Re: Annual Groundwater Monitoring Report for 2022–2023
Former Northwest Plating Site
825 South Dakota Street and 812 and 820 South Adams Street
Seattle, Washington
Cleanup Site ID 1361
VCP Site No. NW2769

TRC Project Number: 015354.12

Dear Mr. Drake:

TRC Environmental Corporation (TRC), is pleased to present this Annual Groundwater Monitoring Report (Annual Report) for the 2022 to 2023 monitoring cycle for the Former Northwest Plating Site located at 825 South Dakota Street in Seattle, Washington (Site). The location of the Site is indicated on Figure 1. The Site is currently enrolled in the Washington State Department of Ecology (Ecology) Voluntary Cleanup Program (VCP) as Site No. NW2769 and Ms. Jing Song is the Ecology Site Manager. This work has been performed on behalf of the Washington Industries Environmental Remediation Trust (WEIRT).

As documented in the *Remedial Investigation Report* (RI Report) dated June 26, 2016, soil and groundwater at the Site are impacted with trichloroethene (TCE) and related volatile organic compounds (VOCs) as well as total chromium (Cr) and hexavalent chromium (CrVI). Those impacts are present as a result of historical electroplating activities at the former Northwest Plating facility.

The RI Report was submitted to Ecology for review under the VCP. An *Interim Action Work Plan* dated April 18, 2016 was also submitted to Ecology for review. That work plan included the use of enhanced reductive dechlorination (ERD) as a primary method of groundwater remediation and soil vapor extraction (SVE) to address impacts within the vadose zone. ERD was initially implemented at the Site in December 2016 with additional ERD injections in August 2017 and May 2019. The first phase of SVE was implemented in May 2017 and the SVE system was expanded in November 2017. Completed interim remedial actions were documented in the *Interim Action System As-Built and Startup Report* dated April 17, 2018 and submitted to Ecology under the VCP.

At the completion of the RI, a quarterly groundwater monitoring and sampling program was established to provide protection monitoring under the requirements of the Model Toxics Control Act (70.105D RCW) and its implementing regulations (Washington Administrative Code [WAC] 173-340; collectively “MTCA”) and to provide necessary data for designing and implementing remedial actions. WIERT also previously submitted to Ecology the Annual Groundwater Monitoring Reports for all monitoring cycles since 2016.

This Annual Report presents a discussion of the quarterly groundwater monitoring events performed at the Site in August 2022, November 2022, July 2023, and October 2023. TRC did not complete the first quarterly sampling event of 2023 due to delays in the scope and budget approval.

For the purposes of the RI, the pre-remedial lateral and vertical extents of the Site, as defined under MTCA are characterized as the extent of TCE in groundwater at a concentration exceeding 8.4 micrograms per liter ($\mu\text{g}/\text{L}$). As detailed in the RI, that concentration was determined to be protective of potential vapor intrusion (VI) for Industrial Land Use, which is the local zoning. The extent of the Site is indicated on Figure 2.

The Site is located approximately 3 miles south of downtown Seattle along the eastern margin of the lower Duwamish River industrial area. The Site consists of (i) the Washington Industries, Inc. (WII) Property at 825 South Dakota Street (the location of the former Northwest Plating facility), (ii) the southern adjacent property (“Perine Property”) located at 812 and 820 South Adams Street, and (iii) the western adjacent property located at 4114 Airport Way South. The Site also extends into the South Dakota Street right-of-way and may marginally impact properties north of South Dakota Street. Figure 2 illustrates the lateral extent of the Site as it is currently defined by the 8.4 $\mu\text{g}/\text{L}$ concentration of TCE in groundwater.

GROUNDWATER MONITORING AND SAMPLING

During each monitoring event, groundwater levels are measured in all 46 groundwater monitoring wells at the Site. Groundwater samples are collected from selected monitoring wells for analysis of chemicals of concern (COCs). The sampling frequency at each well during the 2022 to 2023 sampling cycle was as follows:

- Six shallow aquifer monitoring wells (MW-3, MW-7s, MW-8s, MW-24s, SBW-2, and SBW-3) were sampled on quarterly basis;
- Six shallow aquifer monitoring wells (MW-1s, MW-11, MW-15s, MW-18, MW-19, and MW-26s) and two intermediate aquifer monitoring wells (MW-7ir and MW-15i) were sampled on quarterly basis in 2022 and a semi-annual basis in 2023;
- Eight shallow aquifer monitoring wells (MW-4, MW-5s, MW-10s, MW-14, MW-20s, MW-27s, MW-28s, and SBW-1) were sampled on an annual basis;
- One shallow aquifer monitoring well (MW-21s) was sampled on quarterly basis in 2022 and subsequently removed from groundwater monitoring plan in 2023; and

- The remaining 10 shallow aquifer monitoring wells (MW-2, MW-7, MW-9, MW-12, MW-16, MW-22s, MW-23s, MW-25s, MW-29s, and SBW-4) and 13 intermediate aquifer monitoring wells (MW-1i, MW-4i, MW-5B, MW-5i, MW-8i, MW-10i, MW-20i, MW-21i, MW-22i, MW-23i, MW-24ir, MW-25i, and MW-26i) are in compliance with cleanup levels (CULs) and were removed from the groundwater monitoring plan.

