RE: Mica Landfill Annual Progress Report 2019

Dear Sandra,

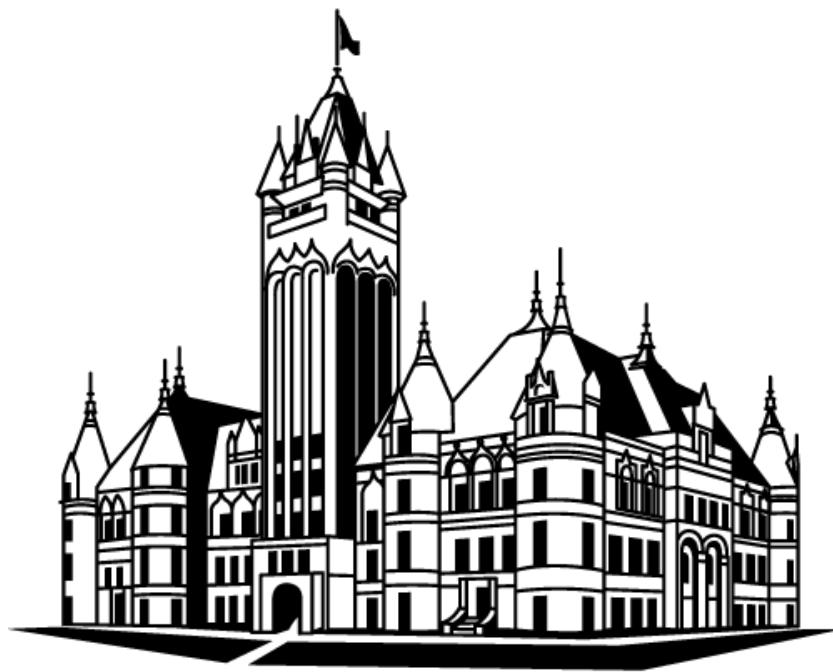

Enclosed you will find one copy of the Mica Landfill September 2019 Annual Progress Report.

If you have any questions, please contact me at (509) 238-6607.

Sincerely,

Austin Stewart
Water Resources Specialist

MICA LANDFILL ANNUAL REMEDIAL ACTION PERFORMANCE REPORT
SEPTEMBER 2019

1 INTRODUCTION

1.1 MICA LANDFILL INFORMATION SUMMARY

SITE:	Mica Landfill, Spokane County, WA S.11, 14 & 15 T.24 R.44
REPORTING PERIOD:	October 2018 through September 2019
REGULATORY AUTHORITY:	Washington State Department of Ecology, EPA Scope of work for Remedial Action as stated in the Final Cleanup Action Plan (CAP) 2002.
TECHNOLOGY:	Impermeable cover system with passive landfill gas collection and flare stations. Leachate collection system conveying leachate to local sewer for treatment and disposal.
CRITERIA:	Criteria were established as stated in the Consent Decree and outlined in the Remedial Action Plan (2002). See Table 1-1 for the established cleanup criteria.
SAMPLING PROGRAMS:	Compliance Monitoring Program: Groundwater and leachate sampling done in accordance with Final Cleanup Action Plan (CAP). Landfill gas monitoring done in accordance with the Compliance Monitoring Plan SAP (contained within the Remedial Action Plan, 2002). See Figure 1-1 for site locations. See Table 1-2 for well designations and Table 1-3 for the sampling schedule.

