Re: New City Cleaners SVE Pilot Test Results

This memorandum presents the results of the Soil Vapor Extraction (SVE) Pilot Test implemented at the New City Cleaners Site (Site) in Richland, Washington (Figure 1). The purpose of this pilot test was to determine if a full-scale SVE system would be a beneficial addition to the draft Cleanup Action Plan (dCAP; Aspect, 2020). SVE pilot testing activities at the Site were conducted under Agreed Order No. DE6558 (Agreed Order) between the Washington State Department of Ecology (Ecology) and HLH, Inc. Ecology concluded an SVE pilot test must be completed prior to finalizing the Cleanup Action Plan¹ (CAP) and required submittal of an SVE Pilot Test Work Plan (Work Plan). This memorandum summarizes the implementation and results of the Ecology-approved Work Plan².

The Work Plan identified four objectives for SVE pilot testing:

- 1) **Evaluate mass removal.** Mass removed and removal rates will be estimated to determine if SVE technology is an effective treatment. Mass removed and removal rates will be calculated using SVE effluent air sample analytical data and field screening values paired with SVE flow rates.

¹ Washington State Department of Ecology (Ecology), 2020, Letter to Aspect Consulting Re: Ecology Comments on the Draft Remedial Investigation and Feasibility Study, Request for a Draft Cleanup Action Plan, April 2020.

²Aspect Consulting, LLC (Aspect), 2020, SVE Pilot Test Work Plan, New City Cleaners Site, Richland, Washington, June 4, 2020.

- 2) **Evaluate change in soil vapor concentrations.** Sub-slab soil vapor samples will be collected before SVE (baseline) and at the termination of the pilot test.
- 3) **Evaluate change in soil concentrations.** Comparing soil COC concentrations in baseline and post-SVE soil samples will support the evaluation of mass removal and the effectiveness at treating soil.
- 4) **SVE Design Parameters.** Demonstrating the presence of meaningful air flow, vacuum, and radius of influence in the subsurface is fundamental to evaluating SVE technology effectiveness. Operational data will be collected on vapor extraction flow rates at various levels of induced vacuum.

The SVE Pilot Test was implemented from July 29, 2020 to September 29, 2020 and the results were evaluated based on the objectives outlined above. The soil sampling conducted before and after SVE pilot testing determined there are no exceedances of proposed cleanup levels, and therefore no current basis for implementing SVE at the Site to address soil contamination under the building. Furthermore, mass removal by the SVE system was minimal. Therefore, the pilot test concludes SVE should not be included in the Cleanup Action Plan.

Basis of Pilot Test Design

The basis of pilot test design is exceedances of proposed cleanup levels of Site contaminants of concern (COCs) in vadose zone soils beneath the building, as shown in Figure 2, established by the Remedial Investigation Feasibility Study (RIFS) Report³. Soil compliance requires protection of soil to groundwater and soil to indoor air exposure pathways. The Site COCs in soil are: Tetrachloroethylene (PCE), trichloroethylene (TCE), cis-1,2-dichloroethylene (cis-DCE), vinyl chloride (VC), and diesel-range petroleum hydrocarbons. The subset of Site COCs that apply to groundwater are PCE, TCE, cis-DCE, and VC, and the subset of soil COCs that exceed screening levels in soil gas are PCE, TCE, and VC. Indoor air concentrations are below proposed cleanup levels³. Pilot testing evaluated all COCs, but PCE was used as the primary COC for conclusions.

System Installation

On August 27, 2020, a licensed driller installed two SVE wells (SVE-01 and SVE-02) inside the New City Cleaners (NCC) building, as shown on Figure 2; see boring logs in Attachment A. A limited-access hollow-stem auger rig was used to install the wells to 11 feet below ground surface (bgs). No soil samples were collected during SVE well installation. Soil cuttings indicated gravel with cobble fill extended to 3 feet bgs and was underlain by silt with sand to the bottom of the boring; this result is consistent with the **Fill Soil** and **Upper Silt Units** geologic units discussed in the Work Plan.

