Attention: Dale Myers, Formal LUST Site Manager

Subject: ASTM Phase I Environmental Site Assessment
ARCO 5445
665 23rd Avenue
Seattle, Washington

Dear Dale:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, located at 665 23rd Avenue in Seattle, Washington (herein referred to as the "subject property"). This work was performed by Haley & Aldrich, Inc. (Haley & Aldrich), in accordance with our proposal to the Washington State Department of Ecology (Ecology) dated 3 March 2023, as authorized on 20 March 2023 ("Agreement"). This Phase I was conducted in conformance with the scope and limitations of the ASTM International (ASTM) E1527-21 Standard Practice for Environmental Site Assessments.¹

The objective of a Phase I is to assess whether known and/or suspect recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) are associated with the subject property, as defined in the ASTM E1527-21 Standard.

¹ The ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21 Standard) as referenced in Code of Federal Regulations Title 40 Part 312 (the All Appropriate Inquiries Rule).

Enclosures

Executive Summary

Haley & Aldrich, Inc. (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of a service station property located at 665 23rd Avenue in Seattle, Washington (herein referred to as the “subject property”). The scope of services is described and conditioned by our proposal dated 3 March 2023. This Phase I was performed for Ecology who seeks to have an understanding of the subject property’s environmental status and current conditions. This Phase I was performed in conformance with the scope and limitations of the ASTM International (ASTM) E1527-21 Standard and [All Appropriate Inquiries](#) (AAI) Rule.

SUBJECT PROPERTY DESCRIPTION

The current configuration of the subject property (retail gasoline station with a convenience store) was developed by ARCO in 1988. The subject property contains three 12,000-gallon fiberglass underground storage tanks (USTs) and four gasoline dispenser islands covered by a canopy.

OBJECTIVE

The objective of a Phase I is to assess whether [recognized environmental conditions](#) (RECs), [controlled RECs](#) (CRECs), or [historical RECs](#) (HRECs) are associated with the subject property. Our conclusions are intended to help the user evaluate the [business environmental risk](#) associated with the subject property. Our opinion regarding a REC's potential impact on the subject property is based on the scope of our services, the information obtained during the course of our services, the conditions prevailing at the time our services were performed, the applicable regulatory requirements in effect at the time our services were performed, our experience evaluating similar sites, and on our understanding of the client's intention to have a comprehensive understanding of the subject property’s environmental status and current conditions.

SIGNIFICANT DATA GAPS

Our ability to identify and evaluate RECs at the subject property is conditioned upon [significant data gaps](#) identified as part of this Phase I. The ASTM E1527-21 Standard defines a significant data gap as a data gap that affects the ability of the [Environmental Professional](#) to identify a REC.

We identified the following significant data gaps in association with this Phase I.

- 2201 East Cherry Street is located adjacent to the subject property to the west in an inferred upgradient direction. This adjacent property is listed in the EDR (Environmental Data Resources, LLC.) historical auto service (HIST AUTO) database. This listing indicates the adjacent property has potentially operated as a gas station/filling station/service station. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 2301 East Cherry Street is presented in the EDR report as 32 feet east of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST AUTO database. This listing indicates the adjacent property has potentially operated as a gas station/filling station/service station. Due to its proximity and historical operations, this represents a data gap for the subject property.

- 554 23rd Avenue is presented in the EDR report as 48 feet southeast of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity and historical operations, this represents a data gap for the subject property.
- 548 23rd Avenue is presented in the EDR report as 48 feet southeast of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST AUTO database. This listing indicates the nearby property has potentially operated as a gas station/filling station/service station. Due to its proximity and historical operations, this represents a data gap for the subject property.
- 2210 East Cherry Street is presented in the EDR report as 100 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 702 and 704 23rd Avenue is presented in the EDR report as 127 to 143 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 2307 East Cherry Street is presented in the EDR report as 153 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. This represents a data gap for the subject property. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The following RECs listed below were identified in connection with the subject property.

REC #1: Historical operation of subject property as a gasoline station resulting in known petroleum hydrocarbons in soil and groundwater at concentrations exceeding Model Toxics Control Act (MTCA) Method A cleanup levels (cleanup levels).

Contamination at the subject property was initially detected during facility upgrade activities in 2004. The most recent available groundwater data for the subject property is from a 2015 groundwater sampling event. Total petroleum hydrocarbons (TPH) as gasoline range organics (TPH-G) cleanup level exceedances were observed in groundwater sampled from monitoring wells MW-1 and MW-5. A benzene cleanup level exceedance was observed in groundwater sampled from monitoring well MW-1. Soil samples collected at the subject property have historically contained cleanup level exceedances for TPH-G, benzene, toluene, ethylbenzene, xylenes (BTEX), and methyl tert-butyl ether (MTBE).

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a CREC as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

HRECs were not identified in connection with the subject property.

SUMMARY AND RECOMMENDATIONS

In summary, we identified seven significant data gaps and one REC at the subject property during this Phase I.

To address the significant data gaps and RECs listed above, we recommend the following:

- Additional soil and groundwater characterization as outlined by Ecology in their response to the Closure Request and 2014/2015 Site Status Report completed by Arcadis U.S. Inc., (Arcadis) (Ecology 2016b).

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

Continued Viability of Environmental Site Assessment

In accordance with the ASTM E1527-21 Standard, the following components of the Phase I Report must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction:

1. Interviews with owners, operators, and occupants. Not completed due to inability to contact key site manager.
2. Searches for recorded environmental cleanup liens (a user responsibility). Completed on: 17 May 2023.
3. Reviews of federal, tribal, state, and local government records. Completed on: 18 April 2023.
4. Visual inspections of the subject property and of adjoining properties. Completed on: 30 May 2023.

The declaration by the Environmental Professional responsible for the assessment or update (refer to Section 9). Completed on 29 June 2023.

1.0 Introduction

This report presents the results of an ASTM International (ASTM) Phase I Environmental Site Assessment (Phase I) conducted for a property located at 665 23rd Avenue located in Seattle, Washington (herein referred to as the “subject property”). The approximately 0.50-acre subject property is currently operated as a branded ARCO gas station and ampm convenience store and is shown on the Project Locus, Figure 1. This Phase I was conducted in consideration of the Washington State Department of Ecology (Ecology) who seeks to understand the subject property’s environmental status and current conditions.

1.1 OBJECTIVE

The objective of a Phase I is to assess whether [recognized environmental conditions](#) (RECs), [controlled RECs](#) (CRECs), or [historical RECs](#) (HRECs) are associated with the subject property by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties, as well as potential releases at surrounding properties that may impact the subject property. Our conclusions are intended to help the user evaluate the [business environmental risk](#) associated with the subject property.

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The definitions of RECs, CRECs, and HRECs are included in the Glossary section of this report.

1.2 SCOPE OF SERVICES

This Phase I was performed by Haley & Aldrich, Inc. (Haley & Aldrich) in conformance with the scope and limitations of the ASTM E1527-21 Standard and [All Appropriate Inquiries](#) (AAI) Rule and in accordance with our proposal dated 3 March 2023, as authorized on 20 March 2023 (“Agreement”). The Phase I limitations and Agreement are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use and attempted interviews with a [key site manager](#) (subject property reconnaissance); reviewed federal, state, tribal, and local environmental database information, federal and state environmental files, previous reports (if identified and provided), and site historical use records; and formulated conclusions regarding the potential presence and impact of RECs.

1.3 NON-SCOPE CONSIDERATIONS

The ASTM E1527-21 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality related to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint unrelated to releases into the environment, lead in drinking water, mold or microbial growth conditions, polychlorinated biphenyl (PCB)-containing

materials, naturally-occurring radon, regulatory compliance, substances not defined as hazardous substances (emerging compounds²), and wetlands. These items were not included in this Phase I of the subject property.

The assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E1527-21 Standard as “electrical or hydraulic equipment known or likely to contain PCBs... to the extent visually and or physically observed or identified from the interview or records review.”

1.4 LIMITING CONDITIONS/DEVIATIONS

Haley & Aldrich completed this Phase I in substantial conformance with the ASTM E1527-21 Standard. In our opinion, no additions were made to, or deviations or deletions made from, the ASTM work scope in completing this Phase I.

1.5 USER RESPONSIBILITIES

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E1527-21 Standard and the AAI Rule. User responsibilities are discussed in Section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix X1 of the ASTM E1527-21 Standard.

² Per- and Polyfluoroalkyl Substances (PFAS) are examples of emerging compounds.

2.0 Site Description

A description of the subject property is detailed in the following sections. Refer to Figure 1 for a project locus and Figure 2 for a site plan showing relevant subject property features and adjacent properties.

2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

Site Description	
Owner	City Neighborhood, Inc. 665 23rd Avenue Seattle, WA 98122
Operator	ARCO Gas Station - ampm Convenience Store
Current Subject Property Use	Current subject property use consists of an ARCO retail gasoline station with an ampm convenience store and four fuel dispensers. The four dispensers are located beneath a larger canopy to the south of the convenience store.
Size	0.50 acres
Building Square Footage	Convenience Store: 3,808 square feet
USGS 7.5-Minute Topographic Map	Seattle South, 2020
Site County	King County
Zoning	Neighborhood Commercial: NC1-40 (M)
Parcel Information	Parcel ID: 912610-1805
Utility Providers	Water: Seattle Public Utilities
	Sewerage: Seattle Public Utilities
	Electricity: Seattle City Light
	Gas/Oil/LPG: Puget Sound Energy
Heating/Cooling System	Forced Air (King County Department of Assessments 2023)
Site Vicinity Description	
General Area Description	Commercial and residential properties adjoining the site. Garfield Community Center east of the subject property.
Adjoining Property Description	North: East Cherry Street followed by commercial and residential buildings.
	East: 23rd Avenue followed by Garfield Community Center
	South: Residential properties and a pre-school/daycare center (Causey's Learning Center)
	West: Homeless shelter (T.C. Spirit Village) followed by 22nd Avenue.

2.2 PHYSICAL SETTING

Subsurface explorations and/or hydrogeologic investigations were not performed as part of this Phase I. Subject property geology and hydrology were evaluated based on readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the vicinity of the subject property. Site-specific sources used to determine the physical setting of the site are recorded in the following table. It is unknown to what extent localized variations in groundwater depth and flow occur on the subject property.

Physical Setting		Source
Topography Summary	The subject property is generally flat.	1, 5
Subject Property Elevation (El.)	Approximate El. 280 feet above mean sea level	1
Overburden Soils	Based on site-specific subsurface investigations, the soil lithology beneath the site is composed of sand silt mixtures to 46.5 feet below ground surface (bgs), the maximum depth previously explored. A discontinuous silt layer has been at approximately 15 to 20 feet bgs.	2, 3
Bedrock Formation	Bedrock formation was not observed in previous site investigations.	
Depth to Bedrock	Depth to bedrock was not observed in previous site investigations.	
Depth to Groundwater	Depth to water has been measured at depths ranging from 5.72 to 25.61 feet below top of well casing. Groundwater elevations have ranged from 75.43 to 273.91 feet above mean sea level.	4
Surface Water Flow Direction	Surface water appears to flow toward the east, based on observed surface topography.	5
Regional Groundwater Flow Direction	Based on site-specific groundwater elevation data, regional groundwater flow direction appears to be to the east-southeast toward Lake Washington.	4
Nearest Surface Water Body	Lake Washington is located approximately 0.94 miles east of the subject property.	6

3.0 Previous Reports

The following previous reports for the subject property were reviewed for this Phase I. Relevant excerpts from these reports are included in Appendix B. Pertinent environmental issues identified in those reports are summarized in the following text and table. Compiled groundwater and soil analytical results are included in the "Closure Request and 2014/2015 Site Status Report" (Arcadis, 2015).

- Environmental Oversight during Retail Facility Upgrade Activities, 9 March 2005. Prepared by Delta Environmental Consultants, Inc. for BP West Coast Products, LLC. Included in Appendix B.
- Subsurface Investigation Report, 25 October 2005. Prepared by Delta Environmental Consultants, Inc., for Remediation Management. Included in Appendix B.
- Groundwater Monitoring Reports from 2006 through 2010. Prepared by Delta Environmental Consultants, Inc. for Washington State Department of Ecology.
- Soil Boring Installation Work Plan. 12 May 2010. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology. Included in Appendix B.
- Semi-Annual Groundwater Monitoring Report, First Half 2010, 28 July 2010. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology.
- Annual Groundwater Monitoring Report 2011, 2 February 2012. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology.
- Remedial Action Plan, 14 June 2012. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology. Included in Appendix B.
- Annual Site Activities Report 2012, 6 May 2013. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology. Included in Appendix B.
- Annual Site Activities Report 2013, 4 March 2014. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology. Included in Appendix B.
- Closure Request and 2014/2015 Site Status Report, 20 October 2015. Prepared by Arcadis U.S. Inc. for Washington State Department of Ecology. Included in Appendix B.
- Notice of Termination of Arcadis Multi-Site VCP Agreement Second Amendment 2014-2016 dated January 1, 2014 between State of Washington, Department of Ecology and Arcadis U.S. Inc., 26 April 2016. Prepared by Arcadis U.S., Inc. for Washington State Department of Ecology. Included in Appendix B.
- Opinion pursuant to WAC 173-340-515(5) on Completed Remedial Action for the following Hazardous Waste Site: Site Name: Arco 5445, Site Address: 665 23rd Avenue Seattle, WA 98122, Facility/Site No.: 76386549, Cleanup Site ID No.: 10446, VCP Project No.: NW2444, 26 April 2016. Prepared by Washington State Department of Ecology for Arcadis U.S. Inc. Included in Appendix B.
- Arcadis Multi-Site Agreement Termination, 2016 October 25. Prepared by Washington State Department of Ecology for Arcadis U.S. Inc. Included in Appendix B.
- Termination of 25 VCP Projects in the former Arcadis Multi Site Agreement, 19 October 2018. Prepared by Washington Department of Ecology for Arcadis U.S., Inc. Included in Appendix B.
- Request for Information on Status of VCP Project, 24 August 2018. Prepared by Washington Department of Ecology for Arcadis U.S., Inc. Included in Appendix B.

- BP and Environmental Consultant Personnel Change, 9 April 2020. Prepared by BP Products NA Inc. for Washington Department of Ecology.

The pertinent issues identified and discussed in the above-listed reports, are presented in the following table.

Pertinent Issue Identified	Further Investigation/Information	Issue Addressed?
Concentrations of petroleum hydrocarbons in subject property soil exceed MTCA Method A cleanup levels (cleanup levels).	Soil at the subject property has historical cleanup level exceedances for gasoline range organics (TPH-G), benzene toluene, ethylbenzene, total xylenes (BTEX), and methyl tert-butyl ether (MTBE) due to releases of petroleum product from leaking UST infrastructure at the subject property.	No. This issue is considered a REC for the subject property.
Concentrations of petroleum hydrocarbons in subject property groundwater exceed cleanup levels.	Groundwater at the subject property has cleanup level exceedances for TPH-G and benzene due to releases of petroleum product from leaking UST infrastructure at the subject property.	No. This issue is considered a REC for the subject property.

4.0 Subject Property History

Haley & Aldrich assessed past usage of the subject property and adjoining properties through a review of the following historical resources:

- Sanborn Fire Insurance Maps dated 1893, 1905, 1949, 1950, and 1969;
- Topographic Maps dated 1894, 1895, 1897, 1908, 1909, 1968, 1973, 1983, 2014, 2017, and 2020;
- Aerial Photographs dated 1936, 1943, 1953, 1956, 1965, 1969, 1977, 1980, 1985, 1990, 2006, 2011, 2015, and 2019;
- City Directories dated 1920, 1925, 1930, 1935, 1940, 1944, 1951, 1955, 1960, 1966, 1969, 1970, 1971, 1975, 1977, 1980, 1981, 1985, 1986, 1990, 1991, 1992, 1995, 1996, 2000, 2005, 2010, 2014, 2017, and 2020;
- Municipal records;
- Previous Reports; and
- Washington State Environmental Information Management (EIM) Database.

Haley & Aldrich attempted to contact the subject property key site manager for an interview on current and past site usage. However, no contact was made with a key site manager following multiple attempts to call the service station.

Copies of information obtained from historical references reviewed are included in Appendix C. Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1940 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period.

4.1 SUBJECT PROPERTY

The current configuration of the subject property (retail gasoline station with convenience store) was developed by ARCO in 1988. The most recent change of ownership is reflected in the deed recorded 13 April 2006, indicating ownership transferred from BP West Coast Products LLC to City Neighbor, Inc. The deed is included in Appendix C. Previously, the property ownership shifted from Ruth and Henry J. Singletary to ARCO in 1987. In 1988, three double wall 12,000-gallon fiberglass USTs were installed at the subject property (Arcadis, 2015).

Dates	Description of Subject Property	Sources
1936 – 1943	Aerial photographs from 1936 – 1943 show the subject property with what appears to be four buildings within the outline of the subject property boundary. Due to the limited quality of the aerial images, discerning the precise nature of these buildings was difficult; however, based on the configuration of the buildings on the subject property and in the surrounding area, the buildings are likely residential.	EDR, 2023
1949 – 1969	The 1949 Sanborn Fire Insurance Map indicates gas and oil storage on the subject property. The aerial photograph from 1953 indicates a change from the previous photograph (1943). The four buildings were replaced by what appears to be two new buildings within the subject property boundary.	EDR, 2023
1969 – 1990	The aerial photograph from 1969 indicates a change from the previous aerial photograph (1965). The building previously shown on the southern edge of the subject property boundary is no longer present, the building in the center of the subject boundary was expanded, and there is an additional building or canopy toward the north of the subject property. A building permit from 1987 notes that a grocery store/service station was demolished.	EDR, 2023
1990 – 2023	The aerial photograph from 1990 indicates a change from the previous aerial photograph (1985), consistent with the building permit noted above. The photograph from 1990 resembles the current site configuration, with a convenience store in the northwest corner and a canopy toward the center of the subject property.	EDR, 2023

4.2 ADJOINING PROPERTIES

The table below provides a summary of pertinent information from the historical sources reviewed regarding adjacent properties:

Aerial Photo Dates	Description of Adjacent Properties	Sources
1936 – 1943	North: Buildings present, likely residential South: Buildings present, likely residential East: Buildings present, likely residential West: Buildings present, likely residential	EDR, 2023
1953 – 1956	North: No significant changes. South: No significant changes. East: Change in adjacent property to the east observed in 1953 aerial photograph. A parking lot is now present in place of previously observed buildings at the corner of 23rd Avenue and Cherry Street. West: No significant changes.	EDR, 2023

Aerial Photo Dates	Description of Adjacent Properties	Sources
1965 – 2006	<p>North: No significant changes.</p> <p>South: No significant changes.</p> <p>East: Additional changes to adjacent properties to the east in 1965 aerial photograph. Several buildings demolished along 23rd Avenue. Park structures (tennis courts and baseball diamonds) observed in 1969 aerial photograph.</p> <p>West: No significant changes.</p>	EDR, 2023
2006 – 2015	<p>North: No significant changes.</p> <p>South: No significant changes.</p> <p>East: Additional changes to adjacent properties to the east. A building is now present at the corner of 23rd and Cherry Street. The tennis courts were moved further east.</p> <p>West: Buildings are no longer present in adjacent property to the west.</p>	EDR, 2023
2019	<p>North: Building to the north, across Cherry Street, no longer present.</p> <p>South: No significant changes.</p> <p>East: No significant changes.</p> <p>West: No significant changes.</p>	EDR, 2023

5.0 Environmental Records Review

5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Haley & Aldrich used an electronic database service (Environmental Data Resources, LLC.), to complete the environmental records review. The database search was used to identify listed properties that may exist within the ASTM-specified approximate minimum search distances, as shown in the following table. A description of each database searched is provided in Section 11.2 of this report. The complete environmental database report is provided in Appendix D. Pertinent information obtained from the database is summarized in Section 5.3.

Database Searched	Approximate Minimum Search Distance	Subject Property Listed?	Number of Sites within Search Distance ¹
1. National Priorities List (NPL) Sites	1 mile	No	0
2. Delisted NPL Sites	0.5 mile	No	0
3. Comprehensive Environmental Reclamation, Compensation, and Liability Information Systems/Superfund Enterprise Management System (CERCLIS/SEMs ²) Sites	0.5 mile	No	0
4. CERCLIS-No Further Remedial Action Planned (NFRAP)/SEMs ² Sites	0.5 mile	No	0
5. Federal Emergency Response Notification System (ERNS)	Site only	No	0
6. Resource Conservation and Recovery Act (RCRA) non-Corrective Action Treatment Storage and Disposal (non-CORRACTS TSD) Facilities	0.5 mile	No	0
7. RCRA CORRACTS TSD Facilities	1 mile	No	0
8. RCRA Generators	Site & Adjoining	No	1
9. Federal Institutional/Engineering Controls	Site Only	No	Not Applicable
10. State/Tribal Equivalent NPL Sites	1 mile	No	18
11. Lists of state and tribal hazardous waste facilities ² Ecology's Confirmed and Suspected Contaminated Sites List (CSCSL)	0.5 mile	Yes	68
12. State/Tribal Registered Storage Tanks	Site & Adjoining	Yes	1
13. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	0
14. State/Tribal Leaking Storage Tanks	0.5 mile	Yes	1
15. State/Tribal Institutional Controls/Engineering Controls	Site Only	No	Not Applicable
16. State/Tribal Voluntary Cleanup Sites	0.5 mile	Yes	16
17. State/Tribal Brownfield Sites	0.5 mile	No	0

Database Searched	Approximate Minimum Search Distance	Subject Property Listed?	Number of Sites within Search Distance ¹
18. Orphan Site List ³	Site & Adjoining	No	6
19. RGA LUST (Recovered Government Archive Leaking Underground Storage Tank)	Site & Adjoining	Yes	1
20. RGA HWS (Recovered Government Archive State Hazardous Waste Facilities List)	Site & Adjoining	Yes	1
21. EDR HIST AUTO (EDR Exclusive Historical Auto Stations)	.13 mile	Yes	6
Notes: <ol style="list-style-type: none"> 1. Some sites may be included on multiple databases. 2. Formerly the CERCLIS database. 3. Haley & Aldrich also searched the Orphan Site List provided in the database report for the subject property and sites adjoining the subject property. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped. 4. If applicable, other relevant databases, not specifically required by ASTM were included in the database review. 			

5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, we contacted the following state and local government agencies and searched applicable online databases. If copies of the documents reviewed were obtained, pertinent material is included in Appendix D.

Agency	Request Sent or Files Searched		Files Exist and are Available for Review	Files Reviewed
	Subject Property	Adjoining Properties		
Department of Ecology ^{1,2}	Yes	No	Haley and Aldrich staff visited Ecology to conduct a hardcopy file review on 17 May 2023. Applicable site documents were then scanned by Ecology and uploaded to their online database. Haley and Aldrich also reviewed the Ecology Environmental Information Management (EIM) database for the subject property. No data was found for soil or groundwater in the EIM database for the subject property.	Yes
Department of Archaeology and Historic Preservation (DAHP) ³	Yes	No	Per email correspondence with the DAHP dated 11 May 2023, the subject property is not listed as historic. Correspondence with DAHP is included in Appendix D.	No

Agency	Request Sent or Files Searched		Files Exist and are Available for Review	Files Reviewed
	Subject Property	Adjoining Properties		
Notes:				
<ol style="list-style-type: none"> 1. To date, no responses have been received from the Freedom of Information Act (FOIA) requests noted above. Based on the information obtained through our interviews with key site personnel and our review of other records, it does not appear that responses to the FOIA requests should affect our conclusions regarding RECs on the subject property. However, when a response is received, it will be forwarded to Ecology and, if it affects our conclusions regarding the subject property, Ecology will be informed. 2. Ecology maintains information regarding toxic cleanup, USTs, leaking underground storage tanks (LUSTs), hazardous waste, environmental report tracking and spills, and water quality discharge permits. 3. The DAHP maintains information on historic properties. 				

5.3 SUBJECT PROPERTY

The subject property is listed in several databases, including Ecology’s contaminated sites database (Facility Site ID: 76386549, Cleanup Site ID: 10446). A summary of the databases the subject property is listed in is provided below.

Listing	Description	Potential Impact
CSCSL/LUST/ UST/RGA LUST/ RGA HWS/EDR HIST AUTO/VCP	<p>The subject property is listed on the Ecology’s CSCL for known contamination by petroleum hydrocarbons in soil and groundwater at the subject property.</p> <p>The subject property is listed on Ecology’s Leaking Underground Storage Tank (LUST) site list. A No Further Action (NFA) designation has not been issued for the subject property.</p> <p>The subject property is listed on Ecology’s Underground Storage Tank (UST) site database. There are currently three 12,000-gallon USTs containing unleaded gasoline reported at the facility.</p> <p>The subject property is listed in the Recovered Government Archive Leaking Underground Storage Tank (RGA LUST) database provided by Ecology.</p> <p>The subject property is listed in the Recovered Government Archive State Hazardous Waste Facilities (RGA HWS) list provided by Ecology.</p> <p>The subject property is listed in the EDR Historical Auto Station (EDR HIST AUTO) database. This listing indicates the subject property has operated as a gas station/filling station/service station.</p> <p>The subject property is listed in the Voluntary Cleanup Program (VCP) Sites database provided by Ecology. A NFA designation has not been issued for the subject property.</p>	This represents a recognized environmental condition for the subject property.

Listing	Description	Potential Impact
Other non-ASTM Standard Listings		
ALLSITES/FINDS/ ECHO	<p>The subject property is listed in ALLSITES database provided by Ecology. This listing indicates that the subject property is listed as a local hazardous waste/contaminated site.</p> <p>The subject property is listed in the Facility Index System/Facility Registry System (FINDS) database provided by Environmental Protection Agency (EPA). The FINDS database indicates facility information and “pointers” to other sources that contain more detail.</p> <p>The subject property is listed in the Enforcement and Compliance History Information (ECHO) database provided by EPA. The ECHO database listing provides integrated compliance and enforcement information for approximately 800,000 regulated facilities nationwide.</p>	This represents a recognized environmental condition for the subject property.
UIC	The subject property is listed in the Underground Injection Wells (UIC) database. This listing indicates injections have been completed at the subject property.	This represents a recognized environmental condition for the subject property.
SPILLS	The subject property is listed in SPILLS database provided by Ecology. Limited information is provided within this database. A failed drum or container spilled an unknown amount of soil contaminated with gasoline at the subject property.	No significant environmental impact.
FINANCIAL ASSURANCE	The subject property is listed in the Financial Assurance 1 database provided by Ecology. This database contains general insurance information and indicates presence of USTs at the subject property.	No significant environmental impact.
WA MANIFEST	The subject property is listed in the WA MANIFEST database provided by Ecology, indicating presence of hazardous waste manifest data.	This represents a potential for a recognized environmental condition for the subject property.
RCRA NONGEN/NLR	The subject property is listed in the RCRA NONGEN / NLR database provided by the Environmental Protection Agency. This listing indicates the facility does not presently generate hazardous waste. The subject property has previously been listed as Conditionally Exempt Small Quantity Generator and Small Quantity Generator.	No significant environmental impact.

Contamination at the subject property was initially detected during facility upgrade activities in 2004. Delta Environmental Consultants Inc. (Delta) provided environmental oversight during upgrades to the dispenser islands and product piping. Soil samples were collected during the upgrade activities and were analyzed for TPH-G and BTEX. Analytical results revealed TPH-G and BTEX at concentrations greater than

laboratory method limits in samples from dispenser islands D-1 and D-4 and from the southern product lines. Samples collected at D-4 contained TPH-G and BTEX at concentrations exceeding cleanup levels. Samples collected at P-8, located along the product lines in the southern portion of dispenser islands, contained TPH-G at concentrations exceeding clean up levels. Impacted soils were over-excavated from underneath the former dispenser island D-4 to depths between 13 and 15 feet bgs. Confirmation samples were collected following the over excavation. The confirmation samples did not exceed laboratory reporting limits with exception of xylenes in confirmation sample D-4-13-SWW. The xylene detection at D-4-13-SWW was below cleanup levels. The impacted soil observed in sample P-8 was not over-excavated (Delta, 2005a).

A subsurface investigation was completed by Delta in 2005. The subsurface investigation consisted of installing four monitoring wells to a maximum depth of 46.5 feet bgs. The monitoring wells were completed with 2-inch schedule 40 polyvinyl chloride (PVC) piping with 0.010-inch factory slotted screen. MW-1 and MW-4 are screened from 10 to 30 feet bgs, MW-2 is screened from 25 to 45 feet bgs, and MW-3 is screened from 20 to 40 feet bgs. Eight soil samples were collected for analysis during well installation activities. The soil samples were analyzed for TPH-G, BTEX, MTBE, 1,2-Dibromoethane (EDB), 1,2-Dichloroethane (EDC), and lead. Analytical results indicated cleanup level exceedances at MW-2 for TPH-G and BTEX at 5 feet bgs. Additional benzene cleanup level exceedances for soil samples collected during installation of MW-2 were also present at 15 and 20 feet bgs. Groundwater samples were collected following completion of the monitoring wells and were analyzed for BTEX, MTBE, total lead, and dissolved lead. Cleanup level exceedances were identified for benzene and MTBE in the groundwater sample collected from MW-1. Total lead exceeded MTCA clean up levels in the groundwater sample collected from MW-3 (Delta, 2005b). Subsequently, groundwater samples were collected on a variable schedule from 2005 to 2015. Compiled groundwater sampling results are shown in Table 1 of the Closure Request and 2014/2015 Site Status Report (Arcadis, 2015) included in Appendix B.

To further characterize soil and groundwater contamination at the subject property, three soil borings were completed in February 2012 and were finished into groundwater monitoring wells MW-5, MW-6, and MW-7. During the completion of each soil boring, soil samples were field screened. Based on field screening, two to three soil samples were collected for analysis of TPH-G, diesel-range TPH (TPH-D), oil-range TPH (TPH-O), BTEX, and lead. Analytical results revealed the soil sample collected at 10 feet bgs from MW-5 exceeded method reporting limits for TPH-G, TPH-D, TPH-O, and lead; however, these results did not exceed cleanup levels. The soil sample collected at 10 feet bgs from MW-5 was non-detect for MTBE; however, the reporting limit for this analyte was above the cleanup level. The rest of the soil samples collected during the 2012 event exceeded method reporting limits for lead, these detections did not exceed cleanup levels (Arcadis, 2012). Compiled soil sampling results for the subject property are shown in Tables 2 and 3 of the of the Closure Request and 2014/2015 Site Status Report (Arcadis, 2015) included in Appendix B.

Arcadis completed a Remedial Action Plan in 2012, proposing subsurface injections as the chosen remedial approach for the subject property (Arcadis, 2012). In May 2012, two injection wells (IW-1 and IW-2) and one downgradient monitoring well (MW-8) were installed at the subject property. Two soil samples were collected during drilling activities for MW-8 and were analyzed for TPH-G, BTEX, and lead. The two soil samples, collected at 10 and 17.5 feet bgs, exceeded method reporting limits for lead; however, these detections did not exceed cleanup levels. The two soil samples did not exceed method reporting limits for TPH-G or BTEX. In August 2012, magnesium sulfate heptahydrate (MgSO₄) was injected into wells IW-1 and IW-2 to facilitate enhanced natural attenuation of hydrocarbon

constituents. The wells received 5,000 gallons each of the MgSO₄ solution. Monitoring conducted after the injection indicated that the target wells contained sufficient concentrations of MgSO₄ to sustain elevated microbial activity for enhancing the natural attenuation of petroleum hydrocarbons for a period of two months following the injection (Arcadis, 2012). Subsequent groundwater sampling in 2013 revealed that the concentrations of sulfate had returned to baseline conditions established in the February 2012 sampling event, prior to the injections (Arcadis, 2014).

To further characterize contaminants of concern (COC) concentrations in soil at the subject property, two hand-augured soil borings (HA-1 and HA-2) were completed in July 2014. HA-1 was completed to a depth of 5.5 feet, south of the dispenser islands. HA-2 was completed to a depth of 7 feet, just downgradient (within 5 feet) of monitoring well MW-2. Soil samples from HA-1 and HA-2 were analyzed for TPH-G, TPH-D, TPH-O, BTEX, MTBE, and lead. Laboratory method reporting limits were exceeded at HA-1 at depths of 4.5 to 5 feet bgs and 5 to 5.5 feet bgs for TPH-G, TPH-D, TPH-O, and lead. MTCA cleanup level exceedances of TPH-G were identified at HA-1 at 4.5 to 5 feet bgs. Benzene was not detected above the laboratory method reporting limit at 5 to 5.5 feet bgs; however, the method reporting limit is above the MTCA cleanup level. Laboratory method reporting limits were exceeded at HA-2 at a depth of 5 to 5.5 feet bgs for TPH-G, TPH-D, ethylbenzene, total xylenes, and lead. MTCA cleanup level exceedances of TPH-G were identified at HA-2 at 5 to 5.5 feet bgs. Laboratory method reporting limits were exceeded at HA-2 at a depth of 6.5 to 7 feet bgs for TPH-G, TPH-D, ethylbenzene, total xylenes, and lead. MTCA cleanup level exceedances of TPH-G were identified at HA-2 at 6.5 to 7 feet bgs. Benzene was not detected above the laboratory method reporting limit at 6.5 to 7 feet bgs; however, the reporting limit is above the cleanup level (Arcadis, 2015).

Arcadis submitted a Closure Request and 2014/2015 Site Status Report (Arcadis, 2015) presenting a request to Ecology to issue a No Further Action (NFA) determination for the subject property. The Closure Request included a COC transport evaluation in groundwater and concluded that offsite migration of groundwater exceeding MTCA cleanup levels was not likely. Ecology issued a response to the Closure Request and 2014/2015 Site Status Report on 26 April 2016. In its response, Ecology disagreed with Arcadis' conclusions that soil and groundwater at the subject property had been adequately characterized.

The most recent available groundwater data from the subject property is from the 2015 groundwater sampling event, conducted in June 2015. TPH-G cleanup level exceedances were observed in MW-1 and MW-5. Benzene cleanup level exceedance was observed in MW-1.

In a letter to Arcadis dated 19 October 2018, Ecology acknowledges that the subject property has been removed from the VCP. The letter also states removal from the VCP is required to apply to Pollution Liability Insurance Agency (PLIA) program (Ecology, 2018a). Since 2018, there has been no additional documentation regarding the subject property's cleanup status with Ecology.

Additionally, the Asarco Company operated a copper smelter in Tacoma for approximately 100 years. As a result, air pollution from the smelter settled on the surface soil of more than 1000 square miles (Ecology, 2023) of the Puget Sound basin. Regional sampling across this Tacoma smelter plume area indicates that arsenic, lead, and other heavy metals are still present in the soil as a result of this pollution. The subject property lies within the Tacoma smelter plume (Dirt Alert map³, accessed June 2023); however, arsenic levels are predicted to be below the state cleanup levels of 20 parts per million

³ Dirt Alert map - <https://apps.ecology.wa.gov/dirtalert?lat=47.273840&lon=-122.500000&zoom=11>.

(ppm) at the subject property. Soil at the subject property has been sampled for lead in the previous environmental investigations. Results of lead testing at the subject property have consistently been above laboratory reporting levels, but below cleanup levels. Arsenic and other heavy metals have been tested in soil samples from the subject property. Compiled soil sampling results for the subject property are shown in Tables 2 and 3 of the Closure Request and 2014/2015 Site Status Report (Arcadis, 2015) included in Appendix B.

5.4 NEARBY SITES

One hundred and nine locations either were listed in the environmental database report within the applicable search distances or were identified in supplemental regulatory records reviews. Due to their location with respect to the subject property (on the opposite side of a hydrogeologic barrier, distance from the site, location of the site relative to inferred groundwater flow, subsurface utilities and building levels, etc.), or their status (closed-out release, etc.), 98 of the locations are not likely to adversely affect the subject property and, therefore, are not discussed in this report. The remaining 11 locations were identified within 1/8th mile of the subject property and were listed on supplementary regulatory records or proprietary historical records compiled by EDR. The complete environmental database report and relevant records review are included in Appendix D. Listings for nearby sites identified within 1/8th mile of the subject property, are included in the table below.

Property Name & Location	Database/Record Identified	Description	Potential Impact to Subject Property
ELMOS AUTO REPAIR 2201 – 2301 EAST CHERRY STREET	EDR HIST AUTO	The address of the former businesses of Elmo’s Auto Repair and Garfield Garage and Super Service is located adjacent to the west of the subject property, in an inferred upgradient direction. This listing indicates the adjacent property has potentially operated as a gas station/filling station/service station.	This represents a data gap for the subject property.
GARFIELD CLEANERS 554 23RD AVENUE	EDR HIST CLEANER	The address of this former dry cleaner is located just east of the subject property on 23rd Avenue, in an inferred downgradient direction. This listing indicates the property has potentially operated as a dry cleaner or laundromat.	This represents a data gap for the subject property.
CALDERON D Z 548 23RD AVENUE	EDR HIST AUTO	The address of this former auto service station is located just east of the subject property on 23rd Avenue, in an inferred downgradient direction. This listing indicates the property has potentially operated as a gas station/filling station/service station.	This represents a data gap for the subject property.
SINGLETARY S TEXACO SERVICE 555 23RD AVENUE	EDR HIST AUTO	The address of this former service station is located approximately 84 feet south of the subject property, in an inferred downgradient location. This listing indicates the property has potentially operated as a gas station/filling station/service station.	This represents a data gap for the subject property.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
MAIN DYE WORKS 2210 EAST CHERRY	EDR HIST CLEANER	This address of this former business is located approximately 100 feet north of the subject property, in an inferred upgradient location. This listing indicates the property has potentially operated as a dry cleaner or laundromat.	This represents a data gap for the subject property.
COSMOPOLITAN CLEANERS AND HATTERS 702 – 704 23rd AVENUE	EDR HIST CLEANER	The address of this former dry cleaner is located approximately 140 feet north of the subject property, in an inferred upgradient direction. This listing indicates the property has potentially operated as a dry cleaner or laundromat.	This represents a data gap for the subject property.
LESKIN ISAAC 2307 EAST CHERRY	EDR HIST CLEANER	This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. The EDR report presents this listing as 153 feet north from the subject property and at an inferred upgradient direction.	This represents a data gap for the subject property.
CITY OF SEATTLE PARKS AND REC GARFIELD CC 2323 EAST CHERRY STREET	ALLSITES, SPILLS, MANIFEST	This property is listed in the ALLSITES, SPILLS, and MANIFEST databases. The ALLSITES and MANIFEST listings indicate this property has generated hazardous waste. The SPILLS listing indicates wastewater was spilled to an impermeable surface in 2015. The EDR report presents this listing as 235 feet east from the subject property and at an inferred upgradient direction.	No significant environmental impact.
DUNSMORE CHAS L 519 22D AVENUE	EDR HIST AUTO	This property is listed in the EDR HIST AUTO database. This listing indicates the property has potentially operated as a gas station/filling station/service station. The EDR report presents this listing as 330 feet south from the subject property and at an inferred downgradient direction.	No significant environmental impact.
METER MAID INC 431 23RD AVENUE	EDR HIST CLEANER	This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. The EDR report presents this listing as 550 feet south from the subject property and at an inferred downgradient direction.	No significant environmental impact.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
SEATTLE SCH DIST NOVA ALTERNATIVE HIGH S 2410 EAST CHERRY STREET	ALLSITES, RCRA NONGEN / NLR, FINDS, ECHO, ASBESTOS	This property is listed in several databases indicating it has generated hazardous waste. The EDR report presents this listing as 554 feet north from the subject property and at an inferred upgradient direction.	No significant environmental impact.