Table 1-1: Mica Landfill Summary of Indicator Analytes and Cleanup Levels

GROUNDWATER			
Indicator Analyte	Method B Cleanup Level, ug/L	Indicator Analyte	Method B Cleanup Level, ug/L
Conventionals		Volatile Organic Compounds	
Alkalinity	N	1,2-Dichloroethane	1.2
Ammonia	272,000	1,2-Dichloropropane	0.643
Chloride	N	Acetone	688
N-Nitrate	800	Benzene	0.795
Sulfate	N	cis-1,2-Dichloroethene	33
Total Dissolved Solids	N	Methylene Chloride (MC)	5
Total Organic Carbon	N	Tetrachloroethene (PCE)	0.858
Inorganics		Toluene	100
Arsenic	5	Trichloroethene (TCE)	3.98
Barium	560	Vinyl Chloride (VC)	0.023
Lead	15	Phthalates	
Manganese	1,926	bis(2- ethylhexyl)	6
Mercury	0.4	Phthalate (BEHP)	
Vanadium	112		
Zinc	400		

LEACHATE		
Parameter	Units	Daily Maximum
Benzene	mg/L	Sum total of the four results shall be less than or equal to 1.4
Toluene	mg/L	
Ethylbenzene	mg/L

2 GROUNDWATER

2.1 GROUNDWATER DATA/SUMMARIES

PROBLEMS/ DEVIATIONS

Monitoring wells MS-4, MW-13, MW-19R and MW-29 are low producing wells that are purged once and allowed to recharge before obtaining samples. The groundwater level in MW-31 was below the pump intakes during September and a sample was unobtainable in that well.

FIELD DATA

Field parameters for this report are shown in Table 2-1. Hydrographs are presented in Figures 2-1 through 2-5. Water level readings are shown in Table 2-1. Sen's slope trend analysis results for individual well groundwater elevations over time are presented in Table 2-2. Groundwater elevation contours/flow directions are presented in Figure 2-6.

CRITERIA EXCEEDANCES

Detected analyte concentrations and clean-up criteria exceedances for this annual report are presented in Tables 2-3 through 2-7. Clean-up criteria were presented previously in Table 1-1. Cleanup-level exceedance geospatial maps are presented in Figures 2-7 through 2-16.

NORTHWEST DRAINAGE (MW-13, MW-14, MW-29 and MW-31)

Nitrate concentrations in MW-013 and MW-29 exceeded the regulatory criteria during this annual reporting period.

SOUTHWEST DRAINAGE (MW-9, MW-10 and MW-16)

Concentrations in samples collected from monitoring well MW-16 exceeded the criteria for several VOCs, including: 1,2-Dichloroethane (1,2-DCA), 1,2-Dichloropropane, benzene, cis-1,2-Dichloroethene (cis-1,2-DCE), Vinyl chloride, and acetone. MW-16 also exceeded the criteria for arsenic, barium, and nitrate during this annual reporting period.

SOUTH DRAINAGE (MS-5, MW-20 and MW-23)

MW-20 and MS-5 exhibited nitrate concentrations above the cleanup criteria. MW-20 also exhibited exceedances for arsenic, barium, and lead. MW-023 exceeded the criteria for Vinyl chloride.

SOUTHEAST DRAINAGE (MS-4 and MW-19R)

Nitrate concentrations in both southeast area wells were above the cleanup criteria.

DOMESTIC WELLS (DW-1, DW-2 and DW-3)

Nitrate levels at DW-2 and DW-3 exceeded the clean-up criteria for each sample round during this year. Zinc levels were above clean up criteria in DW-2 during the April sampling event, but dropped below the cleanup criteria for the September sampling event.

CHEMICAL DATA AND STATISTICAL TRENDS

All laboratory data collected during this annual reporting period is shown in Appendix A. Volatile organic detections and semi-volatile detections for this reporting period are presented in Table 2-4 and Table 2-5, respectively. Inorganic detections are presented in Table 2-6, and conventional detected concentrations are in Table 2-7. Data summary analyses are presented in Appendix B. Data validation performed for the September 2019 sample round is presented in Appendix C.

STATISTICAL ANALYSIS: Trend analyses were performed on chemical data from 1994 to present date using Sen's non-parametric trend test. Statistically significant trends are included in Table 2-8. Due to the change in filtered versus non-filtered metals analysis (dissolved versus total) after March 2002, statistical analysis for metals was performed only on the unfiltered data

collected after that date. Because of this, the statistical analysis calculated for metals may produce a trend that does not reflect the overall historic changes for that constituent.

