Re: Unocal Edmonds Terminal
Lower Yard Interim Action As-built Report

Dear Mr. South:

On behalf of Unocal Corporation, we are transmitting one (1) unbound copy of the final *Lower Yard Interim Action As-built Report, Unocal Edmonds Terminal*, November 30, 2002. As requested, we have also enclosed a computer disk that contains copies of the associated electronic files.

Sincerely,

A handwritten signature in blue ink that reads 'Linda Dawson'. The signature is fluid and cursive.

Linda Dawson
Principal Scientist

1 INTRODUCTION

1.1 Purpose

This report summarizes and documents an interim remedial action performed at the Unocal Edmonds Terminal, Edmonds, Washington, in the summer and fall of 2002. The interim action was performed consistent with the Model Toxics Control Act (MTCA) regulations of WAC 173-340-430, Interim Actions.

1.2 Background

Union Oil Company of California, dba Unocal, entered into Agreed Order No. DE 92TC-N328 with the Washington Department of Ecology (Ecology) to conduct environmental investigations at the UNOCAL Edmonds Terminal (Terminal) located at 11720 Unoco Road in Edmonds, Washington (Figure 1-1). The scope of the Agreed Order, issued pursuant to MTCA, included a remedial investigation (RI) and feasibility study (FS), and the evaluation of an existing free product recovery system.

The RI was performed between October 1994 and August 1996 and reported to Ecology (EMCON, 1996a and 1998; MFA, 2001a). The free product recovery system evaluation was performed and reported in 1994 (EMCON, 1994a). A preliminary FS was performed in 1996 and reported to Ecology (EMCON, 1996b). An updated and expanded FS will be performed and reported to Ecology in 2003.

During the FS, Unocal performed an interim action in the lower yard of the Terminal to reduce potential threats to human health and the environment and to provide additional information for the FS and subsequent design of a cleanup action. Specifically, free petroleum product and associated petroleum-contaminated soil were removed from select areas of the lower yard and shipped off site for recycling and/or treatment.

As required by WAC 173-340-430, Interim Actions, an Interim Action Report was prepared before performing the interim action (MFA, 2001b). The report was issued for public comment and was reviewed by Ecology. A SEPA checklist was prepared in conjunction with the report; copies of the SEPA checklist and the Determination of Nonsignificance are provided in the Interim Action Report. Ecology approval was

required prior to initiating the interim action. Approval was granted by letter dated July 31, 2001.

1.3 Public Participation

The following public participation activities were performed: The Draft Interim Action Report was placed at four public repositories (Ecology's Northwest Regional Office, Edmonds Public Library, Mountlake Terrace Public Library, Lynnwood Public Library); a 30-day public comment period was held by Ecology for review of the draft report (June 11 through July 11, 2001); a public meeting was held in Edmonds on June 20, 2001; and notification letters were mailed to all property owners within a 1/2-mile radius of the Terminal on July 10, 2001.

1.4 Report Organization

The report is organized as follows:

- Section 2 provides a summary of the Terminal features;
- Section 3 describes the interim action performed in the lower yard of the Terminal;
- A summary of the volumes of soil, product and groundwater removed during the interim action is provided in Section 4;
- Section 5 reports the soil sampling results;
- A summary of the lower yard interim action is provided in Section 6; and
- The professional engineer's statement is provided in Section 7.

2 SITE DESCRIPTION

The Terminal comprises approximately 47 acres of land on and adjacent to the northern slope of a hillside and lies within approximately 1,000 feet of the Puget Sound shoreline. At its nearest point (southwest corner of lower yard) the Terminal boundary is approximately 160 feet from the Puget Sound shoreline. The Terminal has two distinct areas, the upper yard (tank farm) area and the lower yard area (Figure 2-1).

The lower yard is approximately 22 acres, lying east of the Burlington Northern Santa Fe Railroad (BNSFRR) right-of-way, south of Union Oil Marsh, west of the Deer Creek Salmon Hatchery, and north of the upper yard. The lower yard elevation ranges from approximately 10 to 25 feet above the mean lower low water datum (MLLW). The lower yard consists of office buildings, two former truck loading racks, aboveground piping, two underground (former vapor recovery) tanks, two underground vaults, Detention Basin No. 1, Detention Basin No. 2, and an oil/water separator. Previous operations also included an air-blown asphalt plant, an asphalt packaging warehouse, and a railcar loading/unloading facility.

The upper yard is approximately 25 acres located immediately south of the lower yard. Upper yard elevations range from approximately 25 to 150 feet MLLW. The upper yard consists of tank basins, a storage shed, garage, and a warehouse.

