Executive Summary

This report summarizes the remedial investigation/feasibility study (RI/FS) and independent cleanup action completed in accordance with the Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) cleanup regulations (Chapter 173-340 Washington Administrative Code [WAC]) for the Ultra Custom Cleaners (UCC) Site, located at 2222 Northwest Bucklin Hill Road in Silverdale, Washington (referred to herein as the “Property”). The Property is a 0.96-acre rectangular lot bounded by NW Bucklin Hill Road to the south, an improved alley to the east, a parking lot to the west and an adjoining retail warehouse store to the north. The UCC tenant space, located in Suite 105 of Bucklin Place, formerly operated as a dry-cleaning facility from 1999 to March 2021 when Ultra Custom Cleaners ceased operation at the Property.

The UCC Site is listed on the Ecology Toxics Cleanup Program database of contaminated properties under Cleanup Site ID 14334 and Facility Site ID 18955. The current listed status for the Site is “Awaiting Cleanup.” The cleanup action was performed by Bucklin Place LLC, the current property owner, to address the Ecology MTCA requirements.

Based on the environmental investigations conducted during 2016, 2017, 2018 and 2021, soil and groundwater at the Property contained concentrations of tetrachloroethene (PCE) greater than the MTCA Method A cleanup level. PCE was subsequently identified as the contaminant of concern based on MTCA Method A cleanup levels of 0.05 milligrams per kilogram (mg/kg) for soil and 5 micrograms per liter (µg/L) for groundwater. The extent of PCE contamination in groundwater and the vertical extent of PCE contamination in soil beneath the Suite 105 tenant space were recognized as data gaps following the initial investigations.

An independent cleanup action was conducted at the Property in January 2022. The cleanup action consisted of monitoring well installation, remedial excavation and off-site permitted disposal of contaminated soil with PCE concentrations greater than the MTCA cleanup level from within the Property boundaries, bioremediation treatment and compliance groundwater monitoring.

PCE was either not detected at concentrations greater than the laboratory reporting limits or was detected at concentrations less than the MTCA Method A cleanup level in the majority of the confirmation soil samples collected at the Property with the exception of two sidewall soil samples collected from the southwestern corner of the excavation limits. A total of 93.84 tons of soil were removed from the Property under a Contained-In Determination during remedial excavation for permitted off-site disposal. As a part of the cleanup action and Property restoration, a bioremediation amendment was applied to the base of the excavation prior to backfilling. An additional application of the amendment solution was introduced to the backfilled remedial excavation in August 2022 via an infiltration gallery installed during Property restoration.

GeoEngineers, Inc. (GeoEngineers) documented groundwater conditions and completed compliance groundwater monitoring at wells MW-1 through MW-6 during an initial baseline monitoring event in November 2021, and between March 2022 and June 2023 following the cleanup action. Based on the groundwater monitoring and analytical results for the samples collected during quarterly compliance groundwater monitoring from March 2022 to June 2023, PCE and its chemical degradation products are no longer present in Property or Site groundwater at concentrations greater than the MTCA Method A cleanup level. The concentrations of PCE in groundwater observed initially in 2016 were in samples

collected from temporary well screens and were turbid at the time of sampling. The presence of particulates in turbid groundwater samples is known to bias contaminant concentration results high relative to non-turbid samples and may have contributed to the elevated PCE concentrations reported during the 2016 investigation.

The results of a MTCA-compliant statistical analysis of the soil data to evaluate compliance with the MTCA Method A cleanup level for PCE indicate that the PCE soil data within the building footprint are compliant with the MTCA Method A soil cleanup level. PCE was either not detected in groundwater or was detected at concentrations less than the MTCA Method A cleanup level in the samples collected during the last four groundwater monitoring events, indicating that the PCE concentrations in soil at the Site are protective of groundwater.

As documented in this report, the cleanup action is complete per the Ecology MTCA requirements, and a No Further Action (NFA) determination is requested for the Site.

This Executive Summary should be used only in the context of the full report for which it is intended.

1.0 Remedial Investigation

1.1 INTRODUCTION

This report documents the remedial investigation, feasibility study and cleanup action completed to address the tetrachloroethene (PCE) contaminated soil and groundwater identified at the Ultra Custom Cleaners (UCC) Site located at 2222 NW Bucklin Hill Road in Silverdale, Washington (“Property” or “Site”). The cleanup action was conducted in accordance with the Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) (Chapter 137-340 Washington Administrative Code [WAC]). General Property information is summarized in Table 1-1 below.

TABLE 1-1. GENERAL PROPERTY INFORMATION

PROJECT CONTACTS	
Property Owner	Bucklin Place, LLC
Environmental Consultant	GeoEngineers, Inc.: Tim Syverson (Associate) and Ian Young (Senior Geologist)
PROPERTY INFORMATION AND LOCATION	
Site Address	2222 NW Bucklin Hill Road, Silverdale, Washington
Approximate Surface Elevation	Elevation 48 feet (NAVD 88) at the east boundary of the Property. Surface elevation at the Property slopes gently downward to 41 feet at the southwest corner of the Property near NW Bucklin Hill Road.
General Description	The rectangular lot that is developed with a 5-unit commercial strip mall is bounded by NW Bucklin Hill Road to the south, an improved alley to the east beyond which is a commercial office, a parking lot to the west and an adjoining retail warehouse store to the north.
Kitsap County Tax Parcel Number	162501-4-111-2006
GPS Coordinates	47°39'03.30"N, 122°40'45.50"W
Quarter, Section, Township and Range	Section 16, Township 25N, Range 1E, Willamette Meridian
GEOLOGIC SETTING AND SUBSURFACE CONDITIONS	
Geologic Setting	Puget Sound Lowlands
Nearest Surface Water Body	Dyes Inlet is approximately 1,200 feet to the southwest of the Property
Soil and Geologic Conditions	Fill overlying glacially deposited sediments (discussed further in Sections 1.2.1 and 1.2.2)
Depth to Groundwater	Approximately 6 to 7 feet below ground surface (bgs) (discussed further in Section 1.2.1)
Inferred Direction of Shallow Groundwater Flow	Toward the southwest based on recorded groundwater elevation measurements, surface topography and the relative location of Dyes Inlet (discussed further in Section 1.2.1)

Notes:

NAVD 88 = North American Vertical Datum of 1988.

The Property is a 0.96-acre rectangular lot bounded by NW Bucklin Hill Road to the south, an improved alley to the east, a parking lot to the west and an adjoining retail warehouse store to the north. The Property consists of one Kitsap County parcel (Kitsap County Parcel Number 162501-4-111-2006). The Property is

listed on the Ecology Toxics Cleanup Program database of contaminated properties under Cleanup Site ID 14334 and Facility Site ID 18955. The current listed status for the Site is “Awaiting Cleanup.”

The Property grade is generally level, sloping gently from an approximate elevation (El.) 48 feet (NAVD 88) downward to the west-southwest to an elevation of approximately El. 41 feet at the southwest corner near NW Bucklin Hill Road. The Property is shown relative to surrounding physical features on the Vicinity Map, Figure 1. The Property layout is shown on the Site Plan, Figure 2.

1.1.1 Site History

GeoEngineers, Inc. (GeoEngineers) conducted a review of available historical records to establish historical uses of the Property. GeoEngineers obtained documents and a regulatory database research report for the Site from Environmental Data Resources (EDR) and public documents available from the Kitsap County Assessor’s Office. Review of available city directories, aerial photographs, topographic maps and tax records indicated the following historical uses of the subject property:

- 1950s to 1980s – Fields or pasture with no structures;
- 1980s to 1990s – Fields and hedgerows with no structures;
- 1999 to 2000 – Property developed with a commercial strip mall (Bucklin Place) and adjacent properties developed with a grocery store, parking lot and improved alley; and
- 2000 to present – Current development.

The UCC tenant space, located in Suite 105 of Bucklin Place, formerly operated as a dry-cleaning facility from 1999 until March 2021 when Ultra Custom Cleaners ceased operation at the Property. A nail salon, operating as Nail Pro or Happy Nails & Spa, has occupied the west-adjointing tenant space, Suite 104, from at least 2005 to the present.

The historical documents from EDR are included in Appendix A.

1.1.2 Current Site Use

The Property is currently developed with a commercial strip mall with five business suites/tenant spaces, including restaurants and a nail salon. Suite 105, the former location of Ultra Custom Cleaners, is currently occupied by a martial arts studio.

1.2 SITE CHARACTERIZATION

1.2.1 2016 Soil, Groundwater and Indoor Air Investigation, Adapt Engineering and Landau Associates

Environmental investigations conducted at the UCC Site by Adapt Engineering (Adapt) in January 2016 (Adapt, 2016), by Landau Associates, Inc. (Landau) in April - May and November 2016 (Landau 2016a,c), and by Landau at the west-adjointing Happy Nails & Spa tenant space (Landau, 2016b,d) identified volatile organic compound (VOC) contamination, including the chlorinated solvents tetrachloroethene (PCE) and trichloroethene (TCE), in soil, groundwater, indoor air, or sub-slab soil vapor at, or adjacent to, the UCC tenant space at the Site. Investigations were conducted to evaluate and document the nature and extent of the VOC contamination at concentrations greater than the applicable MTCA cleanup levels, adopted as screening levels to evaluate the concentrations detected at the Site and to assess the need for further action.

Indoor air sampling at the Site identified VOCs, including PCE and TCE, in indoor air at concentrations greater than the screening levels, as shown in Indoor Air Chemical Analytical Data, Table 1. Investigations of indoor air quality at the UCC tenant space were conducted after hours when there were no active operations in process, though cleaning products containing PCE or TCE and garments recently treated with such products were present. Mitigation following investigation, including adjustments to the heating ventilation and air conditioning (HVAC) systems to create positive pressure, were conducted to address the VOC concentrations detected in indoor air within the UCC tenant space and the adjoining Happy Nails & Spa space.

Landau detected PCE in both soil and grab groundwater samples collected from two direct-push borings located outside of the UCC tenant space to the south (SB-3 and SB-5) at concentrations greater than the MTCA Method A cleanup levels, as shown in Site Characterization, Soil Field Screening and Chemical Analytical Data, Table 2, and Groundwater Chemical Analytical Data, Table 3. The concentrations of PCE detected in groundwater were 210 micrograms per liter ($\mu\text{g}/\text{L}$) at SB-3 and 170 $\mu\text{g}/\text{L}$ at SB-5. The detected PCE concentrations were two orders of magnitude greater than the MTCA Method A cleanup level of 5 $\mu\text{g}/\text{L}$. Groundwater, interpreted as a shallow perched zone, was encountered in investigation borings at depths ranging from 6 to 9 feet below ground surface (bgs). The field notes from the Landau investigation indicate that the groundwater samples, which were collected from temporary well screens, were turbid at the time of sampling. The presence of particulates in turbid groundwater samples is known to bias contaminant concentration results high relative to non-turbid samples, and may have contributed to the elevated PCE concentrations reported during the 2016 investigation.

Landau's December 2016 memorandum addressing the UCC Site (Landau, 2016c) presented a preliminary conceptual site model (CSM) indicating complete exposure pathways for VOCs at the UCC tenant space posing a risk to human health via indoor air (workers and customers) and contact with soil and perched groundwater (construction workers), and potentially posing similar risks at adjacent tenant spaces. The CSM emphasized the unknown lateral and vertical extent of contamination in Site soil and groundwater based on the data available at the time.

The discovery of a release of VOCs to soil, groundwater and air at the UCC Site was reported to the Ecology Northwest Regional Office (NWRO) in August 2016, and Ecology completed an initial investigation of the Site in February 2017.

1.2.2 2017 Indoor Air Investigation, GeoEngineers, Inc.

GeoEngineers conducted additional indoor air sampling and analysis, and indoor/sub-slab pressure differential testing in June 2017 to further evaluate and document conditions within the former UCC tenant space and the effect of the presence of cleaning products and treated garments on indoor air quality (GeoEngineers, 2017). The June 2017 evaluation was completed at the former UCC tenant space with the dry-cleaning inventory and all PCE- or TCE-containing business supplies removed.

The analytical results, shown in Table 1, for indoor air from the June 2017 sampling event indicated that the baseline conditions within the UCC tenant space, empty of tenant dry-cleaning inventory and business supplies, and with the HVAC system in normal business-hours operation, were protective of workers and customers in a standard commercial setting. The results also indicated that the dry-cleaning inventory and/or business supplies contributed to the elevated PCE and TCE concentrations previously detected in the indoor air within the UCC tenant space. Measurements of the indoor/sub-slab pressure differential collected during the investigation indicated no appreciable difference in air pressure between the sub-slab and the tenant space that could drive vapor intrusion between the sub-slab soil and the UCC tenant space.

1.2.3 2018 Soil and Groundwater Characterization, GeoEngineers, Inc.

In February 2018, to further evaluate and document the nature and extent of the VOC contamination identified at the Site, GeoEngineers conducted additional focused investigation of the soil and groundwater beneath the UCC tenant space, including evaluation of the vertical extent of the VOC contamination in soil and shallow groundwater and of the potential that the VOC contamination has affected the deeper area-wide groundwater aquifer. The investigation included drilling six shallow direct-push soil borings (B1 through B6) within the UCC tenant space, and drilling one deep soil boring at a location hydraulically downgradient of the UCC tenant space that was completed as a monitoring well to evaluate and document the Site stratigraphy, the depth of the first deeper aquifer, and to allow monitoring and sampling of the deeper groundwater.