NORTHWEST DRAINAGE (MW-13, MW-14, MW-29 and MW-31)

Time series plots for northwest area analyte concentrations are presented in Figures 2-17 through 2-35. Statistically significant trends for the northwest area are presented in Table 2-8. The northwest drainage wells show little to no detections of VOC's. Monitoring well MW-29, located in the southern area of the northwest drainage, indicates increasing trends in a majority of the conventionals, along with barium. MW-31 indicates decreasing trends for alkalinity, chloride, sulfate, and TDS. MW-13 indicates an increasing trend for alkalinity, and decreasing trends for nitrate, sulfate, barium, and PCE.

SOUTHWEST DRAINAGE (MW-9, MW-10 and MW-16)

Time series plots for southwest area monitoring well analyte concentrations are presented in Figures 2-36 through 2-82. Statistically significant trends for the southwest area are shown in Table 2-8. Monitoring wells MW-9 and MW-10 show no detections of VOC's. MW-9 shows decreasing trends for a majority of conventionals, and an increasing trend for barium. MW-10 indicates a decreasing trend for chloride, and increasing trends for alkalinity, nitrate, and barium. Out of all wells monitored at the Mica Landfill, MW-16 typically has the highest concentrations of analytes and statistical analysis shows increasing concentrations for the majority of these. Monitoring well MW-16 exhibits decreasing trends for MC and TCE, and increasing trends for benzene, 1,2-DCP, and cis-1,2-DCE, indicating VOC degradation. MW-16 also indicates increasing trends for the majority of conventionals, along with arsenic.

Because of the high volatile organic concentrations found in MW-16, dilutions for laboratory analysis are necessary. This typically increases the method reporting limit for the analytes, and while most detections are well above these elevated reporting limits, there may be some low level concentrations that will not be represented with these lab results.

SOUTH DRAINAGE (MS-5, MW-20 and MW-23)

Time series plots for the south area monitoring well analyte concentrations are presented in Figures 2-83 through 2-105. Statistically significant trends for the south area are shown in Table 2-8. Decreasing trends for nitrate, PCE, MC, TCE, 1,2-DCA, cis-1,2-DCE, and barium are indicated in MW-23. Monitoring well MS-5 exhibits increasing trends for most conventionals, with the exception of nitrate. Statistical analysis shows decreasing trends for chloride, nitrate, sulfate, and TOC in MW-20.

SOUTHEAST DRAINAGE (MS-4 and MW-19R)

Time series plots for the south area monitoring well analyte concentrations are presented in Figures 2-106 through 2-123. Statistically significant trends are shown in Table 2-8. Monitoring well MS-4 shows increasing trends for alkalinity, nitrate, sulfate, TDS, and barium. Monitoring well MW-19R indicates decreasing trends for most conventionals, with the exception of an increasing trend for nitrate. MW-19R also indicates a decreasing trend for cis-1,2-DCE.

DOMESTIC WELLS (DW-1, DW-2 and DW-3)

Time series plots for the domestic well analyte concentrations are presented in Figures 2-124 through 2-135. Statistically significant trends are shown in Table 2-8. Data from DW-1 shows increasing trends for nitrate, chloride, and barium. DW-3 still indicates an increasing trend for nitrate and sulfate, and barium. DW-2 indicates a decreasing trend for nitrate, and an increasing trend for barium.

CONTINGENCY RESPONSE ACTIONS

Nitrate levels at domestic well DW-2 were over the clean-up criteria for each sampling event during this annual reporting period. The statistical analysis for nitrate at this well indicates a decreasing trend. As stated in previous reports, these levels of nitrate are historically found in this well and further confirmation of the analyte presence is unnecessary. The nitrate concentration in DW-3 exceeded the cleanup criteria for each sampling event during this annual reporting period as well. This well has exhibited an increasing trend for nitrate since 2006.