UNOCAL operated the Terminal from 1923 to 1991. Fuel was brought to the Terminal on ships, pumped to the storage tanks in the upper yard, and loaded from the tanks into rail cars and trucks for delivery to customers. An asphalt plant operated on the site from 1953 to the late 1970s. Detailed descriptions of the Terminal facilities and historic activities are presented in the Background History Report (EMCON, 1994b). The facility is currently used only for office purposes. All tanks and lines were cleaned and removed from the site.

3 LOWER YARD INTERIM ACTION

3.1 Scope of Work

The scope of the lower yard interim action was based on the Interim Action Report (MFA, 2001b) and the Technical Specifications (MFA, 2001c). The report was approved by Ecology by letter dated July 31, 2001 (Ecology, 2001a). The technical specifications were reviewed and comments provided on July 16, 2001 (Ecology, 2001b). The work was performed primarily between August 28 and November 7, 2001.

The interim action consisted of the removal of petroleum-product-saturated soil from four areas of the lower yard: Excavation Areas A, B, C and D (Figure 3-1). Additionally, the excavations remained open for several weeks to allow floating product to be removed from the groundwater surface. Additional details of the interim action are provided below.

3.2 Contractors

The excavation, transportation, backfill, grading, and drainage system work was performed by Emerald Services, Inc., Seattle, Washington. Pre- and post-excavation surveys were performed by Triad Associates, Kirkland, Washington. Laboratory analyses were performed by North Creek Analytical Services, Bothell, Washington. Construction monitoring was performed by Maul Foster & Alongi, Inc. (MFA), Seattle, Washington. Soil treatment was performed by Lafarge Corporation, Seattle, Washington. Product recycling/groundwater treatment was performed by Emerald Services, Inc., Seattle, Washington.

3.3 Mobilization

Prior to excavation in the lower yard, Cascade Drilling, Inc., abandoned the following monitoring wells located in the planned excavation areas: MW-2, MW-5, MW-6, MW-15, MW-19, MW-20, MW-21, MW-102, MW-103, MW-110, MW-112, MW-113, MW-114, MW-115, MW-117, MW-118, MW-128, MW-132, and LM-1, and the recovery well RW-1 (Figure 3-1). The monitoring wells and recovery well were

abandoned on August 7, 2001, pursuant to procedures described in *Minimum Standards for Construction and Maintenance of Wells* (WAC 173-160-310). During soil excavation, monitoring well MW-123 was removed by Emerald Services by over-excavation.

A traffic control plan was prepared by Emerald Services. Air monitoring procedures were established by MFA, for purposes of controlling dust and monitoring and controlling petroleum odors as necessary during the excavation work. Exclusion zones and associated site controls were established in accordance with the site Health and Safety Plan. A sedimentation and erosion control plan was prepared and implemented by Emerald Services.

3.4 Soil Excavation and Product Recovery

Excavation monitoring for consistency with the interim action was performed by Steve Taylor, Maul Foster & Alongi, Inc., a Washington-registered professional engineer, and/or a qualified technician under the direct supervision of Mr. Taylor.

3.4.1 Excavation Extent

Soil was excavated using conventional excavation equipment. The excavations extended vertically to the following depths below ground surface (bgs): Excavation A, approximately 9 feet bgs; Excavation B, approximately 10.5 feet bgs; Excavation C, approximately 6.5 feet bgs; and Excavation D, approximately 6.5 feet bgs. Excavations extended laterally until product-saturated soil was not observed in the sidewalls or until structural concerns for site equipment made it prudent to cease excavation. Soil excavation was discontinued at the southern edge of Excavation D to prevent damage to the site oil/water separator and associated storm water collection equipment.

Based on data collected during the RI, soil excavated from the top of the zone of groundwater fluctuation to the base of each excavation (approximately 4 to 10 feet bgs) was assumed to be contaminated at total petroleum hydrocarbon (TPH) concentrations above 5,000 mg/kg and was shipped off site for thermal treatment (see Section 4.2). The soil excavated at depths above 4 feet bgs was stockpiled on site, sampled, and analyzed for TPH constituents. Soil stockpiles were placed on impermeable liners, and covered and secured. Berms were constructed around the stockpiles to prevent run-on and run-off. Following laboratory analysis to confirm TPH concentrations were less than 5,000 mg/kg, stockpiled soil was returned to the excavation from which it was removed (e.g., soil removed from Excavation C was returned to Excavation C).

3.4.2 Product Recovery

Each excavation remained open for a period of about a month to allow remaining petroleum product to enter the excavation. The product that collected on the groundwater in each excavation was recovered by vacuuming. Product (and groundwater vacuumed with the product) was transferred into a temporary, aboveground storage tank. Product/water was periodically transferred to a tanker truck and subsequently shipped off site. No product or groundwater was discharged to Unocal's on site treatment systems.

