1 INTRODUCTION

This report summarizes the field activities and results for the environmental cap and stormwater drainage system inspection conducted on behalf of the Port of Tacoma (Port) for the former Cascade Timber No. 3 log sort yard (Cascade Timber). Cascade Timber is located southwest of the Blair Waterway in Tacoma, Washington bordered by Thorne Road and Maxwell Way (the Site) (Figure 1). The facility is owned by the Port and leased by Washington United Terminals (WUT) and Husky Terminal and Stevedoring, LLC (Husky) as a truck queue area. The ground surface at Cascade Timber is covered by an environmental cap and has several stormwater drainage features, further described in this report.

Inspection activities were conducted in accordance with the requirements identified in Consent Decree (CD) No. 92-2-03590-3 issued by the Washington State Department of Ecology (Ecology) to the Port (Washington Superior Court, 1994) and the operations and maintenance plan contained in the final engineering and design report (HLA, 1994). A memorandum of understanding between Ecology and the Port, updating the cap inspection frequency to every 30 months starting with an inspection in February 2012, was issued on September 12, 2011 (Ecology and Port of Tacoma, 2011).

1.1 Purpose and Scope

The purpose of this report is to present the findings of the 2022 environmental cap and stormwater drainage system inspection at Cascade Timber. The purpose of the environmental cap is to prevent surface water infiltration, exposure of humans and the environment to underlying materials, and erosion. The stormwater drainage system is used to convey stormwater off the cap surfaces to prevent infiltration and erosion.

Maul Foster & Alongi, Inc. (MFA), performed the inspection on February 27, 2022, which included the following tasks:

- Inspection of the asphalt/concrete pavement for the presence of cracks or other failures in the pavement that allow surface water runoff to infiltrate the bark/slag surficial fill (e.g., cracks greater than 1/8 in. wide, sub-base material exposed, pavement edge deterioration, and general appearance).
- Evaluation of the structural and functional condition of the cap and drainage systems (including catch basins, maintenance holes, oil/water separators, and spill containment vessels).
- Evaluation of debris/sediment accumulation in the stormwater structures (if visible).

The inspection observations are presented in this report.

1.2 Facility Background

Cascade Timber Site encompasses approximately 10.7 acres of a larger property located southwest of the Blair Waterway. Cascade Timber operated its property as a log sort yard from 1967 to 1987 (Ecology, 2017). In 1982, approximately 500 tons of ASARCO slag were placed on-Site as ballast material. In the 1989 Record of Decision for the Commencement Bay Nearshore/Tideflats Superfund site, the Site was identified as a source of arsenic, copper, lead, and zinc to Sitcum Waterway. The property is operated by WUT and ITS Husky as a truck queue area. Trucks drive through the property over a set of truck scales before driving over to shipping yard.

In 1991, Ecology issued an Agreed Order (No. DE 91-S199) for a remedial investigation/feasibility study to evaluate metals associated with ASARCO slag at Cascade Timber and their extent in the soils, groundwater and surface water (stormwater runoff) on and adjacent to Cascade Timber (Ecology, 2017). A remedial investigation and feasibility study report was submitted to Ecology in June 1993 and an engineering design report was submitted to Ecology in 1994 by Harding Lawson Associates (HLA) (HLA, 1993; HLA, 1994). In 1993, a cleanup action plan was completed for Cascade Timber; the plan was included in the property's consent decree. Remedial activities, including the installation of a low-permeability asphalt cap, stormwater drainage system, and groundwater monitoring wells, were conducted in 1994.

Groundwater monitoring has been conducted at the Site since 1994 to monitor the effectiveness of the remedial action. Groundwater quality is monitored every 18 months (Ecology, 2011). The last groundwater monitoring event was conducted in February 2022 (described in a separate report [MFA, 2022]).

The Port is required to conduct environmental cap and drainage system inspections (inspections) every 30 months (Ecology, 2011). The last inspection was performed in August 2019 (Windward, 2019). During the 2019 inspection, portions of pavement and curbs were recommended for repair. The environmental cap was temporarily penetrated in 2020 during the installation of the new gate and utilities at the Site. The construction activities were approved by Ecology on December 30, 2019, and the cap was restored to its original condition after completion of the construction in 2020. A memorandum authored by the Port and summarizing the utility construction elements, soil management and disposal activities, cap restoration components, and asphalt permeability testing results is included as the appendix to this report.

2 FIELD OBSERVATIONS

MFA performed the 2022 inspection at Cascade Timber on February 27, 2022, making use of the previous inspection results and information regarding maintenance work provided by the Port (see the appendix). The inspection was led by a Washington State licensed professional engineer.

2.1 Environmental Cap

Inspectors were able to observe all paved surfaces within the environmental cap. The location of facility features and the Cascade Timber Site boundary are shown in Figure 2. Photographs depicting cap issues are provided in Table 1.

The cap was generally in good condition with minor asphalt damage observed across the cap. Several unsealed cracks wider than 1/8 inch were observed to run parallel with the drive lanes on the cap. Gouges ranging from 1-3 feet long were observed across the Site; these were generally only 1 inch deep. Deeper tire ruts were observed across the drive lanes located in the new gate areas.

Several areas of the asphalt curb were damaged or cracking along the pavement edge. Pavement edge erosion was observed behind the curb in several areas of the cap. Asphalt debris in areas with pavement edge erosion was observed sliding down the slopes at the edge of the cap. The subgrade material in one area was eroding from underneath the pavement edge.

Pavement repairs were completed in 2020 and are summarized in Section 3 and the appendix. Pavement repairs observed during the 2022 inspection are presented in Figure 3 and described in Table 2. Photographs of the observed repairs are provided in the appendix that follows this report.

The table below provides a summary of the cap conditions observed during the 2022 inspection; observations, photographs, and recommended actions keyed to specific locations are presented in Table 1 following this report.

Environmental Cap Conditions and Recommended Actions

Required Inspection Element	Observed Condition	Recommended Action
Presence of cracks wider than 1/8 inch	Cracks wider than 1/8 inch were observed across the cap.	Repair pavement as shown in Figure 2 and described in Table 1.
Pavement edge deterioration	Several areas of pavement edge determination were observed.	Locations of pavement edge deterioration are shown in Figure 2 and described in Table 1.
Sub-base material exposed	Sub-base material was potentially exposed in one area of pavement edge erosion.	Stabilize slope as described in Table 1.
Degradation, subsidence, general appearance	Limited degradation and deterioration were observed in asphalt surface.	Locations of pavement deterioration are shown in Figure 2 and described in Table 1.

2.2 Stormwater Drainage System

The Cascade Timber stormwater drainage system consists of six catch basins, one spill containment vessel, one oil/water separator,[1] and one maintenance hole. In 2022, each drainage system component was inspected for general appearance, sediment and debris accumulation (as visible), and structural and functional condition. Inspectors were unable to inspect maintenance hole WMH, as it was located

[1] The spill containment vessel and oil/water separator have two maintenance covers/vaults. In Figure 2 and Table 1, spill containment vaults are shown as SV1 and SV2; oil/water separator vaults are shown as OWS1 and OWS2.

within a secured fenced area that could not be unlocked. Stormwater features OWS1, OWS2, SV1, and SV2 were partially inspected due to the tight fit of the grates covering the structures. Catch basins CB5 and CB7 were not inspected due to severe deterioration in the catch basin inserts.

Catch basins across the Site appeared to be structurally sound and functioning normally, structures were actively discharging at the time of inspection which prevented visual observations of sediment accumulation as well as observing debris and floatables on the water surface. Table 3 summarizes the observations made at each drainage structure.

3 STATUS AND RECOMMENDATIONS

3.1 Maintenance and Repair Performed Since Previous Inspection

3.1.1 Environmental Cap

The 2019 inspection report (Windward, 2019) recommended the following repairs:

- Repair or monitor damaged curb areas
- Repair pavement in numerous areas of observed deterioration throughout the cap

As described in Section 2.1, Table 2, and the appendix, the following items have been repaired:

- Areas of freshly repaired asphalt were observed across the environmental cap. Repairs included repairs from previous inspection observations, as well as repairs associated with construction within the cap area (see the appendix).
- Two areas curb repairs were observed at C7 and C15

Three areas adjacent to or within repaired pavement had minor cracking or gouging (Table 2) that do not currently affect the integrity of the cap. MFA recommends monitoring these areas during the next inspection cycle (P12, P39, and P46). Overall, the repairs are in good condition.

3.1.2 Stormwater Drainage System

The 2019 inspection report (Windward, 2019) recommended the following repairs/maintenance:

- Remove sediment from catch basin filter inserts or replace damaged filter inserts
- Remove accumulated debris and sediment on the pavement surfaces near catch basins CB5 and CB7
- Remove floatables, debris, and sheen from the oil/water separator
- Restore access to the two lids of the spill containment vessel

- Remove floatables and debris from SV1

Due to the length of time since the previous 2019 cap inspection and the limited access to some stormwater features, inspectors were unable to determine if the proposed maintenance activities had been performed. Some of the above maintenance issues are reoccurring. The stormwater infrastructure at the Property is managed under the Port's municipal stormwater permit, and inspections and maintenance are performed under the requirements of the permit. Section 2.2 and Table 2 described current repair/maintenance items observed during the 2022 inspection.

3.2 Recommendations

3.2.1 Environmental Cap

The following recommendations are based on this 2022 inspection:

- Repair curb damage at locations C11 and C14
- Stabilize slope at location P4 to prevent further undercutting of the pavement cap
- Seal cracks at P10, P17, P18, P27, P28, P29, P30, P31, P32, and P59
- Repair asphalt depressions at P27, P33, P34, P37, and P60
- Monitor gouges and cracks in asphalt at locations P25, P26, P35, P36, and P39

Cracks wider than 1/8 inch observed across the Site are recommended for repair. Multiple curb locations which had damage extending through the vertical profile of the curb are recommended for repairs. Gouges and chipping of asphalt were observed across the cap. These gouges were generally less than 1 inch deep and are recommended for continued monitoring and evaluation during the next inspection cycle and gouges greater than 1 inch deep were recommended for repair. Recommended actions are further described in Table 1.

3.2.2 Stormwater Drainage System

The following recommendations are based on this 2022 inspection:

- Restore access to maintenance hole WMH to facilitate inspection during the next inspection cycle
- Consider replacing filter inserts in all catch basins
- Restore access to spill containment vessel and oil water separator during the next inspection cycle

Required and recommended actions are further described in Table 3.

LIMITATIONS

The services undertaken in completing this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, express or implied, is made. These services were performed consistent with our agreement with our client. This report is solely for the use and information of our client unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

Observations in this report are limited to environmental cap areas that were visible to the Windward field team. In some instances, portions of the cap surface may have been covered and not readily available for inspection. Inspection of stormwater structures was limited to observations made from the surface and by means of direct observation, probes (extendible poles to check for sediment), and photography. No confined space entry was performed. Observation of some stormwater structures was also limited by storm flow and/or the presence of damaged or sediment-laden catch basin inserts that could not be safely removed. No guarantee is made that all cap or stormwater deficiencies that could impact cap/drainage system performance were identified.

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report.

APPENDIX

ENVIRONMENTAL CAP REPAIRS

INTEROFFICE MEMORANDUM

TO: PROJECT FILE

FROM: SARAH WEEKS

SUBJECT: CASCADE TIMBER 2020 CAP REPAIRS

DATE: APRIL 22, 2021

CC: ROB HEALY & DAVE MYERS

In 2020 the Port's tenant ITS Husky installed a new remote gate and truck at Port Parcel 30 (also known as "Lot F") to reduce terminal and street congestion from queueing trucks. Approximately 10-acres of the 18-acre property is the Cascade Timber No. 3 environmental cap. The new gate and new utilities were installed within cap limits. The utility work, electrical and storm drainage, was installed within the set aside utility corridors. During the same period the Port of Tacoma (Port) installed new fiber optic lines between the Husky Administration Building and Lot F, the new fiber optic lines were installed within the utility corridors. Per the terms of the Consent Decree the integrity of the cap was restored to its original condition and soil spoils were handled and disposed of in accordance with State Law. The scope of work was shared with Ecology on December 18, 2019. Ecology approved the proposed work on December 30, 2019.

The follow measures were taken to minimize disruption to the contaminated soils beneath the cap:

- All conduits were installed in shallow excavations, with the top of conduit approximately 24-inches from the top of asphalt.
- Many of the structures were designed to maintain the foundations in the clean pit run material in place over the contaminated soils.
- Soil samples were collected for characterization and appropriate disposal.

The environmental cap was restored per the original design requirements:

- The low permeability asphalt cap was restored to the original thickness
- The low permeability asphalt cap mix was comparable to the mix of the original cap design and was based on current WSDOT classifications. Permeability test results indicated a permeability of less than 10^{-9} cm/s. This is within the permeability range required by the Construction Completion Report (10^{-7} to 10^{-9} cm/s).
- An impervious fabric layer was installed between asphalt lifts per the original cap design.
- Edges were sealed with rubberized mastic to prevent intrusion of water along the pavement seams.

Subject: RE: Cascade Timber No. 3 - Construction in January 2020
Date: Monday, December 30, 2019 11:15:25 AM

Good morning Sarah,

I reviewed the work proposed at the Cascade Timber No. 3 site. I understand that the Port of Tacoma's tenant, ITS Husky would like to install a new remote gate and truck queue to reduce terminal and street congestion from queueing trucks. As part of this work, some of the capped areas will be stripped to install a new gate, new utilities, and structures. Also the excavated material/soil will be tested for proper disposal and the excavated capped areas will be restored to the original condition.

The proposed procedure for conducting this work is okay with Ecology and Ecology is hear by approve the work proposal.

Once all the work is completed, please send me a letter/e-mail regarding the following information for our files:

- Approximate quantity of excavated material
- Analytical results
- Name of the disposal facility
- Any other relevant information

Thanks.

Panjini Balaraju

Subject: Cascade Timber No. 3 - Construction in January 2020

Good Afternoon, Panjini –

We've got some worked planned at Cascade Timber No. 3 that requires your review and approval. The Cascade Timber No. 3 Site is known to the rest of Port staff as "Lot F." Lot F includes the Cascade Timber No. 3 environmental cap and adjacent acreage between the northeast boundary of the environmental cap and Port of Tacoma Road. Lot F is operated as a trucking queue, a portion of which is leased to ITS Husky. ITS Husky is planning to install a new remote gate and truck queue to reduce terminal and street congestion from queueing trucks. The scope of work includes disturbance of the Cascade Timber environmental cap. Per the Cascade Timber No.3 log yard Consent Decree – "The Port shall obtain approval from Ecology prior to initiating any disturbance of the cap stormwater drainage and/or monitoring system. Ecology shall not deny approval if the Port can show (1) that no releases of hazardous materials will occurs; (2) integrity of the cap and stormwater draining and monitoring systems will be restored to their original condition in a timely manner; and (3) that material will be handled and disposed of in accordance with State law."

I've communicated these requirements to the Port engineer, Dave Myers. Dave and I work together on the Port's environmental cap maintenance program and he is familiar with the restrictions. The team hopes to begin construction in January. Please see Dave's email below describing the scope of work. I've uploaded the drawing sets to our FTP site. Let Dave and I know if you have any questions. We'd also be happy to set up a meeting if you'd like to review the material with us in more detail.

Subject: Lot F work

Sarah,

Please see below for a description of work:

At lot F the Port's tenant ITS Husky is planning to install a new remote gate and truck queue to reduce terminal and street congestion from queueing trucks. Much of the site will remain as is with the exception of some striping and barricades to keep various terminal trucks separated from each

other. As part of the new gate however there are some new utilities and structures that will be installed within the cap limits. Most of the utilities including electrical, communications and storm drainage will be maintained with the set aside utility corridors. However there are some limited structures and conduit that will be installed outside these corridors.

To minimize impacts to the capped material all conduits will be kept in shallow excavations with the top of conduit 24" from the top of asphalt. This means that the trenches will likely only be 12" to 16" below paving. Likewise, many of the structures are designed to incorporate spread footings in order to maintain the foundations in the clean pit run material that was placed over the contaminated soils. There is a small conduit trench and two vaults that will be installed near light pole 12 that are outside of the utility corridors but very close to the edge of the cap. Again the conduits and vaults will be held close to the bottom of existing paving to minimize depth of excavation.

In any areas where contaminated material is contacted it will be staged on site, placed on plastic and covered with plastic, until proper characterization and disposal permits can be obtained. Areas will be over excavated to allow for a layer of clean material between contamination and installed structures. After backfill, the pavement will be restored to original thickness with a impervious fabric layer installed within the section as shown on the details. All edges will be sealed with rubberized mastic to prevent intrusion of water along the seam.

Trenches will be scrutinized more extensively and evaluated for routine maintenance under the Port's cap repair program. Additional mastic will be added to the cracks as needed and seal coating will be considered to ensure a watertight system is maintained.