Two permanent sub-slab monitoring points (VP-08 and VP-09; Figure 2) were installed inside the NCC building on August 27, 2020, to supplement the existing soil vapor points VP-06 and VP-07 for pilot test monitoring.

The SVE pilot test system was installed on August 28, 2020 and started up on August 29, 2020. The installed blower was an AirTech A-197s, 3.42-horsepower blower rated for 80 cubic feet per

³Aspect Consulting, LLC (Aspect), 2019, Remedial Investigation / Feasibility Study report, HLH/New City Cleaners, Richland, Washington, December 20, 2019.

minute at 73 inches of water under suction. We selected this blower based on vendor availability; as such, it is larger than the Work Plan's 1.0-horsepower recommendation. Due to the blower size, the system was operated using the dilution valve to target operational vacuums. Extracted vapor passed through a 1-gallon moisture knockout tank with particulate filter to remove entrained water and then discharged to the atmosphere. An As-Built Piping and Instrument Diagram (P&ID) is shown on Figure 3.

Step Test

Step Testing occurred on August 29 to 30, 2020, at blower vacuum steps of 10, 20, 30, 40, and 60 inches of water on both SVE wells simultaneously to determine the optimal operational vacuum for the pilot test. Step test readings were collected on 15-minute intervals until stabilization was achieved (stabilization requires three consecutive readings within a range of +/- 15 percent). The results of step testing are included as Table 1. Based on the flow and vacuum observations during the step test, 60 inches of water was selected as the operational vacuum for pilot testing to maximize mass removal potential.

Operational data was collected during the step test and through weekly operation and maintenance (O&M) visits. The total airflow was relatively low, measuring 34 standard cubic feet per minute (SCFM) at a blower vacuum of 60 inches of water. Also, the threshold for significant vacuum influence (0.10 inches of water at a monitoring point) was not attained even at the closest sub-slab monitoring point, 5 feet from an SVE well. The step test data is presented in Figure 4

System Operation and Maintenance

The following system operations data was collected during weekly O&M visits to evaluate pilot test objectives:

- Vacuum at SVE-01 and SVE-02 laterals with a gauge and at each of the soil gas monitoring points (VP-06 through VP-09) with a micromanometer
- Extraction flow rate with a flowmeter upstream of the dilution valve
- Velocity with an anemometer from each SVE lateral and in the combined lateral (upstream of the blower)
- Pressure and temperature in the blower effluent

Operational monitoring also included analytical sampling of the extracted vapors and field screening of volatile organic compounds (VOCs) to calculate mass removal rate. The extracted air at the SVE wellheads and combined effluent were field screened during weekly Site visits with a photoionization detector (PID) and PCE-specific Gastec tubes. Extracted vapor analytical samples were collected at each SVE lateral at the beginning, middle, and end of the pilot test (for a total of 6 samples) and analyzed for chlorinated volatile organic compounds (CVOCs) via Environmental Protection Agency (EPA) method TO-15.

Condensate collection in the moisture knockout tank was monitored during weekly visits. No condensate accumulated over the 8-week pilot test. Weekly O&M Visit Data can be found in Attachment B, and analytical data from the SVE well laterals are shown in Table 2. SVE-01 results indicate a reduction in concentration of COCs in soil gas throughout the Pilot Test, therefore the

utility of SVE-01 long-term is unlikely. SVE-02 results indicate this well continues to pull contaminant mass during both the startup and termination of the pilot test, possibly due to proximity to the water table, as discussed below.