The zinc concentration found at DW-1 was below the cleanup criteria in both the April and September sampling events. The zinc concentrations in this well continue to exhibit a decreasing trend, and decreased below the cleanup criteria on 10/9/2018. The zinc concentration found at DW-2 was above the cleanup criteria in the April 2019 sampling event, but decreased below the cleanup criteria in the September sampling event. The increase in zinc concentration for DW-2 occurred due to a replacement of 160' of 1-1/4" galvanized pipe on 3/29/2019. The replacement of the galvanized pipe was performed by Fogle Pump, and the replacement was due to a pump failure in the well.

Mica Landfill Field Parameters

Table 2-1: Mica Landfill Field Parameters Summary

StationID	SampleDate	Temp*	pH*	Conductivity*	Turbidity*	Welev*
DW-001	10/9/2018	11.3	6.93	299	0.59

3 LEACHATE

3.1 LEACHATE DATA

As required by the wastewater discharge permit (issued by Spokane County), a grab sample is collected twice a year at the gravity line conveying leachate to the local sewer system. Grab samples were collected in October 2018 and April 2019.

FIELD DATA

Field parameters were collected at the gravity line during the above sampling rounds. Results are shown in Table 3-1. Hydrographs created using levels taken at landfill leachate piezometers are presented in Figures 3-1 through 3-5.

CRITERIA EXCEEDANCES

There were no exceedances of daily maximum criteria set forth for the leachate gravity line samples during this annual reporting period.

CHEMICAL DATA

Results from the analyses of the October and April leachate samples are presented in Table 3-2.

LEACHATE PRODUCTION

Monthly and quarterly leachate production rates are presented in Table 3-3 along with local precipitation amounts. Total annual production rates and precipitation totals versus time are shown in Figure 3-6. The total amount of leachate generated at the Mica Landfill from October 2018 through September 2019 was approximately 4,393,296 gallons.

Leachate Field Parameters

4 LANDFILL GAS

FLARE STATIONS

A summary of monitoring results from the operational flare stations are presented in Table 4-1. The Mica Landfill produced an estimated 29.4 million cubic feet of landfill gas in 2019. The average methane concentration was approximately 39.4%.

GAS PROBES

Monthly gas probe monitoring results are presented in Appendix D. There were no methane detections near or above the regulatory criteria of 5% during this annual reporting period.

MICA FLARE STATION SUMMARY

APPENDIX C - DATA VALIDATION

Analytical data for the September 2019 sample round was reviewed using quality control (QC) criteria documented in the analytical method, *National Functional Guidelines for Organic Data Review and Inorganic Data Review* (1994, and the *Work Plan for Interim Action Compliance Monitoring Mica Landfill Spokane County, Washington* (October 1994) as amended by the County and Ecology in February, 2001.

Data Qualifier Summary for September 2019 Sampling Results

StationID	SampleDate	Analyte	Type	Units	SampleID	Reporting Limit	Result	Qualifier
MW-16	4/23/2019	Alkalinity	C	mg/L as Ca	GWMW-016-190412	1	1	REJ
MW-016	6/12/2019	N-Nitrate	C	mg/L	GWMW-016-190612	0.05	0.05	UJ

Laboratory explanation for the rejection (REJ) of the alkalinity value from sample GWMW-016-190412 collected on 4/23/2019:

“We have finished the reanalysis for Alk on sample 1 of the above work order. There was a data upload error on this sample for the original report. We will be reissuing your report with the corrected Alk result in duplicate.”

“Alkalinity was reanalyzed; the reanalysis did not confirm the original analysis. Our apologies for the inconvenience.”

Laboratory explanation for the estimation (J) of the n-nitrate value from sample GWMW-016-190612 collected on 6/12/2019:

“SVL just reviewed the set-up for this sample and found a mistake. The NO3 did not get assigned, and so was not run within hold time. It can be run today, but the hold time expired at 9:01 this morning. I am sorry for this. What would you like us to do? The NO3 data would be qualified as out of hold time.”

“We will remove the NO3 charge, since it was our mistake. We will go forward with the analysis.”
