Observations: SWPP Deficiencies Observed as noted and Corrected

SWPP CSWPPP inspection conducted prior to rain event - 0.2" of rain recorded Friday night

Observations: Soils exposed in the sidewalk cut on Chestnut Street were covered with plastic sheeting and secured with sand bags - the perimeter site containment berm in this area that was removed to install the storm drain pipe was reconnected to prevent surface water from the site lay-down area from exiting the site via the cut in the sidewalk pavement on Chestnut Street.

The back-filled CSTC within the sidewalk cut on Jefferson street where the new storm drain pipe was connected to the existing catch basin was placed below the level of the sidewalk and sloped back towards the site such that any surface water in the sidewalk cut will drain back to the site instead on onto the street.

General Notes: Install construction entrance, cut perimeter grade (sidewalk and existing fence line), Remove 1 existing catch basin / plug pipes, Place geotextile fabric and gravel cover (approx. 25% complete) - Lot 1

Comments related to environmental protection issues revealed upon site observations pertinent to SWPPP.

SWPP

Observations: NO SWPP Protection Issues Observed

SWPP Observations: Lot 1 is bowl shaped, and the existing catch basin was removed and associated drain pipes were plugged - therefore Lot 1 is unlikely to have an off-site discharge of storm water runoff. The gravel cap should be completed by the end of the week. A construction entrance with wheel wash was installed - periodic broom sweeping of the roadway in the vicinity of the construction entrance shall be conducted to mitigate track out. Vehicles on the site should be able to stay on the construction entrance / gravel cap material to minimize track out.
