April 1, 2024

# Executive Summary

This *Annual Report* is a progress report prepared for the Washington Department of Ecology (“Ecology”) to describe actions completed thus far in accordance with the Ecology-approved *Cleanup Action Plan (Revision 1)* report, dated 7/31/20 (and approved on 12/8/20) (“CAPrev1”), for the former Cherry Street Cleaners located at 2510 E Cherry St in Seattle, Washington. The reporting period for this report is from 1/1/23 through 12/31/23.

As a part of the CAPrev1, an ozone injection treatment system (“OITS”) was installed in 2022 to address the following constituent of concern (“COC”) impacts that were not addressed by shallow vadose zone remediation activities previously completed in June of 2021:

- a. Soil gas located at depths deeper than 10 feet below ground surface (“bgs”) and shallower than the top of the water table
- b. Any lingering free-phase emulsified oil substrate (“EOS”) not recoverable by mechanical means
- c. Groundwater

Decreases in soil gas and source area groundwater COC concentrations have occurred since operation of the OITS began.

Based on the remedial actions completed to date and the remedial actions specified in the Ecology-approved CAPrev1, the following is scheduled for 2024:

1. Continue OITS operation
  2. Prepare this *Annual Report* documenting activities occurring during 2023
  3. Conduct quarterly performance groundwater monitoring
  4. Conduct EOS gauging and vacuum removal, if necessary
  5. Continue annual VI sampling and inspections at 2516/2518 E Cherry St
  6. Prepare a VIA report for 2516/2518 E Cherry St
-

# 1 Site History

This *Annual Report* is a progress report prepared for the Washington Department of Ecology (“Ecology”) to describe actions completed thus far in accordance with the Ecology-approved *Cleanup Action Plan (Revision 1)* report, dated 7/31/20 (and approved on 12/8/20) (“CAPrev1”), for the former Cherry Street Cleaners (“Facility”) located at 2510 E Cherry St in Seattle, Washington (“Property”) (ELAM 2020d; Ecology 2020). The reporting period for this report is from 1/1/23 through 12/31/23.

## **1.1 Facility and Property**

During Facility operations, Cherry Street Cleaners used two dry cleaning machines (“DCMs”) of unknown makes and model numbers. The first DCM was used from 1968 to 1998, and the second DCM was used from 1998 to 2007. Both DCMs used tetrachloroethene (“PCE”), which was released to the environment. Prior to 1968, the business operated as Accurate Cleaners, which used petroleum-based dry cleaning solvents instead of PCE.

The 4,000 square-foot commercial Property was previously developed with a single-story 2,440 square-foot building. The building was razed in July 2013 as a part of interim remedial measures. During the demolition, all utilities were disconnected and the pavement was removed. A 2,500-gallon heating oil tank remained at the Property but was later removed in June 2021 as a part of CAPrev1. Currently, the Property consists of a grass-covered lot surrounded by a chain-link fence. The Property is bound by the Islamic School of Seattle to the west and north, an alleyway to the east, and E Cherry St to the south. The locations of former features of the Facility and current features of the Property are shown on Figure 1.

## **1.2 Constituents of Concern**

Due to the historical use of PCE, the constituents of concern (“COCs”) are PCE and its daughter products trichloroethene (“TCE”), cis-1,2-dichloroethene (“c-DCE”), trans-1,2-dichloroethene (“t-DCE”) and vinyl chloride (“VC”). Several activities associated with remedial investigations (“RI”) and cleanup actions of the COC impacts to soil, groundwater and soil gas have ensued since 2007. Details of the prior work are

publicly available through Ecology's website and webpages dedicated to Cherry Street Cleaners.<sup>1</sup>

### **1.3 Regional Geology and Hydrogeology**

The relief in the vicinity of the site ranges between 280 and 285 feet above mean sea level ("amsl"). Based on a review of *The Geologic Map of Seattle* (USGS 2005), soils in the region of the site consists of Quaternary pre-Olympian landslide glacial deposits consisting of fine-grained silts and clays with interbedded sands, underlain by very dense fine-grained till deposits. The till generally ranges from gravelly, sandy silt to silty sand with varied quantities of clay and scattered cobbles and boulders (Galster and Laprade 1991).

Specific to the site, noncohesive sandy silt is generally encountered from the ground surface to approximately 5 to 10 feet below ground surface ("bgs") followed by discontinuous interbedded silt, silty sand and sandy silt lenses within a non-cohesive sand unit with some gravel. This soil type exists to the total depth drilled of 60 feet bgs.

Groundwater exists under unconfined conditions at depths ranging from 20 to 30 feet bgs. Historically, the shape of the water table surface reflected an approximate 100-feet wide "valley" shape with a north-south trending axis located between the Facility and 26th Ave (ELAM 2019). This valley shape causes water from the east to flow west and water from the west to flow east. The Facility itself is located on the west side of this valley shape and so groundwater generally flows eastward, although the surface is generally flat and has been noted to flow in the opposite direction as well.

As described in a prior *Annual Report*, groundwater also flows east from the Facility in the deeper part of the aquifer, but the deeper portion does not terminate to the east like the shallow portion does (ELAM 2019). Consequently, there is no groundwater flow termination point in this deeper portion (ELAM 2019). Lake Washington is the nearest surface water body to the east of the Facility, located approximately 1 mile east.

## **1.4 Remedial Investigation History**

Site characterization began when PCE was discovered in soil and groundwater during an initial Facility characterization conducted by Adapt Engineering, Inc. ("Adapt") in June 2007. The release was subsequently reported to Ecology and entered into the Voluntary Cleanup Program ("VCP"). Since then, several phases of investigation have been conducted to delineate the extent of chlorinated volatile organic compounds ("cVOCs") in soil, groundwater and air. These prior reported investigations are summarized in the table below.

Year	Investigation Activity	Report Reference
2007	<input type="checkbox"/> Advanced soil boring B-1	ECC 2013
2008	<input type="checkbox"/> Advanced soil borings FB-1 through FB-10 <input type="checkbox"/> Installed monitoring wells MW-1 through MW-10 and MW-10D	ECC 2013

Ecology recognized that the RI was complete when they approved the CAPrev1 on 12/8/20 (ELAM 2020d, Ecology 2020). Accordingly, the site was delineated and is defined to encompass all of the areas of investigation identified above within which the COCs were identified ("Site").

## **1.5 Remediation History**

Several remediation measures have been conducted at the site both before and after Ecology's approval of the CAPrev1. Remediation measures completed before the CAPrev1 approval are identified below as "Interim Remedial Measures." The remediation activities that were outlined in the CAPrev1 are identified as "CAP Remediation Activities."

### **1.5.1 Site Interim Remedial Measures**

Interim remedial measures included pilot testing to evaluate the efficacy of air sparge ("AS") and soil vapor extraction ("SVE") technologies, injection of emulsified oil substrate ("EOS") to augment PCE bioremediation, and vacuum truck events to remove

free-phase EOS from monitoring wells and injection wells.<sup>2</sup> These interim remedial measures are summarized in the table below.

Year	Interim Remedial Measures	Report Reference
2008	<input type="checkbox"/> Completed AS/SVE pilot study testing using wells SVE-1 and MW-1D <input type="checkbox"/> An AS/SVE system was not installed	ECC 2013
2010	<input type="checkbox"/> Completed an additional pilot study for SVE using SVE-2 and VP-1 through VP-3 <input type="checkbox"/> Injected a total of 3,465 gallons of EOS into wells IW-1 through IW-28, MW-1, MW-2, MW-3, and MW-7 <input type="checkbox"/> 2,310 gallons of EOS were injected into the wells within the Facility boundary <input type="checkbox"/> 1,155 gallons of EOS were injected into the wells outside the Facility boundary	ECC 2013
2012	<input type="checkbox"/> Completed groundwater monitoring for four consecutive quarters in 2012 and 2013 as part of the EOS performance monitoring	ECC 2013
2013	<input type="checkbox"/> Demolished site building <input type="checkbox"/> Used vacuum truck to remove 75 gallons of EOS from subsurface in Q4	ECC 2014
2014	<input type="checkbox"/> Used vacuum truck to remove 75 gallons of EOS in Q2 and 120 gallons of EOS in Q3	ECC 2014
2016	<input type="checkbox"/> Used vacuum truck to remove 25 gallons of EOS in Q4	ELAM 2019
2017	<input type="checkbox"/> Used vacuum truck in Q1, Q2 and Q3 to remove a total of 80 gallons of EOS during the three events	ELAM 2019
2018	<input type="checkbox"/> Used vacuum truck to remove 6 gallons of EOS in Q1	ELAM 2019
2020	<input type="checkbox"/> Used vacuum truck to remove 10 gallons of EOS in Q1	ELAM 2020c
2021	<input type="checkbox"/> Used vacuum truck in Q2 and Q4 to remove a total of 12 gallons of EOS during the two events	ELAM 2022c

### 1.5.2 CAP Remediation Activities

In an effort to define a permanent remedy, both a Feasibility Study (“FS”) and a Cleanup Action Plan (“CAP”) were prepared for Ecology’s review. After revision, the *Feasibility Study (Revision 1)* (“FSrev1”) and CAPrev1 were submitted to Ecology on 7/31/20 (ELAM 2020c, d). Ecology approved the FSrev1 and CAPrev1 in its *Opinion on*

<sup>2</sup> PCE was detected in samples of the removed EOS at concentrations of up to 1,380,000 micrograms per kilogram (“µg/kg”).

*Proposed Cleanup* letter, dated 12/8/20 (Ecology 2020). The CAP Remediation Activities and completion progress is summarized in the following table.

Year	CAP Remediation Activity	Report Reference
Jun - Jul 2021	<input type="checkbox"/> Removal of a 2,500-gallon heating oil tank <input type="checkbox"/> Grading and offsite disposal of approximately 296 cubic yards (429 tons) of soil from the surface of the property to a maximum depth of 2 feet bgs <input type="checkbox"/> In-situ chemical oxidation ("ISCO") via soil mixing approximately 985 cubic yards of soil with a Klorur SP® sodium persulfate reagent solution and a Portland cement binding agent between 2 and 10 feet bgs <input type="checkbox"/> Restoration of the original surface grade with clean backfill and hydroseeded topsoil	ELAM 2022c
2022	<input type="checkbox"/> Installation of an Ozone Injection Treatment System ("OITS") in the fall - operation began in November 2022	ELAM 2023c
2023	<input type="checkbox"/> Continued OITS operation	This Report

## 2 Ozone Injection Treatment System

The OITS was installed in the fall of 2022 and began full operation on 11/10/22. The primary aboveground components are housed in a trailer and include an air compressor, oxygen concentrator and ozone generator. These components deliver ozone to the subsurface through a network of 12 injection wells, which are nested in 6 pairs with each pair including one shallow well injecting into the vadose zone soil and one deep well injecting into the saturated soil. Detailed OITS construction and installation specifications are documented in the *2022 Annual Report* (ELAM 2023c). The locations of the injection wells, conveyance lines and remediation system trailer are shown on Figure 2.

### **2.1 Overview**

The OITS controls the flow of ozone to the injection wells through a system of timers that open and close solenoid valves for each individual injection well at set time intervals. During 2023, the cycle was set so that ozone was delivered to each injection well, one well at a time for a 30-minute delivery period. Between each 30-minute delivery period, a 2-minute overlap period was programmed between the existing and next sequential injection well to decrease stress on the system components. The full timer sequence is summarized in the table on the following page.

Timer	Time (mins)	INJ1s	INJ2s	INJ3s	INJ4s	INJ5s	INJ6s	INJ1d	INJ2d	INJ3d	INJ4d	INJ5d	INJ6d
		Valve A	Valve B	Valve C	Valve D	Valve E	Valve F	Valve G	Valve H	Valve I	Valve J	Valve K	Valve L

## **2.2 Operation and Maintenance**

Key OITS operating parameters include runtime, air pressure, oxygen pressure, air purity, amperage draw from the ozone generator, ozone concentration and rate of ozone production. These parameters are continuously monitored by the programmable logic controller ("PLC"), which records relevant parameter data, sends out a screenshot of system readings near the end of each day, and alerts the system operator of alarm conditions. Additionally, users can log on to the PLC remotely to check the operating parameters. Over the course of 2023, these parameters generally remained within their

designed operating ranges. The 2023 average values for these parameters are summarized below.

- The OITS was fully operational for 274 of 365 days in 2023 (~75%)
- The OITS was down between 1/1/23 and 3/13/23 due to malfunctions associated with the oxygen purifier, air compressor and electronic components located within the system control panel
- The OITS was down between 4/24/23 and 4/30/23 due to malfunctions associated with a check valve on the air compressor check
- The OITS was down between 4/24/23 and 4/30/23 due to malfunctions associated with a check valve on the air compressor check
- The OITS was down between 5/10/23 to 5/15/23 due to an air leak in the oxygen purifier
- The OITS was down between 5/31/23 to 6/4/23 due to an issue with the air dryer condensate drain on the air compressor
- The OITS was down on 12/13/23 due to an electrical surge in the air compressor
- The average air pressure in the air compressor was approximately 110 pounds per square inch ("PSI") during 2023, which is above the low pressure alarm setpoint of 70 PSI
- The average oxygen pressure in the oxygen concentrator storage tank was approximately 64 PSI during 2023, which is above the low pressure alarm setpoint of 45 PSI
- The average oxygen purity was approximately 90% during 2023, which is above the low purity alarm setpoint of 70%
- The average current draw by the ozone generator was approximately 8.5 amps when the ozone generator was operational, which is above the low alarm setpoint of 2 amps and below the high alarm setpoint of 22 amps
- The average ozone concentration was approximately 101.8 grams per cubic meter ("g/m<sup>3</sup>") when the ozone generator was operational
- The average rate of ozone production was approximately 4.6 pounds per day ("lbs/day") when the ozone generator was operational, which is within the designed 4.5 to 5.5 lbs/day
- Approximately 1,259 pounds of ozone were injected into the subsurface during 2023

Screenshots of system readings recorded near the end of each day are included in Appendix A.1 and the data are summarized in Table 1. A chart depicting the screenshot data graphically is included in Appendix A.2. A chart depicting the ozone production rate and cumulative ozone mass produced since operation began through 12/31/23 is included in Appendix A.3.

## 3 Performance Monitoring

The CAPrev1 included performance monitoring and sampling plans for soil, groundwater, free-phase EOS and vapor intrusion (ELAM 2020d). The confirmatory soil sampling was completed in Q4 2021 and Q1 2022 and documented in the 4/5/22 *Annual Report* (ELAM 2022c). Groundwater, free-phase EOS and vapor intrusion (“VI”) monitoring remain ongoing and are reported herein.<sup>3</sup>

### 3.1 Quarterly Groundwater Monitoring

The CAPrev1 specifies a plan for quarterly groundwater monitoring after implementation of the remedy while the OITS is in operation and for four additional quarters after the OITS is shut down. Since the OITS began operation in Q4 2022, quarterly performance groundwater monitoring began in the following quarter, Q1 2023, and has continued through Q4 2023. The plan includes gauging and sampling 14 monitoring wells for analysis of volatile organic compounds. The 14 wells identified for performance monitoring are MW-1, MW-2R, MW-3R, MW-4, MW-5, MW-6, MW-7, MW-9, MW-11, MW-13, MW-15, MW-15D, MW-23 and MW-101. The locations of these monitoring wells are shown on Figure 1.

#### 3.1.2 Procedures

During each of the four quarterly groundwater monitoring events conducted in 2023, an ELAM staff scientist accessed, gauged and sampled the 14 monitoring wells in the plan in accordance with the procedures specified in the QAPP (ELAM 2020d, 2023b). Field documentation is provided on Low-Flow Test Reports for each well in Appendices B.1 through B.4.

---

<sup>3</sup> VI monitoring in 2023 was conducted at 720 E 25th Ave and 2516 E Cherry St in March. These VI sampling events are summarized in this section and are also documented in separate reports (ELAM 2023d, 2023e).

---

### 3.1.3 Results

#### *3.1.3.1 Groundwater Flow*

Groundwater contours and flow directions were interpreted for each sampling event using data from the monitoring wells that are screened across the top of the water table at approximately 25 feet bgs. The groundwater elevation in each monitoring well was calculated by subtracting the depth-to-water measurement from the top-of-casing elevations. The groundwater elevations ranged from 252.00 ft amsl to 252.95 ft amsl during Q1 2023, 252.34 ft above amsl to 253.30 ft amsl during Q2 2023, 251.02 ft above amsl to 251.67 ft amsl during Q3 2023 and 250.57 ft above amsl to 251.10 ft amsl during Q4 2023.

An evaluation of the historical groundwater elevation measurements revealed that the groundwater elevations measured at MW-15 in Q1 2023 and at MW-2R in Q2 2023 were anomalous. Elevations at these monitoring wells were not included in the groundwater flow interpretations. The anomalous data are described below.

Q1 2023: Historical groundwater elevations at MW-15 have typically been 0.05 to 0.15 ft less than the elevations measured at nearby monitoring wells MW-9 and MW-23. During Q1 2023, the elevation measured at MW-15 was 0.95 ft greater than MW-9 and 0.86 ft greater than MW-23.

Q2 2023: Historical groundwater elevations at MW-2R have typically been 0.05 to 0.50 ft less than the elevations measured at nearby monitoring wells MW-3R and MW-13. During Q2 2023, the elevation measured at MW-2R was 0.46 ft greater than MW-3R and also 0.46 ft greater than MW-13.

Groundwater flow interpretations in the shallow zone for each groundwater monitoring event indicate a flow from the former Cherry Cleaners toward the east. Groundwater elevation measurements and low-flow stabilization parameters from this monitoring period are summarized in Table 2 and illustrated on Figures 3a through 3d. Historical gauging data are presented in Appendix C.1.

#### *3.1.3.2 Groundwater Analytical Data*

Each sample was analyzed for VOCs in accordance with USEPA SW-846 Method 8260. There were cVOCs detected in 13 to 14 samples during each of the four sampling

---

events. The results are summarized in Table 3 and shown on Figure 4. Historical groundwater analytical results are provided in Appendix C.2. The laboratory analytical reports for each quarterly groundwater monitoring event are presented in Appendix D.

### 3.1.3.3 QA/QC Analytical Data

Results from the QA/QC data, including trip blanks and field duplicates, were evaluated to assess the quality of the groundwater analytical data. VOCs were not detected in the trip blanks analyzed during the reporting period. Therefore, cross-contamination during sample storage and transit is not suspected. To evaluate the precision of the data set, the relative percent difference ("RPD")<sup>4</sup> was calculated for detected cVOCs as summarized in the table below.

Sampling Event	Duplicate Location	Detected cVOCs	RPD Range (%)
Q1 2023	MW-1	PCE	5.2
		TCE	6.4
		cDCE	2.1
Q2 2023	MW-1 MW-2R	PCE	3.3
		TCE	0.8
		cDCE	5.1
Q3 2023	MW-1	PCE	1.8
		TCE	2.7
		cDCE	1.0
Q4 2023	MW-1	PCE	3.0
		TCE	13.2
		cDCE	4.5

The calculated RPD values are within the acceptable range of less than 20% (Ecology, 2004) during each groundwater monitoring event during this reporting period.

<sup>4</sup> The RPD is calculated by dividing the absolute value of the difference between the two concentrations by the average of the two concentrations.

### **3.2 EOS Monitoring & Removal**

Beginning in 2013, EOS that was previously injected into the groundwater as an interim remedy was detected floating on the top of the water table in injection wells and monitoring wells at thicknesses of greater than 3 feet. Laboratory analysis of an EOS sample collected from monitoring well MW-3 in 2013 revealed that the PCE concentration in the EOS was 1,380,000 micrograms per kilogram (“ $\mu\text{g}/\text{kg}$ ”). With the possibility of the EOS biodegrading and re-releasing the sequestered PCE back into the groundwater, Cherry Street Cleaners began monitoring the EOS thicknesses and using a vacuum truck to skim EOS from the groundwater surface in monitoring wells and injection wells in 2014.

#### **3.2.1 Procedures**

During 2023, EOS monitoring events were conducted on 6/21/23, 9/27/23 and 12/3/23. Monitoring wells (MW-1, MW-3 and MW-7) and injection wells (IW-02 through IW-27) were inspected for the presence of EOS. Detailed EOS monitoring procedures are provided in Appendix E.

#### **3.2.2 Results**

No EOS was observed during the reporting period. In fact, EOS has not been detected in any monitoring or injection wells since Q2 2021. The measured EOS thicknesses since 2013 are summarized in Table 4.

### **3.3 Vapor Intrusion Monitoring**

During 2023, The ELAM Group conducted vapor intrusion assessments (“VIAs”) at the Islamic School of Seattle (“ISS”) building located at 720 25th Ave, the Twilight Exit bar building located at 2516 E Cherry St and the building located at 2518 E Cherry St. These VIAs were documented in separate reports submitted to Ecology in December 2023 (ELAM 2023d, ELAM2023e).

### 3.3.1 720 25th Ave

The VIA at the ISS was conducted in March 2023 and included inventorying chemical products in the building, removing paint and other building maintenance products from the building at least 48 hours prior to sampling and collecting sub-slab soil gas (“SGss”) and indoor air (“IA”) samples from the southern portion of the building. Results from the analysis of VOCs are compared to MTCA Method B Residential Cleanup Levels.

#### *3.3.1.1 Procedures*

Samples were collected from two SGss and seven IA sample locations over an 8-hr period in accordance with procedures listed in the Quality Assurance Project Plan - Revision 1 (“QAPPRev1”) (ELAM 2023a). The samples were submitted to Eurofins laboratory for analysis of VOCs in accordance with USEPA Method Toxic Organic 15 (“TO-15”).

#### *3.3.1.2 Results*

No COCs related to Cherry Cleaners were detected in the SGss or IA samples at concentrations exceeding the MTCA Method B Cleanup Levels. Analytical results are summarized on Table 5 and shown relative to the sample locations on Figure 5.

### 3.3.2 2516 & 2518 E Cherry St

Annual inspections of 2516 and 2518 E Cherry St are conducted to confirm continued Commercial land use and determine if additional VIA sampling is necessary. If land use changes to residential, additional VIA sampling may be required at both properties. If land use remains commercial, winter VIA sampling is conducted at 2516 E Cherry St, but no additional sampling is necessary at 2518 E Cherry St. During the inspections in 2023, the land use for both properties remained commercial. Consequently, a winter VIA was conducted for the Twilight Exit bar at 2516 E Cherry St.

The VIA at Twilight Exit was conducted in March 2023 and included documenting building use, inventorying chemical products in the building, removing paint and other building maintenance products from the building at least 48 hours prior to sampling and

---

collecting SGss and IA samples from the building for comparison to MTCA Method C Commercial Cleanup Levels.

### *3.3.2.1 Procedures*

Within the Twilight Exit building, samples were collected from two SGss and two IA sample locations over an 8-hr period in accordance with procedures listed in the QAPPRev1 (ELAM 2023a) on 3/11/23. The samples were submitted to Eurofins laboratory for analysis of VOCs in accordance with USEPA TO-15.

### *3.3.2.2 Results*

Analytical results from the 3/11/23 VIA indicate that no COCs related to Cherry Cleaners were detected in the IA samples at concentrations exceeding the MTCA Method C Cleanup Levels. The PCE detected in the SGss sample from SS-1 is the only MTCA Method C Cleanup Level exceedance. Analytical results are summarized on Table 6 and shown relative to the sample locations on Figure 6. Historical VI sampling analytical results for all properties are shown in Appendix C.3.

## 4 Remedy Progress Analysis

The CAPrev1 remedies included a HOT removal, shallow soil excavation to a depth of 2 ft bgs and mixing a sodium persulfate remediation product and portland cement bonding agent with the soil from 2 to 10 ft bgs in June 2021; two EOS removal events in 2021; and installation and operation of an OITS beginning in November 2022. The progress of these remedies, as measured by performance groundwater monitoring and VIA events, is presented herein.

### **4.1 Groundwater Analysis**

Groundwater remediation progress is assessed through a comparison to MTCA Cleanup Levels and an evaluation of the change in COC concentrations.

#### **4.1.1 Comparison to MTCA Cleanup Levels**

Results from the 2023 quarterly groundwater sampling events are compared to the MTCA Cleanup Levels in Table 3 and shown relative to the sample locations on Figure 4. A review of Table 3 shows the following:

- 11 monitoring wells (MW-1, MW-2, MW-3R, MW-5, MW-6, MW-11, MW-13, MW-15, MW015d, MW-23 and MW-101): at least one COC exceeded the MTCA Level A Cleanup Level in each of the 4 quarterly sampling events during 2023
- 1 monitoring well (MW-7): at least one COC exceeded the MTCA Level A Cleanup Level in 3 of the 4 quarterly sampling events during 2023
- 2 monitoring wells (MW-4 and MW-9): no COCs exceeded the MTCA Level A Cleanup Level in any of the 4 quarterly sampling events during 2023

Per the CAPrev1, monitoring wells in which COCs have not been detected at concentrations above the MTCA Level A Cleanup Levels for four consecutive quarters after remedy implementation will be removed from the monitoring plan. Based on this criteria, monitoring well MW-9 will be removed from the monitoring plan. Monitoring well MW-4 also fits this criteria. However, it will remain in the monitoring plan for at least one more quarter because the PCE concentration in Q1 2023 was equal to the MTCA Level A Cleanup Level. MW-4 will be removed from the monitoring plan if no COC

---

concentrations from the Q1 2024 sampling event exceed the MTCA Level A Cleanup Levels.

#### 4.1.2 Evaluation of Change in COC Concentrations

To evaluate groundwater remediation progress, the cVOC concentrations from the Q4 2023 sampling event were compared to the cVOC concentrations from the Q4 2021 baseline sampling event.<sup>5</sup> The Q4 2021 and Q4 2023 COC concentrations in micrograms per liter ("µg/L") and associated percentage change ("%Δ") from baseline are summarized in the table below.

Well	PCE			TCE			c-DCE			VC		
	Q4 21	Q4 23	% Δ	Q4 21	Q4 23	% Δ	Q4 21	Q4 23	% Δ	Q4 21	Q4 23	% Δ
<b>MW-1</b>	512	267	-48%	73.4	15.3	-79%	1,960	542	-72%	6.5	<10.0	-23%
<b>MW-2r</b>	243	140	-42%	15.0	7.1	-53%	2.9	4.1	+41%	<0.20	<2.0	--
<b>MW-3r</b>	191	116	-39%	2.5	1.5	-40%	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-4</b>	2.8	4.2	+50%	<0.40	<1.0	--	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-5</b>	24.0	62.0	+158%	0.59	1.1	+86%	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-6</b>	49.0	98.5	+101%	<0.40	<1.0	--	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-7</b>	296	2.3	-99%	14.8	<2.0	-93%	337	195	-42%	1.8	<2.0	-44%
<b>MW-9</b>	<1.0	1.2	--	<0.40	<1.0	--	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-11</b>	354	407	+15%	26.8	18.7	-30%	33.5	62	+85%	<0.40	<5.0	--
<b>MW-13</b>	26.7	35.2	+32%	<0.40	<1.0	--	<1.0	<1.0	--	<0.20	<1.0	--
<b>MW-15</b>	499	704	+41%	10.6	14.7	+39%	<1.0	<10.0	--	<0.20	<2.0	--
<b>MW-15d</b>	15.3	14.0	-9%	0.70	1.90	+171%	<1.0	<1.0	--	<0.20	<2.0	--
<b>MW-23</b>	197	279	+42%	11.4	17.1	+50%	29.7	57.5	+94%	<0.20	<2.0	--
<b>MW-101</b>	144	110	-24%	7.5	5.8	-23%	20.4	13.3	-35%	<0.20	<2.0	--

Notes:

- Percentages in blue font represent concentration decreases, whereas red font indicates increases. When the result is less than the laboratory reporting limit,  $\frac{1}{2}$  of the reporting limit is used to calculate the percentage change.
- indicates the compound was not detected during either sampling event.

The percent changes shown in the table demonstrate decreasing COC concentrations in wells within and immediately down-gradient of the OITS treatment area (MW-1, MW-2r, MW-3r, MW-7 and MW-101), which are areas that had some of the highest

<sup>5</sup> The Q4 2021 baseline sampling event was conducted after implementing the shallow soil excavation and soil mixing remedies in June 2021 but before beginning operation of the OITS in November 2022.

concentrations prior to remedy implementation. At upgradient monitoring well MW-5 and sidegradient monitoring well MW-6, PCE concentrations have shown an increase of greater than 100%. However, both of these wells are located outside of the OITS treatment area and had baseline PCE concentrations approximately 10 times less than the baseline concentrations in the treatment area.

Overall, the groundwater data demonstrate that the OITS has decreased the cVOC concentrations within and immediately downgradient of the treatment area. Changes to the OITS operating schedule that are intended to optimize the effectiveness of groundwater treatment are discussed in Section 5.2.

## **4.2 EOS Removal Analysis**

Since implementing the removal program in 2014, approximately 907 gallons of liquid was removed, of which approximately 403 gallons was EOS. As shown in Table 4, the EOS thicknesses and EOS removal quantities have steadily decreased over time. No measurable EOS has been detected in the monitoring wells or injection wells since Q2 2021, signifying that the mechanical removal of the EOS has been successful.

## **4.3 Vapor Intrusion**

### **4.3.1 720 25th Ave**

Prior to implementing remedy at Cherry cleaners, PCE was detected in the soil gas beneath the southern portion of the ISS building at concentrations exceeding the MTCA Method B Cleanup Levels. Since implementing remedy at Cherry Cleaners, VIAs have been conducted at the ISS during two winter worst-case scenario sampling events: January 2022 and March 2023. No COCs related to Cherry Cleaners were detected in the SGss or IA samples at concentrations exceeding the MTCA Method B Cleanup Levels during either of these sampling events. Consequently, The ELAM Group concluded that the remedies contributed to a permanent reduction in PCE in soil gas. Further, since the VI exposure pathway remained below Method B IACLs for the COCs associated with Cherry Street Cleaners, The ELAM Group recommended discontinuing VIAs at the ISS. Ecology reviewed the data and, via email on 12/21/23, concurred that VIAs at ISS may be discontinued (Ecology 2023).

---

#### 4.3.2 2516 E Cherry St

During the March 2023 VIA sampling event, none of the COCs associated with Cherry Street Cleaners were detected in the IA samples or SGss samples at concentrations exceeding Ecology's Method C Cleanup Levels. Historically, PCE has been detected in SGss samples at concentrations above the Method C SGSLs. The PCE concentration detected at sample location SS-1 in March 2023 was considerably lower than the baseline concentration before remedy, which was collected in October of 2021 [1,300 micrograms per cubic meter ("ug/m<sup>3</sup>") vs. 29,200 ug/m<sup>3</sup>]. The PCE concentration detected at sample location SS-2 was also considerably lower in March 2023 than its October 2021 baseline concentration (20 ug/m<sup>3</sup> vs. 6,320 ug/m<sup>3</sup>).

As presented in the *Vapor Intrusion Assessment Report - 2516 E Cherry St* (ELAM 2023), the historical VIA data demonstrate the following:

1. Demolition of the former Cherry Street Cleaners building is largely responsible for the release of entrapped soil gas
2. The remedies specified in CAPrev1, including the completed soil excavation of the upper 2 feet of soil and ISCO of the vadose zone soil between 2 and 10 feet bgs as well as the ongoing ISCO with ozone in groundwater and the lower part of the vadose zone, are reducing PCE mass in the subsurface
3. The March 2023 VI sample collection event represents the first post-remedy event where the PCE concentrations in the samples collected from both SS-1 and SS-2 did not exceed the Method C SGSL, and suggests that the above-referenced remedies contributed to a permanent reduction of PCE in soil gas

## 5 CAP Implementation Planning

All of the CAP Remediation Activities have been implemented. Items that remain for completion are continued operation of the OITS and continued monitoring. This section of the report presents modifications that will be implemented in 2024 to optimize OITS effectiveness and provides the updated CAP implementation schedule.

### 5.1 OITS Operation Modifications

During 2023, the ozone injection cycle was set so that ozone was delivered to each injection well, one well at a time for a 30-minute delivery period. This distributed 50% of the ozone to the saturated zone and 50% of the ozone to the vadose zone. As evidenced by the March 2023 VIA data, operating in this manner has resulted in a 95% or more reduction in PCE soil gas concentrations at 720 25th Ave and 2516 E Cherry St. PCE concentrations in groundwater have also shown a reduction, but not to the same magnitude as the soil gas reductions. In an effort to increase the groundwater COC reductions in 2024, The ELAM Group will adjust the ozone injection cycle such that approximately 90% is injected into the saturated zone and 10% is injected into the vadose zone. The injection timing sequence will be modified as shown in the following table.

Timer	Time (mins)	INJ1s	INJ2s	INJ3s	INJ4s	INJ5s	INJ6s	INJ1d	INJ2d	INJ3d	INJ4d	INJ5d	INJ6d

## 5.2 CAP Implementation Schedule

The following checklist was presented in the CAPrev1 to outline the schedule of activities. This checklist is updated to demonstrate completion progress through 2023 and to show the planned activities that remain for completion from 2024 through 2026. At this time, no adjustments to the schedule or amendments to the scope of remedy are recommended.

Quarter & Year	CAPrev1 Scheduled Activities

## 6 Summary

The CAPrev1 activities conducted during 2023 included continued operation of the OITS, four performance groundwater monitoring events, three EOS gauging events and two VIA events. The OITS operated with approximately 75% runtime throughout 2023. Periodic shut-downs were due to equipment malfunctions. The performance groundwater monitoring and VIA events were conducted during the 2023 monitoring events show that the implementation of interim remediation activities and the CAP Remediation Activities has resulted in the following:

- Successful removal of PCE-laden EOS from the groundwater surface
- Decreased groundwater cVOC concentrations within and immediately down-gradient from the treatment area
- Decreased soil gas cVOC concentrations at 2516 E Cherry St and 720 25th Ave
- Elimination of 720 25th Ave VI sampling
- Removal of one monitoring well from the monitoring plan

Based on the remedial actions completed to date and the schedule of activities specified in the CAPrev1, the following is scheduled for 2024:

- Continue OITS operation throughout 2024 with a modified ozone injection cycle to optimize groundwater remediation
- Conduct quarterly performance groundwater monitoring throughout 2024
- Conduct quarterly EOS gauging and vacuum removal, if necessary
- Conduct inspections and winter VI sampling during Q1 2024 at 2516 and 2518 E Cherry St
- Prepare separate reports to document the VIAs at 2516/2518 E Cherry St

## Notes:

1. Analytical results are presented in micrograms per liter (ug/L).
2. All results for cVOCs are listed. Other VOCs listed represent those that were detected above the applicable MTCA CL.
3. The applicable MTCA CLs are Method A CLs unless Method A CLs are not listed. Where Method A CLs are not listed, Method B CLs are applicable.
4. A bold font style and blue shading indicates that the concentration exceeds the applicable MTCA Cleanup Level.
5. NA = Not Applicable

Notes:

1. NM = Not Measured

2. NA = Not Available

3. Bold front and yellow shading indicates vacuum was applied to the well to skim EOS from the surface of the water.

4. Although no EOS was dected in Q4 2021, vacuum was applied to skim the groundwater surface at 14 well.

## Notes:

1. All air analytical results are presented in micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ).
2. All results are displayed for tetrachloroethene and its daughter compounds: trichloroethene, cis-1,2-dichloroethene, trans-1,2-dichloroethene and vinyl chloride. The other compounds presented contain at least one sample that was detected at a concentration greater than the applicable cleanup/screening level during the most recent sample collection event.
3. A bold font style indicates that the concentration exceeds the applicable Method B Screening Level, and a bold underlined font style indicates that the concentration exceeds the applicable Method C. For carcinogens, the Cancer Screening Level is used. For non-carcinogens, the Noncancer Screening Level is used.
4. NT = Not Tested
5. NA = Not Available

## Notes:

1. All air analytical results are presented in micrograms per cubic meter (ug/m3).

2. All results are displayed for tetrachloroethene and its daughter compounds: trichloroethene, cis-1,2-dichloroethene, trans-1,2-dichloroethene and vinyl chloride. The other compounds presented contain at least one sample that was detected at a concentration greater than the applicable cleanup/screening level during the most recent sample collection ever.

3. A bold font style indicates that the concentration exceeds the applicable Method B Screening Level, and a bold underlined font style indicates that the concentration exceeds the applicable Method C. For carcinogens, the Cancer Screening Level is used. For non-carcinogens, the Noncancer Screening Level is used.

4. NT = Not Tested

5. NA = Not Available

## Test Notes:

## Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Flow
		+/- 0.1	+/- 3 %	+/- 3 %	+/- 10 %	+/- 10 %	+/- 10	+/- 0.3	
3/12/2023 2:13 PM	00:00	6.27 pH	12.06 °C	399.41 µS/cm	5.19 mg/L	101.26 NTU	279.6 mV	27.42	150.00 ml/min
3/12/2023 2:17 PM	04:03	6.15 pH	11.83 °C	406.25 µS/cm	2.54 mg/L	273.25 NTU	298.5 mV	27.42	150.00 ml/min
3/12/2023 2:21 PM	08:06	6.15 pH	12.11 °C	404.77 µS/cm	1.76 mg/L	110.14 NTU	287.2 mV	27.42	150.00 ml/min
3/12/2023 2:25 PM	12:09	6.18 pH	12.62 °C	401.05 µS/cm	4.44 mg/L	47.28 NTU	304.5 mV	27.42	150.00 ml/min
3/12/2023 2:29 PM	16:12	6.21 pH	13.06 °C	394.62 µS/cm	2.24 mg/L	16.60 NTU	294.9 mV	27.42	150.00 ml/min
3/12/2023 2:33 PM	20:15	6.27 pH	13.11 °C	391.88 µS/cm	1.87 mg/L	9.22 NTU	288.5 mV	27.42	150.00 ml/min
3/12/2023 2:37 PM	24:18	6.30 pH	13.05 °C	391.15 µS/cm	1.86 mg/L	8.91 NTU	291.6 mV	27.42	150.00 ml/min
3/12/2023 2:41 PM	28:21	6.33 pH	13.22 °C	390.06 µS/cm	1.71 mg/L	7.96 NTU	289.4 mV	27.42	150.00 ml/min

## Samples

Sample ID:	Description:
MW101:G031223	

# Calibration Report

Instrument      Aqua TROLL 600  
Serial Number    588628  
Created          3/10/2023

Sensor  
Sensor          Turbidity  
Serial Number   875449  
Last Calibrated   3/7/2023

Calibration Details  
Slope      0.9933621  
Offset     0.84 NTU

Calibration Point 1  
Pre Measurement    0.00 NTU  
Post Measurement   0.00 NTU

Calibration Point 2  
Pre Measurement    99.82 NTU  
Post Measurement   100.00 NTU

Sensor  
Sensor          RDO  
Serial Number   852213  
Last Calibrated   3/7/2023

Calibration Details  
Slope      1.027641  
Offset     0.00 mg/L

Calibration point 100%  
Concentration    7.21 mg/L  
Pre Measurement   97.34 %Sat  
Post Measurement   100.00 %Sat  
Temperature      24.16 °C  
Barometric Pressure   898.70 mbar

Calibration point 0%  
Concentration    0.00 mg/L  
Pre Measurement   0.02 %Sat  
Post Measurement   0.00 %Sat  
Temperature      23.94 °C

Sensor  
Sensor          Conductivity  
Serial Number   1009908  
Last Calibrated   3/10/2023

**Calibration Details**

TDS Conversion Factor (ppm)	0.65
Cell Constant	0.845
Reference Temperature	20.00 °C

**Pre Measurement**

Actual Conductivity	7,449.2 µS/cm
Specific Conductivity	7,690.3 µS/cm

**Post Measurement**

Actual Conductivity	6,251.8 µS/cm
Specific Conductivity	7,160.0 µS/cm

**Sensor**

Sensor	pH/ORP
Serial Number	967240
Last Calibrated	Factory Defaults

**Sensor**

Sensor	Barometric Pressure
Serial Number	588628
Last Calibrated	Factory Defaults

**Calibration Details**

TDS Conversion Factor (ppm)	0.65
Cell Constant	0.94
Reference Temperature	20.00 °C

**Pre Measurement**

Actual Conductivity	6,089.6 µS/cm
Specific Conductivity	6,437.5 µS/cm

**Post Measurement**

Actual Conductivity	6,089.2 µS/cm
Specific Conductivity	7,160.0 µS/cm

**Sensor**

Sensor	pH/ORP
Serial Number	967240
Last Calibrated	3/10/2023

## Calibration Details

**Calibration Point 1**

pH of Buffer	7.02 pH
pH mV	8.5 mV
Temperature	17.66 °C

**Pre Measurement**

pH	6.85 pH
pH mV	8.6 mV

**Post Measurement**

pH	7.02 pH
pH mV	8.3 mV

**Slope and Offset 1**

Slope	-57.7 mV/pH
Offset	9.7 mV

**ORP**

ORP Solution	Zobell's
Offset	6.4 mV
Temperature	17.65 °C
Pre Measurement	232.3 mV
Post Measurement	238.7 mV

**Sensor**

Sensor	Barometric Pressure
Serial Number	588628
Last Calibrated	Factory Defaults

# Calibration Report

Instrument      Aqua TROLL 600 Vented  
Serial Number    466586  
Created          2023-09-23

Sensor          **Conductivity**  
Serial Number   754103  
Last Calibrated   2023-09-23

---

## *Calibration Details*

TDS Conversion Factor (ppm)    0.65  
Cell Constant                        245.285  
Reference Temperature              25.00 °C

## *Pre Measurement*

---

Actual Conductivity    7,001.4 µS/cm  
Specific Conductivity   7,842.6 µS/cm

## *Post Measurement*

---

Actual Conductivity    7,142.0 µS/cm  
Specific Conductivity   8,000.0 µS/cm

Sensor	Turbidity
Serial Number	961196
Last Calibrated	2023-08-16

### Calibration Details

#### Calibration Point 1

pH of Buffer	7.02 pH
pH mV	-33.8 mV
Temperature	19.38 °C

#### Pre Measurement

pH	7.00 pH
pH mV	-33.8 mV

#### Post Measurement

pH	7.02 pH
pH mV	-33.1 mV

#### Slope and Offset 1

Slope	-58.05 mV/pH
Offset	-32.6 mV

#### ORP

ORP Solution	Quick Cal
Offset	-51.6 mV
Temperature	19.38 °C
Pre Measurement	231.0 mV
Post Measurement	232.0 mV

## Q4 2023 Low-Flow Test Reports

# Low-Flow Test Report:

Test Date / Time: 12/2/2023 6:16:17 PM

Project: WAKS2510C\_MW1 (3)

Operator Name: Ag

Location Name: MW-1  Well Diameter: 2 in Casing Type: PVC Screen Length: 20 ft Top of Screen: 22 ft Total Depth: 42 ft Initial Depth to Water: 29.45 ft	Pump Type: Geoprobe Bladder Pump  Tubing Type: PTFE Tubing Inner Diameter: 0.25 in Tubing Length: 35 ft Pump Intake From TOC: 35 ft Estimated Total Volume Pumped: 0.25 gal Flow Cell Volume: 130 ml Final Flow Rate: 150 ml/min Final Draw Down: 0.17 ft	Instrument Used: Aqua TROLL 600  Serial Number: 565268
--	---	--

## Test Notes:

## Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth To Water	Flow
		+/- 0.1	+/- 3 %	+/- 3 %	+/- 10 %	+/- 10 %	+/- 10	+/- 5	
12/2/2023 6:16 PM	00:00	5.08 pH	11.56 °C	1,857.4 µS/cm	4.79 mg/L	68.21 NTU	53.0 mV	29.45 ft	150.00 ml/min
12/2/2023 6:20 PM	04:27	5.08 pH	11.83 °C	1,896.7 µS/cm	2.09 mg/L	78.82 NTU	49.2 mV	29.50 ft	150.00 ml/min
12/2/2023 6:25 PM	08:54	5.07 pH	11.17 °C	1,889.2 µS/cm	1.87 mg/L	74.81 NTU	49.2 mV	29.55 ft	150.00 ml/min
12/2/2023 6:29 PM	13:21	5.07 pH	10.91 °C	1,894.9 µS/cm	1.82 mg/L	65.86 NTU	48.6 mV	29.57 ft	150.00 ml/min
12/2/2023 6:34 PM	17:48	5.07 pH	10.82 °C	1,894.1 µS/cm	1.81 mg/L	62.17 NTU	50.0 mV	29.60 ft	150.00 ml/min
12/2/2023 6:38 PM	22:15	5.07 pH	10.64 °C	1,893.6 µS/cm	1.87 mg/L	58.80 NTU	50.4 mV	29.62 ft	150.00 ml/min

# Calibration Report

Instrument      Aqua TROLL 600  
Serial Number    565268  
Created          12/1/2023

---

Sensor           **Conductivity**  
Serial Number    978943  
Last Calibrated   12/1/2023

## *Calibration Details*

---

TDS Conversion Factor (ppm)    0.65  
Cell Constant                        0.917  
Reference Temperature             25.00 °C

## *Pre Measurement*

---

Actual Conductivity    5,697.6 µS/cm  
Specific Conductivity   7,834.7 µS/cm

## *Post Measurement*

---

Actual Conductivity    5,817.8 µS/cm  
Specific Conductivity   8,000.0 µS/cm

Sensor	pH/ORP
Serial Number	944302
Last Calibrated	12/1/2023

### Calibration Details

#### Calibration Point 1

pH of Buffer	7.03 pH
pH mV	-24.4 mV
Temperature	10.72 °C

#### Pre Measurement

pH	6.99 pH
pH mV	-24.2 mV

#### Post Measurement

pH	7.03 pH
pH mV	-23.2 mV

#### Slope and Offset 1

Slope	-56.33 mV/pH
Offset	-22.7 mV

#### ORP

ORP Solution	Quick-Cal
Offset	37.5 mV
Temperature	10.72 °C
Pre Measurement	238.8 mV
Post Measurement	245.1 mV

Sensor	RDO
Serial Number	984910
Last Calibrated	11/20/2023

---

*Calibration Details*

Slope	1.061472
Offset	-0.06 mg/L

---

*Calibration point 100%*

Concentration	8.99 mg/L
Pre Measurement	94.19 %Sat
Post Measurement	100.00 %Sat
Temperature	18.28 °C
Barometric Pressure	1,021.4 mbar

---

*Calibration point 0%*

Concentration	0.05 mg/L
Pre Measurement	0.67 %Sat
Post Measurement	0.00 %Sat
Temperature	18.17 °C

---

**Sensor**      **Turbidity**

Serial Number	1036744
Last Calibrated	11/20/2023

---

*Calibration Details*

TSS Conversion Factor (mg/L)	0
Slope	0.8481856
Offset	1.06 NTU

---

*Calibration Point 1*

Pre Measurement	0.00 NTU
Post Measurement	0.00 NTU

---

*Calibration Point 2*

Pre Measurement	116.87 NTU
Post Measurement	100.00 NTU

Sensor	Barometric Pressure
Serial Number	565268
Last Calibrated	Factory Defaults

### Appendix C.1. Historical Monitoring Well Gauging Data

Former Cherry Cleaners  
2510 E. Cherry Street, Seattle, WA 98122  
VCP ID: NW2009, Cleanup Site ID: 4175; Facility/Site ID: 476174

Location	Monitoring Well Construction Information						Date	Gauging Data				Approximate EOS Thickness (feet)	Elevations (feet above mean sea level)				
	Well Diameter (in)	Screened Interval (ft bgs)	Elevations (feet above mean sea level)					Depth to EOS	Measurements (feet below top of casing)				Groundwater	Bottom of Well	Pump Intake		
			Top of Casing	Top of Screen	Bottom of Screen	Depth to Water			Depth to Bottom

### Appendix C.1. Historical Monitoring Well Gauging Data

Former Cherry Cleaners  
2510 E. Cherry Street, Seattle, WA 98122  
VCP ID: NW2009, Cleanup Site ID: 4175; Facility/Site ID: 476174

Location	Monitoring Well Construction Information						Date	Gauging Data				Approximate EOS Thickness (feet)	Elevations (feet above mean sea level)				
	Well Diameter (in)	Screened Interval (ft bgs)	Elevations (feet above mean sea level)					Depth to EOS	Measurements (feet below top of casing)				Groundwater	Bottom of Well	Pump Intake		
			Top of Casing	Top of Screen	Bottom of Screen	Depth to Water			Depth to Bottom	Depth to Pump Intake

Notes:

1. NM = Not Measured

2. Prior to 2017, EOS thicknesses were based solely on oil-water interface probe measurements, which have proven inaccurate for determining the precise depth of the EOS/water interface. Beginning in 2017, a bailer was used to retrieve an EOS sample for measurement of the EOS thickness.

VCP ID No. NW2009

Project No. WAKS2510C22.2

Date: 4/1/24

Notes:

1. Analytical results are presented in micrograms per liter (ug/L).
2. Results are only shown for PCE, TCE, cDCE, tDCE and VC.
3. The applicable MTCA CLs are Method A CLs unless Method A CLs are not listed. Where Method A CLs are not listed, Method B CLs are applicable.
4. A bold font style and blue shading indicates that the concentration exceeds the applicable MTCA Cleanup Level.
5. NA = Not Applicable

## Q1 2023 Groundwater Analytical Report

March 26, 2023

Jason Oland  
ELAM Group  
161 Lakeview Drive  
Suite B  
Noblesville, IN 46060

RE: Project: WAK52510C  
Pace Project No.: 10645984

Dear Jason Oland:

Enclosed are the analytical results for sample(s) received by the laboratory on March 16, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rachel Johnson  
rachel.johnson@pacelabs.com  
(612)607-1700  
Project Manager

## QUALIFIERS

Project: WAK52510C  
Pace Project No.: 10645984

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 872104

- [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
- [1] Vinyl acetate did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.
- [2] The continuing calibration verification was below the method acceptance limit for bromomethane, dichlorofluoromethane, and iodomethane. The analytes were not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

Batch: 872502

- [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

- 1M Post-analysis pH measurement indicates insufficient VOA sample preservation. Therefore, analysis was conducted outside the recognized method holding time.
- D4 Sample was diluted due to the presence of high levels of target analytes.

Noblesville, IN 46060

RE: Project: WAKS2510C  
Pace Project No.: 10658463

Dear Jason Oland:

Enclosed are the analytical results for sample(s) received by the laboratory on June 21, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rachel Johnson  
[rachel.johnson@pacelabs.com](mailto:rachel.johnson@pacelabs.com)

## QUALIFIERS

Project: WAKS2510C  
Pace Project No.: 10658463

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 889463

[1] The continuing calibration verification was below the method acceptance limit for 1,2-dibromo-3-chloropropane. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

Batch: 889652

[1] The continuing calibration verification was below the method acceptance limit for chloroethane, dichlorofluoromethane, trichlorofluoromethane, and 2-butanone (MEK). The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

Batch: 889988

[1] The continuing calibration verification was below the method acceptance limit for chloromethane, chloroethane, dichlorofluoromethane, trichlorofluoromethane, acetone, and 1,2-dibromo-3-chloropropane. The analytes were not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

Batch: 890121

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 890664

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

[1] The continuing calibration verification was below the method acceptance limit for bromomethane. Any detection for the analyte in the associated samples may have a low bias.

Batch: 891176

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

## QUALIFIERS

Project: WAKS2510C  
Pace Project No.: 10658463

---

### ANALYTE QUALIFIERS

- D4 Sample was diluted due to the presence of high levels of target analytes.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- c2 Acid preservation may not be appropriate for the analysis of 2-Chloroethylvinyl ether.
- v3 The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.

Noblesville, IN 46060

RE: Project: Former Cherry Street Cleaners  
Pace Project No.: 10670301

Dear Chris Sloffer:

Enclosed are the analytical results for sample(s) received by the laboratory on September 27, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rachel Johnson

## QUALIFIERS

Project: Former Cherry Street Cleaners  
Pace Project No.: 10670301

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### WORKORDER QUALIFIERS

WO: 10670301

[1] The samples were received outside of required temperature range. Analysis was completed upon client approval.

### BATCH QUALIFIERS

Batch: 909017

[1] Dichlorodifluoromethane did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

Batch: 909349

[1] Dichlorodifluoromethane did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

Batch: 909566

[1] Dichlorodifluoromethane did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

### ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D4 Sample was diluted due to the presence of high levels of target analytes.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

## Q4 2023 Groundwater Analytical Report

Pace Analytical Services, LLC  
1700 Elm Street  
Minneapolis, MN 55414  
(612)607-1700

December 19, 2023

Chris Sloffer  
ELM Group  
161 Lakeview Dr  
Noblesville, IN 46060

RE: Project: Former Cherry Street Cleaners  
Pace Project No.: 10677747

Dear Chris Sloffer:

Enclosed are the analytical results for sample(s) received by the laboratory on December 05, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rachel Johnson  
[rachel.johnson@pacelabs.com](mailto:rachel.johnson@pacelabs.com)  
(612) 656-2307  
Project Manager

## QUALIFIERS

Project: Former Cherry Street Cleaners  
Pace Project No.: 10677747

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 922247

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 923650

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

[1] The continuing calibration verification was below the method acceptance limit for bromomethane. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

### ANALYTE QUALIFIERS

D4 Sample was diluted due to the presence of high levels of target analytes.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

## EOS Removal Procedures

## Appendix E

### EOS Monitoring & Removal Procedures

EOS monitoring and removal includes measuring depth to product or water in a series of injection wells and monitoring wells, collecting product samples and removing of EOS.

#### E.1 EOS Gauging and Thickness Assessment

Prior to product sampling and removal, the depth to product and product thickness were gauged in injection wells and monitoring wells. An ELAM scientist first accessed each well following this procedure:

1. Don a pair work gloves
2. Unbolt the flushmount cover for the injection or monitoring well
3. If necessary, remove standing water within the flushmount skirt
4. Remove the expandable plug secured to the monitoring well casing

For gauging, an ELAM scientist adhered to the following procedure

1. Don a pair of unused, disposable nitrile gloves.
2. Decontaminate a oil/water interface probe and tape measure reel with a Liquinox® solution and rinse with distilled water
3. Carefully lower the probe down the wellhead until an audible signal is heard. If signal is steady, product has been encountered. If signal is intermittent, water has been encountered.
4. Record the depth to product or water to the nearest 0.01 foot on the field form.<sup>1</sup>
5. Lower a bailer into the well until as much EOS as possible is collected.
6. Bring the bailer to the surface and measure the thickness of EOS.
7. Record the product thickness on the field form.

---

<sup>1</sup>In 4Q 2016 the oil/water interface probe was used to estimate the EOS thickness by lowering the probe through the EOS until water was detected. This method did not provide accurate depth-to-water measurements because the EOS often adhered to the probe tip and prevented detection of water. Consequently, for all subsequent gauging events, a bailer was used to measure the EOS thickness and the oil/water interface probe was only used for the initial measurement to detect EOS or water.

## **E.2 Product Sampling and EOS Removal**

When collecting product samples, the following procedures are used:

1. Don a pair of unused, disposable nitrile gloves.
2. Lower a bailer into the well until EOS has been captured, while limiting the amount of water captured.
3. Decant product into each of the three 40 mL vials preserved with HCl, ensure the meniscus is intact.
4. Seal vials, ensuring there is no headspace and store on ice in cooler.

## **E.3 EOS Removal**

EOS removal is generally conducted at wells with EOS thicknesses of 0.02 feet or greater using the following procedures:

1. Don hearing protection and unused, disposable nitrile gloves and/or work gloves.
2. Ensure vacuum truck operator has proper PPE.
3. Mark the vacuum hose with duct tape at the depth product was encountered.
4. Slowly lower the vacuum hose into the well until product depth is reached.
5. Proceed to lower hose to approximate depth of bottom of product. Minimize water intake.
6. Remove hose and move onto another well.
7. After the well has been allowed to sit and recharge, check thickness with a bailer. If EOS has returned to the well, repeat the vacuum procedure.
8. After all vacuuming has been completed, transfer the recovered EOS to 275-gallon totes or 55-gallon drums.
9. Seal totes and drums, label with a hazardous waste label.

## **E.3 Waste Management**

All decontamination water and EOS waste were containerized in Washington State Department of Transportation (“WSDOT”) approved 55-gallon drums affixed with “Pending Analysis” labels. All investigation waste drums were removed for disposal in accordance with the Washington State Department of Ecology (“Ecology”) site-specific “Contained-In” Determination.