The SVE remediation system at the Site is shut down prior to each groundwater sampling event to allow for stabilization of the groundwater surface to hydrostatic conditions.

Groundwater Elevation Measurements

During each of the quarterly sampling events, TRC measured water levels in all 46 of the shallow and intermediate monitoring wells located at the Site. An electronic water level meter was used to measure the depth to water to the nearest 0.01 foot from a surveyed point at the top of the well casing. The measurements were subtracted from the surveyed casing elevations to establish piezometric elevations. Depth-to-water measurements and corresponding groundwater elevations for the monitoring events are presented in Table 1.

The depth to water in the shallow aquifers ranged from 4.30 to 13.54 feet below the top of the well casing. Piezometric elevations ranged from 4.56 to 16.39 feet above mean sea level (MSL). The piezometric data indicate that the shallow aquifer generally migrates in a northwesterly direction at an approximate gradient of 0.0137 feet/foot. Interpolated piezometric contours for the shallow aquifer for October 2023 are presented on Figure 3. Figure 4 depicts the interpolated piezometric contours for the shallow aquifer for the August 2022, November 2022, July 2023, and October 2023 sampling events.

The depth to water in the intermediate aquifer monitoring wells ranged from 3.85 feet to 11.95 feet below the top of the well casing. Piezometric elevations ranged from 7.10 feet to 17.79 feet above MSL. The piezometric data indicate that the intermediate aquifer groundwater generally migrates in a west-northwesterly direction at an approximate gradient of 0.0262 feet/foot. Interpolated piezometric contours for the intermediate aquifer for October 2023 are presented on Figure 5. Figure 6 depicts interpolated piezometric contours for the intermediate aquifer for the August 2022, November 2022, July 2023, and October 2023 sampling events.

There are 14 pairs of co-located shallow and intermediate aquifer well pairs. Water level data for these pairs indicate that there is a net upward hydraulic gradient between the shallow and intermediate aquifer over the entire Site. The net upward gradient ranged between 0.23 feet/foot and 4.07 feet/foot of head during the annual monitoring cycle. The vertical gradients are indicated on Figure 7. Downward gradients are indicated by negative values. Uncharacteristic downward gradients were observed during the August 2022 and July 2023 monitoring events. Downward gradients were observed between the following well pairs:

- MW-22s/MW-22i (August 2022 and July 2023)
- MW-24s/MW-24ir (July 2023)

Downward gradients appear to coincide with unusually high groundwater levels in the shallow aquifer.

The presence of a pervasive and Site-wide upward hydraulic gradient serves to significantly hinder the potential for transport of dissolved-phase contaminants from the shallow to the intermediate aquifer. Contaminant migration between the two aquifers cannot occur through convection and dispersion across the aquifer and is limited to transport along chemical gradients. Such chemical transport is extremely slow and subject to generally weak chemical forces. Additionally, those forces must work in the opposite direction of actual groundwater transport across the aquitard. This lack of chemical transport across the aquitard is confirmed by the lack of impacts to the intermediate aquifer, even in locations with elevated concentrations in the shallow aquifer (see below).

Groundwater Sampling and Analyses

After measuring and recording groundwater levels in monitoring wells, TRC collected groundwater samples from the Site wells scheduled for sampling.

Groundwater samples have been collected using passive diffusion bags (PDBs) during the November 2017 through October 2023 groundwater sampling events. The groundwater samples are collected by transferring groundwater from the recovered PDB directly into appropriate pre-labeled sample containers supplied by the laboratory.

After each sampling event, new PDBs are deployed in each well and allowed to remain in place between sampling events, thereby ensuring that the samples are in chemical equilibrium with the water in the formation. Excess water recovered in the PDBs was stored on Site in properly labeled 55-gallon drums pending permitted disposal.

Samples for Cr and CrVI analysis continue to be collected using low-flow methods. Immediately prior to sample collection, each well was purged with a peristaltic pump and dedicated tubing. TRC collected field measurements of pH, temperature, and conductivity. Wells were purged until consecutive parameter measurements stabilized to within 10 percent or until three wetted casing volumes had been removed, whichever occurred first. Purge water was stored on Site in properly labeled 55-gallon drums pending permitted disposal.

Wells were sampled using the same tubing and peristaltic pump used for purging. Sampling was conducted using low-flow sampling techniques to minimize sample volatilization and silt uptake. The groundwater samples were collected at a flow rate of less than 100 milliliters per minute and pumped directly into appropriate pre-labeled sample containers supplied by the laboratory.

All groundwater samples were submitted for analysis of VOCs using U.S. Environmental Protection Agency (EPA) Method 8260D. Selected groundwater samples were additionally submitted for the following analyses:

- Total Cr using EPA Method 200.8; and
- CrVI using EPA Method 7196.