A reconnaissance groundwater sample was also collected from a temporary well screen installed within the perched groundwater zone during drilling of the deeper boring. A conductor casing and a bentonite plug were set prior to breaching the confining till layer to prevent the creation of a conduit for vertical migration of contamination through the till. Monitoring well, MW-1, was constructed with a well screen set at depths of 45 to 60 feet bgs to monitor the first deep groundwater zone encountered beneath the shallow perched groundwater zone. The deeper area-wide aquifer was found to be under confined/artesian conditions at the time of drilling, producing an elevated water level indicating approximately 8 feet of head.

1.2.3.1 SOIL CONDITIONS

Soil encountered during the sub-slab soil explorations was generally characterized as brown silty fine sand to silt with fine sand. Perched groundwater was not encountered in any borings at the explored depths; very moist to wet conditions were observed in borings B3 and B5, though perched groundwater was not present in a recoverable quantity suitable for sampling.

Twelve soil samples collected from the six direct-push borings were submitted for laboratory chemical analysis for the following VOCs:

- PCE;
- TCE;
- Trans-1,2-dichloroethene (DCE);
- Cis-1,2-DCE;
- 1,1-DCE; and
- Vinyl chloride.

PCE was detected at boring B3 in soil samples GEI-B3-3.5-4 and GEI-B3-5.5-6 at concentrations of 0.0905 milligrams per kilogram (mg/kg) and 0.0653 mg/kg, respectively, which are greater than the MTCA Method A cleanup level of 0.05 mg/kg for unrestricted land use. PCE was also detected at boring B5 in soil sample GEI-B5-5.5-6 at a concentration of 0.0373 mg/kg and at boring B6 in sample GEI-B6-3.5-4 at a concentration of 0.0476 mg/kg, as shown in 2018 and 2021 Soil Investigations Soil Analytical Results Summary, Figure 3; both the B5 and B6 sample concentrations are less than the Method A cleanup level. These chemical analytical results are displayed in Table 2.

PCE and other VOCs were not detected at concentrations greater than the laboratory reporting limits in the remaining samples analyzed, including the deeper soil samples at borings B5 and B6.

Soil encountered during the deep boring for monitoring well MW-1 was generally characterized as gray sandy silt with fine sand and gray silty fine-to-coarse sand, with occasional gravel content, from 10 to 27 feet bgs, underlain by a very dense gray silty sand from 27 to 45 feet bgs, transitioning to a black/gray to brown sand from 45 feet to the termination of drilling at 70 feet bgs. Perched groundwater was encountered at a depth of approximately 19 feet bgs, and the deeper aquifer was encountered at approximately 45 feet bgs.

A soil sample was also collected from a depth of 14½ feet bgs within the perched groundwater zone (GEI-MW1-14.5-15) and submitted for chemical analysis for VOCs. No VOCs were detected in the soil sample at concentrations greater than the laboratory reporting limits.

1.2.3.2 GROUNDWATER CONDITIONS

A grab groundwater sample collected during drilling and installation of MW-1 from the perched groundwater zone (approximately 19 feet bgs), and a deeper aquifer groundwater sample collected from the developed monitoring well were submitted for laboratory chemical analysis for VOCs. No VOCs were detected at concentrations greater than the laboratory reporting limits in neither the perched groundwater sample nor the deeper aquifer groundwater sample collected from MW-1 (Table 3).

TABLE 1-2. MONITORING WELL AND GROUNDWATER DATA

WELL ID	GROUND SURFACE ELEVATION (FEET)	TOP OF CASING ELEVATION (FEET)	WELL SCREEN ELEVATION (FEET BGS)	DEPTH TO GROUNDWATER (FEET BGS)	GROUNDWATER ELEVATION (FEET)
MW-1	47.22	46.46	45 to 60	0.0	<46.46 ¹

Notes:

Datum = NAVD 88

¹ MW-1 is screened in the deep groundwater aquifer; groundwater is under hydrostatic pressure and rose above the top of the well casing.

The chemical analytical results for soil and groundwater from the perched groundwater zone and from the deeper area aquifer, collected from MW-1 that is located about 50 feet downgradient from the UCC tenant space, did not indicate VOCs at concentrations greater than the laboratory reporting limits. These results indicate that the VOC-containing soil and groundwater encountered beneath and immediately south of the tenant space has not affected downgradient perched groundwater in the southern portion of the property, nor the deeper area-wide aquifer.

1.2.4 2021 Soil and Groundwater Characterization, GeoEngineers, Inc.

In July 2021, GeoEngineers conducted additional focused investigation of the soil and groundwater contamination beneath the UCC Suite 105 tenant space to further evaluate and document the nature and extent of the VOC contamination identified at the Site.

The objective of the focused investigation within the Suite 105 tenant space was to address data gaps regarding sub-slab soil conditions within the footprint of the former dry-cleaner tenant space and the potential for historical property uses to have impacted Site soil and/or groundwater. Boring locations were chosen to correspond to former dry-cleaning equipment locations and locations where higher concentrations of VOCs were detected in soil sampled during previous investigations (Figure 3).

GeoEngineers monitored the drilling of seven direct-push soil borings (B7 through B15) within Suite 105. Exploration depths ranged from 1.5 to 6 feet bgs; the maximum depth was dictated by refusal encountered during drilling. Due to refusal during drilling, perched groundwater could not be collected from the borings advanced within the footprint of Suite 105. Two planned borings (B13 and B14) also could not be completed due to conflicts with subgrade utilities.

In August 2021, during construction excavation to extend additional utilities to the southeast corner of Suite 105 and southward across the parking lot from the southeast corner of Suite 105, grab soil samples were collected for field screening and chemical analysis from soil exposed during trenching.

1.2.4.1 SOIL CONDITIONS

During the 2021 investigations, soil observed below the subgrade base inside Suite 105 was generally characterized as very dense brown silty fine sand to silt with fine sand. Refusal was encountered at all borings at depths ranging from 1.5 to 6 feet bgs. Soil exposed during utility trench excavation was characterized as very dense brown silty fine sand with gravel to silt with fine sand to depths of approximately 6 feet bgs.

1.2.4.2 SOIL CHEMICAL ANALYTICAL RESULTS

Eleven soil samples collected from the seven direct-push borings were submitted for laboratory chemical analysis for the following VOCs:

- PCE;
- TCE;
- Trans-1,2-DCE;
- Cis-1,2-DCE;
- 1,1-DCE; and
- Vinyl chloride.

PCE was detected at boring B7 in soil samples GEI-B7-2-3 collected at 2 feet bgs and GEI-B7-4-5 collected at 4 feet bgs, at concentrations of 0.0322 mg/kg and 0.0903 mg/kg, respectively. PCE was also detected at boring B9 in sample GEI-B9-1.5-2.5 at a concentration of 0.0378 mg/kg and at boring B10 in sample GEI-B10-1.5-2.5 at a concentration of 0.0356 mg/kg. The concentration of PCE in soil sample GEI-B7-4-5 was greater than the MTCA Method A cleanup level of 0.05 mg/kg for unrestricted land use; all other detected concentrations were less than the Method A cleanup level. All of these samples were collected from the soil interval at refusal in each of the three borings, and deeper samples could not be collected. PCE and other VOCs were not detected at concentrations greater than the laboratory reporting limits in the remaining samples analyzed. These chemical analytical results are displayed in Table 2.

PCE and its chemical degradation products were not detected at concentrations greater than the laboratory reporting limits in the soil samples collected from the utility trench excavation.

2.0 Contaminants of Concern

The area for remedial excavation was identified as the area on the Property where hazardous substances had come to be located at concentrations greater than the applicable cleanup levels as a result of historical uses at the Property.

The identified PCE contamination is interpreted to be related to historical releases at the Property associated with former dry-cleaning operations.

Based on the chemical analytical results for the soil, groundwater and indoor air/soil vapor characterization samples collected during investigations conducted between 2016 and 2021 (Tables 1 through 3 by GeoEngineers and other consultants), the contaminants of concern for the Property are the contaminants that were detected at concentrations greater than the MTCA Method A cleanup levels as summarized in Table 2-1 below.

TABLE 2-1. CONTAMINANTS OF CONCERN

CONTAMINANTS OF CONCERN (COCS)	INTERPRETED SOURCE
Tetrachloroethene (PCE) Trichloroethene (TCE)	Historical release(s) at the Property from former dry-cleaner operations (PCE) and related potential chemical degradation products, including TCE.

2.1 CONCEPTUAL SITE MODEL

The environmental investigations at the Property provide information to document the CSM for the Site, including the following:

- A release of chlorinated solvents to Site soil has occurred within the southern portion of the UCC Suite 105 tenant space.
- The volatilization of VOCs beneath the building has resulted in the intrusion of PCE and TCE to air within the UCC and Happy Nails & Spa tenant spaces.
- The absence of chlorinated solvents in soil collected at boring SB-1 and soil and groundwater collected at SB-2 indicates that the VOC contamination does not extend to the north or laterally to the east of the UCC tenant space.
- Soil encountered during drilling of the deep boring for monitoring well MW-1 located to the south and hydraulically downgradient of the UCC tenant space indicated a very dense confining glacial till layer from 27 to 45 feet bgs, transitioning to a black/gray to brown sand from 45 feet to the termination of drilling at 70 feet bgs.
- Perched groundwater was encountered during Site investigations at depths ranging from approximately 6 to 9 feet bgs near UCC Suite 105 to approximately 19 feet bgs south of the building at MW-1, and the deeper area aquifer was encountered at approximately 45 feet bgs.
- Analysis of groundwater collected from deep monitoring well MW-1 downgradient from the UCC tenant space indicates that VOCs have not affected the deeper aquifer beneath the confining till layer.

The primary data gaps remaining regarding the conceptual site model are:

- The extent of PCE contamination in the discontinuous shallow perched groundwater immediately to the south of the UCC tenant space.
- The vertical extent of the PCE-containing soil beneath the UCC tenant space has not been documented. Access and equipment limitations prevented drilling to the depth of the confining layer beneath the UCC tenant space to reach the extent of soil with PCE concentrations less than the laboratory reporting limits.

The next section presents potential exposure pathways and receptors for the Property.

Based on the results of the remedial investigations, one potential receptor and/or pathway was determined to be **incomplete** and was **not evaluated further**:

- Terrestrial wildlife is not included as a receptor because the Site qualifies for an exclusion from the Terrestrial Ecological Evaluation (TEE) (Appendix B) because the Site is less than 1.5 acres of contiguous undeveloped land and does not lie within 500 feet of such land. WAC 173-340-7491(c)(i) and (c)(ii).

2.1.1 Potential Exposure Pathways and Receptors

Exposure pathways describe the mechanism(s) by which an individual or population is exposed, or has the potential to be exposed, to hazardous substances at or originating from a Site [WAC 340-350 (7)(e)(ii)]. The following sections summarize our evaluations of the potential exposure pathways for the Property/Site.

2.1.1.1 SOIL TO GROUNDWATER

Contaminated soil on the Property was above the perched water table (3.5 to 5 feet bgs) and near the top of the perched water table (6.5 feet bgs). Perched groundwater exhibited PCE contamination prior to the cleanup action. Following the cleanup action that removed the contaminated soil, this soil to groundwater pathway is incomplete.

2.1.1.2 SOIL DIRECT CONTACT

Contaminated soil at the Property ranged in depth from 3.5 to 6.5 feet bgs. This contaminated soil may have presented a risk for direct contact to construction workers if redevelopment were to occur at the Property. However, the current building covers the area where the contaminants of concern were detected, and there are no plans by the owner to redevelop the Property. Following the cleanup action that removed the contaminated soil, the soil direct contact pathway is no longer complete.

2.1.1.3 SOIL TO SURFACE WATER (RUNOFF)

Soil contamination present at the Property did not pose a threat to surface water because the contaminated soil was several feet below the ground surface. The area of contaminant-containing soil is also developed with a permanent structure, and surrounding surfaces are paved, which prevents the soil to surface water pathway.

2.1.1.4 GROUNDWATER DIRECT CONTACT

Because groundwater at the Property is not currently used for drinking water or domestic use and is not anticipated to be used for drinking water or domestic use because the Property is served by the municipal supply, this pathway is incomplete.

2.1.1.5 SOIL TO INDOOR AIR

- Indoor air samples collected by GeoEngineers in 2017 indicated that the baseline conditions within the UCC tenant space were protective of workers and customers in a standard commercial setting. The testing of indoor/sub-slab air pressure found no appreciable difference that could drive vapor intrusion between the sub-slab soil and the UCC tenant space. Therefore, the soil to indoor air pathway is incomplete.

2.2 CLEANUP STANDARDS

2.2.1 Terrestrial Ecological Evaluation

GeoEngineers evaluated the need for a Terrestrial Ecological Evaluation (TEE) for the Property in accordance with the MTCA. The Property qualifies for an exclusion from a TEE because there is “less than 1.5 acres of contiguous undeveloped land on the site or within 500 feet of the site” (WAC 173-340-7491(c)(i)) (the Property measures 0.96 acres). No further evaluation relative to a TEE is necessary and the MTCA Method A cleanup levels were used for the remedial excavation completed at the Property. The basis for the exclusion is documented with the completed Terrestrial Ecological Evaluation Form included as Appendix B.

