Laboratory Analytical Report and Data Validation

1.0 INTRODUCTION

This report presents the results of groundwater monitoring conducted by WSP USA Inc. (WSP; formerly Golder Associates USA Inc.) at the Bear Creek Village Shopping Center during the month of September 2023.

1.1 Site Description

The site is currently developed as a shopping center known as the Bear Creek Village Shopping Center, located at 17100 - 17262 Redmond Way, in Redmond, King County, Washington (site). Figure 1 depicts the location of the site on a United States Geological Survey (USGS) topographic map. The existing shopping center development was constructed in phases in approximately 1969, 1977, and 1985. Before the existing shopping center, the site was agricultural land with several houses, outbuildings, and a small warehouse complex along the northern side. The shopping center includes two core building complexes, one stand-alone multi-tenant retail-strip building, and three pad buildings (Taco Time, Jiffy Lube [previously Q-Lube], and O'Reilly Auto Parts [previously Schuck's]). Paved parking areas and limited landscaped areas comprise the remaining area. A dry cleaning establishment known as Bear Creek Cleaners formerly operated on the site. Bear Creek Cleaners was located at the southeastern portion of the site and is the focus of this groundwater monitoring program. A brief background on the history of Bear Creek Cleaners and the resulting remedial investigations is provided in previous monitoring reports (Golder 2020a).

1.2 Purpose and Scope

The purpose of conducting this groundwater monitoring event was to determine groundwater quality with respect to the presence of halogenated volatile organic compounds (HVOCs) because of the former Bear Creek Cleaners operations, and to obtain groundwater elevation data to determine the groundwater flow direction. Golder submitted a request to Ecology dated January 14, 2020 (Golder 2020b) to temporarily reduce the number of groundwater monitoring wells sampled from six to two monitoring wells. Ecology approved the request. The reduction in the number of wells sampled is reflected in the scope of work outlined below.

The scope of work for this groundwater monitoring event included the following:

- Collection of groundwater samples from two on-site groundwater-monitoring wells (MW-10A and MW-13).
- Collection of additional data from these wells including groundwater level measurements, pH, conductivity, dissolved oxygen, turbidity, oxidation-reduction potential, and temperature.
- Implemented field quality control procedures, including collection and analysis of an equipment blank and a duplicate sample from MW-10A.
- Analysis of the groundwater and quality control samples for the presence of HVOCs using United States Environmental Protection Agency (EPA) Method 8260C.
- Measurement of static groundwater levels in all on-site monitoring wells.

2.0 SEPTEMBER 2023 GROUNDWATER SAMPLING

2.1 Groundwater Investigation Methods

On September 7, 2023, WSP sampled groundwater from two groundwater monitoring wells (MW-10A and MW-13). The wells were purged and sampled in accordance with EPA low-flow sampling guidelines. Figure 2 depicts the location of all pertinent on-site monitoring wells. The September 2023 analytical results are presented

in Table 1. Historical analytical results for groundwater sampling conducted since 1999 are summarized in Table 2. A narrative of historical sampling activities was provided in previous monitoring reports (Golder 2020a). Sampling conditions and data collected during the monitoring event were recorded on the Sample Integrity Data Sheets (SIDS) provided in Appendix A and summarized in Table 3. The following methods and procedures were used for measuring water levels in site monitoring wells and collecting groundwater samples:

- Depth to groundwater was measured in all on-site wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-9, MW-10A, MW-13, and MW-14) prior to purging and sampling. Water levels were recorded in the field notes and on the SIDS. Table 4 presents depth to water measurements and elevations. Figure 3 depicts groundwater elevations and contours.
- Dedicated tubing is located in all groundwater monitoring wells and is replaced as needed. Each well was slowly purged of water at a rate of approximately 150 milliliters (mL) per minute using a peristaltic pump connected to the dedicated tubing.
- Field parameters of temperature, pH, conductivity, turbidity, dissolved oxygen, and oxidation-reduction potential were measured and recorded during purging at approximately 5-minute intervals until parameters were stable (Table 3). All field parameters were recorded on the SIDS (Appendix A).
- Upon completion of purging, groundwater samples were collected by directly capturing groundwater in three 40-mL vials pre-preserved with hydrochloric acid. The 40-mL VOA vials were sealed with septa-lined caps and sealed void of air bubbles. The samples were labeled and placed in a cooler with ice.
- For quality control purposes, a duplicate sample and equipment blank were collected. The duplicate sample was collected from MW-10A, which was identified with the sample label MW-20. The equipment blank was collected after sampling at MW-13.
- The collected samples were transported to OnSite Environmental Inc. in Redmond, Washington for chemical analysis on the same day as sample collection, following chain-of-custody protocols.