3.4.3 Sequence of Work

Excavation work began on August 28, 2001. Excavation Area C was opened and product skimming began. Clean overburden from the area was stockpiled. Excavation then started in Area D. In September, Excavation Areas D, B and A were opened. Clean overburden from these areas was stockpiled and sampled, and petroleum-contaminated soil was shipped off site. Soil samples were collected at the limits of all four excavations and the sampling locations were surveyed. Backfill and compaction of Excavation C was completed on September 28. In October, additional soil was removed along the southern edge of Excavation A and additional soil samples were collected. The final extents of excavation were surveyed. Backfilling, grading and compaction continued through the end of October. Excavations D, B and A were backfilled and compacted by October 5, November 7, and November 7, respectively. The storm water drainage lines in the excavation areas were replaced the last week of October and first week of November. The field portion of the lower yard interim action was completed in November; final grading and compaction was finished the first week of November, 2001.

3.5 Sampling and Analysis

Soil samples were collected and analyzed using the procedures identified in the site Sampling and Analysis Plan (SAP; MFA, 2001d). After excavation, sidewall samples were collected to evaluate TPH concentrations in the unsaturated soil at the extent of the excavation. Samples were collected on 50-foot centers and in accordance with the procedures described in the SAP. The samples were submitted to North Creek Analytical, Inc., for analysis of benzene, toluene, ethylbenzene and xylenes (BTEX); TPH in the gasoline range (GRO), diesel range (DRO), and heavy oil range (HO); and polycyclic aromatic hydrocarbons (PAHs). Stockpile samples were collected and submitted for analysis of GRO, DRO, HO, PAHs and BTEX.

Stockpiled soil that contained combined GRO, DRO, and HO concentrations below 5,000 mg/kg was used as backfill material (at depths above the high seasonal groundwater table). As previously noted, stockpiled soil that contained combined GRO,

DRO and HO concentrations greater than 5,000 mg/kg was shipped off site for thermal treatment.

3.6 Area Restoration

When product was no longer observed on the groundwater in the excavations or when weather or schedule considerations made it prudent to do so, excavations were backfilled. Each excavation was backfilled with clean, imported 2"-4" quarry spalls and 3/8-inch washed rock up to the seasonal high groundwater elevation (approximately 4 feet bgs). A geotextile fabric was installed over the quarry spalls to provide separation between the quarry spalls and the remaining backfill material. Above the 3/8-inch washed rock, each excavation was backfilled with clean imported gravel, stockpiled soil from that excavation, and then clean imported gravel to the surface. Up to 2 feet bgs, backfill was compacted to 90% of maximum density. The top 2 feet of backfill in each excavation was compacted to 95% of maximum density. Measurement was per ASTM Method D698 (standard proctor).

Approximately 11,200 tons of clean imported material were used to backfill the excavations. This material consisted of approximately 2,030 tons of quarry spalls and 9,170 tons of gravel. Approximately 2,900 cubic yards (or 4,600 tons) of stockpiled soil were returned to the excavations.

Emerald Services purchased the majority to the fill material from the Glacier Northwest facility located at 4002 W. Marginal Way SW, Seattle; Glacier Northwest's gravel pit is located in Steilacoom (Emerald, 2002a). Additional material (quarry spalls) was purchased from CSR Associated's Everett facility; the rock was mined from their Monroe pit (Emerald, 2002a). Bills of Lading associated with the imported backfill material, and the source information, are provided in Appendix A.

On behalf of Emerald Services, HWA GeoSciences, Inc., performed periodic testing to assess the compaction of fill materials placed in the excavation areas. Periodic field compaction tests were performed; fulltime monitoring of fill placement was not performed. Results of the compaction tests and copies of the field reports are provided in Appendix B.

Per the Technical Specifications, those portions of the storm drain system removed during the excavation work were replaced (drain lines and catch basins).

In January 2002, Cascade Drilling, Inc., drilled and installed ten new groundwater monitoring wells to replace abandoned wells MW-20 and MW-102, to add a well in the Excavation Area A, B and D backfill (MW-140, MW-141, and MW-142), and to add additional wells at locations requested by Ecology and/or the Edmonds Citizens

Awareness Committee (MW-143, MW-144, MW-145, MW-103R and MW-112R). The ten new wells will be used to monitor groundwater conditions in the former plume areas and between the excavation areas and the tidal basin and drainage ditch (Figure 3-2). The new wells were installed following procedures specified in the SAP. Well logs are provided in Appendix C.

3.7 Unexpected Conditions or Events

The lateral extents of each excavation were similar to the planned extents of excavation, except for the southern extent of Excavation A. Due to the presence of product-saturated soil near the base of the southern wall of Excavation A, the excavation was extended an additional 20 to 50 feet to remove the saturated soil. The final extent of Excavation A is shown on Figure 3-2.