Upon collection, the groundwater samples were placed in a chilled cooler and submitted to ALS Laboratory Group (ALS) in Everett, Washington, under standard chain-of-custody protocol. During each

event, field duplicate groundwater samples were also collected and submitted to ALS for quality control purposes.

GROUNDWATER ANALYTICAL RESULTS

Laboratory-reported chemical analytical data are summarized in Tables 2 and 3. Final laboratory analytical reports are included as Attachment A. The groundwater cleanup levels (CULs) for the Site were developed in Section 6.0 of the RI and summarized in Table 16 of the RI. The analytical results for the COCs relative to the CULs for each sampling event are summarized below.

For this report, TCE and CrVI in groundwater are the primary COCs for monitoring. These chemicals serve as indicator hazardous substances for the dissolved-phase plume.

Isoconcentration contours for the October 2023 TCE data are presented on Figure 8. Figure 9 depicts TCE isoconcentration contours for the August 2022, November 2022, July 2023, and October 2023 sampling events. Figure 10 depicts a graphical summary of the TCE distribution since December 2016 and illustrates the progression of groundwater quality improvement over the past seven years.

No graphics were prepared for CrVI because none of the detected concentrations exceeded the specific CUL developed in the RI.

August 2022

This was a quarterly sampling event. TCE was identified in three of the seven shallow monitoring wells sampled during this event. Reported concentrations of TCE ranged from 6.9 µg/L in the sample from MW-24s to 180 µg/L in the sample from SBW-2. Only one of the reported concentrations exceeded the CUL for TCE of 8.4 µg/L (SBW-2). None of the intermediate depth aquifer wells were scheduled for sampling during this event.

Two samples from the shallow depth aquifer were additionally analyzed for Cr and CrVI. Cr was identified in both samples with concentrations of 18 µg/L in SBW-2 and 110 µg/L in SBW-3. There is not an established CUL for Cr. CrVI was not identified in either sample at concentrations exceeding the laboratory quantitation limit of 10 µg/L. The CUL for CrVI is 9,400 µg/L. None of the intermediate depth aquifer wells were scheduled for sampling during this event.

November 2022

This was a quarterly sampling event. TCE was identified in four of the 11 shallow monitoring wells sampled during this event. Reported concentrations of TCE ranged from 2.4 µg/L in the sample from MW-3 to 39 µg/L in the sample from SBW-2. Only one of the reported concentrations exceeded the CUL for TCE.

TCE was not identified in either of the two samples collected from intermediate depth aquifer during this event. The samples did not exceed the laboratory quantitation limit of 2.0 µg/L.

Two samples from the shallow depth aquifer were additionally analyzed for Cr and CrVI. Cr was identified in both samples, at concentrations of 25 µg/L in SBW-2 and 68 µg/L in SBW-3. CrVI was not identified in either sample at concentrations exceeding the laboratory quantitation limit of 10 µg/L. No samples from the intermediate depth aquifer were submitted for analysis of Cr and CrVI during this event.

July 2023

This was a Site-wide annual sampling event. TCE was identified in four of the 20 shallow monitoring wells sampled during this event. Reported concentrations of TCE ranged from 2.2 µg/L in the sample from MW-5 to 120 µg/L in the sample from SBW-2. Only one of the reported concentrations exceeded the CUL for TCE.

TCE was not identified in either of the two samples collected from the intermediate depth aquifer during this event. The samples did not exceed the laboratory quantitation limit of 2.0 µg/L.

Seven samples from the shallow depth aquifer were additionally analyzed for Cr and CrVI. Cr was identified in each of the seven samples. Reported concentrations of Cr ranged from 6.2 µg/L in MW-5s to 160 µg/L in SBW-3. CrVI was detected in two of the seven shallow monitoring wells sampled during this event. Reported concentrations of ranged from 33 µg/L in MW-14 and 140 µg/L in SMW-3. Neither of these concentrations exceeded the CUL for CrVI. No samples from the intermediate depth aquifer were submitted for analysis of CrVI during this event.

October 2023

This was a quarterly sampling event. TCE was identified in four of the six shallow monitoring wells sampled during this event. Reported concentrations of TCE ranged from 18 µg/L in the sample from MW-8s to 190 in the sample from SBW-2. Only one of the reported concentrations exceeded the CUL for TCE. No samples from the intermediate depth aquifer were submitted for analysis of TCE during this event.

Two samples from the shallow depth aquifer were additionally analyzed for Cr and CrVI. Cr was identified in both samples, with concentrations of 17 µg/L in SBW-2 and 130 µg/L in SBW-3. CrVI was identified in the sample from SBW-3 with a concentration of 230 µg/L. This concentration does not exceed the CUL for CrVI. None of the intermediate depth aquifer wells were scheduled for sampling during this event.

GROUNDWATER AND COC TRENDS

Groundwater monitoring data for August 2022 through October 2023 were evaluated for temporal fluctuations and trends in groundwater gradient and direction and contaminant concentrations in the shallow and intermediated aquifers throughout the Site.

