**To:** Myers, Dale - TCP (ECY)  
**Cc:** Gavin Casson; Nathan Soccorsy; Johnson, Scott D.  
**Subject:** Carson Cleaners - May 11, 2023 Call Summary

Hi Dale,

Per your request, please see the bullet list summary of our call on May 11, 2023.

- Preliminary data suggests there may be more than one source contributing to the chlorinated solvent plume. Anchor QEA showed a map that was included in a previous report that shows many other historic dry cleaners in the vicinity. At Dale's request, Anchor QEA will conduct research to determine if solvents were historically used at the neighboring facilities.
  - This research was requested to begin prior to the RI Report and progress to be included in the quarterly reports.
- Soil contamination may require further delineation to the north and west.
- Groundwater contamination may require further delineation to the north, west, and east. The north and west may require additional well installations but access in those directions is limited. Additional well installations will require coordination and cooperation with neighboring properties. The Chevron site has additional wells to the east that may be used to delineate in that direction.
- Quarterly air monitoring results will be directly communicated to the bank due to indoor air results.

Please let us know if you have any questions. Thanks.