SVE Pilot Test Results

Pilot Test Emissions

Analytical data from the SVE well laterals was collected to ensure compliance with monitoring and discharge requirements of the Benton County Clean Air Agency and Controls for New Sources of Toxic Air Pollutants regulations (Chapter 173-460 WAC). Analytical results were paired with operation run time and weekly recorded flow rates to calculate emissions, as shown in Table 3. Throughout the 8-week pilot test, approximately 0.3 pounds of PCE was removed from the subsurface by the SVE system. As there was no pretreatment or condensate collection, it is assumed that this 0.3 pounds of PCE was discharged to the atmosphere; this is less than the de minimis value of 1.3 pounds per year to initiate the need for registration with the Benton County Clean Air Agency.

Sub-Slab Soil Vapor Concentrations

Baseline sub-slab soil vapor samples were collected on July 27, 2020, from monitoring points VP-06 through VP-09 and analyzed for soil gas COCs by EPA Method TO-15. Baseline analytical results from all four vapor monitoring points exceed PCE and TCE sub-slab soil gas screening levels (Table 4).

Performance monitoring sub-slab soil vapor samples were collected on September 29, 2020, from monitoring points (VP-06 through VP-09) and analyzed for soil gas COCs by EPA method TO-15. These samples were collected roughly 30 hours after the SVE system was shut down and at the end of the pilot test. Analytical results were less than the PCE and TCE sub-slab soil gas screening levels at all vapor monitoring points (Table 4). These soil gas analytical results for baseline and performance monitoring are also shown in Figure 6.

These results indicate the low vacuum observed beneath the slab was sufficient to induce pore volume exchange at these sub-slab monitoring points and significantly reduce soil gas concentrations.

Soil Concentrations

Soil samples were collected from underneath the building to establish pre- and post-SVE Pilot Test soil concentrations. Four direct-push borings were advanced at a 50-degree angle to approximately 12 feet bgs (17 to 18 feet of borehole length) utilizing continuous soil sampling⁴. Soil was field-screened by vapor headspace using a PID. One sample from each boring with elevated PID readings was selected for laboratory analysis of soil COCs by EPA method 8260.

Baseline soil sampling occurred on July 28, 2020, before the SVE system was installed. There were no elevated PID responses during field screening, and samples were collected from the vadose zone and close to the water table. No COCs were detected above their respective proposed cleanup levels during baseline soil sampling and only trichloroethylene (TCE) and cis-1,2-dichloroethylene

⁴ Soil sample depths in the Tables and Figures are based on depth below ground surface. The length along the angled borehole is used in the sample naming convention in the boring logs and laboratory analytical reports, in Appendices A and C, respectively.

(cDCE) were detected. Soil boring logs with field screening results can be found in Attachment A, and baseline soil analytical results are shown in Table 5 and Figure 5.

Performance monitoring soil sampling occurred on October 5, 2020, one week after the SVE Pilot Test system was shut down. The borings were completed to replicate the baseline borings and were offset approximately 3 feet from the baseline locations. PID responses were identified from the deepest soil samples for borings AB-03B and AB-04B during field screening. One sample was collected from each boring with elevated PID readings, or close to the water table in absence of PID response. Samples were submitted for laboratory analysis of soil COCs by EPA method 8260 and diesel-range petroleum hydrocarbons by method NWTPH-Dx.

Performance monitoring analytical results indicate no COCs were detected above their proposed cleanup levels beneath the building and only cDCE was detected. Soil boring logs with field screening results can be found in Attachment A, and performance soil analytical results in Table 5 and Figure 5.

Conclusions

Aspect implemented the SVE Pilot Test from July 29, 2020 through September 28, 2020 and in accordance with the Ecology-approved Work Plan. The purpose of this pilot test was to determine if a full-scale SVE system would be a beneficial addition to the dCAP (Aspect, 2020). This was evaluated via mass removal calculations, change in soil vapor concentrations, and change in soil concentrations.

Mass Removal

The SVE mass removal in the **Upper Silt Unit** was limited, even under a relatively high applied vacuum (60 inches of water). As a result, the estimated mass removal over the 8-week pilot test was only 0.3 pounds of PCE.

Change in Soil Vapor Concentrations

Significant decreases in sub-slab soil vapor concentrations at all four locations indicate the SVE system was effective at inducing pore volume exchanges in the space immediately beneath the slab. However, soil vapor intrusion to indoor air is not a complete pathway at the Site³.

Change in Soil Concentrations

All eight soil sample results are less than proposed cleanup levels. These results are updated soil conditions relative to the 2000 and 2009 investigation results that were used as the basis of the PCE soil exceedances in the RIFS³ and the basis of pilot testing. Therefore, either the 2000 and 2009 investigations are not representative of current conditions, or the soil borings did not intersect locations of residual soil contamination. The limited mass removal is consistent with the lack of exceedances in soil.

Further, PID responses were elevated near the water table for all occurrences⁵, indicating the PID responses are likely associated with contaminated groundwater. The SVE pilot testing results demonstrate SVE technology applied to the **Upper Silt Unit** results in minimal mass removal. Further, the recent soil sampling results did not exceed proposed cleanup levels and provide no

⁵ PID response will be considered >1 ppm.

basis for implementing SVE at the Site to address soil contamination under the building. Therefore, based on the results of SVE pilot testing, a full-scale SVE system should not be added to the CAP.

Limitations

Work for this project was performed for the HLH, Inc. c/o Beveridge & Diamond P.C. and Landye Bennett Blumstein, LLP (Client), and this memorandum was prepared in accordance with generally accepted professional practices for the nature and conditions of work completed in the same or similar localities, at the time the work was performed. This memorandum does not represent a legal opinion. No other warranty, expressed or implied, is made.

All reports prepared by Aspect Consulting for the Client apply only to the services described in the Agreement(s) with the Client. Notes:

1) Depth corresponds to sample depth below ground surface, not distance along the angled boring as sample names in the boring logs and laboratory reports.