2.2.2 Cleanup Levels and Point of Compliance

The soil cleanup level for the contaminant identified in this section is as follows:

- PCE 0.05 mg/kg

The groundwater cleanup level for the contaminant identified in this section is as follows:

- PCE 5 µg/L

These are the MTCA Method A cleanup levels for unrestricted land use, which are protective of soil direct contact and protection of groundwater (WAC 173-340-900, Table 740-1). The point of compliance is soil in the unsaturated zone throughout the Property. This is the MTCA standard point of compliance for soil cleanup levels that are based on the protection of groundwater (WAC 173-340-740[6][b]).

3.0 Feasibility Study

3.1 REMEDIAL ACTION GOALS

The objective of the proposed cleanup action is to eliminate, reduce or otherwise control to the extent feasible and practicable, unacceptable risks to human health and the environment posed by hazardous substances (PCE) in soil at the Site in accordance with the MTCA and other applicable regulatory requirements. Specifically, the objective of the cleanup action is to mitigate risks associated with the following potential receptors and exposure routes:

- Direct contact with contaminated soil.
- Leaching/migration of contaminants from soil to groundwater.
- Migration of contaminants from groundwater to surface water.
- Contaminant migration from soil via vapor intrusion to indoor air.

3.2 CLEANUP REMEDY ALTERNATIVES AND SELECTION OF PREFERRED CLEANUP REMEDY

Cleanup remedy alternatives were considered for the contaminated soil at the Property. After consideration of the alternatives, excavation and appropriate off-site disposal of the contaminated soil from beneath the tenant space at Suite 105 of the UCC Site was selected as the preferred remedy. This remedy was identified to be the most effective to address the contaminated soil at the Property, protect human health and the environment, and comply with applicable MTCA requirements based on the following:

- The selected alternative meets the “minimum requirements for cleanup actions” (WAC 173-340-360(2)). Specifically, the alternative: (1) could be completed within a relatively short period of time; (2) meets threshold requirements described by the MTCA (e.g., protects human health and the environment, complies with the cleanup standards, complies with state and federal laws and provides for compliance monitoring); (3) is expected to be more effective than other available methods in achieving concentrations that are protective of human health and the environment; (4) is permanent; and (5) considers public concerns.
- Excavation and off-site disposal of impacted soil is considered the most permanent and cost-effective cleanup option for the Property.

The soil cleanup action was conducted by the Property owner. The remaining sections of this report describe the cleanup action activities, cleanup confirmation soil sampling, off-site permitted disposal of contaminated soil and compliance groundwater monitoring.

4.0 Cleanup Action

4.1 PURPOSE AND SCOPE

The independent cleanup action was conducted at the Property between November 2021 and June 2023 consistent with the MTCA requirements. The cleanup action consisted of the installation of compliance groundwater monitoring wells, remedial excavation and off-site permitted disposal of soil with PCE concentrations greater than the MTCA cleanup level, bioremediation treatment and compliance groundwater monitoring, as outlined below.

4.1.1 Compliance Monitoring Well Installation

- Monitored the drilling of five hollow-stem auger (HSA) borings to depths up to approximately 15 feet bgs and the installation of groundwater monitoring wells to characterize the shallow perched groundwater at the Property. Continuous core soil samples were obtained for field screening and laboratory chemical analysis.
- Field screened discrete soil samples from the borings for evidence of contamination using visual and headspace vapor screening methods.
- Submitted selected soil samples for laboratory chemical analysis for PCE and its chemical degradation products by U.S. Environmental Protection Agency (EPA) Method 8260.
- Developed the new monitoring wells using a combination of surging and pumping to stabilize the sand pack and formation materials surrounding the well screens and restored the hydraulic connection between each well screen and the surrounding soil.

- Conducted an initial round of groundwater monitoring prior to the remedial excavation of soil to collect baseline field measurements and groundwater samples from each monitoring well. Groundwater samples were collected using low-flow sampling methods and were submitted for laboratory chemical analysis for PCE and its chemical degradation products by EPA Method 8260. The results of the baseline monitoring and sampling are described further in Section 5.0.

4.1.2 Remedial Soil Excavation

- Profiled Property soil for permitted disposal at an Ecology-approved disposal facility and obtained a Contained-In Determination from Ecology for the disposal of PCE-contaminated soil.
- Observed the excavation of PCE-contaminated soil.
- Obtained confirmation soil samples from the limits (base and sidewalls) of the remedial excavation and field screened soil from the excavation for evidence of contaminants using visual, water sheen screening and photoionization detector (PID) methods.
- Submitted the confirmation soil samples to a subcontracted, on-site mobile analytical laboratory for chemical analysis for PCE and its chemical degradation products by EPA Method 8260.
- Evaluated field and laboratory data relative to the MTCA Method A cleanup levels.

4.1.3 Bioremediation Treatment

- Observed the application of the initial bioremediation amendment to soil during backfilling of the remedial soil excavation.
- Coordinated the application of one additional amendment to the remedial excavation backfill by a subcontracted bioremediation contractor via the remote bioremediation treatment infiltration system.

4.1.4 Groundwater Compliance Monitoring

- Conducted quarterly groundwater monitoring events, including the collection of field measurements and groundwater samples from all Site monitoring wells. The groundwater samples were submitted to an approved chemical analytical laboratory for chemical analysis for PCE and its chemical degradation products by EPA Method 8260.
- Evaluated groundwater field and analytical data relative to the MTCA cleanup standards.

4.2 GROUNDWATER MONITORING WELL INSTALLATION

Monitoring wells were installed to document shallow groundwater conditions and the VOC concentrations in perched groundwater at the Site in the vicinity of Suite 105. Five borings were drilled using hollow-stem auger drilling in November 2021. The monitoring wells, MW-2 through MW-6, were installed to depths of approximately 15 feet bgs with screened intervals at depths from 5 to 15 ft bgs. The monitoring well logs are presented in Appendix C.

TABLE 4-1. MONITORING WELL AND GROUNDWATER DATA

WELL ID	GROUND SURFACE ELEVATION (FEET)	TOP OF CASING ELEVATION (FEET)	WELL SCREEN ELEVATION (FEET BGS)	DEPTH TO GROUNDWATER (FEET BGS)	GROUNDWATER ELEVATION (FEET)
MW-2	46.67	46.28	6 to 16	6.91	36.76
MW-3	46.66	46.35	5 to 15	5.96	40.70
MW-4	46.89	46.50	5 to 15	6.25	40.64
MW-5	47.66	47.41	5 to 15	6.37	41.29
MW-6	46.10	45.60	5 to 15	5.28	40.82

Note:

Datum = NAVD88

Soil samples were collected from each boring representative of both shallow soil at or above the vadose zone and from the saturated zone. The soil samples were collected and submitted for laboratory chemical analysis for the following analytes:

- PCE;
- TCE;
- Cis-1,2-DCE;
- Trans-1,2-DCE;
- 1,1-DCE; and
- Vinyl chloride.

PCE was detected in soil at concentrations greater than the MTCA Method A cleanup level (0.05 mg/kg) in both MW-4 at 6.5 feet bgs and MW-5 at 6.5 feet bgs, corresponding to near the perched groundwater table. PCE was not detected at concentrations greater than the laboratory reporting limit in the other soil samples collected from the borings. All other analytes were not detected at concentrations greater than the laboratory reporting limits in any of the analyzed soil samples. The laboratory reports for the soil collected and analyzed during the monitoring well installation are presented in Appendix D.

4.3 REMEDIAL EXCAVATION

Based on the soil analytical data collected from 2016 to 2021, an area beneath the southern portion of the UCC Suite 105 tenant space was identified as containing the extent of the PCE-contaminated soil. The area measured 40 feet by 10 feet and to a depth of up to 8 feet bgs. Remedial Excavation and Analytical Results, Figure 4, shows the final remedial excavation area.

Between January 5 to January 24, 2022, GeoEngineers observed as Wyser Construction of Woodinville, Washington, completed the following remedial action tasks:

- Remove the concrete slab across the southernmost 10 feet within Suite 105;
- Excavate PCE-contaminated and impacted soil and load the soil into roll-off bins;
- Apply a bioremediation amendment product to the base and backfill of the finished excavation;

- Construct and install a treatment infiltration gallery within the excavation limits; and
- Backfill the excavation area and restore the building slab to its original grade.

During the excavation, GeoEngineers continuously screened soil using a PID and collected confirmation soil samples at the lateral and vertical extents of the excavation area. The remedial excavation focused on removal of the PCE-contaminated soil from the ground surface to approximately 6 to 7 feet bgs where static perched groundwater was encountered.

Based on the results of the confirmation soil samples collected from the extents of the remedial excavation, the PCE-contaminated soil was successfully removed from the base, and the northern, eastern and western sidewalls of the excavation, as described in the section below. The southern sidewall was excavated as far southward as was practicable based on the existing building structure. A total of 93.84 tons of soil was removed from the Property during remedial excavation for permitted off-site disposal consistent with an Ecology-approved Contained-In Determination.

4.3.1 Remedial Excavation Confirmation Soil Samples

Fifteen discrete confirmation soil samples, and two field duplicates, were collected for laboratory analysis during the remedial excavation to document the removal of contaminated soil from the Property. The locations of the confirmation soil samples are shown on Figure 4 and the chemical analytical data are summarized in Table 2. The confirmation samples were submitted to an on-site mobile laboratory operated by Libby Environmental of Olympia, Washington, for chemical analysis for the following contaminants of concern using EPA Method 8260:

- PCE;
- TCE;
- Trans-1,2-DCE;
- Cis-1,2-DCE;
- 1,1-DCE; and
- Vinyl chloride.

Field procedures and sampling methods are described in Appendix E. The confirmation soil samples are representative of the remedial excavation base and sidewalls. The final lateral extent of the remedial excavation was approximately 10 feet wide by 40 feet long, and the final depth of remedial excavation was approximately 6 to 7 feet deep. Soil sample locations containing PCE at concentrations greater than the MTCA Method A cleanup level identified in previous investigations were overexcavated, as detailed in Table 4.3.1.

TABLE 4.3.1 REMEDIAL EXCAVATION CONFIRMATION SAMPLING

CHARACTERIZATION SOIL SAMPLE WITH ONE OR MORE COC CONCENTRATIONS GREATER THAN MTCA CULS ¹	APPROXIMATE CORRESPONDING CHARACTERIZATION SAMPLE DEPTH (FEET BGS)	CONTAMINANT OF CONCERN	CORRESPONDING SOIL SAMPLES CONFIRMING CLEANUP	APPROXIMATE CORRESPONDING CONFIRMATION SAMPLE DEPTH (FEET BGS)
GEI-B3-3.5-4 and GEI-B3-5.5-6	3.5 to 4 and 5.5 to 6	PCE	EX-2 (base)	6 to 7
			EX-15 (North sidewall)	3 to 4
GEI-B7-4-5	4 to 5	PCE	EX-4 (base)	6 to 7
			EX-8 ² (South sidewall)	4 to 5
			EX-14 (West sidewall)	3 to 4

Notes:

¹All sample locations were overexcavated and removed during the 2022 cleanup action.

²EX-8 has residual concentrations of PCE that are greater than the MTCA Method A Cleanup Level.

CUL = cleanup level.

Contaminants of concern in confirmation soil samples were either not detected at concentrations greater than the laboratory reporting limits or were detected at concentrations less than the MTCA Method A cleanup levels in the final confirmation soil samples obtained from the base and northern, eastern and western sidewalls of the remedial excavation. Two south sidewall confirmation samples collected at depths between 4 and 5 feet bgs contained concentrations of PCE just greater than the MTCA Method A cleanup level of 0.05 mg/kg. These sidewall samples were collected during the remedial excavation and represent conditions beneath the south wall of the Suite 105 tenant space:

- EX-7-4, PCE at a concentration of 0.062 mg/kg; and
- EX-8-4, PCE at a concentration of 0.074 mg/kg.

These two confirmation soil samples were both collected at a depth of approximately 4 to 5 feet bgs, and the sidewall in this area could not be further overexcavated due to the presence of building footings and the need to maintain structural integrity.

Chemical analytical results for the cleanup confirmation soil samples are summarized in Table 2; sample locations are shown on Figure 4. The laboratory reports for the confirmation soil samples are presented in Appendix D.

4.3.2 Contaminated Soil Disposal

The 93.84 tons of PCE-contaminated and impacted soil removed from the remedial excavation were transported by truck to Waste Management's Subtitle D Greater Wenatchee Regional Landfill for disposal consistent with the Ecology approved Contained-In Determination. The Contained-In Determination letter and disposal weight tickets are included in Appendix F.

4.3.3 Application of Bioremediation Amendment

Following removal of the PCE-contaminated soil, a bioremediation amendment was applied to the base and backfill of the excavation to promote the chemical breakdown of residual PCE in soil and groundwater at the Property. The amendment, an anaerobic reductive carbohydrate compound, was applied to exposed soil prior to and during backfilling the excavated area using 1,000 pounds of the amendment mixed with water. Details regarding the bioremediation amendment and additional application information are included in Appendix G.

4.3.4 Bioremediation Infiltration Gallery

During restoration of the remedial excavation, two horizontal lengths of perforated polyvinyl chloride (PVC) pipe were installed within the backfill material to allow later applications of the bioremediation amendment, as warranted. The perforated pipes were connected to risers housed in a secure monument box located immediately outside Suite 105.