All groundwater and quality control samples were analyzed for the presence of HVOCS using EPA Method 8260C. The quality control goal for the project analytical data is to achieve a control limit of +/- 20 percent relative percent difference (RPD) between an original and its duplicate sample for an individual well. For the September 2023 event, the duplicate sample identification number MW-20 was collected at the same time from well MW-10A. Results for the duplicate are included in Table 2 as bracketed results associated with MW-10A. Figure 4 depicts the detected HVOOC concentrations for the wells sampled in September 2023. Figures 5 and 6 depict the detected concentrations of HVOOCs for each well over time.

2.2 Water Level Measurements and Groundwater Flow Direction

Static groundwater levels were measured in all on-site monitoring wells (including those that are not sampled for HVOCS) on September 7, 2023 for the September 2023 groundwater sampling event. The groundwater levels measured that day (as well as during historical sampling) are summarized in Table 4. Groundwater elevations on the site are generally at their highest levels during the wetter winter/spring months and lower during the drier summer/fall months. The September 2023 sampling event groundwater levels were similar to previous summer/fall events and the seasonal trend remained consistent with previous events.

The groundwater elevation contour map for September 7, 2023 data is presented in Figure 3. There is some variability in groundwater flow direction across the site, but the inferred groundwater flow direction is generally

west or northwesterly, away from Bear Creek, which suggests that Bear Creek loses water to the aquifer in this area. The groundwater gradient measured on September 7, 2023 is generally consistent with historical monitoring results. Low groundwater elevations are observed in MW-2, MW-3, MW-4, and MW-10A compared with elevation in surrounding wells. Possible causes for the low groundwater elevations could be from excavations in the area during cleanup actions or stormwater pipe installations. MW-2, MW-3, MW-4, and MW-10A values were not used in contouring for Figure 3.

2.3 Groundwater Quality

The groundwater analytical data for PCE, and PCE's HVOCS degradation compounds trichloroethylene (TCE), 1,3-dichlorobenzene (1,3-DCE), cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride detected in this round of sampling are summarized in Table 1. Table 2 contains the historical sampling results. Appendix B contains a copy of the laboratory analytical data report and data validation. The HVOCS concentrations detected during this round of sampling are depicted in Figure 4. Groundwater HVOCS concentrations and elevations with respect to time for MW-10/10A and MW-13 are depicted in Figures 5 and 6 for the last 25 years.

PCE or its degradation compounds were detected in both monitoring wells sampled during this period. Both wells are located on the eastern side of the former dry cleaner facility.

2.3.1 Perchloroethylene

PCE was detected in MW-13 at a concentration of 1.9 micrograms per liter ($\mu\text{g}/\text{L}$) during the September 2023 sampling event. The practical quantitation limit, or PQL, is 0.20 $\mu\text{g}/\text{L}$. Figure 7 depicts the PCE detections for the routinely sampled wells since 1999. This figure shows an overall decline in PCE concentrations across the site over time. PCE concentrations did not exceed the Model Toxics Control Act (MTCA) Method A Cleanup Level of 5.0 $\mu\text{g}/\text{L}$ in either well during the September 2023 sampling event. PCE concentrations have not exceeded the MTCA Method A Cleanup Level of 5.0 $\mu\text{g}/\text{L}$ in any site monitoring well since the March 2013 sampling event.

2.3.2 Trichloroethylene

TCE was detected in MW-13 at a concentration greater than the PQL (0.20 $\mu\text{g}/\text{L}$) during the September 2023 sampling event at a concentration of 2.90 $\mu\text{g}/\text{L}$. Figure 8 depicts the TCE detections for MW-2, MW-3, MW-4, MW-10A, and MW-13 since 1997. TCE concentrations did not exceed the MTCA Method A Cleanup Level of 5.0 $\mu\text{g}/\text{L}$ in either well during the September 2023 sampling event. Figure 8 shows an overall decline of TCE concentrations across the site over time. MW-13 had a slight increasing TCE trend from 2011 to 2017 but concentrations appear to be relatively stable since 2017. Seasonal fluctuations remain common. TCE concentrations have not exceeded the MTCA Method A Cleanup Level of 5.0 $\mu\text{g}/\text{L}$ in any site monitoring wells since the March 2005 sampling event with two exceptions. The exceptions being TCE was detected during the September 2017 (5.1 $\mu\text{g}/\text{L}$) and September 2021 (5.2 $\mu\text{g}/\text{L}$) monitoring events.

2.3.3 Cis-1,2-Dichlorethene

Cis-1,2-DCE was detected at concentrations greater than the PQL (0.20 $\mu\text{g}/\text{L}$) in MW-10A and MW-13 at concentrations of 2.5 $\mu\text{g}/\text{L}$, and 1.3 $\mu\text{g}/\text{L}$, respectively. Cis-1,2-DCE was also detected in the duplicate taken at MW-10A (MW-20) at a concentration of 2.5 $\mu\text{g}/\text{L}$. The concentrations of cis-1,2-DCE detected during the September 2023 sampling event were all less than the current MTCA Method B Cleanup Level of 16 $\mu\text{g}/\text{L}$. Cis-1,2-DCE has never been detected at a concentration exceeding the current or historical (80 $\mu\text{g}/\text{L}$) MTCA Method B Cleanup Level in effect in any of the site wells.