Piezometric Conditions

The observed hydraulic gradients and flow directions were generally consistent throughout the annual monitoring cycle and with prior annual monitoring cycles. Within the shallow aquifer, the inferred groundwater flow direction is consistently westerly to northwesterly with a gradient ranging between

0.0134 and 0.0141 feet/foot. Piezometric contour maps for the shallow aquifer are presented on Figure 3 (October 2023) and Figure 4 (August 2022 through July 2023). Water level data for the Site are summarized in Table 1.

Within the intermediate aquifer, the pattern of apparent groundwater migration was also very consistent during the annual monitoring cycle and with prior annual monitoring cycles. The inferred groundwater flow direction is consistently westerly to northwesterly with a gradient ranging between 0.0254 and 0.0283 feet/foot. Piezometric contour maps for the intermediate aquifer in the annual monitoring cycle are presented on Figure 5 (October 2023) and Figure 6 (August 2022 through February 2023).

Water data in 14 shallow and intermediate aquifers well pairs indicate that there is a consistent net upward hydraulic gradient between the shallow and intermediate aquifers over the entire Site. While small downward gradients were observed at one location during the August 2022 and two locations during the July 2023 monitoring events, the downward gradients vary temporally and spatially. They appear to coincide with unusually high groundwater levels in the shallow aquifer.

TCE Trends Analysis

TCE is the most abundant COC at the Site with the highest concentrations present in groundwater. TCE is therefore used as the indicator compound for the purposes of illustrating and discussing contaminant distribution trends. An evaluation of trends in reported TCE concentrations is presented below, and cumulative data for tetrachloroethene (PCE), TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC) are summarized in Table 2. The discussions below will indicate a decrease in intensity of both (i) the dissolved-phase plume (as measured by maximum concentrations) and (ii) the lateral extent of the plume (as measured in total area). This decrease is in response to the Interim Actions. As noted above, TCE is the indicator hazardous substance for the Site.

Figures 8 and 9 illustrate the dissolved-phase TCE plume in the shallow aquifer during the annual monitoring cycle and illustrate that the maximum extent of the plume, as defined by the 8.4 µg/L concentration isocontour remained stable during the 2022 to 2023 monitoring cycle. There was a slight increase in lateral area of the plume attributable to monitoring well MW-8s, in which the TCE concentration increased above the CUL during one event, in November 2022. The TCE concentration in MW-8s decreased to below the CUL in July 2023. During the November 2023 event, the TCE concentrations in both MW-3 and MW-8s increased above the CUL. The estimated lateral area of the TCE plume is about 2,380 square feet as of October 2023.

The maximum TCE concentrations in the core of the plume have remained stable from August 2022 to October 2023, with a slight decrease observed during the November 2022 monitoring event.

It is TRC's opinion that a residual pocket of TCE remains in the northwest portion of the Former Northwest Plating property. This residual mass is dissolving in shallow groundwater and migrating into South Dakota Street.

The TCE in the shallow aquifer extends northwest and west from the downgradient edge of the on-site building near MW-3 and into South Dakota Street, hydraulically downgradient of the source area.

Throughout the monitoring period, the highest TCE concentrations were generally observed in MW-8S, SBW-2, and SBW-3 (i.e., the source area wells). Samples from wells within and immediately downgradient of the former source area (i.e., MW-14, MW-15, MW-16, and MW-19) consistently do not contain detectable TCE concentrations (Figure 9). This finding indicates that residual impacts are localized to the area of SBW-5 and hydraulically downgradient.

For monitoring well MW-1, the TCE concentration from March 2016 to July 2023 decreased from 910 µg/L to 28 µg/L (approximately 97 percent). For monitoring well SBW-2, the TCE concentration from March 2016 to October 2023 decreased from 1,000 µg/L to 190 µg/L (approximately 81 percent). For monitoring well MW-3, the decrease was from 440 µg/L to 27 µg/L (approximately 94 percent), and for SBW-3 the decrease was from 100 µg/L to 20 µg/L (approximately 80 percent). This represents an average decrease of 89 percent from March 2016 to October 2023.

Figure 10 represents the distribution of the shallow TCE plume prior to remediation system startup in December 2016 through October 2023. This figure provides a graphical representation of the lateral extent of the dissolved-phase TCE plume as defined by the maximum lateral extent of concentrations exceeding the Site-specific CUL of 8.4 µg/L. This graphic indicates a substantial reduction in the area of the Site as defined by an exceedance of the TCE CUL. The pre-remediation area of the Site was approximately 57,005 square feet and the October 2023 area of the Site is approximately 2,380 square feet. This is an approximate 96 percent reduction in the lateral distribution of the Site.

The pre-remediation area of the Site exceeding the Site-specific remediation level (REL) of 37 µg/L was approximately 43,655 square feet in 2016 compared to the October 2023 area of 13,860 square feet. This represents an approximate decrease of 68 percent. The Site area increased slightly in 2023 compared to November 2022.