It was anticipated that less than 2,000 gallons of product and residual groundwater would be skimmed from the excavations (MFA, 2001b). A significantly greater volume of water was removed from the excavations during product removal, as the contractor opted to remove the floating product by vacuuming rather than skimming methods. An estimated 2,524 gallons of product were vacuumed from the groundwater surface within the excavations (see Section 4.3).

Between September 18 and 21, soil was excavated from Excavation Area A exposing the 72-inch Washington State Department of Transportation (WSDOT) storm drain line and large manhole structure located within Excavation Area A. On September 19, the manhole structure tilted slightly to the west during excavation of soil around the bottom of the structure. A visual examination of the riser base revealed that the seal connecting the manhole structure with the pipe was damaged. The damaged area consisted of stained, broken concrete with several exposed rusted rebar suggesting that the damage occurred prior to excavation and that the structure moved when the surrounding soil was removed. On September 20, the damaged manhole was replaced following standard construction practice (i.e., the new manhole was grouted, inside and out, to the existing pipe) and soil was placed around the manhole structure for support.

Unocal elected to have 18 test pits excavated along the southwest property boundary on September 24 through 26 (TP-4 through TP-20). The pits remained open through the end of the month. Soil samples were collected and product observations were noted. Additionally, groundwater samples were collected from the test pits. Soil and groundwater sample results will be reported in the forthcoming Supplemental Remedial Investigation Report.

Groundwater monitoring wells MW-10 and MW-11 were damaged during the interim action (Figure 3-1). These wells were abandoned (by grouting) on January 24, 2002.

4 REMOVAL SUMMARY

4.1 Volumes/Areal Extent of Soil Removed

The areal extent of each excavation area was surveyed by Triad Associates. The survey drawing is provided in Appendix D. Surveyed extents are also displayed on Figure 3-2.

Yardage quantities were estimated by Triad Associates as noted below (Triad, 2001a and 2001b). Documentation for this estimate is provided in Appendix D. Yardage associated with the excavation areas is shown in banked (in place) cubic yards.

Excavations:

Area A:	4,502 banked cubic yards (bcy)
Area B:	3,457 bcy
Area C:	298 bcy
Area D:	942 bcy
Total:	9,199 bcy

Stockpiles:

Pile A:	848 cubic yards (cy)
Pile B:	1,460 cy
Pile C:	150 cy
Pile D:	440 cy
Total:	2,898 cy

As previously noted, soil stockpiled on site was subsequently placed back in the excavations (following sampling to confirm TPH concentrations less than 5,000 mg/kg). The balance of the soil was shipped off site (see Section 4.2).

4.2 Amount of Soil Transported Off Site

A total of 10,763.44 tons of soil were received by LaFarge Corporation for thermal treatment at 5400 W. Marginal Way SW, Seattle. A list of all shipments to LaFarge Corporation is provided in Appendix E. This list was provided by Emerald Services. Bills of Lading for these soil shipments are also provided in Appendix E.

4.3 Amount of Asphalt and Related Debris Transported Off Site

A total of 3,324.41 tons of asphalt were removed from the lower yard prior to soil excavation. The asphalt debris was transported to CSR Associated at 6300 Glenwood Avenue in Everett, Washington for recycling. Bills of Lading for these shipments are provided in Appendix E.

4.4 Volumes of Product and Groundwater Transported Off Site

A total of 76,237 gallons of product, groundwater and associated solids were shipped in 21 shipments to the Emerald Services recycling facility located at 1500 Airport Way South, Seattle.

Based on four spot checks performed by Emerald Services, the estimate of petroleum product recovered from the water was 2,524 gallons (Emerald Services, 2002b; Appendix F). This was estimated by applying the average percent oil from the four spot-checked loads (3.575 percent) to the approximate total gallons of liquid shipped from the site.

Bills of Lading associated with the product/groundwater shipments are provided in Appendix F.

5 SAMPLING RESULTS

Sampling was performed following procedures described in the Interim Action Report and in accordance with the site Sampling and Analysis Plan. Excavation samples were validated per the Sampling and Analysis Plan. The data validation report and the laboratory reports are provided in Appendix G.

5.1 Stockpile Sampling

As specified in the Sampling and Analysis Plan, the number of soil samples collected from each stockpile was determined based on the volume of the pile. Samples were analyzed for GRO, DRO, and HO, BTEX, and PAHs. Results are provided in Tables 5-1 and 5-2. As noted above, where combined concentrations of GRO, DRO and HO were less than 5,000 mg/kg, the soil was determined acceptable for use as backfill. All combined sample results were less than 5,000 mg/kg; as such, all stockpiled soil was determined acceptable to return to the excavations.

5.2 Excavation Sampling

After excavation, sidewall samples were collected on 50-foot centers at the final limits of each excavation. The sidewall soil samples were analyzed for GRO, DRO and HO, BTEX, and PAHs. Results are provided in Tables 5-1, 5-2, and 5-3.