2.3.4 Vinyl Chloride

Vinyl chloride was detected ($0.30 \mu\text{g/L}$) in MW-10A during the September 2023 sampling event. Vinyl chloride was detected ($0.31 \mu\text{g/L}$) in the duplicate (MW-20), with a 3.3 percent difference. Figure 9 depicts the vinyl chloride detections for MW-2, MW-3, MW-4, MW-10A, and MW-13 since 1997. This figure shows a general overall site-wide decline of vinyl chloride concentrations with only one exception, MW-10A. Vinyl chloride concentrations have not exceeded the MTCA Method A Cleanup Level of $0.2 \mu\text{g/L}$ in any site monitoring well since the March 2007 sampling event except at MW-10A.

2.3.5 1,3-Dichlorobenzene

1,3-Dichlorobenzene was not detected in any of the groundwater samples, or equipment blank samples, collected during the September 2023 event. 1,3-Dichlorobenzene has not been detected at concentrations greater than the PQL ($0.20 \mu\text{g/L}$) in Site groundwater samples since September 2011.

3.0 CONCLUSIONS AND RECOMMENDATIONS

3.1 Findings and Conclusions

The findings and conclusions of this Groundwater Monitoring Report are summarized as follows:

- During the September 2023 sampling event, there were no detections of any of the constituents of concern (COCs) exceeding MTCA Method A Cleanup Levels, with one exception; MW-10A and associated duplicate sample had a detection (of vinyl chloride exceeding the MTCA Method A Cleanup Level ($0.2 \mu\text{g/L}$)).
- Groundwater monitoring data indicates that groundwater is in compliance with State groundwater cleanup criteria under WAC 173-340-720(9)(c) with the exception of vinyl chloride at monitoring well MW-10A.

3.2 Recommendations

Based on the findings and conclusions of the September 2023 groundwater monitoring period, the following recommendations are made:

- The sampling program at the site will continue on the semi-annual sampling schedule (typically March and September) until two consecutive monitoring events below MTCA cleanup levels are achieved at which time the frequency will be increased to quarterly sampling to confirm that results are representative of all seasons of the year. Thus, the next routine semi-annual monitoring event schedule should be continued, and the March 2024 sample event scheduled.
- The wells sampled during the next groundwater monitoring event should include MW-10A and MW-13 to confirm trends in HVOCS concentrations and to support the goal of four consecutive sampling periods with HVOCS concentrations that are less than MTCA Cleanup Levels.

4.0 CLOSING

WSP is pleased to continue working with you on the Bear Creek Village Shopping Center project. If you have any questions regarding this report, please feel free to contact Eric Adams at (425) 883-0777.

Tables

Table 1: September 2023 Groundwater Analytical Results

Analytes	Cleanup Level	Units	Monitoring Well		
			MW-10A	MW-20*	MW-13
PCE	5.0 (A)	µg/L	<0.20	<0.20	1.9
TCE	5.0 (A)	µg/L	<0.20	<0.20	2.9
VC	0.2 (A)	µg/L	0.30	0.31	<0.20
cis-1,2-DCE	16 (B)	µg/L	2.5	2.5	1.3
1,3-DCB	---	µg/L	<0.20	<0.20	<0.20
Groundwater Elevation		ft amsl	30.06	30.06	36.52

Notes:

cis-1,2-DCE = *cis*-1,2-Dichloroethene

PCE = Perchloroethylene = Tetrachloroethylene

1,3-DCB = 1,3-Dichlorobenzene

TCE = Trichloroethene

VC = Vinyl Chloride

<0.20 = indicates sample was not detected above the laboratory analytical detection limit.

(A) = MTCA Method A Cleanup Level (Model Toxics Control Act Cleanup Regulation - Chapter 173-340 WAC).

(B) = MTCA Method B formula value (Model Toxics Control Act Cleanup Regulation - Chapter 173-340 WAC and Model Toxics Control Act Cleanup Levels and Risk Calculations - February 1996).

Analytical results in parentheses represent duplicate samples.

Bold Italic = indicates the analytical result exceeds the MTCA Method A or B Cleanup Level.

* Duplicate sample collected at MW-10A.

Groundwater elevation determined using the surveyed elevation (NAVD 88 datum) of the top of each well casing.

Elevations given in feet above mean sea level.

MTCA Cleanup Levels		5.0 A	5.0 A	0.2 A	16 B¹

Notes:

Analytical results in parentheses represent duplicate samples.