I have provide two sets of drawings, one from the tenant representing their contract work and one from the Port representing Port work. I have highlighted the areas and items in orange that are on or affect the cap. Items that are not highlighted are not on the cap. Again, please keep in mind that much of the corridor work and even some of the foundations and fence work are within the prescribed "Clean Utility Corridors" that were set aside when the cap was put in place.

Please let me know if you have any questions.

NOTES

1. EQUIPMENT USED: TOPCON QS ROBOTIC TOTAL STATION
2. THIS SURVEY WAS PERFORMED BY FIELD TRAVERSE WITH THE FINAL RESULTS MEETING OR EXCEEDING THE CURRENT TRAVERSE STANDARDS CONTAINED IN W.A.C. 332–130–090. ALL MEASUREMENTS WERE MADE WITH A TOPCON QS ROBOTIC TOTAL STATION IN ACCORDANCE WITH THE EQUIPMENT MANUFACTURER'S SPECIFICATIONS.
3. IN ACCORDANCE WITH THE REVISED CODE OF WASHINGTON (R.C.W.) 58.09 AND THE WASHINGTON ADMINISTRATIVE CODE (W.A.C.) 332–130, THIS SURVEY MAY DEPICT OCCUPATIONAL INDICATORS THAT DIFFER FROM THE DEEDED LOT LINES. THESE INDICATORS, IF AT ALL PRESENT, MAY REPRESENT A POTENTIAL FOR CLAIMS OF UNWRITTEN TITLE. THIS SURVEY DOES NOT PURPORT TO RESOLVE SUCH ITEMS.
4. FIELD WORK PERFORMED IN MARCH THROUGH MARCH AND SEPTEMBER 2017, UNDER SITTS & HILL PROJECT NUMBER 17537.
5. UTILITIES AS SHOWN HEREON ARE BASED ON FIELD SURVEY OBSERVATION OF UTILITY LOCATE SERVICES PERFORMED BY MOUNTAIN VIEW LOCATING SERVICES LLC. IN SEPTEMBER 2017 FOR THIS SURVEY. THIS HAS BEEN SUPPLEMENTED BY PUBLIC RECORDS. RECORD UTILITY LINES SHOWN HEREON ARE DEPICTED WITH THE STANDARD LINETYPE WITH A "– R" AS SHOWN IN THE LEGEND. UTILITIES OTHER THAN SHOWN MAY EXIST ON THE SITE. THE SURVEYOR DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED. THE SURVEYOR DOES CERTIFY THAT THEY ARE SHOWN AS ACCURATELY AS POSSIBLE FROM FIELD SURVEY AND PAINTED UTILITY LOCATE LINES. COLLECTION AND DEPICTION OF EXISTING SUBSURFACE UTILITY DATA IS CONSISTENT WITH QUALITY LEVEL (B) OF THE ASCE STANDARD GUIDELINES 38–02.
6. SITTS & HILL ENGINEERS, INC. HAS RELIED UPON TITLE INFORMATION NOTED IN COMMITMENT FOR TITLE INSURANCE PREPARED BY FIRST AMERICAN TITLE INSURANCE COMPANY OF WASHINGTON, COMMITMENT NUMBER 2940659, DATED SEPTEMBER 12TH 2017. IN PREPARATION OF THIS SURVEY, SITTS AND HILL ENGINEERS, INC. HAS CONDUCTED NO INDEPENDENT TITLE SEARCH NOR IS SITTS AND HILL ENGINEERS, INC. AWARE OF ANY TITLE ISSUES AFFECTING THE SURVEYED PROPERTY OTHER THAN THOSE SHOWN ON THE MAP AND/OR DISCLOSED BY SAID TITLE COMPANY'S ORDER. SITTS & HILL ENGINEERS, INC. HAS RELIED WHOLLY ON SAID TITLE COMPANY'S REPORT AND THEREFORE QUALIFIES THE MAP'S ACCURACY AND COMPLETENESS TO THAT EXTENT.
7. THIS SURVEY COMPLIES WITH W.A.C. 332–130–145. THE CONTOURS DEPICTED HEREON ARE BASED ON DATA FROM DIRECT FIELD MEASUREMENTS. SPOT ELEVATIONS ARE BASED ON DIRECT FIELD MEASUREMENTS AND ARE DEPICTED FOR REFERENCE. THE PURPOSE OF THIS TOPOGRAPHIC MAP IS TO SERVE AS A BASE MAP FOR CONTEMPLATED SITE IMPROVEMENTS AND DESIGN.

SCHEDULE B EXCEPTIONS

PER FIRST AMERICAN TITLE INSURANCE COMPANY OF WASHINGTON, COMMITMENT NUMBER 2940659, DATED SEPTEMBER 12TH 2017

EXCEPTION NUMBER	AFN	DESCRIPTION
1.	**8012010130	FACILITY CHARGES, IF ANY, INCLUDING BUT NOT LIMITED TO HOOK–UP, OR CONNECTION CHARGES AND LATECOMER CHARGES FOR SEWER, WATER AND PUBLIC FACILITIES OF THE CITY OF TACOMA AS DISCLOSED BY INSTRUMENT RECORDED UNDER RECORDING NO. 2864651 AND AS AMENDED BY INSTRUMENTS RECORDED UNDER RECORDING NUMBERS 2881434 AND 8012010130.
2.	**––	PROVISIONS AND CONDITIONS OF TITLE 53 RCW RELATING TO THE USE OF LANDS WITHIN PORT DISTRICTS, CHAPTER 73, SESSION LAWS 1955, AS AMENDED, OR IF APPLICABLE, CHAPTER 45, SESSION LAWS 1939, AS AMENDED.

LEGAL DESCRIPTIONS

PER FIRST AMERICAN TITLE INSURANCE COMPANY COMMITMENT 2940659; DATED 09/12/2017

PARCEL A (696500–0410):

LOT 1, BLOCK 12, CORRECTED PLAT OF PORT OF TACOMA INDUSTRIAL DEVELOPMENT DISTRICT FIRST ADDITION, ACCORDING TO THE PLAT THEREOF RECORDED IN VOLUME 18 OF PLATS, PAGES 8 AND 8A, RECORDS OF THE PIERCE COUNTY AUDITOR;

TOGETHER WITH THAT PORTION OF THE VACATED RIGHT OF WAY ABUTTING THEREON AND ATTACHED THERETO BY OPERATION OF LAW, AS VACATED BY CITY OF TACOMA ORDINANCE NO. 21116 AND RECORDED UNDER RECORDING NUMBER 2772670;

EXCEPT THAT PORTION LYING WITHIN THE NORTHWESTERLY 200 FEET OF SAID LOT 1;

TOGETHER WITH ALL OF LOTS 2 THROUGH 18, INCLUSIVE, OF SAID BLOCK 12;

SITUATE IN THE CITY OF TACOMA, COUNTY OF PIERCE, STATE OF WASHINGTON.

PARCEL B (696500–0411):

THE NORTHWESTERLY 200 FEET OF LOT 1, BLOCK 12, CORRECTED PLAT OF PORT OF TACOMA INDUSTRIAL DEVELOPMENT DISTRICT FIRST ADDITION, ACCORDING TO THE PLAT THEREOF RECORDED IN VOLUME 18 OF PLATS, PAGES 8 AND 8A, RECORDS OF THE PIERCE COUNTY AUDITOR, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE NORTHERLY CORNER OF SAID LOT 1 AND THE SOUTHWESTERLY RIGHT OF WAY LINE OF PORT OF TACOMA ROAD, BEING THE TRUE POINT OF BEGINNING OF THIS DESCRIPTION;
THENCE SOUTHWESTERLY ALONG THE NORTHWESTERLY LINE OF SAID LOT TO THE WESTERLY CORNER THEREOF;
THENCE SOUTHEASTERLY ALONG THE SOUTHWESTERLY LINE OF SAID LOT A DISTANCE OF 200 FEET;
THENCE ON AN ANGLE TO THE LEFT OF 90° AND PARALLEL TO THE NORTHWESTERLY LINE OF SAID LOT TO INTERSECT THE NORTHEASTERLY SIDE OF SAID LOT;
THENCE ALONG THE NORTHEASTERLY LINE OF SAID LOT TO THE TRUE POINT OF BEGINNING;

SITUATE IN THE CITY OF TACOMA, COUNTY OF PIERCE, STATE OF WASHINGTON.

PARCEL C: (696500–0423)

THAT PORTION OF BLOCK 13, CORRECTED PLAT OF PORT OF TACOMA INDUSTRIAL DEVELOPMENT DISTRICT FIRST ADDITION, ACCORDING TO THE PLAT THEREOF RECORDED IN VOLUME 18 OF PLATS, PAGES 8 AND 8A, RECORDS OF THE PIERCE COUNTY AUDITOR, LYING NORTHERLY OF THE PROLONGATION OF THE NORTHWESTERLY BOUNDARY LINE OF LOTS 2 THROUGH 19, BLOCK 14 OF SAID PLAT;

TOGETHER WITH THAT PORTION OF THE VACATED RIGHT OF WAY ABUTTING THEREON AND ATTACHED THERETO BY OPERATION OF LAW, AS VACATED BY CITY OF TACOMA ORDINANCE NO. 21116 AND RECORDED UNDER RECORDING NUMBER 2772670;

EXCEPT THAT PORTION THEREOF CONVEYED TO THE CITY OF TACOMA BY WARRANTY DEED RECORDED NOVEMBER 28, 1977 UNDER RECORDING NUMBER 2781220;

SITUATE IN THE CITY OF TACOMA, COUNTY OF PIERCE, STATE OF WASHINGTON.

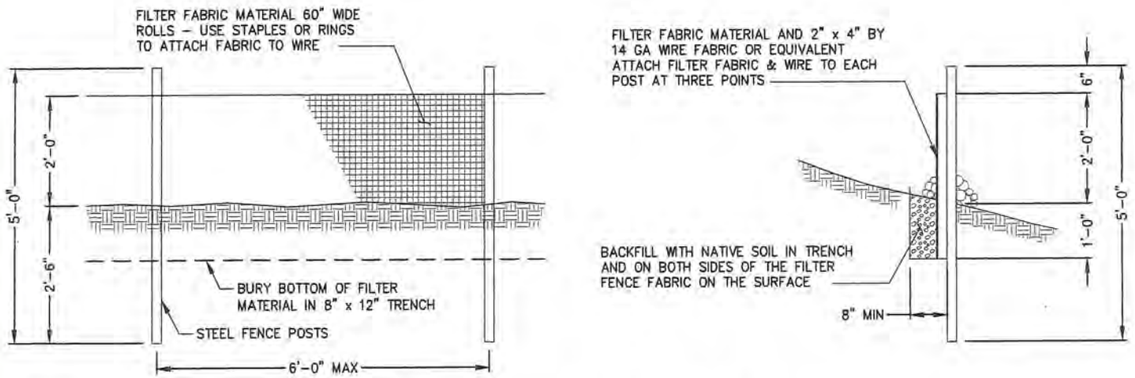
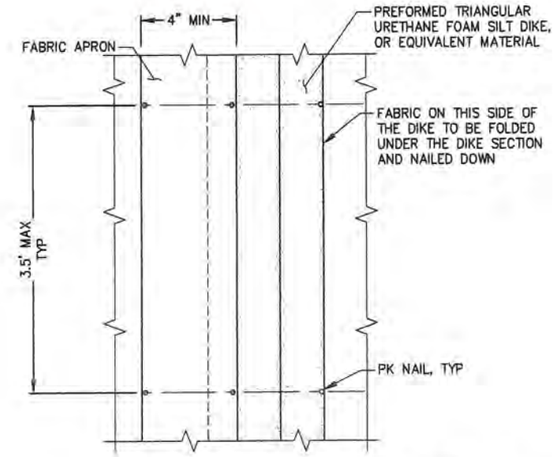
NOTES:

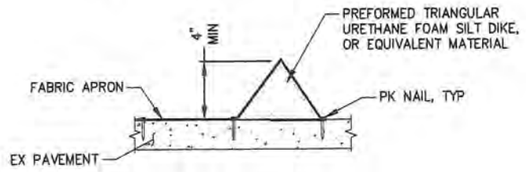
1. ANY ACCUMULATED SEDIMENT ON OR AROUND THE FILTER FABRIC SHALL BE REMOVED. ALL SEDIMENT SHALL BE DISPOSED OF OFF-SITE.
2. ANY SEDIMENT IN THE DRAINAGE STRUCTURE INSERT SHALL BE REMOVED WHEN SEDIMENT HAS FILLED ONE-THIRD OF THE INSERT. THE INSERT SHALL BE REPLACED MONTHLY OR AS DIRECTED BY THE ENGINEER.

1 – TEMPORARY DRAINAGE STRUCTURE INSERT DETAIL
SCALE: NTS



2 – TEMPORARY FILTER FABRIC FENCE - DETAIL
SCALE: NTS





NOTES:

1. PK NAILS SHALL BE PLACED WHERE THE UNITS OVERLAP AND IN THE CENTER OF A 7-FOOT UNIT AS SHOWN ON THE DIKE PLAN.
2. ALTERNATE APPROVED HOLD DOWN DEVICE MAY BE SUBSTITUTED FOR PK NAILS (WIRE STAPLES, ETC).

3 – TEMPORARY TRIANGULAR SILT DIKE - DETAIL
SCALE: NTS

TESC NOTES:

1. EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED FOR THE SITE TO PREVENT ERODED SEDIMENT AND TURBID WATER FROM ENTERING THE CITY STORM DRAINAGE SYSTEM, RIGHT-OF-WAY, AND/OR ADJACENT PROPERTY DURING AND FOLLOWING CONSTRUCTION UNTIL ENTIRE SITE HAS BEEN STABILIZED.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE RESULTING FROM ON-SITE EROSION CAUSING SEDIMENT TO BE DEPOSITED OFF SITE. IF SEDIMENT IS TRANSPORTED ONTO A ROAD SURFACE, THE ROADS SHALL BE CLEANED IMMEDIATELY USING A METHOD ACCEPTABLE TO THE ENGINEER AND/OR THE CITY OF TACOMA. IF A SWEEPER IS USED, IT SHALL BE A REGENERATIVE AIR SWEEPER.
3. THE IMPLEMENTATION OF THESE TEMPORARY EROSION AND SEDIMENT CONTROL (TESC) PLANS AND THE CONSTRUCTION, MAINTENANCE, REPLACEMENT, AND UPGRADING OF THESE TESC FACILITIES ARE THE RESPONSIBILITY OF THE CONTRACTOR UNTIL ALL CONSTRUCTION IS COMPLETED AND ACCEPTED AND SHALL BE CONDUCTED IN ACCORDANCE WITH CITY OF TACOMA CONSTRUCTION STORMWATER CONTROL TECHNICAL REQUIREMENTS AND ALL OTHER APPLICABLE STANDARDS AND REGULATIONS.
4. THE BOUNDARIES OF THE PROJECT SITE (CONSTRUCTION LIMIT) SHOWN ON THIS PLAN SHALL BE CLEARLY FLAGGED IN THE FIELD PRIOR TO CONSTRUCTION. DURING THE CONSTRUCTION PERIOD, NO DISTURBANCE BEYOND THE FLAGGED CLEARING LIMITS WILL BE PERMITTED WITHOUT PRIOR APPROVAL. THE FLAGGING SHALL BE MAINTAINED BY THE CONTRACTOR FOR THE DURATION OF CONSTRUCTION.
5. THE TESC FACILITIES SHOWN ON THIS PLAN MUST BE CONSTRUCTED IN CONJUNCTION WITH CLEARING AND GRADING AND/OR DEMOLITION ACTIVITIES, AND IN SUCH A MANNER AS TO ENSURE THAT ERODED SEDIMENT OR TURBID WATER DOES NOT ENTER THE DRAINAGE SYSTEM, ROADWAYS, OR VIOLATE APPLICABLE WATER STANDARDS.
6. THE TESC FACILITIES DEPICTED ON THESE DRAWINGS ARE INTENDED TO BE MINIMUM REQUIREMENTS TO MEET ANTICIPATED SITE CONDITIONS. AS CONSTRUCTION PROGRESSES AND UNEXPECTED OR SEASONAL CONDITIONS DICTATE, THE CONTRACTOR SHOULD ANTICIPATE THAT MORE EROSION AND SEDIMENTATION CONTROL FACILITIES WILL BE NECESSARY TO INSURE COMPLETE SILTATION CONTROL ON THE PROJECT SITE. DURING THE COURSE OF CONSTRUCTION, IT SHALL BE THE OBLIGATION AND RESPONSIBILITY OF THE CONTRACTOR TO ADDRESS ANY NEW CONDITIONS THAT MAY BE CREATED BY THE CONTRACTOR'S ACTIVITIES AND TO PROVIDE ADDITIONAL FACILITIES, OVER AND ABOVE THESE MINIMUM REQUIREMENTS, AS MAY BE NEEDED TO PROTECT ADJACENT PROPERTIES AND WATER QUALITY OF THE RECEIVING DRAINAGE SYSTEM AND AS REQUIRED BY THE ENGINEER AND/OR CITY OF TACOMA.
7. THE TESC FACILITIES SHALL BE INSPECTED AS NOTED IN THE SPECIFICATIONS BY THE CONTRACTOR AND MAINTAINED AS NECESSARY TO ENSURE THEIR CONTINUED FUNCTIONING UNTIL CONSTRUCTION IS COMPLETED AND POTENTIAL FOR ON-SITE EROSION HAS PASSED.
8. IF EROSION CONTROL FACILITIES FAIL, THEY SHALL BE REPAIRED OR REPLACED IMMEDIATELY UPON RECEIVING VERBAL NOTICE OF SAID FAILURE FROM ENGINEER OR CITY OF TACOMA.
9. ANY AREA STRIPPED OF VEGETATION OR PAVEMENT WHERE NO FURTHER WORK IS ANTICIPATED FOR A PERIOD OF 15 DAYS OR MORE SHALL BE IMMEDIATELY STABILIZED WITH APPROVED TESC METHODS SUCH AS SEEDING, MULCHING, NETTING, EROSION BLANKETS, ETC.
10. TESC FACILITIES ON INACTIVE SITES SHALL BE INSPECTED AND MAINTAINED A MINIMUM OF ONCE A MONTH OR WITHIN 24 HOURS FOLLOWING A STORM EVENT.
11. AT NO TIME SHALL MORE THAN ONE FOOT OF SEDIMENT BE ALLOWED TO ACCUMULATE WITHIN A CATCH BASIN INSERT. ALL CATCH BASINS AND CONVEYANCE LINES SHALL BE CLEANED PRIOR TO PAVING. THE CLEANING OPERATION SHALL NOT FLUSH SEDIMENT LADEN WATER INTO THE DOWNSTREAM SYSTEM.
12. STABILIZED CONSTRUCTION ENTRANCES AND TIRE WASH PADS SHALL BE PROVIDED BY THE CONTRACTOR AS REQUIRED AND INSTALLED AT THE BEGINNING OF CONSTRUCTION AND MAINTAINED TO MEET ALL APPLICABLE STANDARDS FOR THE DURATION OF THE PROJECT. ADDITIONAL MEASURES MAY BE REQUIRED TO INSURE THAT ALL OFFSITE WORK AREAS ARE KEPT CLEAN FOR THE DURATION OF THE PROJECT.
13. WHERE SEEDING FOR TEMPORARY EROSION CONTROL IS REQUIRED, FAST GERMINATING GRASSES SHALL BE APPLIED AT AN APPROPRIATE RATE, AS APPROVED BY THE CITY OF TACOMA.
14. WHERE STRAW MULCH FOR TEMPORARY EROSION CONTROL IS REQUIRED, IT SHALL BE APPLIED AT A MINIMUM THICKNESS OF TWO INCHES.
15. THE CONTRACTOR SHALL PROTECT STOCK PILE AREAS FROM RELEASE OF ERODED SEDIMENT OR TURBID WATER. STOCK PILES SHALL BE COVERED AT ALL TIMES WHILE NOT IN USE TO KEEP THE STORED MATERIAL DRY.
16. ALL DISTURBED AREAS SHALL BE STABILIZED BY ACCEPTABLE METHODS FOR THE PREVENTION OF ON-SITE EROSION AFTER COMPLETION OF CONSTRUCTION.
17. ALL EROSION/SEDIMENT CONTROL PONDS WITH A DEAD STORAGE DEPTH EXCEEDING 6 INCHES MUST BE SURROUNDED WITH A FENCE WITH A MINIMUM HEIGHT OF 3 FEET.
18. EXISTING PAVED ROADS MAY BE USED AS CONSTRUCTION ENTRANCES.
19. CONTRACTOR SHALL REMOVE ALL TEMPORARY TESC FACILITIES PRIOR TO COMPLETION OF WORK.