Hexavalent Chromium Trends Analysis

The available data indicate that concentrations of dissolved CrVI in the shallow depth aquifer have also decreased significantly in response to the ERD treatment. For monitoring well MW-14, the CrVI concentration from March 2016 to July 2023 decreased from 58 µg/L to 33 µg/L (greater than 43 percent). For MW-18 the decrease was from 5,300 µg/L to 160 µg/L (greater than 96 percent). For SBW-3, the decrease between March 2016 and September 2023 was from 170 µg/L to 130 µg/L (greater than 23 percent). This represents an average decrease in CrVI concentrations of about 54 percent from March 2016 to September 2023. Cumulative data for CrVI and total Cr are summarized in Table 3.

SVE System Operation

There are two SVE systems at the Site for remediation of the shallow soils. SVE System 1 was installed between June 20 and August 2, 2016, with a full-time startup on May 1, 2017. System 1 focuses on soil conditions within the apparent source area inside the former Northwest Plating Building. SVE System 2 was installed between July 17 and November 21, 2017, with full-time startup on December 4, 2017. System 2 focuses on soil conditions downgradient of the apparent source area and within the western portion of the building.

Extracted vapors for System 1 and 2 were initially treated through activated carbon to remove COCs prior to atmospheric discharge. Because the annual system effluent loads are less than the Puget Sound Clean Air Agency (PSCAA) discharge criteria, the system effluent does not currently require treatment. The atmospheric discharge is also exempt from permitting under the criteria set forth by PSCAA.

Details of the installation and startup of the SVE systems are provided in the *Remedial Action System As-Built and Startup Report* (As-Built Report), which was published on April 17, 2018. As noted above, this report was provided to Ecology through the VCP.

After quarterly groundwater sampling was performed in November 2022, System 1 was left off due to a mechanical issue. On February 8, 2023, blowers for both systems were removed for repairs. They were reinstalled and restarted on February 10, 2023. On April 25, both systems were vandalized and nonfunctional. System 1 remained off until June 7, when it was repaired and restarted. System 2 remains off due to mechanical issues. No operation and maintenance (O&M) was performed on either system between January and June 2023.

System O&M events were performed at the Site approximately every 6 weeks during the 2022 to 2023 monitoring period, except where noted otherwise. During the O&M site visits, TRC personnel monitored and recorded system status and operational parameters and made necessary adjustments to the system components to optimize performance.

Samples of the system effluent vapors were collected on each O&M visit to confirm compliance with the PSCAA exemption, estimate a contaminant mass removal rate, and evaluate control efficiency of the granulated activated carbon (GAC) treatment vessels (when used). The vapor samples were collected into Tedlar® bags and submitted to Fremont Analytical in Seattle, Washington, for laboratory analysis. All samples were analyzed for VOCs using EPA Method 8260D.

Based on the monitoring data and vapor analytical results, it is estimated that SVE System 1 has removed approximately 375 pounds of VOCs from the time of initial system startup on May 1, 2017 through September 28, 2023. SVE System 2 is estimated to have removed an additional 61 pounds of VOCs between December 4, 2017 and December 21, 2023. The total combined mass removal for both systems is 436 pounds of TCE equivalents.

For the period between August 2022 and September 2023, the SVE systems removed approximately 35.5 pounds of total VOCs. This relatively low rate is due to the systems being down for several months due to vandalism and subsequent maintenance time responding.

Tabulated vapor emissions data for the SVE systems are summarized in Tables 4 and 5. Tabulated mass removal and destruction efficiency data for SVE systems are summarized in Tables 6 and 7. A copy of the laboratory analytical reports for the system vapor samples is provided in Attachment B.

System monitoring data confirmed that the system discharges complied with PSCAA exemption limits.

CONCLUSIONS

The following conclusions are supported by the findings of the 2022 to 2023 annual monitoring cycle:

- The hydraulic gradients in the shallow and intermediate aquifers remained consistently westerly to northwesterly during the monitoring period. These gradients and flow directions are consistent with prior annual sampling periods and appear to be highly stable from year to year.
- A net upward hydraulic gradient between the shallow and intermediate aquifers is consistently observed across the Site. The net upward hydraulic gradient largely impedes the downward migration of VOCs into the intermediate aquifer as demonstrated by the absence of impacts to the intermediate aquifer, including beneath the former source area.
- The combined SVE and ERD treatment at the Site has been highly effective at addressing dissolved-phase VOC impacts to groundwater. Concentrations of TCE have decreased by as much as 99 percent when compared to the maximum pre-treatment concentration at well MW-1. The interim actions conducted have reduced the areal extent of the TCE plume by approximately 96 percent since December 2016, based on the lateral extend of concentrations exceeding the CUL of 8.4 µg/L.
- Impacts to groundwater at the Site are no longer present on the south-adjacent property at a concentration exceeding a CUL.
- No current CrVI concentrations exceed the site-specific CUL.
- The SVE systems appear to be highly effective at removing contaminant mass from the subsurface and limiting VOC dissolution to groundwater. Data collected to date indicate that the SVE systems have removed approximately 436 pounds of VOCs from May 2017 through October 2023 at an average rate of approximately 0.22 pounds per day.
- Between August 2022 and September 2023, the SVE systems removed approximately 36 pounds of total VOCs. This relatively low rate may be because the systems were down for several months due to maintenance outages and vandalism.