Sampling locations were surveyed by Triad Associates. A copy of the survey drawing (with coordinates) is provided in Appendix H.

6 SUMMARY

As an interim remedial action, free petroleum product and associated petroleum-contaminated soil were removed from four areas of the lower yard and shipped off site for thermal treatment. The excavations extended vertically to between 6.5 and 10.5 feet bgs and extended laterally until product-saturated soil was not observed in the sidewalls (or until structural concerns made it prudent to cease excavation). Additionally, the excavations remained open for several weeks to allow floating product to be removed from the groundwater surface. This work was performed primarily between August 28 and November 7, 2001.

Overburden was stockpiled and sampled to confirm that this soil contained combined GRO, DRO, and HO concentrations below 5,000 mg/kg. The stockpiled soil (approximately 2,900 cubic yards) was later returned to the excavations as backfill material at depths above the high seasonal groundwater table.

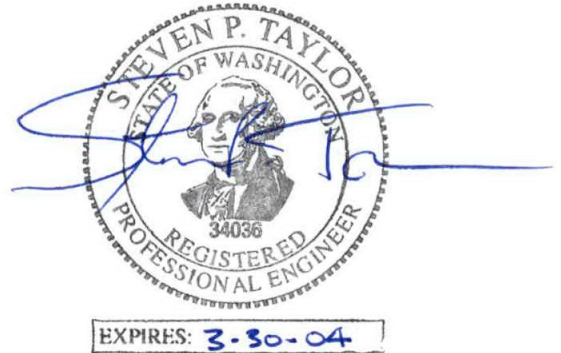

A total of 10,763.44 tons of petroleum-contaminated soil were removed and shipped off site for thermal treatment. A total of 76,237 gallons of product, groundwater and associated solids were shipped off site for recycling.

Approximately 11,200 tons of clean imported material were used to backfill the excavations, at depths below the high seasonal groundwater table (quarry spalls), above this level, and at the surface. This material consisted of approximately 2,030 tons of quarry spalls and 9,170 tons of gravel.

Twenty-one groundwater monitoring wells were removed from service in and adjacent the excavation areas and ten new monitoring wells were installed in these areas.

7 PROFESSIONAL ENGINEER'S STATEMENT

Based on the results of testing and inspections, it is my opinion that this interim action was performed in substantial compliance with the plans, specifications and related documents.

Steven P. Taylor, P.E.

LIMITATIONS

The services described in this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, express or implied, is made. These services were performed consistent with our agreement with our client. This report is solely for the use and information of our client unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

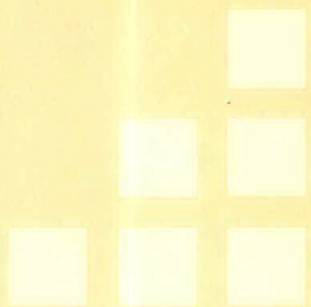

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report.

APPENDIX A
IMPORT MATERIAL DOCUMENTATION

Ms. Linda Dawson
Maul Foster & Alongi
17171 Bothell Way N.E.
Seattle, WA 98155

January 14, 2002

**Subject: Pickup Locations and Aggregate Sources for all Fill Material
Delivered to Unocal's Former Edmonds Terminal**

Dear Ms. Dawson:

Emerald Services, Inc (ESI) purchased the majority of its fill material (aggregate Type #17) from Glacier Northwest facility located at 4002 W. Marginal Way SW, Seattle, Washington.

Glacier's pit location is located in Steilacoom, Washington, and is transported by way of barge to West Marginal Way Facility.

Addition material was purchased from CSR Associated (8" -4" Quarry Spalls) at CSR's Everett facility. The rock was mined and hauled to Everett from their Monroe, Washington pit. The reason CSR was selected as an alternate source was that the Glacier Northwest facility ran out of that same material on three occasions.

Should you have questions regarding the above information, please feel free to contact me at (206) 832-3036 and I will do my best to complete this work as soon as possible.

Sincerely,
Emerald Services, Inc.

Joe Comstock

DATE: August 27, 2001

RE: Submittal Number: 1 - Backfill Specifications

Submittal number 1
 has been reviewed for general conformance with the contract documents. This review does not relieve the Contractor of responsibility for adherence to contract documents.

- No exceptions taken
- Revise as noted
- Revise and resubmit
- Rejected
-

By SA Date: 8/27/01
 Maul Foster and Alongi, Inc.

COMMENTS: The 2"-4" quarry spalls and the 3/8" washed proposed, in your letter dated August 17, 2001, for backfill during the Edmonds Terminal Lower Yard Interim Action are consistent with the specifications and are approved. Per your fax dated August 24, 2001 the "3/8-inch washed rock" will meet the specifications of Glacier Northwest Product #8127, Mineral Aggregate, Type 17. Installation of the proposed geotextile mat to separate the quarry spalls from the washed rock is also approved.