BINDING EDGE

GENERAL NOTES:

1. DO NOT SCALE ELECTRICAL DRAWINGS. REFER TO CIVIL AND STRUCTURAL DRAWINGS TO COORDINATE THE EXACT LOCATION OF ALL ELECTRICAL EQUIPMENT, STRUCTURES, VAULTS, CONDUITS, ETC. NOTIFY ENGINEER IN THE EVENT OF A CONFLICT.
2. SEE DRAWING E10 AND E11 FOR CONDUIT AND CONDUCTOR SCHEDULE. NOT ALL CONDUIT AND CONDUCTORS ARE INDICATED ON THE SCHEDULES. SEE SITE PLANS AND DETAILS FOR ADDITIONAL CONDUIT AND CONDUCTOR REQUIREMENTS. METALLIC CONDUITS, COUPLINGS AND JOINTS OF METALLIC CONDUITS EMBEDDED IN CONCRETE, CDF, EARTH OR ASPHALT SHALL BE 1/2 LAP TAPED OR OTHERWISE MADE WATERTIGHT TO PREVENT INTRUSION OF MORTAR, WATER OR OTHER MATERIALS. TEST CONDUIT FOR ABSENCE OF ANY BLOCKAGE PRIOR TO AND WITHIN 24 HOURS OF COMPLETING A CONCRETE OR CDF POUR OR ASPHALT PAVING. ALL METAL CONDUIT EXPOSED ABOVE GRADE SHALL BE PVC COATED OR PRIMED AND PAINTED TWO(2) COATS BLACK OVER GALVANIZE.
3. CONTRACTOR SHALL INCLUDE IN THE BID ALL COSTS TO HAVE A DEPARTMENT OF LABOR AND INDUSTRIES APPROVED FIRM TO FIELD EVALUATE THE INSTALLATION, SAFETY, AND COMPLIANCE REQUIRED PER TACOMA POWER ELECTRICAL INSPECTION AND/OR PER W.A.C. 296-46B-901 FOR ANY EQUIPMENT SPECIFIED OR FURNISHED NOT UL LABELED.
4. THERE IS ADDITIONAL ELECTRICAL WORK SHOWN ON THE CIVIL AND STRUCTURAL DRAWINGS AND DESCRIBED IN THE SPECIFICATIONS. EXTENSIVE COORDINATION IS REQUIRED BY THE CONTRACTOR WITH GOVERNING AUTHORITIES, OTHER CONTRACTORS WORKING ON SITE, POT, AND POT TENANTS. CONTRACTOR SHALL REVIEW ALL DRAWINGS AND SPECIFICATION SECTIONS AND INCLUDE COSTS FOR ALL COORDINATION AND RELATED WORK IN THE BID.
5. EXCAVATIONS IN EXISTING ASPHALT AREAS FOR POWER AND COMMUNICATIONS WORK. THE CONTRACTOR SHALL SAWCUT, EXCAVATE, HAND DIG, BACKFILL, COMPACT AND PATCH ASPHALT PER THE SPECIFICATIONS. LIMITS OF PAVEMENT DEMOLITION AND RESTORATION SHALL BE AS REQUIRED BY CIVIL AND TO SAFELY PERFORM THE POWER AND COMMUNICATIONS INSTALLATIONS. PAVEMENT PATCHING SHALL BE PER CIVIL/ STRUCTURAL REQUIREMENTS.
6. SEE CIVIL DRAWINGS FOR LIMITS OF CAP, SITE EQUIPMENT DEMOLITION, EXISTING AND NEW BELOW GRADE UTILITIES. CONTRACTOR SHALL FIELD COORDINATE EXISTING UTILITIES, UNDERGROUND WORK BY OTHER CONTRACTORS WITH ROUTING OF NEW ELECTRICAL UNDERGROUND INFRASTRUCTURE. CALL FOR, IDENTIFY AND MAINTAIN EXISTING UTILITY LOCATES PRIOR TO ANY EXCAVATIONS.
7. THIS PROJECT WILL HAVE MULTIPLE CONTRACTORS WORKING ON THE SAME SITE TO ACCOMPLISH A COMPLETED PROJECT. CONTRACTOR WILL BE REQUIRED TO SCHEDULE AND COORDINATE WITH ITS/ HUSKY COMMUNICATION EQUIPMENT CONTRACTOR, PORT OF TACOMA MAINTENANCE PERSONNEL, POT OF TACOMA IT STAFF AND WUT TERMINAL TENANT.
8. CONTRACTOR SHALL PROVIDE PULL TAPE IN ALL CONDUIT RUNS WITH CONDUCTORS, COMMUNICATIONS CABLES OR EMPTY. PROVIDE COMPLETE LOOP OF ALL POWER AND COMMUNICATIONS CABLES AROUND ALL FOUR(4) WALLS OF VAULTS PRIOR TO CABLE EXITING VAULT. FOR POWER CONDUCTORS UPSIZED TO REDUCE VOLTAGE DROP AND LARGER THAN TERMINATION LUGS CONTRACTOR SHALL PROVIDE TERMINAL PINS (FINGER SPLICES) TO ACCOMMODATE TERMINATION.

SYMBOLS LEGEND:

- XXXX — BURIED POWER/ COMMUNICATIONS CONDUITS IN SHARED TRENCH. SEE CONDUIT AND WIRE SCHEDULE SHEET E10 AND E11.
- PV / CV — POWER VAULT(PV) AND COMMUNICATION VAULT(CV), 125KIP RATING. SEE VAULT SCHEDULE SHEET E12.
- ELECTRICAL POWER PANEL.
- DUPLEX 120V, 20A. WP = GFI RECEPTACLE IN NEMA 3R CAST BOX WITH "IN USE" NEMA 3R COVER.

SCALE: 1/8"=1'-0"

B PARTIAL ELECTRICAL SITE PLAN (E4)
SCALE: 1/8"=1'-0"

GENERAL NOTES:

1. SEE SHEET E1 FOR GENERAL NOTES.

ELECTRICAL NOTES:

1. COORDINATE POWER/WIRING AND COMMUNICATIONS CONDUIT LOCATIONS IN INTERCOM PEDESTAL. PVC CONDUITS SHALL BE STUBBED 2" ABOVE CONCRETE. PROVIDE 18" MINIMUM POWER WIRING LOOP FOR CONNECTION TO RECEPTACLE BY OTHERS. SEE SHEET C3.04. PROVIDE #4 BARE COPPER GROUND WIRE TO BOND REBAR, ANCHOR BOLTS AND METAL STAIR. LEAVE 24" COIL FOR CONNECTION TO EQUIPMENT GROUND WIRE PROVIDED IN CONDUIT FROM POWER PANEL.

2. COORDINATE POWER/WIRING AND COMMUNICATIONS CONDUIT LOCATIONS IN CHASSIS CAMERA PEDESTAL. SEE SHEET C3.04. PROVIDE #4 BARE COPPER GROUND WIRE TO REBAR AND ANCHOR BOLTS. LEAVE 24" COIL FOR CONNECTION TO EQUIPMENT GROUND WIRE PROVIDED IN CONDUIT FROM POWER PANEL. PROVIDE TWO(2) BEGA 22354K4BRZ19524120V OR EQUAL LIGHT FIXTURES MOUNTED IN PEDESTAL. PROVIDE ASTRONOMICAL, PROGRAMMABLE, 4-CHANNEL LIGHTING CONTROL, NEMA 3R, MOUNTED ADJACENT TO POWER PANEL. TORK, INTERMATIC OR EQUAL.

3. COORDINATE POWER/WIRING, COMMUNICATIONS CONDUIT AND SURFACE PULL BOX LOCATIONS AT T-POLES. SEE SHEET C3.05. PROVIDE TWO(2) LIGHT FIXTURES AND AND STAINLESS STEEL MOUNTING HARDWARE ON POLE AS INDICATED. ILP WPSPYMK30WLEDUNIV4000KCORDX OR EQUAL. PROVIDE #4 BARE COPPER GROUND WIRE TO CONCRETE EMBEDDED REBAR, T-POLE AND ANCHOR BOLTS. LEAVE 24" COIL FOR CONNECTION TO EQUIPMENT GROUND WIRE PROVIDED IN CONDUIT FROM POWER PANEL. ALL CONDUIT ON T-POLE SHALL BE PVC COATED FLEX OR PVCRS WERE EXPOSED. PULL BOXES, JUNCTION BOXES AND LIGHT FIXTURE/CAMERA MOUNTING BOXES SHALL BE RS TYPE, GASKETED PAINTED TWO(2) COATS BLACK. USE STAINLESS STEEL SCREWS AND DO NOT PAINT SCREWS. LIGHTS AND CAMERA CONNECTIONS SHALL BE FROM DOWN FACING HUBS. ITS/HUSKY WILL FURNISH AND INSTALL CAMERAS ON T-POLE. PROVIDE ASTRONOMICAL, PROGRAMMABLE, 4-CHANNEL LIGHTING CONTROL, NEMA 3R, MOUNTED ADJACENT TO POWER PANEL. TORK, INTERMATIC OR EQUAL.

4. STUB AND CAP CONDUITS BELOW GRADE AT LIMITS OF CONSTRUCTION BOUNDARY. DIMENSION LOCATIONS FROM CENTER OF PEDESTAL.

5. WORK FROM THIS POINT BY POT CONTRACTOR NIC. COORDINATE CONDUIT EXTENSION SAWCUTTING, ASPHALT REMOVAL, TRENCHING, BACKFILL, PATCHING FROM THIS LOCATION WITH POT CONTRACTOR. WIRE FROM PANEL 4B TO UNIT SUB BY POT CONTRACTOR.

ELECTRICAL/COMMUNICATIONS TRENCH - TYPICAL ENTIRE SITE
NOT TO SCALE

GENERAL NOTES:

1. SEE SHEET E1 FOR GENERAL NOTES.

ELECTRICAL NOTES:

1. NEW SERVICE ENTRANCE RATED AUTOMATIC TRANSFER SWITCH PRE-ORDERED BY ITS/HUSKY INSTALLED BY CONTRACTOR. SEE POWER RISER SHEET E7.
2. PROVIDE NEW UNDERGROUND CONDUITS. SEE POWER RISER SHEET E7.
3. STUB AND CAP CONDUIT 6" ABOVE ASPHALT. ELBOW AND STUB SHALL BE PVCRS.
4. IN CAP AREAS FROM TOP OF ASPHALT. SEE CIVIL FOR LIMITS OF CAP.
5. ITS/HUSKY HAS PRE-ORDERED SERVICE ENTRANCE RATED ATS AND OPTIONAL STANDBY NEC 702 DIESEL GENERATOR. CONTRACTOR SHALL TAKE DELIVERY ON SITE, OFF LOAD, INSTALL AND TEST. CONTRACTOR SHALL PROVIDE ALL CONSUMABLES (ANTIFREEZE, OIL, LUBRICANTS, FILTERS) FOR ON SITE TESTING. CHANGE ALL FILTERS TO NEW AFTER ACCEPTANCE TEST. CONTRACTOR SHALL PROVIDE REINFORCED CONCRETE PAD AND MOUNT GENERATOR.

EXISTING LIGHTING CONTROL CIRCUIT #1

NOT TO SCALE

ELECTRICAL NOTES:

1. PROVIDE NEW #10 CU IN EXISTING CONDUIT FROM EXISTING CIRCUIT BREAKER ON EACH EXISTING POLE UP TO A NEW 8"x8"x6", NEMA 4, NON-METALLIC BOX WITH COVER LOCATED BETWEEN CROSS ARMS. REMOVE EXISTING LIGHTING BRACKET CROSS ARMS. PROVIDE NEW MOUNTING BRACKET CROSS ARMS PAINTED TWO(2) COATS GREY. ALL METAL PARTS OR EXPOSED GALVANIZED MATERIAL IS NOT ALLOWED. MOUNTING HARDWARE SHALL BE STAINLESS STEEL FOR NEW LIGHT FIXTURES. GARMIRE OR EQUAL. LIGHT FIXTURE MANUFACTURER SHALL PROVIDE AIMING ANGLES, BEAM SPREAD AND MOUNTING POSITIONS FOR FIELD AIMING INSTALLATION BY CONTRACTOR. AREA LIGHTING CALCULATIONS SHALL BE BASED ON ENTIRE LENGTH OF SITE AND THE SITE WIDTH. MINIMUM 3FC WITH MAX/MIN OF LESS THAN 6 FOR THE WEST (MAXWELL RD) HALF OF THE SITE. NO LIGHT SPILL PAST PROPERTY LINE. AS A SHOP DRAWING SUBMITTAL PROVIDE COMPUTER GENERATED PHOTOMETRICS ON SCALED SITE PLAN WITH LIGHT METER READINGS AT 30'x30' SPACINGS. INCLUDE MOUNTING HEIGHT, FIXTURE TYPE, LUMENS PER LIGHT FIXTURE, WATTAGE PER LIGHT FIXTURE AND AIMING COORDINATES FOR EACH. PROVIDE NEW LIGHT FIXTURES 800W, 480V, LED LIGHTS SPECGRADE AFL800WBEAM480V8300LMWTTLGSCNSP10, OR EQUAL BY HOLOPHANE OR HUBBEL.