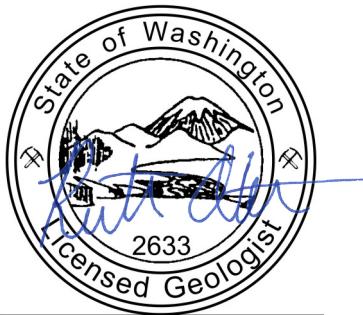

CLOSING

Groundwater monitoring at the Site is ongoing and will continue to be performed and reported in a manner consistent with our approved Scope of Work. TRC appreciates the opportunity to be of assistance on this project. If you have any questions or comments, please do not hesitate to contact us at 425-395-0010.

Sincerely,

Notes:

All site monitoring wells resurveyed on August 7 and 20, 2014.

More recently installed monitoring wells surveyed on June 11, 2015 and February 2, 2016.

a Depths in feet below top of well casing.

b Depths measured from north side of top edge of well casing.

c Elevations reported in feet above NAVD 88 datum.

NM Not measured.

Site-Specific Groundwater CULs Developed for the Groundwater-Indoor Air Pathway^d	101	8.4	NVE	NVE	NVE	6.8	11,930	NVE	NVE	
Groundwater CULs Adopted from ODEQ^e	5,600	3,000	1,800	180,000	44,000	960	1,100,000	49	720	

Notes:

All samples were analyzed by EPA Method 8260 and results are presented in micrograms per liter (µg/L).

Bold Bold result exceeds the laboratory reporting limit.

Shaded Shaded result exceeds the Site-specific remediation level.

< Analyte not detected at a concentration greater than the laboratory reporting limit.

-- Sample was not analyzed for this compound.

* MW-16PP collected before low-flow purging.

a Samples collected in March 1989, September 1989 and October 1989 were analyzed by EPA Method 8010. Samples collected in April 1999 were analyzed by EPA Method 8260.

b Samples collected in March 1989, September 1989 and October 1989 were analyzed by EPA Method 8010.

c Site-Specific Groundwater RELs Developed for the Groundwater-Indoor Air Pathway for a construction worker reasonable maximum exposure (RME) scenario.

d Site-Specific Groundwater CULs Developed for the MTCA Method C Groundwater-Indoor Air CUL.

e Oregon Department of Environmental Quality (ODEQ) Risk-Based Cleanup Levels for direct contact with groundwater in an excavation for a construction worker (<http://www.deq.state.or.us/lq/pubs/docs/RBDMTable.pdf>).

REL Remediation level.

NVE No cleanup value has been established for this compound.

CUL Cleanup level.

Qualifier:

J Laboratory estimated concentration.

Notes:

- All results in micrograms per liter (µg/L).
- Bold** Bold result exceeds the laboratory reporting limit.
- Shaded result exceeds the Site-specific remediation level.
- < Analyte not detected at a concentration greater than the laboratory reporting limit.
- Sample was not analyzed for this compound.
- * MW-16PP collected before low-flow purging.
- a Method of analysis of arsenic, copper, and lead is unknown for samples dated 03/23/1989.
- b Samples collected on 3/23/89, 9/21/89 and 4/27/99 were analyzed for cadmium by EPA Method 6010. Samples collected on 10/11/89 were analyzed by EPA Methods 7130 and 7131.
- c All samples analyzed for hexavalent chromium by EPA Method 7196 for all dates except 4/27/99, when Method SM3500Cr-D was used.
- d Samples collected on 8/26/14 were analyzed for total chromium by EPA Method 200.8. Samples collected on all other dates were analyzed for total chromium by EPA Method 6010.
- e Samples collected on 3/23/89 and 9/21/89 were analyzed for nickel by EPA Method 6010. Samples collected on 10/11/89 were analyzed by EPA Method 7520.
- f Samples collected on 3/23/89, 9/21/89 and 4/27/99 were analyzed for zinc by EPA Method 6010. Samples collected on 10/11/89 were analyzed by EPA Method 7950.
- g Samples collected on 3/23/89, 9/21/89 and 10/11/89 were analyzed for cyanide by EPA Method 9012. Samples collected on 4/27/99 were analyzed by EPA Method 335.2. Samples collected on 12/1/2020 were analyzed by SM 4500-CN C, E.
- h Free Cyanide analyzed by CN_Free at Specialty Analytical.
- i Reported concentration is less than the laboratory practical quantitation limit (PQL).
- j Oregon Department of Environmental Quality (ODEQ) Risk-Based Cleanup Levels for direct contact with groundwater in an excavation for a construction worker (<http://www.deq.state.or.us/lq/pubs/docs/RBDMTable.pdf>).
- CUL Cleanup level.
- NVE No cleanup value has been established for this compound.