5.5 VAPOR MIGRATION

The ASTM E1527-21 Standard states that "for the purposes of this practice, "migrate" and "migration" refer to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." Thus, this section specifies whether we perceive a risk of vapor migration to the subject property.

To assess a vapor migration risk, Haley & Aldrich conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated VOC contamination located, specifically, the edge of the contamination plume, within 100 feet of the subject property boundary; or
2. Off-site properties have a documented volatile petroleum hydrocarbon (VPH) contamination plume within 30 feet of the subject property boundary.

Based on our records review, it is unlikely that a potential source of vapor migration currently exists beneath the subject property. There are several historic gas station/filling station/service stations and dry cleaner/laundromats in the area; however, these properties are not listed as contaminated in the Ecology database.

5.6 ENVIRONMENTAL LIEN/ACTIVITY USE LIMITATIONS

EDR obtained chain-of-title information up to 1980 for the subject property to evaluate for the presence of environmental liens and/or activity use limitations associated with the subject property.

Environmental liens associated with the subject property were not identified. Activity use limitations associated with the subject property were identified. The chain-of-title information is included in Appendix D.

6.0 Subject Property Reconnaissance and Key Personnel Interview(s)

A site visit to observe subject property conditions was conducted by Zach Stephens of Haley & Aldrich on 30 May 2023. Access to the subject property was not provided by the owner or tenant.

Due to lack of access, Haley & Aldrich personnel did not observe interior areas of the subject property building. Haley & Aldrich observed the exterior portions of the subject property, including the property boundaries. Adjoining properties were observed from public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the subject property or adjoining properties occurred during our site visit.

An interview with a key site manager was not performed in conjunction with the site visit. Per the ASTM Standard, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information to interview past owners and/or operators at the subject property. Contact information for the subject property owner was available online and attempts to reach a key site manager were made on 23, 24, and 25 May 2023. Based upon historical data collected from other sources, this is not expected to adversely impact the results of this assessment.

The findings of the site visit are discussed below. Subject property photographs are included in Appendix E.

ASTM E1527-21 Standard Section 10.8 requires that, prior to the site visit, the current subject property owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Documents were not provided.

6.1 CURRENT USE OF THE SUBJECT PROPERTY

The subject property currently is in use as an active ARCO gas station. Along with the petroleum dispenser islands, there is an associated ampm convenience store located on the subject property.

6.2 GENERAL DESCRIPTION OF STRUCTURES

There is a single-story structure located on the subject site, approximately 3,400 square feet in size. Due to our inability to perform reconnaissance on the interior of the building, no further description of the building is possible.

6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

From public thoroughfares, a limited observation of petroleum products and/or hazardous materials was conducted. No petroleum products or hazardous materials were observed from public thoroughfares; however, the presence of multiple USTs was noted.

Evidence (fill ports and fuel dispensers) of the following bulk fuel storage tanks was observed:

Tank #	AST/ UST	Contents/ Capacity	Location ¹	Use
1	UST	Petroleum		Fuel for dispenser islands
2	UST	Petroleum		Fuel for dispenser islands
3	UST	Petroleum		Fuel for dispenser islands
Notes:				
1. Approximate tank locations are shown on Figure 2.				

6.4 OTHER SUBJECT PROPERTY OBSERVATIONS

The following table summarizes other observations of the subject property made at the time of the site visit. As previously mentioned, limited observations were made of the interior of any buildings located on the subject property, as well as select outdoor areas on the subject property. As a result, several portions of the table below are unable to be commented on at this time.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	Yes	Assumed yes.
Nearest Drinking Water Source	No	
Sewage Disposal System	Yes	Assumed yes.
Septic System	N/A	Unable to evaluate for presence on site.
Unidentified Storage Containers	N/A	Unable to evaluate for presence on site.
Wastewater Discharge	No	
Stormwater Discharge	Yes	Multiple stormwater drains located on site.
Odors	N/A	Unable to evaluate for presence on site.
PCBs Associated with Electrical or Hydraulic Equipment	N/A	Unable to evaluate for presence on site.
Elevators (Traction or Hydraulic)	No	
Vehicle Maintenance Lifts	No	
Emergency Generators	N/A	Unable to evaluate for presence on site.
Sprinkler System Pumps	N/A	Unable to evaluate for presence on site.
Heating System	N/A	Unable to evaluate for presence on site.
Cooling System	N/A	Unable to evaluate for presence on site.
Stains or Corrosion on Floors, Walls, or Ceilings	N/A	Unable to evaluate for presence on site.
Floor Drains	N/A	Unable to evaluate for presence on site.
Sumps	N/A	Unable to evaluate for presence on site.
Catch Basins	N/A	Unable to evaluate for presence on site.
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	No	
Stressed Vegetation	No	
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Monitoring Wells	Yes	
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	No	
Abandoned Wells	No	
Notes:		
1. N/A items are those that were not observed or reported and/or not anticipated to be present given the nature of the subject property (e.g., building features not present on an undeveloped property).		

6.5 ADJOINING PROPERTY OBSERVATIONS

East Cherry Street is located to the north of the subject property, followed by multiple storefronts including a barber shop, a café, and a florist shop. To the east of the subject property is 23rd Avenue, followed by Garfield Community Center. A residence and learning center is located to the south of the subject property. Several small residences are located to the west of the subject property.

6.6 USER RESPONSIBILITIES

The AAI Rule requires that the user of the report consider the following:

- Whether the user has specialized knowledge about previous ownership or uses of the subject property that may be material to identifying RECs;
- Whether the user has determined that the subject property’s title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- Whether the user is aware of commonly known or reasonably ascertainable information about the subject property including whether the presence of contamination is likely on the subject property and to what degree it can be detected; and
- Whether the user has prior knowledge that the price of the subject property has been reduced for environmentally-related reasons.

While such information is not required to be provided by the Environmental Professional(s), the information can assist the Environmental Professional in identifying RECs. The AAI Final Rule (Code of Federal Regulations Title 40 [40 CFR] Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability.

Haley & Aldrich was provided with a completed user responsibilities questionnaire, which is attached in Appendix E.

7.0 Findings and Opinions

7.1 SIGNIFICANT DATA GAPS

Our ability to identify and evaluate RECs at the subject property is conditioned upon [significant data gaps](#) identified as part of this Phase I. The ASTM E1527-21 Standard defines a significant data gap as a data gap that affects the ability of the [Environmental Professional](#) to identify a REC.

We identified the following significant data gaps in association with this Phase I.

- 2201 East Cherry Street is located adjacent to the subject property to the west in an inferred upgradient direction. This adjacent property is listed in the EDR (Environmental Data Resources, LLC.) historical auto service (HIST AUTO) database. This listing indicates the adjacent property has potentially operated as a gas station/filling station/service station. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 2301 East Cherry Street is presented in the EDR report as 32 feet east of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST AUTO database. This listing indicates the adjacent property has potentially operated as a gas station/filling station/service station. Due to its proximity and historical operations, this represents a data gap for the subject property.
- 554 23rd Avenue is presented in the EDR report as 48 feet southeast of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity and historical operations, this represents a data gap for the subject property.
- 548 23rd Avenue is presented in the EDR report as 48 feet southeast of the subject property in an inferred downgradient direction. This property is listed in the EDR HIST AUTO database. This listing indicates the nearby property has potentially operated as a gas station/filling station/service station. Due to its proximity and historical operations, this represents a data gap for the subject property.
- 2210 East Cherry Street is presented in the EDR report as 100 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 702 and 704 23rd Avenue is presented in the EDR report as 127 to 143 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.
- 2307 East Cherry Street is presented in the EDR report as 153 feet north of the subject property in an inferred upgradient direction. This property is listed in the EDR HIST CLEANER database. This listing indicates the property has potentially operated as a dry cleaner or laundromat. This represents a data gap for the subject property. Due to its proximity, historical operations, and inferred upgradient location, this represents a data gap for the subject property.

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The following RECs listed below were identified in connection with the subject property.

REC #1: Historical operation of subject property as a gasoline station resulting in known petroleum hydrocarbons in soil and groundwater at concentrations exceeding MTCA Method A cleanup levels (cleanup levels).

Contamination at the subject property was initially detected during facility upgrade activities in 2004. The most recent available groundwater data from the subject property is from a 2015 groundwater sampling event. TPH-G cleanup level exceedances were observed in monitoring wells MW-1 and MW-5. A benzene cleanup level exceedance was observed in monitoring well MW-1. Soil samples collected at the subject property have historically contained cleanup level exceedances for TPH-G, BTEX, and MTBE.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines a CREC as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject property.

7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

HRECs were not identified in connection with the subject property.

7.5 DE MINIMIS CONDITIONS

The ASTM E1527-21 Standard defines a *de minimis* condition as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The ASTM E1527-21 Standard notes that conditions determined to be *de minimis* are not recognized environmental conditions.

De minimis conditions were not identified in connection with the subject property.

8.0 Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E1527 of 665 23rd Avenue, Seattle, Washington, the subject property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

REC #1: Historical operation of subject property as a gasoline station resulting in known petroleum hydrocarbons in soil and groundwater at concentrations exceeding MTCA Method A cleanup levels (cleanup levels).

Refer to Section 7.2, above, for our opinion regarding the RECs listed above.

To address the RECs listed above, we recommend the following:

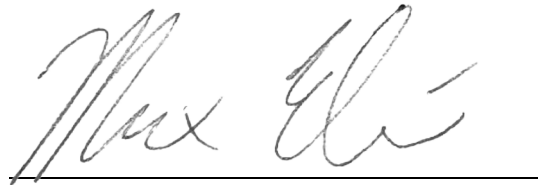

- Additional soil and groundwater characterization as outlined by Ecology in their response to the Closure Request and 2014/2015 Site Status Report completed by Arcadis U.S. Inc., (Arcadis) (Ecology, 2016b).

9.0 Environmental Professional Certification

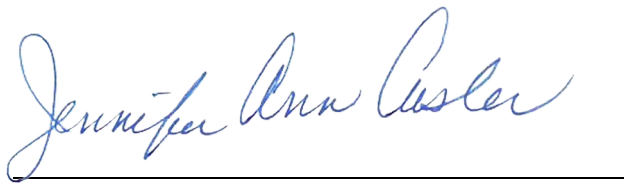

The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of [Environmental Professional](#) as defined in §312.10 of 40 CFR Part 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Max Elias
Environmental Scientist

Jennifer Casler, P.G.
Senior Associate Geologist

10.0 Credentials

This Phase I report was prepared by Max Elias, under the direct supervision of Jennifer Casler, who served as the [Environmental Professional](#)(s) for this project. Qualification information for the project personnel is provided below.

Max Elias received his degree in environmental science and geology from the University of Oregon and has nine years of environmental consulting experience on a variety of environmental projects. Max has provided leadership and field support in natural resources habitat restoration and fire management, and managed staff in field work for underground storage tank decommissioning, soil sampling, and groundwater investigations. Max has completed a number of Phase I ESAs in the Portland, Oregon area.

Jennifer Casler is a Registered Geologist in Oregon and Washington and has over 30 years of experience focused on environmental due diligence, environmental and energy compliance, and brownfields redevelopment. Jennifer's experience includes investigation, evaluation, permitting, and research of a variety of traditional and renewable energy facilities and linear conveyances; government land trades; land development and redevelopment projects; trust and in-fee tribal lands; pulp and paper mills; steel mills; lumber mills and value-added wood and paper products; metals and plastics manufacturing; food processing plants; high-tech industries; nurseries and greenhouses; and undeveloped properties.

11.0 Glossary and Other Descriptions

11.1 GLOSSARY

All Appropriate Inquiry (AAI) - that inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 U.S.C. §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C. §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

Business Environmental Risk - a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Controlled Recognized Environmental Condition (CREC) - a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Significant Data Gap - a data gap that affects the ability of the Environmental Professional to identify a recognized environmental condition.

De Minimis Conditions - a condition related to a release that generally does not present those conditions which “do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” The ASTM E1527-21 Standard notes that conditions determined to be *de minimis* are not recognized environmental conditions.

Environmental Professional - a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

Historical Recognized Environmental Condition (HREC) - a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls. A historical recognized environmental condition is not a recognized environmental condition.

Key Site Manager - the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material Threat - an obvious threat which is likely to lead to a release and that, in the opinion of the Environmental Professional, would likely result in impact to public health or the environment.

Orphan Site - (not ASTM E1527-21 definition) - sites that could not be mapped due to poor or inadequate address information.

Recognized Environmental Condition (REC) - (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs.

11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix D. Those databases required by the E1527-21 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).
2. **Delisted NPL Sites:** The Delisted NPL is a list of formal NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.
3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.
4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.
5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.
6. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.
7. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.
8. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.
9. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.

10. **State and Tribal Equivalent NPL/CERCLIS Sites:** The ASTM E1527-21 Standard requires searching “State and Tribal Equivalent NPL Sites.” In Washington, the equivalent NPL is the Hazardous Sites List (HSL), which is maintained by Ecology.
11. **State and Tribal Equivalent CERCLIS Sites:** The ASTM E1527-21 Standard requires searching “State and Tribal Equivalent CERCLIS Sites.” In Washington, the equivalent CERCLIS is the CSCSL, which is maintained by Ecology.
12. **State and Tribal Registered Storage Tanks:** Ecology maintains a list of aboveground and underground storage tanks.
13. **State and Tribal Landfills and Solid Waste Disposal Sites:** Ecology maintains a list of regulated waste disposal sites.
14. **State and Tribal Leaking Storage Tanks:** Ecology maintains a list of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an Underground or Aboveground Storage Tank listed as the source.
15. **State and Tribal Institutional Controls/Engineering Controls:** Ecology maintains a list of sites with Institutional or Engineering controls in place.
16. **State and Tribal Voluntary Cleanup Sites:** Ecology maintains a list of Voluntary Cleanup sites (VCP).
17. **State and Tribal Brownfield Sites:** Ecology maintains a list of Brownfield sites which includes properties where redevelopment or reuse may be compromised by the presence or presumed presence of hazardous materials or petroleum.
18. **UIC:** Ecology maintains a listing of underground injection wells.
19. **FINDS:** The Facility Index System/Facility Registry System (FINDS) indicates facility information and “pointers” to other sources that contain more detail.
20. **Washington ALLSITES:** The Facility/Site Identification System (ALLSITES) listing indicates that Ecology has information on facilities and sites of interest.
21. **ECHO:** The Enforcement and Compliance History Information (ECHO) listing provides integrated compliance and enforcement information for approximately 800,000 regulated facilities nationwide.

Appendix A
Phase I Environmental Site Assessment Limitations and
Haley & Aldrich Proposal Dated 3 March 2023

APPENDIX A

Haley & Aldrich, Inc. Limitations

Environmental site assessment (Phase I Environmental Site Assessment) reports prepared by Haley & Aldrich are for the sole and exclusive use of its Client. Haley & Aldrich represents that the Phase I Environmental Site Assessment was prepared in accordance with the ASTM International (ASTM) Standard E1527-21 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM E1527-21). The findings, opinions, conclusions, and information contained in the ASTM E1527-21 Phase I Environmental Site Assessment are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E1527-21 Phase I Environmental Site Assessment was completed.

All users of this E1527-21 Phase I Environmental Site Assessment are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms and Conditions, and Limitations for this ASTM E1527-21 Phase I Environmental Site Assessment. The findings, opinions, conclusions, and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E1527-21 Phase I Environmental Site Assessment was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E1527-21 Phase I Environmental Site Assessment is prepared for the exclusive use of Haley & Aldrich's client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Haley & Aldrich's client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E1527-21 Phase I Environmental Site Assessment. Use of this ASTM E1527-21 Phase I Environmental Site Assessment by any person or entity, including by Haley & Aldrich's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E1527-21 Phase I Environmental Site Assessment is adequate for such other use. Use of this ASTM E1527-21 Phase I Environmental Site Assessment by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E1527-21 Phase I Environmental Site Assessment by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E1527-21 Phase I Environmental Site Assessment only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E1527-21 Phase I Environmental Site Assessment report and the proposal and its Attachments, Terms and Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich's reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Haley & Aldrich's receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley &

Aldrich's ASTM E1527-21 Phase I Environmental Site Assessment for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agree(s) to bind each of its respective successors and assigns to the aforementioned Terms and Conditions.

This ASTM E1527-21 Phase I Environmental Site Assessment reflects subject property conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E1527-21 Phase I Environmental Site Assessment preparation. The passage of time may result in significant changes in subject property conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E1527-21 Phase I Environmental Site Assessment. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E1527-21 Phase I Environmental Site Assessment is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E1527-21 Phase I Environmental Site Assessment preparation. Haley & Aldrich makes no express or implied representation that the information contained in the E1527-21 Phase I Environmental Site Assessment has continued viability after 180 days of the ASTM E1527-21 Phase I Environmental Site Assessment's completion date, and any use or reliance on the ASTM E1527-21 Phase I Environmental Site Assessment after 180 days of the ASTM E1527-21 Phase I Environmental Site Assessment's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E1527-21 Phase I Environmental Site Assessment. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

Shoreline, Washington 98133

Attention: Dale Myers, Formal LUST Site Manager

Subject: Proposal for Phase I Environmental Site Assessment
ARCO 5445
665 23rd Avenue
Seattle, Washington

Haley & Aldrich, Inc. (Haley & Aldrich) is pleased to submit this proposal to the Washington State Department of Ecology (Ecology) for environmental due diligence services at the below referenced property (Property).

Site Name: ARCO 5445

Site Address: 665 23rd Avenue, Seattle, Washington 98122

Facility Site ID (FSID): 76386549

Cleanup Site ID (CSID): 10446

This proposal presents Haley & Aldrich's scope of services and cost for performing a Phase I environmental site assessment (Phase I) on the Property.

Project Understanding

We understand that Ecology is requesting a Phase I and environmental data status update on the referenced Property to assess the current environmental conditions and liabilities of the Property.

The Property is comprised of one King County Tax Parcel (9126101805). The Property is approximately 0.50 acre in size and is currently operated as a branded ARCO gas station.

Proposed Scope of Services

Our proposed scope of services for conducting a Phase I focuses on providing environmental information on the Property and identifying recognized environmental conditions (RECs) that may present a potential liability. Our scope of services for completing the Phase I is comprehensive and in general conformance with the All Appropriate Inquiries (AAI) Final Rule in 40 Code of Federal Regulations (CFR) 312 and the ASTM International (ASTM) Standard Practice for Environmental Site Assessments (ASTM E1527-21).

To complete the Phase I, our scope of services will include a description of the work to be performed, deliverables, assumptions, and schedule. Costs for each task are summarized below and provided in Table 1 (attached).

- Task 1 – Project Management
- Task 2 – Ecology’s Environmental Information Management (EIM) Database Review, Records Review, Site Reconnaissance, and Interviews
- Task 3 – Phase I Environmental Site Assessment (ESA) Evaluation and Reporting

To comply with the ASTM standard and the federal AAI rule, we assume you will provide any specialized knowledge you may have of the Property and the results of a search for any environmental cleanup liens against them. The newest ASTM standard requires the user to search recorded land-title records and other records for environmental liens and activity and use limitations (AULs). Our Phase I cost in this proposal **does** include an environmental lien or AUL search.

TASK 1 – PROJECT MANAGEMENT

This task will include one initial on-site meeting with the Ecology Site Manager at the beginning of the project. Ongoing project management will include preparation of status reports and submittal to Ecology.

Haley & Aldrich will provide monthly tracking of project schedule, budget, scope of services, and deliverables. This includes timely notification to Ecology’s Site Manager and Contract Officer of the following:

- if additional staff hours are needed;
- when 75 percent of the budget has been spent; and
- any changes to scope, schedule, or budget.

Deliverable: Progress reports will be generated and accompany each monthly invoice if work specific to this task has been performed and if a deliverable as outlined below is not available for a billing cycle.

TASK 2 – ECOLOGY’S EIM DATABASE REVIEW, RECORDS REVIEW, SITE RECONNAISSANCE, AND INTERVIEWS

Haley & Aldrich will review analytical data associated with the Property that was uploaded and available in Ecology’s EIM database. We will summarize the data available in the Phase I report (Task 3).

Haley & Aldrich will search historical background information, the search will include acquiring the following materials for the Property, as available:

- chain of title (if provided by owner);
- aerial photographs;
- Sanborn fire insurance maps;
- county and municipal tax records;
- Puget Sound Regional Archives records;
- building department records;
- interviews with knowledgeable persons;
- city street directories and atlases; and
- Ecology Property documents and reports, including reviewing of available hard copies in Ecology Central Records and electronic documents.

We will contract with Environmental Data Resources Inc. (EDR), or an equivalent database company to screen and review federal and state regulatory agency databases for the Property and nearby sites. EDR will search available files for information that suggests the potential for environmental concerns affecting the Property. Our review will be strictly limited to the information provided to us by agency databases.

Haley & Aldrich will also consult with the Department of Archaeology and Historic Preservation (DAHP) to determine if the Property is of any archaeological or historic importance.

We will conduct a site reconnaissance to corroborate information gathered during records review, and to identify visible signs of potential environmental concerns on or adjacent to the Property. We understand you will arrange for us to have access to the Property. We also understand you will provide an appropriate property owner representative(s) for our interview who is knowledgeable about the Property. We will take photographs and field notes to document our observations.

Our site reconnaissance will include visually checking for signs of spills, stained areas, evidence of current or former underground storage tanks (USTs), oil sheens in drains, and any anomalies. Because USTs, piping, and other related elements are subsurface structures, they may not be visible from the surface; therefore, will not be checked.

As necessary, we may contact public utilities departments (PUDs) by telephone to inquire whether on-site PUD-owned pole- or pad-mounted transformers or electrical switching equipment currently or previously contained polychlorinated biphenyls. We will request other information such as records of leaks, spills, fluid replacement, and fires if it is available, and will evaluate it for potential impact on the Property.

We will also observe the outdoor areas of adjoining sites to identify obvious potential environmental concerns that would be expected to affect the Property. We will conduct a walk-by reconnaissance in the immediate area to assess land use around the Property.

Results of our records review, site reconnaissance, and interviews will be summarized in the Phase I report (Task 3).

TASK 3 – PHASE I EVALUATION AND REPORTING

We will:

- prepare one summary report to present the information collected from Tasks 1 and 2, including the EIM database summary, communications with DAHP, years of operation of the service station, and entity who installed the USTs and fueling lines;
- summarize conceptual site model elements including physiographic setting, hydrogeology, ecological and land use setting, surface and storm water features, water supply, and contaminant source and history;
- evaluate the information gathered for indications of existing and historical environmental concerns on the Property or on adjoining sites;
- discuss our findings and provide recommendations for a Phase II, if warranted, depending on whether we identify specific potential areas of environmental concern;
- summarize RECs, controlled RECs, historical RECs, and *de minimis* conditions;
- include figures showing the Property and pertinent on-site and off-site environmental features, color photographs, and other relevant information acquired during the Phase I activities; and
- provide copies of historical aerial and site reconnaissance photographs, database report, and regulatory agency records, as applicable, as appendices.

Deliverables: The draft report will be provided to Ecology for review approximately 8 weeks after notice to proceed. We will finalize the report 1 week after receiving comments back from Ecology.

Schedule

We anticipate that this work assignment will be conducted from March through June 2023. Upon receipt of Ecology's notice to proceed, Haley & Aldrich will begin completing the services outlined in this proposal.

Estimated Cost

We will perform the proposed scope of services for the Property on a time-and-materials basis. Our estimated cost is \$29,402, which includes an environmental lien and AUL search. A breakdown of the costs is provided in Table 1. Our services will be performed in general accordance with the standard of care of our profession. We will use the Terms and Conditions agreed upon from Contract No. C1900043, dated 1 October 2018 and rates agreed upon from Amendment No. 7, dated 16 November 2022.

Washington Department of Ecology

3 March 2023

Attention: Mr. Michael Condon

Subject: Environmental Oversight during Retail Facility Upgrade Activities
ARCO Facility No. 5445
665 23rd Avenue
Seattle, WA
Delta Project No.: G0CNVRR51

RECEIVED
AUG 02 2010
DEPT. OF ECOLOGY

Dear Mr. Condon:

Delta Environmental Consultants, Inc. (Delta) was retained by Remediation Management (RM), a BP West Coast Products, LLC (BP) affiliated company to conduct environmental oversight during facility upgrade activities at ARCO Facility No. 5445 (hereinafter referred to as "subject property"). The subject property is located at 665 23rd Avenue, Seattle, Washington (Figure 1). As part of environmental oversight activities, Delta collected soil samples from beneath the dispenser islands, beneath the product distribution piping and from an over-excavated area during facility upgrade activities conducted on July 9 and 13, 2004. This letter summarizes the field activities, the analytical results of the soil samples, and the disposal of excavated soils.

Joe Hall Construction (JHC) of Fife, Washington, was contracted by BP to complete the dispenser island and product distribution piping upgrades at the subject property. Prior to soil sampling activities, JHC removed the concrete and asphalt surface material as well as the pea gravel and fill material that had been utilized to backfill the product piping. This fill material was stockpiled on-site. There was no visual or other evidence of potential contamination (e.g., discoloration, odor, or evidence of staining) on the fill material.

On July 9, 2004, Delta collected one soil sample from beneath three of the dispenser islands, two soil samples from beneath dispenser island four (DP-4) and two soil samples from beneath the removed product distribution piping. Based on field observations, soil samples were collected utilizing a backhoe to remove a bucket full of soil from the desired sampling depth and location. A representative soil sample was taken from the soil in the middle of the bucket, away from the metal sides of the bucket. Surface soil was not incorporated into the sample. The samples were field screened using the headspace method. Soils were placed, with a minimum of handling and atmospheric exposure, in clean Zip-Lock plastic bags. These bags were filled to half to two-thirds capacity and then sealed tightly. Soils in the bags were then gently agitated to facilitate the break-up of any lumps and allowed to sit for approximately 10 minutes prior to analyzing the air

A member of:

above the soil in the bag (headspace). The bagged soil samples were screened for the presence of volatile organic compounds (VOCs) by inserting the probe of a Thermo 580B Photoionization Detector (PID) equipped with a 10.6 eV lamp, through the seal into the headspace of the plastic bag. The PID was calibrated using 100 parts per million (ppm) isobutylene gas. The maximum vapor concentrations were recorded for each soil sample collected. Soil sample locations are shown on Figure 2. Ground water was not encountered during the excavation activities.

All soil samples were labeled, transported on ice, and submitted to North Creek Analytical, Inc. (NCA) of Bothell, Washington, under proper chain-of-custody documentation. The soil samples were submitted for 24-hour turn-around and analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), methyl tert-butyl ether (MTBE) by Environmental Protection Agency (EPA) Method 8021B, total petroleum hydrocarbon-gasoline range (TPH-Gx) by Northwest Method for gasoline range hydrocarbons (NWTPH-Gx) and total lead by EPA Method 6020. Select soil samples were also analyzed for total petroleum hydrocarbons diesel range (TPH-Dx), total petroleum hydrocarbons-lube oil range (TPH-O) by Northwest Method for diesel-range and lube oil range hydrocarbons (NWTPH-Dx) and volatile petroleum hydrocarbons (VPH) by Washington Department of Ecology (Ecology) Method for VPH.

Laboratory analytical results indicated that the soil samples collected from the northern dispenser islands (D-1 and D-4) and the southern product lines contained petroleum hydrocarbon concentrations above the laboratory reporting limits (Table 1). Based on the analytical results, the subject property was reported to Ms. Tracy Walters of Ecology and Environmental Report Tracking System (ERTS) No. 545079 was assigned to the subject property. Based on the analytical results and field-screening with the PID, Delta directed the over-excavation of hydrocarbon-impacted soil on July 13, 2004, from under the former northeastern dispenser island (D-4). Delta collected three confirmatory soil samples (D-4-15.0, D-4-13.0-SWW, and D-4-13.0-SWE) from the vertical and lateral extent of the over-excavation to verify that all of the hydrocarbon-impacted soil had been removed. Soil sample locations and the limits of excavation are shown on Figure 3. Laboratory results indicated that the confirmatory soil samples collected after over-excavation activities did not contain hydrocarbon concentrations above the laboratory reporting limits with the exception of xylenes in sample D-4-13.0-SWW. Ground water was not encountered during the over-excavation activities. Copies of the laboratory analytical reports are attached.

Delta submitted the analytical results and a Site Information Sheet to TPS Technologies, Inc. (TPS) of Tacoma, Washington, for soil disposal profiling. On July 14 and 15, 2004, JHC transported 40.86 tons of soil to the TPS Lakewood disposal facility for thermal treatment and disposal. The ~41 tons of soil transported to TPS was removed from the subject property as a result of over-excavation of impacted soil as directed by Delta. All soils excavated from the subject property were transported and disposed of at TPS. The TPS Soil Recycling Customer Job Report and TPS Technologies Soil Recycling Manifests documenting the disposal of the soil are attached.

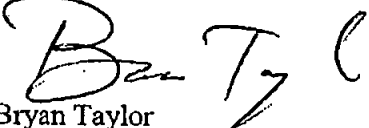

Delta appreciates the opportunity to provide services to BP. If you have any questions, or if you require any additional information on this project, please contact Bryan Taylor at (425) 450-9565 or Markham Hurd at (425) 450-7726.

Sincerely,

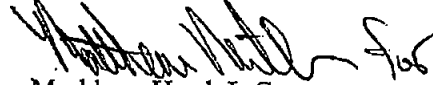

DELTA ENVIRONMENTAL CONSULTANTS, INC.

1.0 INTRODUCTION

1.1 Purpose and Scope of Work

Delta Environmental Consultants, Inc. (Delta), was retained by Remediation Management (RM), a BP West Coast Products, LLC (BP) affiliated company to complete a subsurface investigation at ARCO Facility No. 5445 located at 665 23rd Avenue in Seattle, Washington (hereinafter referred to as "subject property"). The purpose of this investigation was to assess the soil and ground water conditions with respect to petroleum hydrocarbons on the subject property.

The subsurface investigation scope of work included:

- Preparing a Site-Specific Health and Safety Plan;
- Identifying subsurface utilities in the vicinities of the proposed drilling locations and coordinating drilling activities;
- Advancing four soil borings after clearing each location to five feet below ground surface (bgs) using air-knife technology with a vacuum truck;
- Collecting soil samples and submitting the samples for quantitative hydrocarbon analyses;
- Completing the four borings as ground water monitoring wells;
- Collecting ground water samples and submitting the samples for quantitative hydrocarbon analyses;
- Surveying the top of casing elevations of the monitoring wells;
- Interpreting the data obtained; and
- Preparing this report.

1.2 Site Description

The subject property is currently an active Atlantic Richfield Company retail gasoline facility located at the southwest corner of the intersection of 23rd Avenue and East Cherry Street in Seattle, Washington (Figure 1). The site vicinity is a mix of commercial, residential and retail land uses. The site elevation is approximately 100 feet above mean sea level and the topography of the site slopes slightly to the East. Lake Washington is the nearest surface body of water, located approximately 0.8 miles east of the subject property.

Site features include; the station building, four dispenser islands under a single canopy, three underground storage tanks (USTs) and associated product dispensing components. The station building is located in the northwest portion of the site, the USTs and product dispensers are located in the central portion of the site. The surface of the site is asphalt and concrete paved with some landscaped areas around the perimeter.

1.3 Regional Hydrogeologic Setting

The site is situated in the lowlands of the Puget Sound basin in western Washington. The Puget Sound is a north-south trending trough between the Olympic Mountains to the west and the Cascade Mountains to the east. Elevation in the lowlands ranges from sea level up to several hundred feet. The topography is dominated by north-south trending valleys and low, nearly flat-topped highlands cut by streams. The Puget Sound occupies a large part of the western portion of the basin, and lakes and streams occur frequently throughout the area.

Surficial geology is dominated by Pleistocene glacial alluvium with recent alluvium in river floodplains and mouths. Pleistocene sediments are typically well-compacted beds of very dense till interbedded with sands, silts and gravels with occasional lacustrine deposits. Beds of till are often several meters thick containing frequent discontinuous "lenses" of more permeable material. Perched ground water frequently occurs in the lenses with larger aquifers occupying sandy strata overlying less permeable till or silt deposits.

2.0 PROJECT ACTIVITIES

2.1 Drilling and Soil Sampling

The subsurface investigation involved advancing a total of four soil borings to a maximum depth of 46.5 feet below ground surface (bgs). The borings were completed as ground water monitoring wells MW-1 through MW-4. The locations of the monitoring wells are presented on the Site Map (Figure 2).

Cascade Drilling, Inc. (Cascade) of Woodinville, Washington, completed the soil borings and well installations. Cascade advanced the borings using a truck-mounted CME-75 drill rig with 4.25-inch diameter (ID) hollow-stem augers on September 7, 2005. The hollow-stem augers were steam cleaned prior to advancing each boring. The 2.5-inch inside-diameter ID soil sampler was washed with soap and water followed by a clean water rinse before each use. A Delta geologist observed and logged the borings using the Unified Soil Classification System. Discreet soil samples were collected from each boring at approximately five-foot intervals using Environmental Protection Agency (EPA) Method 5035A sampling techniques.

After collection, each soil sample was field-screened for the presence of volatile organic compounds (VOCs) with a photo ionization detector (PID) to facilitate selecting representative soil samples for chemical analysis. A total of eight soil samples were selected and submitted to North Creek Analytical, Inc. (NCA) of Bothell, Washington, for quantitative hydrocarbon analysis.

The field procedures followed during the investigation are provided in Appendix A. A Predrilling/Subsurface Checklist for Intrusive Field Work and boring logs describing soil horizons, sample recovery and PID screening values are presented in Appendix B.

2.2 Monitoring Well Installation and Survey

The four soil borings were completed as ground water monitoring wells MW-1 through MW-4 on September 7, 2005. Upon completion of drilling, 2-inch ID schedule 40 PVC casing with 0.010-inch factory slotted screen was inserted into the hollow stem auger and the auger was slowly retracted from the boring. The well screen was placed across the saturated zone in each well extending from 10 to 30 feet bgs in MW-1 and MW-4, from 25 to 45 feet bgs in MW-2 and from 20 to 40 feet bgs in MW-3. The annular space was back-filled with graded 2x12 silica sand. The sand pack was placed across the entire screened interval, extending approximately two feet above the top of the screen in wells MW-1 through MW-4. The annular space of each well was then sealed with hydrated bentonite chips to approximately two feet bgs. A plug-type locking device and waterproof monument set in concrete were installed at the top of each monitoring well.

A Cascade representative developed monitoring wells MW-1, MW-2 and MW-4 on September 7, 2005 using a down well pump. A Delta representative developed MW-3 on September 12, 2005 by hand-bailing ground water from the well with a disposable polyethylene bailer. Monitoring well development procedures consisted of removing ground water from the wells until it became translucent or transparent, or until ten casing volumes of ground water had been removed. A well development data sheet is included in Appendix B. The decontamination and well development water were temporarily stored on-site in 55-gallon drums labeled non-hazardous. The drummed water was then treated through activated carbon and discharged to an on-site planter. On October 10, 2005, a Delta geologist surveyed the top of casing (TOC) elevations for wells MW-1 through MW-4 relative to an arbitrary site datum. The TOC well elevations are shown on the boring logs in Appendix B and on the monitoring well survey form in Appendix B.

2.3 Ground Water Sampling

On September 13, 2005, a Delta representative collected ground water level measurements and collected ground water samples from monitoring wells MW-1 through MW-4. Delta field personnel visually checked for the presence of LPH or hydrocarbon sheen by removing a small amount of ground water with a clear disposable polyethylene bailer before purging and sampling.

No LPH or hydrocarbon sheen was detected in the monitoring wells. The wells were then purged by removing a minimum of three well volumes of water. After the wells had recovered to at least 80% of the static water level, ground water samples were collected and submitted to NCA for quantitative chemical analysis. The well monitoring and sampling field forms are included in Appendix B.

3.0 PROJECT RESULTS

3.1 Subsurface Lithologic Conditions

During drilling activities, Delta observed primarily sand with varying amounts of silt and gravel to 46.5 feet bgs, the maximum depth explored. A more detailed description of the soil is presented in the soil boring logs in Appendix B and in the Geologic Cross Section A-A' (Figure 5).

3.2 Quantitative Soil Analyses

NCA analyzed the soil samples for the presence of total petroleum hydrocarbons-gasoline range (TPH-G) by Northwest Method for gasoline range hydrocarbons (NWTPH-Gx), benzene, toluene, ethylbenzene and xylenes (BTEX) compounds and methyl tert-butyl ether (MTBE) by EPA Method 8021B, 1,2-Dibromoethane (EDB) and 1,2-Dichloroethane (EDC) by EPA Method 8260B and total lead by EPA Method 6020.

Quantitative laboratory analysis did not detect concentrations of TPH-G, BTEX compounds or MTBE above the laboratory method reporting limits in soil samples collected from soil borings MW-1, MW-3 or MW-4. Benzene was detected in soil samples (MW-2-5.0, MW-2-15.0 and MW-2-20.0) collected from boring MW-2 at 5, 15 and 20 feet bgs at concentrations of 2.11, 0.0604 and 0.0673 milligrams per kilogram (mg/kg), respectively. Toluene, ethylbenzene and xylenes were detected in soil samples (MW-2-5.0 and MW-2-15.0) collected from MW-2 at 5 and 15 feet bgs. The detected concentrations of these constituents ranged from 0.0604 mg/kg to 126 mg/kg. Lead was detected in soil borings MW-1 through MW-4 at concentrations ranging from 1.46 mg/kg to 3.89 mg/kg. The results of the soil analyses are summarized in Table 1 and on Figure 4. The laboratory analytical reports are included in Appendix C.

3.3 Ground Water Monitoring Data

Ground water monitoring data collected on September 13, 2005, indicated that ground water is present at depths of approximately 18 to 25 feet below the TOC in monitoring wells MW-1 through MW-4. Depth to ground water measurements collected on September 13, 2005 and survey data for wells MW-1 through MW-4 were used to calculate water table contours. The ground water flow direction on September 13, 2005 was to the north at a gradient of 0.08 feet per linear foot. The inferred water table contours from ground water elevation data collected on September 13, 2005 are depicted on Figure 3.

3.4 Quantitative Ground Water Analyses

NCA analyzed the ground water samples collected from wells MW-1 through MW-4 for TPH-G by NWTPH-Gx, BTEX compounds and MTBE by EPA Method 8021B, EDB by EPA Method 8011, EDC and MTBE confirmation by EPA Method 8260B and total and dissolved lead by EPA Method 6020.