SCHEDULE NOTES:

1. EXISTING CONDUIT
2. PVC SCHEDULE 80
3. STUB AND CAP AT TOP OF CONCRETE BASE.
4. PVC COATED GRS CONDUIT
5. STUB AND CAP 12" ABOVE FINISHED GRADE.
6. PROVIDE MAXCELL EDGE DETECTABLE 3 CELL INNER DUCT. MAXCELL MXC2003 OR EQUAL EACH CONDUIT.
7. COORDINATE AND INSTALL FIELD WIRING FOR SCALES SUPPLIED WITH SCALE EQUIPMENT.
8. PROVIDE (5)CAT 6 CABLES IN ONE CELL OF INNERDUCT.
9. NOT IN CONTRACT (NIC)
10. REVIEW AND COORDINATE WITH TRUCK INTERCOM MANUFACTURER'S SHOP DRAWINGS. STUB PVC CONDUIT 2" ABOVE TOP OF CONCRETE, WITH 18" WIRE LOOP FOR CONNECTION TO RECEPTACLE BY INTERCOM CABINET SUPPLIER. SEE CIVIL.
11. STUB CONDUIT MINIMUM 6" ABOVE OCR PARTIAL FOUNDATION. LEAVE MINIMUM 24" LOOP OF POWER WIRE FOR EXTENSION BY OCR EQUIPMENT PROVIDER. SEE CIVIL.
12. REVIEW AND COORDINATE POWER CONNECTION WITH GATE ARM MANUFACTURER. COMMUNICATION'S WIRING BY OTHERS. SEE CIVIL.
13. PROVIDE WATER TIGHT SPLICE(S) IN VAULT FOR GROUND WIRE. PROVIDE GROUND WIRE IN INDIVIDUAL CONDUITS TO EACH T-POLE, CHASSIS CAMERA PEDESTALS AND TRUCK INTERCOM PEDESTALS. SEE CIVIL.
14. PROVIDE OUTSIDE PLANT (OSP), 24 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. POT CONTRACTOR NIC.
15. PROVIDE OUTSIDE PLANT (OSP), (4)6 AND (2)12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLES. CABLES SHALL BE INSTALLED IN INDIVIDUAL FIBER CELLS. ITS/HUSKY CONTRACTOR.
16. PROVIDE OUTSIDE PLANT (OSP), 6 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. ITS/HUSKY CONTRACTOR.
17. OUTSIDE PLANT (OSP), (3)6 AND (2)12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLES. CABLES SHALL BE INSTALLED IN INDIVIDUAL FIBER CELLS. PROVIDED BY OTHERS.
18. PROVIDE OUTSIDE PLANT (OSP), 12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. ITS/HUSKY CONTRACTOR.

SCHEDULE NOTES:

1. EXISTING CONDUIT
2. PVC SCHEDULE 80
3. STUB AND CAP AT TOP OF CONCRETE BASE.
4. PVC COATED GRS CONDUIT
5. STUB AND CAP 12" ABOVE FINISHED GRADE.
6. PROVIDE MAXCELL EDGE DETECTABLE 3 CELL INNER DUCT. MAXCELL MXC2003 OR EQUAL EACH CONDUIT.
7. COORDINATE AND INSTALL FIELD WIRING FOR SCALES SUPPLIED WITH SCALE EQUIPMENT.
8. PROVIDE (5)CAT 6 CABLES IN ONE CELL OF INNERDUCT.
9. NOT IN CONTRACT (NIC)
10. REVIEW AND COORDINATE WITH TRUCK INTERCOM MANUFACTURER'S SHOP DRAWINGS. STUB PVC CONDUIT 2" ABOVE TOP OF CONCRETE, WITH 18" WIRE LOOP FOR CONNECTION TO RECEPTACLE BY INTERCOM CABINET SUPPLIER. SEE CIVIL.
11. STUB CONDUIT MINIMUM 6" ABOVE OCR PARTIAL FOUNDATION. LEAVE MINIMUM 24" LOOP OF POWER WIRE FOR EXTENSION BY OCR EQUIPMENT PROVIDER. SEE CIVIL.
12. REVIEW AND COORDINATE POWER CONNECTION WITH GATE ARM MANUFACTURER. COMMUNICATION'S WIRING BY OTHERS. SEE CIVIL.
13. PROVIDE WATER TIGHT SPLICE(S) IN VAULT FOR GROUND WIRE. PROVIDE GROUND WIRE IN INDIVIDUAL CONDUITS TO EACH T-POLE, CHASSIS CAMERA PEDESTALS AND TRUCK INTERCOM PEDESTALS. SEE CIVIL.
14. PROVIDE OUTSIDE PLANT (OSP), 24 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. POT CONTRACTOR NIC.
15. PROVIDE OUTSIDE PLANT (OSP), (4)6 AND (2)12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLES. CABLES SHALL BE INSTALLED IN INDIVIDUAL FIBER CELLS. ITS/HUSKY CONTRACTOR.
16. PROVIDE OUTSIDE PLANT (OSP), 6 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. ITS/HUSKY CONTRACTOR.
17. OUTSIDE PLANT (OSP), (3)6 AND (2)12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLES. CABLES SHALL BE INSTALLED IN INDIVIDUAL FIBER CELLS. PROVIDED BY OTHERS.
18. PROVIDE OUTSIDE PLANT (OSP), 12 FIBER COUNT, LOOSE TUBE, SINGLE JACKET FIBER CABLE. ITS/HUSKY CONTRACTOR.

VAULT SCHEDULE			
ID	DESCRIPTION	LOADING	NOTES
PV1-PV11	CUSTOM 600V POWER VAULTS, SEE DETAIL A, THIS SHEET BY ITS/HUSKY CONTRACTOR	MINIMUM 125 KIP.	1 2 3 4 5 6
CV1-CV11,CV8B	CUSTOM COMMUNICATION VAULT SEE DETAIL A, THIS SHEET BY ITS/HUSKY CONTRACTOR	MINIMUM 125 KIP.	1 2 3 4 5 6

VAULT SCHEDULE NOTES:

1. ALL CONDUITS (2" AND LARGER) ENTERING OR LEAVING VAULTS SHALL USE TERM-A-DUCTS. ALL 3/4", 1" AND 1-1/2" CONDUITS ENTERING OR LEAVING VAULTS MAY USE BLOCK-OUTS WITH BELL ENDS AND GROUTED. PROVIDE REMOVABLE FOAM FILL IN ALL EMPTY CONDUIT OPENINGS. PROVIDE PULL STRINGS IN ALL EMPTY CONDUITS. PROVIDE MAXCELL EDGE DETECTABLE MXC2003 (3 CELL) OR EQUAL IN ALL FOB LABELED COMMUNICATIONS CONDUITS. ITS/HUSKY CONTRACTOR SHALL PROVIDE CONDUIT LABELS FOR ALL CONDUITS ENTERING AND LEAVING VAULTS. PROVIDE PHENOLIC LABEL ATTACHED TO VAULT WALL WITH TWO (2) PLASTIC INSERTS AND STAINLESS STEEL SCREWS ADJACENT TO EACH CONDUIT. PHENOLIC LABEL SHALL HAVE CONDUIT ID ENGRAVED AS INDICATED ON CONDUIT AND WIRE SCHEDULE DRAWINGS.
2. SEE SPECIFICATION SECTION 26 71 19 FOR ADDITIONAL VAULT INSTALLATION REQUIREMENTS.
3. ALL WIRE (POWER AND COMMUNICATIONS) SHALL COMPLETELY LOOP AROUND VAULT WALLS PRIOR TO EXITING VAULT.
4. CONTRACTOR SHALL PROVIDE CAST LABEL ON LID TO READ "ELECTRIC" OR "COMMUNICATIONS". PROVIDE FIELD STAMPED LABEL ON LID WITH VAULT ID TO MATCH ELECTRICAL SITE PLANS.
5. PROVIDE BOLTED GROUND LUG(S) ON LID AND FRAME. PROVIDE #2 BARE CU GROUND IN EACH VAULT TO TWO (2) 3/4" X 10'-0" GROUND RODS.
6. PROVIDE STENCIL PAINTED, VAULT KIP RATING ON INSIDE OF VAULT DIRECTLY BELOW LID. MINIMUM 4" HIGH LETTERS.

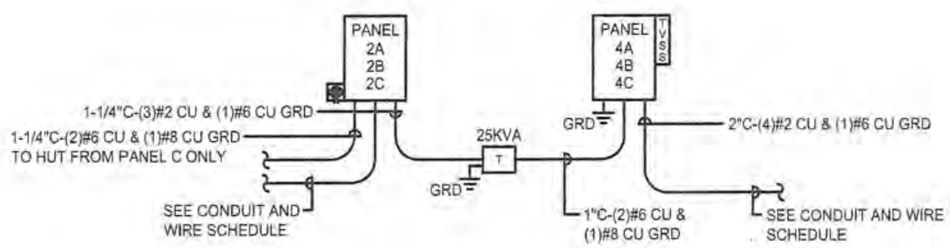
NOTE: AT PANEL LOCATION 4A THE ITS/HUSKY WEIGH-IN MOTION VENDOR WILL PROVIDE TWO(2) ADDITIONAL CABINETS NOT SHOWN AT THIS LOCATION. PROVIDE (1) ADDITIONAL POST WITH STRUTS. CABINETS SHALL BE MOUNTED ON EAST SIDE OF STRUT ONLY.



PARTIAL POWER RISER DIAGRAM - TYPICAL (B / E13)

NOT TO SCALE

ELECTRICAL NOTES:

1. PROVIDE 8'-0" SECTION OF 3" RIGID GALVANIZED STEEL CONDUIT WITH THREADED END CAP. PROVIDE 8" ROUND x 3'-0" DEEP, 3000 PSI CONCRETE BASE AND EMBED CONDUIT 3'-0" BELOW FINISHED GRADE. PAINTED OVER GALVANIZE, 2 COATS SAFETY YELLOW. TYPICAL OF TWO(2) EACH LOCATION.
2. PROVIDE (3)1-5/8" HOT DIP, PAINTED (2 COATS SAFETY YELLOW) OVER GALVANIZED STRUT EACH SIDE BETWEEN RIGID STEEL CONDUIT POSTS FOR MOUNTING EQUIPMENT. DRILL CONDUIT AND PROVIDE STAINLESS STEEL MOUNTING HARDWARE FOR STRUT AND EQUIPMENT MOUNTING AT EACH LOCATION.
3. PROVIDE NEMA 3R, TRANSIENT SURGE PROTECTIVE DEVICE (TVSS), SIEMENS TPS3E1115D2 OR EQUAL. PROVIDE 3/4" CONDUIT NIPPLE AND 5#10 CU, WITH 30/3P CIRCUIT BREAKER IN PANEL.
4. PROVIDE 120V, 20A, GFCI DUPLEX RECEPTACLE WITH A NEMA 3R "IN-USE" COVER. PROVIDE 3/4"CONDUIT NIPPLE AND 2-#12 CU CONDUCTORS, PLUS GROUND AND CONNECT TO PANEL.
5. PROVIDE (2)10'-0" x 3/4" COPPER CLAD STEEL GROUND RODS SPACED NO LESS THAN 10 FEET APART. PROVIDE (1) GROUND WELL (ERITECH #T416F WITH COVER OR EQUAL). PROVIDE 3/4"PVCRS-#6 BARE CU TO GROUND WELL AND BETWEEN EACH GROUND ROD. CONNECT TO POWER PANEL AND COMMUNICATIONS BOX.
6. PROVIDE 4" CONCRETE PAD, 3000 PSI, EXTENDING 6" PAST TRANSFORMER FOOTPRINT ON ALL SIDES. BOLT TRANSFORMER TO CONCRETE PAD.
7. PROVIDE NEMA 4X, 36"W x 36"H x 12"D, 316 STAINLESS STEEL ENCLOSURE WITH HINGED AND PADLOCKABLE DOOR, DIN RAIL AND GROUND BAR. PROVIDE MOTOR RATED TOGGLE SWITCH, (2)DUPLEX 20A, 125V RECEPTACLES IN SINGLE BOX WITH COVER IN LOWER RIGHT HAND CORNER. ITS/HUSKY COMMUNICATIONS SYSTEMS VENDOR WILL PROVIDE COMMUNICATIONS EQUIPMENT, PULL WIRE AND TERMINATE IN CABINET AND AT EQUIPMENT.
8. NEMA 3R, 304 STAINLESS STEEL, PAINTED, DRY-TYPE TRANSFORMER, 25KVA, 480V TO 240V, 1PH ON 4" HIGH CONCRETE PAD.
9. PROVIDE NEMA 4X, 24"W x 24"H x 8"D, 316 STAINLESS STEEL ENCLOSURE WITH HINGED AND PADLOCKABLE DOOR, DIN RAIL AND GROUND BAR. PROVIDE MOTOR RATED TOGGLE SWITCH, (2)DUPLEX 20A, 125V RECEPTACLES IN SINGLE BOX WITH COVER IN LOWER RIGHT HAND CORNER. ITS/HUSKY WILL PROVIDE EQUIPMENT, CAMERAS AND MOUNTS. CONTRACTOR TO MOUNT EQUIPMENT, PULL (5)CAT 6 CABLES FROM HUT TO EQUIPMENT, TERMINATE AND TEST BOTH ENDS OF CABLE. PROVIDE (2)2"PVCRS, 70'-0" UP POLE TO (2)8" x 8" x 4" NEMA 4X, 316 STAINLESS STEEL BOXES. SEE NOTE 1 THIS SHEET FOR CABINET MOUNTING.

COVER SHEET AND SHEET INDEX

WO-01

SHEET NO
SHEET 1 OF 9

GENERAL

- The following special provisions are to be used in conjunction with the "2010" Standard Specifications for Road, Bridge and Municipal Construction" and "Standard Plans for Road, Bridge and Municipal Construction" as prepared by the Washington State Department of Transportation (WSDOT). State Standard Specifications are available through WSDOT, by mail at Pre-Contract Section, P.O. Box 47408, Olympia, WA 98504-7408, or by telephoning (360) 705-7430.
- Any inconsistency between these work order drawings and the 2010 Standard Specifications or the WSDOT Standard Plans shall be resolved by the following order of precedence (e.g., 1 presiding over 2, 3, and so forth):
  1. Approved Work Order Drawings
  2. 2010 Standard Specifications
  3. WSDOT Standard Plans
- Any revisions to these plans must be reviewed and approved by the City of Tacoma Department of Public Works prior to any implementation in the field.
- Contractors shall familiarize themselves with the site and shall bring any discrepancies to the attention of the Engineer prior to undertaking the affected work.
- Any discrepancy in these drawings, specifications, these notes, and the site conditions shall be reported to the Engineer, who shall correct such discrepancy in writing after reviewing any changes. Any work done by the Contractor after the discovery of such discrepancy shall be done at the Contractor's risk. The Contractor shall verify and coordinate the dimensions among all drawings prior to proceeding with any work.
- A pre-construction meeting shall be held at the City of Tacoma with the applicant, contractor, and City Inspectors prior to issuance of a permit.

ADDITIONAL PERMITS

- Separate permits are required for all retaining walls, grading, and erosion control. Adherence to all conditions of these permits is required as a part of this plan.
- Separate permits are required for sidewalk installation as well as curb and gutter removal and driveway construction when constructed at building permit stage.
- Separate storm and sanitary sewer connection permits are required for connections to the sanitary or storm sewer system.

UTILITIES

- The existing underground utilities shown hereon are based upon existing record drawings and are not guaranteed to be accurate, nor all-inclusive.
- All utilities must be verified prior to construction. If the project requires any excavation, the developer/contractor is required to call the Utility Underground Location Center at (800) 424-5555 at least two days before starting such excavation in accordance with RCW 19.122.
- It shall be the Contractor's responsibility to protect, in place, all utilities and/or structures whether shown or not shown on this plan. Damage due to the Contractor's operations shall be repaired at the Contractor's expense.

EXCAVATION

- If workers enter any trench or other excavation four feet or more in depth that does not meet the open pit requirements of Section 2-09.3(3)B, it shall be shored and cribbed. All trench safety systems shall meet the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Contractor alone shall be responsible for all worker safety, and neither the City of Tacoma nor the Engineer of record assumes any responsibility.

PAVEMENT PREPARATION / RESTORATION

- Additional removal and replacement of pavement may be required to provide proper transition/crown as directed by the City of Tacoma Construction Inspector in the field.
- The street sections shown on this plan are designed to be placed upon a firm and unyielding base.
- Subgrade compaction shall be tested by a professional geotechnical consultant prior to placing base material.
- Pavement restoration shall be constructed in accordance with the City of Tacoma Restoration policy.