Bold Italic = indicates the analytical result exceeds the MTCA Method A or B Cleanup Level.

<0.20 = indicates sample was not detected above the laboratory analytical detection limit.

A = MTCA Method A Cleanup Level (Model Toxics Control Act Cleanup Regulation - Chapter 173-340 WAC).

B = MTCA Method B formula value (Model Toxics Control Act Cleanup Regulation - Chapter 173-340 WAC and

¹ Current (2014) MTCA Method B value. Historical value was 80 µg/L.

* Groundwater elevation resided beneath the well screen. Sample could not be collected.

cis-1,2-DCE = cis-1,2-Dichloroethene

PCE = Perchloroethylene = Tetrachloroethylene

TCE = Trichloroethene

VC = Vinyl Chloride

MW-13	5.53	193	16.2	3.37	0.37	115.3	200	36.52

Notes:

Groundwater elevation determined using the surveyed elevation (NAVD 88 datum) of the top of each well casing.

Elevations given in feet above mean sea level.

			9/7/2023	14.77	34.73	

Notes:

* These elevations are of the top of the PVC well casing measured in feet above mean sea level (MSL).

**Wells re-surveyed November 2007 and reported in NGVD29 datum.

***Wells re-surveyed in July 2013 and reported in NAVD88 datum.

1 Anomalous groundwater elevation reading. Value was not used in contouring.

TOC = top of PVC well casing.

NC = Not Collected due to damaged well monument.

bgs = below ground surface.

Dry = water level at or below well casing.

Sample Integrity Data Sheets

SAMPLE INTEGRITY DATA SHEET

Plant/Site Bear Creek Village Project No. 31404502.000.1.1

Site Location Redmond, WA Sample ID MW-10A-20230907

Sampling Location Groundwater Monitoring well – end of dedicated sampling tube (dup MW-20-20230907)

Technical Procedure Reference(s) TG 1.2-23; TG 1.4-6a; TG 1.2-20

Type of Sampler Peristaltic Pump

Date 9/7/23 Time 11:30 / 11:35 for dup

Media water Station MW-10A

Sample Type: grab time composite space composite

Sample Acquisition Measurements (depth, volume of static well water and purged water, etc.)

Static Water Level: 18.31 BTOC

Screened Interval: unknown

Pump intake at: BTOC

Sample Description clear, no odor, no sheen

Field Measurements on Sample (pH, conductivity, etc.)

See Field Parameters Sheet

Aliquot Amount Container Preservation / Amount

Re: Analytical Data for Project 31406375.000
Laboratory Reference No. 2309-043

Dear Eric:

Enclosed are the analytical results and associated quality control data for samples submitted on September 7, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DBS".

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 12, 2023
Samples Submitted: September 7, 2023
Laboratory Reference: 2309-043
Project: 31406375.000

Case Narrative

Samples were collected on September 7, 2023 and received by the laboratory on September 7, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
 and is intended only for the use of the individual or company to whom it is addressed.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Table B-1: Sample Collection and Analysis Summary

SDG	Field Identification	Collection Date	Location	Lab Identification	Matrix	QC Samples	Analyses
							Halogenated Volatiles (EPA 8260C)
2309-043	MW-10A-20230907	9/7/2023	MW-10A	09-043-01	GW	--	X
2309-043	MW-20-20230907	9/7/2023	MW-10A	09-043-02	GW	FD	X
2309-043	MW-13-20230907	9/7/2023	MW-13	09-043-03	GW	--	X
2309-043	EB-20230907	9/7/2023	--	09-043-04	DI	EB	X

Notes:

All analyses performed by OnSite Environmental, Inc

Abbreviations:

DI - Deionized Water

EB - Equipment Blank

FD - Field Duplicate

GW - Groundwater

QC - Quality Control

SDG - Sample Delivery Group

September 2023

31406375.000

Table B-2: Qualifier Summary Table

SDG	Sample Name	Constituent	New Result	New RL	Qualifier	Reason
n/a						

Notes:

No Qualifiers Applied

Abbreviations

RL - Reporting Limit

SDG - Sample Delivery Group

Qualifier Definitions

n/a

Table B-3: Field Duplicate Precision

Parameter	MW-10A	MW-20*	RPD1 (%)	QC Goal RPD (%)
PCE	0.2U	0.2U	NA	0 - 20
TCE	0.2U	0.2U	NA	0 - 20
VC	0.30	0.31	-3.3	0 - 20
cis-1,2-DCE	2.50	2.50	0.0	0 - 20
1,3-DCB	0.2U	0.2U	NA	0 - 20

Notes:

1. MW-20 duplicate sample

2. RPD (relative percent difference) = $[(S-D) * 100] / [(S+D)/2]$

where, S = first / original sample value and, D = second (duplicate) sample value.

3. U - Analyte was analyzed for but was not detected