Attachment A
Laboratory Analytical Reports for Groundwater

August 5, 2022

Ms. Mariem Esparra
TRC Companies
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Ms. Esparra,

On August 2nd, 7 samples were received by our laboratory and assigned our laboratory project number EV22080007. The project was identified as your 015354 - WA Industries. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

A handwritten signature in black ink that reads "Glen Perry".

Glen Perry
Laboratory Director

Ms. Mariem Esparra
TRC Companies
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Ms. Esparra,

On November 29th, 12 samples were received by our laboratory and assigned our laboratory project number EV22110164. The project was identified as your WA Industries - 015354. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Ms. Mariem Esparra
TRC Companies
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Ms. Esparra,

On December 1st, 2 samples were received by our laboratory and assigned our laboratory project number EV22120006. The project was identified as your WA Industries - 015354. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

A handwritten signature in black ink that reads "Glen Perry".

Glen Perry
Laboratory Director

Issaquah, WA 98027

Dear Ms. Esparra,

On July 6th, 4 samples were received by our laboratory and assigned our laboratory project number EV23070015. The project was identified as your 015354. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Dear Ms. Esparra,

On July 7th, 22 samples were received by our laboratory and assigned our laboratory project number EV23070031. The project was identified as your 015354. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Ms. Mariem Esparra
TRC Companies
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Ms. Esparra,

On October 4th, 6 samples were received by our laboratory and assigned our laboratory project number EV23100021. The project was identified as your WA Industries - 015354. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

RE: WA Industries
Work Order Number: 2209189

September 21, 2022

Attention Mariem Esparra:

Fremont Analytical, Inc. received 2 sample(s) on 9/14/2022 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Brianna Barnes'.

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level

Sample Log-In Check List

Client Name: TRCI
Logged by: Clare Griggs

Work Order Number: 2209189
Date Received: 9/14/2022 12:29:00 PM

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? FedEx

Log In

3. Coolers are present? Yes No NA
Air Samples
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >2°C to 6°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: WA Industries Po# 186484

Work Order Number: 2210323

October 27, 2022

Attention Mariem Esparra:

Fremont Analytical, Inc. received 2 sample(s) on 10/20/2022 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method TO-15

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

*DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ppbv and ug/m³.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Standard temperature and pressure assumes 24.45 = (25C and 1 atm).

*Acrolein: Reporting Limit noted is the laboratory Limit of Detection (LOD). Any detections below 0.0229 ug/m³ (0.01 ppbv) are considered an estimate.

*1,2-Dibromoethane (EDB): Reporting Limit noted is the Method Detection Limit (MDL). Any detections below 0.00768 ug/m³ (0.001 ppbv) are considered an estimate.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: TRCI

Work Order Number: 2210323

Logged by: Elisabeth Samoray

Date Received: 10/20/2022 11:45:00 AM

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA

4. Shipping container/cooler in good condition? Yes No

5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present

6. Was an attempt made to cool the samples? Yes No NA

7. Were all items received at a temperature of >2°C to 6°C * Yes No NA

8. Sample(s) in proper container(s)? Yes No

9. Sufficient sample volume for indicated test(s)? Yes No

10. Are samples properly preserved? Yes No

11. Was preservative added to bottles? Yes No NA

12. Is there headspace in the VOA vials? Yes No NA

13. Did all samples containers arrive in good condition(unbroken)? Yes No

14. Does paperwork match bottle labels? Yes No

15. Are matrices correctly identified on Chain of Custody? Yes No

16. Is it clear what analyses were requested? Yes No

17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order?

Yes No NA

Person Notified:	Mariem Esparra	Date:	10/24/2022
By Whom:	Brianna Barnes	Via:	<input checked="" type="checkbox"/> eMail <input type="checkbox"/> Phone <input type="checkbox"/> Fax <input type="checkbox"/> In Person
Regarding:	Lab was unable to meet the hold time for 8260. Will TO15 data work?		
Client Instructions:	Report TO15 data.		

19. Additional remarks:

Item Information

* Note: DoD/ELAP and TNI require items to be received at 4°C +/- 2°C

RE: WA Industries
Work Order Number: 2211277

November 18, 2022

Attention Mariem Esparra:

Fremont Analytical, Inc. received 2 sample(s) on 11/11/2022 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

*DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing
ORELAP Certification: WA 100009 (NELAP Recognized) for Environmental Testing
Washington State Department of Ecology Accredited for Environmental Testing, Lab ID C910*

Case Narrative

WO#: 2211277

Date: 11/18/2022

CLIENT: TRC
Project: WA Industries

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ug/L.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: TRCI

Work Order Number: 2211277

Logged by: Elisabeth Samoray

Date Received: 11/11/2022 10:48:00 AM

Chain of Custody

1. Is Chain of Custody complete?

Yes No Not Present

2. How was the sample delivered?

Client

Log In

3. Coolers are present?

Yes No NA

4. Shipping container/cooler in good condition?

Yes No

5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact)