HOT MIX ASPHALT

- The hot mix asphalt shall be HMA CL 1/2 inch PG 64-22. Mix design shall be based on Standard Plan PD-01-Pavement Design Standards.
- Section 5-04.3(8)A 'Acceptance Sampling and Testing' of the Standard Specifications is deleted.
- All hot mix asphalt shall be compacted to a minimum of 92 percent of the maximum density as determined by AASHTO T209. All hot mix asphalt utilized shall be considered compactable. The level of compaction attained will be determined as the average of not less than 5 nuclear density gauge tests taken on the day the mix is placed (after completion of the finish rolling) at randomly selected locations within each lot. The quantity represented by each lot will be no greater than a single day's production or approximately 400 tons, whichever is less.
- All testing results shall be provided to the City within 48 hours of the test.
- Control lots not meeting the minimum density standard shall be removed and replaced with satisfactory material.
- In addition to the randomly selected locations for test of the control lot, the Engineer reserves the right to test any area which appears defective and to require further compaction of areas that fall below acceptable density readings. These additional tests shall not impact the compaction evaluation of the entire control lot.
- Hot mix asphalt pavement shall not be placed on any traveled way between October 1 and April 1 without written approval from the Construction Division Manager.
- No traffic shall be allowed on any newly placed pavement without the approval of the Inspector.

CONCRETE

- Concrete pavement mix design shall be based on Standard Plan PD-01-Pavement Design Standards.
- Cold Weather Concrete Work. The following requirements for placing concrete shall be in effect from November 1 to April 1:
  1. The Engineer shall be notified at least 24 hours prior to any concrete placement.
  2. Weather permitting, all concrete placement shall be completed no later than 2:00 p.m. each day.
  3. Where forms have been placed and the subgrade has been subjected to severe frost, no concrete shall be placed until the ground is completely thawed. At that time, the forms shall be adjusted and subgrade repaired as determined by the Engineer.
- Curing of concrete shall be in accordance with Section 5-05.3(13) of the Standard Specifications.
- The slump for concrete used for sidewalks shall not exceed four inches +/- one inch.
- Sidewalks and curb ramps shall be constructed in accordance with ADA Standards for Accessible Design, 28 CFR, Part 35 and as supplemented by the Public Works Right of Way Accessibility Guidelines (PROWAG).

SANITARY AND STORM SEWERS

- 7-08.3(2)G Jointing of Dissimilar Pipe:

Dissimilar pipe shall be joined by use of rigid couplings manufactured by Romac Industries, Inc., or Engineer approved equal.

- 7-08.3(2)F Plugs and Connections:

Rigid Couplings, manufactured by Romanc Industries, Inc., or Engineer approved equal, shall be used at any pipe joint in which ball and spigot or fused joints are not used. Flexible couplings are not permitted.

- Section 7-04 of the Standard Specification is deleted. Storm sewers shall meet all the requirements of sanitary sewers.
- Sewers and appurtenances shall be cleaned and tested after backfilling by either exfiltration or low-pressure air method at the option of the Contractor, except where the ground water table is such that the Engineer may require the infiltration test.
- All sanitary and storm sewers shall be video inspected by City Forces prior to paving where paving occurs over sewers. All other sewers will be video inspected prior to final acceptance.
- All abandoned pipes encountered during construction and new storm and sanitary sewer stub outs shall be sealed with a watertight pipe plug.
- All frames and grates for standard catch basin inlets on this project shall be "vaned" type and shall conform to that shown on WSDOT Standard Plan No. B30.30-00
- Recycled concrete shall not be used for pipe zone backfill.

MISCELLANEOUS

- Any fence or structure replaced and/or relocated shall be maintained to remain functional.
- Independent quality assurance sampling and testing will be provided by a certified independent laboratory for all improvements within the right-of-way. All special inspection reports shall be forwarded to the Construction Division Office on a monthly basis, and / or as requested by the construction inspector.
- The Contractor shall only use those hydrants designated by the agency in charge of water distribution and in strict accordance with its requirements for hydrant use. Water applied by the Contractor shall not be from residential sources.

PRIVATE WORK ORDER GENERAL NOTES

GRADING, EXCAVATION, AND EROSION CONTROL NOTES

- All work is to be done in accordance with the approved grading plan, soils report, the most current WSDOT Standard Specification For Road, Bridge And Municipal Construction, and the current Tacoma Surface Water Management Manual.
- When construction operations are such that debris from the work is deposited on the streets, the Contractor shall, as a minimum, remove on a daily basis any deposits or debris which may accumulate on the roadway surface. Should daily removal be insufficient to keep the streets clean, the Contractor shall perform removal operations on a more frequent basis. If the City of Tacoma Construction Inspector determines that a more frequent cleaning is impractical or if the Contractor fails to keep the streets free from deposits and debris resulting from the work, the Contractor shall, upon order of the City of Tacoma Construction Inspector, provide facilities for, and remove all clay or other deposits from the tires or between wheels before trucks or other equipment will be allowed to travel over paved streets. Should the Contractor fail or refuse to clean the streets in question, or the trucks or equipment in question, the City of Tacoma Construction Inspector may order the work suspended at the Contractor's risk until compliance with the Contractor's obligations is assured, or the City of Tacoma Construction Inspector may order the streets in question cleaned by others and such costs incurred by the City in achieving compliance with these requirements, including cleaning of the streets, shall be deducted from the work order account.
- The Contractor shall protect existing drainage structures using acceptable methods and materials as shown on this plan. If the methods and materials as shown on this plan are not adequate, the City of Tacoma Construction Inspector may require additional/alternative methods for erosion control and/or protection of existing drainage structures. Additional or alternative methods shall be submitted by the design engineer and accepted by the City of Tacoma Construction Inspector. Any damage caused to the City of Tacoma storm sewer system as a result of the work outlined on this plan shall be the sole responsibility of the Contractor. Resolving said damage may include, but not be limited to, the cleaning of the drainage system in question by the Contractor.
- Watering provisions when applicable must be in place to prevent dust from becoming air borne. Violation of this condition will result in a stop work order until corrected.
- Fill that will support a street section or other structures shall be placed under the inspection of a licensed Geotechnical Engineer. Soil to be placed shall be tested and compacted to 95 percent of its maximum density. Engineer shall document existing site conditions, soil and its placement and allowable bearing capacity submitted. Standard requirements for cuts and fill are contained in the WSDOT Standard Specifications For Road, Bridges, and Municipal Construction.
- A stormwater pollution prevention plan is required for all work order projects. The plan must be in accordance with the current Tacoma Surfacewater Management Manual.

HYDROSEEDING

- All areas that are cleared and grubbed, graded, excavated or filled are subject to hydroseeding. Any of these areas that are left unpaved or unlandscaped shall be hydroseeded under the direction and approval of the Construction Inspector.
- Hydroseed only during the periods of April 1 though May 31 or September 1 though October 15. This hydroseeding requirement may be met during the months of June through August if irrigation is provided.
- Maintain hydroseeding throughout the winter wet season.

EROSION CONTROL MEASURES

A. Minimum Erosion Control measures shall include:
   1. Construction entrance.
   2. Perimeter erosion/sedimentation control.
   3. Protection of catch basins.
   4. Stabilization of exposed soils.
B. All erosion control shall be in place prior to clearing.
C. Erosion control measures shall be maintained at all times to the approval of the Construction Inspector.
D. Should temporary erosion and sedimentation control measures, as shown on plans become inadequate, the contractor shall install facilities as necessary to protect adjacent properties and the City of Tacoma drainage system, meeting approval of the Construction Inspector.
E. Grading, excavation, and filling prohibited. No permits to perform grading, excavation, or filling during the period from October 1st through March 31 shall be issued. EXCEPTION: The Building Official may approve a grading, excavation, or filling plan prepared by a licensed Civil or Geotechnical Engineer which specifically addresses the winter rain season and the associated erosion problems, and issue a permit based on such plan.
F. Call for inspection of the Construction Inspector upon completion of:
   1. Staking of clearing limits.
   2. Installation of erosion control and prior to site grading.
   3. Prior to removal of erosion control devices.
G. All material removed from site shall be placed only at a permitted site. Verify location of destination of material prior to exportation.
H. Traffic control provisions as approved by the traffic engineer shall be adhered to at all times.
I. Trees to be removed shall be clearly marked for removal. Trees to be saved shall be fenced with barricade fence at the drip line (outer edge of tree branches) to keep construction vehicles from compacting root zone and killing trees. This fencing shall be maintained until construction ends.

RECORD DRAWINGS CRITERIA FOR ACCEPTANCE OF ALL PRIVATE WORK ORDERS

- All revisions to the approved plans must be approved by the City of Tacoma Public Works Construction Division prior to implementation of the changes.
- A determination at the time of proposal shall be made whether the revision can be addressed with red line drawings submitted as a part of the record drawings or will require formal submission for approval.
- Record drawings shall show the station, offset, centerline and gutter flowline elevations, to nearest 0.01 foot, for all horizontal and vertical roadway alignment changes, at the intersection end of radius points and at the beginning and end of new paving.
- Record drawings shall show the station, offset, invert, and rim elevations to the nearest 0.01 foot for all storm and sanitary sewer structures. (i.e.: manholes, catch basins, etc.)
- After any new storm and/or sanitary sewer(s) have been cleaned and the manholes channeled, the main(s) shall be televised to provide a record of the constructed conditions and to verify side sewer connection locations by the City of Tacoma Public Works Sewer Maintenance Division.
- The property side ends of the side sewers shall be marked in the field by means of a 2-inch by 4-inch board and locate wire that extends from the flow line of the side sewer to at least 1 foot above the finished lot grade. Record drawings shall show all side sewers and shall locate them by measurements from permanent objects. (i.e.: curb, property corner, etc.) In addition, the depth of all side sewers shall be noted on the record drawings and locate board.
- Record drawings shall be received and accepted prior to issuing side sewer connection permits or release of performance bonds.
- Record drawings shall show vertical and horizontal datum for survey monuments (existing or new construction) within the limits of the project.
- Record drawings shall consist of a clean set of approved work order drawings with all changes noted above shown in red ink.
- Record drawings must be submitted within 30 days of substantial completion or City survey crews will collect the necessary data and bill against the work order.

MONUMENT REMOVAL PERMIT PROCESS

"No survey monument shall be removed or destroyed (the physical disturbance or covering of a monument such that the survey point is no longer visible or readily accessible) before a permit is obtained from the Department of Natural Resources (DNR)." WAC 332-120-030(2) states "It shall be the responsibility of those performing construction work or other activity (including road and street resurfacing projects) to adequately search the records and the physical area of the proposed construction work or other activity for the purpose of locating and referencing any known or existing survey monuments." Construction shall not commence until WAC outlined in Chapter 332-120 is complied with.

SEWERS AND STORM

- Clearing stakes if needed.
- Stakes every 50 feet plus grade breaks. Try to maintain 12 foot offsets in streets and 8 foot offsets in alleys.
- Double offsets at manholes and catch basins (ahead and back stakes at angle points).
- Catch basin station shall be to the centerline of the basin. Catch basin offsets shall be to the face of the curb.

RESIDENTIAL STREETS

- Clearing stakes as needed.
- Slope stakes every 50 feet and grade breaks if cuts or fills exceed 2 feet.
- Curb stakes every 50 feet and grade breaks, on 4 foot offset to the face of curb. Curb stakes are set to the top of curb grade (Blue Tops).
- Also stake the beginning and end of all approaches.
- No centerline of street grades unless the street grade is warped. If street grades are needed, set blue tops for each course.

ARTERIAL STREETS

- Clearing stakes as needed.
- Slope stakes every 50 feet and grade breaks if cuts or fills exceed 2 feet.
- Curb stakes every 50 feet and grade breaks, on 4 foot offset to the face of curb.
- Curb stakes are set to the top of curb grade (Blue Tops). Also stake the beginning and end of all approaches.
- Stake centerline and quarterline grade every 50 feet and grade breaks at grade for each course.

ALLEYS

- Stake both sides every 50 feet and grade breaks, on a 2 foot offset to the edge of paving, with a cut or fill to edge of paving on high side and flow line on low side.

SIDEWALKS

- Offsets for walks are set on 50' intervals and grade breaks normally at 2 foot to edge of walk and at edge of walk grade (Blue Tops).
- Sidewalk alignment is normally at 5 feet from the face of curb. No walk grades are needed if curbs are built.

HORIZONTAL AND VERTICAL CURVES

- Grade stakes must be set every 25 feet and grade breaks with a minimum of 3 stakes for each curve. Radius points on street Returns.

GENERAL NOTES

1. ALL LOCATIONS OF EXISTING UTILITIES SHOWN HAVE BEEN ESTABLISHED BY FIELD SURVEY OR OBTAINED FROM AVAILABLE RECORDS AND SHOULD BE CONSIDERED APPROXIMATE ONLY AND NOT NECESSARILY COMPLETE. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO INDEPENDENTLY VERIFY THE ACCURACY OF ALL UTILITY LOCATIONS SHOWN AND TO FURTHER DISCOVER AND PROTECT ANY OTHER UTILITIES NOT SHOWN WHICH MAY BE AFFECTED BY THE IMPLEMENTATION OF THIS PLAN. CONTRACTOR SHALL VERIFY LOCATION, DEPTH, SIZE, TYPE AND CONDITION OF EXISTING UTILITIES BEFORE CONSTRUCTION.

2. THE CONTRACTOR SHALL HIRE, USE, AND PAY FOR SERVICES OF PRIVATE LOCATING COMPANY PRIOR TO STARTING WORK IN ANY AREA. CONTRACTOR SHALL LOCATE AND PROTECT ALL UTILITIES DURING CONSTRUCTION AND SHALL ALSO CONTACT THE UNDERGROUND UTILITIES LOCATION SERVICE (1-800-424-5555) AT LEAST 48 HOURS PRIOR TO CONSTRUCTION.

3. CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS AT THE SITE BEFORE STARTING WORK AND SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES.

4. SLOPE OF FINISHED GRADE SHALL MATCH EXISTING ON ALL SIDES AND EDGES.

5. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN TEMPORARY EROSION AND SEDIMENTATION CONTROL FACILITIES AS REQUIRED IN THE SPECIFICATIONS AND TEMPORARY EROSION AND SEDIMENTATION CONTROL (TESC) PLANS. SEE TEMPORARY EROSION AND SEDIMENT CONTROL DRAWINGS.

6. ALL DEVIATIONS FROM THESE PLANS SHALL BE RECORDED ON A SET OF "AS-BUILT" DRAWINGS AS REQUIRED IN THE SPECIFICATIONS.

7. EXISTING UTILITIES WHICH ARE DAMAGED DUE TO CONSTRUCTION WORK SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE AND INSPECTED AND ACCEPTED BY UTILITY OWNER'S REPRESENTATIVE PRIOR TO BACKFILLING.

8. THE CONTRACTOR SHALL KEEP PAVED AREAS ADJACENT TO THE SITE CLEAN AT ALL TIMES BY SWEEPING DAILY. WASHING OF THESE AREAS WILL NOT BE ALLOWED WITHOUT PRIOR APPROVAL.

9. PARTS OF THE NORTHERN WORK ARE WITHIN AN OPERATING SECURED TERMINAL. ALL OF THE CONTRACTORS PERSONNEL ARE REQUIRED TO HAVE A VALID TWIC CARD ON THEIR PERSON WHEN ON SITE. REFER TO THE SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.