Benzene concentrations were detected in the ground water samples (MW-1-18.92 and MW-3-24.70) collected from wells MW-1 and MW-3 at concentrations of 78.6 micrograms per liter ($\mu\text{g/l}$) and 0.598 $\mu\text{g/l}$, respectively. TPH-G concentrations were detected in the ground water sample (MW-1-18.92) collected from well MW-1 at 662 $\mu\text{g/l}$. Concentrations of toluene, ethylbenzene, and xylenes were detected in the ground water sample (MW-1-18.92) collected from well MW-1 at 0.728 $\mu\text{g/l}$, 43.1 $\mu\text{g/l}$ and 2.3 $\mu\text{g/l}$, respectively. Total lead was detected in wells MW-1, MW-3 and MW-4 at concentrations ranging from 6.07 $\mu\text{g/l}$ to 16.1 $\mu\text{g/l}$. Dissolved lead was not detected above laboratory method detection limits in any ground water sample. The results of the ground water chemical analyses are presented in Table 2 and Figure 4. The laboratory analytical report is included in Appendix D.

3.5 On-Site Containment of Drill Cuttings

Soil cuttings generated from the subsurface investigation were temporarily stored on-site in 55-gallon Department Of Transportation (D.O.T) approved drums pending transport and disposal to Rinker Materials, Inc. (Rinker) of Everett, Washington. Delta submitted the laboratory reports and a Site Information Sheet to Rinker for soil disposal profiling. On October 20, 2005, Rinker coordinated the transportation of soil to the Everett facility for thermal treatment and disposal.

4.0 CONCLUSIONS

Four soil borings were advanced on the subject property to depths ranging from approximately 30 to 46.5 feet bgs and completed as ground water monitoring wells MW-1 through MW-4. Soil samples collected from each boring were submitted for quantitative hydrocarbon analysis. Petroleum hydrocarbon concentrations in the soil samples were below the laboratory reporting limits/with the exception of soil samples collected from boring MW-2 at 5, 15 and 20 feet bgs. Ground water analytical results from this investigation indicate concentrations of petroleum hydrocarbons above the laboratory reporting limits in monitoring wells MW-1 and MW-3.

APPENDIX A

Summary of Field Procedures and Analytical Methods

FIELD PROCEDURES

Discrete soil samples were collected from each boring in approximately five-foot intervals to characterize site soils with respect to petroleum hydrocarbon impacts. All samples were obtained by driving a 2 1/2-inch I.D. by 18-inch long split-spoon sampler ahead of the auger into undisturbed soils with a 140-pound hammer. The sampler was removed from the boring and the soil samples were retrieved. The bottom-most soil sample at each interval was labeled and immediately placed in cold storage until submitted to the laboratory. The samples were transported to the laboratory under chain-of-custody procedures to document sample integrity. North Creek Analytical, Inc. of Bothell, Washington performed all laboratory analyses.

During the drilling program, soil samples were screened using a photoionization detector (PID). The PID utilized was a Thermo Environmental Instruments Inc. Model 580 B equipped with a 10.6 eV ultraviolet (UV) lamp, and was calibrated to benzene standards with isobutylene for direct readings in parts per million (ppm). The operating range of the detector is from 0 to 2,000 ppm with a minimum detection limit of 0.1 ppm. Detected concentrations are considered semi-quantitative data as PIDs are sensitive to a wide range of chemicals and do not provide compound specific measurements or identification. The soil samples were removed from the sampler and placed in plastic bags, sealed and brought to approximately ambient air temperature. The PID probe was inserted into an opening of the plastic bag and the reading noted. The soil within the bag was agitated during the reading process to aid in mobilization of volatile organic vapors. Although the PID is not capable of quantifying or identifying specific organic compounds, it is capable of measuring a variety of organic vapors frequently associated with petroleum hydrocarbons.

ANALYTICAL METHODS

Sample Identification and Chain-of-Custody Procedures

Sample identification and chain-of-custody procedures ensure sample integrity and document sample possession from the time of collection to delivery to the laboratory. Each sample submitted for analysis was labeled and identified with the project number, date and time of sample collection, sampler and sample number unique to the sample.

Upon arrival at the laboratory, the sample control personnel at the laboratory verified sample integrity and confirmed that the sample was collected in the proper container, packaged correctly, and that there was adequate volume of sample for the required analyses. The laboratory assigned a unique log number for identification of each sample throughout analyses and reporting. The log number was recorded on the chain-of custody form and in the legally required logbook maintained in the laboratory. The sample description, date received, client name, and any other relevant information was recorded.

Analytical Quality Assurance

In addition to routine calibration of the analytical instruments with standards and blanks, the analyst is required to run duplicates and spikes on 10 percent of the analyses to insure an added measure of precision and accuracy. Accuracy is also verified through the following:

1. U.S. Environmental Protection Agency (EPA) and State certification programs.
2. Participation in an inter-laboratory or "round-robin" quality assurance program.
3. Verification of results with an alternative method. For example, calcium may be determined by atomic absorption, ion chromatography, or titrimetric methods.

Analytical Methods

The analytical tests performed for this evaluation were chosen based upon standard guidelines issued by the Washington State Department of Ecology. Select samples collected during this investigation were analyzed by one or more of the following methods:

1. Total petroleum hydrocarbons-gasoline range hydrocarbons by Washington State Department of Ecology Method NWTPH-Gx;
2. Benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether by EPA Method 8021B;
3. 1,2-Dibromoethane by EPA 8260B or EPA 8011;
4. 1,2-Dichloroethane and methyl tert-butyl ether confirmation by EPA 8260B; and
5. Total and dissolved lead by EPA Method 6020 or EPA Method 200.8.

Soil samples analyzed for gasoline-range hydrocarbons, BTEX compounds, and MTBE were collected utilizing EPA Method 5035A sampling techniques.

Bryan Taylor

Name of Supplier Field Personnel

[Handwritten Signature]

 SIGNATURE OF PROJ. MGR.
[Handwritten Signature]

 Signature of Field Personnel

NOTE: Primary Contractor Signature is verification that Field Personnel have reviewed, adhered to and received the necessary supplier training to implement precautionary drilling standards for performing work at GEM Marketing Retail properties as defined in BP's PRECAUTIONARY PROCEDURES AND GUIDELINES FOR DRILLING, SUBSURFACE INVESTIGATIONS AND REMEDIAL CONSTRUCTION ACTIVITIES. Any questions or concerns should be elevated to the Primary Contractor Project Manager or EBM prior to initiating field work.

Subject:
Soil Boring Installation Work Plan
ARCO Facility No. 05445
665 23rd Avenue
Seattle, WA

Date:
May 12, 2010

Dear Ms. Nied:

ARCADIS U.S. Inc. (ARCADIS), on behalf of BP West Coast Products, LLC, has prepared this Soil Boring Installation Work Plan (Work Plan) for ARCO Facility No. 05445 located at 665 23rd Ave. in Seattle, Washington (the Site). This Work Plan summarizes the proposed soil boring installations for additional soil delineation at the Site. The surrounding area and location of the Site are illustrated in **Figure 1**.

Contact:
Scott Zorn

Phone:
206-726-4709

Email:
Scott.Zorn@
Arcadis-us.com

Site Description

The Site property is located at the intersection of 23rd Ave. and East Cherry Street in Seattle, Washington (**Figure 2**). The property is an operating retail gasoline facility and convenience store. Operations at the property included the storage and distribution of unleaded gasoline and diesel fuel. The site contains three 10,000 gallon double walled fiberglass underground storage tanks (USTs) and four dispenser islands.

Our ref:
GP09BPNA.WA37

The Site is located in a mixed commercial/residential area of Seattle, Washington. East Cherry Street and a church are located to the north, 23rd Avenue and a school are located to the east, residential properties are located to the south, and an open field is located to the west.

Site Geology and Hydrogeology

The Site is located in the Puget Lowland, bound by the North Cascade Mountains to the east, South Cascade Mountains to the south and Puget Sound and Olympic Mountains to the west. (Lasmanis, R., 1991). The Puget Lowland is underlain by

unconsolidated deposits originating from continental glacial drift from the Pleistocene age (WA DNR, 2005). Such deposits are typically sand and gravel, which are as much as 3,000 feet deep, and often form discontinuous lenses. The local topography slopes slightly to the east and the approximate elevation of the site is approximately 100 feet above mean sea level (msl) (USGS, 1983).

Previous assessments indicate that the site is underlain by silty-sand to a depth of 8 to 15 feet below ground surface (bgs). The silty-sand is primarily underlain by poorly graded sands, as well as intermittent zones of silt and silty-sand to the maximum depth explored (46.5 feet bgs) (Delta, 2005).

The Site is located within the Puget-Willamette Trough Regional Aquifer System, which is a linear elongated basin stretching from the Canadian border in Washington to central Oregon. Specifically, the site is located in an unconsolidated-deposit aquifer, which is the principle aquifer type in the Puget Lowlands. Sand and gravel lenses underlain in the area can retain localized productive groundwater (USGS, 1994).

Historically, depth to groundwater measured in monitoring wells at the Site has ranged from 13.13 to 25.61 ft bgs and groundwater flow direction has consistently been to the north. During the most recent groundwater monitoring event on April 14, 2009, depths to groundwater ranged from 16.63 feet bgs in well MW-1 to 24.21 feet bgs in well MW-2. The gradient was estimated to be approximately 0.09 ft/ft while the flow direction was to the north (Delta, 2009).

Site History

From July 9 to July 13, 2004, facility upgrades were conducted at the site, including the replacement of the dispenser islands and product distribution piping. During these operations, one soil sample was collected from beneath each dispenser island (DP-1 through DP-3), two soil samples were collected from beneath dispenser island four (DP-4), two soil samples were collected from beneath the removed product distribution piping (P-7 and P-8), and three soil samples were collected from an over-excavation conducted in the area surrounding dispenser island four. Soil samples collected during facility upgrades were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), methyl tert-butyl ether (MTBE), Total Petroleum Hydrocarbons as gasoline (TPH-G) and Total Lead. Additionally, select soil samples were analyzed for Total Petroleum Hydrocarbons as diesel (TPH-D), Total Petroleum

Hydrocarbons as heavy oil (TPH-O), and Volatile Petroleum Hydrocarbons (VPH) (Delta, 2005a).

Laboratory analytical results indicated that the soil samples collected from dispenser island four contained constituents of concern exceeding the Model Toxics Control Act (MTCA) Method A Cleanup Level (CUL) for soil. Maximum TPH-G and benzene levels in DP-4 were 1,220 milligrams per kilogram (mg/kg) and 1.82 mg/kg respectively, located at 11.5 ft bgs. Based on the analytical results, the findings were reported to the Ecology and Environmental Report Tracking System (ERTS). Number 545079 was assigned to the property. Forty-one tons of soil were transported and disposed of by TPS Technologies Inc. following the completion of upgrade activities (Delta, 2005a).

A subsurface investigation was initiated in September 2005 to determine the extent of residual hydrocarbons in soil and dissolved hydrocarbons in groundwater. Four borings were advanced to depths ranging from 31.5 to 46.5 feet bgs, and monitoring wells were installed (MW-1 to MW-4). Groundwater was encountered ranging from 21.5 to 36.5 feet bgs, and groundwater flow was determined to be to the north. Soil samples collected from borings were analyzed for TPH-G, BTEX, MTBE, and Total Lead. Additionally, soil sample MW-2-5.0 was analyzed for 1,2-Dibromoethane (EDB), and 1,2-Dichloroethane (EDC). Laboratory analytical results indicated that soil samples collected from boring MW-2 contained constituents of concern exceeding the MTCA Method A CUL for soil. Maximum TPH-G and benzene levels in MW-2 were 3,600 mg/kg and 2.11 mg/kg respectively, collected at 5 ft bgs, located downgradient to the UST basin (Delta, 2005b).

In November 2005 the Department of Ecology (DOE) listed the site in the Leaking Underground Storage Tank (LUST) program. The LUST designation was made following the review of the subsurface investigation report (see above) (DOE, 2005). The Site is not currently listed under DOE's Voluntary Cleanup Program (VCP).

A semiannual groundwater monitoring program was initiated at this Site in the third quarter of 2005, and is currently ongoing. Groundwater samples are regularly collected from four monitoring wells (MW-1 to MW-4), to monitor groundwater conditions at the Site. The most recent groundwater monitoring event was conducted on April 14, 2009. The maximum dissolved TPH-G and benzene concentrations were 81.8 micrograms per liter ($\mu\text{g/L}$) and 11.7 $\mu\text{g/L}$ respectively, collected from MW-1 near the southeast border of the site. During the sampling event the depth to groundwater was between 16.63 and 24.21 ft bgs, and the

groundwater gradient was to the north at a 0.09 ft/ft gradient (Delta, 2009). Well locations, groundwater analytical data, and groundwater elevations are illustrated in **Figure 3**.

Proposed Scope of Work

To complete delineation of the petroleum-hydrocarbon impacts at the Site, ARCADIS proposes to install two additional downgradient soil borings (SB-101 and SB-102) to confirm the delineation of soil impacts in the vicinity of MW-1 and MW-2, respectively. The borings will be advanced to a depth of 30 feet bgs, or until groundwater is encountered. The proposed location of the new monitoring wells is shown on **Figure 2**.

Access and Permitting

The site property owner will be contacted a minimum of seven days prior to initiating site activities. A valid access agreement will be in place at this time.

Utility Clearance

ARCADIS will mark the proposed boring location shown on **Figure 2** and consult with the Washington State One Call. Also, ARCADIS will contract a private utility locating company to locate underground utilities prior to the initiation of drilling activities. ARCADIS staff will also conduct a visual site inspection of the property to identify potential utility lines. In this way ARCADIS will establish three lines of evidence of utility location prior to implementation of drilling activities.

Sample Analysis

At least one soil sample will be collected and submitted for laboratory analysis from each boring. The sample will be collected from the interval with the highest PID reading, and/or as indicated by field screening methods. If field screening methods indicate the presence of petroleum hydrocarbons in soil, then a minimum of two samples will be collected. The first sample will be collected where screening methods indicate an impact, and the second sample will be collected below the impact area where impacts are not expected. If field screening methods indicate that there are no petroleum hydrocarbon impacts, then a soil sample will be collected just above the groundwater interface.

Soil samples will be submitted to a Washington State DOE-certified laboratory for analysis. Chain of custody procedures will be followed from the time the samples are collected until the time the samples are relinquished to the laboratory. The samples will be submitted for the following analyses:

- TPH-G by Northwest Method NWTPH-Gx;
- TPH-D and TPH-O by Northwest Method NWTPH-Dx;
- MTBE by EPA Method 8261B;
- BTEX by EPA method 8261B; and
- Total Lead by EPA method 6020.

Waste Management

Soil cuttings and waste water generated during the field activities will be contained in Department of Transportation-approved, 55-gallon steel drums. These drums will be appropriately labeled and temporarily stored on-site pending analytical results. Upon receipt of soil analytical results, the drums will be removed from the Site and transported to an approved off-site disposal facility.

Soil Boring Survey

Upon completion of the well installations, each well will be surveyed by a Washington State-licensed surveyor. The well locations will be surveyed relative to site features and local datum, and the top of casing elevations will be measured from a permanent measuring point installed on the casings.

Summary Report Preparation

A report summarizing soil boring installation field activities will be prepared by ARCADIS and submitted to DOE subsequent to receipt of final analytical data.

If you have questions or comments regarding this Work Plan, please contact Scott Zorn at 206.726.4709 or by email at Scott.Zorn@arcadis-us.com.

Sincerely,

ARCADIS U.S., Inc.

Scott Zorn

Drilling and Soil Sampling

Soil Drilling and Sample Collection

Rev. #: 1

Rev Date: March 3, 2009

Approval Signatures

Prepared by: Caron Loh Date: 3/3/09

Reviewed by: Michael J. Giffell Date: 3/3/09
(Technical Expert)

I. Scope and Application

Overburden drilling is commonly performed using the hollow-stem auger drilling method. Other drilling methods suitable for overburden drilling, which are sometimes necessary due to site-specific geologic conditions, include: drive-and-wash, spun casing, Rotasonic, dual-rotary (Barber Rig), and fluid/mud rotary. Direct-push techniques (e.g., Geoprobe or cone penetrometer) may also be used. The drilling method to be used at a given site will be selected based on site-specific consideration of anticipated drilling depths, site or regional geologic knowledge, types of sampling to be conducted, required sample quality and volume, and cost.

No oils or grease will be used on equipment introduced into the boring (e.g., drill rod, casing, or sampling tools).

II. Personnel Qualifications

The Project Manager (a qualified geologist, environmental scientist, or engineer) will identify the appropriate soil boring locations, depth and soil sample intervals in a written plan.

Personnel responsible for overseeing drilling operations must have at least 16 hours of prior training overseeing drilling activities with an experienced geologist, environmental scientist, or engineer with at least 2 years of prior experience.

III. Equipment List

The following materials will be available during soil boring and sampling activities, as required:

- Site Plan with proposed soil boring/well locations;
- Work Plan or Field Sampling Plan (FSP), and site Health and Safety Plan (HASP);
- personal protective equipment (PPE), as required by the HASP;
- drilling equipment required by the American Society for Testing and Materials (ASTM) D 1586, when performing split-spoon sampling;
- disposable plastic liners, when drilling with direct-push equipment;
- appropriate soil sampling equipment (e.g., stainless steel spatulas, knife);

- equipment cleaning materials;
- appropriate sample containers and labels;
- chain-of-custody forms;
- insulated coolers with ice, when collecting samples requiring preservation by chilling;
- photoionization detector (PID) or flame ionization detector (FID); and
- field notebook and/or personal digital assistant (PDA).

IV. Cautions

Prior to beginning field work, underground utilities in the vicinity of the drilling areas will be identified by one of the following three actions (lines of evidence):

- Contact the State One Call
- Obtain a detailed site utility plan drawn to scale, preferably an "as-built" plan
- Conduct a detailed visual site inspection

In the event that one or more of the above lines of evidence cannot be conducted, or if the accuracy of utility location is questionable, a minimum of one additional line of evidence will be utilized as appropriate or suitable to the conditions. Examples of additional lines of evidence include but are not limited to:

- Private utility locating service
- Research of state, county or municipal utility records and maps including computer drawn maps or geographical information systems (GIS)
- Contact with the utility provider to obtain their utility location records
- Hand augering or digging
- Hydro-knife
- Air-knife

- Radio Frequency Detector (RFD)
- Ground Penetrating Radar (GPR)
- Any other method that may give ample evidence of the presence or location of subgrade utilities.

Overhead power lines also present risks and the following safe clearance must be maintained from them.

Power Line Voltage Phase to Phase (kV)	Minimum Safe Clearance (feet)
50 or below	10
Above 50 to 200	15
Above 200 to 350	20
Above 350 to 500	25
Above 500 to 750	35
Above 750 to 1,000	35

ANSI Standard B30.5-1994, 5-3.4.5

Avoid using drilling fluids or materials that could impact groundwater or soil quality, or could be incompatible with the subsurface conditions.

Water used for drilling and sampling of soil or bedrock, decontamination of drilling/sampling equipment, or grouting boreholes upon completion will be of a quality acceptable for project objectives. Testing of water supply should be considered.

Specifications of materials used for backfilling borehole will be obtained, reviewed and approved to meet project quality objectives.

V. Health and Safety Considerations

Field activities associated with overburden drilling and soil sampling will be performed in accordance with a site-specific HASP, a copy of which will be present on site during such activities.

VI. Procedure

Drilling Procedures

The drilling contractor will be responsible for obtaining accurate and representative samples; informing the supervising geologist of changes in drilling pressure; and keeping a separate general log of soils encountered, including blow counts (i.e., the number of blows from a soil sampling drive weight [140 pounds] required to drive the split-barrel sampler in 6-inch increments). Records will also be kept of occurrences of premature refusal due to boulders or construction materials that may have been used as fill. Where a boring cannot be advanced to the desired depth, the boring will be abandoned and an additional boring will be advanced at an adjacent location to obtain the required sample. Where it is desirable to avoid leaving vertical connections between depth intervals, the borehole will be sealed using cement and/or bentonite. Multiple refusals may lead to a decision by the supervising geologist to abandon that sampling location.

Soil Sampling Procedures

Samples of subsurface materials encountered while drilling soil borings will be collected using one of the following methods:

- 2-inch split-barrel (split-spoon) sampler, if using the ASTM D 1586 - Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils
- Plastic internal soil sample sleeves if using direct-push drilling.

Soil samples are typically field screened with an FID or PID at sites where volatile organic compounds are present in the subsurface. Field screening is performed using one of the following methods:

- Upon opening the sampler, the soil is split open and the PID or FID probe is placed in the opening and covered with a gloved hand. Such readings should be obtained at several locations along the length of the sample
- A portion of the collected sample is placed in a jar, which is covered with aluminum foil, sealed, and allowed to warm to room temperature. After warming, the cover is removed, the foil is pieced with the FID or PID probe, and a reading is obtained.

Samples selected for laboratory analysis will be handled, packed, and shipped in accordance with the procedures outlined in the Work Plan, FSP, or Chain-of-Custody, Handling, Packing, and Shipping SOP.

A geologist will be onsite during drilling and sampling operations to describe each soil sample on the soil boring log, including:

- percent recovery;
- structure and degree of sample disturbance;
- soil type;
- color;
- moisture condition;
- density;
- grain-size;
- consistency; and
- other observations, particularly relating to the presence of waste materials

Further details regarding geologic description of soil samples are presented in the Soil Description SOP.

Particular care will be taken to fully describe any sheens observed, oil saturation, staining, discoloration, evidence of chemical impacts, or unnatural materials.

VII. Waste Management

Water generated during cleaning procedures will be collected and contained onsite in appropriate containers for future analysis and appropriate disposal.

PPE (such as gloves, disposable clothing, and other disposable equipment) resulting from personnel cleaning procedures and soil sampling/handling activities will be placed in plastic bags. These bags will be transferred into appropriately labeled 55-gallon drums or a covered roll-off box for appropriate disposal.

Soil materials will be placed in sealed 55-gallon steel drums or covered roll-off boxes and stored in a secured area. Once full, the material will be analyzed to determine the appropriate disposal method.

VIII. Data Recording and Management

The supervising geologist or scientist will be responsible for documenting drilling events using a bound field notebook and/or PDA to record all relevant information in a clear and concise format. The record of drilling events will include:

- start and finish dates of drilling;
- name and location of project;
- project number, client, and site location;
- sample number and depths;
- blow counts and recovery;
- depth to water;
- type of drilling method;
- drilling equipment specifications, including the diameter of drilling tools;
- documentation of any elevated organic vapor readings;
- names of drillers, inspectors, or other people onsite; and
- weather conditions.

IX. Quality Assurance

Equipment will be cleaned prior to use onsite, between each drilling location, and prior to leaving the site. Drilling equipment and associated tools, including augers, drill rods, sampling equipment, wrenches, and other equipment or tools that may have come in contact with soils and/or waste materials will be cleaned with high-pressure steam-cleaning equipment using a potable water source. The drilling equipment will be cleaned in an area designated by the supervising engineer or geologist that is located outside of the work zone. More elaborate cleaning procedures may be

required for reusable soil samplers (split-spoons) when soil samples are obtained for laboratory analysis of chemical constituents.

Remedial Action Plan

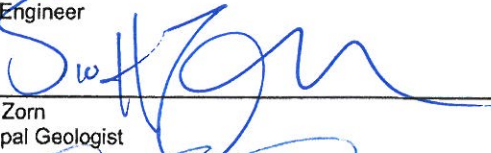

ARCO Facility No. 5445
Seattle, Washington

1. Introduction

ARCADIS U.S., Inc. (ARCADIS) has prepared this Remedial Action Plan (RAP) for ARCO Facility No. 5445 located at 665 23rd Avenue, Seattle, Washington (site). The site and surrounding area are illustrated on Figure 1.

The objective of this RAP is to outline the actions that would allow for a No Further Action designation for the site on behalf of BP West Coast Products, LLC. This RAP discusses the details for implementing an enhanced anaerobic biological oxidation remedial approach using injections to treat dissolved impacts observed at monitoring well MW-1.

2. Background

The site is located at the intersection of East Cherry Street and 23rd Avenue in Seattle, Washington. The site is a retail ARCO gasoline facility and convenience store, with a retail building and canopy. Former and current operations at the site have included the storage and distribution of unleaded gasoline. The site currently contains three 12,000-gallon double-walled fiberglass underground storage tanks (USTs) and four dispenser islands. The USTs are located on the western portion of the site, adjacent to the dispenser islands. According to the King County Department of Assessments, there is no indication that the site has served as anything but a retail gas station since 1987 (King County 2012).

The site is located in a mixed commercial/residential area of Seattle, Washington. East Cherry Street and a barbershop are located to the north of the site; 23rd Avenue and a community center are located to the east; residential properties are located to the south; and an open field is located to the west. The nearest residents to the station are located on the adjacent property to the south of the site. The nearest surface-water body, Lake Washington, and is located approximately 0.93 mile east of the site. Site features are depicted on Figure 2.

3. Site Cleanup Levels

The Washington State Department of Ecology (Ecology) issued cleanup levels (CULs) according to the Model Toxics Control Act (MTCA) (Ecology 2007). The following guidance was used to compare site concentrations of residual and dissolved-phase constituents of concern (COCs) with cleanup criteria:

- Ecology's MTCA Method A CULs (MTCA Chapter 173-340). The Method A CULs were established for groundwater where drinking water is a beneficial use, soil for unrestricted land use, and industrial properties.
- Cleanup Levels and Risk Calculation Summary for Method B soil CULs for benzene, toluene, ethylbenzene, and total xylenes (BTEX) determined by the Standard Formula Value (carcinogen and non-carcinogen) based on direct contact (ingestion only) for unrestricted land use (Ecology 2007).

Residual and dissolved phase COCs detected at the site greater than MTCA Method A and B CULs include:

- Gasoline range organics (GRO) (soil and groundwater)
- Benzene (groundwater)
- Ethylbenzene (groundwater)
- Total xylenes (groundwater).

The tables below present applicable MTCA Method A and B CULs for GRO and BTEX for soil and groundwater.

Remedial Action Plan

ARCO Facility No. 5445
Seattle, Washington

Groundwater

Constituent	Cleanup Criteria (µg/L) ¹
GRO	800 / 1,000 ²
Benzene	5
Toluene	1,000
Ethylbenzene	700
Total xylenes	1,000

Soil

Constituent	Cleanup Criteria (mg/kg)
GRO	30 / 100 ^{1,2}
Benzene	18 ³
Toluene	6,400 ⁴
Ethylbenzene	8,000 ⁴
Total xylenes	16,000 ⁴

¹ Cleanup criteria based on Ecology's MTCA Method A CULs for soil and groundwater (MTCA Cleanup Regulation 173-340).

² Method A CULs for GRO are determined based on the presence of benzene.

³ Method B CULs for benzene determined by the Standard Formula Value (carcinogen) based on direct contact (ingestion only) for unrestricted land use.

⁴ Method B CULs for toluene, ethylbenzene, and total xylenes determined by the Standard Formula Value (non-carcinogen) based on direct contact (ingestion only) for unrestricted land use.

µg/L = micrograms per liter.

mg/kg = milligrams per kilogram.

4. Site History

The following section presents previous investigations conducted at the site including details on the subsurface investigation conducted in February 2012, when wells MW-5, MW-6, and MW-7 were installed.

4.1 Previous Investigations

In July 2004, facility upgrades were conducted at the site including replacement of the dispenser islands and product distribution piping. Soil samples collected during facility upgrades were analyzed for GRO, BTEX, methyl tertiary-butyl ether (MTBE), and total lead. Additionally, select soil samples were analyzed for diesel range organics (DRO), heavy oil range organics (HO), and volatile petroleum hydrocarbons (VPHs). Forty-one tons of soil were removed from the site, transported, and disposed of by TPS Technologies Inc. following the completion of upgrade activities (Delta Environmental Consultants, Inc. [Delta] 2005a).

Laboratory analytical results indicated that the shallow soil samples collected from the northeast dispenser island (D-4) contained COCs exceeding the applicable MTCA CULs at the time. The findings were reported to Ecology and the impacted area around the dispenser island was over-excavated and resampled to confirm CULs had been met (Delta 2005a).

A subsurface investigation was initiated in September 2005 to determine the extent of residual hydrocarbons in soil and groundwater. Four borings were advanced to depths ranging from 31.5 to 46.5 feet below ground surface (bgs) and monitoring wells MW-1 through MW-4 were installed. Groundwater was encountered at depths ranging from 21.5 to 36.5 feet bgs and groundwater flow was determined to be to the north. Soil samples collected from the borings were analyzed for GRO, BTEX, MTBE, and total lead. Additionally, one soil sample was analyzed for 1,2-dibromoethane and 1,2-dichloroethane (Delta 2005b).

A groundwater monitoring program was initiated at the site in the third quarter 2005, and is currently ongoing. Starting in 2005, groundwater samples were collected from the four on-site monitoring wells (MW-1 to MW-4). As described below, three additional monitoring wells were installed at the site in February 2012 and added to the groundwater monitoring program. Analyzed constituents include GRO, BTEX, total and dissolved lead, and MTBE. Current and historical groundwater analytical data from 2005 to February 2012 are presented in Table 1. Well locations are illustrated on

Figure 2. A potentiometric map with analytical results from the most recent groundwater monitoring event is provided on Figure 3.

In February 2012, three soil borings were advanced at the site and converted to groundwater monitoring wells MW-5, MW-6, and MW-7, as part of a subsurface investigation. Two or three soil samples were collected from each boring and analyzed for GRO, DRO, HO, BTEX, total lead, VPH, and/or extractable petroleum hydrocarbons (EPHs). Details of this investigation are presented in Section 4.2.

Site soil data is presented in Tables 2a and 2b and shown on Figure 4.

4.2 2012 Subsurface Investigation

In February 2012, three soil borings were advanced at the site and converted to groundwater monitoring wells MW-5, MW-6, and MW-7, as part of a subsurface investigation. Locations of these monitoring wells are shown on Figure 2.

4.2.1 Field and Analytical Methods

Each soil boring was cleared using an air knife to 6.5 feet bgs. Soil samples were collected for field screening at approximately 5-foot intervals, beginning at 5 feet bgs. An ARCADIS field geologist prepared boring logs using the Unified Soil Classification System (USCS); the boring logs are included in Appendix A. Field screening of soil samples was performed using a photoionization detector (PID) and visual inspection methods. Soil samples with the highest PID reading, and/or as indicated by field screening methods were submitted to an Ecology-certified laboratory (Pace Analytical Services Inc. in Seattle, Washington) for analysis. Soil samples were analyzed for one or more of the following:

- GRO by Northwest Method NWTPH-Gx
- DRO and HO by Northwest Method NWTPH-Dx
- BTEX by United States Environmental Protection Agency (USEPA) Method 8260B
- Total lead by USEPA Method 6020.
- EPHs by NWEPH
- VPHs by NWVPH

Based on field screening methods, two to three soil samples were collected for analysis during the installation of each boring. Three soil samples were collected during the installation of boring MW-5 at depths of 10, 15, and 22 feet bgs. Soil

samples MW-5-10 (10 feet bgs) and MW-5-15 (15 feet bgs) were collected for laboratory analysis because PID readings for these samples were 12.9 and 2.4 parts per million (ppm), respectively, which were the highest of the field-screened soils. Sample MW-5-22 (22 feet bgs) was collected at the bottom of the boring where PID and field screenings methods did not indicate the presence of petroleum impacts.

Two soil samples were collected during the installation of monitoring well MW-6 at depths of 20 and 28 feet bgs. Soil sample MW-6-20 (20 feet bgs) was collected for analysis because this sample had the highest PID reading observed (1.4 ppm) from field-screened soils. Soil sample MW-6-28 (28 feet bgs) was collected at the bottom of the boring where PID and field screening methods did not indicate the presence of petroleum impacts.

Three soil samples (MW-7-15, MW-7-20, and MW-7-25) were collected for analysis during the installation of boring MW-7 at depths of 15, 20, and 25 feet bgs, respectively. Sample MW-7-15 (15 feet bgs) was collected for laboratory analysis because PID reading for this sample was the highest along the boring (4.4 ppm). Samples MW-7-20 and MW-7-25 were collected at 20 and 25 feet bgs, respectively. Samples were collected at these depths to delineate soil along the screened interval of the well. PID and field screening methods did not indicate the presence of petroleum impacts.

4.2.2 Soil Analytical Results

Eight soil samples and one duplicate sample were collected during the installation of monitoring wells MW-5, MW-6, and MW-7. Petroleum hydrocarbon constituents were detected at concentrations greater than laboratory reporting limits from one sample in monitoring well MW-5 at a depth of 10 feet bgs (MW-5-10). Concentrations of GRO (6.5 mg/kg), DRO (21.1 mg/kg), and HO (96.7 mg/kg) were less than their respective CULs. Concentrations of BTEX in this sample were less than laboratory detection limits. Sample MW-5-10 was also analyzed for EPH and VPH, where carbon ranges were detected greater than laboratory detection limits during both analyses.

Concentrations of petroleum constituents in seven of the eight soil samples collected were not greater than laboratory detection limits. This includes two samples collected from MW-5 at depths of 15 and 20 feet bgs and all of the samples collected from MW-6 and MW-7. Soil sample analytical results are presented in Table 2a; EPH/VPH results from this investigation are presented in Table 2b. GRO, DRO, HO, BTEX and lead results are presented on Figure 4. Laboratory certificates are presented in Appendix B.

4.2.3 Well Construction Details and Development

Soil borings MW-5, MW-6, and MW-7 were converted to 2-inch polyvinyl chloride (PVC) monitoring wells with 0.010-slot screen. The screen interval at MW-5 is 10 feet long (from 12 to 22 feet bgs), and the screened interval in MW-6 and MW-7 is 15 feet long (from 13 to 28 feet bgs). Sand pack in all of the wells extends from the total depth of the well up to 2 feet above the top of screened interval. Above the sand pack is a hydrated bentonite seal to approximately 2 feet bgs. The wells are finished with traffic-rated well monuments set in concrete, with locking well plugs. Well logs are included in Appendix B.

Upon completion, monitoring wells MW-5, MW-6, and MW-7 were developed using surge and purge methods. Development continued until the purge water was clear and free of silt. The wells were purged using a submersible pump.

5. Regional and Site-Specific Settings

5.1 Regional and Site-Specific Geology and Hydrogeology

The site is situated in the lowlands of the Puget Sound Basin in Western Washington. Puget Sound Basin is a north-south trending trough between the Olympic Mountains to the west and the Cascade Mountains to the east. Elevations in the lowlands range from sea level up to several hundred feet. The topography is dominated by north-south-trending valleys and low, nearly flat-topped highlands cut by streams. Puget Sound occupies a large part of the western portion of the basin and lakes and streams occur frequently throughout the area (Washington State Department of Natural Resources 2005). The site elevation is approximately 278 feet above mean sea level (msl) and the topography slopes slightly to the east.

Surficial geology in the general area is dominated by Pleistocene glacial alluvium with recent alluvium in river floodplains and deltas. Pleistocene sediments are typically well-compacted beds of very dense till interbedded with sands, silts, and gravel with occasional lacustrine deposits. Beds of till are often several meters thick and contain frequent discontinuous "lenses" of more permeable material. Perched groundwater occurs frequently in the lenses, with larger aquifers occupying sandy strata overlying permeable till or silt deposits [United States Geologic Society (USGS) 1994].

In the past, subsurface investigations have been conducted to a depth of 46.5 feet bgs. The investigations indicate that soil at the site is silty-sand to a depth of approximately 8 to 15 feet bgs. From 8 to 15 feet bgs to the maximum depth explored, materials encountered were poorly graded coarse-grained sands. Fine-grained silt layers were encountered at depths from 15 to 25 feet bgs in the southwestern and northwestern portions of the site. Cross sections detailing the subsurface lithology based on previous and current subsurface investigations are illustrated on Figures 5 through 8. Site investigation boring logs are included as Appendix B.

The site is located within the Puget-Willamette Trough Regional Aquifer System, which is a linear elongated basin stretching from the Canadian border in Washington to Central Oregon. Specifically, the site is located in an unconsolidated-deposit aquifer, which is the principle aquifer type in the Puget Sound Lowlands. Sand and gravel lenses underlain in the area can retain localized productive groundwater (USGS 1994).

5.2 Historical Site-Specific Gauging Data

Historically, depth to groundwater measured in groundwater monitoring wells at the site (MW-1 to MW-4) has ranged from 13.13 to 25.61 feet below top of casing (btoc) and groundwater gradient direction has generally been to the north. Historically, monitoring well MW-2, which has a submerged screen interval, has been used to calculate the site groundwater gradient. However after the installation of MW-5, MW-6, and MW-7 in February 2012, ARCADIS discovered that previous interpretations of the groundwater gradient at the site were incorrect and concluded that the gradient is to the southeast, rather than north. In addition to the southeast gradient, there appears to be a localized gradient that flows to the east in the southern portion of the site; groundwater appears to flow from MW-4 toward wells MW-1 and MW-5.

During the most recent groundwater monitoring event in February 2012, depths to groundwater ranged from 10.22 feet btoc in well MW-5 to 10.78 feet btoc in well MW-4, with the groundwater gradient to the southeast. Historical gauging data from previous groundwater monitoring events are presented in Table 1. A groundwater contour elevation and analysis map from the most recent groundwater monitoring event is present on Figure 3.

This gradient based on February 2012 data was determined by excluding data from monitoring wells MW-2 and MW-3. These wells are screened deeper than other monitoring wells at the site, and typically, groundwater is observed at lower elevations at these locations. The minimum and maximum groundwater elevations that have been observed in wells MW-2 and MW-3 are 75.43 and 83.17 feet above msl, respectively. The minimum and maximum groundwater elevation observed in wells MW-1 and MW-4 has been 80.70 and 89.41 feet above msl. Note that groundwater elevations at wells MW-5, MW-6, and MW-7 were not calculated because these newly installed wells had not been surveyed at the time this report was written. These wells will be surveyed during 2012.

6. Petroleum Hydrocarbons in Soil and Groundwater

This section summarizes soil and groundwater CULs exceedances observed at the site.

6.1 Petroleum Hydrocarbons in Soil

During facility upgrades in 2004, the only soils containing petroleum hydrocarbons above CULs were located around the northeastern-most dispenser island, Dispenser Island D-4, and underneath the southern dispenser lines at sample location P-8. The D-4 dispenser island area is reported to have been over-excavated to depths between 13 and 15 feet bgs and hydrocarbon-impacted soil was removed. The sample collected at location P-8 at a depth of 3.5 feet bgs contained a GRO concentration of 72.3 mg/kg, exceeding the MTCA Method A CUL. From the data available, it appears sample location P-8 was not over-excavated (Delta 2005a).

A subsurface investigation was initiated in September 2005, to determine the extent of residual hydrocarbons in soil. Four borings were advanced to depths ranging from 31.5 to 46.5 feet bgs, and monitoring wells were installed (MW-1 to MW-4). The only exceedance observed was in boring MW-2 at a depth of 5 feet bgs (GRO at 3,600 mg/kg). No CUL exceedances were observed during the 2012 subsurface investigation (Delta 2005b).

Historical analytical data from soil samples collected during previous soil investigations and assessments are presented in Tables 2a and 2b. The analytical data and boring locations from the previous investigations and assessments are illustrated on Figure 4.