Yes No Not Present

6. Was an attempt made to cool the samples?

Yes No NA

7. Were all items received at a temperature of >2°C to 6°C *

Yes No NA

8. Sample(s) in proper container(s)?

Yes No

9. Sufficient sample volume for indicated test(s)?

Yes No

10. Are samples properly preserved?

Yes No

11. Was preservative added to bottles?

Yes No NA

12. Is there headspace in the VOA vials?

Yes No NA

13. Did all samples containers arrive in good condition(unbroken)?

Yes No

14. Does paperwork match bottle labels?

Yes No

15. Are matrices correctly identified on Chain of Custody?

Yes No

16. Is it clear what analyses were requested?

Yes No

17. Were all holding times able to be met?

Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order?

Yes No NA

RE: WA Industries
Work Order Number: 2212478

December 29, 2022

Attention Mariem Esparra:

Fremont Analytical, Inc. received 2 sample(s) on 12/21/2022 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

*DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing
ORELAP Certification: WA 100009 (NELAP Recognized) for Environmental Testing
Washington State Department of Ecology Accredited for Environmental Testing, Lab ID C910*

Case Narrative

WO#: 2212478

Date: 12/29/2022

CLIENT: TRC
Project: WA Industries

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ug/L.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: TRCI

Work Order Number: 2212478

Logged by: Clare Griggs

Date Received: 12/21/2022 1:19:00 PM

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
Air Samples
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >2°C to 6°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: WA Industries

Work Order Number: 2306438

July 03, 2023

Attention Mariem Esparra:

Fremont Analytical, Inc. received 1 sample(s) on 6/26/2023 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

Case Narrative

WO#: 2306438

Date: 7/3/2023

CLIENT: TRC
Project: WA Industries

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ug/L.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: TRCI
Logged by: Morgan Wilson

Work Order Number: 2306438
Date Received: 6/26/2023 12:21:00 PM

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present
4. Was an attempt made to cool the samples? Yes No NA
5. Were all items received at a temperature of >2°C to 6°C * Yes No NA
6. Sample(s) in proper container(s)? Yes No
7. Sufficient sample volume for indicated test(s)? Yes No
8. Are samples properly preserved? Yes No
9. Was preservative added to bottles? Yes No NA
10. Is there headspace in the VOA vials? Yes No NA
11. Did all samples containers arrive in good condition(unbroken)? Yes No
12. Does paperwork match bottle labels? Yes No
13. Are matrices correctly identified on Chain of Custody? Yes No
14. Is it clear what analyses were requested? Yes No
15. Were all holding times able to be met? Yes No

Special Handling (if applicable)

16. Was client notified of all discrepancies with this order? Yes No NA

RE: WA Industries

Work Order Number: 2308188

August 21, 2023

Attention Mariem Esparra:

Fremont Analytical, Inc. received 1 sample(s) on 8/14/2023 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing
ORELAP Certification: WA 100009 (NELAP Recognized) for Environmental Testing
Washington State Department of Ecology Accredited for Environmental Testing, Lab ID C910

Case Narrative

WO#: 2308188

Date: 8/21/2023

CLIENT: TRC
Project: WA Industries

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ug/L.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

NOTES:

S,R - Outlying spike recovery observed (high bias) and RPD out due to matrix effects of a prior injection.

Sample Log-In Check List

Client Name: TRCI
Logged by: Clare Griggs

Work Order Number: 2308188
Date Received: 8/14/2023 11:14:00 AM

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) Yes No Not Present
4. Was an attempt made to cool the samples? Yes No NA
5. Were all items received at a temperature of >2°C to 6°C * Yes No NA
6. Sample(s) in proper container(s)? Yes No
7. Sufficient sample volume for indicated test(s)? Yes No
8. Are samples properly preserved? Yes No
9. Was preservative added to bottles? Yes No NA
10. Is there headspace in the VOA vials? Yes No NA
11. Did all samples containers arrive in good condition(unbroken)? Yes No
12. Does paperwork match bottle labels? Yes No
13. Are matrices correctly identified on Chain of Custody? Yes No
14. Is it clear what analyses were requested? Yes No
15. Were all holding times able to be met? Yes No

Special Handling (if applicable)

16. Was client notified of all discrepancies with this order? Yes No NA

RE: WA Industries 105354
Work Order Number: 2309536

October 06, 2023

Attention Mariem Esparra:

Fremont Analytical, Inc. received 1 sample(s) on 9/29/2023 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in blue ink, appearing to read "Brianna Barnes".

Brianna Barnes
Project Manager

DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing
ORELAP Certification: WA 100009 (NELAP Recognized) for Environmental Testing
Washington State Department of Ecology Accredited for Environmental Testing, Lab ID C910

Case Narrative

WO#: 2309536

Date: 10/6/2023

CLIENT: TRC
Project: WA Industries 105354

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Air samples are reported in ug/L.

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate