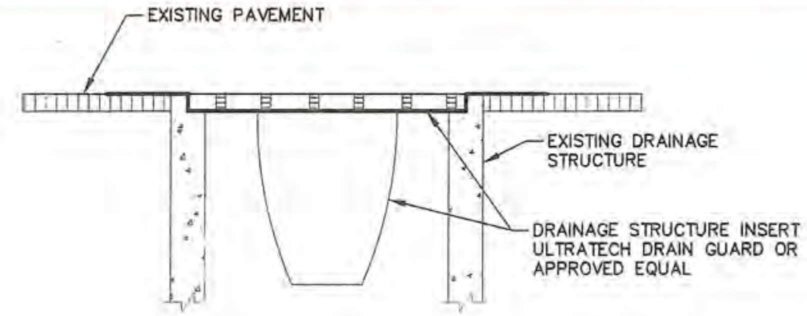
TESC NOTES

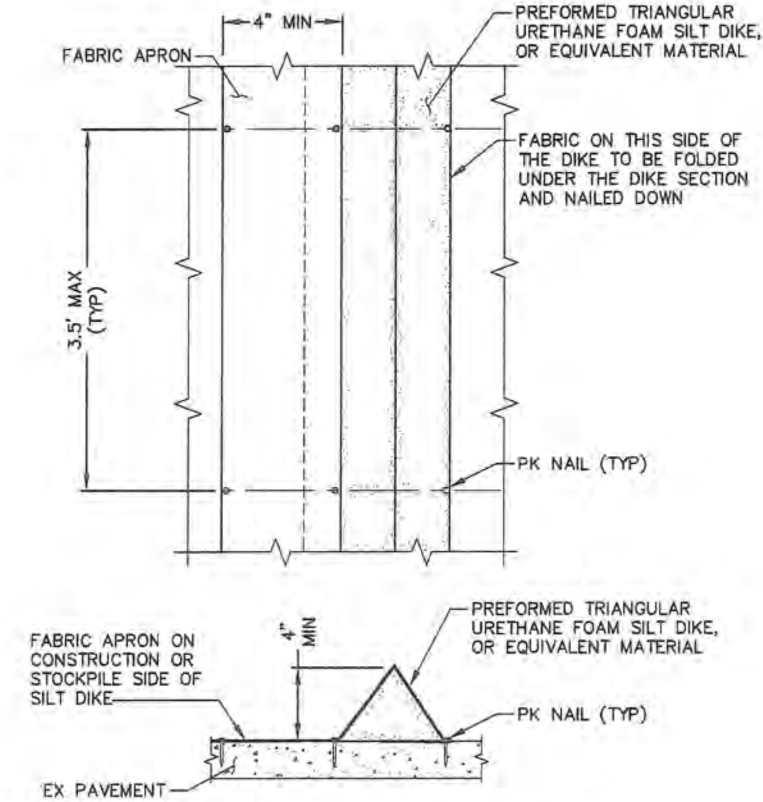
1. EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED FOR THE SITE TO PREVENT ERODED SEDIMENT AND TURBID WATER FROM ENTERING THE PORT STORM DRAINAGE SYSTEM, RIGHT-OF-WAY, AND/OR ADJACENT PROPERTY DURING AND FOLLOWING CONSTRUCTION UNTIL ENTIRE SITE HAS BEEN STABILIZED.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE RESULTING FROM ON-SITE EROSION CAUSING SEDIMENT TO BE DEPOSITED OFF SITE. IF SEDIMENT IS TRANSPORTED ONTO A ROAD SURFACE, THE ROADS SHALL BE CLEANED IMMEDIATELY USING A METHOD ACCEPTABLE TO THE ENGINEER AND/OR THE CITY OF TACOMA. IF A SWEEPER IS USED, IT SHALL BE A REGENERATIVE AIR SWEEPER.
3. THE IMPLEMENTATION OF THESE TEMPORARY EROSION AND SEDIMENT CONTROL (TESC) PLANS AND THE CONSTRUCTION, MAINTENANCE, REPLACEMENT, AND UPGRADING OF THESE TESC FACILITIES ARE THE RESPONSIBILITY OF THE CONTRACTOR UNTIL ALL CONSTRUCTION IS COMPLETED AND ACCEPTED AND SHALL BE CONDUCTED IN ACCORDANCE WITH CITY OF TACOMA CONSTRUCTION STORMWATER CONTROL TECHNICAL REQUIREMENTS AND ALL OTHER APPLICABLE STANDARDS AND REGULATIONS.
4. THE TESC FACILITIES SHOWN ON THIS PLAN MUST BE CONSTRUCTED IN CONJUNCTION WITH PAVEMENT REMOVAL AND/OR DEMOLITION ACTIVITIES, AND IN SUCH A MANNER AS TO ENSURE THAT ERODED SEDIMENT OR TURBID WATER DOES NOT ENTER THE DRAINAGE SYSTEM, ROADWAYS, OR VIOLATE APPLICABLE WATER STANDARDS.
5. THE TESC FACILITIES DEPICTED ON THESE DRAWINGS ARE INTENDED TO BE MINIMUM REQUIREMENTS TO MEET ANTICIPATED SITE CONDITIONS. AS CONSTRUCTION PROGRESSES AND UNEXPECTED OR SEASONAL CONDITIONS DICTATE, THE CONTRACTOR SHOULD ANTICIPATE THAT MORE EROSION AND SEDIMENTATION CONTROL FACILITIES WILL BE NECESSARY TO ENSURE COMPLETE SILTATION CONTROL ON THE PROJECT SITE. DURING THE COURSE OF CONSTRUCTION, IT SHALL BE THE OBLIGATION AND RESPONSIBILITY OF THE CONTRACTOR TO ADDRESS ANY NEW CONDITIONS THAT MAY BE CREATED BY THE CONTRACTOR'S ACTIVITIES AND TO PROVIDE ADDITIONAL FACILITIES, OVER AND ABOVE THESE MINIMUM REQUIREMENTS, AS MAY BE NEEDED TO PROTECT ADJACENT PROPERTIES AND WATER QUALITY OF THE RECEIVING DRAINAGE SYSTEM AND AS REQUIRED BY THE ENGINEER.
6. THE TESC FACILITIES SHALL BE INSPECTED AND MAINTAINED BY THE CONTRACTOR AS NOTED IN DIVISION 01 OF THE CONTRACT SPECIFICATIONS AS NECESSARY TO ENSURE THEIR CONTINUED FUNCTIONING UNTIL CONSTRUCTION IS COMPLETED AND POTENTIAL FOR ON-SITE EROSION HAS PASSED.
7. IF EROSION CONTROL FACILITIES FAIL, THEY SHALL BE REPAIRED OR REPLACED IMMEDIATELY UPON RECEIVING VERBAL NOTICE OF SAID FAILURE BY THE CONTRACTOR FROM ENGINEER OR CITY OF TACOMA.
8. TESC FACILITIES ON INACTIVE SITES SHALL BE INSPECTED AND MAINTAINED A MINIMUM OF ONCE A MONTH OR WITHIN 24 HOURS FOLLOWING A STORM EVENT.
9. REFER TO SPECIFICATIONS FOR REQUIREMENTS TO MAINTAIN AND CLEAN DRAINAGE STRUCTURE INSERTS. ALL DRAINAGE STRUCTURES AND CONVEYANCE LINES SHALL BE CLEANED PRIOR TO WORK COMPLETION. THE CLEANING OPERATION SHALL NOT FLUSH SEDIMENT LADEN WATER INTO THE DOWNSTREAM SYSTEM.
10. THE CONTRACTOR SHALL PUT PLASTIC DOWN BEFORE STOCKPILING AND PROTECT STOCK PILE AREAS FROM RELEASE OF ERODED SEDIMENT OR TURBID WATER. STOCK PILES SHALL BE COVERED WITH PLASTIC AT ALL TIMES WHILE NOT IN USE TO KEEP THE STORED MATERIAL DRY.
11. ALL DISTURBED AREAS SHALL BE STABILIZED BY ACCEPTABLE METHODS FOR THE PREVENTION OF ON-SITE EROSION AFTER COMPLETION OF CONSTRUCTION.
12. EXISTING PAVED ROADS MAY BE USED AS CONSTRUCTION ENTRANCES.
13. CONTRACTOR SHALL REMOVE ALL TEMPORARY TESC FACILITIES UPON COMPLETION OF WORK IN EACH WORK AREA.



NOTES:

1. ANY ACCUMULATED SEDIMENT ON OR AROUND THE FILTER FABRIC SHALL BE REMOVED. ALL SEDIMENT SHALL BE DISPOSED OF OFF-SITE.
2. REFER TO SPECIFICATION SECTION 01 57 13, PARAGRAPH 3.03B FOR REQUIREMENTS TO MAINTAIN AND CLEAN DRAINAGE STRUCTURE INSERTS.

1 / VARIES — **TEMPORARY DRAINAGE STRUCTURE INSERT DETAIL**
SCALE: NTS



TRIANGULAR SILT DIKE NOTES

1. PK NAILS SHALL BE PLACED WHERE THE UNITS OVERLAP AND IN THE CENTER OF A 7-FOOT UNIT AS SHOWN ON THE DIKE PLAN.
2. ALTERNATE APPROVED HOLD DOWN DEVICE MAY BE SUBSTITUTED FOR PK NAILS (WIRE STAPLES, ETC.).

2 / VARIES — **TEMPORARY TRIANGULAR SILT DIKE**
SCALE: NTS

NOTE

1. ALTERNATE MEANS TO CONTROL SEDIMENT ON PAVEMENT MAY BE SUBSTITUTED FOR TRIANGULAR SILT DIKES SUBJECT TO ENGINEER APPROVAL.

OVERALL ELECTRICAL SITE PLAN

SCALE: 1"=100'-0"

GENERAL NOTES:

1. ALL AERIAL FIBER OPTIC CABLE INSTALLED ON EXISTING TACOMA POWER(TPU), CENTURY LINK POLES ALONG PORT OF TACOMA ROAD SHALL BE INSTALLED AND LABELED (POT AND ITS/HUSKY) PER TPU STANDARDS AND REQUIREMENTS. TPU CONSTRUCTION STANDARDS ARE AVAILABLE ON ELECTRICAL CONSTRUCTION STANDARDS-MYTPU.ORG. CONTRACTOR SHALL CONTACT TPU, F & BM GROUP (PWRJOINTUTILITIES@CI.TACOMA.WA.US) PRIOR TO STARTING WORK AND COORDINATE WORK WITH TPU. THE PORT OF TACOMA HAS CONTRACTED WITH TPU FOR TREES UNDER EXISTING AERIAL LINES TO BE TRIMMED PRIOR TO START OF CONSTRUCTION.
2. POTM WILL SUPPLY THREE(3) EXISTING REELS OF 3-CELL(MAXCELL) FIBER OPTIC INNER DUCT TO THE CONTRACTOR AT THE CONSTRUCTION SITE FOR INSTALLATION AS PART OF THIS PROJECT. CONTRACTOR SHALL DOCUMENT TOTAL LENGTH OF INNER DUCT INSTALLED AND RETURN ANY REMAINING INNER DUCT TO POTM AT THEIR FACILITY.
3. THERE WILL BE MULTIPLE CONTRACTORS, POTM, IT, ITS/HUSKY CONTRACTORS WORKING, FURNISHING OR INSTALLING EQUIPMENT AT LOT F. WUT TENANT WILL ALSO BE USING PORTIONS OF LOT F DURING CONSTRUCTION. THIS CONTRACTOR WILL NEED TO COORDINATE WITH AND INSTALL EQUIPMENT PROVIDED AS PART OF THIS WORK.
4. ELECTRICAL REQUIREMENTS ARE NOT LIMITED TO ELECTRICAL DRAWINGS AND SPECIFICATIONS. THERE IS ADDITIONAL ELECTRICAL WORK REQUIRED TO BE INCLUDED IN THE BID, INDICATED ON CIVIL AND DRAWINGS. ADDITIONAL ELECTRICAL WORK REQUIRED IN THE BID IS ALSO LOCATED IN THE SPECIFICATIONS. CONTRACTOR SHALL REVIEW ALL CIVIL AND SPECIFICATIONS FOR ADDITIONAL ELECTRICAL INFORMATION AND INCLUDE COSTS FOR THIS WORK IN THE BID.
5. THE CONTRACTOR SHALL BE FULLY RESPONSIBLE FOR THE LOCATION AND PROTECTION OF ALL EXISTING UTILITIES. THE CONTRACTOR SHALL VERIFY ALL UTILITY LOCATIONS PRIOR TO CONSTRUCTION BY CALLING THE UNDERGROUND LOCATED LINE AT 1-(800)-424-5555 A MINIMUM OF 48 HOURS PRIOR TO ANY EXCAVATION. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING ALL LOCATE MARKS ONCE THE UTILITIES HAVE BEEN LOCATED.

CONDUIT AND CONDUCTOR SCHEDULE:

1. (E)4"C WITH (E)3-CELL MAXCELL FABRIC INNER DUCT
PROVIDE (2)NEW 48 FIBER COUNT, LOOSE TUBE, SINGLE JACKET OUTSIDE PLANT FIBER CABLES.

2. (N)(2)4"SCHEDULE 80 PVC
PROVIDE (1)4"C-EMPTY WITH PULLSTRING AND
PROVIDE (1)4"C WITH (1)-MAXCELL 3-CELL INNERDUCT
(1)-MAXCELL INNERDUCT CELL WITH (2)48 FIBER COUNT, LOOSE TUBE, SINGLE JACKET, OUTSIDE PLANT, FIBER CABLES. SAWCUT, TRENCH AND PATCH EXISTING PAVEMENT. SEE CIVIL.

3. (N)(2)4"SCHEDULE 80 PVC, (PVCRS ABOVE GRADE)
PROVIDE (2)4"C WITH (1)-MAXCELL 3-CELL INNERDUCT IN EACH
UTILIZE (2)-MAXCELL INNERDUCT CELLS IN ONE 4"C WITH (1)48 FIBER COUNT EACH, LOOSE TUBE, SINGLE JACKET, OUTSIDE PLANT, FIBER CABLES. SAWCUT, TRENCH AND PATCH EXISTING PAVEMENT. SEE CIVIL.

4. (E)2"C-(N)3-CELL MAXCELL FABRIC
PROVIDE NEW MAXCELL 3-CELL FABRIC INNERDUCT. LEAVE (2)INNER DUCT CELLS EMPTY WITH PULLSTRING AND (1)CELL WITH (2)48 FIBER COUNT, LOOSE TUBE, SINGLE JACKET, OUTSIDE PLANT, FIBER CABLES.

ELECTRICAL NOTES:

1. ROUTE NEW (2)48 COUNT OSP FO CABLING INTO NEW 36"x36"x10", NEMA 4X, 316 STAINLESS STEEL, SINGLE DOOR LOCKABLE (B-LINE OR EQUAL). COIL 50'-0" OF ITS/HUSKY (1)48 COUNT OSP FO CABLING AND CONTINUE OUT OF CABINET WITHOUT TERMINATING. CONTRACTOR TO TERMINATE ON PORT PROVIDED TWO (2) FO BREAKOUT PANELS (ENTERING AND LEAVING) FOR POT (N)48 COUNT FO CABLING. TERMINATE ALL STRANDS WITH LC CONNECTORS.

2. THERE ARE TWO(2) EXISTING CONDUITS STUBBED AT THIS LOCATION WITHIN 3'-0" OF EACH OTHER. CONTRACTOR SHALL PROVIDE A FREE STANDING TYPE NEMA 4X, 316 STAINLESS, SINGLE DOOR, LOCKABLE, 36"x30"x10" WITH LEGS (B-LINE OR EQUAL). PROVIDE 8"x8"x18"D CONCRETE PAD FOR EACH LEG. CONTRACTOR WILL BE REQUIRED TO REMOVE ASPHALT, HAND DIG AND EXTEND THE TWO(2) EXISTING CONDUITS INTO THEN NEW CABINET. DO NOT ATTACH CABINET TO TPU POLE. CABINET DOOR SHALL OPEN TO PROJECT WEST. PATCH ASPHALT TO MATCH EXISTING.

3. EXISTING TPU FENCED EQUIPMENT ENCLOSURE WITH POT IT HUT #1 AND GENERATOR. CONTRACTOR SHALL COORDINATE WITH TPU FOR ACCESS TO AREA AND POT FOR ACCESS TO HUT #1.

4. PROVIDE (1)4"PVCRS FROM COMMUNICATIONS CABINET THROUGH TPU FENCE AND INTO (E)HUT #1 WITH (1)48 COUNT, OSP FIBER CABLE INTO AND OUT OF HUT #1. TERMINATE ON POT PROVIDED CONTRACTOR INSTALLED FIBER BULKHEADS IN HUT. COORDINATE EXACT PENETRATION LOCATION WITH ENGINEER AND SEAL WEATHERTIGHT. PROVIDE ESCUTCHING AT FENCE PENETRATION.

5. CONTRACTOR SHALL PUSH CONDUIT UNDER EXISTING CONCRETE RTG RUNWAY AND FILL ANY VOIDS WITH CDF. DO NOT SAWCUT RTG CONCRETE RUNWAY.

6. WHERE COMMUNICATIONS CONDUITS CROSS EXISTING TPU DUCT BANKS CONTRACTOR SHALL ROUTE CONDUIT ABOVE TPU DUCTS AND ENCASE WITH CDF A MINIMUM OF 2'-0" PAST TPU DUCT EACH SIDE.

ELECTRICAL NOTES:

1. THERE ARE TWO(2) EXISTING CONDUITS STUBBED AT THIS LOCATION WITHIN 3'-0" OF EACH OTHER. CONTRACTOR SHALL PROVIDE A FREE STANDING TYPE NEMA 4X, 316 STAINLESS, SINGLE DOOR, 36"x30"x10" WITH LEGS (B-LINE OR EQUAL). PROVIDE 8"x8"x18"D CONCRETE PAD WITH EACH LEG. CONTRACTOR WILL BE REQUIRED TO REMOVE ASPHALT, HAND DIG AND EXTEND THE TWO(2) EXISTING CONDUITS INTO THEN NEW CABINET. DO NOT ATTACH CABINET TO TPU POLE. CABINET DOOR SHALL OPEN TO PROJECT WEST. PATCH ASPHALT TO MATCH EXISTING.
2. PROVIDE (3)(N)2"C-SCHEDULE 80 UP POLE. CAP(2) AT 12'-0" AFG. EXTEND (1)2"C WITH (2)48 FIBER COUNT, LOOSE TUBE, SINGLE JACKET, OUTSIDE PLANT, FIBER CABLES UP POLE, ATTACH TO POLE AND CONTINUE AERIAL TO LOT F NEW HUT.
3. SECURE FIBER MESSENGER TO WEATHER HEAD. PROVIDE 4"PVCRS MAST WITH WEATHERHEAD AT HUT. EXTEND (2)48 FIBER COUNT CABLE THROUGH WEATHER HEAD AND TERMINATE ON PORT AND ITS/HUSKY EQUIPMENT RACKS. BULK HEADS AND RACKS SUPPLIED BY PORT AND INSTALLED BY CONTRACTOR. SEE SHEET E11.
4. SEE ELECTRICAL NOTE #1 AND #4 SHEET E3.

REMARKS:

CONNECTED LOAD: 4.2 KVA 18 AMPS
DEMAND LOAD: 4.2 KVA 18 AMPS

PROVIDE HANDLE TIES FOR ALL MULTI-CIRCUIT HOMERUNS SHARING A NEUTRAL PER THE NATIONAL ELECTRIC CODE ARTICLE 210.4 MULTIWIRE BRANCH CIRCUITS. PART (B) DISCONNECTING MEANS. DRAWINGS ARE DIAGRAMMATIC. WHERE THE CONTRACTOR MODIFIES THE CIRCUITING, THE CONTRACTOR SHALL PROVIDE AN INDIVIDUAL NEUTRAL PER CIRCUIT, MULTI-POLE CIRCUIT BREAKERS, OR CIRCUIT BREAKER HANDLE TIE TO MEET THE NEC ARTICLE. ALL COSTS ASSOCIATED WITH MODIFICATIONS SHALL BE INCLUDED IN THE CONTRACTOR'S BID.

ELECTRICAL NOTES:

NIC 1 PROVIDE COPPER BAR 13 1/4"x4"x1/4" WITH 3 PAIR 7/16" HOLES AND 19 PAIR 5/16" HOLES. ERICO TMGB-A14L15PT OR EQUAL.

NIC 2 PROVIDE MOUNT SWITCH AND RECEPTACLE IN DOUBLE GANG JUNCTION BOX AT 42" AFF.

NIC 3 PROVIDE GREENHECK OR EQUAL AIR INTAKE VENT SIZE AS RATED FOR EXHAUST FAN.

NIC 4 PROVIDE GREENHECK 060, 1725 CFM OR EQUAL.

NIC 5 PROVIDE EXHAUST THERMOSTAT, 120V, SET AT 65° F. PROVIDE WIRING IN 3/4" EMT TO FAN.

NIC 6 PROVIDE KING ELECTRIC SL2422, 1500 WATT HEATER WITH INTEGRAL THERMOSTAT, SET AT 40° F. OR EQUAL.

NIC 7 PROVIDE 4"C-PVCRS AERIAL MAST ATTACHED TO STRUCTURE WITH WALL PENETRATION FOR FIBER OPTIC CABLE TO RACKS.

NIC 8 PROVIDE (2)3/4"x10' COPPER CLAD STEEL GROUND RODS SPACED 20' APART. #6 BARE CU TO PANEL.

NIC 9 PROVIDE #6 BARE CU FROM PANEL GROUND TO GROUND BAR.

NIC 10 PROVIDE METALUX #4-SNLED-LD5-37SL-LW-UNV-L840-CD-1 OR EQUAL.

11 24" x 72" x 6" DEEP CABLE TRAY MOUNTED ABOVE COMMUNICATIONS CABINETS FROM STRUCTURE. POT IT FURNISHED CONTRACTOR INSTALLED.

NIC 12 PROVIDE SERVICE ENTRANCE (SUSE) PANEL, 120/240V, 1PH, 3W, 10,000 AIC, 60A MB, 30 CKT, WITH SEPARATE NEUTRAL AND GROUND BAR. SEE PANEL SCHEDULE FOR BRANCH CIRCUIT BREAKERS.

NIC 13 2" CONDUITS STUBBED 6" ABOVE FINISHED FLOOR.

NIC 14 TVSS. SIEMENS #TPS3-A-11-15-D2 OR EQUAL.

NIC 15 3/4"C TO FENCE WITH #8 BARE CU SERVICE GROUND. PROVIDE 3/4"C x 10'-0" GROUND RODS AT TWO(2) FENCE CORNER POSTS.

16 POT IT FURNISHED RACKS. CONTRACTOR INSTALLED.

17 POT IT FURNISHED FIBER BULKHEADS (2)48 IN, 48 OUT AND FORTY(40) CLOSED CONNECTOR HOUSING(CCH) WITH LC ADAPTERS, SINGLE NODE(OS2), (6)LC DUPLEX ADAPTERS FOR 12-STRAND FIBER(8 PER PANEL) TO BE INSTALLED, TESTED AND LABELED BY CONTRACTOR.

18 POT RACK MOUNTED EQUIPMENT FURNISHED BY POT IT. INSTALLED, CONNECTED, TESTED AND LABELED BY CONTRACTOR:
(1)UPS
(2)MODEL 9300 SWITCHES
(4)10GB SFP + FOR SWITCH UPLINKS
(9)LC SFP LC-1GB-LX

VAULT SCHEDULE NOTES:

1. ALL CONDUITS (2" AND LARGER) ENTERING OR LEAVING VAULTS SHALL USE TERM-A-DUCTS. ALL 3/4" AND 1" CONDUITS ENTERING OR LEAVING VAULTS MAY USE BLOCK-OUTS WITH BELL ENDS AND GROUTED. PROVIDE REMOVABLE FOAM FILL IN ALL EMPTY CONDUIT OPENINGS. PROVIDE PULL STRINGS IN ALL EMPTY CONDUITS. PROVIDE MAXCELL EDGE DETECTABLE MXC2003 (3 CELL) OR EQUAL IN ALL FOB LABELED COMMUNICATIONS CONDUITS. ITS/HUSKY CONTRACTOR SHALL PROVIDE CONDUIT LABELS FOR ALL CONDUITS ENTERING AND LEAVING VAULTS. PROVIDE PHENOLIC LABEL ATTACHED TO VAULT WALL WITH TWO (2) PLASTIC INSERTS AND STAINLESS STEEL SCREWS ADJACENT TO EACH CONDUIT. PHENOLIC LABEL SHALL HAVE CONDUIT ID ENGRAVED AS INDICATED ON CONDUIT AND WIRE SCHEDULE DRAWINGS.
2. SEE SPECIFICATION SECTION 26 71 19 FOR ADDITIONAL VAULT INSTALLATION REQUIREMENTS.
3. ALL WIRE (POWER AND COMMUNICATIONS) SHALL COMPLETELY LOOP AROUND VAULT WALLS PRIOR TO EXITING VAULT.
4. CONTRACTOR SHALL PROVIDE CAST LABEL ON LID TO READ "ELECTRIC" OR "COMMUNICATIONS". PROVIDE FIELD STAMPED LABEL ON LID WITH VAULT ID TO MATCH ELECTRICAL SITE PLANS.
5. PROVIDE BOLTED GROUND LUG(S) ON LID AND FRAME. PROVIDE #2 BARE CU GROUND IN EACH VAULT TO TWO (2) 3/4" X 10'-0" GROUND RODS.
6. PROVIDE STENCIL PAINTED, VAULT KIP RATING ON INSIDE OF VAULT DIRECTLY BELOW LID. MINIMUM 4" HIGH LETTERS.

DEPARTMENT OF PUBLIC WORKS

FIBER TO LOT F
COVER SHEET AND SHEET INDEX

WO-01
SHEET NO
SHEET 1 OF 7

Plotted By: Todd, James 11/5/2019 7:23 AM

GENERAL

- The following special provisions are to be used in conjunction with the "2010" Standard Specifications for Road, Bridge and Municipal Construction" and "Standard Plans for Road, Bridge and Municipal Construction" as prepared by the Washington State Department of Transportation (WSDOT). State Standard Specifications are available through WSDOT, by mail at Pre-Contract Section, P.O. Box 47408, Olympia, WA 98504-7408, or by telephoning (360) 705-7430.
- Any inconsistency between these work order drawings and the 2010 Standard Specifications or the WSDOT Standard Plans shall be resolved by the following order of precedence (e.g., 1 presiding over 2, 3, and so forth):
  1. Approved Work Order Drawings
  2. 2010 Standard Specifications
  3. WSDOT Standard Plans
- Any revisions to these plans must be reviewed and approved by the City of Tacoma Department of Public Works prior to any implementation in the field.
- Contractors shall familiarize themselves with the site and shall bring any discrepancies to the attention of the Engineer prior to undertaking the affected work.
- Any discrepancy in these drawings, specifications, these notes, and the site conditions shall be reported to the Engineer, who shall correct such discrepancy in writing after reviewing any changes. Any work done by the Contractor after the discovery of such discrepancy shall be done at the Contractor's risk. The Contractor shall verify and coordinate the dimensions among all drawings prior to proceeding with any work.
- A pre-construction meeting shall be held at the City of Tacoma with the applicant, contractor, and City inspectors prior to issuance of a permit.

ADDITIONAL PERMITS

- Separate permits are required for all retaining walls, grading, and erosion control. Adherence to all conditions of these permits is required as a part of this plan.
- Separate permits are required for sidewalk installation as well as curb and gutter removal and driveway construction when constructed at building permit stage.
- Separate storm and sanitary sewer connection permits are required for connections to the sanitary or storm sewer system.

UTILITIES

- The existing underground utilities shown hereon are based upon existing record drawings and are not guaranteed to be accurate, nor all-inclusive.
- All utilities must be verified prior to construction. If the project requires any excavation, the developer/contractor is required to call the Utility Underground Location Center at (800) 424-5555 at least two days before starting such excavation in accordance with RCW 19.122.
- It shall be the Contractor's responsibility to protect, in place, all utilities and/or structures whether shown or not shown on this plan. Damage due to the Contractor's operations shall be repaired at the Contractor's expense.

EXCAVATION

- If workers enter any trench or other excavation four feet or more in depth that does not meet the open pit requirements of Section 2-09.3(3)B, it shall be shored and cribbed. All trench safety systems shall meet the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Contractor alone shall be responsible for all worker safety, and neither the City of Tacoma nor the Engineer of record assumes any responsibility.

PAVEMENT PREPARATION / RESTORATION

- Additional removal and replacement of pavement may be required to provide proper transition/crown as directed by the City of Tacoma Construction Inspector in the field.
- The street sections shown on this plan are designed to be placed upon a firm and unyielding base.
- Subgrade compaction shall be tested by a professional geotechnical consultant prior to placing base material.
- Pavement restoration shall be constructed in accordance with the City of Tacoma Restoration policy.

HOT MIX ASPHALT

- The hot mix asphalt shall be HMA CL 1/2 inch PG 64-22. Mix design shall be based on Standard Plan PD-01-Pavement Design Standards.
- Section 5-04.3(8)A 'Acceptance Sampling and Testing' of the Standard Specifications is deleted.
- All hot mix asphalt shall be compacted to a minimum of 92 percent of the maximum density as determined by AASHTO T209. All hot mix asphalt utilized shall be considered compactable. The level of compaction attained will be determined as the average of not less than 5 nuclear density gauge tests taken on the day the mix is placed (after completion of the finish rolling) at randomly selected locations within each lot. The quantity represented by each lot will be no greater than a single day's production or approximately 400 tons, whichever is less.
- All testing results shall be provided to the City within 48 hours of the test.
- Control lots not meeting the minimum density standard shall be removed and replaced with satisfactory material.
- In addition to the randomly selected locations for test of the control lot, the Engineer reserves the right to test any area which appears defective and to require further compaction of areas that fall below acceptable density readings. These additional tests shall not impact the compaction evaluation of the entire control lot.
- Hot mix asphalt pavement shall not be placed on any traveled way between October 1 and April 1 without written approval from the Construction Division Manager.
- No traffic shall be allowed on any newly placed pavement without the approval of the Inspector.

CONCRETE

- Concrete pavement mix design shall be based on Standard Plan PD-01-Pavement Design Standards.
- Cold Weather Concrete Work. The following requirements for placing concrete shall be in effect from November 1 to April 1:
  1. The Engineer shall be notified at least 24 hours prior to any concrete placement.
  2. Weather permitting, all concrete placement shall be completed no later than 2:00 p.m. each day.
  3. Where forms have been placed and the subgrade has been subjected to severe frost, no concrete shall be placed until the ground is completely thawed. At that time, the forms shall be adjusted and subgrade repaired as determined by the Engineer.
- Curing of concrete shall be in accordance with Section 5-05.3(13) of the Standard Specifications.
- The slump for concrete used for sidewalks shall not exceed four inches +/- one inch.
- Sidewalks and curb ramps shall be constructed in accordance with ADA Standards for Accessible Design, 28 CFR, Part 35 and as supplemented by the Public Works Right of Way Accessibility Guidelines (PROWAG).

SANITARY AND STORM SEWERS

- 7-08.3(2)G Jointing of Dissimilar Pipe:

Dissimilar pipe shall be joined by use of rigid couplings manufactured by Romac Industries, Inc., or Engineer approved equal.

- 7-08.3(2)F Plugs and Connections:

Rigid Couplings, manufactured by Romanc Industries, Inc., or Engineer approved equal, shall be used at any pipe joint in which bell and spigot or fused joints are not used. Flexible couplings are not permitted.

- Section 7-04 of the Standard Specification is deleted. Storm sewers shall meet all the requirements of sanitary sewers.
- Sewers and appurtenances shall be cleaned and tested after backfilling by either exfiltration or low-pressure air method at the option of the Contractor, except where the ground water table is such that the Engineer may require the infiltration test.
- All sanitary and storm sewers shall be video inspected by City Forces prior to paving where paving occurs over sewers. All other sewers will be video inspected prior to final acceptance.
- All abandoned pipes encountered during construction and new storm and sanitary sewer stub outs shall be sealed with a watertight pipe plug.
- All frames and grates for standard catch basin inlets on this project shall be "vaned" type and shall conform to that shown on WSDOT Standard Plan No. B30.30-00
- Recycled concrete shall not be used for pipe zone backfill.

MISCELLANEOUS

- Any fence or structure replaced and/or relocated shall be maintained to remain functional.
- Independent quality assurance sampling and testing will be provided by a certified independant laboratory for all improvements within the right-of-way. All special inspection reports shall be forwarded to the Construction Division Office on a monthly basis, and / or as requested by the construction inspector.
- The Contractor shall only use those hydrants designated by the agency in charge of water distribution and in strict accordance with its requirements for hydrant use. Water applied by the Contractor shall not be from residential sources.

PRIVATE WORK ORDER GENERAL NOTES

GRADING, EXCAVATION, AND EROSION CONTROL NOTES

- All work is to be done in accordance with the approved grading plan, soils report, the most current WSDOT Standard Specification For Road, Bridge And Municipal Construction and the current Tacoma Surface Water Management Manual.
- When construction operations are such that debris from the work is deposited on the streets, the Contractor shall, as a minimum, remove on a daily basis any deposits or debris which may accumulate on the roadway surface. Should daily removal be insufficient to keep the streets clean, the Contractor shall perform removal operations on a more frequent basis. If the City of Tacoma Construction Inspector determines that a more frequent cleaning is impractical or if the Contractor fails to keep the streets free from deposits and debris resulting from the work, the Contractor shall, upon order of the City of Tacoma Construction Inspector, provide facilities for, and remove all clay or other deposits from the tires or between wheels before trucks or other equipment will be allowed to travel over paved streets. Should the Contractor fail or refuse to clean the streets in question, or the trucks or equipment in question, the City of Tacoma Construction Inspector may order the work suspended at the Contractor's risk until compliance with the Contractor's obligations is assured, or the City of Tacoma Construction Inspector may order the streets in question cleaned by others and such costs incurred by the City in achieving compliance with these requirements, including cleaning of the streets, shall be deducted from the work order account.
- The Contractor shall protect existing drainage structures using acceptable methods and materials as shown on this plan. If the methods and materials as shown on this plan are not adequate, the City of Tacoma Construction Inspector may require additional/alternative methods for erosion control and/or protection of existing drainage structures. Additional or alternative methods shall be submitted by the design engineer and accepted by the City of Tacoma Construction Inspector. Any damage caused to the City of Tacoma storm sewer system as a result of the work outlined on this plan shall be the sole responsibility of the Contractor. Resolving said damage may include, but not be limited to, the cleaning of the drainage system in question by the Contractor.
- Watering provisions when applicable must be in place to prevent dust from becoming air borne. Violation of this condition will resort in a stop work order until corrected.
- Fill that will support a street section or other structures shall be placed under the inspection of a licensed Geotechnical Engineer. Soil to be placed shall be tested and compacted to 95 percent of its maximum density. Engineer shall document existing site conditions, soil and its placement and allowable bearing capacity submitted. Standard requirements for cuts and fill are contained in the WSDOT Standard Specifications For Road, Bridges, and Municipal Construction.
- A stormwater pollution prevention plan is required for all work order projects. The plan must be in accordance with the current Tacoma Surfacewater Management Manual.

HYDROSEEDING

- All areas that are cleared and grubbed, graded, excavated or filled are subject to hydroseeding. Any of these areas that are left unpaved or unlandscaped shall be hydroseeded under the direction and approval of the Construction Inspector.
- Hydroseed only during the periods of April 1 though May 31 or September 1 though October 15. This hydroseeding requirement may be met during the months of June through August if irrigation is provided.
- Maintain hydroseeding throughout the winter wet season.

EROSION CONTROL MEASURES

A. Minimum Erosion Control measures shall include:
   1. Construction entrance.
   2. Perimeter erosion/sedimentation control.
   3. Protection of catch basins.
   4. Stabilization of exposed soils.

B. All erosion control shall be in place prior to clearing.

C. Erosion control measures shall be maintained at all times to the approval of the Construction Inspector.

D. Should temporary erosion and sedimentation control measures, as shown on plans become inadequate, the contractor shall install facilities as necessary to protect adjacent properties and the City of Tacoma drainage system, meeting approval of the Construction Inspector.

E. Grading, excavation, and filling prohibited. No permits to perform grading, excavation, or filling during the period from October 1st through March 31 shall be issued. EXCEPTION: The Building Official may approve a grading, excavation, or filling plan prepared by a licensed Civil or Geotechnical Engineer which specifically addresses the winter rain season and the associated erosion problems, and issue a permit based on such plan.

F. Call for inspection of the Construction Inspector upon completion of:
   1. Staking of clearing limits.
   2. Installation of erosion control and prior to site grading.
   3. Prior to removal of erosion control devices.

G. All material removed from site shall be placed only at a permitted site. Verify location of destination of material prior to exportation.

H. Traffic control provisions as approved by the traffic engineer shall be adhered to at all times.

I. Trees to be removed shall be clearly marked for removal. Trees to be saved shall be fenced with barricade fence at the drip line (outer edge of tree branches) to keep construction vehicles from compacting root zone and killing trees. This fencing shall be maintained until construction ends.

RECORD DRAWINGS CRITERIA FOR ACCEPTANCE OF ALL PRIVATE WORK ORDERS

- All revisions to the approved plans must be approved by the City of Tacoma Public Works Construction Division prior to implementation of the changes.
- A determination at the time of proposal shall be made whether the revision can be addressed with red line drawings submitted as a part of the record drawings or will require formal submission for approval.
- Record drawings shall show the station, offset, centerline and gutter flowline elevations, to nearest 0.01 foot; for all horizontal and vertical roadway alignment changes, at the intersection end of radius points and at the beginning and end of new paving.
- Record drawings shall show the station, offset, invert, and rim elevations to the nearest 0.01 foot for all storm and sanitary sewer structures. (i.e.: manholes, catch basins, etc.)
- After any new storm and/or sanitary sewer(s) have been cleaned and the manholes channeled, the main(s) shall be televised to provide a record of the constructed conditions and to verify side sewer connection locations by the City of Tacoma Public Works Sewer Maintenance Division.
- The property side ends of the side sewers shall be marked in the field by means of a 2-inch by 4-inch board and locate wire that extends from the flow line of the side sewer to at least 1 foot above the finished lot grade. Record drawings shall show all side sewers and shall locate them by measurements from permanent objects. (i.e.: curb, property corner, etc.) In addition, the depth of all side sewers shall be noted on the record drawings and locate board.
- Record drawings shall be received and accepted prior to issuing side sewer connection permits or release of performance bonds.
- Record drawings shall show vertical and horizontal datum for survey monuments (existing or new construction) within the limits of the project.
- Record drawings shall consist of a clean set of approved work order drawings with all changes noted above shown in red ink.
- Record drawings must be submitted within 30 days of substantial completion or City survey crews will collect the necessary data and bill against the work order

MONUMENT REMOVAL PERMIT PROCESS

"No survey monument shall be removed or destroyed (the physical desturbance or covering of a monument such that the survey point is no longer visible or readily accessible) before a permit is obtained from the Department of Natural Resources (DNR)." WAC 332-120-030(2) states "It shall be the responsibility of those performing construction work or other activity (including road and street resurfacing projects) to adequately search the records and the physical area of the proposed construction work or other activity for the purpose of locating and referencing any known or existing survey monuments." Construction shall not commence until WAC outlined in Chapter 332-120 is complied with.

SEWERS AND STORM

- Clearing stakes if needed.
- Stakes every 50 feet plus grade breaks. Try to maintain 12 foot offsets in streets and 8 foot offsets in alleys.
- Double offsets at manholes and catch basins (ahead and back stakes at angle points).
- Catch basin station shall be to the centerline of the basin. Catch basin offsets shall be to the face of the curb.

RESIDENTIAL STREETS

- Clearing stakes as needed.
- Slope stakes every 50 feet and grade breaks if cuts or fills exceed 2 feet.
- Curb stakes every 50 feet and grade breaks, on 4 foot offset to the face of curb. Curb stakes are set to the top of curb grade (Blue Tops).
- Also stake the beginning and end of all approaches.
- No centerline of street grades unless the street grade is warped. If street grades are needed, set blue tops for each course.

ARTERIAL STREETS

- Clearing stakes as needed.
- Slope stakes every 50 feet and grade breaks if cuts or fills exceed 2 feet.
- Curb stakes every 50 feet and grade breaks, on 4 foot offset to the face of curb.
- Curb stakes are set to the top of curb grade (Blue Tops). Also stake the beginning and end of all approaches.
- Stake centerline and quarterline grade every 50 feet and grade breaks at grade for each course.

ALLEYS

- Stake both sides every 50 feet and grade breaks, on a 2 foot offset to the edge of paving, with a cut of fill to edge of paving on high side and flow line on low side.

SIDEWALKS

- Offsets for walks are set on 50' intervals and grade breaks normally at 2 foot to edge of walk and at edge of walk grade (Blue Tops).
- Sidewalk alignment is normally at 5 feet from the face of curb. No walk grades are needed if curbs are built.

HORIZONTAL AND VERTICAL CURVES

- Grade stakes must be set every 25 feet and grade breaks with a minimum of 3 stakes for each curve. Radius points on street Returns.

LOT F REDEVELOPMENT SOIL SAMPLING PLAN UPDATED 05/14/2020

The contractor has exported **924 cy** of soils from the Low F Project as of 5/8/2020. They are anticipating an estimate of 1400 cy total of export soils. Per the Pierce County Dept. of Health guidelines for quantities of waste and number of samples, we took to take 3 additional samples in addition to the 9 that have already been taken. This would amount to 12 samples to cover up to 3000 cy of export material (1001cy to 2000 cy = 10 samples and 1 additional sample for every 500 cy above 2000 cy).

See below for sample locations and excavation locations. Analytical reports from Spectra are contained in this document for samples 1-12.

LOT F REDEVELOPMENT SOIL SAMPLING PLAN UPDATED 04/14/2020

The contractor has exported 616 cy of soils from the Low F Project. They are now anticipating an estimate of 1400 cy of additional export. Per the Pierce County Dept. of Health guidelines for quantities of waste and number of samples, we are planning to take 3 additional samples in addition to the 9 that have already been taken. This would amount to 12 samples to cover up to 3000 cy of export material (1001cy to 2000 cy = 10 samples and 1 additional sample for every 500 cy above 2000 cy).

See below for sample locations and excavation locations.

LOT F REDEVELOPMENT SOIL SAMPLING PLAN 02/05/2020

Per the contract requirement, soils excavated during the project are subject to analytical testing prior to hauling off site. There is an estimated quantity of above 100 cy and below 500 cy of material excavated in both Phases 1 and 2 of construction. 11 total samples will be taken to meet the requirements of the Pierce County Dept. of Health sampling frequency, exhibited below. The total quantity of exported material on the project is estimated between 550 and 750 cy's.Due to the larger surface area in Phase 1, 7 samples will be taken in this area, 4 samples will be taken in the Phase 2 area. *Page 2 and 3 shows the sampling location planPage 4 shows the Piece County Dept of Health guidelines for sampling frequency and analysis the would apply to this projectPage 5 shows the Method A soil cleanup levels for unrestricted land use*

Waste Disposal Authorization
Required Analysis

Tacoma-Pierce County Health Department
Healthy People in Healthy Communities

You must submit analytical results before disposal of waste in permitted Pierce County solid waste facility.

The volume of waste dictates the number of required samples.

Volume in Cubic Yards	Number of Samples
0 - 25	2
26 – 100	3
101 – 500	5
501 - 1000	7
1001 – 2000	10
One (1) additional sample for every 500 cubic yards of material over 2000 cubic yards.	

1000cy over 2000 = 2 additional samples

The following analyses may apply to your site. **Contact us** if you don't know which analyses will be required for your Waste Disposal Authorization.

Zinc and Copper tests must be included in testing

Analysis	Method
Total RCRA Metals (8 analytes)	EPA 6010D/7471B
TCLP RCRA Metals (8 analytes)	EPA 1311/6010D/7470A
TPH - Hydrocarbon Identification	NWTPH-HCID

j **Ethylene dibromide (1,2 dibromoethane or EDB).** Cleanup level based on concentration derived using Equation 720-2, adjusted for the practical quantitation limit.

k **Gross Alpha Particle Activity, excluding uranium.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.15).

l **Gross Beta Particle Activity, including gamma activity.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.15).

m **Lead.** Cleanup level based on applicable state and federal law (40 C.F.R. 141.80).

n **Lindane.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

o **Methylene chloride (dichloromethane).** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

p **Mercury.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.62).

q **Methyl tertiary-butyl ether (MTBE).** Cleanup level based on federal drinking water advisory level (EPA-822-F-97-009, December 1997).

r **Naphthalenes.** Cleanup level based on concentration derived using Equation 720-1. This is a total value for naphthalene, 1-methyl naphthalene and 2-methyl naphthalene.

s **PCB mixtures.** Cleanup level based on concentration derived using Equation 720-2, adjusted for the practical quantitation limit. This cleanup level is a total value for all PCBs.

t **Radium 226 and 228.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.15).

u **Radium 226.** Cleanup level based on applicable state law (WAC 246-290-310).

v **Tetrachloroethylene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

w **Toluene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

x **Total Petroleum Hydrocarbons (TPH).** TPH cleanup values have been provided for the most common petroleum products encountered at contaminated sites. Where there is a mixture of products or the product composition is unknown, samples must be tested using both the NWTPH-Gx and NWTPH-Dx methods and the lowest applicable TPH cleanup level must be met.

- **Gasoline range organics** means organic compounds measured using method NWTPH-Gx. Examples are aviation and automotive gasoline. The cleanup level is based on protection of groundwater for noncarcinogenic effects during drinking water use. Two cleanup levels are provided. The higher value is based on the assumption that no benzene is present in the groundwater sample. If any detectable amount of benzene is present in the groundwater sample, then the lower TPH cleanup level must be used. No interpolation between these cleanup levels is allowed. The groundwater cleanup level for any carcinogenic components of the petroleum [such as benzene, EDB and EDC] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and MTBE], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for gasoline releases.
- **Diesel range organics** means organic compounds measured using NWTPH-Dx. Examples are diesel, kerosene, and #1 and #2 heating oil. The cleanup level is based on protection from noncarcinogenic effects during drinking water use. The groundwater cleanup level for any carcinogenic components of the petroleum [such as benzene and PAHs] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and naphthalenes], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for diesel releases.
- **Heavy oils** means organic compounds measured using NWTPH-Dx. Examples are #6 fuel oil, bunker C oil, hydraulic oil and waste oil. The cleanup level is based on protection from noncarcinogenic effects during drinking water use, assuming a product composition similar to diesel fuel. The groundwater cleanup level for any carcinogenic components of the petroleum [such as benzene, PAHs and PCBs] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and naphthalenes], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for heavy oil releases.
- **Mineral oil** means non-PCB mineral oil, typically used as an insulator and coolant in electrical devices such as transformers and capacitors measured using NWTPH-Dx. The cleanup level is based on protection from noncarcinogenic effects during drinking water use. Sites using this cleanup level must analyze groundwater samples for PCBs and meet the PCB cleanup level in this table unless it can be demonstrated that: (1) The release originated from an electrical device manufactured after July 1, 1979; or (2) oil containing PCBs was never used in the equipment suspected as the source of the release; or (3) it can be documented that the oil released was recently tested and did not contain PCBs. Method B (or Method C, if applicable) must be used for releases of oils containing greater than 50 ppm PCBs. See Table 830-1 for the minimum testing requirements for mineral oil releases.

y **1,1,1 Trichloroethane.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

z **Trichloroethylene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

aa **Vinyl chloride.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1 x 10^{-5} risk.

bb **Xylenes.** Cleanup level based on xylene not exceeding the maximum allowed cleanup level in this table for total petroleum hydrocarbons and on prevention of adverse aesthetic characteristics. This is a total value for all xylenes.

Table 740-1
Method A Soil Cleanup Levels for Unrestricted Land Uses.[a]

Hazardous Substance	CAS Number	Cleanup Level
Arsenic	7440-38-2	20 mg/kg[b]
Benzene	71-43-2	0.03 mg/kg[c]
Benzo(a)pyrene	50-32-8	0.1 mg/kg[d]
Cadmium	7440-43-9	2 mg/kg[e]
Chromium		
Chromium VI	18540-29-9	19 mg/kg[f1]
Chromium III	16065-83-1	2,000 mg/kg[f2]
DDT	50-29-3	3 mg/kg[g]
Ethylbenzene	100-41-4	6 mg/kg[h]
Ethylene dibromide (EDB)	106-93-4	0.005 mg/kg[i]
Lead	7439-92-1	250 mg/kg[l]
Lindane	58-89-9	0.01 mg/kg[k]
Methylene chloride	75-09-2	0.02 mg/kg[l]
Mercury (inorganic)	7439-97-6	2 mg/kg[m]
MTBE	1634-04-4	0.1 mg/kg[n]

Hazardous Substance	CAS Number	Cleanup Level
Naphthalenes	91-20-3	5 mg/kg[o]
PAHs (carcinogenic)		See benzo(a)pyrene[d]
PCB Mixtures		1 mg/kg[p]
Tetrachloroethylene	127-18-4	0.05 mg/kg[q]
Toluene	108-88-3	7 mg/kg[r]
Total Petroleum Hydrocarbons[s]		
[Note: Must also test for and meet cleanup levels for other petroleum components—see footnotes!]		
Gasoline Range Organics		
Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture		100 mg/kg
All other gasoline mixtures		30 mg/kg
Diesel Range Organics		2,000 mg/kg
Heavy Oils		2,000 mg/kg
Mineral Oil		4,000 mg/kg
1,1,1 Trichloroethane	71-55-6	2 mg/kg[t]
Trichloroethylene	79-01-6	0.03 mg/kg[u]
Xylenes	1330-20-7	9 mg/kg[v]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for sites undergoing routine cleanup actions or for sites with relatively few hazardous substances, and the site qualifies under WAC 173-340-7491 for an exclusion from conducting a simplified or site-specific terrestrial ecological evaluation, or it can be demonstrated using a terrestrial ecological evaluation under WAC 173-340-7492 or 173-340-7493 that the values in this table are ecologically protective for the site. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table should not automatically be used to define cleanup levels that must be met for financial, real estate, insurance coverage or placement, or similar transactions or purposes. Exceedances of the values in this table do not necessarily mean the soil must be restored to these levels at a site. The level of restoration depends on the remedy selected under WAC 173-340-350 through 173-340-390.

b **Arsenic.** Cleanup level based on direct contact using Equation 740-2 and protection of groundwater for drinking water use using the procedures in WAC 173-340-747(4), adjusted for natural background for soil.

c **Benzene.** Cleanup level based on protection of groundwater for drinking water use, using the procedures in WAC 173-340-747 (4) and (6).

d **Benzo(a)pyrene.** Cleanup level based on direct contact using Equation 740-2. If other carcinogenic PAHs are suspected of being present at the site, test for them and use this value as the total concentration that all carcinogenic PAHs must meet using the toxicity equivalency methodology in WAC 173-340-708(8).

e **Cadmium.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4), adjusted for the practical quantitation limit for soil.

f1 **Chromium VI.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

f2 **Chromium III.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4). Chromium VI must also be tested for and the cleanup level met when present at a site.

g **DDT (dichlorodiphenyltrichloroethane).** Cleanup level based on direct contact using Equation 740-2.

h **Ethylbenzene.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

i **Ethylene dibromide (1,2 dibromoethane or EDB).** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4), adjusted for the practical quantitation limit for soil.

j **Lead.** Cleanup level based on preventing unacceptable blood lead levels.

k **Lindane.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4), adjusted for the practical quantitation limit.

l **Methylene chloride (dichloromethane).** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

m **Mercury.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

n **Methyl tertiary-butyl ether (MTBE).** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

o **Naphthalenes.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4). This is a total value for naphthalene, 1-methyl naphthalene and 2-methyl naphthalene.

p **PCB Mixtures.** Cleanup level based on applicable federal law (40 C.F.R. 761.61). This is a total value for all PCBs.

q **Tetrachloroethylene.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

r **Toluene.** Cleanup level based on protection of groundwater for drinking water use, using the procedures described in WAC 173-340-747(4).

s **Total Petroleum Hydrocarbons (TPH).** TPH cleanup values have been provided for the most common petroleum products encountered at contaminated sites. Where there is a mixture of products or the product composition is unknown, samples must be tested using both the NWTPH-Gx and NWTPH-Dx methods and the lowest applicable TPH cleanup level must be met.