6.2 Petroleum Hydrocarbons in Groundwater

Groundwater monitoring was initiated at the site in September 2005 and has occurred quarterly, semiannually, or annually through 2012. Throughout the monitoring program, monitoring wells MW-1, MW-2, MW-3, and MW-4 have been used to monitor groundwater conditions at the site; wells MW-5, MW-6, and MW-7 were installed and sampled for the first time in February 2012. Analyzed constituents include GRO, BTEX, MTBE, and total and dissolved lead.

Wells MW-1 through MW-7 were sampled during the most recent groundwater sampling event conducted in February 2012. Exceedances of MTCA Method A CULs were only observed at monitoring well MW-1; concentrations of GRO, benzene, and

ethylbenzene, were 11,600, 780, and 1,540 µg/L, respectively. Current groundwater analytical results and potentiometric map are illustrated on Figure 3. Current and historical groundwater sample analytical results are presented in Table 1.

6.3 Biogeochemical Sampling

On February 20, 2012, ARCADIS conducted pre-injection baseline groundwater biogeochemical indicator sampling in conjunction with groundwater monitoring activities at the site. During this event, one source zone well (MW-1), three cross gradient wells (MW-2, MW-5, and MW-7), and one upgradient well (MW-4) were sampled for pre-injection baseline parameters of alkalinity, sulfate, sulfide, nitrite/nitrate, methane, and total and dissolved iron, using low-flow methodology and the following laboratory analytical methods:

- Total alkalinity by SM Method 2320B
- Sulfate by USEPA Method 300.0
- Sulfide by SM Method 4500-S²F
- Total iron by USEPA Method 6010
- Dissolved iron by USEPA Method 6010
- Methane by Method RSK 175
- Nitrite/nitrate by USEPA Method 353.2

Concentrations of alkalinity in baseline samples ranged from 110 milligrams per liter as calcium carbonate (mg/L as CaCO₃) (MW-7) to 349 mg/L as CaCO₃ (MW-1). Sulfate concentrations ranged from 4.1 mg/L (MW-1) to 39.5 mg/L (MW-2). Sulfide was not detected at concentrations greater than the laboratory detection limit of 0.040 mg/L in any of the baseline samples collected. Nitrogen as nitrite/nitrate ranged from less than 0.050 mg/L (MW-1 and MW-7) to 3.1 mg/L (MW-4). Concentrations of methane ranged from less than 6.6 µg/L (MW-4 and MW-7) to 4,490 µg/L (MW-1). Concentrations of total iron ranged from less than 100 µg/L (MW-2) to 6,850 µg/L (MW-1). Concentrations of dissolved iron ranged from less than 100 µg/L (MW-2, MW-4, and MW-5) to 7,900 µg/L (MW-7).

Field measurements for geochemical parameters pH and specific conductivity were also collected using a calibrated multiparameter water quality meter. Field measurements for pH ranged from to 5.68 standard units (MW-4) to 6.74 standard units (MW-7). Field measurements for specific conductivity ranged from 272 microSiemens per centimeter (µS/cm) (MW-4) to 665 µS/cm (MW-1). Biogeochemical results are presented in Table 3 and laboratory certificates are included as Appendix C.

Petroleum hydrocarbons can serve as a carbon source and stimulate indigenous microorganisms to use naturally occurring electron acceptors. Available electron acceptors are generally depleted in order of thermodynamic favorability in the following order: oxygen, nitrate, manganese, iron, sulfate, and eventually carbon dioxide under methanogenic conditions. The electron acceptors are reduced through electron transport as the petroleum hydrocarbons are oxidized through microbial respiration to benign end products including hydrogen, acetic acid, carbon dioxide, etc. Electron acceptors react to form a more reduced constituent; manganese and iron that undergo microbial reduction are usually sourced from the solid aquifer matrix.

Compared to other wells that were sampled, elevated concentrations of methane, total and dissolved iron, and a reduced concentration of sulfate were observed in monitoring well MW-1. Biogeochemical results suggest anaerobic, strongly reducing (i.e., sulfate-reducing to methanogenic) conditions at this well as a result of the petroleum hydrocarbons observed here. The presence of 4,500 µg/L of methane, or approximately 25-percent of methane solubility, demonstrates that groundwater in the immediate vicinity of MW-1 highly methanogenic and lacking available electron acceptors.

6.4 Hydraulic Conductivity Testing

Prior to pilot test activities, rising-head aquifer testing (slug testing) was conducted on monitoring wells MW-1 and MW-4. During this test, a pressure transducer with data logging capabilities was placed into each well to measure water level. Several manual depth to water measurements were taken with an oil/water interface probe prior to the slug test to convert pressure readings to depth to water readings. A disposable bailer was placed in the well below the groundwater interface and removed, resulting in an instantaneous change in head. The water level was then allowed to equilibrate.

Pressure transducer data were logarithmically plotted and the data were evaluated according to methods established by the updated Bouwer and Rice methodology (Bouwer and Rice 1976) to calculate hydraulic conductivity at the site. Based on the slug tests, the hydraulic conductivity at MW-1 is 1.1 feet per day (ft/day) or 3.8×10^{-4} centimeters per second (cm/s) and hydraulic conductivity at well MW-4 is 1.1 ft/day or 3.9×10^{-4} cm/s. Hydraulic conductivity measurements appear to support reasonable injection flow rates into the aquifer. Calculations for hydraulic conductivity (K) using methods established by Bouwer and Rice and updated in 1989 (Bouwer 1989) are illustrated in Appendix D.

Remedial Action Plan

ARCO Facility No. 5445
Seattle, Washington

Following the slug tests conducted at the site, a step test was conducted on monitoring wells MW-1 and MW-4. This test consisted of injecting potable water into the well at a low flow rate of 0.25 gallon per minute (gpm) and gradually increasing the flow rate to 0.5, 1.0, 1.5, and 2 gpm. The depth to water in the well was measured during the injection event to determine if a given flow rate would result in overtopping the well casing. Results from the step test indicated that an injection flow rate of greater than approximately 5 gpm can be expected during full-volume injection activities. Step test results are shown included in Appendix D, showing flow rates and depth to water versus time.

7. Evaluation of Remedial Alternatives

This section discusses the feasibility of select potential remedial alternatives for soil and groundwater at the site. Three remedial alternatives are identified for affected soil and groundwater:

- Monitored natural attenuation (MNA)
- Air sparge (AS) and soil vapor extraction (SVE)
- Enhanced anaerobic biodegradation.

7.1 Alternative 1 – Monitored Natural Attenuation

This alternative does not involve the implementation of active remedial activities to remove, treat, or contain COCs at the site. Under this alternative, natural attenuation processes will reduce chemical concentrations over time and routine (e.g., semiannual) groundwater monitoring will be performed to document changes.

MNA is defined as the reliance on natural attenuation processes (within the context of a carefully controlled and monitored site cleanup approach) to achieve site-specific remediation objectives within a timeframe that is reasonable compared to that offered by other, more active methods. The “natural attenuation processes” at work in such a remediation approach include a variety of physical, chemical, or biological processes that, under favorable conditions, act to reduce the mass, toxicity, mobility, volume, or concentration of COCs in groundwater. These in-situ processes include diffusion, dilution, sorption, biodegradation, volatilization, and chemical biological stabilization, transformation, or destruction of COCs.

Natural attenuation processes are typically occurring at all sites, but to varying degrees of effectiveness, depending on the types and concentrations of contaminants present, and physical, chemical, and biological characteristics of the soil and groundwater. Natural attenuation processes may reduce the potential risk posed by site contamination in three ways:

1. The contaminant may be converted to less toxic form through destructive processes such as bioremediation or abiotic transformations.
2. Potential exposure levels may be reduced by lowering concentration levels through physical processes or by dilution.

3. Contaminant mobility and bioavailability may be reduced by sorption to the soil or aquifer matrix.

Based on data that has been collected at MW-1 concentrations of COCs have fluctuated since 2005, and it appears fluctuations correspond to fluctuations in groundwater elevation. It is possible that dissolved phase COC concentrations have decreased over time due to MNA, however, it is not the preferred remedial alternative at this site. It is likely that groundwater fluctuations would continue to cause elevated COC concentrations and a prohibitive timeframe would be required to achieve dissolved concentrations below MTCA Method A CULs.

7.2 Alternative 2 – Air Sparge and Soil Vapor Extraction

An air sparge and soil vapor extraction (AS/SVE) system involves injecting air under pressure into the saturated zone to increase dissolved-phase oxygen concentrations and degrade dissolved-phase COC concentrations through aerobic degradation. AS also increases volatilization of dissolved, sorbed, and residual phase petroleum hydrocarbons through transfer into the vapor phase. SVE removes residual and sorbed-phase hydrocarbons from vadose zone soils, and captures the vapors generated through sparging activities. An AS/SVE system could be installed at the site and would consist of a network of AS and SVE wells connected to a centralized blower and compressor system via manifold piping. Prior to discharge, collected vapors would be treated aboveground through catalytic oxidation or carbon filtration. Components of this alternative might potentially include:

- Install a skid-mounted AS/SVE treatment system at the site.
- Install new trenching and subsurface piping.
- Perform system startup and routine operation and maintenance activities.
- Conduct air monitoring activities to evaluate the reduction of total volatile organic compound (VOC) concentrations in the influent air to the treatment system.
- Continue to perform air monitoring activities to evaluate the reduction of VOC concentrations in soil and groundwater.

AS/SVE is not the preferred remedial alternative at this site under current conditions. Based on the data available, the cost to install new conveyance piping and system

components is prohibitive for the remaining minimal petroleum hydrocarbons detected in groundwater at monitoring well MW-1 and vadose zone impacts detected at MW-2 and sample location P-8.

7.3 Alternative 3 – Enhanced Anaerobic Biodegradation

Organic carbon in the form of petroleum hydrocarbons can stimulate indigenous microorganisms to utilize naturally occurring electron acceptors in microbial respiration. As the indigenous ecology evolves, available electron acceptors are depleted in general order of thermodynamic favorability: oxygen, nitrate, manganese, iron, sulfate, and eventually carbon dioxide under methanogenic conditions. The electron acceptors are reduced through electron transport as the petroleum hydrocarbons are oxidized to benign end products, including hydrogen, acetic acid, carbon dioxide, etc.

Typical petroleum release sites can generate strongly reducing environments dominated by sulfate-reduction and methanogenesis. If sulfate or other electron acceptors are present in sufficient quantity to meet the stoichiometric demand of the available petroleum impacts, petroleum constituents can be destroyed naturally. This remedial alternative involves adding sulfate as an electron acceptor in the form of Epsom salt (i.e., magnesium sulfate heptahydrate) to enhance ongoing petroleum hydrocarbon oxidation.

The addition of sulfate to the portions of the aquifer that contain petroleum hydrocarbons and are strongly reducing will stimulate ongoing natural biodegradation processes. Therefore, ARCADIS proposes to conduct an initial pilot test to evaluate the effectiveness of sulfate application to the focused area with petroleum hydrocarbon concentrations above CULs using two injection wells to facilitate delivery and a monitoring well network to monitor its effectiveness. Based on results from the initial pilot test, ARCADIS may perform additional injections of Epsom salt solution.

Biogeochemical results demonstrate the presence of strongly reducing sulfate-reduction to methanogenic conditions in the immediate vicinity of the sole well containing petroleum hydrocarbon concentrations above CULs (MW-1); therefore, sulfate injections are expected to be an effective method for site remediation. This approach will be used to address hydrocarbon impacts to groundwater observed in MW-1.

8. Enhanced Anaerobic Bio-oxidation Pilot Test

The pilot test study area will be confined to a series of two newly installed on-site injection wells (IW-1 and IW-2), existing monitoring wells MW-1 and MW-5, and proposed well MW-8 (Figure 9). The injection wells will be used to deliver the sulfate solution while observations from target dose response wells MW-1 and MW-5 will be used to confirm reagent distribution and measure treatment. Distribution of delivered electron acceptors via direct injection and subsequent ambient groundwater flow will establish an anaerobic bio-oxidation reactive zone, which will provide an electron acceptor to naturally occurring sulfate-reducing bacteria. The biogeochemical indicator data discussion in Section 6.3 above demonstrates that the immediate vicinity of MW-1 is strongly reducing and methanogenic, which indicates groundwater is void of viable electron acceptors.

8.1 Technical Background

Aquifers impacted by petroleum hydrocarbons are typically anaerobic because dissolved oxygen (DO) is energetically favorable and is preferentially consumed by indigenous microbes during aerobic oxidation (i.e., biodegradation) of the petroleum hydrocarbons. The petroleum hydrocarbons serve as electron donors in the microbial metabolism reactions. Following the depletion of oxygen, alternative electron acceptors (i.e., nitrate, iron, manganese, sulfate, and carbon dioxide) are used in the continued anoxic/anaerobic oxidation of petroleum hydrocarbons. The anaerobic oxidation of petroleum hydrocarbons under various dominant electron-accepting processes (e.g., sulfate-reduction, iron-reducing, methanogenesis) is well-founded in the literature (Anderson and Lovley 2000, Aronson and Howard 1997, Beller et al. 1992, Bordon et al. 1997, Coyne and Smith 1995, Cunningham et al. 2001, Davis et al. 1999, Schreiber et al. 2004, Wiedemeier et al. 1999, and Foght 2008).

Similar to enhanced aerobic systems typically designed through biosparging, AS, oxygenated water injection, injection of oxygen-releasing materials, etc., engineered anaerobic approaches rely on redox couples such as nitrate reduction, ferric iron reduction, sulfate reduction, and methanogenesis to facilitate cellular respiration using the petroleum hydrocarbon as an electron donor.

Anaerobic processes generally occur at slower kinetic rates than those observed with oxygen. Non-oxygen electron acceptors (i.e., sulfate) can be advantageous to oxygen injection approaches because some sulfate salts are highly soluble, can be supplied at elevated dissolved concentrations, and have minimal abiotic or non-target reactions

that typically limit oxygen persistence in the subsurface. The higher concentrations of sulfate that can be maintained in a petroleum hydrocarbon-impacted aquifer accompanied by electron acceptor persistence allows for effective hydrocarbon degradation. Comparatively, oxygen sparging approaches are fundamentally limited by low oxygen solubility in groundwater and gas transfer inefficiencies that limit the effective DO concentrations typically maintained in engineered aerobic reactive zones. Thus while the kinetic rates of anaerobic hydrocarbon bio-oxidation may be slower than under aerobic conditions, the ability to deliver elevated concentrations of non-oxygen electron acceptors over a relatively long time period during several injection events can be cost-effective compared to long-term operation of continuous oxygen sparging or other engineered aerobic treatment alternatives.

8.1.1 Anticipated Short-Term Effects of Sulfate on Groundwater Chemistry

Short-term effects of sulfate injection on groundwater chemistry may include the following:

- Increase of sulfate concentrations to a calculated concentration of approximately 2.2 grams per liter (g/L) prior to consumption by sulfate-reducing bacteria (initially localized to the injected radius of influence [ROI]).
- Increase in the population of sulfate-reducing bacteria and sulfide, the reduced form of sulfate.
- Sulfide will undergo intrinsic geochemical control through the formation of ferrous iron sulfide precipitates, which will become part of the solid aquifer matrix.
- Localized and transient increases in groundwater total dissolved solids from contributions of magnesium, sulfate, and alkalinity before the effects of intrinsic geochemical controls work to reduce concentrations.

Long-term effects on groundwater chemistry are expected to be minimal due to consumption of the sulfate and other associated reaction byproducts.

8.2 Utility Clearance and Permitting

Prior to drilling activities, a public utility one call will be placed to identify underground utilities surrounding and leading to the site. Additionally a private utility-locating company will be contracted to survey the site for underground utilities. The area will be

surveyed with ground-penetrating radar and magnetic locating equipment to identify utilities not included under the public locating service. As-built facility drawings will be reviewed to verify locations of connections to underground and aboveground utilities. The proposed injection well locations will be marked prior to utility markout by Underground Service Alert and the private utility locator. Based on survey findings, proposed well locations are subject to change.

8.3 Injection and Dose Response Well Installation and Construction

Injections wells IW-1 and IW-2 will be installed upgradient of monitoring wells MW-1 and MW-5; downgradient monitoring well MW-8 will be installed to the southwest of MW-1 and MW-5 (Figure 9). The initial 6.5 feet of the borehole will be cleared using an air knife and vacuum truck to reduce the potential for damage to underground improvements. The boring will then be advanced using a truck-mounted hollow-stem auger rig. The drilling rig will be provided and operated by Cascade Drilling Incorporated of Woodinville, Washington.

During drilling, soil samples will be collected by split spoon at 2.5-foot intervals from 5 feet bgs to the total depth of each boring (approximately 20 feet bgs). Soil samples will be screened in the field for VOCs using a PID. Field observations, including PID readings, soil types, and other pertinent geologic data will be recorded on the boring log.

Upon reaching the total depth of the borehole, the injection well will be installed within the annulus of the hollow-stem augers. The injection wells will be constructed of 4-inch diameter, schedule 40 PVC casing with 0.02-inch slot, stainless steel wire-wrapped screen. Depth to water through time has ranged from 10.22 to 18.92 feet btoc with an average depth to water of 15.26 feet btoc at wells MW-1 and MW-5. Therefore, the injection wells will be advanced to a depth of approximately 18 feet bgs with a 10-foot screen interval extending between 8 to 18 feet bgs. Screen interval may vary during drilling, based on groundwater elevation and/or observed hydrostratigraphy. The sand pack of #10/20 silica sand will be placed around the well screen to 1 foot above the top of screen. One foot of choker sand will be placed above the #10/20 silica sand followed by neat Portland cement to completion. A locking water tight well plug and flush-mounted traffic-rated monitoring well monument will be installed at ground surface.

Downgradient well MW-8 will be construction of 2-inch-diameter, Schedule 40 PVC casing with 0.02-inch slot schedule 40 PVC mill slot well screen. Based on depth-to-water observed at MW-1 and MW-5, the well will be advanced to a depth of

approximately 18 feet bgs with a 10-foot screen interval extending between 8 to 18 feet bgs. The sand pack of #2/12 silica sand will be placed around the well screen to 1 foot above the top of screen. A locking water tight well plug and flush-mounted traffic-rated monitoring well monument will be installed at ground surface. ARCADIS' standard operating procedure (SOP) for monitoring well installation is included in Appendix E.

8.3.1 Well Development

Newly installed wells will be developed using a combination of surging and jetting techniques. Development through jetting introduces high-velocity water into the well screen through a small-diameter tube equipped with nozzles. Injected water is purged simultaneously, effectively keeping the in-well water level elevation below the static water level. The well will initially be gently surged to remove fines by moving the pump the length of the saturated screen. The submersible pump will be capable of purging between 0.5 to 4 gpm. Details describing well jetting are attached in the Well Development Water Jetting SOP included in Appendix E.

8.3.2 Management of Investigation-Derived Waste

Soil cuttings and decontamination water generated during the field activities will be contained in Department of Transportation-approved 55-gallon steel drums. These drums will be appropriately labeled and temporarily stored on site pending analytical results. Upon receipt of soil analytical results, the drums will be removed from the site and transported to an off-site disposal facility.

8.4 Sulfate Injection

8.4.1 Injection Setup

Each injection well that will be used for injection will be temporarily connected aboveground by 5/8-inch hose to a distribution manifold staged inside an injection trailer. The manifold will include flow control valves and flow meters to adjust the application rate and quantify injection volumes. Water will be supplied to the trailer via flexible 1-inch rubber hose via camlock fittings leading to a temporary on-site water tank. Batch mixtures of Epsom salt will be dissolved into four 275-gallon mixing tanks. Aggressive in-tank mixing will be used to mix the dissolved Epsom salt solution with potable water within the injection trailer. Once the tanks are adequately mixed the Epsom salt solution will be initially pumped through the manifold to establish a siphon to the injection wells. The solution will then be gravity fed into the injection wells. ARCADIS

personnel will be on site to execute the injection process and record injection parameters throughout the event. If injection rates are low the system may be pressurized to increase flow. Well head pressure will be monitored and pressure will be incrementally increased to prevent significant pressure build up that could cause soil to fracture and create a preferential pathway to the surface.

8.4.2 Estimated Injection Volumes

Arrangements will be made to use the on-site water source; however, if the on-site water source is not adequate for the large volumes of injection solution required, a truck-mounted tank will be used to supply potable water to the site. Approximately 5,300 gallons of potable water will be used to dissolve approximately 500 pounds of Epsom salt per injection well. A target injection concentration of approximately 11 g/L of Epsom salt (magnesium sulfate heptahydrate) will be injected into each well. The target in-situ sulfate concentration is approximately 2.2 g/L, assuming a groundwater dilution factor of approximately 2 along the flow path from the injection wells to the dose response monitoring well. Calculations associated with Epsom salt injection are summarized in Table 4.

Injection volumes are based on a target 15-foot ROI per well over 10 feet of vertical well screen and an estimated 10 percent mobile porosity, which results in an approximate injection volume of approximately 10,575 gallons per injection event.

Injection volumes will be adjusted as necessary in the field to achieve positive confirmation of injected solution at dose response monitoring wells MW-1 and MW-5. An increase in sustained electrical conductivity response at target dose response wells, coupled with confirmation sulfate laboratory analytical results, will confirm that an adequate ROI is achieved over the target pilot test treatment area.

8.4.3 Baseline Monitoring

Prior to injection, groundwater samples will be collected from newly installed downgradient well MW-8 to assess baseline conditions. The sample will be analyzed for the following biogeochemical parameters: methane, sulfate, sulfide (field filtered), and dissolved iron (field filtered). The sample will also be analyzed for the following COCs : GRO and BTEX. Temperature, pH, and conductivity measurements will be taken using a down hole meter.

8.4.4 Injection Monitoring

Immediately prior to injection, baseline conductivity, temperature, and pH readings will be obtained from injection wells IW-1 and IW-2, dose response wells MW-1 and MW-5, and downgradient well MW-8. Throughout the injection process, conductivity, pH, and temperature readings will be taken from the injection tanks and dose response wells to ensure that the solution is mixed thoroughly and to monitor for reagent delivery. Once measurements at dose response wells show a sustained increase in specific conductivity, injection will cease. An increase in conductivity response indicates that reagent solution has effectively reached the targeted ROI. A groundwater sampling matrix is summarized in Table 5.

8.4.5 Performance Monitoring

At the end of injection activities, grab samples will be collected from wells MW-1, MW-5, and MW-8 for sulfate laboratory analysis. During sampling, temperature, pH, and conductivity measurements will be taken using a down hole meter.

Additional groundwater sampling of dose response wells will occur approximately 1 and 2 months following injection. During the 1-month sampling event, samples will be collected from dose response wells for laboratory analysis for the following biogeochemical parameters: methane, sulfate, sulfide (field filtered), and dissolved iron (field filtered). Temperature, pH, and conductivity measurements will be taken using a down hole meter. During the 2-month event, wells will be sampled for the same analytes as the 1-month event, and COCs (GRO, BTEX, and total and dissolved lead).

Concentration trends of sulfate, other biogeochemical parameters, and COCs will be analyzed to determine the rate of sulfate reduction over the area influenced by reagent injection. If concentrations remain above CULs, but reducing conditions exist and sulfate is depleted, an additional injection event may be scheduled. Based on the rate of sulfate use by the subsurface microbial communities, sulfate concentrations may be adjusted for subsequent injection events.

A groundwater sampling matrix is summarized in Table 5.

9. Health and Safety Procedures

The site-specific Health and Safety Plan will include methods for protection of site workers and visitors during the remedial activities and will include:

- List of COCs, their characteristics, and the potential routes of exposure
- Action levels for the various COCs
- Methods for field monitoring for the various COCs
- Emergency procedures and contact information
- Air monitoring
- Routes to emergency facilities
- Potential physical hazards and response actions for specific remedial tasks
- PPE for specific remedial tasks.

PPE will generally consist of hard hats, steel-toed boots, chemical-resistant gloves, ear protection, and eye protection. Respiratory protection (e.g., dust mask) and splash protection (e.g., face shield, apron) may be needed when mixing the magnesium sulfate solution.

Remedial Action Plan

ARCO Facility No. 5445
Seattle, Washington

10. Schedule

Injection wells will be installed during the first half of 2012, with injection following after well installation and underground injection control (UIC) permitting. Based on sulfate utilization rates observed during groundwater monitoring, additional injections may occur. A progress report will be submitted to Ecology during the second half of 2012, summarizing results of the first injection event.

Notes:

BOLD = constituent detected above MTCA Cleanup Levels
All analytical results are presented in micrograms per liter (µg/L).
GRO, DRO, and HO methods by Ecology NW Methods; BTEX, MTBE, and EDB by 8260B, lead by USEPA 6000/7000 Series, EDC by USEPA 8011.
Historical analysis (by former consultant) of BTEX, MTBE, and EDB by USEPA 8021B and confirmed with USEPA 8260B, if necessary.
Groundwater elevation = If NAPL is present, the elevation is corrected according to the following formula: (TOC elevation - depth to water) + (0.8 X NAPL Thickness).
800/1,000 = GRO MTCA cleanup levels with benzene present (800) and without (1,000).
Data collected prior to 2010 were provided by previous consultants and are included as historical reference only.
Site resurveyed in 2010. TOC elevation in reference to North American Vertical Datum 88 and North American Datum 83/98.
TOC/DTW/LNAPL/GWE measurements are in feet (ft)
BTEX = benzene, toluene, ethylbenzene, and total xylenes
DRO = total petroleum hydrocarbons - diesel range organics
DTW = depth to water below TOC
(Dup) = duplicate sample
Ecology = Washington State Department of Ecology
EDB = ethylene dibromide
EDC = 1,2-dichloroethane
GRO = total petroleum hydrocarbons - gasoline range organics
GWE = groundwater elevation above mean sea level
HO = total petroleum hydrocarbons - heavy oil range organics
(LFP) = low flow purge sampling
MTBE = methyl tertiary-butyl ether
NAPL = non-aqueous phase liquid thickness
NM = not measured
(NP) = no purge sampling
(NS) = not sampled
(P) = purge sampling
TOC = top of casing
USEPA = United States Environmental Protection Agency
-- = not analyzed/not applicable
< = Not detected greater than laboratory reporting limit. Value listed is laboratory detection limit.

Notes:

Bold and shaded cells represent concentrations greater than applicable MTCA Method A and B Cleanup Levels.

All analytical results are in milligrams per kilogram (mg/kg).

Depths are listed in feet below ground surface.

BTEX = benzene, toluene, ethylbenzene, and total xylenes

DRO = total petroleum hydrocarbons in the diesel range

EDB = Ethylene Dibromide

EDC = Ethylene Dichloride

GRO = total petroleum hydrocarbons in the gasoline range

HO = total petroleum hydrocarbons in the oil range

NA = not analyzed

NE = not established

< = Not detected greater than laboratory reporting limit. Value listed is laboratory detection limit.

TVPH = total volatile petroleum hydrocarbon

VPH = volatile petroleum hydrocarbon

BTEX by USEPA 8260

GRO, DRO, HO methods by Ecology NW Methods

Lead by USEPA 6000/7000 Series

30/100 = GRO MTCA cleanup levels with benzene present (30) and without (100)

(a) MTCA Method A CULs presented with the following exceptions: benzene, toluene, ethylbenzene, and total xylenes; MTCA Method B CULs apply for these analytes.

(b) Area where this sample was collected was over-excavated to depths between 13 and 15 feet bgs and resampled; samples from bottom of excavation are below applicable CULs (samples D-4-15.0, D-4-13.0-SWW, and D-4-13.0-SWE).

(c) Results from VPH/EPH analyses are presented in Table 2b.

**Table 2b

Sulfate Loading Conceptual Design
IW-1

Remedial Action Plan
ARCO Facility No. 5445
665 23rd Avenue
Seattle, Washington

Design Elements	Quantity	Units	Notes
Aquifer Characteristics			
Mobile Porosity (θ_m)	10%		Assumed
Total Porosity (θ_t)	30%		Assumed
Injection Wells and Volume			
Screened Interval (h)	10	ft	Screen length for IW-1, IW-2
Total Number of Injection Wells Required (#IW)	2	wells	
Radius of Influence (ROI)	15	ft	Assumed
Required injection volume per foot of screen (V_{inj}/ft)	353	gal	$V_{inj}/ft = (\pi \cdot ROI^2 \cdot h \cdot \theta_m \cdot 7.48) / h$
Total required injection volume per well (V_{inj})	529	gal	$V_{inj} = V_{inj}/ft \cdot h$
Total required injection volume per event (V_{tot})	10,575	gal	$V_{tot} = V_{inj} \cdot \#IW$
Mass Loading			
Target in situ concentration of SO_4	2.20	g/L	Target SO_4 Concentration = Sorbed and Aqueous Mass (lbs TPH) * 5 (lbs sulfate/lbs TPH) / total injection volume (gallons) * 0.27 (gallon/Liter) * (453.59 g/lbs)
Sulfate Loading			
Target Sulfate Concentration in Aquifer (AC_{SO_4})	2,200	mg/L	
Target Sulfate Concentration in Aquifer (AC_{SO_4})	0.018	lb/gal	Conversion
Unit Weight of Water (γ_w)	8.3	lb/gal	Assumed
Target Sulfate Mass Percentage in Aquifer $AM\%_{SO_4}$	0.22%	%	$M\%_{SO_4} = AC_{SO_4} / \gamma_w$
Dilution in Aquifer (D)	2	X	Assumed aquifer dilution of 2X
Formula Weight of Magnesium Sulfate Heptahydrate ($FW_{MgSO_4 \cdot 7H_2O}$)	246	g/mol	$FW_{MgSO_4 \cdot 7H_2O} = MW_{Mg} + MW_S + 4 \cdot MW_O + 7 \cdot MW_{H_2O}$
Formula Weight of Sulfate (FW_{SO_4})	96	g/mol	$FW_{SO_4} = MW_S + 4 \cdot MW_O$
Formula Weight of Magnesium (FW_{Mg})	24	g/mol	$FW_{Mg} = MW_{Mg}$
Magnesium Sulfate Hepta Hydrate:Sulfate Mass Ratio ($FW_{MgSO_4 \cdot 7H_2O} : FW_{SO_4}$)	2.6	--	$FW_{MgSO_4 \cdot 7H_2O} : FW_{SO_4} = FWMgSO_4 / FW_{SO_4}$
Magnesium:Magnesium Sulfate Hepta Hydrate Mass Ratio ($FW_{Mg} : FW_{MgSO_4 \cdot 7H_2O}$)	0.098	--	$FW_{Mg} : FW_{MgSO_4 \cdot 7H_2O} = FW_{Mg} / FW_{MgSO_4}$
Mass Percentage of Injection Strength as Sulfate ($IM\%_{SO_4}$)	0.4%	%	$IM\%_{SO_4} = D \cdot M\%_{SO_4}$
Injection Strength as Sulfate (IC_{SO_4})	0.037	lb/gal	$IC_{SO_4} = IM\%_{SO_4} \cdot \gamma_w$
Injection Strength as Sulfate (IC_{SO_4})	4,400	mg/L	Conversion
Injection Strength of Magnesium Sulfate Hepta Hydrate ($C_{MgSO_4 \cdot 7H_2O}$)	11,275	mg/L	$C_{MgSO_4} = IC_{SO_4} \cdot FW_{MgSO_4 \cdot 7H_2O} / FW_{SO_4}$ (approximate solubility @ 20°C = 710 g/L)
Injection Strength of Magnesium Sulfate Hepta Hydrate (C_{MgSO_4})	0.09	lb/gal	
Injection Strength of Magnesium Sulfate Hepta Hydrate (C_{MgSO_4})	0.09	lb/gal	Check
Mass Percentage of Injection Strength as Magnesium Sulfate Hepta Hydrate ($IM\%_{MgSO_4}$)	1.1%	%	
Sulfate requirement per well (SO_4^{2-}/W)	194	lbs	$SO_4^{2-}/W = (IC_{SO_4}) \cdot V_{inj}$
Sulfate requirement per event ($SO_4^{2-}/Event$)	388	lbs	$SO_4^{2-}/Event = SO_4^{2-}/W \cdot \#IW$
Magnesium Sulfate Hepta Hydrate requirement per event ($MgSO_4/Event$)	994	lbs	$MgSO_4/Event = SO_4^{2-}/Event \cdot FWMgSO_4 / FWSO_4^{2-}$
Magnesium Sulfate Hepta Hydrate requirement per event ($MgSO_4/Event$)	994	lbs	CHECK: $MgSO_4 \cdot 7H_2O/Event = CMgSO_4 \cdot 7H_2O \cdot V_{tot}$
Injection Timeframe			
Assumed per well injection rate (Q_{inj})	2	gpm	Design Parameter
Assumed hours worked per day	10	hr/d	Assumed
Injection hours per day (t_{labor})	10	hr/d	Assumed - continuous gravity feed not possible
Time to complete injection at one well cluster (t_{inj})	45	hours	$t_{inj} = (V_{inj}) / (Q_{inj} \cdot 60)$
Number of wells for Simultaneous Injection	2		
Length of injection	5	days	
Time required for travel, setup/teardown, mix batches each day (t_{setup})	1	hours	Change this with local site knowledge
Required Technician Oversight	100%		Assumed
Field Technician Oversight Time	46	hours	
Total time to complete injection (t_{tot})	6	days	$t_{tot} = (t_{inj} + t_{setup}) / t_{labor}$

**Table 5
Sampling Schedule for Sulfate Injections**

**Remedial Action Plan
ARCO Facility No. 5445
665 23rd Avenue
Seattle, Washington**

Subject:
Annual Site Activities Report, 2012
Former ARCO Facility No. 5445
Multi-Site VCP No. NW2444
665 23rd Avenue
Seattle, Washington 98122

Dear Ms. Goldstein:

On behalf of BP West Coast Products, LLC. (BP), ARCADIS U.S., Inc. (ARCADIS) is pleased to submit this *Annual Site Activities Report, 2012* for the above referenced facility (the Site). The Site currently operates as an active retail gasoline station located at 665 23rd Avenue, in Seattle, Washington. A Site location map is presented in **Figure 1**.

On February 20th and October 29th, 2012, ARCADIS conducted semi-annual groundwater monitoring activities at the Site. During the February 20th event, monitoring wells MW-1 through MW-7 were gauged and sampled via low flow sampling methods. During the October 29th event, monitoring wells MW-1, MW-5, and MW-8 were gauged and sampled via purge methods, using disposable bailers. Groundwater samples were analyzed for gasoline range organics (GRO) according to Northwest Method NWTPH-Gx, for benzene, toluene, ethylbenzene, total xylenes (BTEX collectively) and methyl tertiary butyl ether (MTBE) by Environmental Protection Agency (EPA) Method 8260, and for dissolved and total lead by EPA Method 6010. Field data sheets are included as **Appendix A**.

Samples were collected in laboratory provided bottles and placed in a cooler with ice. Samples were submitted to Pace Analytical Services, Inc., in Seattle, Washington, under standard chain-of-custody protocol. The laboratory analytical report and chain-of-custody documentation are included as **Appendix B**.

During the February 20th, 2012 monitoring event, groundwater conditions at the Site remained generally consistent with previous years. The depth to groundwater during

this sampling event ranged between 10.82 feet below top of casing (btoc) in well MW-7 to 20.60 feet btoc in well MW-2. Groundwater elevations during this sampling event ranged from 260.40 feet above mean sea level (msl) in well MW-3 to 268.19 feet above msl in well MW-6. Groundwater elevations from wells MW-2 and MW-3 are not consistent with the other Site wells; these wells are screened at deeper intervals, between 20 and 25 feet below ground surface (bgs) to 40 and 45 feet bgs.

A gauging event was conducted on March 20th, 2012, the depth to groundwater ranged between 10.22 feet btoc in well MW-5 to 10.78 feet btoc in well MW-4. Groundwater elevations during this gauging event ranged from 266.50 feet above msl in well MW-1 to 268.98 feet above msl in well MW-6. The inferred direction of groundwater flow is to the east-southeast, based on the March 20th, 2012 gauging event. Groundwater gauging data are presented in **Table 1** and **Figure 2**.

During the February 20th, 2012 sampling event, groundwater samples collected from one monitoring well contained constituents of concern (COCs) at concentrations greater than the Model Toxics Control Act Method A Cleanup Levels (MTCA A CULs) for GRO (800 micrograms per liter ($\mu\text{g/L}$)), benzene (5 $\mu\text{g/L}$), and ethylbenzene (700 $\mu\text{g/L}$). The samples collected from well MW-1 contained concentrations of GRO, benzene, and ethylbenzene (11,600 $\mu\text{g/L}$, 780 $\mu\text{g/L}$, and 1,540 $\mu\text{g/L}$, respectively) greater than the MTCA A CUL.

Analytical results for groundwater collected from monitoring wells MW-2 and MW-5 did not identify COCs at concentrations greater than the MTCA A CULs. Analytical results for groundwater collected from monitoring wells MW-3, MW-4, MW-6, MW-6 duplicate sample (DUP), and MW-7 did not identify COCs at concentrations greater than the laboratory reporting limits (RLs). Analytical results are presented in **Table 1** and **Figure 2**.

A limited gauging and sampling event was conducted on October 29th, 2012. The depth to groundwater during this sampling event ranged between 11.80 feet btoc in wells MW-1 and MW-8 to 12.30 feet btoc in well MW-5. Groundwater elevations during this sampling event ranged from 264.90 feet above msl in well MW-8 to 265.39 feet above msl in well MW-1. Groundwater gauging data are presented in **Table 1** and **Figure 3**.

During the October 29th, 2012 sampling event groundwater samples collected from one monitoring well contained COCs at concentrations greater than the MTCA A CULs for GRO, benzene, and ethylbenzene. The sample collected from well MW-1

contained concentrations of GRO, benzene, and ethylbenzene (8,720 µg/L, 284 µg/L, 1,790 µg/L, respectively) greater than the MTCA A CUL.

Analytical results for groundwater collected from monitoring well MW-5 and DUP did not identify COCs at concentrations greater than the MTCA A CULs. Analytical results for groundwater collected from monitoring well MW-8 did not identify COCs at concentrations greater than the laboratory RLs. Analytical results are presented in **Table 1** and **Figure 3**.

In February 2012, activities were conducted to prepare for the implementation of remedial activities at the Site. On February 3rd, 2012, three soil borings were advanced at the site and converted to groundwater monitoring wells MW-5, MW-6, and MW-7. Between February 9th and 19th, 2012, rising-head aquifer tests (slug tests) were conducted on monitoring wells MW-1 and MW-4. In addition, step tests were also conducted at the wells, where potable water was injected into the Site wells at variable flow rates to determine target flow rates to be achieved during injection activities. During these tests, a pressure transducer with data logging capabilities was placed into each well to measure water level. On February 20, 2012, ARCADIS conducted pre-injection baseline groundwater biogeochemical indicator sampling in conjunction with groundwater monitoring activities at the site. During this event, one source zone well (MW-1), three cross gradient wells (MW-2, MW-5, and MW-7), and one upgradient well (MW-4) were sampled for pre-injection baseline parameters of total alkalinity, sulfate, sulfide, nitrite/nitrate, methane, and total and dissolved iron, using low-flow methodology. Results from the aforementioned site characterization activities were reported in the *Remediation Action Plan* dated June 14, 2012.

