

APPENDIX I
Previous Environmental Study Exploration Logs

DRAFT

CHANGES TO SUMMARY BORE LOGS

Former Mill A MTCA Support Sample Collection Everett, Washington

General Comments and Universal Changes

SAA stands for Same as Above

Trace is 5% or less

Density or Consistency

- ▶ Medium is presented as moderate
- ▶ For silt units moderately firm is presented as moderately stiff
- ▶ Descriptions in parentheses are interpretations based on visual records of the cores.

If trace constituents were not include in the percentages recorded on the field sheets, then the trace amounts were taken from the dominant constituent percentages.

Wood chunks or chips appear to be a coarse machined product, unstained or appeared fresh or recent, that are angular and uniform in size.

Rafting debris includes chunks of bark (often with reddish tints), wood splinters or fibrous wood chunks. Rafting debris may include twigs.

Summary Log	Interval	Changes
ST-1	0 to 1.5 ft	Large riprap <3-inch description changed to angular gravel description in surface unit.
ST-3	1.6 to 2 ft	Moderately dense description added to unit.
ST-3	2 to 2.7 ft	Moderately dense description added to unit.
ST-3	2.7 to 3.5 ft	Moderately dense description added to unit.
ST-3	3.5 to 14.4 ft	Moderately dense description added to unit.
ST-3	14.4 to 15.7 ft	Moderately dense description added to unit.
ST-3	15.7 to 16.8 ft	Moderately dense description added to unit.
ST-3	16.8 to 17.7 ft	Moderately dense description added to unit.
ST-3	14.4 to 15.7 ft	80% wood chips/20% sand changed to 75%/20%/5% to reflect presence of 5% sawdust.
ST-5	0 to 0.4 ft	60% sand/20% silt /10%/wood and shells changed to 70%/20%/10% to equal 100%.
ST-5	19 to 20 ft	60% sand/40% silt changed to 55%/40%/5% to reflect presence of trace constituents.
ST-6	2 to 12 ft	Sawdust and wood chip percentages recorded as ranges on field form, average percentage recorded on bore log.
ST-8	18 to 20 ft	80% silt/20% sand changed to 75%/20%/5% to reflect presence of trace constituents.
ST-11	0 to 10 ft	Moderately loose description estimated from photographs.
ST-14	10.7 to 12.2 ft	Moderately stiff description added to unit.
ST-15	8 to 15.5 ft	Moderately stiff description added to unit.
ST-17	14.8 to 18 ft	100% sand changed to 95%/5% to reflect trace amount of shells and wood fragments.
ST-21	8.1 to 12.3 ft	Moderately dense description added to unit.
ST-21	7 to 8 ft	75% silt/25% sand changed to 70%/25%/5% to reflect presence of trace constituents (wood chips).
ST-29	0 to 0.4 ft	80% sand/20% silt changed to 75%/20%/5% to reflect presence of 5% twigs, shells, gravel. Moderately loose added to description of unit.
ST-29	0.4 to 2 ft	60% silt/40% sand changed to 55%/40%/5% to reflect presence of trace constituents (twigs and shells). Moderately stiff added to description of the unit.
ST-29	2 to 4 ft	60% sand/40% silt changed to 55%/40%/5% to reflect presence of trace constituents (twigs and shells).
ST-37	6.8 to 9.6 ft	100% sand changed to 95%/5% to reflect trace amount of shells.
ST-42	0 to 2.8 ft	75% silt/25% sand changed to 70%/25%/5% to reflect presence of trace constituents (wood chips).
ST-42	2.8 to 11.8 ft	100% sand changed to 95%/5% to reflect trace amount of shells and native wood chunks. Sand estimated as medium from photos.
ST-43	3.2 to 4.4 ft	80% silt/20% sand to 75%/20%/5% wood splinters (trace).

Mudmole™ Core Summary Log

Project: Port of Everett

Station: ST-1

Mudline elevation: -0.7 ft MLLW