4.4 BIOREMEDIATION APPLICATION

Following two rounds of compliance groundwater monitoring during which concentrations of PCE were less than the laboratory reporting limits during the first quarter of 2022 and then were above the reporting limits during the second quarter of 2022, an additional application of the bioremediation amendment was introduced to the remedial excavation backfill material via the remote bioremediation treatment infiltration system by our subcontracted bioremediation contractor in August 2022. Approximately 1,000 pounds of the amendment mixed in an estimated 2,000 gallons of water was applied to the remedial excavation via the infiltration gallery. Based on the analytical results for the successive quarters of compliance groundwater monitoring, additional bioremediation application was not warranted to achieve the groundwater compliance goals for the Site. The results of the compliance groundwater monitoring are further described in the section below.

5.0 Compliance Groundwater Monitoring

The compliance monitoring at the Site has included the initial groundwater monitoring in November 2021 to establish baseline conditions prior to the cleanup action and quarterly compliance groundwater monitoring and sampling between March 2022 and June 2023 (GeoEngineers 2024a-f) following completion of the soil excavation and bioremediation application.

GeoEngineers completed groundwater monitoring and sampling to document groundwater conditions at wells MW-1 through MW-6 from November 2021 (the baseline sampling event) to June of 2023.

5.1 GROUNDWATER CONDITIONS

Depths to the perched shallow groundwater at the Property generally ranged between 5.5 to 7 feet bgs (elevations generally from 39 feet to 42 feet) with seasonal variations, and groundwater flow direction generally to the southwest. Deep aquifer well MW-1 produced water under artesian/confined conditions during all monitoring events.

5.2 GROUNDWATER MONITORING CHEMICAL ANALYTICAL RESULTS

The groundwater monitoring included analysis of groundwater samples for PCE and its degradation products TCE, cis-1,2-DCE, trans-1,2-DCE, 1,1-DCE and vinyl chloride. The chemical analytical results for groundwater sampled at the Property are summarized in Table 3. The analytical results for the 2022/2023 quarterly groundwater sampling are presented in the following sections.

5.2.1 PCE

PCE trends include the following:

- **MW-1, MW-3 and MW-6:** PCE was not detected at a concentration greater than the laboratory reporting limit in the groundwater samples from these three monitoring wells during any of the compliance monitoring events.
- **MW-2:** PCE was detected at concentrations less than the MTCA Method A cleanup level of 5 µg/L in the samples from MW-2 during four of the six compliance monitoring events. During the other two compliance monitoring events, PCE was not detected at a concentration greater than the laboratory reporting limit. The most recent detection of PCE in a sample from MW-2 was during the June 2023 compliance monitoring event at a concentration of 3.37 µg/L which is less than the cleanup level of 5 µg/L.
- **MW-4:** PCE was detected at concentrations less than the MTCA Method A cleanup level in the samples from MW-4 during two of the six compliance monitoring events. During the other four compliance monitoring events, PCE was not detected in any of the samples at a concentration greater than the laboratory reporting limit. The most recent detection of PCE was during the March 2023 compliance monitoring event at a concentration of 0.728 µg/L, which is well below the cleanup level of 5 µg/L. PCE was not detected at a concentration greater than the laboratory reporting limit during the June 2023 event.
- **MW-5:** PCE was detected at a concentration greater than MTCA Method A cleanup level of 5 µg/L in the sample from MW-5 during the June 2022 event (9.75 µg/L). In October 2022, following the second application of the bioremediation amendment, PCE was detected at a concentration less than the MTCA Method cleanup level (0.581 µg/L). In the most recent events (December 2022 through June 2023), PCE was not detected in the samples from MW-5 at concentrations greater than the laboratory reporting limit.

5.2.2 PCE Breakdown Products

TCE was detected only in the sample from MW-5 during the October 2022 compliance monitoring event, and the detected concentration (0.575 µg/L) was less than the MTCA Method A cleanup level of 5 µg/L. This detected concentration of TCE is interpreted as a breakdown product of PCE resulting from the post-remedial excavation applications of the bioremediation amendment. TCE was not detected in the samples from MW-5 during subsequent monitoring events, or in the samples from any of the other wells during the compliance monitoring events.

Cis-1,2-DCE, trans-1,2-DCE, 1,1-DCE and vinyl chloride were not detected at concentrations greater than their respective MTCA Method A or B cleanup levels in any of the groundwater samples collected during the compliance groundwater sampling events.

5.2.3 Summary

Based on the groundwater monitoring and analytical results for the samples collected during the quarterly compliance groundwater monitoring conducted from March 2022 to June 2023, PCE and its chemical degradation products are not present in Site groundwater at concentrations greater than their respective MTCA Method A or B cleanup levels.

6.0 Statistical Evaluation of the PCE Cleanup Level

Following completion of the remedial soil excavation and bioremediation treatments, a MTCA-compliant statistical evaluation was completed to evaluate the compliance of the final soil confirmation data with the MTCA Method A cleanup level for PCE of 0.05 mg/kg, which is based on the protection of groundwater as a drinking water source.

6.1.1 PCE Soil Data Within the Building Footprint

The statistical evaluation of the cleanup confirmation data was completed using the soil PCE data from samples collected within the building footprint that represent soil that remains in place. Soil data for samples from exploration locations B3, B7, B9, and B10, which represent soil that was removed during remedial excavation, were not used. The MTCA-compliant statistical evaluation was completed using EPA's ProUCL version 5.2 using the following two data sets:

- **Data Set 1:** All soil data, regardless of depth. Soil samples in this data set range from 1.5 feet bgs to 12.5 feet bgs.
 - Thirty-three soil samples.
 - Detection frequency = 9/33.
 - 95% upper confidence limit (UCL) = 0.027 mg/kg (95% KM (t) UCL based on normal distribution).
 - Cleanup level exceedance frequency = 2/33 or 6.1%.
 - Maximum cleanup level exceedance ratio = 0.074 mg/kg/0.05 mg/kg or 1.5.
- **Data Set 2:** Soil data that were collected at similar depth to the remedial excavation confirmation samples, which were collected between 3 and 7 feet bgs.
 - Twenty-four soil samples.
 - Detection frequency = 9/24.
 - 95% UCL = 0.034 mg/kg (95% KM (t) UCL based on normal distribution).
 - Cleanup level exceedance frequency = 2/24 or 8.3%.
 - Maximum cleanup level exceedance ratio = 0.074 mg/kg/0.05 mg/kg or 1.5.
 - The ProUCL data analysis output sheets for both evaluations are included in Appendix H.

Both soil data sets indicate that the PCE soil data within the building footprint are compliant with the MTCA Method A soil cleanup level of 0.05 mg/kg including:

- The 95% UCL values are less than the cleanup level.

- Less than 10% of the PCE soil concentrations are greater than the cleanup level.
- No PCE soil concentration is greater than two times the cleanup level.

6.1.2 PCE Soil Data Both Inside and Outside of the Building Footprint

The soil cleanup level for PCE at the Site is the MTCA Method A cleanup level of 0.05 mg/kg, which is based on the protection of groundwater as a drinking water source. Prior to completing the MTCA-compliant statistical evaluation, the applicability of the Method A cleanup level was considered.

PCE has been detected in groundwater at concentrations greater than the MTCA Method A cleanup level of 5 µg/L in two grab groundwater samples collected in May 2016 (SB-3 and SB-5) and one monitoring well sample collected in June 2022 (MW-5). Following the June 2022 sampling event, four consecutive rounds of groundwater monitoring have been completed at monitoring wells MW-1 through MW-6 (October and December 2022 and March and June 2023). PCE was either not detected in groundwater or was detected at concentrations less than the MTCA Method A cleanup level during these last four groundwater monitoring events. The absence of PCE in groundwater at concentration greater than the MTCA Method A cleanup level indicate that the PCE concentrations in soil at the Site are protective of, and not affecting, groundwater. Therefore, the MTCA-compliant statistical evaluation should be based on the MTCA Method B direct contact cleanup level of 480 mg/kg instead of the MTCA Method A cleanup level of 0.05 mg/kg.

The maximum PCE concentration in soil at the Site is 0.121 mg/kg, that was detected in the sample collected from the soil boring for MW-4 at a depth of 6.5 feet bgs. This concentration of PCE is less than the MTCA Method B direct contact cleanup level of 480 mg/kg. Therefore, the PCE soil data at the Site are compliant with the MTCA Method B soil cleanup level.

7.0 Summary, Conclusions and Recommendations

7.1 REMEDIAL INVESTIGATION

The former UCC tenant space, located in Suite 105 of Bucklin Place, operated as a dry-cleaning facility from 1999 to March 2021 when Ultra Custom Cleaners ceased operation at the Property. The discovery of VOCs related to dry-cleaning operations in soil, groundwater and air at the UCC Site was reported to the Ecology Northwest Regional Office in August 2016.

Based on the environmental investigations conducted from 2016 to 2021, soil and groundwater at the Property were identified as containing concentrations of PCE greater than the MTCA Method A cleanup levels. Investigation results indicate that the dry-cleaning inventory and/or business supplies had contributed to elevated concentrations of PCE and TCE in indoor air, and that the baseline conditions within the UCC tenant space, empty of tenant dry-cleaning inventory and business supplies, and with the HVAC system in normal business-hours operation, were protective of workers and customers in a standard commercial setting.

Soil encountered during the investigations was generally characterized as brown silty fine sand to silt with fine sand underlain by a dense till layer. Groundwater conditions in the deeper area-wide aquifer were artesian/confined, producing hydrostatic head at the time of drilling. Perched groundwater was encountered at a depth of approximately 19 feet bgs, and the deeper aquifer was encountered at approximately 45 feet bgs.

PCE was identified as the contaminant of concern with published MTCA Method A cleanup levels of 0.05 mg/kg for soil and 5 µg/L for groundwater. The extent of PCE contamination in groundwater and the vertical extent of PCE contamination beneath the Suite 105 tenant space were recognized as data gaps prior to the cleanup action.

7.2 FEASIBILITY STUDY

The results of the Feasibility Study presented in Section 3.0 document that excavation and off-site disposal of PCE-containing soil was the most feasible and cost-effective cleanup remedy to meet the MTCA remedy selection criteria.

7.3 CLEANUP ACTION

The independent cleanup action conducted at the Property included the excavation and off site permitted disposal of PCE-contaminated soil with concentrations greater than the applicable MTCA cleanup level from within the Property, bioremediation treatment, and compliance groundwater monitoring.

Remedial excavation of soil with the highest concentrations of PCE was completed from inside the UCC Suite 105 tenant space between January 5 to 24, 2022. PCE was either not detected at concentrations greater than the laboratory reporting limits or was detected at concentrations less than the MTCA Method A cleanup level in 13 of the 15 confirmation soil samples collected. Two remediation confirmation soil samples collected from the sidewall of the southwestern portion of the remedial excavation, contained concentrations of PCE that are greater than the MTCA Method A cleanup level. This area could not be further overexcavated due to the presence of building footings and the need to maintain the structural integrity of the building foundation. The cleanup action included the removal and permitted off-site disposal of 93.84 tons of soil from the Property under an Ecology-approved Contained-In Determination.

During the cleanup action and Property restoration, a bioremediation amendment was applied as part of backfilling of the remedial excavation to enhance the breakdown of residual PCE. An additional application of the amendment solution was also introduced to the remedial excavation backfill in August 2022 following the second quarter of compliance groundwater monitoring.

GeoEngineers documented groundwater conditions and completed compliance groundwater monitoring at wells MW-1 through MW-6 during an initial baseline monitoring event in November 2021 and between March 2022 and June 2023. Based on the groundwater monitoring and analytical results for the samples collected during quarterly compliance groundwater monitoring from March 2022 to June 2023, PCE and its chemical degradation products are no longer present in Site groundwater at concentrations greater than the MTCA Method A cleanup levels.

7.4 CONCLUSION

The cleanup action included the removal and appropriate off-site disposal of the soil with PCE concentrations greater than the MTCA Method A cleanup level, bioremediation treatment to enhance the degradation of residual PCE, and compliance groundwater monitoring. The excavation confirmation samples document that the soil at the base and most side walls of the remedial excavation meet the cleanup levels. Two confirmation soil samples collected from the sidewall of the southwestern portion corner of the remedial excavation, contained residual concentrations of PCE that are greater than the MTCA

Method A cleanup level. This area could not be further overexcavated due to the presence of building footings and the need to maintain the structural integrity of the building foundation.

The compliance groundwater monitoring events demonstrate there is no longer PCE contamination in Property/Site groundwater at concentrations greater than MTCA cleanup level. The concentrations of PCE in groundwater initially detected in 2016 were in samples collected from temporary well screens and were turbid at the time of sampling. The presence of particulates in turbid groundwater samples is known to bias contaminant concentration results high relative to non-turbid samples and may have contributed to the elevated PCE concentrations reported during the 2016 investigation.

The results of a MTCA-compliant statistical analysis of the soil data to evaluate compliance with the MTCA Method A cleanup level for PCE indicate that the PCE soil data within the building footprint are compliant with the MTCA Method A soil cleanup level. PCE was either not detected in groundwater or was detected at concentrations less than the MTCA Method A cleanup level in the samples collected during the last four groundwater monitoring events, indicating that the PCE concentrations in soil at the Site are protective of groundwater.

