Re: Approval of Request for Monitoring Requirements

Site name: Former Automotive Services, Inc.
Site address: 2327 West Mill Plain Boulevard, Vancouver, Washington
Facility/Site ID: 4380
Cleanup Site ID: 5210

Dear Matt Graves:

The Department of Ecology (Ecology) received the "Groundwater Monitoring Letter Report-December 2022", dated March 9, 2023. In that report, you have requested the following:

- To discontinue sampling GL-3, GL-4 and GL-6 as there have been no CUL exceedances in the past 10 monitoring events.
- Discontinue VOC analysis as no VOCs have been detected above the CULs over the past ten monitoring events.
- Report to the method reporting limit (MRL) instead of the method detection limit (MDL) as the MRLs are adequate to meet their respective CULs.
- Discontinue the step of using disposable double check ball bailer for sample collection as VOC analysis is being removed from the analytical program.

Ecology approves the requested changes above for future groundwater monitoring events. If you have any questions, please contact Danielle Gibson at (360) 409-6164 or danielle.gibson@ecy.wa.gov.

Sincerely,

A handwritten signature in black ink that reads "Andrew Smith". The signature is written in a cursive, slightly slanted style.

Andrew Smith, PE, LHG