Consistent with the specifications, your backfill plan should be amended as follows: The 3/8" washed rock will be brought up to the seasonally high groundwater fluctuation level (approx. 4 feet bgs.). Above the 3/8" washed rock, ESI will backfill each excavation with TPH impacted soil (e.g., soil with TPH concentrations less than 5,000 mg/kg) to approximately 6" bgs. The top 6" of each excavation will be backfilled with Class A gravel per WSDOT Section 9-03.12(1), per the e-mail sent to all bidders on July 17, 2001.

Subject: Unocal Edmonds Project "Lower Yard Interim Action"

RE: Backfill Specifications.

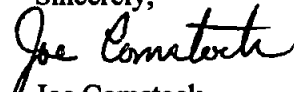

Dear Mr. Staton:

Please accept the following submittal from Emerald Services Inc. (ESI). ESI intends to complete the backfill phase of this project using the following aggregates and work plan.

- Place 2 to 4" quarry spalls supplied by Glacier Northwest in the clean excavations up to the level of the existing ground water approximately 1'6" from the bottom of the excavations.
- Lay a geotextile mat, type AMCO 2006, above the quarry spalls lining the excavations up to 2' on the walls.
- A 3/8 washed rock, Glacier NW type #18 will be used in conjunction with the overburden material that was removed from the excavations will be placed in 12" lifts and compacted to achieve final grade prior to placing the clean over burden.

If you have any questions, please contact me at (206) 832-3036.

Sincerely,

Joe Comstock
Emerald Services Inc.

PROPERTY DAMAGE RELEASE (TO BE SIGNED IF DELIVERY IS TO BE MADE INSIDE CURB LINE)
 Dear Customer: The driver of this truck is presenting this RELEASE to you for your signature is of the opinion that the size and weight of his truck may possibly cause damage to the premises and/or adjacent property if he places the material in this load where you desire it. It is our wish to help you in every way that we can, but in order to do this the driver is requesting that you sign this RELEASE relieving him and this supplier from any responsibility from any damage that may occur to the premises and/or adjacent property, buildings, sidewalks, drive-ways, curbs, etc. by the delivery of this material and that you also agree to help him remove mud from the wheels of his vehicle so that he will not enter the public street. Further, as additional consideration, the undersigned agrees to indemnify and hold harmless the driver of this truck and this supplier for any and all damage to the premises and/or adjacent property which may be claimed by anyone to have arisen out of delivery of this order.
 SIGNED

The undersigned promises to pay all costs, including reasonable attorney's fees, incurred in collecting any sums owed.
 All accounts not paid within 30 days of delivery will bear interest at the rate of 18% per annum.
 Not Responsible for Reactive Aggregate or Color Quality. No Claim Allowed Unless Made at Time Material is Delivered.
 A \$40.00 Service Charge and Loss of the Cash Discount will be collected on all Returned Checks.

NOTICE: MY SIGNATURE BELOW INDICATES THAT I HAVE READ THE HEALTH WARNING NOTICE AND SUPPLIER WILL NOT BE RESPONSIBLE FOR ANY DAMAGE CAUSED WHEN DELIVERING INSIDE CURB LINE.

PROPERTY DAMAGE RELEASE (TO BE SIGNED IF DELIVERY IS TO BE MADE INSIDE CURB LINE)
 Dear Customer: The driver of this truck is presenting this RELEASE to you for your signature is of the opinion that the size and weight of his truck may possibly cause damage to the premises and/or adjacent property if he places the material in this load where you desire it. It is our wish to help you in every way that we can, but in order to do this the driver is requesting that you sign this RELEASE relieving him and this supplier from any responsibility from any damage that may occur to the premises and/or adjacent property, buildings, sidewalks, drive-ways, curbs, etc. by the delivery of this material and that you also agree to help him remove mud from the wheels of his vehicle so that he will not litter the public street. Further, as additional consideration, the undersigned agrees to indemnify and hold harmless the driver of this truck and this supplier for any and all damage to the premises and/or adjacent property which may be claimed by anyone to have arisen out of delivery of this order.
 SIGNED

The undersigned promises to pay all costs, including reasonable attorney's fees, incurred in collecting any sums owed.
 All accounts not paid within 30 days of delivery will bear interest at the rate of 18% per annum.
 Not Responsible for Reactive Aggregate or Color Quality. No Claim Allowed Unless Made at Time Material is Delivered.
 A \$40.00 Service Charge and Loss of the Cash Discount will be collected on all Returned Checks.

