Re: Quarterly Progress Report: Second Quarter 2023
Carson Cleaners Site, Cleanup Site ID: 14878
Washington State Department of Ecology Agreed Order No. DE 19805

Dear Mr. Myers:

This Quarterly Progress Report is submitted on behalf of Tahn Associates, LLC, and summarizes the activities performed at the Carson Cleaners Site (Site) from April 1, 2023, through June 30, 2023, as required by the Washington State Department of Ecology (Ecology) Agreed Order (AO) No. DE 19805. This Quarterly Progress Report has been prepared in accordance with the requirements of the AO, Section VII.F, and describes the following:

1. Actions that have been taken to comply with the AO
2. Sampling and testing reports and other data reports received by the Potentially Liable Party
3. Deviations from approved work plans
4. Contacts with representatives of the local community; public interest groups; the press; and federal, state, or tribal governments
5. Problems or anticipated problems in meeting the schedule or objectives set forth in the scope of work and work plans
6. Solutions developed and implemented or planned to address any actual or anticipated problems or delays
7. Changes in key personnel
8. Work planned for the next reporting period

Actions During Second Quarter 2023

Actions Performed

- Implementation of the Remedial Investigation Work Plan (RIWP) at the Site (Figure 1) included the following:
  - Groundwater monitoring was completed from June 12, 2023, through June 14, 2023, which included sample collection at the recently installed monitoring wells associated

with the Site (CC-MW-01 through CC-MW-06), as well as existing groundwater monitoring wells associated with neighboring properties (Figure 2).
- The second quarter 2023 indoor air, subslab vapor, and ambient air monitoring was conducted (Figure 3).
- Groundwater potentiometric surface contour figures were developed based on the groundwater elevations measured during Second Quarter 2023 (Figure 4). A groundwater elevation summary is provided in Table 1.

Sampling and Testing Reports

This report includes the monitoring results for the First Quarter 2023 monitoring event. The Second Quarter 2023 laboratory data is pending validation. Groundwater, soil, air, and soil vapor samples were collected and analyzed per the RIWP sampling schedule. The analytical results are included in Tables 2 through 4, respectively. Laboratory analytical reports are included in Attachment 1, and data validation reports are included in Attachment 2. A brief summary of the validated data is as follows:

- Groundwater monitoring analytical results (Table 2) indicated the following:
  - Tetrachloroethene (PCE) exceeded both the Model Toxics Control Act (MTCA) Method B cancer and noncancer screening levels at three monitoring well locations (CC-MW-01, MW-20, and MW-28). PCE exceedances of the MTCA Method B cancer screening level were found at two monitoring well locations (BP-MW27 and BP-MW28). PCE was detected at nine additional monitoring well locations (CC-MW-03, CC-MW-2D, CC-MW-2S, CC-MW-4D, MW-22, MW-23, MW-25, MW-27, and BP-MW8) but did not exceed the MTCA Method B screening levels.
  - Trichloroethene (TCE) exceeded both the MTCA Method B cancer and noncancer screening levels at seven monitoring well locations (CC-MW-01, MW-20, MW-22, MW-23, MW-25, MW-27, and MW-28). TCE was detected at an additional five monitoring well locations (CC-MW-2D, CC-MW-4D, BP-MW8, BP-MW27, and BP-MW28) but did not exceed the MTCA Method B screening levels.
  - Vinyl chloride exceeded the MTCA Method B cancer screening level at five monitoring well locations (MW-22, MW-23, MW-27, MW-28, and BP-MW27). Detection limits for vinyl chloride were elevated above the MTCA Method B cancer screening level in the groundwater sample at CC-MW-01 due to the dilution required for higher concentrations of PCE and TCE. Vinyl chloride exceeded both the MTCA Method B cancer and noncancer screening levels at monitoring well location MW-25.
  - Cis-1,2-dichloroethene exceeded the MTCA Method B noncancer screening level at four monitoring well locations (MW-22, MW-23, MW-25, MW-27, and MW-28). Cis-1,2-dichloroethene was detected in five additional monitoring well locations (CC-MW-4D, MW-20, BP-MW27, and BP-MW28) but did not exceed the MTCA Method B noncancer screening level.

  - Trans-1,2-dichloroethene was detected in six monitoring well locations (CC-MW-4D, MW-20, MW-22, MW-23, MW-25, and MW-27) but did not exceed the MTCA Method B noncancer screening level.
- Indoor and ambient air monitoring analytical results (Table 3) indicated the following:
  - TCE exceeded the MTCA Method B cancer indoor air screening level at CC-IA-04 (Bank of America). Cis-1,2-dichloroethene was also detected at CC-IA-04 but did not exceed the MTCA Method B screening levels.
  - No additional target analytes were detected in any of the indoor or ambient air locations during First Quarter 2023.
- Subslab vapor monitoring analytical results (Table 4) indicated the following:
  - PCE exceeded both the MTCA Method B cancer and noncancer subslab screening levels at CC-SS-03b.
  - TCE exceeded both the MTCA Method B cancer and noncancer subslab screening levels at CC-SS-03b.
  - No other target analytes were detected in remaining subslab vapor monitoring locations during First Quarter 2023.
  - Subslab vapor sampling is not currently conducted at Bank of America due to refusal of access by the current tenant.

Preliminary draft figures depicting interpolated chlorinated volatile organic compound (cVOC) groundwater analytical results are depicted in Figures 5 through 9. As additional data are available to determine optimized interpolation parameters that best reflect the conceptual site model, the figures will be further revised. A single indoor air testing exceedance of TCE is depicted in Figure 6. No other indoor air testing resulted in exceedances of indoor air criteria.

As of this Quarterly Progress Report submittal, the Second Quarter 2023 monitoring data are still pending validation and are not discussed within this report. Validated laboratory results from the Second Quarter 2023 monitoring event are expected to be included in the Third Quarter 2023 report.

Deviations from Approved Work Plans

There were no deviations from the approved work plans.

Contacts with Local, State, Federal, or Tribal Representatives

- Ecology was notified a minimum of 7 days in advance of field work, per the AO.
- A check-in call with Ecology was held on May 11, 2023. A summary email of the call was transmitted to Ecology on May 15, 2023.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