On May 17th, 2012, one monitoring well (MW-8) and two injection wells (IW-1 and IW-2) were installed at the Site. Soil analytical results are presented in **Table 2** and **Figure 4**. Analytical results are included in **Appendix B** and boring logs are included in **Appendix C**.

A magnesium sulfate (MgSO₄) injection event took place between August 22nd and August 31st, 2012. The purpose of the injection event was to stimulate sulfate reducing bacteria in order to provide anaerobic bio oxidation to COC in the treatment area. A total of 10,000 gallons of MgSO₄ was injected, with a permit from the Underground Injection Control (UIC) Program number 31643. The UIC permit is included in **Appendix D**. Field notes and data sheets are included as **Appendix E**. Summary of injection events and tank batch readings are presented in **Tables 3** and **4**, respectively.

The next groundwater monitoring event at the Site is scheduled for the first half of 2013. Pending analytical and geochemical results associated with the MgSO₄ injection event, ARCADIS will evaluate additional MgSO₄ injection events in 2013. Results from future injection events will be reported in the 2013 Annual Site Activities Report.

Should you have any questions or if ARCADIS can be of further assistance, please contact Scott Zorn at (206) 726-4709.

Sincerely,

ARCADIS U.S., Inc.

msl = Mean sea level
TOC = Top of casing
GWE = Groundwater elevation above msl
DTW = Depth to water below TOC
All analytical results are in micrograms per liter (µg/L)
TOC/DTW/NAPL/GWE measurements are in feet (ft)
< = Not detected at or above the laboratory reporting limit
-- = Not analyzed/not applicable
NA = Not analyzed
NM = Not measured
NE = Top of casing not established
DUP = Duplicate sample
NS = Not sampled
NAPL = Non-Aqueous Phase Liquid Thickness
GRO = Total Petroleum Hydrocarbons - Gasoline Range Organics
DRO = Total Petroleum Hydrocarbons - Diesel Range Organics

Table 1
Groundwater Gauging Data and Select Analytical Results
WA-05445
665 23rd Avenue, Seattle, WA 98122

All analytical results are presented in micrograms per liter (µg/L)

Well	Date	Notes	TOC	DTW	NAPL	GWE	GRO	DRO	HO	Benzene	Toluene	Ethylbenzene	Total Xylenes	MTBE	EDB	EDC	Total Lead	Dissolved Lead
Model Toxics Control Act (MTCA) Method A Cleanup Levels (CLs) in µg/L							800/1,000	500	500	5	1,000	700	1,000	20	0.01	5	15	15

HO = Total Petroleum Hydrocarbons- Heavy Oil Range Organics
EDB = Ethylene Dibromide
EDC = 1,2-Dichloroethane
MTBE = Methyl Tertiary Butyl Ether
BTEX = Benzene, Toluene, Ethylbenzene and Total Xylenes
P = Purge sampling
LFP = Low flow purge sampling
NP = No purge sampling
GRO, DRO, HO methods by Ecology NW Methods; BTEX, MTBE and EDB by 8260B, lead by EPA 6000/7000 Series, EDC by EPA 8011
Historic analysis by former consultant of BTEX, MTBE and EDB by EPA 8021B and confirmed with EPA 8260B if necessary
Groundwater Elevation - If NAPL is present, the elevation is corrected according to the following formula, (TOC elevation - depth to water) + (0.8 X NAPL Thickness)
800/1,000 = GRO MTCA cleanup levels with benzene present (800) and without (1,000)
Data collected prior to 2010 have been provided by previous consultants and are included as historical reference only
Site resurveyed in 2010. TOC elevation in reference to vertical datum N.A.V.D. 88 and horizontal datum NAD 83/98

BOLD constituent detected above MTCA Cleanup Levels

Notes:

Bold and shaded cells represent concentrations greater than applicable MTCA Method A and B Cleanup Levels.

All analytical results are in milligrams per kilogram (mg/kg).

Depths are listed in feet below ground surface.

BTEX = benzene, toluene, ethylbenzene, and total xylenes

DRO = total petroleum hydrocarbons in the diesel range

EDB = Ethylene Dibromide

EDC = Ethylene Dichloride

GRO = total petroleum hydrocarbons in the gasoline range

HO = total petroleum hydrocarbons in the oil range

NA = not analyzed

NE = not established

< = Not detected greater than laboratory reporting limit. Value listed is laboratory detection limit.

TVPH = total volatile petroleum hydrocarbon

VPH = volatile petroleum hydrocarbon

BTEX by USEPA 8260

GRO, DRO, HO methods by Ecology NW Methods

Lead by USEPA 6000/7000 Series

30/100 = GRO MTCA cleanup levels with benzene present (30) and without (100)

(a) MTCA Method A CULs presented with the following exceptions: benzene, toluene, ethylbenzene, and total xylenes; MTCA Method B CULs apply for these analytes.

(b) Area where this sample was collected was over-excavated to depths between 13 and 15 feet bgs and resampled; samples from bottom of excavation are below applicable CULs (samples D-4-15.0, D-4-13.0-SWW, and D-4-13.0-SWE).

(c) Results from VPH/EPH analyses are presented in Table 2b.

Subject:
Annual Site Status Report, 2013
Former ARCO Facility No. 5445
Multi-Site VCP No. NW2444
665 23rd Avenue
Seattle, WA 98122

Dear Ms. Goldstein:

On behalf of BP West Coast Products, LLC. (BP), ARCADIS U.S., Inc. (ARCADIS) is pleased to submit this *Annual Site Status Report, 2013* for the above referenced facility (the Site). This report summarizes semi-annual groundwater sampling and post sulfate injection monitoring activities. The Site currently operates as an active retail gasoline station located at 665 23rd Avenue, in Seattle, Washington. A Site location map is presented in **Figure 1**.

First Semi-Annual Monitoring Event

On June 18, 2013, ARCADIS conducted the first semi-annual groundwater monitoring event at the Site. During this event, monitoring wells MW-1 through MW-8 were gauged and sampled via no purge methods, using disposable bailers. Field data sheets are included as **Appendix A**.

Groundwater samples were analyzed for the following constituents of concern (COCs):

- Total petroleum hydrocarbons (TPH) as gasoline range organics (GRO) by Washington State Department of Ecology (Ecology) Northwest Method NWTPH-Gx;
- Benzene, toluene, ethylbenzene, total xylenes (BTEX, collectively) and methyl tertiary butyl ether (MTBE) by Environmental Protection Agency (EPA) Method 8260; and
- Total and dissolved lead by EPA Method 6010.

Groundwater samples were collected in laboratory-provided bottles and placed in a cooler with ice. Samples were submitted to Pace Analytical Laboratories (Pace) in Seattle, Washington, under standard chain-of-custody protocols. The laboratory analytical report and chain-of-custody documentation are included as **Appendix B**.

The depth to groundwater during the June 18, 2013 sampling event ranged between 7.30 feet below top of casing (btoc) in monitoring well MW-7 to 17.42 feet btoc in monitoring well MW-2. Groundwater elevations during this sampling event ranged from 271.66 feet above mean sea level (msl) in monitoring well MW-6 to 260.86 feet above msl in monitoring well MW-2. Groundwater elevations from wells MW-2 and MW-3 are not consistent with the other Site wells; these wells are screened at deeper intervals, between 20 and 25 feet below ground surface (bgs) to 40 and 45 feet bgs. Therefore, these wells were not used for groundwater contour mapping. The inferred direction of groundwater flow is to the southeast during this gauging event.

Analytical results for groundwater samples collected during this event indicate concentrations of the following COCs are greater than the Ecology Model Toxics Control Act (MTCA) Method A Cleanup Levels (Method A CLs):

- GRO was detected greater than Method A CL of 800 micrograms per liter ($\mu\text{g/L}$) at a concentration of 13,800 $\mu\text{g/L}$ (MW-1).
- Benzene was detected greater than Method A CL of 5 $\mu\text{g/L}$ at a concentration of 126 $\mu\text{g/L}$ (MW-1).
- Ethylbenzene was detected greater than Method A CL of 700 $\mu\text{g/L}$ at a concentration of 1,900 $\mu\text{g/L}$ (MW-1).

Remaining COCs detected above laboratory reporting limits (RLs) did not exceed Method A CLs. Groundwater gauging data and select analytical results are summarized in **Table 1**. A groundwater contour map with analytical results from the first semi-annual event is presented on **Figure 2**.

Second Semi-Annual Monitoring Event

On December 23, 2013, Blaine Tech Services, Inc. (Blaine Tech) conducted the second semi-annual groundwater monitoring event at the site. During this event, monitoring wells MW-1 through MW-8 were gauged and sampled via low-flow sampling methods, using submersible and peristaltic pumping methods with disposable polyethylene tubing. Field data sheets are included as **Appendix A**.

Groundwater samples were analyzed for the following COCs:

- TPH as GRO by Ecology Northwest Method NWTPH-Gx;
- BTEX and MTBE by EPA Method 8260; and,
- Total and dissolved lead by EPA Method 6010

Groundwater samples were collected in laboratory-provided bottles and placed in a cooler with ice. Samples were submitted to Pace in Seattle, Washington, under standard chain-of-custody protocols. The laboratory analytical report and chain-of-custody documentation are included as **Appendix B**.

The depth to groundwater during the December 23, 2013 sampling event ranged between 5.72 feet btoc in monitoring well MW-7 to 20.51 feet btoc in monitoring well MW-2. Groundwater elevations during this sampling event ranged from 257.77 feet above msl in monitoring well MW-2 to 272.40 feet above msl in monitoring well MW-8. Groundwater elevations from wells MW-2 and MW-3 are not consistent with the other Site wells; these wells are screened at deeper intervals, between 20 and 25 feet below ground surface (bgs) to 40 and 45 feet bgs. Therefore, these wells were not used for groundwater contour mapping. The inferred direction of groundwater flow is to the southeast during this gauging event.

Analytical results for the groundwater samples indicate concentrations of the following COCs are present greater than MTCA Method A CLs:

- GRO was detected greater than Method A CL of 800 $\mu\text{g/L}$ at concentrations of 6,300 $\mu\text{g/L}$ (MW-1), 7,400 $\mu\text{g/L}$ (duplicate sample from MW-1) and 1,700 $\mu\text{g/L}$ (MW-5).
- Benzene was detected greater than Method A CL of 5 $\mu\text{g/L}$ at concentrations of 150 $\mu\text{g/L}$ (MW-1) and 140 $\mu\text{g/L}$ (duplicate sample from MW-1).
- Ethylbenzene was detected greater than Method A CL of 700 $\mu\text{g/L}$ at a concentration of 1,100 $\mu\text{g/L}$ (MW-1 and the duplicate sample from MW-1).

Remaining COCs detected above laboratory RLs did not exceed Method A CLs. Groundwater gauging data and select analytical results are summarized in **Table 1**. A groundwater contour map with analytical results from the second semi-annual event is presented on **Figure 3**. An updated historical groundwater flow diagram is presented on **Figure 4**.

Post Injection Monitoring:

In 2012 one magnesium sulfate heptahydrate ($MgSO_4$) injection event was conducted in order to facilitate in situ anaerobic bio-oxidation (ABOx) treatment of COCs at the Site. No additional injection events were conducted in 2013. However, post injection sampling from the injection event has been ongoing. The injection event took place between August 22nd and August 30th, 2012 and is reported in the *Annual Site Activities Summary Report 2012*.

Post injection sampling occurred during each of the semiannual groundwater monitoring events conducted in June and December 2013. Sulfate concentrations have dissipated to approximate baseline concentrations in all monitoring wells (MW-1, MW-5 and MW-8). Based on the groundwater sulfate results from June and December 2013 monitoring events, injections will be continued during the first half of 2014. Geochemical analytical results are presented in **Table 2** and laboratory analytical reports are included in **Appendix B**. Field data sheets from post injection sampling events are included as **Appendix A**.

The next groundwater monitoring event at the Site is scheduled for the first half of 2014. Should you have any questions or if ARCADIS can be of further assistance, please contact Praj Ghatpande at (206) 726-4762.

Sincerely,

ARCADIS U.S., Inc.

msl = Mean sea level

TOC = Top of casing

GWE = Groundwater elevation above msl

DTW = Depth to water below TOC

All analytical results are in micrograms per liter (µg/L)

TOC/DTW/NAPL/GWE measurements are in feet (ft)

< = Not detected at or above the laboratory reporting limit and/or method detection limit

-- = Not analyzed/not applicable

NA = Not analyzed

NM = Not measured

NE = Top of casing not established

DUP = Duplicate sample

NS = Not sampled

NAPL = Non-Aqueous Phase Liquid Thickness

GRO = Total Petroleum Hydrocarbons - Gasoline Range Organics

DRO = Total Petroleum Hydrocarbons - Diesel Range Organics

HO = Total Petroleum Hydrocarbons- Heavy Oil Range Organics

EDB = Ethylene Dibromide

EDC = 1,2-Dichloroethane

MTBE = Methyl Tertiary Butyl Ether

BTEX = Benzene, Toluene, Ethylbenzene and Total Xylenes

P = Purge sampling

LFP = Low flow purge sampling

NP = No purge sampling

J = estimated value - The result is less than or equal to the method detection limit and less than the limit of quantitation.

U = The result is less than the method detection limit.

GRO, DRO, HO methods by Ecology NW Methods; BTEX, MTBE and EDB by 8260B, lead by EPA 6000/7000 Series, EDC by EPA 8011

Historic analysis by former consultant of BTEX, MTBE and EDB by EPA 8021B and confirmed with EPA 8260B if necessary

Groundwater Elevation - If NAPL is present, the elevation is corrected according to the following formula, (TOC elevation - depth to water) + (0.8 X NAPL Thickness)

800/1,000 = GRO MTCA cleanup levels with benzene present (800) and without (1,000)

Data collected prior to 2010 have been provided by previous consultants and are included as historical reference only

Site resurveyed in 2010. TOC elevation in reference to vertical datum N.A.V.D. 88 and horizontal datum NAD 83/98

BOLD constituent detected above MTCA Cleanup Levels

¹: Total alkalinity analyzed using SM method 2320B.

²: Sulfate analyzed by EPA method 300.0.

^{2a}: Sulfide analyzed by SM 4500-S-2 F

³: Nitrogen, Nitrite/Nitrate analyzed by EPA method 353.2.

⁴: Methane analyzed using method RSK 175.

⁵: Total and dissolved lead and iron analyzed by EPA method 6010.

⁶: pH readings are in standard units, collected using a calibrated Yellow Springs Instrument Multi-meter.

⁷: Specific conductivity measured using a calibrated Yellow Springs Instrument Multi-meter.

"ND <" = Indicates analyte not detected above method reporting limits

J = estimated value. - The result is less than or equal to the Method Detection Limit and less than the limit of quantitation.

CaCO₃ = Calcium carbonate

mg/L = Milligrams per liter

µg/L = Micrograms per Liter

-- = Not Analyzed or Measured

Closure Request and 2014/2015 Site Status Report

Former ARCO Facility No. 5445

1. Introduction

On behalf of BP West Coast Products, LLC, (BP) Arcadis U.S., Inc. (Arcadis) has prepared this Closure Request and 2014/2015 Site Status Report for Atlantic Richfield Company (ARCO) Facility No. 5445 located at 665 23rd Avenue, Seattle, Washington (the Site). The Site and surrounding areas are presented on **Figure 1**, a Site aerial map is presented on **Figure 2**.

This report summarizes past investigation results and remedial actions at the Site and has been completed following the submittal of an application to the Washington State Department of Ecology (Ecology) Voluntary Cleanup Program (VCP). This closure request also presents a request to Ecology for a No Further Action (NFA) determination regarding historical subsurface impacts to soil and groundwater associated with former operations by ARCO. The following information will demonstrate that an NFA determination is the appropriate action regarding the Site.

2. Property Information

2.1 Property Description

The Site property is located at the intersection of 23rd Avenue and East Cherry Street in Seattle, Washington. The Site is currently a retail ARCO gasoline facility and convenience store, with a retail building and canopy on a flat grade across the Site. Former operations at the property have included the storage and distribution of unleaded gasoline. The facility currently operates three 12,000 gallon underground storage tanks (USTs) containing unleaded gasoline (Arcadis 2012). A Site plan depicting station layout is presented on **Figure 3**.

A legal description of the property, as well as other details relating to past and present ownership and operations at the property are presented as **Appendix A**. A tank data summary is presented as **Appendix B**.

2.2 Property Ownership and Use

2.2.1 Past Ownership and Use

In 1987 the property was transferred from Ruth and Henry J. Singletary to ARCO. In 1988, three fiberglass, reinforced double wall 12,000 gallon USTs were installed onsite

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

(Appendix A). These tanks are currently in operation at the facility. The following table summarizes the current USTs at the property.

Tank ID	Tank Volume (gallons)	Content	Installation Date	Decommissioning Date
1	12,000	Unleaded Gasoline	March 1988	In Service
2	12,000	Unleaded Gasoline	March 1988	In Service
3	12,000	Unleaded Gasoline	March 1988	In Service

In 2001, the ownership and operations of the property was transferred from ARCO to BP.

2.2.2 Current Ownership and Use

In 2006, the ownership and operation of the property was transferred from BP to the current property owner, City Neighbor, Inc. The service station and retail store is currently a retail ARCO gasoline facility and convenience store. The Site is paved with asphalt or concrete with the exception of some minor landscaping around the property boundary.

2.2.3 Future Ownership and Use

The future use and ownership of the property is unknown, however it is anticipated to continue to be used as a gas station and to remain zoned for commercial use.

2.3 Property Zoning and Location

The Site is located in King County and is zoned as NC1-30, neighborhood commercial use, and surrounded by a mixed commercial/residential area. Residential neighborhoods exist to the north, west and south of the Site. Garfield Community Center exists immediately to the east, across 23rd Avenue. A retail commercial building and the Cherry Hill Baptist Church are to the north of the Site across East Cherry Street. A vacant lot is located directly west of the Site. Several single family residential houses are located directly south of the Site. The Site is approximately one mile west of Lake Washington. Surrounding Site features are depicted on **Figure 2**.

The topography in the immediate vicinity of the Site is flat, and the elevation of the Site is approximately 278 feet (ft.) above North American Datum 1988 (NAVD 88). The Site

is approximately one mile west of Lake Washington. The Puget Sound is located two miles west of the Site.

2.4 Site Discovery and Definition

In July 2004, facility upgrades were conducted at the Site, including the replacement of the dispenser islands and product distribution piping. During these operations, soil samples were collected from beneath the product lines and dispenser islands. The samples collected from dispenser island four (D-4), the northeast dispenser island, indicated that there was impacted soils present, which resulted in an over-excavation conducted in the area surrounding D-4 and three more confirmation soil samples were collected, including the bottom and two side walls of the over-excavated area. Soil samples collected during facility upgrades were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), methyl tertiary butyl ether (MTBE), Total Petroleum Hydrocarbons (TPH) as gasoline (GRO) and Total Lead. Additionally, select soil samples were analyzed for TPH as diesel (DRO), TPH as heavy oil (HO), and Volatile Petroleum Hydrocarbons (VPH) (Delta Environmental Consultants, Inc. [Delta] 2005a).

Laboratory analytical results indicated that the soil samples collected from D-4 contained constituents of concern (COCs) exceeding the Model Toxics Control Act (MTCA) Method A Cleanup Level (CUL) for soil. Maximum GRO and benzene levels in samples collected at D-4 were 1,220 milligrams per kilogram (mg/kg) and 1.82 mg/kg respectively, located at 11.5 ft. below ground surface (bgs). The findings were reported to Ecology and the impacted area around D-4 was over-excavated (Delta 2005a).

A semiannual groundwater monitoring program was initiated at this Site in the third quarter of 2005 and in November 2005, Ecology listed the Site in the Leaking Underground Storage Tank (LUST) program.

The Site is defined under MTCA as all areas affected by the petroleum hydrocarbon impacts associated with the property. The Site is defined as the region surrounding the location where impacts were observed from the north at MW-2 to the south at MW-1 and MW-5. The boundaries of the Site in accordance with MTCA are illustrated on **Figure 4**.

2.5 Regulatory Consultation

A VCP application was sent to Ecology by Arcadis and the Site was entered into the Ecology VCP in July 2011. The Site was assigned VCP No. NW2444. Since entering the Site into the Ecology VCP there have been no written opinions from Ecology regarding actions to achieve a NFA for the Site.

2.6 Area Drinking Water Sources

The public water supply at the Site and surrounding area is provided by the Seattle Public Utilities, which acquires its supply from both the Cedar Water Treatment Facility which treats water received from the Cedar River and Lake Youngs and the Tolt Water Treatment Facility which treats water received from the Tolt River. A 2015 online search of the Ecology well log database and the King County Groundwater Program was conducted in addition to a review of the Environmental Data Resources, Inc. (EDR) Geocheck Report, 2011 (Inquiry Number 2982393.14s) to check the drinking water sources within the vicinity of the Site (Ecology 2015; King County 2015).

According to the EDR Report, there are a total of four U.S. Geological Survey (USGS) monitoring wells within one mile of the property. The USGS wells are specifically used for the collection of hydrogeological data and are not used for drinking water purposes. No wells exist within ¼ mile of the Site and three USGS wells are listed as being located within ¼ to ½ mile from the Site. The online search of the Ecology well log database and the King County Groundwater Program did not reveal wells other than wells labeled “resource protection wells” and “decommissioned” within a ¼ mile radius of the Site.

The EDR report did not indicate there were any other types of wells within a mile of the property. Therefore, there are no known drinking water wells within one mile of the property that could serve as potential receptors for ingestion of dissolved phase petroleum hydrocarbons. The EDR Geocheck Report is available in **Appendix C**.

3. Environmental Conditions

3.1 Physiographic Setting and Topography

The Site is situated in the lowlands of the Puget Sound basin in western Washington. Puget Sound Basin is a north-south trending trough between the Olympic Mountains to the west and the Cascade Mountains to the east. Elevations in the lowlands range

from sea level up to several hundred feet. The topography is dominated by north-south-trending valleys and low, nearly flat-topped highlands cut by streams. Puget Sound occupies a large part of the western portion of the basin and lakes and streams occur frequently throughout the area (Washington State Department of Natural Resources 2005). The Site elevation is approximately 278 ft. above NAVD 88 and the topography slopes slightly to the east.

3.2 Geology and Hydrogeology

The Site is located within the Puget-Willamette Trough Regional Aquifer System, which is a linear, elongated basin stretching from the Canadian border in Washington to central Oregon. Specifically, the Site is located in an unconsolidated-deposit aquifer, which is the principle aquifer type in the Puget Sound Lowlands. Surficial geology in the general area is dominated by Pleistocene glacial alluvium with recent alluvium in river floodplains and deltas. Pleistocene sediments are typically well-compacted beds of very dense till interbedded with sands, silts and gravel with occasional lacustrine deposits. Beds of till are often several meters thick, and contain frequent discontinuous “lenses” of more permeable material. Perched groundwater frequently occurs in the lenses with larger aquifers occupying sandy strata overlying permeable till or silt deposits (USGS 1994).

Previous subsurface assessments have been conducted to a depth of 46.5 ft. bgs. The investigations indicate that soil at the Site is composed primarily of sand and silt mixtures to the maximum depth explored with an observed discontinuous silt layer at a depth of approximately 15 to 20 ft. bgs. (Delta 2005b; Arcadis 2012).

Historically, depth to groundwater measured in monitoring wells at the Site has ranged from 5.72 to 25.61 ft. bgs. Groundwater flow direction was historically shown to the north, however these gradients were based on monitoring wells MW-1 through MW-4, two of which (MW-2 and MW-3) are constructed with screens below the water table in a tighter lithological unit, resulting in inaccurate groundwater elevations. After the installation of monitoring wells MW-5 through MW-8, completed in 2012, the groundwater direction gradient could be calculated more accurately. The calculated groundwater flow gradient is generally to the east-southeast but ranges through the site from east to southeast, the lower point of groundwater elevation being the southeast corner of the site. Historic groundwater flow directions are illustrated in a groundwater rose diagram on **Figure 5**.

Cross sections showing Site lithology are presented on **Figures 6, 6a and 6b**. Historical groundwater gauging data are presented in **Table 1** and on **Figures 7a to 7e**. Site boring logs are included in **Appendix D**.

4. Summary of Previous Site Investigations

In July 2004, facility upgrades were conducted at the Site including replacement of the dispenser islands and product distribution piping. Soil samples collected during facility upgrades were analyzed for GRO, BTEX, MTBE, and total lead. Additionally, select soil samples were analyzed for DRO, HO, and VPH. During facility upgrades in 2004, the only soils containing petroleum hydrocarbons above MTCA Method A CULs were located around the northeastern-most dispenser island, Dispenser Island D-4 at 11.5 ft. bgs. Concentrations of GRO (1,220 mg/kg) and BTEX (1.82 mg/kg, 18.6 mg/kg, 12.1 mg/kg and 59.5 mg/kg, respectively) were above the MTCA Method A CULs in the sample collected from D-4-11.5. The D-4 dispenser island area was over-excavated to depths between 13 and 15 ft. bgs and hydrocarbon-impacted soil was removed. Side wall samples D-4-13-SSW and D-4-13-SWE as well as the bottom of excavation sample D-4-15 did not have concentrations of COCs exceeding CULs (Delta 2005a).

A subsurface investigation was initiated in September 2005 to determine the extent of residual hydrocarbons in soil and groundwater. Four borings were advanced to depths ranging from 31.5 to 46.5 ft. bgs and monitoring wells MW-1 through MW-4 were installed. Groundwater was encountered at depths ranging from 21.5 to 36.5 ft. bgs. Soil samples collected from the borings were analyzed for GRO, BTEX, MTBE, and total lead. Additionally, one soil sample (MW-2 at 5 ft. bgs) was analyzed for ethylene dibromide (EDB) and ethylene dichloride (EDC). Soil analytical samples from borings MW-1, MW-3 and MW-4 had no concentrations of COCs detected above the laboratory method detection limits. Soil collected from boring MW-2 contained concentrations of COCs that exceeded the MTCA Method A CULs at depths of 5, 15 and 20 ft. bgs, while COC concentrations of samples from 25 ft. bgs were below the respective method detection limits (Delta 2005b).

In November 2005, Ecology listed the Site in the LUST program (Ecology 2005).

A groundwater monitoring program was initiated at the Site in the third quarter 2005, and is currently ongoing. Starting in 2005, groundwater samples were collected from the four on-site monitoring wells (MW-1 to MW-4). As described below, three additional monitoring wells were installed at the Site in February 2012 and one additional monitoring well was installed in May of 2012. The four monitoring wells were added to

the groundwater monitoring program. Analyzed constituents include GRO, BTEX, total and dissolved lead, and MTBE. DRO and HO were added in 2014 during final compliance sampling activities. Current and historical groundwater analytical data from 2005 to June 2015 are presented in **Table 1**. Well locations are illustrated on **Figure 3**.

In February 2012, three soil borings were advanced at the Site and converted to groundwater monitoring wells MW-5, MW-6, and MW-7, as part of a subsurface investigation. Based on field screening methods, two to three soil samples were collected for analysis during the installation of each boring and analyzed for GRO, DRO, HO, BTEX, and total lead, with select samples analyzed for VPH, and extractable petroleum hydrocarbons (EPH). Eight soil samples and one duplicate sample were collected during the installation of monitoring wells MW-5, MW-6, and MW-7. Petroleum hydrocarbon constituents were detected at concentrations greater than laboratory reporting limits from one sample in monitoring well MW-5 at a depth of 10 ft. bgs (MW-5-10). Concentrations of GRO (6.5 mg/kg), DRO (21.1 mg/kg), and HO (96.7 mg/kg) were less than their respective CULs. Concentrations of BTEX in this sample were less than laboratory detection limits. Sample MW-5-10 was also analyzed for EPH and VPH. No CUL exceedances were observed during the 2012 subsurface investigation (Arcadis 2012).

To evaluate Site remedial options, a rising-head aquifer testing (slug testing) was conducted. Hydraulic conductivity at the Site was calculated and a step test was conducted on monitoring wells MW-1 and MW-4. Additionally, baseline geochemical parameters were analyzed in conjunction with groundwater monitoring activities conducted on February 20, 2012. Following these investigations and as outlined in the Remedial Action Plan (Arcadis 2012), enhanced natural attenuation via subsurface injections was selected as the Site remedial approach. In May of 2012, two injection wells (IW-1 and IW-2) and one downgradient monitoring well (MW-8) were installed at the Site. Soil analytical samples taken from monitoring well MW-8 had concentrations below the laboratory method detection limits for the COCs analyzed. On July 8, 2014, two hand auger soil samples were collected near historically impacted soils. Details regarding this event are discussed below in Section 6.1.

5. Summary of Previous Remedial Actions

In July 2004, facility upgrades were conducted at the Site, including the replacement of the dispenser islands and product distribution piping. During these operations, soil analytical samples were collected, two of which had concentrations above applicable MTCA Method A CULs under dispenser island 4. The soil in this area was over-

Closure Request and 2014/2015 Site Status Report

Former ARCO Facility No. 5445

excavated to a depth of 13-15 ft. bgs. Forty-one tons of soil were removed from the Site, transported and disposed of by TPS Technologies Inc. following the completion of upgrade activities.

In 2012, Arcadis submitted a Remedial Action Plan to Ecology, proposing subsurface injections as the remedial approach for the Site. In June of 2012, Site injection wells were registered with the Underground Injection Control (UIC) Program and assigned the UIC site number 31830. In August of 2012, a magnesium sulfate heptahydrate ($MgSO_4$) injection event was conducted to promote enhanced natural attenuation of hydrocarbon COCs through anaerobic bio-oxidation at the Site. The $MgSO_4$ solution was injected into injection wells IW-1 and IW-2. A total of 10,000 gallons of $MgSO_4$ solution was injected: approximately 5,000 gallons into each injection well (Arcadis 2013). Post injection monitoring of the injection solution indicated that $MgSO_4$ concentrations were found in target wells at levels sufficient to sustain elevated microbial activity needed to enhance the natural attenuation of petroleum hydrocarbons for two months post injection. Continued post injection sampling in 2013 found that concentrations had dropped back to pre-injection baseline conditions (Arcadis 2014a).

6. Summary of 2014-2015 Activities

6.1 2014 Subsurface Investigation

On July 8, 2014, Arcadis conducted a subsurface investigation to the north and south of the dispenser island on the central southern portion of the Site. Two soil borings (HA-1 and HA-2) were advanced to delineate and confirm historic soil COC concentrations. HA-1 was advanced south of the dispenser islands to confirm historical impacts associated with the dispenser island and product piping upgrades conducted in 2004. HA-2 was advanced less than five feet downgradient (southeast) of monitoring well MW-2.

Drilling activities were conducted by a licensed drilling subcontractor, Cascade Drilling, LP. The soil borings, HA-1 and HA-2 were cleared using an air-knife and vacuum truck to 5.5 and 7.0 ft. bgs respectively to reduce the potential for damage to subsurface utilities. Groundwater was not encountered in HA-1 and was encountered at 6.0 ft. bgs in HA-2.

Soil samples were collected for field screening using a hand auger. Boring logs were prepared by Arcadis field staff using the Unified Soil Classification System and are

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

included in **Appendix D**. Field screening of soil samples was performed using a photoionization detector (PID) and visual inspection methods. Investigative derived waste generated during the event was stored in Department of Transportation approved 55-gallon steel drums on the Site until it was removed for disposal by Kleen Environmental Technologies Inc. Waste manifests are included as **Appendix E**.

Analytical samples were collected in laboratory-provided bottles and placed in a cooler with ice. Samples were submitted to Eurofins Lancaster Laboratories (Lancaster) in Lancaster, Pennsylvania, under standard chain-of-custody protocol. Soil samples were analyzed for the following COCs:

- GRO by Ecology Northwest Method NWTPH-Gx;
- DRO and HO by Ecology Northwest Method NWTPH-Dx;
- BTEX by Environmental Protection Agency (EPA) Method 8260; and
- Lead by EPA 6010.

Soil samples were collected for laboratory analysis from depths that corresponded to adjacent historical soil impacts as well as areas where PID screening indicated potential impacts, and/or the bottom of each boring:

- HA-1 analytical samples were collected from 4.5- 5.0 ft. bgs and 5- 5.5 ft. bgs. Concentrations of BTEX were not detected exceeding the laboratory method detection limits (MDLs). At HA-1 the highest concentration of GRO (110 mg/kg) is from the 4.5-5.0 ft. bgs sample. Other COC concentrations detected in soil samples from this boring did not exceed MTCA Method A CULs.
- HA-2 analytical samples were collected from 5- 5.5 ft. bgs and 6.5- 7 ft. bgs. At HA-2, GRO concentrations exceeded the MTCA Method A CUL in the 5-5.5 ft. bgs (910 mg/kg) and 6.5-7 ft. bgs (1,300 mg/kg) samples. Other COC concentrations detected in soil samples from this boring did not exceed MTCA Method A CULs. Therefore, historical impacts associated with MW-2 are confirmed to have reduced concentrations and are in compliance with applicable MTCA CULs.

Additionally, soil from HA-1 and HA-2 were analyzed for VPH and EPH by the Ecology Northwest Method VPH/EPH, respectively. Laboratory analytical reports and chain of custody documentation are included as **Appendix F**. Soil analytical data are presented in **Table 2** and on **Figure 8**. VPH/EPH soil analytical data are presented in **Table 3**.

6.2 Groundwater Monitoring Activities 2014 and 2015

On June 27, September 26, December 18, 2014, March 10, 2015, and June 8, 2015, Arcadis conducted groundwater monitoring activities at the Site. Wells were sampled using low-flow purge methodology. Groundwater gauging data and select analytical results are presented on **Figure 7a to 7e**, and in **Table 1**. Groundwater monitoring field data sheets are included as **Appendix G**.

Groundwater samples from monitoring activities were analyzed for:

- TPH as GRO by Ecology Method NWTPH-Gx;
- TPH as DRO and HO by Ecology Method NWTPH-Dx (with the exception of the June 2014 event);
- BTEX by EPA Method 8260; and
- Lead by EPA Method 6010.

Samples were collected in laboratory-provided bottles and placed in a cooler with ice. Samples were submitted to Lancaster in Lancaster, Pennsylvania, under standard chain-of-custody protocol. Waste water generated during the monitoring events was stored in Department of Transportation approved 55-gallon steel drums on the Site until it was removed for disposal by Kleen Environmental Technologies Inc. Waste manifests are included as **Appendix E**. The laboratory analytical report and chain-of-custody documentation are included as **Appendix F**.

6.2.1 June 2014 Groundwater Monitoring Event

During the June 27, 2014 event, monitoring wells MW-1 through MW-8 were gauged and sampled. The depth to groundwater during this sampling event ranged between 5.75 ft. below top of casing (btoc) in well MW-7 and 18.52 ft. btoc in well MW-2. Groundwater elevations during this sampling event ranged between 259.76 ft. above NAVD 88 in well MW-2 and 272.50 ft. above NAVD 88 in well MW-6. The overall direction of groundwater gradient was to the east-southeast but ranges locally from the east to southeast. Groundwater gauging data and select analytical results are presented on **Figure 7a**.

For the June 2014 event, groundwater samples collected from three wells had concentrations of COCs greater than the MDLs:

Report**

Former ARCO Facility No. 5445

- Monitoring well MW-1 had detections of benzene and GRO with concentrations greater than the MTCA Method A CULs and detections of ethylbenzene, toluene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.
- Monitoring well MW-2 had a detection of benzene with a concentration greater than the MDL but below the MTCA Method A CUL.
- Monitoring well MW-5 had detections of GRO at a concentration greater than the MTCA Method A CUL and detections of benzene, ethylbenzene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

The remaining COCs were not detected above their respective MDLs.

6.2.2 September 2014 Groundwater Monitoring Event

During the September 26, 2014 event, monitoring wells MW-1 through MW-8 were gauged and sampled. Depth to groundwater during this sampling event ranged between 5.91 ft. btoc in well MW-7 and 19.89 ft. btoc in well MW-3. Groundwater elevations during this sampling event ranged between 259.03 NAVD 88 in well MW-2 and 272.28 ft. above NAVD 88 in well MW-6. The overall direction of groundwater gradient was to the southeast but ranges locally from the east-southeast to the south-southeast. Groundwater gauging data and select analytical results are presented on **Figure 7b**.

For the September 2014 event, groundwater samples collected from three wells contained COCs at concentrations greater than the MDLs:

- Monitoring well MW-1 had detections of benzene and GRO with concentrations greater than the MTCA Method A CULs and detections of DRO, ethylbenzene, toluene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.
- Monitoring well MW-2 had a detection of benzene with a concentration greater than the MDL but below the MTCA Method A CUL.
- Monitoring well MW-5 had detections of GRO at a concentration greater than the MTCA Method A CUL and detections of benzene, ethylbenzene and total

xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

The remaining COCs were not detected above their respective MDLs.

6.2.3 December 2014 Groundwater Monitoring Event

During the December 18, 2014 event, monitoring wells MW-1 through MW-8 were gauged and sampled. Depth to groundwater during this sampling event ranged between 6.07 ft. btoc in well MW-6 and MW-7 and 19.40 ft. btoc in well MW-2. Groundwater elevations during this sampling event ranged from 258.88 ft. above NAVD 88 in well MW-2 and 273.57 ft. above NAVD 88 in well MW-6. The overall direction of groundwater gradient was to the east-southeast/southeast. Groundwater gauging data and select analytical results are presented on **Figure 7c**.

For the December 2014 event, groundwater samples collected from three wells contained COCs at concentrations greater than the MDLs:

- Monitoring well MW-1 had detections of benzene and GRO with concentrations greater than the MTCA Method A CULs and detections of DRO, ethylbenzene, toluene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.
- Monitoring well MW-2 had a detection of benzene with a concentration greater than the MDL but below the MTCA Method A CUL.
- Monitoring well MW-5 had a detection of GRO at a concentration greater than the MTCA Method A CUL and detections of benzene, ethylbenzene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

The remaining COCs were not detected above their respective MDLs.

6.2.4 March 2015 Groundwater Monitoring Event

During the March 10, 2015, monitoring wells MW-1 through MW-8 were gauged and sampled. Depth to groundwater during this sampling event ranged between 5.73 ft. btoc in well MW-6 and 18.02 ft. btoc in well MW-2. Groundwater elevations during this sampling event ranged from 260.26 ft. above NAVD 88 in well MW-2 and

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

273.91 ft. above NAVD 88 in well MW-6. The overall direction of the groundwater gradient was to the east-southeast but ranges locally from the east to southeast. Groundwater gauging data and select analytical results are presented on **Figure 7d**.

For the March event, groundwater samples collected from three wells contained COCs at concentrations greater than the MDLs:

- Monitoring well MW-1 had detections of benzene and GRO with concentrations greater than the MTCA Method A CULs and detections of DRO, ethylbenzene, toluene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.
- Monitoring well MW-2 had a detection of benzene with a concentration greater than the MDL but below the MTCA Method A CUL.
- Monitoring well MW-5 had a detection of GRO at a concentration greater than the MTCA Method A CUL and detections of benzene, ethylbenzene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

The remaining COCs were not detected above their respective MDLs.

6.2.5 June 2015 Groundwater Monitoring Event

During the June 8, 2015, monitoring wells MW-1 through MW-8 were gauged and sampled. Depth to groundwater during this sampling event ranged between 6.12 ft. btoc in well MW-6 and 17.99 ft. btoc in well MW-2. Groundwater elevations during this sampling event ranged from 260.29 ft. above NAVD 88 in well MW-2 and 273.52 ft. above NAVD 88 in well MW-6. The overall direction of the groundwater gradient was to the east/east-southeast. Groundwater gauging data and select analytical results are presented on **Figure 7e**.

For the June event, groundwater samples collected from two wells contained COCs at concentrations greater than the MDLs:

- Monitoring well MW-1 had detections of benzene and GRO with concentrations greater than the MTCA Method A CULs and detections of ethylbenzene, toluene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

- Monitoring well MW-5 had a detection of GRO at a concentration greater than the MTCA Method A CUL and detections of DRO, ethylbenzene and total xylenes with concentrations greater than the MDLs but below the MTCA Method A CULs.

The remaining COCs were not detected above their respective MDLs.

7. Potential Petroleum Hydrocarbon Impacts – Other Media

Petroleum hydrocarbon impacts have been investigated in the soils and groundwater onsite and in some surrounding areas, which have been presented. The following are other areas for potential petroleum hydrocarbon impacts.

7.1 Surface Waters

Annual average rainfall is approximately 37.5 inches in Seattle, Washington. Surface water at the Site is limited to runoff from precipitation. Since development as a retail gas station and service station, the Site has been paved with asphalt with the exception of the landscaped areas; therefore infiltration of surface water into the groundwater table is limited. Surface water, surface drainage, floodplains, wetlands and areas of sediment deposition are not applicable at this Site. Therefore, no known impacts to surface waters have occurred due to the past operation of the Site as a retail gasoline station.

7.2 Sediment

Surface waterways and associated sediments are not present at the Site. Therefore, no known impacts to sediments have occurred due to historic retail gasoline station operations at the Site.

7.3 Soil Vapor

The Site is currently zoned for commercial use as a retail gas station and a convenience store and is assumed to remain in this condition in the future. Section 1.2 of the vapor intrusion guidance states:

“A worker potentially exposed to vapor intrusion-contaminated indoor air is regularly and simultaneously exposed to the same hazardous chemical vapors in the workplace. The workplace vapor

Closure Request and 2014/2015 Site Status Report

Former ARCO Facility No. 5445

concentrations are routinely much higher than any levels expected from vapor intrusion. This worker understands that exposure to the particular chemical is part of the job and is enrolled in the company's Occupational Safety and Health Act (OSHA) compliant employee protection program. Because the exposure scenario described here is regulated under OSHA, the guidance has not been developed to assess or otherwise address such a situation.

Although dry-cleaning businesses and automobile filling stations are not manufacturing operations, the same logic may apply to evaluating vapor intrusion in their associated buildings. That is, the guidance has not been developed to assess or otherwise address situations where a subsurface vapor intrusion source potentially threatens indoor air quality, but: a) indoor workers are regularly exposed to the same hazardous chemical vapors in the workplace due to the nature of the business; b) the workplace-related vapor concentrations are routinely much higher than any levels expected from vapor intrusion; and, c) the workers are enrolled in an OSHA-compliant employee protection program (Ecology 2009)."

Because this site is a petroleum facility, workers at the site may be exposed to petroleum constituents in ambient air. The contribution to the total concentrations from potential vapor migration from soil gas is considered minimal.

Table B-1 within the Ecology vapor intrusion guidance contains groundwater screening levels considered to be protective of potential exposures via the vapor intrusion pathway to indoor air. COCs that have historically been detected in groundwater at the site include GRO, DRO, BTEX and MTBE. Toluene, ethylbenzene, and MTBE concentrations have never been detected in groundwater above their respective Table B-1 groundwater screening levels. Total xylenes have not been detected above the Table B-1 groundwater screening level since June 2013 (conservatively compared to the m-xylene screening level of 310 micrograms per liter [$\mu\text{g/L}$]). Benzene was detected above the Table B-1 groundwater screening level ($2.4 \mu\text{g/L}$) in well MW-1 during the last four quarters at a maximum concentration of $46 \mu\text{g/L}$ and in well MW-2 once during the last four quarters at a maximum concentration of $2.6 \mu\text{g/L}$. However, benzene was never detected above the Table B-1 groundwater screening level in wells MW-3, MW-4, MW-5, MW-6, MW-7 and MW-8. Monitoring wells MW-3, MW-6 and MW-7 are closer to the station building than MW-2 and MW-1 and therefore groundwater benzene concentrations are considered to be protective of indoor air at

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

the location of the station building. In addition, wells MW-1 and MW-2 are located close to the dispenser islands and the contribution to the total concentrations from potential vapor migration from soil gas is considered minimal in this area.

The Ecology vapor intrusion guidance suggests the groundwater screening levels would be conservative for receptors at the Site. Specifically, groundwater screening levels are calculated using Method B cleanup levels for indoor air, which are stated to be overly conservative for commercial receptor scenarios. Parameters such as body weight and exposure duration used in the groundwater screening levels differ from the parameters that would be expected for a commercial receptor. Section 6.6.2 of the vapor intrusion guidance states:

“Where the building of concern is being used commercially (but is not located on an industrial property), and the most highly exposed receptors are workers, the Method B exposure assumptions in WAC 173-340-750 Equations 750-1 and 750-2 are likely to be overly conservative. Average body weight, for example, in Equation 750-1 is 16 kg (representing a child), whereas the receptors of concern at most commercial properties will be adults with an average weight closer to 70 kg. In addition, the amount of time exposed will often be less than default values: most receptors in a commercial building will not be exposed to contaminated indoor air 24 hours per day, seven days a week, all year long. Therefore, while subsurface source concentrations must eventually be remediated to cleanup levels derived from Method B air cleanup levels to free the property of any future development restrictions, current receptors can be considered protected if indoor air concentrations are somewhat higher than Method B air cleanup levels.”

TPH (sum of GRO, DRO and HO) is considered a cumulative measurement of several carbon chain compounds. Because of this cumulative result, the evaluation of TPH exposure via the vapor intrusion pathway based on historical data is not technically feasible. Furthermore, Ecology has not provided a TPH indoor air cleanup level for the evaluation of the vapor intrusion pathway within the Ecology vapor intrusion guidance or Cleanup Levels and Risk Calculations (CLARC) database.

Due to the expected current and future exposure and likely receptor scenarios supported by the construction and zoning of the site, and historical COC comparison to conservative groundwater screening criteria, the potential vapor intrusion pathway is not considered to pose an unacceptable risk to current and future receptors at the Site.

7.4 Ecological and Natural Resources

The Site is located in a mixed residential and commercially developed area of Seattle, Washington. The entire Site is paved with asphalt with the exception of the landscaped areas. Because there are no contiguous undeveloped lands in the vicinity of the Site, this area is not considered to be suitable habitat to support native vegetation and/or wildlife. Furthermore, traffic corridors and similar features surrounding the Site further reduce the potential use of the area by wildlife.

7.5 Cultural and Archaeological Resources

There is no indication that cultural and/or archaeological resources are present at the Site. Therefore, no known impacts to cultural and archaeological resources have occurred due to retail gasoline station operations at the Site.

8. Conceptual Site Model

Possible pathways associated with potential exposures to petroleum hydrocarbon constituents detected in the soil and groundwater at the Site are described below. The conceptual site model (CSM), or exposure evaluation flowchart, illustrated on **Figure 9** provides a summary of the relationships between primary sources (i.e. release mechanisms), secondary sources (i.e. exposure media), transport mechanisms, exposure pathways, and potential current and future receptors. Details of the CSM for the Site are provided in the following sections.

8.1 Potential Constituent Sources

The primary sources of dissolved phase COCs at the Site include the historical release of gasoline to soil and groundwater. No specific known release has occurred at the Site, however previous soil and groundwater investigations indicate a release most likely occurred from the northeastern dispenser island. The dispenser island and associated piping were set at approximately 3 to 5 ft. bgs, while depth to groundwater at the Site ranges from 5.72 to 25.61 ft. bgs; therefore, potential releases from the dispenser island occurred in the vadose zone and/or the smear zone.

The primary source of COCs at the Site is considered to be leaks from the dispenser islands and associated product piping. The secondary source is considered to be direct release of gasoline to both surface soil (<15 ft. bgs), subsurface soils (>15 ft. bgs) and groundwater.

8.2 Potential Receptors and Transport Mechanisms

The Site property is located in a commercial area of Seattle and is zoned for commercial use. The Site is currently a retail ARCO gasoline facility and convenience store, with a retail building and canopy on a flat grade across the Site.

8.2.1 Dissolved Product in Groundwater

Potential receptors for groundwater include construction workers exposed during potential redevelopment activities, as well as current and future commercial workers onsite.

Transport mechanisms for dissolved petroleum hydrocarbons in groundwater include advection, diffusion, and volatilization. Groundwater transport may lead to ingestion or dermal absorption of dissolved petroleum hydrocarbons. During the most recent groundwater monitoring event in June 2015, depths to groundwater ranged from 6.12 to 17.99 ft. bgs. Historically, depth to groundwater measured in monitoring wells at the Site has ranged from 5.72 to 25.61 ft. bgs.

Ingestion is not considered to be a likely exposure scenario. Groundwater at the Site is not currently used as a potable water source. As described in Section 2.6., the onsite occupant and surrounding properties currently use drinking water from Seattle Public Utilities municipal source, which is sourced primarily from the Tolt and Cedar River Watersheds. Also, there are no public drinking water wells within one mile of the Site. Additionally, the groundwater flow direction based on groundwater monitoring wells measured across the Site is towards a public road (23rd Avenue), not towards an area where there is a potential future potable water source. This exposure scenario is potentially complete for future receptors but not significant.

Utility/trench workers typically work at depths between 1 to 10 ft. bgs. Regarding the depths to groundwater at the Site, it is possible for utility/trench receptors to be directly exposed to constituents in groundwater beneath the Site. Therefore, pathways associated with potential direct contact exposures to constituents in groundwater for future onsite construction and excavation worker receptors, such as those maintaining utility lines, are potentially complete.

Another potential transport mechanism at the Site may include volatilization of constituents in groundwater to outdoor air and/or indoor air of current and future onsite buildings, or air within a trench used by future onsite construction workers. Although

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

the COCs may volatilize from groundwater to outdoor air and may be inhaled by onsite potential receptors, this exposure pathway is considered to be insignificant given the atmospheric dilution effects from wind. With the exception of benzene, Site COCs have not been detected in groundwater above the respective Table B-1 groundwater screening levels since at least June 2013, or do not have established screening levels for vapor migration. Monitoring wells MW-1 and MW-2, where benzene concentrations were detected above the Table B-1 groundwater screening level, are not located beneath the station building. Benzene may volatilize from groundwater of these well locations to outdoor air, however this exposure pathway is considered to be insignificant given the atmospheric dilution effects from wind. Also, redevelopment of the Site is not expected for the future, and any possible residual petroleum hydrocarbon impacts are contained onsite. Therefore this pathway is considered potentially complete, but insignificant.

8.2.2 Surface Soils (<15 feet)

Leaching of residual phase petroleum hydrocarbons into the groundwater table is another transport mechanism which may lead to exposure through ingestion and dermal absorption. However, this transport mechanism leads to exposure pathways in groundwater, rather than exposure pathways in soil. Ingestion and dermal absorption exposures are not considered to be significant, as outlined in section 8.2.1.

Storm water and surface runoff water is contained in the storm water drainage system and soils are not exposed at or near ground surface. Therefore, runoff is not considered a significant transport mechanism.

Another potential transport mechanism at the Site may include volatilization of constituents in soil to outdoor air and/or indoor air of current and future onsite buildings, or air within a trench used by future onsite construction workers. Although the COCs may volatilize from soil to outdoor air and may be inhaled by onsite potential receptors, this exposure pathway is considered to be insignificant given the atmospheric dilution effects from wind. Historic petroleum hydrocarbon impacted soil has not been located beneath the station building. Also, redevelopment of the Site is not planned for the future, and any possible residual petroleum hydrocarbon impacts are contained onsite. Therefore, current or future inhalation of COCs in indoor air by potential onsite receptors is considered a potentially complete pathway, but is not considered significant.

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

The Site is currently paved with asphalt and concrete and is expected to remain the same in the future as there are no known plans for redevelopment of the Site. The pavement serves as a barrier between potential receptors and surface (<15 ft. bgs) soil. However, utility trench workers often work at depths between 1 and 10 ft. bgs and could be exposed to surface soil by direct contact exposure pathways. The Site may also be redeveloped in the future and direct contact could potentially lead to exposure pathways for future construction workers. Therefore, pathways associated with direct contact exposures to constituents in surface soils for future construction workers receptors are potentially complete.

8.2.3 Ecological Receptors

Transport mechanisms leading to the exposure of petroleum hydrocarbons to terrestrial ecological receptors are not considered present at the Site. According to WAC 173-340-7491(1)(a-d), if the Site meets any one of the four exclusion criteria, no further Terrestrial Ecological Evaluation (TEE) is necessary for the Site. A determination was made in June 2011 that the Site met one of the four exclusion criteria. The Site was therefore excluded from further evaluation under the TEE. Exclusion criteria met at the Site include:

- WAC-173-340-7491(1)(c)(i) – “For sites contaminated with hazardous substances other than those specified in (c)(ii) of this subsection, there is less than 1.5 acres of contiguous undeveloped land on the site or within 500 ft. of any area of the site.”
- WAC-173-340-7491(1)(c)(ii) – There is less than 0.25 acre of contiguous undeveloped land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins of furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.

The Site is currently paved with asphalt and concrete, and is located in a commercial and residential area of Seattle, Washington. Areas within 500 feet of the Site are developed and are also paved with asphalt or concrete. The specific chemicals listed in the criteria are not present at the Site.

Since the Site is devoid of ecological habitat and surface water is absent from the Site, ecological receptors are absent from the Site. It is expected the Site will remain as a

retail gas station in the future. Therefore, potential exposure pathways for terrestrial ecological receptors are not complete.

Therefore, the TEE exclusion submitted in 2011 is currently valid and potential exposure pathways for terrestrial ecological receptors are not complete. The 2011 TEE is included as part of **Appendix H**.

8.3 Potentially Complete Exposure Pathways

Based on the information presented in the previous sections, potentially complete exposure pathways at the Site include the following:

- Ingestion of groundwater by future receptors.
- Dermal contact with groundwater by future construction/excavation workers.
- Volatilization of groundwater to indoor air and potential inhalation by future onsite commercial receptors or volatilization of groundwater to air within a trench and potential inhalation by future onsite construction workers.
- Exposure pathways associated with dermal contact with surface soil, including incidental ingestion of soil, inhalation of fugitive dust, or dermal contact with soil by future onsite construction workers.
- Volatilization of soil to indoor air and potential inhalation by future onsite commercial receptors or volatilization of soil to air within a trench and potential inhalation by future onsite construction workers.

These potential exposure pathways are considered to be insignificant, and the risk to human health is likely to be low. Petroleum hydrocarbon impacts from subsurface to soil vapor are likely to be negligible. Furthermore, the Site is largely paved with concrete and asphalt and no future re-development of the Site has been planned.

9. Cleanup Standards

A cleanup standard consists of the following three elements [WAC 173-340-700(3)]:

- CUL, the concentration that must be met to protect human health and the environment,

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

- Points of compliance (POC), the location where the CUL must be achieved, and
- Other regulatory requirements commonly referred to as applicable or relevant and appropriate requirements (ARARs), that apply to the Site because of the type of action or the location of the Site.

The cleanup standards were developed using the MTCA Method A approach and Site specific information (Ecology 2007). The CULs and POCs are presented in this section.

9.1 Constituents of Concern

COCs are the chemicals expected to account for most of the risks at a Site, and cleanup standards must be developed for each COC in each medium. The COCs for groundwater and soil were developed in accordance with Washington Administrative Code (WAC) 173-340-703. The COCs are presented in this section.

9.1.1 Groundwater COCs

Operations at the property included the UST storage and distribution of unleaded gasoline. Three 10,000 gallon unleaded gasoline USTs were installed on the property in 1988. Groundwater monitoring was initiated at the Site in September 2005 when monitoring wells MW-1, MW-2, MW-3, and MW-4 were installed. Monitoring wells MW-5, MW-6, and MW-7 were installed and sampled for the first time in February 2012 and MW-8 was installed in May 2012 and sampled for the first time in August 2012. Analyzed constituents include GRO, DRO, HO, BTEX, MTBE, EDB, EDC and total and dissolved lead. HO, EDB and EDC were never detected above MDLs and therefore are not considered as Site COCs.

The list of groundwater COCs is as follows:

- GRO
- DRO
- Benzene
- Toluene
- Ethylbenzene
- Total Xylenes
- MTBE

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

- Lead

Concentrations of toluene have not historically exceeded the groundwater MTCA Method A CUL typically used at retail petroleum sites. Therefore, although toluene is listed as a groundwater COC, this constituent has always been in compliance with MTCA. Total lead was detected above MTCA Method A CUL but dissolved lead was never observed at concentration above MTCA Method A CUL. Therefore, although lead is listed as a groundwater COC, this constituent has always been in compliance with MTCA.

9.1.2 Soil COCs

Soil samples were first collected at the Site during facility upgrades in 2004. At this time, samples were analyzed for GRO, BTEX, MTBE and lead. GRO and BTEX were detected above MTCA Method A CULs. A subsurface investigation was initiated in September 2005 to determine the extent of residual hydrocarbons in soil. During boring installation, soil samples were analyzed for GRO, BTEX, MTBE, EDB, EDC and lead. GRO, benzene, ethylbenzene and total xylenes were detected at concentrations greater than MTCA Method A CULs. During the 2014 soil boring activities, soil samples were analyzed for GRO, DRO, HO, BTEX, MTBE and lead. GRO was detected above MTCA Method A CUL. MTBE, EDB and EDC were never detected above MDLs and therefore are not considered as Site COCs.

The final soil COCs for the Site is:

- GRO
- DRO
- HO
- Benzene
- Toluene
- Ethylbenzene
- Total xylenes
- Lead

Concentrations of DRO, HO and lead have not historically exceeded the soil MTCA Method A CULs. Therefore, although DRO, HO and lead are listed as soil COCs, these constituents have always been in compliance with MTCA.

9.2 Cleanup Levels

This section presents the criteria and rationale for determining CULs for groundwater and soils. Such CULs were determined by assuming a conditional point of compliance (CPOC) approach for Site cleanup activities, according to WAC-173-340-720(8)(C):

“Where it can be demonstrated under WAC 173-340-350 through 173-340-390 that it is not practicable to meet the cleanup level throughout the site within a reasonable restoration time frame, the department may approve a conditional point of compliance that shall be as close as practicable to the source of hazardous substances, and except as provided under (d) of this subsection, not to exceed the property boundary. Where a conditional point of compliance is proposed, the person responsible for undertaking the cleanup action shall demonstrate that all practicable methods of treatment are to be used in the site cleanup.”

A conditional point of compliance approach is proposed for this Site using monitoring wells in close proximity of the source of hazardous substances. Subsequent sections of this report demonstrate:

- It is not practicable to meet Method A CULs within the MTCA site boundary within a reasonable restoration time frame.
- Previous remedial activities at the Site have been attempted to reduce the concentrations of hazardous substances below MTCA Method A CULs, and
- Based on an evaluation of natural attenuation at the Site, practicable methods of treatment are being used in the Site cleanup.

9.2.1 Groundwater Cleanup Standards

The following subsections present the endpoints, CULs, and CPOC for groundwater at the Site.

9.2.1.1 Endpoints for Cleanup Levels

Groundwater at the Site generally flows to the east-southeast, toward the southeast corner of the site. However, to be conservative, MTCA Method A Groundwater CULs will be applied to areas immediately surrounding the MTCA Site boundary in order to provide protection for a more conservative drinking water beneficial use scenario. This

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

ensures downgradient areas beyond the Site are also protected for drinking water beneficial use.

9.2.1.2 Groundwater Cleanup Levels

Groundwater CULs at the Site are established according to the MTCA Method A CULs. If remaining petroleum impacts exceed MTCA Method A CULs, and it can be demonstrated that a CPOC approach is appropriate for the Site, CPOC monitoring wells can be used to demonstrate compliance with MTCA.

Such CPOC monitoring wells would need to be in compliance with MTCA Method A Groundwater CULs. If groundwater is shown to be in compliance with MTCA Method Groundwater A CULs at the downgradient groundwater CPOCs, groundwater will be protective for this exposure scenario, with regards to releases from the Site.

Method A Groundwater CULs for Site COCs include:

Method A Groundwater Cleanup Levels

COC	Method A Groundwater Cleanup Level (µg/L)
GRO ¹	800/1,000
DRO	500
HO	500
Benzene	5
Toluene	1,000
Ethylbenzene	700
Total Xylenes	1,000
MTBE	20
Lead	15
Note: ¹ If benzene is present in a given sample the CUL is 800 µg/L. If benzene is not present the CUL is 1,000 µg/L.	

9.2.1.3 *Groundwater POC and CPOC*

Two monitoring wells, MW-1 and MW-5, currently have concentrations that exceed MTCA Method A CULs. These wells are located southeast and south of the dispenser islands. According to WAC-173-340-720(8)(C), the CPOC wells are necessary in order to evaluate whether dissolved phase petroleum hydrocarbons are migrating offsite to the assumed endpoint. Since the endpoint for Site groundwater is potential future drinking water wells, the groundwater CPOCs can be used to determine if such a receptor has the potential to be impacted. CPOC monitoring wells are positioned such that plume migration would be detected and compliance with groundwater CULs would be indicative of a stable or shrinking plume. Compliance for the CPOC would indicate potential future drinking water resources were protected.

The CPOC monitoring wells, the area currently exceeding MTCA Method A CULs, and the MTCA Site boundary are shown on **Figure 4**. Concentrations in CPOC wells are below Method A CULs and so the concentrations are protective of future drinking water resources in the region. The Site CPOC monitoring wells are listed below:

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

CPOC Monitoring Well	Hydraulic Direction from Plume	Geographic Direction from Plume
MW-2	Upgradient	North
MW-3	Upgradient	West/Northwest
MW-4	Upgradient	West
MW-6	Upgradient	Northwest
MW-7	Upgradient	North
MW-8	Downgradient	East/Southeast

9.2.1.4 Groundwater and COC Transport Evaluation

To date, offsite plume migration exceeding the applicable CULs has not been observed. To evaluate the potential for future offsite migration at COC concentrations exceeding CULs, a detailed evaluation of groundwater velocity and transport velocity of COCs was completed. The purpose of this evaluation was to determine the amount of time required for groundwater and organic constituents to potentially travel from a well within the MTCA Site boundary to a downgradient offsite CPOC well.

Among the monitoring wells at the Site, MW-1 is the closest downgradient monitoring well to the dispenser island (the approximate source area), and MW-8 is the furthest downgradient monitoring well. Historically, impacts to groundwater (e.g., MTBE, benzene, ethylbenzene, xylenes and gasoline-range organic constituents) have been observed at MW-1 above MTCA Method A groundwater CULs. Thus, calculating groundwater velocity and COC transport times between monitoring wells MW-1 and MW-8 provides a conservative estimate of travel time for COCs at the Site. Site-specific measurements of hydraulic conductivity are approximately 1.1 ft. per day, and the average hydraulic gradient is 0.75 ft. per day. Using these data, the average mean groundwater velocity of 0.83 ft. per day, and the groundwater travel time between MW-1 and MW-8 is less than 1 month (**Appendix I**).

However, the transport velocity of organic constituents is typically slower than the mean groundwater velocity due to interaction of organic COCs with the soil matrix and, when data are available, should be used for estimation of travel times of COCs in groundwater. The transport velocity of an organic COC is calculated by dividing the mean groundwater velocity by a retardation factor (Rf). The Rf (and thus the constituent transport velocity) is directly correlated to a compound-specific organic carbon sorption coefficient (Koc) value. Among the soil and groundwater COCs at the Site with estimated Koc values, benzene and p-xylene have the lowest and highest

Koc values. Thus, transport velocities calculated for these two constituents provide a conservative range of travel time estimates for the constituents detected at the site. As detailed in **Appendix I**, the estimated travel times for benzene and p-xylene from MW-1 to MW-8 are less than 2 months and less than 4 months, respectively. This approach to calculating COC travel times also does not account for any natural attenuation that occurs along this flow path, which could preclude the arrival of groundwater impacts at downgradient monitoring wells.

Concentrations of benzene, ethylbenzene, total xylenes and GRO in samples collected from conditional point of compliance monitoring well MW-8 have been less than MTCA Method A Groundwater CULs since monitoring began at this well in 2012. Since the Site discovery in 2004, a minimum time of 11 years have elapsed at the Site since impacts occurred, which is greater than the estimated travel time of COCs. Therefore, this approach provides a conservative estimated range of travel times for the COCs at the Site. This indicates that plume attenuation is occurring, and offsite migration of concentrations exceeding the applicable CULs is unlikely to occur.

9.2.1.5 Geochemical Indicators of Biodegradation

Biodegradation of hydrocarbon constituents can proceed via aerobic or anaerobic microbial processes, with naturally-occurring bacteria using these constituents as sources of carbon and/or energy. Bacteria obtain energy for cell production and maintenance by facilitating reduction-oxidation reactions involving the transfer of electrons from electron donors (e.g., hydrocarbon constituents) to available electron acceptors. Electron acceptors in groundwater systems include oxygen, nitrate, manganese, ferric iron, sulfate, and carbon dioxide. When sufficient oxygen is present in groundwater, biodegradation is primarily aerobic. When oxygen becomes less available, conditions will become reducing as anaerobic microorganisms consume electron acceptors in the following order of preference: nitrate (nitrate reduction), manganese (manganese (IV) reduction), ferric iron (ferric iron reduction), sulfate (sulfate reduction), and carbon dioxide (methanogenesis).

On February 20, 2012, Arcadis conducted pre-injection baseline groundwater biogeochemical indicator sampling in conjunction with groundwater monitoring activities at the Site. During this event, wells MW-1, MW-2, MW-4, MW-5 and MW-7 were sampled for pre-injection baseline parameters of alkalinity, sulfate, sulfide, nitrite/nitrate, methane, and total and dissolved iron.

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

Compared to other wells that were sampled, elevated concentrations of methane, total and dissolved iron, and a reduced concentration of sulfate were observed in monitoring well MW-1. Biogeochemical results suggest anaerobic, strongly reducing (i.e., sulfate-reducing to methanogenic) conditions at this well, which is most likely related to the petroleum hydrocarbons observed here. The presence of 4,500 µg/L of methane, or approximately 25-percent of methane solubility, demonstrates that groundwater in the immediate vicinity of MW-1 is conducive to anaerobic natural attenuation (Arcadis 2012).

9.2.2 Soil Cleanup Standards

9.2.2.1 *Soil Leaching Pathway*

The endpoint of soil leaching to groundwater was considered for the soil at the Site in accordance with MTCA Method A soil CULs. Several soil samples located at the north and south sides of the dispenser islands exceed the MTCA Method A CULs. In order to demonstrate compliance with WAC 173-340-740(3)(b)(iii)(A), an empirical demonstration will be used to demonstrate that soil concentrations will not cause an exceedance of groundwater CULs. As defined under WAC 173-340-747(3)(f) and WAC 173-340-747(9), the following are required for the empirical demonstration:

- The measured groundwater concentration is less than or equal to the applicable groundwater cleanup level established under WAC 173-340-720; and
- The measured soil concentration will not cause an exceedance of the applicable groundwater cleanup level established under WAC 173-340-720 at any time in the future. Specifically, it must be demonstrated that a sufficient amount of time has elapsed for migration of hazardous substances from soil into groundwater to occur and that the characteristics of the Site (e.g., depth to groundwater and infiltration) are representative of future site conditions. This demonstration may also include a measurement or calculation of the attenuating capacity of soil between the source of the hazardous substance and the groundwater table using site-specific data.

Compliance monitoring was used to assess whether the empirical demonstration has been successful. The presence/absence of dissolved phase hydrocarbons at groundwater CPOCs will be used as the main line of evidence for compliance. The presence of dissolved phase hydrocarbons exceeding Method A Groundwater CULs would indicate non-compliance with MTCA.

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

Compliance at the Site has empirically been demonstrated to date and the endpoint is protected. COC concentrations at groundwater CPOC wells have been shown to be less than Method A Groundwater CULs for at least four consecutive quarters. Furthermore, sufficient time has passed for COCs to migrate from soil to groundwater, and therefore it is empirically demonstrated that soil impacts are not a future source to groundwater. For these reasons, according to WAC 173-340-747(3)(f) and WAC 173-340-747(9), it is empirically demonstrated that soil concentrations do not and will not cause an exceedance of groundwater CULs.

An empirical demonstration can also be made for soil impacts present in the vadose zone of the Site where such impacts may leach to groundwater. COC concentrations at groundwater CPOC wells have been shown to be less than Method A Groundwater CULs for at least four consecutive quarters. Furthermore, the surface area at the Site is comprised of asphalt or concrete, which is impermeable to surface water. Therefore, it is unlikely that soil concentrations will leach to groundwater due to infiltration and cause an exceedance of the MTCA Method A CUL.

9.2.2.2 *Soil Cleanup Levels*

According to MTCA, soil CULs are based on estimates of the reasonable maximum exposure scenario expected to occur given current and/or future use of the Site. According to WAC 173-340-740(1)(a), *"The department has determined that residential land use is generally the site use requiring the most protective cleanup levels and that exposure to hazardous substances under residential land use conditions represents the reasonable maximum exposure scenario."*

Historical investigations indicate that GRO, DRO, HO, BTEX and lead are the COCs in soil at the Site, and the Site meets the criteria for undergoing a routine cleanup action. Furthermore, numerical standards for the COCs are available for soil under MTCA Method A. Therefore, Method A CULs are appropriate and were used for the Site.

The MTCA Method A CULs for the COCs at the Site are listed below, according to Table 740-1 of the MTCA Statute and Regulation:

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

Method A Soil Cleanup Levels

COC	Method A Soil Cleanup Level (mg/kg)
GRO ¹	30/100
DRO	2,000
HO	2,000
Benzene	0.03
Toluene	7
Ethylbenzene	6
Total Xylenes	9
Lead	250

Note:
¹ If benzene is present in a given sample the CUL is 800. If benzene is not present the CUL is 1,000

Concentrations of DRO, HO and lead have not historically exceeded the soil MTCA Method A CULs typically used at retail petroleum sites. Therefore, although DRO, HO and lead are listed as soil COCs, these constituents have always been in compliance with MTCA.

9.2.2.3 Soil Points of Compliance

Soil COC concentrations protective of direct contact for soil at the Site are met within the standard soil POC, which is within 15 ft. of the ground surface. Soil CULs are protective of the residual saturation pathway throughout the saturated and unsaturated zones.

9.3 Applicable Relevant and Appropriate Requirements

According to WAC 173-340-360(2), all cleanup actions under MTCA must comply with applicable state and federal laws. Such laws are defined under MTCA as including ARARs. The ARARs for the Site include:

Federal

- Safe Drinking Water Act (National Primary and Secondary Drinking Water Regulations) (42 U.S.C. 300f, 40 CFR Part 141, 40 CFR Part 143) – Petroleum

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

hydrocarbon cleanup levels are based on the beneficial use of groundwater as a current and/or future potable water source at the Site.

- Resource Conservation and Recovery Act (RCRA) (42 U.S.C. 6901-6992, 40 CFR Part 260-268) – Investigation Derived Waste and any other waste produced during activities at the Site will be handled per RCRA regulations, and implemented according to WAC 173-303.
- OSHA (29 CFR 1910) – Site activities will be conducted in a manner compliant with OSHA standards and regulations.
- Rules for Transport of Hazardous Waste (49 CFR 107, 171) – Hazardous waste generated at the Site will be appropriately characterized to determine package, transportation and transportation requirements.

State

- Source water protection (WAC 246-290-135) – All new and existing drinking water wells will establish a wellhead protection program that includes an inventory of potential groundwater contamination sources and be appropriately delineated from all potential contamination sources.
- Model Toxics Control Act (WAC 173-340) – Site activities will occur in accordance with MTCA Statutes and Regulations.
- Dangerous Waste Regulations (WAC 173-303) - Investigation Derived Waste and any other waste produced during activities at the Site will be handled per RCRA regulations, and implemented according to WAC 173-303.
- Minimum Standards for Construction and Maintenance of Wells, Regulation and Licensing of Well Contractors and Operators (RCW 18.104, WAC 173-160, 162). Resource protection wells will be constructed and maintained according to the appropriate regulations.
- Washington Industrial Safety and Health Act, Chapter 296-62 WAC - Site activities will be conducted in a manner compliant with Washington Industrial Safety and Health Act standards and regulations.

- Maximum Environmental Noise Levels (WAC 173-60) – Site activities will be conducted at appropriate noise levels, according to WAC 173-60.

10. Compliance with MTCA Statutes and Regulations

10.1 Conditional Points of Compliance

Due to historical and current Site conditions, a conditional point of compliance approach was used to address Site cleanup activities, according to WAC-173-340-720(8)(C). In order to use this approach, it must be demonstrated that:

- It is not practicable to meet the cleanup level throughout the site within a reasonable restoration time frame, and
- The person responsible for undertaking the cleanup action shall demonstrate that all practicable methods of treatment are to be used in the site cleanup.

The MTCA Site boundary and associated soil and groundwater impacts are located within or near the footprint of the current dispenser islands. Since soil and groundwater impacts are in close vicinity to current retail gas station infrastructure, intrusive remedial activities in these areas are not possible. Therefore, it would not be practicable to meet MTCA Method A CULs within a reasonable restoration time frame.

Furthermore, in 2004, during facility upgrades, including replacement of dispenser islands and product distribution piping, forty-one tons of over-excavated soil were removed from the Site. The last remedial effort conducted was an anaerobic biological oxidation via sulfate solution injection. From February 20, 2012 to October 29, 2012, Arcadis conducted a subsurface injection event, injecting a total of 10,000 gallons of sulfate solution into the ground around MW-1 and MW-5 to enhance the natural attenuation of petroleum hydrocarbon impacts.

Concentrations of Site COCs in samples collected from the CPOC monitoring wells at the property have been less than MTCA Method A Groundwater CULs since sampling began in 2005 and 2012. Furthermore, Site specific transport velocity calculations indicate the travel time from well MW-1 to MW-8 would be less than 2 months for benzene and less than 4 months for p-xylene. Additionally, concentrations of BTEX in samples collected from CPOC monitoring well MW-8 have never exceeded MTCA Method A Groundwater CULs since installation in 2012. Therefore, based on the

transport velocity calculations, adequate travel time for COCs to travel from MW-1 to MW-8 has occurred.

Finally, geochemical analyses show that natural attenuation of hydrocarbons is occurring in wells with COC concentrations above MTCA Method A CULs, which is only wells MW-1 and MW-5. Dissolved-phase COCs are non-detect or are below their respective CULs at all other monitoring locations at the Site including at all compliance points. These analyses suggest that the groundwater plume at the Site is stable and not migrating.

Based on current and historical analytical data and transport velocity calculations, the hydrocarbon plume is either stable or shrinking and natural attenuation is occurring. Therefore, offsite migration of concentrations exceeding the applicable CULs is unlikely to occur. Therefore, it is demonstrated that it is not practicable to meet the cleanup level throughout the Site within a reasonable restoration time frame, and all practicable methods of treatment have been to be used in the Site cleanup. Therefore, the use of this approach is in compliance with the requirements stated by MTCA in WAC-173-340-720(8)(C).

10.2 Soil

Hydrocarbon impacts in soil exceeding applicable CULs remain locally at the Site close to existing infrastructure. However, an empirical demonstration is used to show that soil concentrations do not cause an exceedance of groundwater CULs.

- 34 soil samples have been collected from various locations across the Site during soil investigations and monitoring well installations.
- None of the soil samples collected outside of the MTCA Site boundary at the property contained COCs at concentrations exceeding MTCA Method A Soil CULs.
- Eight soil samples collected within the MTCA Site boundary contained COC concentrations greater than MTCA Method A Soil CULs:
 - Of these samples, two were over-excavated during the 2004 excavation, with all subsequent samples collected containing COC concentrations below the MTCA Method A Soil CULs.

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

- CPOC monitoring wells downgradient from the remaining samples do not exceed MTCA Method A Groundwater CULs, therefore an empirical demonstration is used to show that soil concentrations do not cause an exceedance of groundwater CULs.

Therefore, this medium is considered in compliance with MTCA.

10.3 Groundwater

Hydrocarbon impacts in groundwater exceeding applicable CULs remain locally at the Site, at wells MW-1 and MW-5 located southeast and south of the dispenser islands. However, a CPOC approach is used to show that groundwater exceedances are not migrating offsite:

- Concentrations of Site COCs in samples collected from the CPOC monitoring wells at the property have been less than MTCA Method A Groundwater CULs since sampling began in 2005 and 2012.
- A minimum time of 11 years has elapsed since impacts occurred, which is greater than the estimated travel time of COCs. This indicates that plume attenuation is occurring, and offsite migration of concentrations exceeding the applicable CULs is unlikely to occur.

Therefore, this medium is considered in compliance with MTCA.

10.4 Surface Waters

No known impacts to surface waters have occurred due to the past operation of the Site as a retail gasoline station. Therefore, this medium is considered in compliance with MTCA at the Site.

10.5 Sediment

No known impacts to sediments have occurred due to the past operation of the Site as a retail gasoline station. Therefore, this medium is considered in compliance with MTCA at the Site.

10.6 Soil Vapor

WAC 173-340-740(3)(b)(iii)(C) identifies conditions that trigger whether or not an evaluation of the soil to vapor pathway shall be required. These conditions include the following:

- For GRO, whenever the TPH concentration is significantly higher than a concentration derived for protection of groundwater for drinking water beneficial use under WAC 173-340-747(6) using the default assumptions.
- For DRO, whenever the TPH concentration is greater than 10,000 mg/kg.
- For other volatile organic compounds (VOCs), including petroleum components, whenever the concentration is significantly higher than a concentration derived for protection of groundwater for drinking water beneficial use under WAC 173-340-747(4).

DRO and HO concentrations in Site soil have never been detected above 10,000 mg/kg. However, GRO and BTEX have historically been detected in Site soil at concentrations higher than concentrations derived for protection of groundwater for drinking water beneficial use, which under MTCA requires further evaluation of the soil to vapor pathway. However, due to the expected current and future exposure (onsite fueling activities) and likely receptor scenarios supported by the construction and zoning of the site and the location and depth of the soil sample exceedances (at depths of at least 5 feet under pavement), the potential soil vapor intrusion pathway is not considered to pose an unacceptable risk to current and future receptors at the Site.

Furthermore, historical COC groundwater concentrations have been compared to screening levels in Table B-1 of the Ecology vapor intrusion guidance considered to be protective of indoor air. During the last four quarters, only benzene was detected above the Table B-1 groundwater screening level in wells MW-1 and MW-2 which are located close to the dispenser islands. However, benzene was never detected above the Table B-1 groundwater screening level in wells MW-3, MW-6 and MW-7, which are located closer to the station building. Therefore groundwater benzene concentrations are considered to be protective of indoor air. The contribution to the total concentrations from potential vapor migration from soil gas via MW-1 and MW-2 is considered minimal in the dispenser island area due to onsite fueling activities. Therefore the historical groundwater COC concentrations are considered to be

protective of indoor air. This medium is considered in compliance with MTCA at the Site.

10.7 Ecological and Natural Resources

The Site qualifies for an exclusion from the TEE according to WAC-173-340-7491, therefore ecological and natural resource related issues at the Site are considered in compliance with MTCA.

10.8 Cultural and Archaeological Resources

No known impacts to cultural and archaeological resources have occurred due to retail gasoline station operations at the Site. Therefore cultural and archaeological resource related issues at the Site are considered in compliance with MTCA.

11. Selection of Remedial Alternatives for Unrestrictive Land Use

Based on current concentrations of COCs in soil and groundwater, as well as the current exposure scenarios at the Site, a CPOC approach is proposed to demonstrate compliance with MTCA Method A CULs. Therefore, three remedial alternatives were considered for future implementation at the Site, and one was selected. These alternatives are described in **Appendix J** and include:

- Alternative 1 – Monitored Natural Attenuation with Institutional Controls
- Alternative 2 – Air Sparge/Soil Vapor Extraction
- Alternative 3 – Excavation with Institutional Controls

In order to select the appropriate remedial alternative, threshold requirements that protect human health and the environment, provide compliance with cleanup standards and applicable state and federal laws, and provide for compliance monitoring, according to WAC 173-340-360 (2)(a). Additionally, MTCA states that when selecting an alternative, preference will be given to “permanent solutions to the maximum extent practicable.” “Permanent” is defined in WAC 173-340- 200 as a cleanup action in which the cleanup standards of WAC 173-340-700 through 173-340-760 are met without further action being required at the site being cleaned up, or at any other site involved with the cleanup action, other than the approved disposal of any residue from the treatment of hazardous substances. Evaluating the “maximum extent practicable” for

each alternative requires the application of a disproportionate cost analysis (DCA) according to WAC 173-340-360(3)(e). Finally, additional criteria were evaluated with respect to reasonable restoration timeframe in order to select the appropriate remedial alternative, as specified in WAC 173-340-360(b). The evaluation of threshold requirements, the DCA, and criteria for the reasonable restoration time frame are included in **Appendix J**.

Based on the results of the DCA and the other applicable considerations, Alternative 1 was selected. This Alternative is proposed for the site as it represents the lowest disproportionate cost. Following the issuance of an NFA opinion based on a CPOC approach, Arcadis proposes implementing Alternative 1 in order to continue cleanup actions necessary to achieve unrestricted land use for the Site.

12. Groundwater Monitoring Well Decommissioning

Eight groundwater monitoring wells and two injection wells are located at the Site. Upon receipt of an NFA determination, monitoring well decommissioning activities will be completed in accordance with the WAC 173-160 Minimum Standards for Construction and Maintenance of Wells, dated August 2008. A licensed drilling subcontractor will remove the surface monument from the monitoring well locations. The residual annulus of the wells will be filled with hydrated medium-sized bentonite chips to the near surface and completed to the surface with original cover.

13. Waste Management

Soil cuttings and wastewater generated during the abandonment activities, if any, will be contained in Department of Transportation-approved 55-gallon steel drums. These drums will be appropriately labeled and temporarily stored onsite, pending waste removal. All drums will be removed from the Site and transported to an approved offsite disposal facility.

14. Electronic Information Management

Arcadis understands that Ecology requires submittal of environmental data in electronic format prior to issuance of formal correspondence. Arcadis will upload applicable information to the Ecology Electronic Information Management database and coordinate with representatives of Ecology to confirm successful upload.

15. Conclusions

Thirty four soil samples have been collected from various locations across the Site during soil investigations, excavation and monitoring well installations. Hydrocarbon impacts in soil exceeding applicable CULs remain locally at the Site under existing infrastructure. However, an empirical demonstration is used to show that soil concentrations do not cause an exceedance of groundwater CULs.

Groundwater monitoring has been conducted at the Site since 2005. Concentrations of COCs have not been detected greater than applicable MTCA CULs in CPOC monitoring wells at the property since sampling began in 2005 and 2012.

Due to historical and current site conditions, a conditional point of compliance approach was used to address site cleanup activities, according to WAC-173-340-720(8)(C). Since the remaining soil and groundwater impacts are located in close vicinity to current retail gas station infrastructure, intrusive remedial activities are not possible. Therefore, it would not be practicable to meet MTCA Method A CULs within a reasonable restoration time frame. Furthermore, historical remedial activities have been conducted (excavation and injections) to reduce source mass. Based on current analytical data and transport velocity calculations, the hydrocarbon plume is either stable or shrinking, and natural attenuation is occurring. Therefore, offsite migration of concentrations exceeding the applicable CULs is unlikely to occur.

Groundwater at the Site is not currently used as drinking water; therefore ingestion is not a significant exposure pathway. Furthermore, an environmental covenant will ensure that groundwater at the Site will not be used as drinking water in the future. Current groundwater concentrations in Site CPOC wells show that offsite migration of potential groundwater impacts is not occurring. Releases associated with the dispenser islands have been shown to be stable or decreasing.

Potential exposure pathways at the Site are either not considered complete or are not considered significant. The potential risks from possible exposures are likely to be low and, therefore, not significant. Furthermore, dissolved-phase concentrations in CPOC wells are below applicable CULs, which indicates that offsite receptors are protected. Therefore, potential exposures to concentrations of petroleum hydrocarbons in soil or groundwater at the Site are not expected to pose significant risk to human health or the environment.

**Closure Request and
2014/2015 Site Status
Report**

Former ARCO Facility No. 5445

No apparent threat to human health or the environment exists at the Site. Therefore, the direct contact exposure scenario is insignificant. In accordance with MTCA cleanup regulations WAC 173-340 revised November 2007, Arcadis requests that Ecology issue an NFA determination for the Site.

**Closure Request and

**Table 1
Groundwater Gauging Data and Select Analytical Results
WA-05445**

665 23rd Avenue, Seattle, WA 98122

All analytical results are presented in micrograms per liter (µg/L)

Well	Date	Notes	TOC	DTW	NAPL	GWE	GRO	DRO	HO	Benzene	Toluene	Ethylbenzene	Total Xylenes	MTBE	EDB	EDC	Total Lead	Dissolved Lead
Model Toxics Control Act (MTCA) Method A Cleanup Levels (CULs) in µg/L							800/1,000	500	500	5	1,000	700	1,000	20	0.01	5	15	15
MW-8	3/10/2015	(LFP)	276.70	7.60	0.0	269.10	<50	<46	<100	<0.50	<0.50	<0.50	<0.50	<0.50	--	--	<4.7	--
MW-8	6/8/2015	(LFP)	276.70	8.63	0.0	268.07	<50	<47	<100	<0.50	<0.50	<0.50	<0.50	<0.50	--	--	<4.7	--

msl = Mean sea level

TOC = Top of casing

GWE = Groundwater elevation above msl

DTW = Depth to water below TOC

All analytical results are in micrograms per liter (µg/L)

TOC/DTW/NAPL/GWE measurements are in feet (ft)

< = Not detected at or above the laboratory reporting limit

-- = Not analyzed/not applicable

NA = Not analyzed

NM = Not measured

NE = Top of casing not established

DUP = Duplicate sample

NS = Not sampled

NAPL = Non-Aqueous Phase Liquid Thickness

GRO = Total Petroleum Hydrocarbons - Gasoline Range Organics

DRO = Total Petroleum Hydrocarbons - Diesel Range Organics

HO = Total Petroleum Hydrocarbons- Heavy Oil Range Organics

EDB = Ethylene Dibromide

EDC = 1,2-Dichloroethane

MTBE = Methyl Tertiary Butyl Ether

BTEX = Benzene, Toluene, Ethylbenzene and Total Xylenes

P = Purge sampling

LFP = Low flow purge sampling

NP = No purge sampling

GRO, DRO, HO methods by Ecology NW Methods; BTEX, MTBE and EDB by 8260B, lead by EPA 6000/7000 Series, EDC by EPA 8011

Historic analysis by former consultant of BTEX, MTBE and EDB by EPA 8021B and confirmed with EPA 8260B if necessary

Groundwater Elevation - If NAPL is present, the elevation is corrected according to the following formula, (TOC elevation - depth to water) + (0.8 X NAPL Thickness)

800/1,000 = GRO MTCA cleanup levels with benzene present (800) and without (1,000)

Data collected prior to 2010 have been provided by previous consultants and are included as historical reference only

Site resurveyed in 2010. TOC elevation in reference to vertical datum N.A.V.D. 88 and horizontal datum NAD 83/98

J = estimated value – The result is greater than or equal to the Method Detection Limit (MDL) and less than the Limit of Quantitation (LOQ)

BOLD constituent detected above MTCA Cleanup Levels

Notes:

Bold and shaded cells represent values greater than applicable MTCA Method A CULs.

All analytical results are in milligrams per kilogram (mg/kg).

Depths are listed in feet below ground surface.

DUP = Duplicate

TPH = Total petroleum hydrocarbons

GRO = total petroleum hydrocarbons in the gasoline range

DRO = total petroleum hydrocarbons in the diesel range

HO = total petroleum hydrocarbons in the oil range

BTEX = benzene, toluene, ethylbenzene, and total xylenes

MTBE = methyl tertiary butyl ether

EDB = Ethylene Dibromide

EDC = Ethylene Dichloride

SWW = Side Wall West

SWE = Side Wall East

-- = not analyzed/not established

< = Not detected greater than laboratory reporting limit. Value listed is laboratory detection limit.

30/100 = GRO MTCA cleanup levels with benzene present (30) and without (100)

J = value detected between the method detection limit and the limit of quantitation

BTEX/MTBE by USEPA 8260 unless otherwise noted with^b

GRO, DRO, HO methods by Ecology NW Methods

Lead by USEPA 6000/7000 Series

^a Pre-remedial soil concentrations from MW-2-5.0 were confirmed post-remediation with boring HA-2 on July 8, 2014

^b Sample location also analyzed for VPH/EPH, MTBE analyzed by NWWPH

(x) Area where this sample was collected was over-excavated to a total depth of 15 feet bgs and resampled; samples from the side walls (at 13 feet bgs) and bottom of excavation are below applicable CULs (samples D-4-13.0-SWW, D-4-13.0-SWE and D-4-15.0, respectively).

Notes:

All analytical results are in milligrams per kilogram (mg/kg)

EPH = Extractable Petroleum Hydrocarbon

VPH = Volatile Petroleum Hydrocarbon

MTBE = Methyl Tertiary Butyl Ether

EPH/VPH by WA EPH/ WA VPH

Depths are listed in feet below ground surface

< = Not detected greater than laboratory detection limit. Value listed is laboratory detection limit.

J = estimated value detected in-between the method detection limit and the limit of quantitation

**Re: Opinion pursuant to WAC 173-340-515(5) on Completed Remedial Action
for the following Hazardous Waste Site:**

- **Site Name:** Arco 5445
- **Site Address:** 665 23rd Avenue Seattle, WA 98122
- **Facility/Site No.:** 76386549
- **Cleanup Site ID No.:** 10446
- **VCP Project No.:** NW2444

Dear Mr. Zorn:

Thank you for submitting documents regarding your completed remedial action for the **Arco 5445 facility (Site)** for review by the Washington State Department of Ecology (Ecology) under the Voluntary Cleanup Program (VCP). Ecology appreciates your initiative in pursuing this administrative option for cleaning up hazardous waste sites under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

This letter constitutes an advisory opinion regarding a review of submitted documents/reports pursuant to requirements of MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing and addressing the following releases at the Site:

- Gasoline-range total petroleum hydrocarbons (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary-butyl ether (MTBE), and ethylene dibromide (EDB) into soil.
- TPHg, BEX, MTBE, and lead into ground water.

Ecology is providing this advisory opinion under the specific authority of RCW 70.105D.030(1)(i) and WAC 173-340-515(5).

This opinion does not resolve a person's liability to the state under MTCA or protects a person from contribution claims by third parties for matters addressed by the opinion. The State does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). This opinion is advisory only and not binding on Ecology.

Ecology's Toxic Cleanup Program has reviewed the following information:

Mr. Scott Zorn
April 26, 2016
Page 2

- ARCADIS US, Inc. *Closure Request and 2014/2015 Site Status Report, ARCO Facility No. 5445, 665 23rd Ave Seattle, WA 98122.* October 20, 2015.

The reports listed above will be kept in Central Files of the Northwest Regional Office of Ecology (NWRO) for review by appointment only. You can make an appointment by calling the NWRO resource contact at (425) 649-7235 or sending an e-mail to:

nwro_public_request@ecy.wa.gov.

The Site is defined by the extent of contamination caused by the following releases:

- TPHg, BTEX, MTBE, and EDB into soil.
- TPHg, BEX, MTBE, and lead into ground water.

The Site is more particularly described in Enclosure A to this letter, which includes a detailed Site diagram. The description of the Site is based solely on the information contained in the document listed above.

Based on a review of supporting documentation listed above, pursuant to **requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing and addressing the following release(s) at the Site, Ecology has determined that soil and ground water characterization at the Site are not sufficient to make a final determination regarding the current conditions of the Site. The following issues have been identified in the report.**

- Characterization of soil and ground water at the Site is not complete, specifically:
 - o Soil concentrations above MTCA Method A cleanup levels were detected in soil samples from MW-2 and P8 collected between 3 and 20 feet below ground surface (bgs) in the area of the dispenser islands (P8) and upgradient of the dispensers (MW-2). An attempt to confirm shallow soil impacts (5 to 7 feet bgs) in MW-2 was made by advancing HA-2 in 2014. However, petroleum impacts within this soil horizon remain above MTCA Method A soil cleanup levels for TPHg (910 to 1,300 mg/kg) and benzene (0.059 mg/kg) and no soil confirmation was conducted for the deeper contamination at 15 and 20 feet bgs. Additional lateral and vertical delineation downgradient from these two locations and from P8 (TPHg at 72.3 mg/kg) are needed.
 - o Concentrations of MTBE in one soil sample collected from MW-5 at 10 feet bgs was above the MTCA Method A cleanup level (0.503 mg/kg). Additional soil characterization upgradient and downgradient from this location is needed to define the extent of the MTBE contamination in this area.
 - o Include in the figures the extent of the excavation conducted around dispenser D4 in 2004 and locations of soil confirmation samples.
 - o Historical data on ground water flow within the Property indicates that ground water at the Site flows to the southeast. Based on this information, no ground

water monitoring wells are located directly downgradient from well MW-5 to ensure potential ground water impacts migrating downgradient of this well are adequately captured.

- o Historical data from MW-5 indicates that ground water was below MTCA Method A cleanup levels until December 2013 when a spike in TPHg of 1,700 µg/L was detected and has remained at that same concentration until 2015. A source for the TPHg in ground water at this location has not been determined and so may indicate a new release has occurred. Additional ground water characterization directly upgradient and downgradient of MW-5 is needed to determine the source of these exceedances.
- o A review of historical ground water depth levels for each well and their screened intervals indicates that all well screens at the Site are either seasonally or permanently submerged making them unreliable for determining the presence of LNAPL or accurately representing ground water conditions at the Site. Additional wells screened at the appropriate depth intervals need to be installed at key locations to adequately characterize current ground water conditions.
- o Most of the existing ground water monitoring wells at the Site (MW-2, MW-3, MW-4, MW-6, and MW-7) are located upgradient from potential sources of contamination, therefore, cannot effectively be used to monitor releases from the USTs, conveyance piping, or dispensers. Additional wells, properly placed and appropriately screened, are needed downgradient from these locations to ensure that potential ground water impacts from all source areas are captured. Any new wells should be installed such that the screened interval straddles the water table year-round.
- o The source of shallow soil impacts in MW-2 and HA-2 has not been identified. Additional soil and ground water data in this area of the Site are needed.
- o Information regarding the performance and results of the treatment system used at the Site needs to be provided.
- Regarding conditional points of compliance:
 - o Boring logs and historical ground water data from the monitoring wells indicate that all of the wells at the Site are either seasonally or permanently submerged making them unreliable for adequately determining the presence of pure-product petroleum hydrocarbons and therefore are unsuitable to be used as conditional points of compliance (CPOCs).
 - o Figure 4 of the *Closure Request and 2014/2015 Site Status Report* depicts monitoring wells MW-2, MW7, MW-6, MW-3, MW-4 and MW-8 as CPOCs. Of these wells, only MW-8 is appropriately placed to be a CPOC. The rest of these monitoring wells are either located upgradient or crossgradient from Site sources. CPOCs wells should be representative of the ground water conditions at the Site.

Furthermore, monitoring well MW-2 has shallow soil impacts above the water table. Although the impacted soil in this location is in the vadose zone and is not directly in contact with ground water, you cannot definitively say that ground water is not impacted by the residual soil concentrations. Ecology prefers that that a well to be used as CPOC would not have contamination.

- Regarding travel time calculations and empirical demonstration:
 - o It is unclear why the travel time calculations presented in Appendix I were conducted. Because no impacted soils were present in MW-1 during drilling, the impacts in ground water have migrated from somewhere else. This analysis is generally used to show if residual concentrations remaining in soils at the Site are impacting ground water and if sufficient time has passed for those impacts to migrate to a ground water monitoring well located directly downgradient of the impacted soils (or sources) in question.

The calculations presented in Appendix I (from one well into another), without the use of a tracer, do not provide any reliable information on how the contaminants are moving from soil to ground water at a site that is capped so is without significant infiltration.

- o The relationships between ground water monitoring wells MW-1, MW-5, MW-8, and their source of contaminants are unclear. More soil and ground water characterization in this area of the Site is needed to determine which is the source/es of contaminants to MW-1 and MW-5
- o Based on the definitions provided in the book *Remediation Hydraulics* (Payne et al, 2008), the mobile porosity is considerably less than the total and the effective porosities. Therefore, the resulting ground water velocities calculated for the Site using mobile porosity will be higher thus making the predicted travel times shorter. This results in potentially underestimating the time required for contaminants to move through the Site. The memo prepared by Ecology on the correct use of empirical demonstrations and travel time calculations (B. Gilmore, L. Goldstein, and D. South, 2014) used porosity rather than effective or mobile porosity so Ecology will not accept modifications to the calculations provided in the memorandum.
- o Section 9.2.2 of the *Closure Request and 2014/2015 Site Status Report* indicates that “Compliance at the Site has empirically been demonstrated to date and the endpoint is protected. COC concentrations at ground water CPOC wells have been shown to be less than Method A Ground water CULs for at least four consecutive quarters.”

Ecology does not agree with this conclusion because the calculations related to an empirical demonstration per WAC 173-340-747(9) and Ecology’s 2014 Draft Technical Memorandum were not properly conducted. Also, monitoring wells MW-1 and MW-5 still have concentrations of TPHg and benzene above MTCA

Method A cleanup levels contradicting the last part of the statement. The shape of the plume as indicated by the MTCA Site Boundary on Figure 4 is not consistent with the ground water flow direction indicated by the ground water contour maps and the rose diagram in Figure 5. The fact that MW-8 is the most downgradient well and has non-detectable petroleum hydrocarbons and lead is confusing especially since it is located so close to the "MTCA Site Boundary."

- Regarding the Terrestrial Ecological Evaluation (TEE):
 - A figure showing the Property and the 500-foot radius from the Site boundary used for the TEE exclusion was not included in the report. This figure is needed to document that the Site qualifies for the undeveloped land exclusion.
- Regarding the Conceptual Site Model:
 - The soil and ground water ingestion, direct contact, and leaching pathways are complete for this Site.
 - The ground water pathway is complete unless a demonstration of non-potability can be made. Because this pathway is complete, it must be evaluated.
- Analytical laboratory packages should be included in the report if they have not been previously included in other reports.
- An abbreviated version of a Disproportionate Cost Analysis (DCA) was included in the October 20, 2015 *Closure Request and 2014/2015 Site Status Report*. Per WAC 173-340-350 and associated sections, an FS and DCA are required to meet the substantive requirements of MTCA. Per MTCA's specific requirements, the following data gaps were identified:
 - Cleanup action objectives were not included in the report.
 - An evaluation of viable and available remedial technologies was not provided and therefore, it is not proven that all practicable treatment methods were/will be used.
 - Two of the proposed alternatives include what was referred to as Monitored Natural Attenuation (MNA). However, MNA is a very specific process in MTCA that is not necessarily applicable to all sites. The actions described in the report related to MNA are closer to the definition of long term performance or compliance monitoring.
 - In order to determine the feasibility of using MNA at the Site as a cleanup action under MTCA you first have to demonstrate that the plume is stable or shrinking, that microbial degradation processes are occurring on the Site, and that cleanup levels will be reached within a reasonable restoration time frame. The report did not provide an evaluation of these conditions.
 - The limited data provided in the *Closure Request and 2014/2015 Site Status Report* is insufficient to determine stability of the plume and estimate a reasonable

restoration time frame.

- The tools provided in Ecology's Natural Attenuation Tool Package for Petroleum Contaminated Ground Water (Publication No. 05-09-091A) are the preferred method of evaluating plume stability and restoration time frames. Ecology considers a reasonable restoration time frame to be within 5 years or less of the cleanup.
- In order to determine if an alternative's costs are disproportionate, an evaluation of costs for each alternative and a comparison of estimated environmental benefits between them is required. Also, all the alternatives should be compared to the most permanent alternative. A cost breakdown of each alternative by task was not presented. This evaluation can be presented in a tabular format but has to include every costing aspect of each alternative such as equipment, rentals, disposal costs, personnel cost, monitoring costs, analytical costs, etc. Any and all assumptions made in the costing of each task has to be documented in the table notes.
- Table J-1 of the DCA shows the ranking of the different parameters using a comparative ranking scale from 1 to 10. However, the values were not weighted correctly. Ecology agrees that Protectiveness is the most important of these parameters and should have the highest value followed by Permanence. We do not agree that Effectiveness of the remedy has the same weight as Protectiveness. Ecology believes that Effectiveness should have the same weight as Permanence and the remaining parameters (Management of Short-term Risk, Implementability, and Public Concerns) should have the same weight but to a lower degree. Public concerns should not be considered to have more weight if it is determined that the short term risk and the implementability of a remedy are appropriate for a Site.
- The rationale of the DCA is to compare Costs vs Benefits. Table J-2 in the report should be designed to obtain the appropriate numbers to make this analysis. The first part of this table is used to determine only overall benefits. The second part of the table is to determine relative costs. After the values are entered for each portion of the table, the results of each portion are used to construct the Cost vs Benefits graph and determine disproportionality.
- Although cost should have not been included in the overall benefits portion of this table, it had a weighting factor of 8 resulting in an overestimation of the effect of costs in the analysis.
- The calculations on the "Magnitude of Cost...", "Relative Cost Remedy", and "Relative Comparable Benefit" are not the correct numbers to use when calculating the Ratio between benefit and cost. The benefits portion of the table needs to be divide by your calculated cost.
- A figure showing estimated cost versus environmental benefit for the disproportionate cost analysis where the most permanent practicable alternative is

Mr. Scott Zorn
April 26, 2016
Page 7

used as the baseline against which other alternatives are compared to.

This opinion does not represent a determination by Ecology that a proposed remedial action will be sufficient to characterize and address the specified contamination at the Site or that no further remedial action will be required at the Site upon completion of the proposed remedial action. To obtain either of these opinions, you must submit appropriate documentation to Ecology and requests such an opinion under the VCP. **This letter also does not provide an opinion regarding the sufficiency of any other remedial action proposed for or conducted at the Site.**

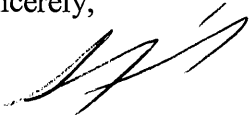

Please note that this opinion is based solely on the information contained in the documents listed above. Therefore, if any of the information contained in those documents is materially false or misleading, then this opinion will automatically be rendered null and void.

The state, Ecology, and its officers and employees make no guarantees or assurances by providing this opinion, and no cause of action against the state, Ecology, its officers or employees may arise from any act or omission in providing this opinion.

Again, Ecology appreciates your initiative in conducting independent remedial action and requesting technical consultation under the VCP. As the cleanup of the Site progresses, you may request additional consultative services under the VCP, including assistance in identifying applicable regulatory requirements and opinions regarding whether remedial actions proposed for or conducted at the Site meet those requirements.

If you have any questions regarding this opinion, please contact me at (425) 649-7233 or email at sofe461@ecy.wa.gov.

Sincerely,

Sonia Fernández, LG.

- **VCP Project No.:** NW2444

Site and Property Definition: The Property is located on the southwest corner of the intersection between East Cherry Street and 23rd Avenue South in Seattle, Washington. The Site is defined by:

- Gasoline-range total petroleum hydrocarbons (TPHg), diesel-range total petroleum hydrocarbons (TPHd), oil-range total petroleum hydrocarbons (TPHo), benzene, toluene, ethylbenzene, and xylenes (BTEX), and ethylene dibromide (EDB) into soil.
- TPHg, TPHd, TPHo, BTEX, methyl tertiary-butyl ether (MTBE), and lead into ground water.

Impacted soil and ground water remain on the southeastern area of the Property where the dispenser islands are currently located. However, neither soil nor ground water contamination at the Site has been adequately characterized.

Soil samples collected in 2004 around the dispenser islands and conveyance piping had levels of TPHg and BTEX above MTCA Method A cleanup levels between 3 and 11 feet below ground surface (bgs). Soil confirmation samples collected after overexcavation of the impacted soils indicated that all petroleum contaminated soil was removed to concentrations below MTCA Method A soil cleanup levels. Additional petroleum-impacted soils from 5 to 20 feet bgs were also identified in the area of the dispenser islands and downgradient from them in 2005, 2012, and 2014. TPHg (110 to 3,600 mg/kg), benzene (0.034 to 2.11 mg/kg), ethylbenzene (38.7, mg/kg), xylenes (126 mg/kg), MTBE 0.053 to 1.8 mg/kg) and EDB (0.09 mg/kg) remain at the Site.

Ground water Monitoring wells MW-1 and MW-5 currently have concentrations of TPHg (1,700 to 3,600 µg/L) and benzene (6.5 µg/L) above MTCA Method A cleanup levels. The required minimum of four consecutive quarters of ground water data from each well showing concentrations below the cleanup levels has not been achieved.

Area Description: The Property is located in an area zoned by the city of Seattle as neighborhood commercial in a mixed commercial and residential area. The Property is bordered to the north by the Cherry Hill Baptist Church and two small retail buildings housing a coffee shop and a barber shop, by a retail commercial building to the northeast housing an adolescent activity center, by Garfield High School and Community Center to the east and southeast, a fenced vacant lot to west, and residences to the south, southwest, and northwest.

Property History and Current Use: Prior to 1987, the Property was occupied by a residence.

The Property was first developed as a gasoline service station in 1988. The retail gasoline station currently operates with the original underground storage tanks (USTs) installed in 1988. The station operates three 12,000-gallon double-walled fiberglass gasoline USTs, a heating oil UST, and a waste oil UST. The gasoline USTs were replaced in 1990 with the three 12,000-gallon unleaded gasoline USTs

The Property is currently an active ARCO retail gasoline station with a convenience store.

Contaminant Sources and History of Releases: The releases were discovered in 2004 while conducting upgrades to the dispensers and associated piping. The source of soil contamination at the Site is attributed to releases from the dispenser islands and conveyance piping that occurred sometime before 2004.

Physiographic Setting: The Property is located at an elevation of approximately 278 feet above mean sea level. The Site is specifically located within the Squire Park neighborhood east of downtown Seattle. General topography around the Site is relatively flat with a slight slope to the east. The Property is paved with asphalt and concrete.

Ecological Setting: There are less than 1.5 acres of contiguous undeveloped land on or within 500 feet from the Site. Based on this information, the Site qualifies for an exclusion under WAC 173-340-7490 and further assessment for a Terrestrial Ecological Evaluation (TEE) was not necessary.

Geology: The Site is located within the Puget Lowland Physiographic Province in Western Washington. The Puget Lowland is a north-south trending trough located between the Olympic Mountains to the west and the Cascade Mountains to the east. Elevations in the lowlands range from sea level to several hundred feet above sea level.

Surficial soils encountered at the Site consist of sand and silt mixtures to 46 feet bgs.

Ground Water: Ground water was encountered at the Property between 5 and 26 feet bgs. The direction of ground water flow is to the southeast with a gradient of 0.075 feet per foot. No drinking water supply wells are located within one mile from the Site.

Surface and Storm Water: The nearest surface water is Lake Washington located approximately 1 mile east from the Site. Surface water runoff from the Property is collected in on-site catch basins and discharge into storm drains along East Cherry Street and 23rd Avenue.

Water Use: The Property's drinking water is provided by Seattle Public Utilities which obtains its water from the Tolt and Cedar River watersheds in the Cascade Mountain foothills.

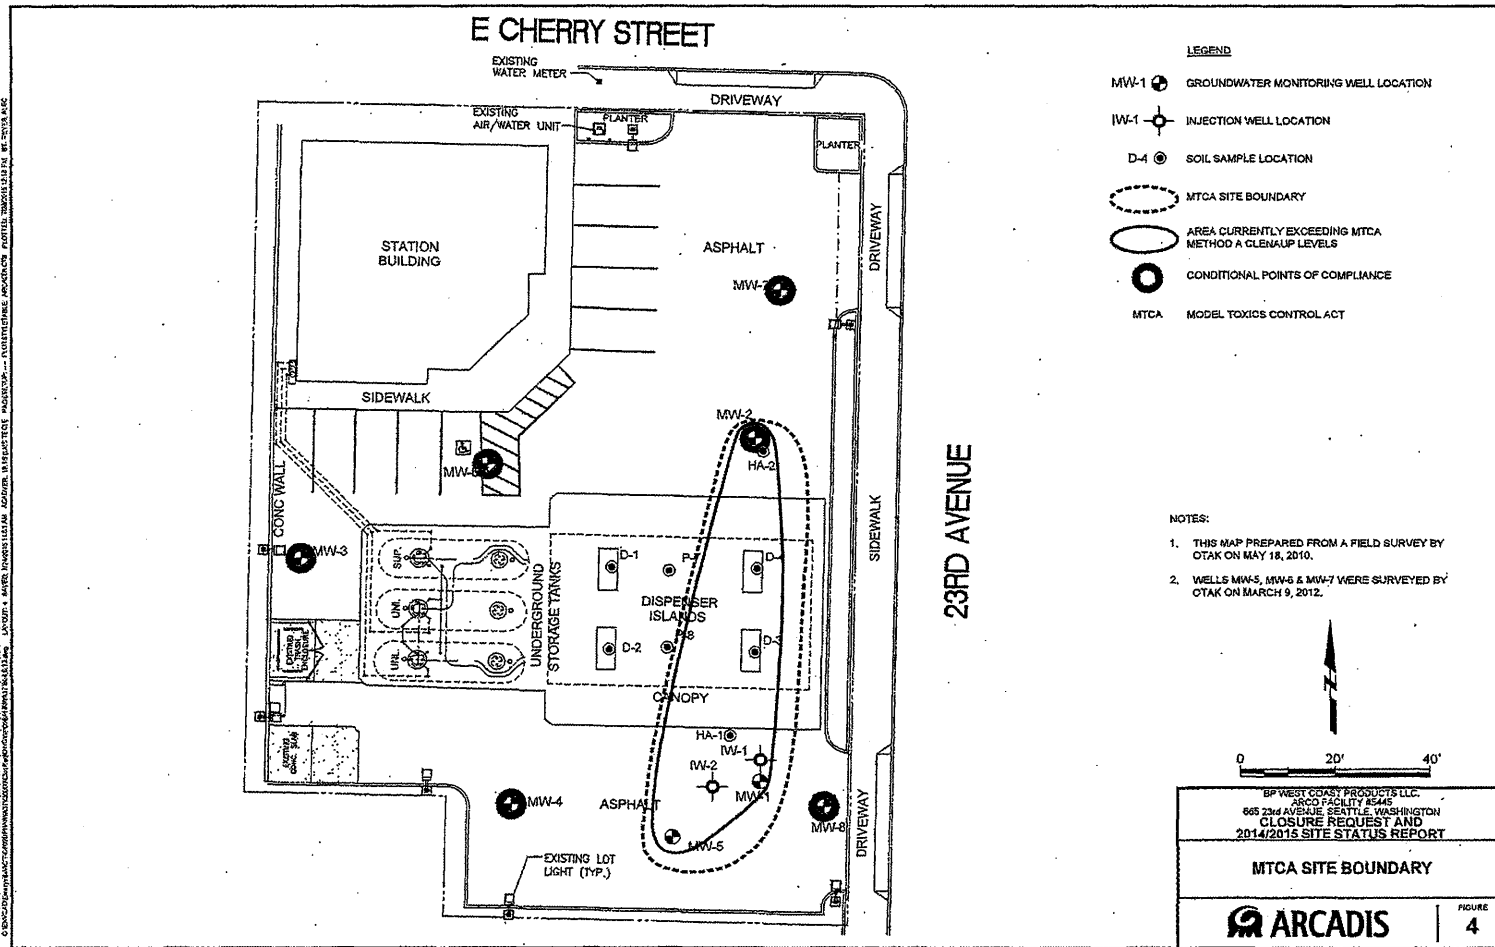

Interim Actions: Interim remedial actions conducted at the Site included a 2004 overexcavation of impacted soils around one of the four dispensers (D4) to a depth of 13 feet bgs. The impacted soils with TPHg (116 to 1,220 mg/kg), benzene (1.82 mg/kg), toluene (18.6 mg/kg), ethylbenzene (12.1, mg/kg), xylenes (59.5 mg/kg), and MTBE (1 mg/kg) were found at 11.5 feet bgs during dispenser upgrades. The impacted soil was overexcavated to approximately 15 feet bgs and soil confirmation samples indicated that remaining soil beneath the D4 dispenser was below MTCA Method A soil cleanup levels. Approximately 41 tons of impacted soil was disposed off-

Mr. Scott Zorn
April 26, 2016
Page 3

site.

In 2012 two injection wells (IW-1 and IW-2) were installed within the Property and approximately 10,000 gallons of magnesium sulfate (5,000 gallons per well) were applied during a series of injection events until 2013. The injections were conducted to determine if Site soils were amenable to enhanced bioremediation with magnesium sulfate. Although the results on ground water monitoring reportedly indicated that the injections could be a potential cleanup option, no additional treatment was conducted and performance data was not provided.

Contaminant concentrations in ground water at the Site are currently above MTCA Method A cleanup levels in MW-1 and MW-5. The minimum required four quarters of ground water concentrations below MTCA was attained in the remaining six wells, however these wells have submerged screens making them an unreliable source to monitoring ground water conditions in a petroleum site.

ALL INFORMATION CONTAINED HEREIN IS UNCLASSIFIED EXCEPT WHERE SHOWN OTHERWISE. DATE OF DECLASSIFICATION IS INDEFINITE.

Re: Arcadis Multi-Site Agreement Termination

Dear Mr. Zorn:

The Department of Ecology (Ecology) would like to thank you for partnering with the Voluntary Cleanup Program (VCP) on the Multi Site Agreement (MSA) from July 1, 2011 through May 2016. Ecology appreciates your initiative in pursuing this administrative option for cleaning up hazardous waste sites under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

Per your letter dated April 26, 2016, Arcadis selected to end the MSA as of May 26, 2016. Per Section 11(d) of the Arcadis Multi-Site Voluntary Cleanup Program Agreement the Ecology Project Managers, Sonia Fernández and Tamara Cardona, have prepared a final report regarding the status of each site listed in the MSA that has not received a No Further Action (NFA) determination. A list of the sites (Enclosure A), a map (Enclosure B), and a compilation of the reports (Enclosure C) are included with this letter.

It is VCP policy to send a Status Request letter to all Sites that are part of the program but have not requested an opinion letter within the last year. Ecology understands that the essence of the MSA was to have informal technical discussions that would help move the Sites towards cleanup. However, some of the Sites that were part of the MSA were not discussed within the past year or more. For these sites, you may receive a Status Request letter after termination of this agreement. If Arcadis intends to maintain those Sites active in the VCP, submission of the current status and a request for an opinion letter may be necessary to maintain active status. If the site is terminated from the VCP, please remember that you may re-enter at any time by submitting an individual VCP application for each site.

Some Sites, specifically NW2456 (Arco 5373) and NW2431 (Midway AM/PM) appear to be near site closure. Ecology recommends that a final Remedial Investigation/ Feasibility Study and Cleanup Action report that includes an adequate disproportionate cost analysis is submitted promptly for evaluation. Please refer to the *Remedial Investigation Report, Feasibility Study and Cleanup Action Plan* checklists when developing reports (checklists are available at <http://www.ecy.wa.gov/programs/tcp/vcp/vcpmain.htm>).

Ecology has concerns about the following ten Sites where contamination has not been fully delineated or that continue to have free product. These sites are listed below:

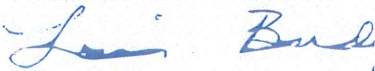

VCP Number	Site Name
NW2432	Southcenter AM/PM
NW2440	ARCO 4368
NW2441	ARCO 11066
NW2447	ARCO 0977
NW2449	ARCO 01166
NW2453	ARCO 0822
NW2454	ARCO 6214
NW2460	ARCO AM PM Lake Forest Park
NW2463	West Seattle ARCO
NW2466	Dravus 76

Ecology expects that Arcadis prioritizes these sites for additional investigation and cleanup. Of particular concern is the site named Arco 11066 (NW2441). Contamination at this location has not been fully delineated, many of the ground water monitoring wells contain free product, and sensitive populations are a short distance from the site (school at the north boundary of the property). The full extent of the contamination needs to be investigated, including any potential preferential pathways to ground water and vapors, and cleanup options proposed and implemented.

Again, Ecology appreciates your initiative in conducting independent remedial action and requesting technical consultation under the MSA. As the cleanup of the Sites progresses, you may request additional consultative services under the VCP, including assistance in identifying applicable regulatory requirements and opinions regarding whether remedial actions proposed for or conducted at the Sites meet those requirements.

If you have any questions regarding this opinion, please contact me at 425-649-7209 or at lbar461@ecy.wa.gov.

Sincerely,

Louise Bardy
VCP Unit Manager
Toxics Cleanup Program, NWRO

Re: Termination of 25 VCP Projects in the former Arcadis Multi Site Agreement

Dear Ross:

We received your letter in response to our request for information on the status of the 26 Voluntary Cleanup Program (VCP) sites that were formerly enrolled in the Arcadis Multi Site Agreement (MSA). Based on your response, we have decided to terminate the 25 sites from the VCP that you are planning to enroll in PLIA's PTAP program. According to the information we have on the releases at these sites, we have no objections with your plans. We will keep NW2441 (Arco 11066) and NW2463 (West Seattle Arco) open to continue the Ecology work already in process.

The list of the 25 sites to terminate is attached. Since it is necessary for us to terminate the VCPs for you to apply to PLIA, we will be terminating those sites on Friday November 9, 2018. Please let us know before then if you have any objections to this plan.

We appreciate your communication with the property owner of NW2431 (Midway AM/PM) to let him know the path forward for his property and addressing his concerns. We also appreciate the Change of Contact Form you provided to update our records.

If you have any questions about this request, please contact me at (425) 649-7233 or by email at sofe461@ecy.wa.com.

Sincerely,

Louise Bardy

Mr. Scott Zorn
Arcadis US, Inc.
2300 Clayton Road, Suite 400
Concord, CA 94520

Re: Request for Information on Status of VCP Project for the following Site:

- **Site Name:** Arco 5445
- **Site Address:** 665 23rd Ave Seattle, Washington 98122
- **Facility/Site No.:** 76386549
- **Cleanup Site ID:** 10446
- **VCP Project No.:** NW2444

Dear Mr. Zorn:

The Department of Ecology (Ecology) appreciates your decision to clean up the **Arco 5445** facility (Site) independently. This letter is a reminder about the project and that Ecology is committed to assisting you in reaching site closure. In order to do that, we are requesting information on the status of your cleanup and your continued interest in the Voluntary Cleanup Program (VCP).

Due to the high volume of interest in the program, Ecology has made a few changes to ensure our resources are aligned with current VCP project needs. Ecology is requiring that VCP sites are actively conducting remedial actions and that a request for an opinion on current work is pending. Also, we are requiring that a schedule of planned Site cleanup milestones is submitted, showing a committed interest to remain in the VCP to continue receiving Ecology assistance in the near future.

Our records indicate that we have no information on remedial actions that were conducted during the past year at your Site. The last information Ecology received was on October 2015 regarding a 2014/2013 Closure Request and Annual Site Status Report dated October 20, 2015. Ecology's has not issued an opinion on this site since April 2016.

Request for Information

Please submit the following information to Ecology within 30 days of the date of this letter so we are able to continue to assist you on this project:

1. **Cleanup status report.**
2. **Any reports documenting the cleanup or other associated activities.** Please use Ecology's Remedial Investigation Checklist or other appropriate checklist for cleanup reports submitted. This ensures that all the required information will be included. The checklists are located at: <https://ecology.wa.gov/Spills-Cleanup/Contamination-cleanup/Cleanup-process/Cleanup-options/Voluntary-cleanup-program/Reporting-requirements>
3. **A work plan and schedule for completing the cleanup.** The schedule for completing cleanup actions must be included with your response and should include significant milestones, such as remedial investigation results, quarterly ground water compliance monitoring events, feasibility study evaluations, and anticipated submittal of documents and requests for Ecology opinions. Contingencies and alternative approaches should be identified if the cleanup is not progressing within the expected time frame.
4. **A VCP "Change of Contact Form" for each of the following VCP project contacts, if applicable:** project manager, project billing contact, project consultant, project attorney, or property owner. A dated form should be submitted for each contact for which these project roles has changed. The form is located at:
<https://fortress.wa.gov/ecy/publications/SummaryPages/ECY070218.html>

Please note that any change in the VCP Customer organization (a representative of which signs the VCP Agreement) requires termination of the existing Agreement and completion of a new VCP application and agreement.

Long-term ground water monitoring alone is not considered by Ecology to be a remedial activity and will not be used to determine that a Site is actively conducting cleanup. If monitoring is very close to completion, Ecology may allow the project to remain in the VCP for closure.

Next Steps

Based on your response, Ecology may contact you to discuss whether continuing participation in the VCP is warranted at this time. If the VCP is terminated, you can always re-apply in the

Mr. Scott Zorn
August 24, 2018
Page 3

future when more remedial activities have occurred or a request for opinion is needed. Ecology's decision to terminate participation will be provided in writing. **Please note that if no response is received within 30 days of the date of this letter, Ecology may close the VCP Agreement governing this project.**

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of your Site. If you have any questions about this request, please contact me at (425) 649-7233 or by email at sofe461@ecy.wa.com.

Sincerely,

Sonia Fernández

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Haley & Aldrich, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Grantor excepts from the conveyance made by this Deed the rights, below the depth of 500 feet, to minerals and oil, gas, and other hydrocarbon substances in and under the land conveyed in fee by this Deed, but without the right of surface entry.

From the date that this Deed is recorded until the expiration of the terms set forth in the Contract Dealer Gasoline Agreement and the am/pm Mini Market Agreement that Grantor and Grantee or Grantee's tenant sign regarding the Real Estate conveyed in fee by this Deed, no person may construct or operate on this Real Estate (i) a convenience food store other than a convenience food store operated under a franchise or other agreement with BP, (ii) a fast food takeout restaurant, or (iii) a facility selling motor fuel other than a facility selling motor fuel under a supply or other agreement with BP. For purposes of this paragraph, the term "BP" means BP West Coast Products LLC, a Delaware limited liability company, its successors and assigns, its parents, subsidiaries, members, and sister companies, anyone to whom the am/pm franchisor role is sold or assigned, anyone to whom the ARCO marketing brand name is sold or assigned, and any other purchaser of a majority of the retail petroleum marketing assets now owned by BP West Coast Products LLC. In the event that the initial term of the Contract Dealer Gasoline Agreement and/or the am/pm Mini Market Agreement are extended or renewed, this restriction shall continue in effect until the expiration date provided for in the extension or renewal. This restriction shall not, however, expire early if the Contract Dealer Gasoline Agreement and/or the am/pm Mini Market Agreement are terminated prior to the expiration dates set forth in these agreements (including extensions and/or renewals).

Except as set forth below, this restriction shall remain in effect for the full term (including any extensions and/or renewals) as set forth above and shall be enforceable during this full term against anyone who acquires the Real Estate or any interest in the Real Estate by assignment, inheritance, purchase, investment, partnership, inter-company transfer, IPO, judgment, divorce, insurance settlement, or otherwise.

This restriction shall not, however, be enforceable against any lender who acquires the Real Estate by foreclosing on a deed of trust that encumbers the Real Estate, nor shall it be enforceable against any bona fide purchaser who acquires the Real Estate from such a lender (provided, however, that anyone who is or has been a franchisee of BP on this Real Estate may not qualify for this exception). This restriction shall also not be enforceable against any entity who acquires the Real Estate by eminent domain (or agreed taking in lieu of eminent domain), nor shall it be enforceable against any purchaser who acquires the Real Estate from such a taking entity.

This restriction will terminate automatically if BP withdraws from both the retail and wholesale operation, marketing, supplying or franchising of motor fuel and BP also withdraws from both the retail and wholesale operation, marketing, supplying or franchising of convenience food stores in the statistical geographic market area in which the Real Estate is located.

Any other early termination of this restriction shall be subject to the sole discretion of BP.

(See Grantor's signature on the next page.)

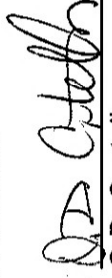

Unofficial Copy

(ATTACH NOTARY ACKNOWLEDGMENT(S))

CERTIFICATE

I, O.D. Castellon, Assistant Secretary of BP WEST COAST PRODUCTS LLC, a Delaware limited liability company, does hereby certify that the following is a true copy of a resolution duly adopted by consent action of the Board of Directors of the company on September 26, 2001, and that said resolution is valid and binding and has not been amended, modified or rescinded and is in full force and effect on the date hereof:

RESOLVED, that the Chairman, President, any Vice President, Assistant Vice President, and the Treasurer of the Company be, and each of them hereby is, severally authorized and empowered in the name and on behalf of the Company to make, execute, authenticate, acknowledge and deliver any contract, agreement, release, assignment, lease, conveyance, deed, transfer of real or personal property, proxy, power of attorney with full and general or limited authority, with power of substitution, or any other instrument similar or dissimilar to the preceding, which he or she may deem necessary or proper in connection with the business of the Company, without further act or resolution of this Board, and the Secretary or any Assistant Secretary be, and each of them hereby is, severally authorized and empowered to affix the corporate seal to any such papers or documents and to attest the same in cases where such action is necessary or appropriate.

I further certify that the foregoing resolution is still in full force and effect and has not been amended or rescinded.

WITNESS my hand and the seal of this Company this 13th day of April 2006.

O. D. Castellon
Assistant Secretary

**DECLARATION OF ENVIRONMENTAL RESTRICTION AND
OTHER ENVIRONMENTAL COVENANTS AND CONDITIONS**

This Declaration of Environmental Restriction and Other Environmental Covenants and Conditions (this "Declaration") dated April 12, 2006, is made by CITY NEIGHBOR, INC., a Washington corporation ("Owner"), for the benefit of ATLANTIC RICHFIELD COMPANY, a Delaware corporation ("ARCO"), and BP WEST COAST PRODUCTS LLC, a Delaware limited liability company ("BP").

RECITALS

A. ARCO or ARCO's dealer operated an ARCO-branded gasoline station on the real property in the County of King, State of Washington, described in the attached Exhibit "A" (the "Real Estate").

FILED FOR RECORD AT REQUEST OF
TRANSNATION TITLE INSURANCE CO

As of January 1, 2002, ARCO conveyed substantially all of its refining and marketing assets, including the Real Estate, to BP.

C. In connection with the signing and recording of this Declaration, BP conveyed the Real Estate to Owner.

D. By this Declaration, Owner intends to impose certain restrictions on the Real Estate.

AGREEMENT

THEREFORE, Owner agrees and declares as follows:

1. BP's Access Right.

1.1 Grant of Access Right. After the date on which this Declaration is recorded (the "Effective Date"), BP and BP's representatives will have the unrestricted right to enter on the Real Estate in order to assess, monitor, and perform corrective action (which may include natural attenuation) on any Pre-Closing Contamination, to the extent that the Agency requires for gasoline station use (the "Corrective Action"). The term "Pre-Closing Contamination" means hydrocarbons, TPHg (total petroleum hydrocarbons as gasoline), MTBE and other fuel additives, petroleum, and petroleum derivative products released into the soil or groundwater during BP or ARCO gasoline station operations conducted on the Real Estate by BP or ARCO and its subsidiaries before the Effective Date. The term "Agency" means the environmental regulatory agency that has jurisdiction over the assessment and remediation of Pre-Closing Contamination. BP shall give Owner prior oral or written notice of its exercise of this right to enter (the "Access Right"). In exercising the Access Right, BP shall attempt to minimize, to the extent reasonably possible, any interference with the operation of the business on the Real Estate, except in the case of an emergency, as determined by BP. In conducting its operations on the Real Estate, Owner shall attempt to minimize, to the extent reasonably possible, any interference with the Corrective Action. BP will have sole discretion to determine the Corrective Action schedule, technique, method, and design; and BP may contest and appeal any decision of the Agency. Owner shall cooperate with BP in obtaining Agency approval for any Corrective Action. The Access Right includes, without limitation, the right to (i) perform soil and groundwater investigations, (ii) install, operate, monitor, maintain, repair, close, and remove equipment (including piping and wells) for the Corrective Action, and (iii) have service trucks on the Real Estate. As part of any equipment installation, BP may cut and remove portions of the asphalt and concrete. But BP shall patch any asphalt and concrete that it removes with comparable asphalt and concrete. BP will not be required to pay any rent or other compensation to Owner for the Access Right or the portion of the Real Estate occupied by the equipment used in performing the Corrective Action.

1.2 Termination and Resumption of Access Right. The Access Right will terminate 90 days after BP receives a letter issued by the Agency stating that, based on certain assumptions and conditions, the Agency will not require BP to perform any further Corrective Action regarding the Real Estate (the "No Further Action Letter"). But if, after the Agency

issues the No Further Action Letter, the Agency requires BP to perform further Corrective Action, the Access Right will resume until 90 days after BP receives a new No Further Action Letter for the further Corrective Action. But, in all events, the Access Right will terminate 25 years after the Effective Date.

2. Owner's Notification Obligations. For 25 years after the Effective Date, Owner shall notify BP within 14 days after (i) any on-site visit by the Agency, (ii) Owner's receipt of correspondence from the Agency regarding any Corrective Action, (iii) any release of a Hazardous Material on or about the Real Estate requiring regulatory notification, or (iv) any activity on or about the Real Estate that impacts BP's rights under this Declaration or BP's performance of any Contractual Obligation (as defined in Section 3), other than the activities covered by Owner's notification obligation in Section 7.1. The term "Hazardous Material" means any material, substance, or waste that has been determined by any governmental authority to be capable of posing a risk of injury to health, safety, or property. The term "Hazardous Material" includes, without limitation, any Pre-Closing Contamination.

3. Owner's Acceptance of the Condition of the Real Estate. Owner acknowledges that Pre-Closing Contamination is present on, under, or near the Real Estate. Owner has accepted the Real Estate, including without limitation its environmental condition, in "AS IS" condition on the Effective Date, subject to any other obligation that BP may have under the Agreement for Unsolicited Bid Sale of Real Estate to Lessee Dealer for Dealer-Owned, Franchisee-Operated Facility or any other written agreement entered into between Owner and BP before the Effective Date, to conduct any Corrective Action (a "Contractual Obligation"). In addition, when the Agency issues the No Further Action Letter, Owner will be considered to have accepted the Real Estate in "AS IS" condition as of the date of the No Further Action Letter. Owner acknowledges that the purchase price paid to BP for the Real Estate reflects (i) the effect of this Declaration on the Real Estate and (ii) any presence, whether known or unknown, of Pre-Closing Contamination, subject to any right that Owner might have to require BP to perform any Contractual Obligation.

4. Owner's Waiver of Environmental Claims. Owner, for itself and its heirs, successors, and assigns (including without limitation all future owners of the Real Estate), waives any claim that it might have against ARCO, BP, or ARCO's or BP's officers, directors, employees, parents, subsidiaries, divisions, members, or affiliates (collectively, the "BP Entities") based on or related to the presence of any Hazardous Material on, under, or about the Real Estate at the Effective Date, whether discovered before or after the Effective Date. These claims include, without limitation, (i) claims that might arise after the Effective Date and (ii) claims that Owner did not know or suspect to exist when Owner signed this Declaration. Until the Agency issues the No Further Action Letter, the waived claims will not include any claims arising from any material breach by BP of (a) its Contractual Obligation, or (b) the conditions to the Access Right.

5. Owner's Environmental Indemnification of the BP Entities. Owner shall indemnify and defend the BP Entities from all liabilities, damages, losses, claims, costs, and

expenses (including reasonable attorneys' fees) that the indemnified person incurs arising from the presence of any Hazardous Material on, under, or about the Real Estate if the release of the Hazardous Material occurred (i) after the Effective Date or (ii) as a result of Owner's operation of the business at the Real Estate, whether before or after the Effective Date. Until the Agency issues the No Further Action Letter, the indemnified claims will not include any claims arising from (a) any material breach by BP of its Contractual Obligation, or (b) any material breach of the conditions to the Access Right.

6. Baseline Data. For purposes of this Declaration, only Contamination within the Contamination concentration levels (the "Contamination Levels") and the Contamination areas (the "Contamination Areas") comprising the Baseline Data will be considered Pre-Closing Contamination. The term "Contamination" means hydrocarbons, TPHg, MTBE and other fuel additives, petroleum, and petroleum derivative products present in the soil or groundwater. The term "Baseline Data" means the Contamination Levels and Contamination Areas disclosed in the reports entitled Environmental Oversight during Retail Facility Upgrade Activities dated March 9, 2005 and Subsurface Investigation Report dated October 25, 2005, and prepared by Delta Environmental Consultants, Inc. with respect to the Real Estate, decreased to any lower Contamination Levels or smaller Contamination Areas disclosed in any Qualified Report obtained by BP after the Effective Date. The term "Qualified Report" means a subsurface investigation report concerning the soil or groundwater at or under the Real Estate that has been prepared and certified by a geologist or professional engineer who is licensed by the state in which the Real Estate is located and who is not affiliated with ARCO, BP, or Owner.

7. Construction, Excavation, and Similar Restrictions.

7.1 Notice of Owner's Improvement Plans. During any period in which the Access Right is in effect (the "Access Period"), Owner shall provide BP with information regarding Owner's plans for improving the Real Estate, at least 30 days before Owner starts any grading or construction work at the Real Estate, so that BP can determine whether or not Owner's planned improvements will interfere with the Access Right or adversely affect the Corrective Action. Additionally, during the Access Period, Owner must obtain BP's written approval (not to be unreasonably withheld) before conducting any grading, constructing any improvement, or installing any equipment that BP determines would be likely to interfere with the Access Right or adversely affect any Corrective Action.

7.2 Excavation Restriction. Except as provided in Section 7.5, for a period of 25 years after the Effective Date, Owner shall not excavate any soil in any Restricted Area at a depth greater than four feet below the grade of the Restricted Area at the Effective Date. The term "Restricted Area" means each area shown on the attached Exhibit "B" with (i) the label "Restricted Area" or (ii) with a label that includes the words "Restricted Area."

7.3 Construction Restriction. Except as provided in Section 7.5, until 90 days after BP receives the No Further Action Letter, Owner shall not construct or install any improvement on or under any Restricted Area, except for asphalt surfacing or landscaping. But the landscaping must not include trees or hardscape. Thereafter, until 25 years after the

Effective Date, Owner may construct or install improvements on or under any Restricted Area, but only if the construction or installation does not involve excavation at a depth greater than four feet below the grade of the Restricted Area at the Effective Date.

7.4 Underground Storage Tank and Petroleum Hydrocarbon Restrictions. Except as provided in Section 7.5, for a period of 25 years after the Effective Date, Owner shall not (i) install any underground storage tank for petroleum hydrocarbons on or under any Restricted Area or (ii) otherwise store or treat petroleum hydrocarbons on or under any Restricted Area.

7.5 Certain Permitted Work. The provisions of Sections 7.2 through 7.4 will not be considered to prohibit Owner from (i) performing any corrective action on soil or groundwater under any Restricted Area that is contaminated with a Hazardous Material, to the extent required by the Agency, (ii) removing or replacing any underground gasoline storage tank or any gasoline lines located under any Restricted Area, or (iii) storing petroleum hydrocarbons in the existing or replaced underground gasoline storage tanks. But Owner must perform that work in compliance with all applicable governmental requirements and perform, and pay for, the sampling, transportation, and disposal of any soil or groundwater that the Agency may require as a result of those activities described in Section 7.5(i) and (ii).

7.6 Owner's Damage to BP's Wells. If Owner or Owner's tenants, representatives, agents, or contractors damage any of BP's remediation system, associated piping, or monitoring, vapor extraction, or other wells at the Real Estate (the "BP Equipment"), Owner shall reimburse BP promptly, for the cost of repairing or replacing that BP Equipment. In addition, if Owner or Owner's tenants, representatives, agents, or contractors cover any of BP's monitoring, vapor extraction, or other wells at the Real Estate, Seller shall locate and uncover those wells and raise the Christie box surrounding the casing for those wells to the surface elevation, and Owner shall reimburse BP promptly for the cost of that work.

8. Notices. Notices relating to this Declaration must be in writing (except as set forth in Section 1.1) and sent to the addresses set forth below. But a party may change its address for notices by giving notice as required by this Section 8. A written notice will be considered given (i) when personally delivered, (ii) two business days after deposit in the United States Mail as first class mail, certified or registered, return receipt requested, with postage prepaid, (iii) one business day after deposit with a reputable overnight delivery service for next business day delivery, or (iv) on the business day of successful transmission by electronic facsimile. The parties' addresses for notices are as follows:

To Owner: City Neighbor, Inc.
665 23rd Avenue
Seattle Washington 98122
Attn: Daniel Taye

Facsimile: _____

To BP:

BP West Coast Products LLC
4 Centerpointe Drive, LPR 4-183
La Palma, California 90623-1066
Attn: Manager, Western Environmental Services Team

Facsimile: (714) 670-5195

9. Entire Agreement; Modification; Waiver. This Declaration (including any attached Exhibits) contains the entire agreement between Owner and BP with respect to any restrictions on Owner's use and operation of the Real Estate and the other matters that are the subject of this Declaration. Any modification of this Declaration must be in writing and signed by Owner and BP. Any waiver of a provision of this Declaration by Owner or BP must be in writing.

10. Governing Law. The internal laws of the State of California govern this Declaration.

11. Interpretation. The captions appearing in this Declaration are for convenience of reference only, and they do not affect the meanings of the provisions of this Declaration. In this Declaration, each gender includes the other gender. Words in the singular include the plural and vice versa, when appropriate. The word "person" includes natural individuals and all other entities. The word "cost" includes any cost or expense. The word "term" includes any covenant, condition, representation, warranty, or other provision that is part of this Declaration. Whenever a provision of this Declaration requires Owner or BP to perform an act, that person must do so at its sole cost (unless otherwise stated in connection with that provision).

12. Further Acts. Owner and BP shall each do all things that the other reasonably requests to carry out the purpose of this Declaration.

13. Attorneys' Fees. If a dispute arises with respect to this Declaration and if BP prevails in the dispute, then BP will be entitled to recover from Owner the reasonable costs and expenses that BP incurred in enforcing its rights under this Declaration, including reasonable attorneys' fees.

14. Restrictions Run with the Land. ARCO's and BP's rights under this Declaration, Owner's obligations under this Declaration, any restrictions on the use and operation of the Real Estate, and any waivers by Owner under this Declaration (collectively, the "Rights and Restrictions") are for the benefit of the BP Entities, and their successors and assigns. The Rights and Restrictions run with the Real Estate and bind Owner's successors and assigns, including future owners of the Real Estate, for the benefit of the BP Entities, and their successors and assigns. The Rights and Restrictions are intended to constitute equitable servitudes that burden the Real Estate.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Haley & Aldrich, Inc. on Apr 18, 2023.

TARGET PROPERTY

665 23rd Avenue
Seattle, WA 98122

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- **Permit Number:** The alphanumeric designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- **Description:** A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- **Permit Type:** Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EDR Environmental Lien and AUL Search 1980

The EDR Environmental Lien and AUL Search 1980 report provides results from a search of available land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel number and/or legal description
- search for ownership information filed between 1980 and the most current publicly available date
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for environmental encumbering instrument(s) filed between 1980 and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Property Archives, LLC researched and compiled the land title information contained in this EDR Environmental Lien and AUL Search 1980 report on behalf of EDR.

BP WEST COAST PRODUCTS LLC, a Delaware limited liability company ("Grantor"), for and in consideration of \$10.00 in hand paid and other good and valuable consideration, conveys and warrants to CITY NEIGHBOR, INC., a Washington corporation ("Grantee"), the following described real estate, situated in the County of King, State of Washington:

See legal description in the attached Exhibit "A".

FILED FOR RECORD AT REQUEST OF
TRANSACTION TITLE INSURANCE CO

Grantor excepts from the conveyance made by this Deed the rights, below the depth of 500 feet, to minerals and oil, gas, and other hydrocarbon substances in and under the land conveyed in fee by this Deed, but without the right of surface entry.

From the date that this Deed is recorded until the expiration of the terms set forth in the Contract Dealer Gasoline Agreement and the am/pm Mini Market Agreement that Grantor and Grantee or Grantee's tenant sign regarding the Real Estate conveyed in fee by this Deed, no person may construct or operate on this Real Estate (i) a convenience food store other than a convenience food store operated under a franchise or other agreement with BP, (ii) a fast food takeout restaurant, or (iii) a facility selling motor fuel other than a facility selling motor fuel under a supply or other agreement with BP. For purposes of this paragraph, the term "BP" means BP West Coast Products LLC, a Delaware limited liability company, its successors and assigns, its parents, subsidiaries, members, and sister companies, anyone to whom the am/pm franchisor role is sold or assigned, anyone to whom the ARCO marketing brand name is sold or assigned, and any other purchaser of a majority of the retail petroleum marketing assets now owned by BP West Coast Products LLC. In the event that the initial term of the Contract Dealer Gasoline Agreement and/or the am/pm Mini Market Agreement are extended or renewed, this restriction shall continue in effect until the expiration date provided for in the extension or renewal. This restriction shall not, however, expire early if the Contract Dealer Gasoline Agreement and/or the am/pm Mini Market Agreement are terminated prior to the expiration dates set forth in these agreements (including extensions and/or renewals).

Except as set forth below, this restriction shall remain in effect for the full term (including any extensions and/or renewals) as set forth above and shall be enforceable during this full term against anyone who acquires the Real Estate or any interest in the Real Estate by assignment, inheritance, purchase, investment, partnership, inter-company transfer, IPO, judgment, divorce, insurance settlement, or otherwise.

This restriction shall not, however, be enforceable against any lender who acquires the Real Estate by foreclosing on a deed of trust that encumbers the Real Estate, nor shall it be enforceable against any bona fide purchaser who acquires the Real Estate from such a lender (provided, however, that anyone who is or has been a franchisee of BP on this Real Estate may not qualify for this exception). This restriction shall also not be enforceable against any entity who acquires the Real Estate by eminent domain (or agreed taking in lieu of eminent domain), nor shall it be enforceable against any purchaser who acquires the Real Estate from such a taking entity.

This restriction will terminate automatically if BP withdraws from both the retail and wholesale operation, marketing, supplying or franchising of motor fuel and BP also withdraws from both the retail and wholesale operation, marketing, supplying or franchising of convenience food stores in the statistical geographic market area in which the Real Estate is located.

Any other early termination of this restriction shall be subject to the sole discretion of BP."

(See Grantor's signature on the next page.)

**DECLARATION OF ENVIRONMENTAL RESTRICTION AND
OTHER ENVIRONMENTAL COVENANTS AND CONDITIONS**

This Declaration of Environmental Restriction and Other Environmental Covenants and Conditions (this "Declaration") dated April 12, 2006, is made by CITY NEIGHBOR, INC., a Washington corporation ("Owner"), for the benefit of ATLANTIC RICHFIELD COMPANY, a Delaware corporation ("ARCO"), and BP WEST COAST PRODUCTS LLC, a Delaware limited liability company ("BP").

RECITALS

A. ARCO or ARCO's dealer operated an ARCO-branded gasoline station on the real property in the County of King, State of Washington, described in the attached Exhibit "A" (the "Real Estate").

FILED FOR RECORD AT REQUEST OF
TRANSNATION TITLE INSURANCE CO

As of January 1, 2002, ARCO conveyed substantially all of its refining and marketing assets, including the Real Estate, to BP.

C. In connection with the signing and recording of this Declaration, BP conveyed the Real Estate to Owner.

D. By this Declaration, Owner intends to impose certain restrictions on the Real Estate.

AGREEMENT

THEREFORE, Owner agrees and declares as follows:

1. **BP's Access Right.**

1.1 **Grant of Access Right.** After the date on which this Declaration is recorded (the "Effective Date"), BP and BP's representatives will have the unrestricted right to enter on the Real Estate in order to assess, monitor, and perform corrective action (which may include natural attenuation) on any Pre-Closing Contamination, to the extent that the Agency requires for gasoline station use (the "Corrective Action"). The term "Pre-Closing Contamination" means hydrocarbons, TPHg (total petroleum hydrocarbons as gasoline), MTBE and other fuel additives, petroleum, and petroleum derivative products released into the soil or groundwater during BP or ARCO gasoline station operations conducted on the Real Estate by BP or ARCO and its subsidiaries before the Effective Date. The term "Agency" means the environmental regulatory agency that has jurisdiction over the assessment and remediation of Pre-Closing Contamination. BP shall give Owner prior oral or written notice of its exercise of this right to enter (the "Access Right"). In exercising the Access Right, BP shall attempt to minimize, to the extent reasonably possible, any interference with the operation of the business on the Real Estate, except in the case of an emergency, as determined by BP. In conducting its operations on the Real Estate, Owner shall attempt to minimize, to the extent reasonably possible, any interference with the Corrective Action. BP will have sole discretion to determine the Corrective Action schedule, technique, method, and design; and BP may contest and appeal any decision of the Agency. Owner shall cooperate with BP in obtaining Agency approval for any Corrective Action. The Access Right includes, without limitation, the right to (i) perform soil and groundwater investigations, (ii) install, operate, monitor, maintain, repair, close, and remove equipment (including piping and wells) for the Corrective Action, and (iii) have service trucks on the Real Estate. As part of any equipment installation, BP may cut and remove portions of the asphalt and concrete. But BP shall patch any asphalt and concrete that it removes with comparable asphalt and concrete. BP will not be required to pay any rent or other compensation to Owner for the Access Right or the portion of the Real Estate occupied by the equipment used in performing the Corrective Action.

1.2 **Termination and Resumption of Access Right.** The Access Right will terminate 90 days after BP receives a letter issued by the Agency stating that, based on certain assumptions and conditions, the Agency will not require BP to perform any further Corrective Action regarding the Real Estate (the "No Further Action Letter"). But if, after the Agency

issues the No Further Action Letter, the Agency requires BP to perform further Corrective Action, the Access Right will resume until 90 days after BP receives a new No Further Action Letter for the further Corrective Action. But, in all events, the Access Right will terminate 25 years after the Effective Date.

2. Owner's Notification Obligations. For 25 years after the Effective Date, Owner shall notify BP within 14 days after (i) any on-site visit by the Agency, (ii) Owner's receipt of correspondence from the Agency regarding any Corrective Action, (iii) any release of a Hazardous Material on or about the Real Estate requiring regulatory notification, or (iv) any activity on or about the Real Estate that impacts BP's rights under this Declaration or BP's performance of any Contractual Obligation (as defined in Section 3), other than the activities covered by Owner's notification obligation in Section 7.1. The term "Hazardous Material" means any material, substance, or waste that has been determined by any governmental authority to be capable of posing a risk of injury to health, safety, or property. The term "Hazardous Material" includes, without limitation, any Pre-Closing Contamination.

3. Owner's Acceptance of the Condition of the Real Estate. Owner acknowledges that Pre-Closing Contamination is present on, under, or near the Real Estate. Owner has accepted the Real Estate, including without limitation its environmental condition, in "AS IS" condition on the Effective Date, subject to any other obligation that BP may have under the Agreement for Unsolicited Bid Sale of Real Estate to Lessee Dealer for Dealer-Owned, Franchisee-Operated Facility or any other written agreement entered into between Owner and BP before the Effective Date, to conduct any Corrective Action (a "Contractual Obligation"). In addition, when the Agency issues the No Further Action Letter, Owner will be considered to have accepted the Real Estate in "AS IS" condition as of the date of the No Further Action Letter. Owner acknowledges that the purchase price paid to BP for the Real Estate reflects (i) the effect of this Declaration on the Real Estate and (ii) any presence, whether known or unknown, of Pre-Closing Contamination, subject to any right that Owner might have to require BP to perform any Contractual Obligation.

4. Owner's Waiver of Environmental Claims. Owner, for itself and its heirs, successors, and assigns (including without limitation all future owners of the Real Estate), waives any claim that it might have against ARCO, BP, or ARCO's or BP's officers, directors, employees, parents, subsidiaries, divisions, members, or affiliates (collectively, the "BP Entities") based on or related to the presence of any Hazardous Material on, under, or about the Real Estate at the Effective Date, whether discovered before or after the Effective Date. These claims include, without limitation, (i) claims that might arise after the Effective Date and (ii) claims that Owner did not know or suspect to exist when Owner signed this Declaration. Until the Agency issues the No Further Action Letter, the waived claims will not include any claims arising from any material breach by BP of (a) its Contractual Obligation, or (b) the conditions to the Access Right.

5. Owner's Environmental Indemnification of the BP Entities. Owner shall indemnify and defend the BP Entities from all liabilities, damages, losses, claims, costs, and

expenses (including reasonable attorneys' fees) that the indemnified person incurs arising from the presence of any Hazardous Material on, under, or about the Real Estate if the release of the Hazardous Material occurred (i) after the Effective Date or (ii) as a result of Owner's operation of the business at the Real Estate, whether before or after the Effective Date. Until the Agency issues the No Further Action Letter, the indemnified claims will not include any claims arising from (a) any material breach by BP of its Contractual Obligation, or (b) any material breach of the conditions to the Access Right.

6. Baseline Data. For purposes of this Declaration, only Contamination within the Contamination concentration levels (the "Contamination Levels") and the Contamination areas (the "Contamination Areas") comprising the Baseline Data will be considered Pre-Closing Contamination. The term "Contamination" means hydrocarbons, TPHg, MTBE and other fuel additives, petroleum, and petroleum derivative products present in the soil or groundwater. The term "Baseline Data" means the Contamination Levels and Contamination Areas disclosed in the reports entitled Environmental Oversight during Retail Facility Upgrade Activities dated March 9, 2005 and Subsurface Investigation Report dated October 25, 2005, and prepared by Delta Environmental Consultants, Inc. with respect to the Real Estate, decreased to any lower Contamination Levels or smaller Contamination Areas disclosed in any Qualified Report obtained by BP after the Effective Date. The term "Qualified Report" means a subsurface investigation report concerning the soil or groundwater at or under the Real Estate that has been prepared and certified by a geologist or professional engineer who is licensed by the state in which the Real Estate is located and who is not affiliated with ARCO, BP, or Owner.

7. Construction, Excavation, and Similar Restrictions.

7.1 Notice of Owner's Improvement Plans. During any period in which the Access Right is in effect (the "Access Period"), Owner shall provide BP with information regarding Owner's plans for improving the Real Estate, at least 30 days before Owner starts any grading or construction work at the Real Estate, so that BP can determine whether or not Owner's planned improvements will interfere with the Access Right or adversely affect the Corrective Action. Additionally, during the Access Period, Owner must obtain BP's written approval (not to be unreasonably withheld) before conducting any grading, constructing any improvement, or installing any equipment that BP determines would be likely to interfere with the Access Right or adversely affect any Corrective Action.

7.2 Excavation Restriction. Except as provided in Section 7.5, for a period of 25 years after the Effective Date, Owner shall not excavate any soil in any Restricted Area at a depth greater than four feet below the grade of the Restricted Area at the Effective Date. The term "Restricted Area" means each area shown on the attached Exhibit "B" with (i) the label "Restricted Area" or (ii) with a label that includes the words "Restricted Area."

7.3 Construction Restriction. Except as provided in Section 7.5, until 90 days after BP receives the No Further Action Letter, Owner shall not construct or install any improvement on or under any Restricted Area, except for asphalt surfacing or landscaping. But the landscaping must not include trees or hardscape. Thereafter, until 25 years after the

Effective Date, Owner may construct or install improvements on or under any Restricted Area, but only if the construction or installation does not involve excavation at a depth greater than four feet below the grade of the Restricted Area at the Effective Date.

7.4 Underground Storage Tank and Petroleum Hydrocarbon Restrictions. Except as provided in Section 7.5, for a period of 25 years after the Effective Date, Owner shall not (i) install any underground storage tank for petroleum hydrocarbons on or under any Restricted Area or (ii) otherwise store or treat petroleum hydrocarbons on or under any Restricted Area.

7.5 Certain Permitted Work. The provisions of Sections 7.2 through 7.4 will not be considered to prohibit Owner from (i) performing any corrective action on soil or groundwater under any Restricted Area that is contaminated with a Hazardous Material, to the extent required by the Agency, (ii) removing or replacing any underground gasoline storage tank or any gasoline lines located under any Restricted Area, or (iii) storing petroleum hydrocarbons in the existing or replaced underground gasoline storage tanks. But Owner must perform that work in compliance with all applicable governmental requirements and perform, and pay for, the sampling, transportation, and disposal of any soil or groundwater that the Agency may require as a result of those activities described in Section 7.5(i) and (ii).

7.6 Owner's Damage to BP's Wells. If Owner or Owner's tenants, representatives, agents, or contractors damage any of BP's remediation system, associated piping, or monitoring, vapor extraction, or other wells at the Real Estate (the "BP Equipment"), Owner shall reimburse BP promptly, for the cost of repairing or replacing that BP Equipment. In addition, if Owner or Owner's tenants, representatives, agents, or contractors cover any of BP's monitoring, vapor extraction, or other wells at the Real Estate, Seller shall locate and uncover those wells and raise the Christie box surrounding the casing for those wells to the surface elevation, and Owner shall reimburse BP promptly for the cost of that work.

8. Notices. Notices relating to this Declaration must be in writing (except as set forth in Section 1.1) and sent to the addresses set forth below. But a party may change its address for notices by giving notice as required by this Section 8. A written notice will be considered given (i) when personally delivered, (ii) two business days after deposit in the United States Mail as first class mail, certified or registered, return receipt requested, with postage prepaid, (iii) one business day after deposit with a reputable overnight delivery service for next business day delivery, or (iv) on the business day of successful transmission by electronic facsimile. The parties' addresses for notices are as follows:

9. Entire Agreement; Modification; Waiver. This Declaration (including any attached Exhibits) contains the entire agreement between Owner and BP with respect to any restrictions on Owner's use and operation of the Real Estate and the other matters that are the subject of this Declaration. Any modification of this Declaration must be in writing and signed by Owner and BP. Any waiver of a provision of this Declaration by Owner or BP must be in writing.

10. Governing Law. The internal laws of the State of California govern this Declaration.

11. Interpretation. The captions appearing in this Declaration are for convenience of reference only, and they do not affect the meanings of the provisions of this Declaration. In this Declaration, each gender includes the other gender. Words in the singular include the plural and vice versa, when appropriate. The word "person" includes natural individuals and all other entities. The word "cost" includes any cost or expense. The word "term" includes any covenant, condition, representation, warranty, or other provision that is part of this Declaration. Whenever a provision of this Declaration requires Owner or BP to perform an act, that person must do so at its sole cost (unless otherwise stated in connection with that provision).

12. Further Acts. Owner and BP shall each do all things that the other reasonably requests to carry out the purpose of this Declaration.

13. Attorneys' Fees. If a dispute arises with respect to this Declaration and if BP prevails in the dispute, then BP will be entitled to recover from Owner the reasonable costs and expenses that BP incurred in enforcing its rights under this Declaration, including reasonable attorneys' fees.

14. Restrictions Run with the Land. ARCO's and BP's rights under this Declaration, Owner's obligations under this Declaration, any restrictions on the use and operation of the Real Estate, and any waivers by Owner under this Declaration (collectively, the "Rights and Restrictions") are for the benefit of the BP Entities, and their successors and assigns. The Rights and Restrictions run with the Real Estate and bind Owner's successors and assigns, including future owners of the Real Estate, for the benefit of the BP Entities, and their successors and assigns. The Rights and Restrictions are intended to constitute equitable servitudes that burden the Real Estate.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

EXECUTIVE SUMMARY

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 08/24/2022 has revealed that there are 18 WA HSL sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state

EXECUTIVE SUMMARY

funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/09/2023 has revealed that there are 67 WA CSCSL sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 5 WA LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 01/31/2023 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 01/09/2023 has revealed that there are 6 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 8 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D018
Waste Description: BENZENE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F002

Waste Description:

THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F003

Waste Description:

THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

P012

Waste Description:

ARSENIC OXIDE AS₂O₃ (OR) ARSENIC TRIOXIDE

Waste Code:

U002

Waste Description:

2-PROPANONE (I) (OR) ACETONE (I)

Waste Code:

U010

Waste Description:

AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYLOXY)METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-MET HOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

Waste Code:

U058

Waste Description:

2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code:

U059

Waste Description:

5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]- 7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code:

U115

Waste Description:

ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

Waste Code:

U150

Waste Description:

L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN
