RE: Mica Landfill Annual Progress Report 2018

Dear Sandra,

Enclosed you will find one copy of the Mica Landfill September 2018 Annual Progress Report.

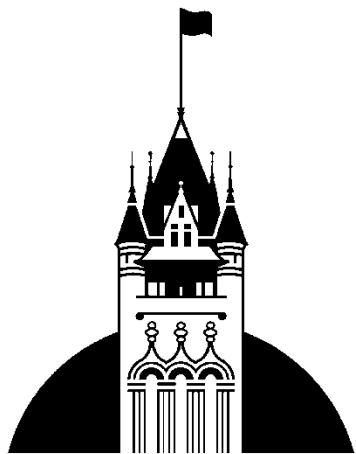

If you have comments or questions, please call me at (509) 238-6607.

Sincerely,

Austin Stewart

1 INTRODUCTION

1.1 MICA LANDFILL INFORMATION SUMMARY

SITE:	Mica Landfill, Spokane County, WA S.11, 14 & 15 T.24 R.44
REPORTING PERIOD:	October 2017 through September 2018
REGULATORY AUTHORITY:	Washington State Department of Ecology, EPA Scope of work for Remedial Action as stated in the Final Cleanup Action Plan (CAP) 2002.
TECHNOLOGY:	Impermeable cover system with passive landfill gas collection and flare stations. Leachate collection system conveying leachate to local sewer for treatment and disposal.
CRITERIA:	Criteria were established as stated in the Consent Decree and outlined in the Remedial Action Plan (2002). See Table 1-1.
SAMPLING PROGRAMS:	<u>Compliance Monitoring Program:</u> Groundwater and leachate sampling done in accordance with Final Cleanup Action Plan (CAP). Landfill gas monitoring done in accordance with the Compliance Monitoring Plan SAP (contained within the Remedial Action Plan, 2002). See Figure 1-1 for site locations. See Table 1-2 for well designations and Table 1-3 sampling schedule.

Table 1-1 Mica Landfill Summary of Indicator Analytes and Cleanup Levels

GROUNDWATER			
Indicator Analyte	Method B Cleanup Level, ug/L	Indicator Analyte	Method B Cleanup Level, ug/L
Conventionals		Volatile Organic Compounds	
Alkalinity	N	1,2-Dichloroethane	1.2
Ammonia	272,000	1,2-Dichloropropane	0.643
Chloride	N	Acetone	688
N-Nitrate	800	Benzene	0.795
Sulfate	N	cis-1,2-Dichloroethene	33
Total Dissolved Solids	N	Methylene Chloride (MC)	5
Total Organic Carbon	N	Tetrachloroethene (PCE)	0.858
Inorganics		Toluene	100
Arsenic	5	Trichloroethene (TCE)	3.98
Barium	560	Vinyl Chloride (VC)	0.023

2 GROUNDWATER

2.1 GROUNDWATER DATA

2.1.1 PROBLEMS/ DEVIATIONS

Monitoring wells MS-4, MW-13, MW-19R and MW-29 are low producing wells that are purged once and allowed to recharge before obtaining samples. The groundwater level in MW-31 was below the pump intakes during September and a sample was unobtainable in that well. Field technicians were also unable to sample residential well DW-1 in September due to difficulties with the pump (the pump was running but there was no water purging). Repairs were complete, and the technicians obtained a sample on 10/09/2018.

2.1.2 FIELD DATA

Field parameters for this report are shown in Table 2-1. Hydrographs are presented in Figure 2-1 and Figure 2-2. Water level readings are shown in Table 2-2.

2.1.3 CRITERIA EXCEEDANCES

Detected analyte concentrations and clean-up criteria exceedances for this annual report are presented in Table 2-2 through Table 2-5. Clean-up criteria were presented previously in Table 1-1.

NORTHWEST DRAINAGE (MW-13, MW-14, MW-29 and MW-31)

Nitrate concentrations in MW-29 exceeded the regulatory criteria during this annual reporting period.

SOUTHWEST DRAINAGE (MW-9, MW-10 and MW-16)

Concentrations in samples collected from monitoring well MW-16 exceeded the criteria for several VOCs, including: 1,2-Dichloroethane (1,2-DCA), 1,2-Dichloropropane, benzene, cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, and acetone. MW-16 also exceeded the criteria for arsenic and barium during this annual reporting period.

SOUTH DRAINAGE (MS-5, MW-20 and MW-23)

MW-20 and MS-5 exhibited Nitrate concentrations above the cleanup criteria.

SOUTHEAST DRAINAGE (MS-4 and MW-19R)

Nitrate concentrations in both southeast area wells were above the cleanup criteria.

DOMESTIC WELLS (DW-1, DW-2 and DW-3)

Nitrate levels at DW-2 and DW-3 exceeded the clean-up criteria for each sample round during this year. Zinc levels were above clean up criteria in DW-1 during the March sampling event. This well had new piping repairs completed in 2012 that contributed to the zinc levels. Since the initial repair, the trend in zinc concentrations continues to decrease.

2.1.4 CHEMICAL DATA AND STATISTICAL TRENDS

All laboratory data collected during this annual reporting period is shown in Appendix A. Volatile organic detections for this reporting period are presented in Table 2-2. Detected concentrations of semi-volatile organics are shown in Table 2-3. Inorganic detections are presented in Table 2-4 and conventional parameters detected concentrations are in Table 2-5. Data summary analyses are presented in Appendix B. Data validation performed for the September 2018 sample round is presented in Appendix C.

STATISTICAL ANALYSIS: Trend analyses were performed on chemical data from 1994 to present date using Sen's non-parametric trend test. Statistically significant trends are included in

Table 2-6. Due to the change in filtered versus non-filtered metals analysis (dissolved versus total) after March 2002, statistical analysis for metals was performed only on the unfiltered data collected after that date. Because of this, the statistical analysis calculated for metals may produce a trend that does not reflect the overall historic changes for that constituent.

NORTHWEST DRAINAGE (MW-13, MW-14, MW-29 and MW-31)

Time series plots for northwest area analyte concentrations are presented in Figure 2-3 through Figure 2-8. Statistically significant trends for the northwest area are presented in Table 2-6. The northwest drainage wells show little to no detections of VOC's. Monitoring well MW-29, located in the southern area of the northwest drainage, indicates increasing trends in a majority of the conventionals, along with an increasing trend in PCE. MW-31 indicated no trend for nitrate and a decreasing trend for TOC last year, but now has an increasing trend for nitrate and no trend listed for TOC.

SOUTHWEST DRAINAGE (MW-9, MW-10 and MW-16)

Time series plots for southwest area monitoring well analyte concentrations are presented in Figures 2-9 through 2-25. Statistically significant trends for the southwest area are shown in Table 2-6. Monitoring wells MW-9 and MW-10 show no detections of VOC's. Out of all wells monitored at the Mica Landfill, MW-16 typically has the highest concentrations of analytes and statistical analysis shows increasing concentrations for the majority of these. Monitoring well MW-16 also exhibits decreasing trends for MC and TCE, while increasing trends for benzene and cis-1,2-DCE, indicating VOC degradation. Increasing trends for MW-16 in the past have settled for acetone, VC, and 1,2-DCP, with Sen's results indicating no trend. Monitoring well MW-9 shows mainly decreasing trends in conventionals.

SOUTH DRAINAGE (MS-5, MW-20 and MW-23)

Time series plots for the south area monitoring well analyte concentrations are presented in Figures 2-26 through 2-34. Statistically significant trends for the south area are shown in Table 2-6. Decreasing trends for nitrate, PCE, MC, and TCE, and cis-1,2-DCE are indicated in MW-23. Monitoring well MS-5 exhibited increasing conventionals for previous years, but Sen's results now indicate no trend, with the exception of nitrate (decreasing trend) and sulfate (increasing trend). Statistical analysis shows a slightly increasing trend for alkalinity in MW-20, no trend for barium, and a decreasing trend for TOC.

SOUTHEAST DRAINAGE (MS-4 and MW-19R)

Time series plots for the south area monitoring well analyte concentrations are presented in Figures 2-35 through 2-40. Statistically significant trends are shown in Table 2-6. Monitoring well MS-4 shows some increasing trends in conventionals. Monitoring well MW-19R indicates decreasing trends in most conventionals, with the exception of an increasing trend for nitrate. MW-19R also indicates a decreasing trend for cis-1,2-DCE.

DOMESTIC WELLS (DW-1, DW-2 and DW-3)

Time series plots for the south area monitoring well analyte concentrations are presented in Figures 2-41 through 2-44. Statistically significant trends are shown in Table 2-6. Data from DW-1 shows statistically increasing trends for nitrate, chloride, and sulfate. DW-3 still indicates an increasing trend for nitrate, and the Sen's results now indicate no trend for chloride in DW-2.

2.1.5 CONTINGENCY RESPONSE ACTIONS

Nitrate levels at domestic well DW-2 were over clean-up criteria during this year. The statistical analysis for nitrate at this well indicates a decreasing trend. As stated in previous reports, these levels of nitrate are historically found in this well and further confirmation of the analyte presence is not needed.

The nitrate concentration in DW-3 exceeded the cleanup criteria each sample round during this annual reporting period. This well has exhibited an increasing trend for nitrate since 2006.

Table 2-1 Mica Landfill Field Parameters Summary

StationID	SampleDate	Temperature	pH	Conductivity	Turbidity	WElev

3 LEACHATE

3.1 LEACHATE DATA

As required by the wastewater discharge permit (issued by Spokane County), a grab sample is collected twice a year at the gravity line conveying leachate to the local sewer system. Grab samples were collected in October 2017 and April 2018.

3.1.1 FIELD DATA

Field parameters were collected at the gravity line during the above sampling rounds. Results are shown in Table 3-1. Hydrographs created using levels taken at landfill leachate piezometers are presented in Figure 3-1.

3.1.2 CRITERIA EXCEEDANCES

There were no exceedances of daily maximum criteria set forth for the leachate gravity line samples during this annual reporting period.

3.1.3 CHEMICAL DATA

Results from the analyses of the January and April leachate samples are presented in Table 3-2.

3.2 LEACHATE PRODUCTION

Monthly and quarterly leachate production rates are presented in Table 3-3 along with local precipitation amounts. Total annual production rates and precipitation totals versus time are shown in Figure 3-2. The total amount of leachate generated at the Mica Landfill from October 2017 through September 2018 was approximately 6,782,033 gallons.

4 LANDFILL GAS

4.1 FLARE STATIONS

A summary of monitoring results from the operational flare stations are presented in Table 4-1. The Mica Landfill produced an estimated 25.7 million cubic feet of landfill gas in 2018. The average methane concentration was approximately 42%.

4.2 GAS PROBES

Monthly gas probe monitoring results are presented in Appendix D. There were no methane detections near or above the regulatory criteria of 5% during this annual reporting period.

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supersedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

Analyses were performed in accordance with SVL standard operating procedures and calibrations were performed and met SVL internal QC criteria.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

Reported: 01-Oct-18 10:47

Notes and Definitions

D2	Sample required dilution due to high concentration of target analyte.
M2	Matrix spike recovery was low, but the LCS recovery was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
0.30R>S	% recovery not applicable; spike level is less than 30% of the sample concentration
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

GWMW-023-180912	X8I0327-03	Water	12-Sep-18 09:15	MT	13-Sep-2018	
MWS-1-2-180912	X8I0327-04	Water	12-Sep-18 09:30	MT	13-Sep-2018	

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supersedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

Analyses were performed in accordance with SVL standard operating procedures and calibrations were performed and met SVL internal QC criteria.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

Notes and Definitions

- D2 Sample required dilution due to high concentration of target analyte.
- M2 Matrix spike recovery was low, but the LCS recovery was acceptable.
- M4 The analysis of the spiked sample required a dilution such that the spike recovery calculation does not provide useful information. The LCS recovery was acceptable.
- Q5 Sample was received with inadequate preservation, but preserved by the laboratory.
- LCS Laboratory Control Sample (Blank Spike)
- RPD Relative Percent Difference
- UDL A result is less than the detection limit
- 0.30R>S % recovery not applicable; spike level is less than 30% of the sample concentration
- <RL A result is less than the reporting limit
- MRL Method Reporting Limit
- MDL Method Detection Limit
- N/A Not Applicable

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	2.3
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	Yes
Labels and chain agree?	Yes
Total number of containers?	54

F

APPENDIX C DATA VALIDATION

Analytical data for the September 2018 sample round was reviewed using quality control (QC) criteria documented in the analytical method, *National Functional Guidelines for Organic Data Review and Inorganic Data Review* (1994), and the *Work Plan for Interim Action Compliance Monitoring Mica Landfill Spokane County, Washington* (October 1994) as amended by the County and Ecology in February, 2001.

There was no qualified data for September 2018.

Data Qualifier Summary for September 2018 Sampling Results

APPENDIX D LANDFILL GAS PROBE MEASUREMENTS