As documented in this report, the cleanup action is complete per the Ecology MTCA requirements, and a No Further Action (NFA) determination is requested for the Site.

9.0 Limitations

We have prepared this report for the exclusive use of Bucklin Place, LLC and their authorized agents and regulatory agencies. This report is not intended for use by others and the information contained herein is not applicable to other sites. No other party may rely on the product of our services unless we agree in advance, and in writing, to such reliance. This is to provide our firm with reasonable protection against open-ended liability claims by third parties with whom there would otherwise be no contractual limits to their actions.

Our conclusions are based on our site observations, field screening results and chemical analysis of a limited number of discrete soil samples obtained from the Property. It is always possible that contaminants are present in locations that were not observed, sampled or tested.

Within the limitations of scope, schedule and budget, our services have been executed in accordance with generally accepted environmental science practices in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

Please refer to Appendix I, titled "Report Limitations and Guidelines for Use," for additional information pertaining to use of this report.

GAA-1	P1702869-001	6/12/2017	Ambient Air	0.13 U	0.13 U	0.58	0.13 U
Modified MTCA Method B Indoor Air Screening Level for Commercial Exposure Scenario⁷				NC	NC	2.7	42
EPA Region 9, Accelerated Response Action Level Commercial/Industrial 10-Hour Work Period⁸				NA	NA	7	NA
EPA Region 9 Urgent Response Action Level Commercial/Industrial 10-Hour Work Period⁸				NA	NA	21	NA
EPA Region 10 Short-Term, Not to be Exceeded Concentration, Commercial/Industrial 8-Hour Work Period⁹				NA	NA	8.8	NA

Notes:

- ¹Approximate sample locations shown in GeoEngineers, 2017 report. GeoEngineers sample locations replicated previous Landau Associates sample locations.
- ²Volatile organic compounds (VOCs) analyzed by U.S. Environmental Protection Agency (EPA) Method TO-15.
- ³Landau Associates April 2016 sampling event conducted with exterior doors closed.
- ⁴Landau Associates May 2016 sampling event conducted with exterior doors open.
- ⁵Landau Associates November 2016 sampling event conducted following modifications to HVAC system and with exterior doors closed.
- ⁶GeoEngineers June 2017 sampling event following removal of all inventory and business supplies with HVAC system operating and with exterior doors closed.
- ⁷Model Toxics Control Act (MTCA) Method B Indoor Air Screening Level adjusted for commercial exposure scenario (adult only, 60 hrs/wk, 50 weeks/yr, 20 years).
- ⁸EPA Region 9 Response Action Levels and Recommendations to Address Near-Term Inhalation Exposures to TCE in Air from Subsurface Vapor Intrusion dated July 9, 2014.
- ⁹Office of Environmental Assessment (OEA) Recommendations regarding TCE Toxicity in Human Health Risk Assessments dated December 13, 2012 (EPA Region 10).
- NA = Not applicable; no listed value; NC = Not calculated as analyte was not detected
 U = Analyte not detected at the laboratory reporting limit shown
 µg/m³ = micrograms per cubic meter
 "-" = not tested
- Bolding** indicates analyte was detected.
- Shading indicates a concentration greater than one or more screening level.
- Chemical analytical testing by ALS Environmental in Simi Valley, California..

MTCA Method A or Method B Cleanup Levels for Unrestricted Land Use						0.05	0.03	160 ⁵	240 ⁵	NA	

Notes:

¹Approximate exploration locations shown on Figures 3 and 4.

²Field screening methods are described in Appendix F.

³Volatile organic compounds (VOCs) analyzed by U.S. Environmental Protection Agency (EPA) Method 8260.

⁴Only selected chlorinated solvents are shown; refer to laboratory reports in Appendix C for complete list of method analytes and detection limits.

⁵Model Toxics Cleanup Act (MTCA) Method B cleanup level for direct contact derived from Ecology's "CLARC Master Spreadsheet.xlsx" updated January 2020.

bgs = below pre-construction ground surface.

J = Result is less than the laboratory practical quantitation limit (PQL) but greater than the method detection limit (MDL); reported value is approximate.

mg/kg = milligrams per kilogram

NAVD88 = North American Vertical Datum of 1988

NA = No listed value

ND = Analytes not detected at laboratory reporting limits.

NS = no sheen

SS = slight sheen

ppm = parts per million

-- = not tested

Bolding indicates analyte was detected.

Shading indicates that concentration exceeded Model Toxics Control Act (MTCA) cleanup level.

GeoEngineers' chemical analytical testing by Fremont Analytical in Seattle, Washington and Libby Environmental of Olympia, Washington. Laboratory analytical reports in Appendix D.

MTCA Method A or B Screening Level Protective of Drinking Water				5	5	16 ⁶	160 ⁶	0.2	--

Notes:

¹Sampling locations shown on Figure 2.

²Volatile Organic Compounds (VOCs) analyzed by U.S. Environmental Protection Agency (EPA) Method 8260C. Refer to laboratory report for individual analytes and detection limits.

³Only selected chlorinated solvents are shown; refer to laboratory reports in Appendix C for complete list of method analytes and detection limits.

⁴Sample collected from perched groundwater zone during drilling at a depth of approximately 14 feet below ground surface.

⁵MW-1 screened in deep groundwater aquifer; groundwater under hydrostatic head and rising above TOC.

⁶Method B Non-Cancer screening level.

⁷MW-3 was not sampled during the December 2022 groundwater monitoring event because the monitoring well was unable to be opened due to a sheared bolt on the monument.

µg/L = micrograms per liter

ND = Not Detected

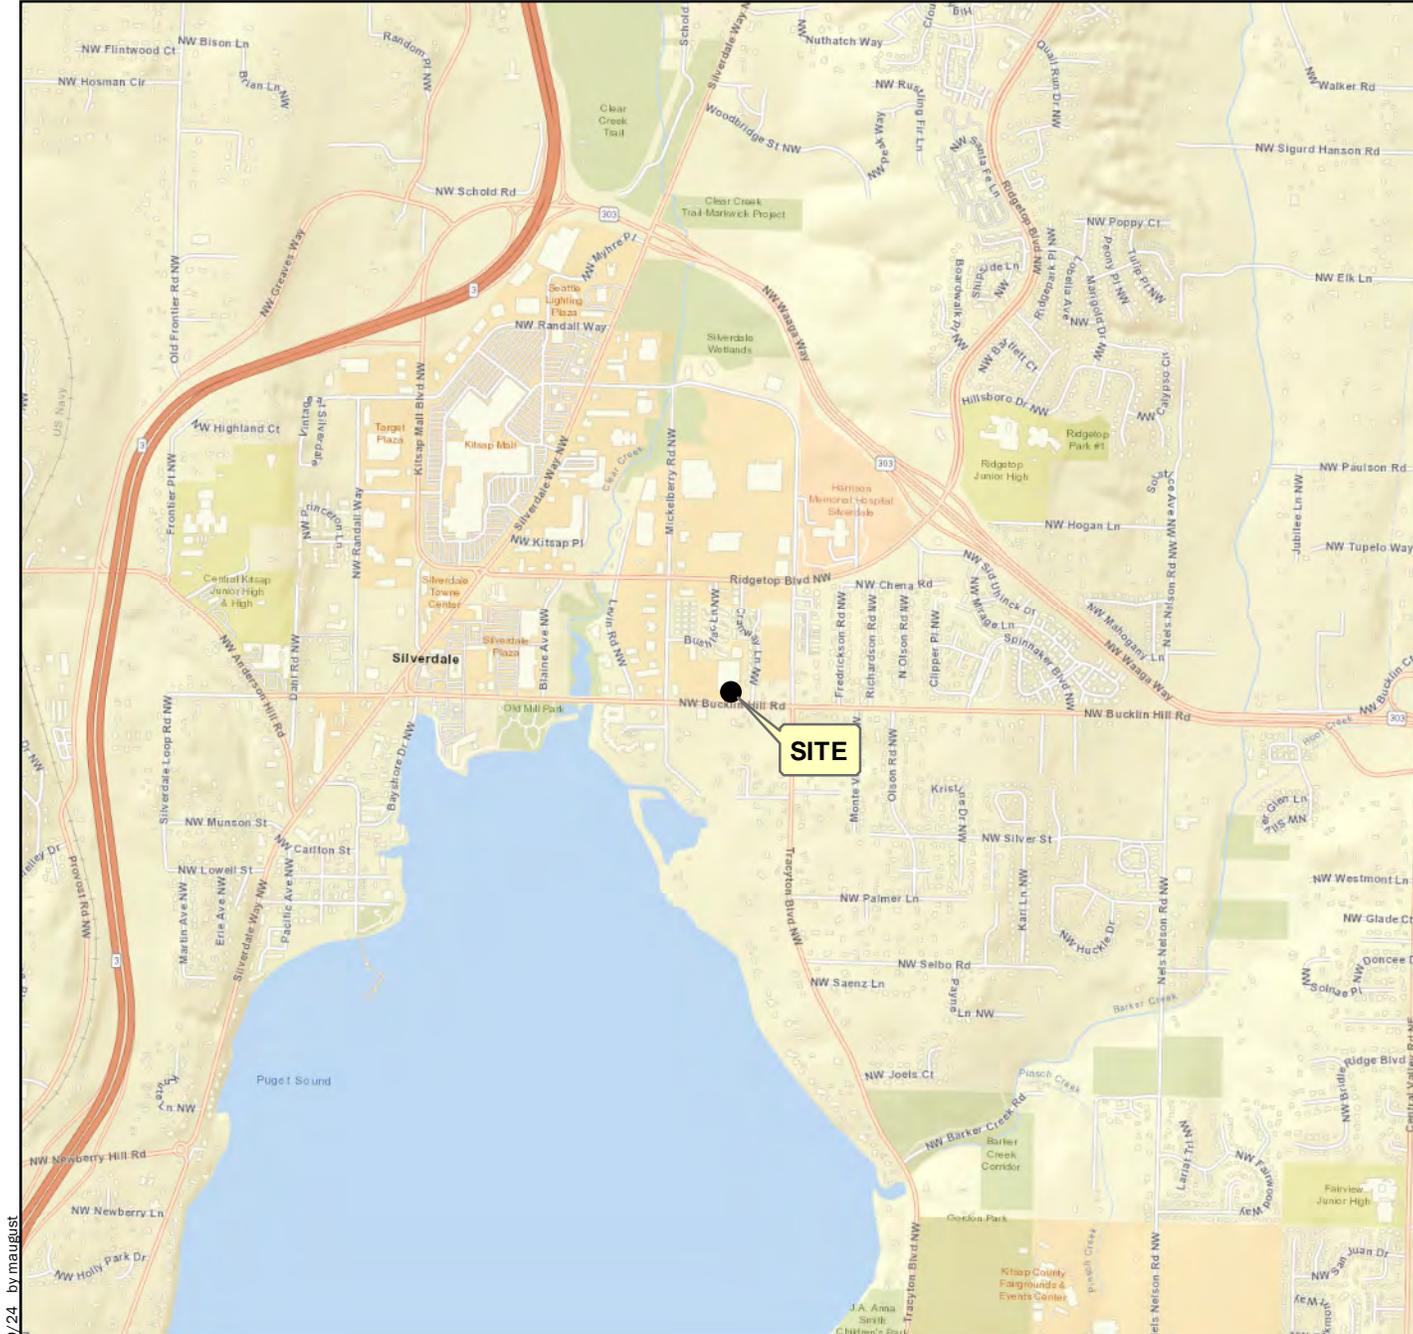

TOC = top of casing

Bolding indicates analyte was detected.

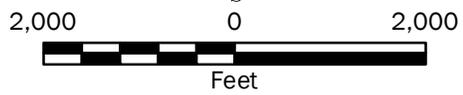

Shading indicates exceedance of Model Toxics Control Act (MTCA) cleanup level.

GeoEngineers' chemical analytical testing by Fremont Analytical in Seattle, Washington. Laboratory analytical reports in Appendix D.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal (Superfund) equivalent sites

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 08/24/2023 has revealed that there are 5 HSL sites within approximately 1 mile of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 10/09/2023 has revealed that there are 5 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
PORT O CALL SERVICE	9601 MICKELBERRY RD	W 0 - 1/8 (0.117 mi.)	B13	64

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical

EXECUTIVE SUMMARY

Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Registry ID: 110005395376

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: U057
Waste Description: Cyclohexanone (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

FINDS:

Registry ID: 110070725899

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Registry ID: 110000829998

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

COSTCO WHOLESALE 13 (Continued)

1001031675

enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

BUCKLIN PROPERTY
2222 NW BUCKLIN HILL ROAD
SILVERDALE, WA 98383

TARGET PROPERTY COORDINATES

Latitude (North):	47.650806 - 47° 39' 2.90"
Longitude (West):	122.679645 - 122° 40' 46.72"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	524058.6
UTM Y (Meters):	5277321.0
Elevation:	43 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14742700 POULSBO, WA
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

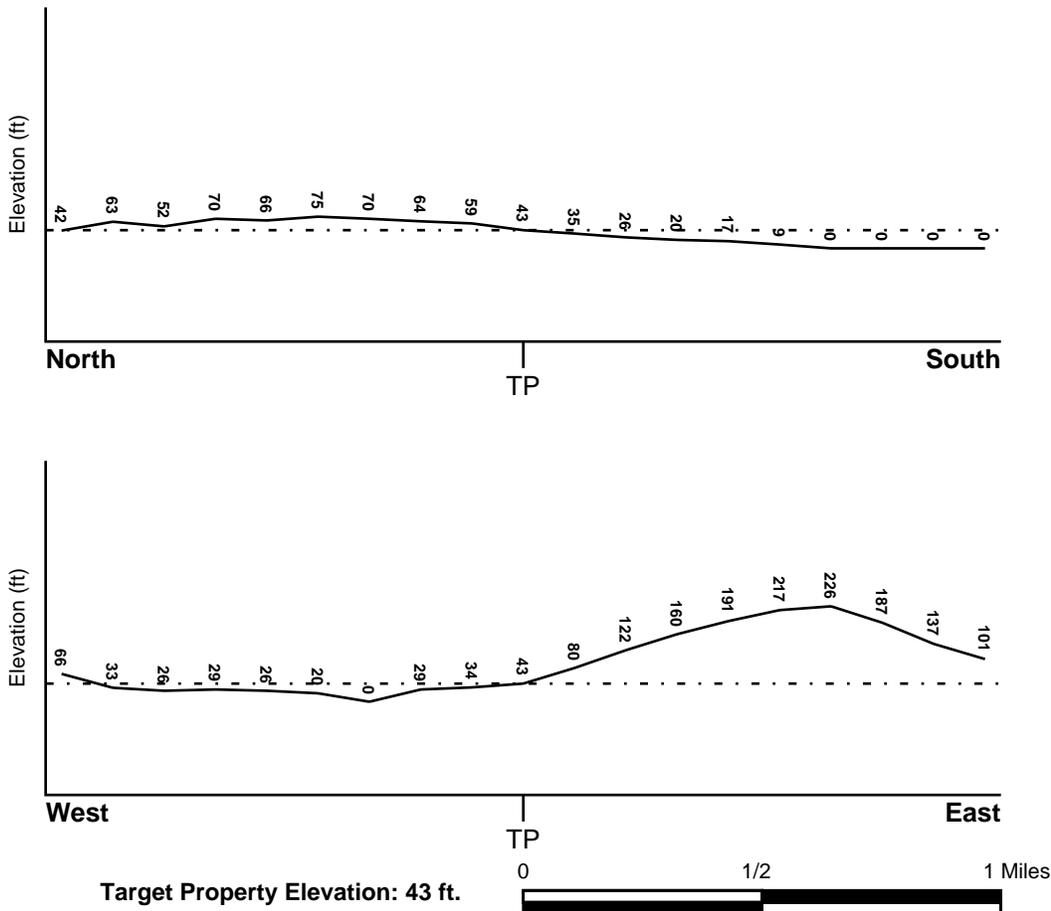

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

POULSBO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Kapowsin

Soil Surface Texture: gravelly loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 46 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1
2	5 inches	22 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1
3	22 inches	59 inches	very gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Norma

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6
2	7 inches	22 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6
3	22 inches	59 inches	stratified loamy sand to clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Alderwood

Soil Surface Texture: very gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	0 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1
2	0 inches	22 inches	very gravelly loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1
3	22 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: Neilton

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6 Min: 5.6
2	3 inches	18 inches	very gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6 Min: 5.6
3	18 inches	59 inches	very gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 5

Soil Component Name: Beaches

Soil Surface Texture: stratified gravel to sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Ecology

Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GeoEngineers, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GeoEngineers, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Appendix B
Completed Terrestrial Ecological Evaluation Form

Voluntary Cleanup Program

Washington State Department of Ecology Toxics Cleanup Program

TERRESTRIAL ECOLOGICAL EVALUATION FORM

Under the Model Toxics Control Act (MTCA), a terrestrial ecological evaluation is necessary if hazardous substances are released into the soils at a Site. In the event of such a release, you must take one of the following three actions as part of your investigation and cleanup of the Site:

1. Document an exclusion from further evaluation using the criteria in WAC 173-340-7491.
2. Conduct a simplified evaluation as set forth in WAC 173-340-7492.
3. Conduct a site-specific evaluation as set forth in WAC 173-340-7493.

When requesting a written opinion under the Voluntary Cleanup Program (VCP), you must complete this form and submit it to the Department of Ecology (Ecology). The form documents the type and results of your evaluation.

Completion of this form is not sufficient to document your evaluation. You still need to document your analysis and the basis for your conclusion in your cleanup plan or report.

If you have questions about how to conduct a terrestrial ecological evaluation, please contact the Ecology site manager assigned to your Site. For additional guidance, please refer to <https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Terrestrial-ecological-evaluation>.

Step 1: IDENTIFY HAZARDOUS WASTE SITE

Please identify below the hazardous waste site for which you are documenting an evaluation.

Facility/Site Name: Ultra Custom Cleaners Site

Facility/Site Address: 2222 Northwest Bucklin Hill Road, Suite 105, Silverdale, Washington

Facility/Site No: 18955

VCP Project No.:

Step 2: IDENTIFY EVALUATOR

Please identify below the person who conducted the evaluation and their contact information.

Name: Ian Young

Title: Senior Geologist

Organization: GeoEngineers, Inc.

Mailing address: 2101 4th Ave, Ste 950

City: Seattle

State: WA

Zip code: 98121

Phone: 206.920.8635

Fax: 206.728.2732

E-mail: iyoung@geoengineers.com

Step 3: DOCUMENT EVALUATION TYPE AND RESULTS

A. Exclusion from further evaluation.

1. Does the Site qualify for an exclusion from further evaluation?

- Yes *If you answered "YES," then answer **Question 2**.*
- No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3B** of this form.*

2. What is the basis for the exclusion? Check all that apply. Then skip to **Step 4** of this form.

Point of Compliance: WAC 173-340-7491(1)(a)

- All soil contamination is, or will be,* at least 15 feet below the surface.
- All soil contamination is, or will be,* at least 6 feet below the surface (or alternative depth if approved by Ecology), and institutional controls are used to manage remaining contamination.

Barriers to Exposure: WAC 173-340-7491(1)(b)

- All contaminated soil, is or will be,* covered by physical barriers (such as buildings or paved roads) that prevent exposure to plants and wildlife, and institutional controls are used to manage remaining contamination.

Undeveloped Land: WAC 173-340-7491(1)(c)

- There is less than 0.25 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.
- For sites not containing any of the chemicals mentioned above, there is less than 1.5 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site.

Background Concentrations: WAC 173-340-7491(1)(d)

- Concentrations of hazardous substances in soil do not exceed natural background levels as described in WAC 173-340-200 and 173-340-709.

* An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

± "Undeveloped land" is land that is not covered by building, roads, paved areas, or other barriers that would prevent wildlife from feeding on plants, earthworms, insects, or other food in or on the soil.

"Contiguous" undeveloped land is an area of undeveloped land that is not divided into smaller areas of highways, extensive paving, or similar structures that are likely to reduce the potential use of the overall area by wildlife.

B. Simplified evaluation.

1. Does the Site qualify for a simplified evaluation?

- Yes *If you answered "YES," then answer **Question 2** below.*
- No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3C** of this form.*

2. Did you conduct a simplified evaluation?

- Yes *If you answered "YES," then answer **Question 3** below.*
- No *If you answered "NO," then skip to **Step 3C** of this form.*

3. Was further evaluation necessary?

- Yes *If you answered "YES," then answer **Question 4** below.*
- No *If you answered "NO," then answer **Question 5** below.*

4. If further evaluation was necessary, what did you do?

- Used the concentrations listed in Table 749-2 as cleanup levels. *If so, then skip to **Step 4** of this form.*
- Conducted a site-specific evaluation. *If so, then skip to **Step 3C** of this form.*

5. If no further evaluation was necessary, what was the reason? Check all that apply. Then skip to **Step 4 of this form.**

Exposure Analysis: WAC 173-340-7492(2)(a)

- Area of soil contamination at the Site is not more than 350 square feet.
- Current or planned land use makes wildlife exposure unlikely. Used Table 749-1.

Pathway Analysis: WAC 173-340-7492(2)(b)

- No potential exposure pathways from soil contamination to ecological receptors.

Contaminant Analysis: WAC 173-340-7492(2)(c)

- No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations that exceed the values listed in Table 749-2.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations that exceed the values listed in Table 749-2, and institutional controls are used to manage remaining contamination.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays, and institutional controls are used to manage remaining contamination.

C. Site-specific evaluation. A site-specific evaluation process consists of two parts: (1) formulating the problem, and (2) selecting the methods for addressing the identified problem. Both steps require consultation with and approval by Ecology. See WAC 173-340-7493(1)(c).

1. Was there a problem? See WAC 173-340-7493(2).

- Yes *If you answered "YES," then answer **Question 2** below.*
- No *If you answered "NO," then identify the reason here and then skip to **Question 5** below:*
- No issues were identified during the problem formulation step.
 - While issues were identified, those issues were addressed by the cleanup actions for protecting human health.

2. What did you do to resolve the problem? See WAC 173-340-7493(3).

- Used the concentrations listed in Table 749-3 as cleanup levels. *If so, then skip to **Question 5** below.*
- Used one or more of the methods listed in WAC 173-340-7493(3) to evaluate and address the identified problem. *If so, then answer **Questions 3 and 4** below.*

3. If you conducted further site-specific evaluations, what methods did you use?

Check all that apply. See WAC 173-340-7493(3).

- Literature surveys.
- Soil bioassays.
- Wildlife exposure model.
- Biomarkers.
- Site-specific field studies.
- Weight of evidence.
- Other methods approved by Ecology. If so, please specify:

4. What was the result of those evaluations?

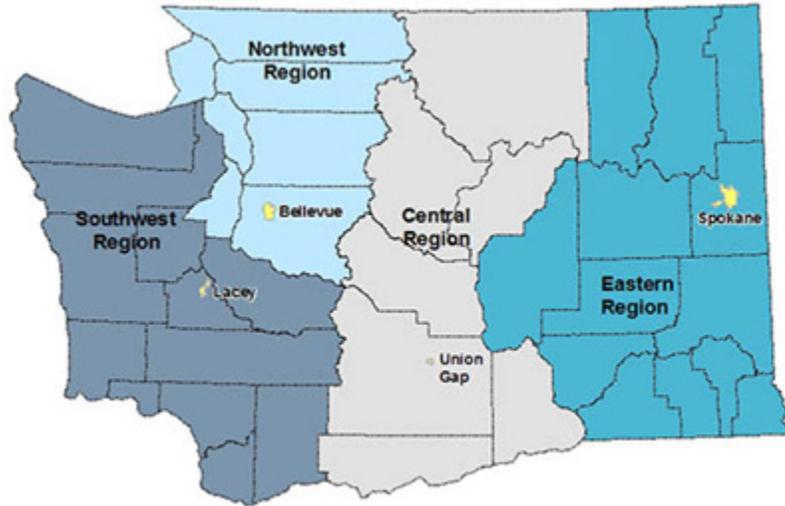

- Confirmed there was no problem.
- Confirmed there was a problem and established site-specific cleanup levels.

5. Have you already obtained Ecology's approval of both your problem formulation and problem resolution steps?

- Yes *If so, please identify the Ecology staff who approved those steps:*
- No

Step 4: SUBMITTAL

Please mail your completed form to the Ecology site manager assigned to your Site. If a site manager has not yet been assigned, please mail your completed form to the Ecology regional office for the County in which your Site is located.

Northwest Region: Attn: VCP Coordinator 3190 160 th Ave. SE Bellevue, WA 98008-5452	Central Region: Attn: VCP Coordinator 1250 West Alder St. Union Gap, WA 98903-0009
Southwest Region: Attn: VCP Coordinator P.O. Box 47775 Olympia, WA 98504-7775	Eastern Region: Attn: VCP Coordinator N. 4601 Monroe Spokane WA 99205-1295

If you need this publication in an alternate format, please call the Toxics Cleanup Program at 360-407-7170. People with hearing loss can call 711 for Washington Relay Service. People with a speech disability can call 877-833-6341.

Appendix C
Monitoring Well Logs

SOIL CLASSIFICATION CHART

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE GRAINED SOILS	GRAVEL AND GRAVELLY SOILS	CLEAN GRAVELS <small>(LITTLE OR NO FINES)</small>		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES
		GRAVELS WITH FINES <small>(APPRECIABLE AMOUNT OF FINES)</small>		GP	POORLY-GRADED GRAVELS, GRAVEL - SAND MIXTURES
	SAND AND SANDY SOILS	CLEAN SANDS <small>(LITTLE OR NO FINES)</small>		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
				GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
		SANDS WITH FINES <small>(APPRECIABLE AMOUNT OF FINES)</small>		SW	WELL-GRADED SANDS, GRAVELLY SANDS
				SP	POORLY-GRADED SANDS, GRAVELLY SAND
FINE GRAINED SOILS	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		SM	SILTY SANDS, SAND - SILT MIXTURES
				SC	CLAYEY SANDS, SAND - CLAY MIXTURES
				ML	INORGANIC SILTS, ROCK FLOUR, CLAYEY SILTS WITH SLIGHT PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
				MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS SILTY SOILS
HIGHLY ORGANIC SOILS				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS AND SILTS OF MEDIUM TO HIGH PLASTICITY
				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

NOTE: Multiple symbols are used to indicate borderline or dual soil classifications

Sampler Symbol Descriptions

	Modified California Sampler (6-inch sleeve) or Dames & Moore
	Standard Penetration Test (SPT)
	Shelby tube
	Piston
	Direct-Push
	Bulk or grab
	Continuous Coring

Blowcount is recorded for driven samplers as the number of blows required to advance sampler 12 inches (or distance noted). See exploration log for hammer weight and drop.

"P" indicates sampler pushed using the weight of the drill rig.

"WOH" indicates sampler pushed using the weight of the hammer.

NOTE: The reader must refer to the discussion in the report text and the logs of explorations for a proper understanding of subsurface conditions. Descriptions on the logs apply only at the specific exploration locations and at the time the explorations were made; they are not warranted to be representative of subsurface conditions at other locations or times.

ADDITIONAL MATERIAL SYMBOLS

SYMBOLS		TYPICAL DESCRIPTIONS
GRAPH	LETTER	
	AC	Asphalt Concrete
	CC	Cement Concrete
	CR	Crushed Rock/ Quarry Spalls
	SOD	Sod/Forest Duff
	TS	Topsoil

Groundwater Contact

Measured groundwater level in exploration, well, or piezometer

Measured free product in well or piezometer

Graphic Log Contact

Distinct contact between soil strata

Approximate contact between soil strata

Material Description Contact

Contact between geologic units

Contact between soil of the same geologic unit

Laboratory / Field Tests

%F	Percent fines
%G	Percent gravel
AL	Atterberg limits
CA	Chemical analysis
CP	Laboratory compaction test
CS	Consolidation test
DD	Dry density
DS	Direct shear
HA	Hydrometer analysis
MC	Moisture content
MD	Moisture content and dry density
Mohs	Mohs hardness scale
OC	Organic content
PM	Permeability or hydraulic conductivity
PI	Plasticity index
PL	Point load test
PP	Pocket penetrometer
SA	Sieve analysis
TX	Triaxial compression
UC	Unconfined compression
UU	Unconsolidated undrained triaxial compression
VS	Vane shear

Sheen Classification

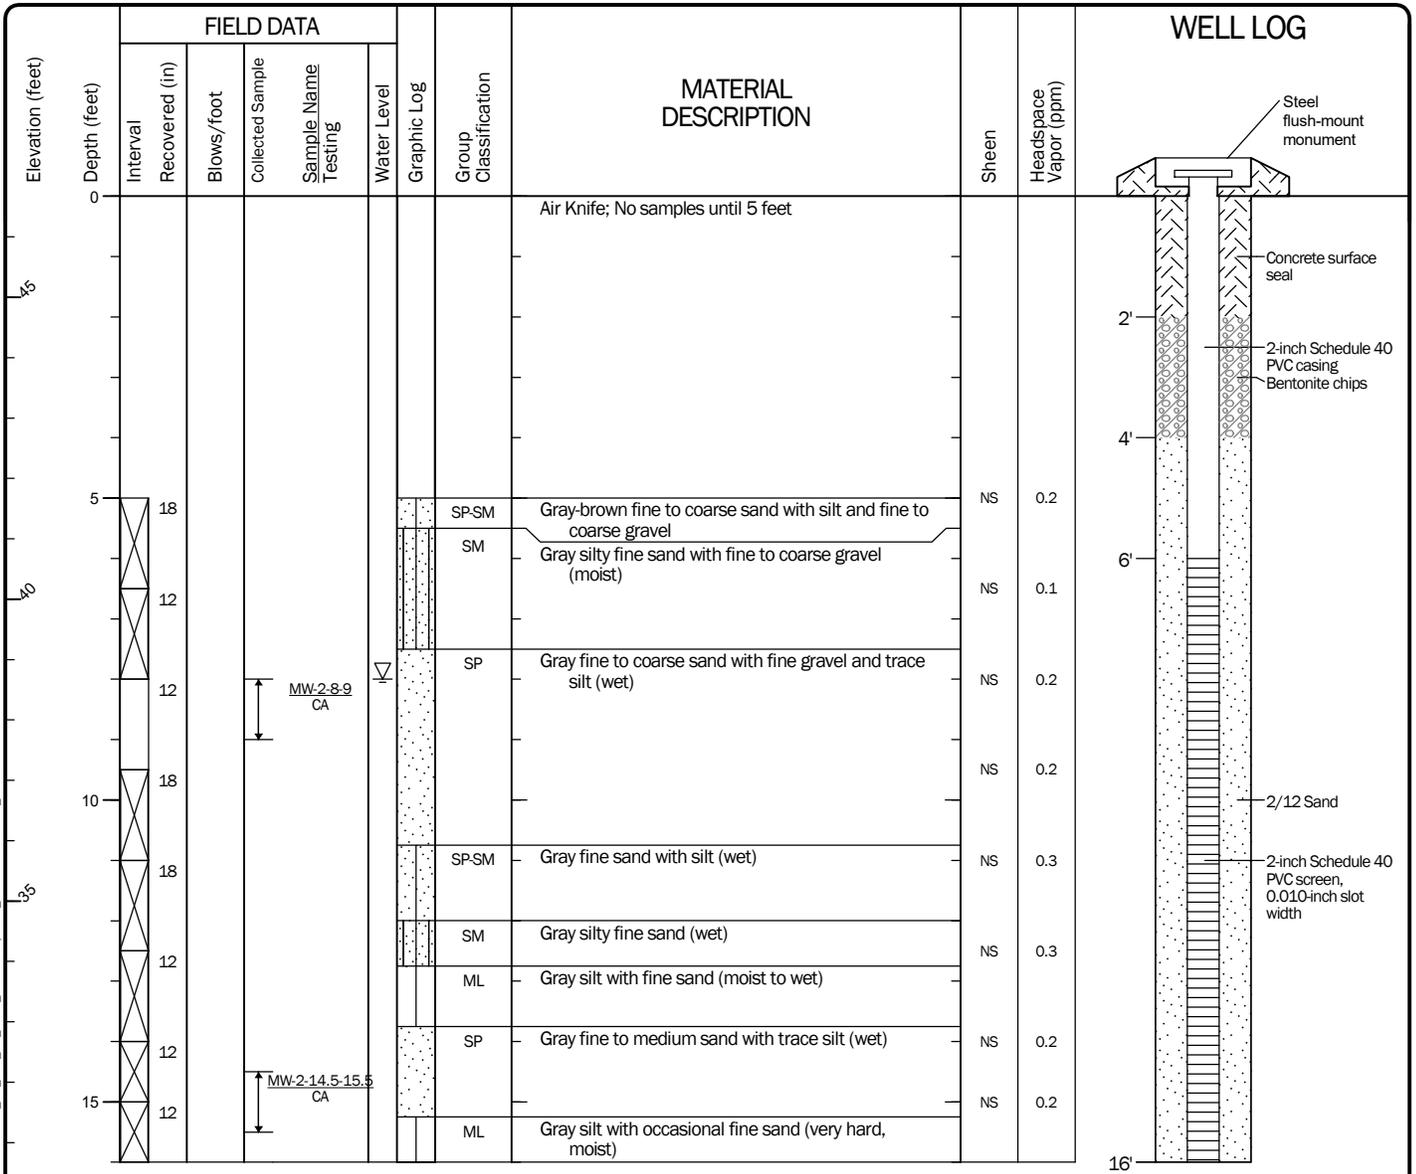

NS	No Visible Sheen
SS	Slight Sheen
MS	Moderate Sheen
HS	Heavy Sheen

Appendix D
Chemical Analytical Laboratory Reports

APPENDIX D

CHEMICAL ANALYTICAL LABORATORY REPORTS

ANALYTICAL METHODS

Chain-of-custody procedures were followed during the transport of the field samples to the analytical laboratory. The samples were held in cold storage pending extraction and/or analysis. The analytical results, analytical methods reference and laboratory quality control records are included in this appendix. The analytical results are also summarized in the text and tables of this report.

ANALYTICAL DATA REVIEW

The laboratory maintains an internal quality assurance program as documented in its laboratory quality assurance manual. The laboratory uses a combination of blanks, surrogate recoveries, duplicates, matrix spike recoveries, matrix spike duplicate recoveries, blank spike recoveries and blank spike duplicate recoveries to evaluate the validity of the analytical results. The laboratory also uses data quality goals for individual chemicals or groups of chemicals based on the long-term performance of the test methods. The data quality goals were included in the laboratory reports. The laboratory compared each group of samples with the existing data quality goals and noted any exceptions in the laboratory report.

ANALYTICAL DATA REVIEW SUMMARY

No quality control exceptions were noted by the testing laboratory.

GeoEngineers

Seattle, WA 98121

RE: Bucklin

Work Order Number: 2111441

November 30, 2021

Attention Ian Young:

Fremont Analytical, Inc. received 12 sample(s) on 11/19/2021 for the analyses presented in the following report.

Sample Moisture (Percent Moisture)
Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Project: Bucklin

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
 2. How was the sample delivered? Courier

Log In

3. Coolers are present? Yes No NA
 4. Shipping container/cooler in good condition? Yes No
 5. Custody Seals present on shipping container/cooler?
 (Refer to comments for Custody Seals not intact) Yes No Not Present
 6. Was an attempt made to cool the samples? Yes No NA
 7. Were all items received at a temperature of >2°C to 6°C * Yes No NA
 8. Sample(s) in proper container(s)? Yes No
 9. Sufficient sample volume for indicated test(s)? Yes No
 10. Are samples properly preserved? Yes No
 11. Was preservative added to bottles? Yes No NA
 12. Is there headspace in the VOA vials? Yes No NA
 13. Did all samples containers arrive in good condition(unbroken)? Yes No
 14. Does paperwork match bottle labels? Yes No
 15. Are matrices correctly identified on Chain of Custody? Yes No
 16. Is it clear what analyses were requested? Yes No
 17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: Bucklin

Work Order Number: 2111467

November 29, 2021

Attention Ian Young:

Fremont Analytical, Inc. received 7 sample(s) on 11/22/2021 for the analyses presented in the following report.

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

CLIENT: GeoEngineers

Project: Bucklin

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

12/1/2021: Revision 1 includes an updated select list for VOCs

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Courier

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >2°C to 6°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Appendix E
Field Procedure

APPENDIX E FIELD PROCEDURES

SAMPLE COLLECTION AND HANDLING

Soil samples were obtained from the excavation area using a clean nitrile-gloved hand from freshly exposed soil following excavation during construction. Each sample was placed in laboratory-prepared sample jars appropriate to analytical method for chemical analysis. New gloves were used before collecting each sample to prevent cross-contamination. The samples were placed in an iced cooler pending transport to the analytical laboratory.

Each sample submitted for chemical analysis was identified by a unique sample designation that corresponded to its mapped sample location and depth. Chain-of-custody procedures were followed in transporting the samples to the laboratory.

FIELD SCREENING OF SOIL SAMPLES

A representative from our staff performed field screening of soil samples obtained from the excavation. Field screening results are used as a general guideline to delineate areas with possible petroleum hydrocarbons. In addition, screening results are used to aid in the selection of soil samples for chemical analysis. The screening methods used included visual screening water sheen screening, and PID.

Visual screening consists of inspecting the soil for stains indicative of petroleum hydrocarbons. Visual screening is generally more effective when hydrocarbons are heavier, such as motor oil, or when hydrocarbon concentrations are high. Water sheen screening is a more sensitive method that can be effective in detecting contamination at concentrations less than regulatory cleanup levels. However, field screening results are site-specific. The effectiveness of field screening varies with temperature, moisture content, organic content, soil type and age of contaminant. The presence or absence of a sheen does not necessarily indicate the presence or absence of petroleum hydrocarbons.

Water sheen screening involves placing soil in water and observing the water surface for signs of sheen. Sheen screening may detect both volatile and nonvolatile petroleum hydrocarbons. Sheen classifications are as follows:

No Sheen (NS)	No visible sheen on water surface.
Slight Sheen (SS)	Light, colorless, dull sheen; spread is irregular, not rapid; sheen dissipates rapidly. Natural organic matter in the soil may produce a slight sheen.
Moderate Sheen (MS)	Light to heavy sheen; may have some color/iridescence; spread is irregular to flowing, may be rapid; few remaining areas of no sheen on water surface.
Heavy Sheen (HS)	Heavy sheen with color/iridescence; spread is rapid; entire water surface may be covered with sheen.

Headspace vapor screening involves placing a soil sample in a plastic sample bag. Air is captured in the bag and the bag is shaken to expose the soil to the air trapped in the bag. The probe of a PID is inserted in the bag and the instrument measures the concentration of combustible vapor in the air removed from the sample headspace. The PID measures concentrations in parts per million (ppm) and is calibrated to

isobutylene. The PID is designed to quantify combustible gas and organic vapor concentrations up to 2,500 ppm with a lower threshold of significance of 1 ppm in this application. Field screening results are site-specific and vary with soil type, soil moisture content, temperature and type of contaminant.

RE: Contained-In Determination for F002 Contaminated Soils at the Ultra Custom Cleaners Site located at 2222 NW Bucklin Hill Road, Suite 105, Silverdale, Washington (Cleanup Site ID # 14334, Facility Site ID # 18955).

References: 1. Electronic Mail and Attachment from Ian Young (GeoEngineers) to Paul Bianco (Ecology), dated October 29, 2021
2. Electronic Mail from Paul Bianco (Ecology) to Ian Young (GeoEngineers), dated November 4, 2021
3. Electronic Mail and Attachment from Ian Young (GeoEngineers) to Paul Bianco (Ecology), dated November 10, 2021

Dear William Matthews:

The Washington State Department of Ecology (Ecology) received a contained-in determination request from your environmental consultant, GeoEngineers for specific F002 listed waste perchloroethylene (PCE) contaminated soils to be excavated on the property located at 628 and 631 Southwest 151st Street, Burien, Washington.

Analytical data were submitted to Ecology to determine if these soils contaminated with F002 listed dangerous waste constituents may be exempt from management as dangerous wastes per the "Contained-In Policy"¹. Ecology understands that these contaminated soils do not designate under federal characteristics (WAC 173-303-090) or State-only criteria (WAC 173-303-100).

Based on the information received and reviewed, Ecology has determined that the **155 tons** of PCE contaminated soils to be excavated (**attached Figure 3**) during excavation activities are contaminated with F002 listed dangerous waste constituents (PCE) at concentrations that do not warrant management as dangerous wastes. Ecology will not require disposal of these **155 tons** of PCE contaminated soils as F002 listed dangerous wastes at a RCRA permitted dangerous waste treatment, storage and disposal (TSD) facility, provided that all of the following conditions are

¹ Washington State Department of Ecology Contained-in Policy, dated February 19, 1993

implemented. This contained-in determination applies only to the contaminated soils, and does not pertain to contaminated water or any mixture of contaminated soils and fluid.

You or your environmental consultant, GeoEngineers shall:

- Ensure that no standing water is present within the containers or trucks holding the contaminated soils. All water must be removed to the maximum extent possible from each container or truck and managed as F002 dangerous wastes or as otherwise allowed under Chapter 173-303 WAC. Adding bentonite or similar materials to absorb standing F002 listed waste contaminated water in the containers is not allowed. Mixtures of bentonite or similar materials and the listed waste contaminated water must be managed as F002 listed dangerous wastes;
- Directly deliver the soils to a solid waste landfill or transfer station permitted under Chapter 173-351 WAC and/or Chapter 173-350 WAC inside Washington State. If taken directly to the solid waste landfill, no off-loading of the contaminated soils is allowed between the cleanup site and the permitted solid waste landfill; If taken to the transfer station, the intermodal containers from the cleanup site will be loaded on to rail cars, removal of the contaminated soils from the intermodal container at the transfer station is not allowed;
- If you plan to deliver the contaminated soils to a landfill outside Washington State, you must **FIRST** submit to Ecology written approval for the contaminated soil disposal from the State hazardous waste program and the out of state landfill, **before** the soils are delivered to the out of state landfill.
- If you load the contaminated soils directly onto the truck bed or the contaminated soils are transported in roll-off bins, the truck or the roll-off bins must be lined with plastic and properly covered to prevent leaks, spills or dispersion due to wind.
- Dispose of the contaminated soils at the permitted solid waste landfill by January 31, 2022. This contained-in determination letter is no longer valid after January 31, 2022 and the contaminated soils shall be managed as dangerous wastes after this date;
- Provide copies of all signed solid waste landfill receipts or a certificate of disposal issued by the receiving landfill for these contaminated soils to Ecology, attention of Paul Bianco, by February 28, 2022. This is an important verification step for you and your consultant to follow in order for this Ecology decision to be valid;
- Do not consolidate these contaminated soils with other soils that do not pertain to this contained-in determination;
- Notify Ecology before disposal of the contaminated soil if the amount exceeds the approved amount or if the excavation limits exceed the lateral extents shown in tan color on Figure 3 in this letter or if the vertical extents exceed 6 feet below ground surface. Ecology needs to make sure that the additional soil qualifies for a contained-in determination;

- Ensure that the transporter is properly trained to handle hazardous waste so that the transporter manages the contained-in determination soils during transport in a manner that is protective of human health and the environment;
- Take measures to prevent unauthorized contact with these contaminated soils at all times;
- Provide instructions to the landfill operator that these soils are **not** to be used for daily, intermediate, or final cover;
- Provide copies of all soil analytical data to the landfill operator, upon request; and
- Do not send these contaminated soils to any incinerator, thermal desorption unit or recycling facility unless that facility is a RCRA Subtitle C permitted dangerous waste TSD facility.

Ecology issued this determination based on the information provided and reviewed to date. This Ecology determination will be rescinded if Ecology finds that the information submitted by the property owner or its environmental consultant is materially false, misleading, otherwise does not accurately represent the site conditions, or if the Ecology requirements listed above are not followed.

This written decision only applies to the **155 tons** of specified PCE contaminated soils to be generated during excavation activities from areas described in your request (reference 3). It does not apply to any other media. Any data used for this contained-in determination is intended for use in determining the proper disposal of the above stated PCE contaminated soil according to the Washington State Dangerous Waste Regulations (Chapter 173-303 WAC) and Ecology Contained-in Policy. This letter is not an Ecology approval for dangerous waste designation or disposal of contaminated soils that may be generated or already excavated from other areas in this property.

This letter is not a No Further Action (NFA) letter and not written approval for any cleanup action plan you may have submitted. Instead, this letter only addresses the procedures for disposal of the contaminated soils according to the Washington State Dangerous Waste Regulations (Chapter 173-303 WAC). Regulatory decisions regarding the cleanup action, applicable soil and groundwater cleanup levels and any other cleanup issues must comply with the requirements under Ecology Model Toxics Control Act (Chapter 173-340 WAC). Local agencies may have the authority to impose additional requirements on this waste stream.

If you fail to comply with the terms of this letter, Ecology may issue an administrative order and/or penalty as provided by the Revised Code of Washington, Sections 70A.300.090 and/or .120 (Hazardous Waste Management Act).

If you have any questions concerning this letter, please contact me at (425) 649-7181 or cboe461@ecy.wa.gov.

Appendix G
Bioremediation Amendment Information

CarBstrate™

THE INDUSTRY'S #1
COMPLETE SUBSTRATE

CarBstrate™ is a B-vitamin and nutrient-amended carbohydrate substrate specifically designed for in situ application. In addition to its high solubility and low-retardation factor, it is a non-toxic, food-grade product that includes the macro-nutrients that are necessary for effective microbial growth (i.e. N and P) as well as a specific suite of trace elements that are critical for active anaerobic microbial activity.

PROPERTIES & CHARACTERISTICS

CarBstrate™ is a dry powder that is mixed with water for subsequent subsurface injection or recirculation. Once delivered into a target saturated zone, this nutrient-amended carbohydrate will stimulate consumption of terminal electron acceptor (TEA) sinks (i.e. dissolved oxygen, nitrate, sulfate, etc.) and provide available total organic carbon (TOC) that will maintain sulfate-reducing and/or methanogenic conditions throughout the target saturated zone. Additional product information includes:

Product Information	CarBstrate™ Characteristics
Packaging	50-lb. bags
Physical Composition	Dry powder
Changes groundwater pH	No
Water Soluble	Yes
Food-Grade Product	Yes
Effective Remediation of:	Chlorinated Solvents, Pentachlorophenol, Hexavalent, Chromium, Energetics, Nitrates, and More
Typical Injection Solution Strength	0.1 - 1 lb. per gallon of water
Field Application Assistance	Yes, upon request
Typical Application Method	Mix with water to make working solution, then pressure-inject into subsurface

CarBstrate™

Appendix I
Report Limitations and Guidelines for Use

APPENDIX I REPORT LIMITATIONS AND GUIDELINES FOR USE¹

This Appendix provides information to help you manage your risks with respect to the use of this report.

READ THESE PROVISIONS CLOSELY

Some clients, design professionals and contractors may not recognize that the geoscience practices (geotechnical engineering, geology and environmental science) are far less exact than other engineering and natural science disciplines. This lack of understanding can create unrealistic expectations that could lead to disappointments, claims and disputes. GeoEngineers includes these explanatory “limitations” provisions in our reports to help reduce such risks. Please confer with GeoEngineers if you are unclear how these “Report Limitations and Guidelines for Use” apply to your project or site.

ENVIRONMENTAL SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES, PERSONS AND PROJECTS

This report has been prepared for the exclusive use of Bucklin Place, LLC. This report may be provided to regulatory agencies for review. This report is not intended for use by others, and the information contained herein is not applicable to other sites.

GeoEngineers structures our services to meet the specific needs of our clients. For example, an environmental site assessment study conducted for a property owner may not fulfill the needs of a prospective purchaser of the same property. Because each environmental study is unique, each environmental report is unique, prepared solely for the specific client and project site. No one except Bucklin Place, LLC should rely on this environmental report without first conferring with GeoEngineers. This report should not be applied for any purpose or project except the one originally contemplated.

THIS ENVIRONMENTAL REPORT IS BASED ON A UNIQUE SET OF PROJECT-SPECIFIC FACTORS

This report has been prepared for excavation activities at the Ultra Custom Cleaners in Silverdale, Washington. GeoEngineers considered a number of unique, project-specific factors when establishing the scope of services for this project and report. Unless GeoEngineers specifically indicates otherwise, do not rely on this report if it was:

- Not prepared for you,
- Not prepared for your project,
- Not prepared for the specific site explored, or
- Completed before important project changes were made.

¹ Developed based on material provided by ASFE, Professional Firms Practicing in the Geosciences; www.asfe.org.

If important changes are made after the date of this report, GeoEngineers should be given the opportunity to review our interpretations and recommendations and provide written modifications or confirmation, as appropriate.

RELIANCE CONDITIONS FOR THIRD PARTIES

Our report was prepared for the exclusive use of Bucklin Place, LLC. No other party may rely on the product of our services unless we agree in advance to such reliance in writing. This is to provide our firm with reasonable protection against open-ended liability claims by third parties with whom there would otherwise be no contractual limits to their actions. Within the limitations of scope, schedule and budget, our services have been executed in accordance with our Agreement with Bucklin Place, LLC and generally accepted environmental practices in this area at the time this report was prepared.

ENVIRONMENTAL REGULATIONS ARE ALWAYS EVOLVING

Some substances may be present in the site vicinity in quantities or under conditions that may have led, or may lead, to contamination of the subject site, but are not included in current local, state or federal regulatory definitions of hazardous substances or do not otherwise present current potential liability. GeoEngineers cannot be responsible if the standards for appropriate inquiry, or regulatory definitions of hazardous substance, change or if more stringent environmental standards are developed in the future.

UNCERTAINTY MAY REMAIN AFTER COMPLETION OF REMEDIAL ACTIVITIES

Remediation activity completed in a portion of a site cannot wholly eliminate uncertainty regarding the potential for contamination in connection with a property. Our interpretation of subsurface conditions in this study is based on field observations and chemical analytical data from widely-spaced sampling locations. It is always possible that contamination exists in areas that were not explored, sampled or analyzed.

SUBSURFACE CONDITIONS CAN CHANGE

This environmental report is based on conditions that existed at the time the study was performed. The findings and conclusions of this report may be affected by the passage of time, by manmade events such as construction on or adjacent to the site, by new releases of hazardous substances, or by natural events such as floods, earthquakes, slope instability or groundwater fluctuations. Always contact GeoEngineers before applying this report to determine if it is still applicable.

SOIL AND GROUNDWATER END USE

The cleanup levels referenced in this report are site- and situation-specific. The cleanup levels may not be applicable for other sites or for other on-site uses of the affected media (soil and/or groundwater). Note that hazardous substances may be present in some of the site soil and/or groundwater at detectable concentrations that are less than the referenced cleanup levels. GeoEngineers should be contacted prior to the export of soil or groundwater from the subject site or reuse of the affected media on site to evaluate the potential for associated environmental liabilities. We cannot be responsible for potential environmental liability arising out of the transfer of soil and/or groundwater from the subject site to another location or its reuse on site in instances that we were not aware of or could not control.

MOST ENVIRONMENTAL FINDINGS ARE PROFESSIONAL OPINIONS

Our interpretations of subsurface conditions are based on field observations and chemical analytical data from widely spaced sampling locations at the site. Site exploration identifies subsurface conditions only at those points where subsurface tests are conducted or samples are taken. GeoEngineers reviewed field and laboratory data and then applied our professional judgment to render an opinion about subsurface conditions throughout the site. Actual subsurface conditions may differ – sometimes significantly – from those indicated in this report. Our report, conclusions and interpretations should not be construed as a warranty of the subsurface conditions.

GEOTECHNICAL, GEOLOGIC AND GEOENVIRONMENTAL REPORTS SHOULD NOT BE INTERCHANGED

The equipment, techniques and personnel used to perform an environmental study differ significantly from those used to perform a geotechnical or geologic study and vice versa. For that reason, a geotechnical engineering or geologic report does not usually relate any environmental findings, conclusions or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. Similarly, environmental reports are not used to address geotechnical or geologic concerns regarding a specific project.

BIOLOGICAL POLLUTANTS

GeoEngineers' Scope of Work specifically excludes the investigation, detection, prevention or assessment of the presence of Biological Pollutants. Accordingly, this report does not include any interpretations, recommendations, findings, or conclusions regarding the detecting, assessing, preventing or abating of Biological Pollutants and no conclusions or inferences should be drawn regarding Biological Pollutants, as they may relate to this project. The term "Biological Pollutants" includes, but is not limited to, molds, fungi, spores, bacteria and viruses, and/or any of their byproducts.

If Bucklin Place, LLC desires these specialized services, they should be obtained from a consultant who offers services in this specialized field.