NOTICE: MY SIGNATURE BELOW INDICATES THAT I HAVE READ THE HEALTH WARNING NOTICE AND SUPPLIER WILL NOT BE RESPONSIBLE FOR ANY DAMAGE CAUSED WHEN DELIVERING INSIDE CURB LINE.

SUB TOTAL	TAX	TICKET TOTAL	ORDER TOTAL
-----------	-----	--------------	-------------

The undersigned promises to pay all costs, including reasonable attorney's fees, incurred in collecting any sums owed.

All accounts not paid within 30 days of delivery will bear interest at the rate of 18% per annum.

Not Responsible for Reactive Aggregate or Color Quality. No Claim Allowed Unless Made at Time Material is Delivered.

A \$40.00 Service Charge and Loss of the Cash Discount will be collected on all Returned Checks.

PROPERTY DAMAGE RELEASE (TO BE SIGNED IF DELIVERY IS TO BE MADE INSIDE CURB LINE)
 Dear Customer: The driver of this truck is presenting this RELEASE to you for your signature is of the opinion that the size and weight of his truck may possibly cause damage to the premises and/or adjacent property if he places the material in this load where you desire it. It is our wish to help you in every way that we can, but in order to do this the driver is requesting that you sign this RELEASE relieving him and this supplier from any responsibility from any damage that may occur to the premises and/or adjacent property, buildings, sidewalks, drive-ways, curbs, etc. by the delivery of this material and that you also agree to help him remove mud from the wheels of his vehicle so that he will not litter the public street. Further, as additional consideration, the undersigned agrees to indemnify and hold harmless the driver of this truck and this supplier for any and all damage to the premises and/or adjacent property which may be claimed by anyone to have arisen out of delivery of this order.
 SIGNED

NOTICE: MY SIGNATURE BELOW INDICATES THAT I HAVE READ THE HEALTH WARNING NOTICE AND SUPPLIER WILL NOT BE RESPONSIBLE FOR ANY DAMAGE CAUSED WHEN DELIVERING INSIDE CURB LINE.

HWA Project No. 2001 167

Emerald Services Inc
7343 E. Marginal Way South
Seattle, Washington 98108

Attention: Mr. Terry Johnson

Subject: Final Letter on Construction Materials Testing
Unocal Edmonds Backfill Project
Edmonds, Washington

Dear Mr. Johnson:

HWA GEOSCIENCES INC performed periodic testing to assess the compaction of fill materials placed within Excavations A, B, C, and D. Field compaction tests were carried out periodically on a 'call out' basis. Full time monitoring of fill placement was not provided. Specific details of the testing carried out are provided on the attached Field Reports (Report No.s 1 to 11)

To the best of our knowledge, all locations tested were in accordance with the project requirements. To our knowledge there are no outstanding deficiencies.

We appreciate the opportunity to be of service on this project. Should you have any additional requirements, please contact our office.

Sincerely,

HWA GEOSCIENCES INC

Richard McKinley
Manager, Laboratory and Construction Services Group

WE NOTED THE FOLLOWING: (Contractor Activities, HWA Activities, Outstanding Issues, Resolutions)

On site at the request of Terry Johnson (Emerald Services). Time Arrived 8:45 A.M. / Time Left 9:30 P.M

Density testing was performed on Type 17 granular fill placed in the north end of Excavation A, at an elevation about 4.5 to 5.5 feet below the surrounding ground surface. Density tests showed compaction to exceed 90% of the maximum dry density as required by the specifications. See test numbers 1 to 3 on the attached field density test worksheet for specifics.

Density testing was performed on Type 17 granular fill placed in Excavation D, at the surface. Density tests showed compaction did not exceed 95% of the maximum dry density as required by the specifications. See test numbers 4 to 6 on the attached field density test worksheet for specifics.

Test results were provided verbally to Terry Johnson on site. It is understood from Terry that the Type 17 granular fill at the surface of Excavation D will be recompacted. HWA will retest this area during our next site visit.

		Job No. 2001167	Page No. 1 of 2
		Report No. 8	Date 10-16-01
Project Name Unocal Edmonds Backfill	Location or Address Edmonds, Washington		Day of the Week Tuesday
Owner Emerald Services	Permit No.		Weather Temp. (F) Rain/Cool
Client Emerald Services	Client Rep. Terry Johnson		HWA Project Engineer Richard McKinley
Contractor / Subcontractor Emerald Services	Contractor Rep. Terry Johnson		HWA Field Rep. T. Martin

WE NOTED THE FOLLOWING: (Contractor Activities, HWA Activities, Outstanding Issues, Resolutions)

Time Arrived 10:30 AM / Time Left 11:00 AM

Arrived on site at the request of Terry Johnson (Emerald Services) to perform density testing on the native backfill material placed in the eastern section of Excavation A. Density tests showed compaction to be 90% minimum as required by specification. The western section of excavation A was still being excavated. See attached field density test worksheet for specifics.

Arrived 1315 / Departed 1345

Arrived on site at the request of Terry Johnson (Emerald Services) to perform density testing on the Type 17 backfill material placed in Excavation A and B. Upon my arrival, the contractor had placed and compacted the final lift on both areas. Density tests showed compaction to be above the minimum required by specification. See attached field density test worksheet for specifics. Terry informed me that he anticipates no further visits by HWA will be required.

4.0				5 7 8	SS	MW-143-2.5	4.0		
4.2				3 3 3	SS	MW-143-4	0	4.2 to 8.2 feet: SANDY SILT (ML); gray; low plasticity; soft; little fine sand; few organic material (wood, roots); trace medium sand; slightly wet to 5.3 feet; wet below 5.3 feet. (FILL/ALLUVIUM)	
7.5				2 2 1	SS	MW-143-7.5	0	@ 7.5 to 8.2 feet: sand fraction increases to silty sand, hydrogen-sulfide-like odor.	
8.2								8.2 to 11.5 feet: CLAYEY SILT (ML); gray; soft; low to medium plasticity; few organic material (wood, pine cone); moist to wet. (ALLUVIUM)	
11.5				3 6 8	SS		NM		
11.5								11.5 to 13.9 feet: SILTY SAND (SM); gray; fine to medium; few to little organics (wood, roots); little fines; trace coarse sand; wet; hydrogen-sulfide-like odor. (ALLUVIUM)	
13.6				2 3 33	SS		NM	@ 13.6 to 13.9 feet: wood.	
13.9								13.9 to 15.0 feet: SAND (SP); gray; fine to medium; trace fines; wet; no odor noted. (ALLUVIUM)	
15.0				33 50/6"	SS		NM	@ 15.5 feet: sandy gravel; fine to medium; trace organic material.	

Total Depth Drilled = 15.0 feet below ground surface.
 Total Depth Sampled = 16.5 feet below ground surface.
 See Page 2 for Well Completion Details.

NOTES: NM = Not measured due to wet sample.

Water level at time of drilling.

Depth (feet, BGS)	Well Details	Sample Data						Lithologic Column	Soil Description
		Interval	Percent Recovery	Blow Counts	Type	Name	PID (ppm)		

WELL COMPLETION DETAILS

0 to 3.5 feet: Nominal 2-inch-diameter, flush threaded, Schedule 40 PVC blank riser pipe.
 3.5 to 13.6 feet: Nominal 2-inch-diameter, flush threaded, Schedule 40 PVC well screen with 0.020-inch machine-cut slots.
 13.6 to 14.1 feet: Nominal 2-inch-diameter, flush-threaded, Schedule 40 PVC end cap.

0 to 1.0 foot: Flush monument and concrete.
 1.0 to 2.0 feet: Medium bentonite chips, hydrated with potable water.
 2.0 to 15.0 feet: 20-40 silica sand.
 15.0 to 16.5 feet: Slough.

NOTES: NM = Not measured due to wet sample.

Water level at time of drilling.

Maul Foster & Alongi, Inc. **Geologic Borehole Log/Well Construction**

Project Number: 9077.01.04/4 Well Number: MW-144 Sheet: 1 of 1

Project Name: Unocal Edmonds Terminal TOC Elevation:
 Project Location: Edmonds, Washington Surface Elevation:
 Start/End Date: 1/23/02 to 1/23/02 Northing:
 Driller/Equipment: Cascade Drilling, Inc./Hollow-stem Auger Easting:
 Geologist/Engineer: H. Corner Hole Depth: 14.5-feet
 Sample Method: Split-spoon Outer Hole Diam: 8-inch

Depth (feet, BGS)	Well Details	Interval	Percent Recovery	Sample Data			PID (ppm)	Lithologic Column	Soil Description
				Blow Counts	Type	Name			
1								0 to 5.8 feet: SAND WITH GRAVEL (SP); brown; fine to medium; few fine to medium, subangular to subrounded gravel; moist; no odor noted. (FILL)	
2									
3				12	SS	MW-144-2.5	0		
4				17					
5				19				@ 4.8 to 5.8 feet: gravel fraction decreases to trace.	
6				14	SS	MW-144-5	491		
7				18				5.8 to 10.1 feet: SAND WITH SILT (SP-SM); gray; fine to medium; few fines; trace organic material; moist to approximately 6.5 feet; wet below 6.5 feet; slight hydrocarbon-like odor. (FILL/ALLUVIUM)	
8				18					
9				2	SS		NM		
10				2					
11				4					
12				8	SS		NM	10.1 to 14.5 feet: SAND (SP); gray; fine to medium; trace fines; trace organic material (wood); wet; very slight hydrocarbon-like odor. (ALLUVIUM)