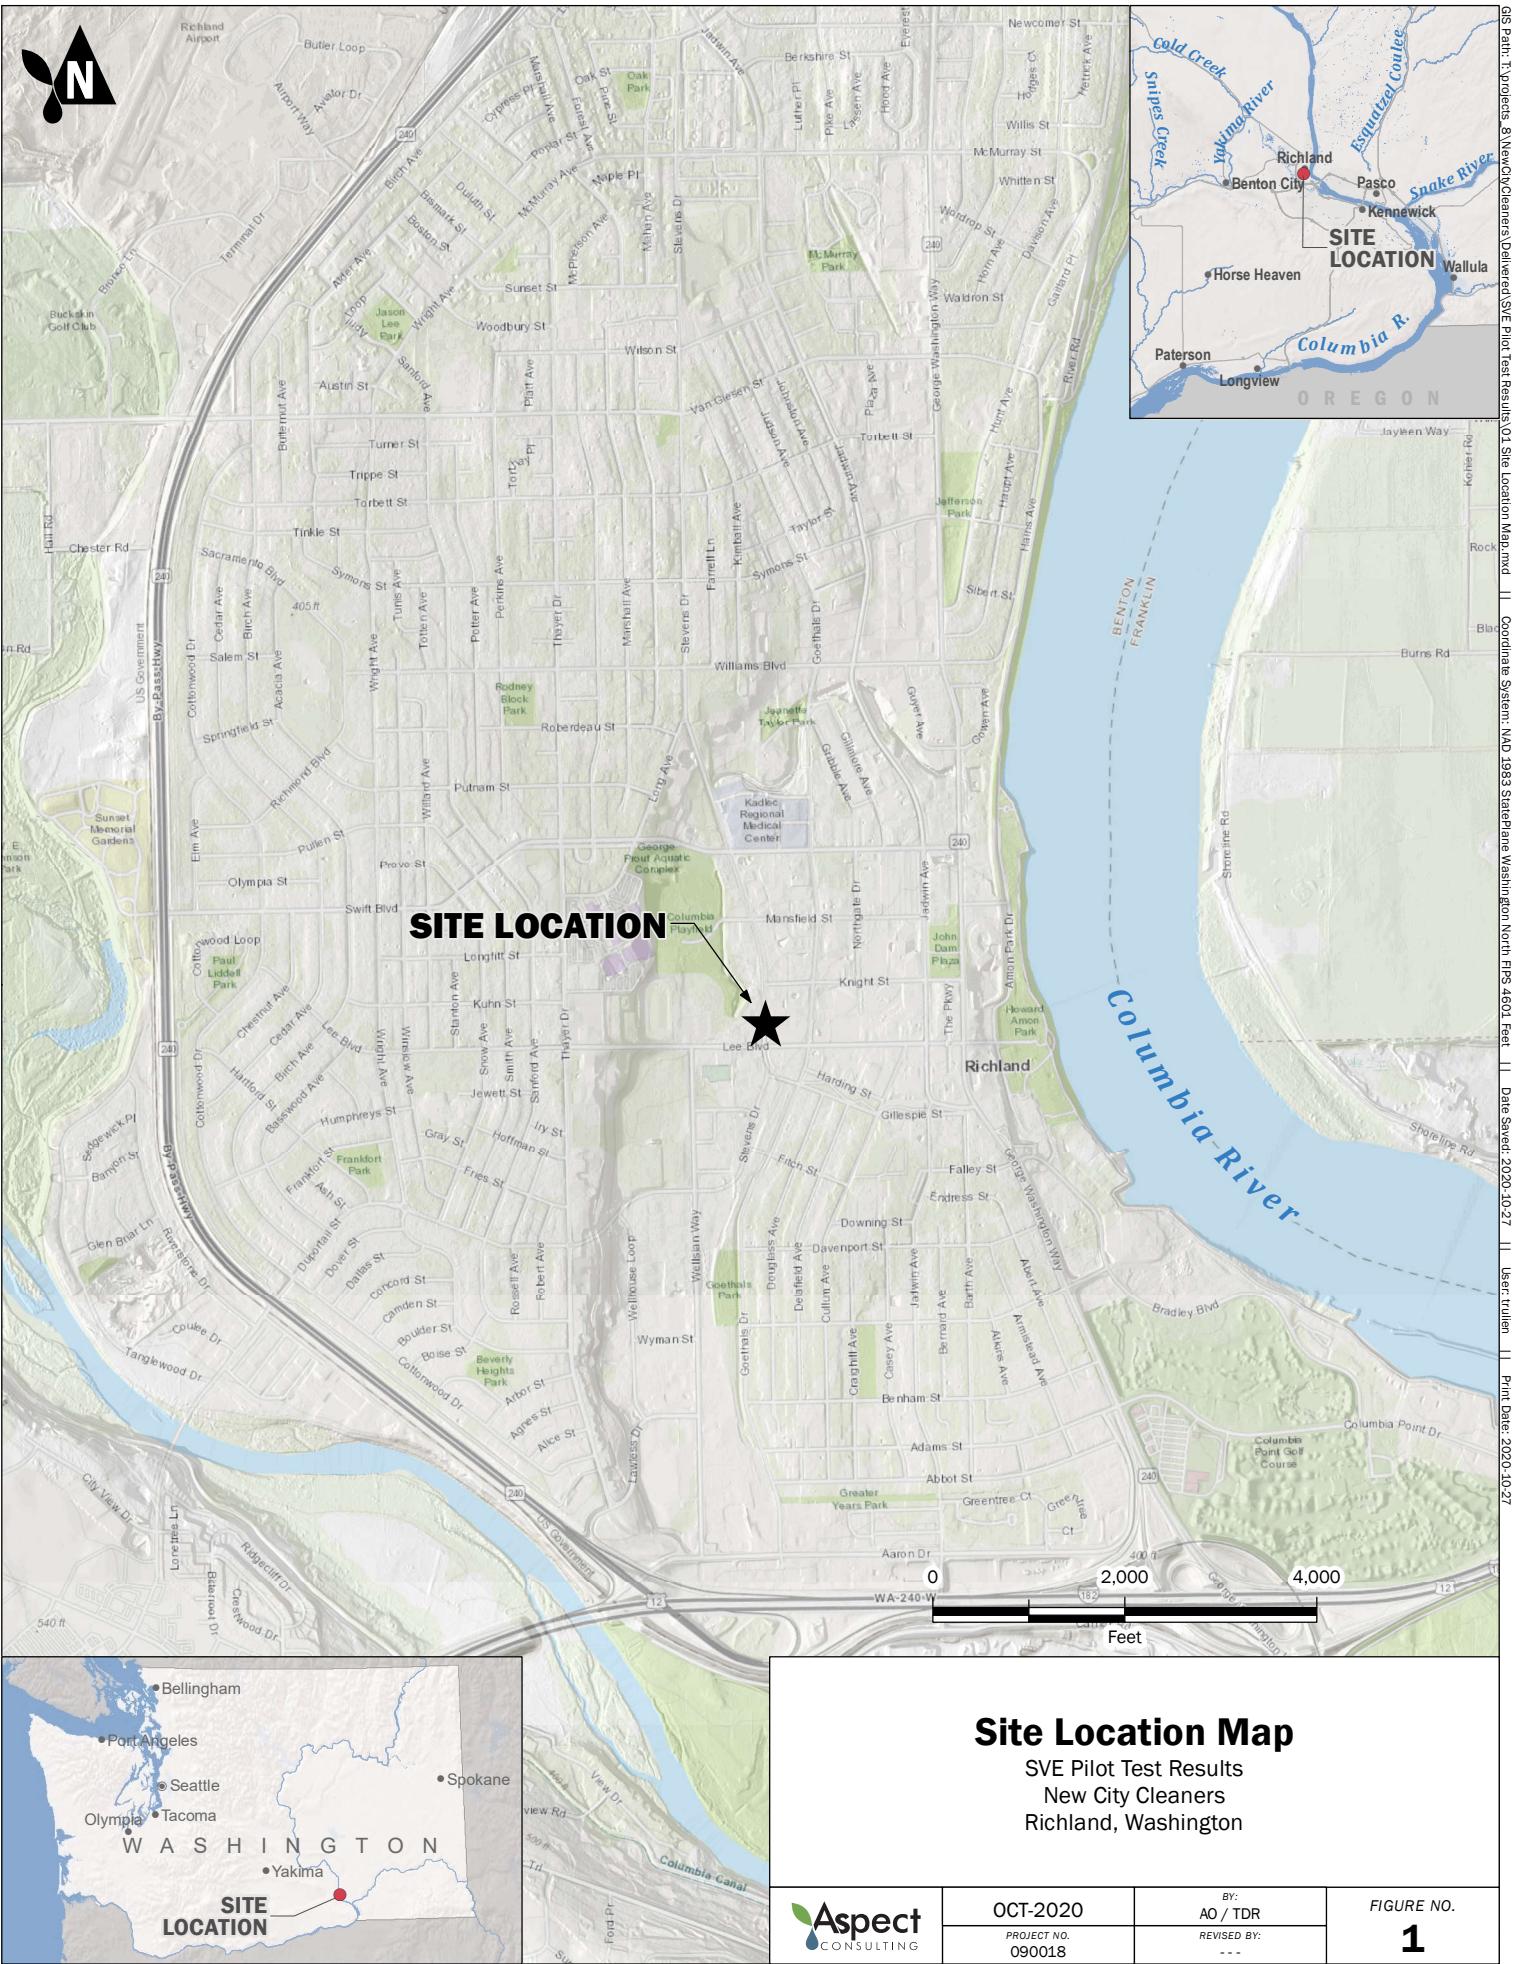

Bold - detected

U - Analyte not detected at or above Reporting Limit (RL) shown

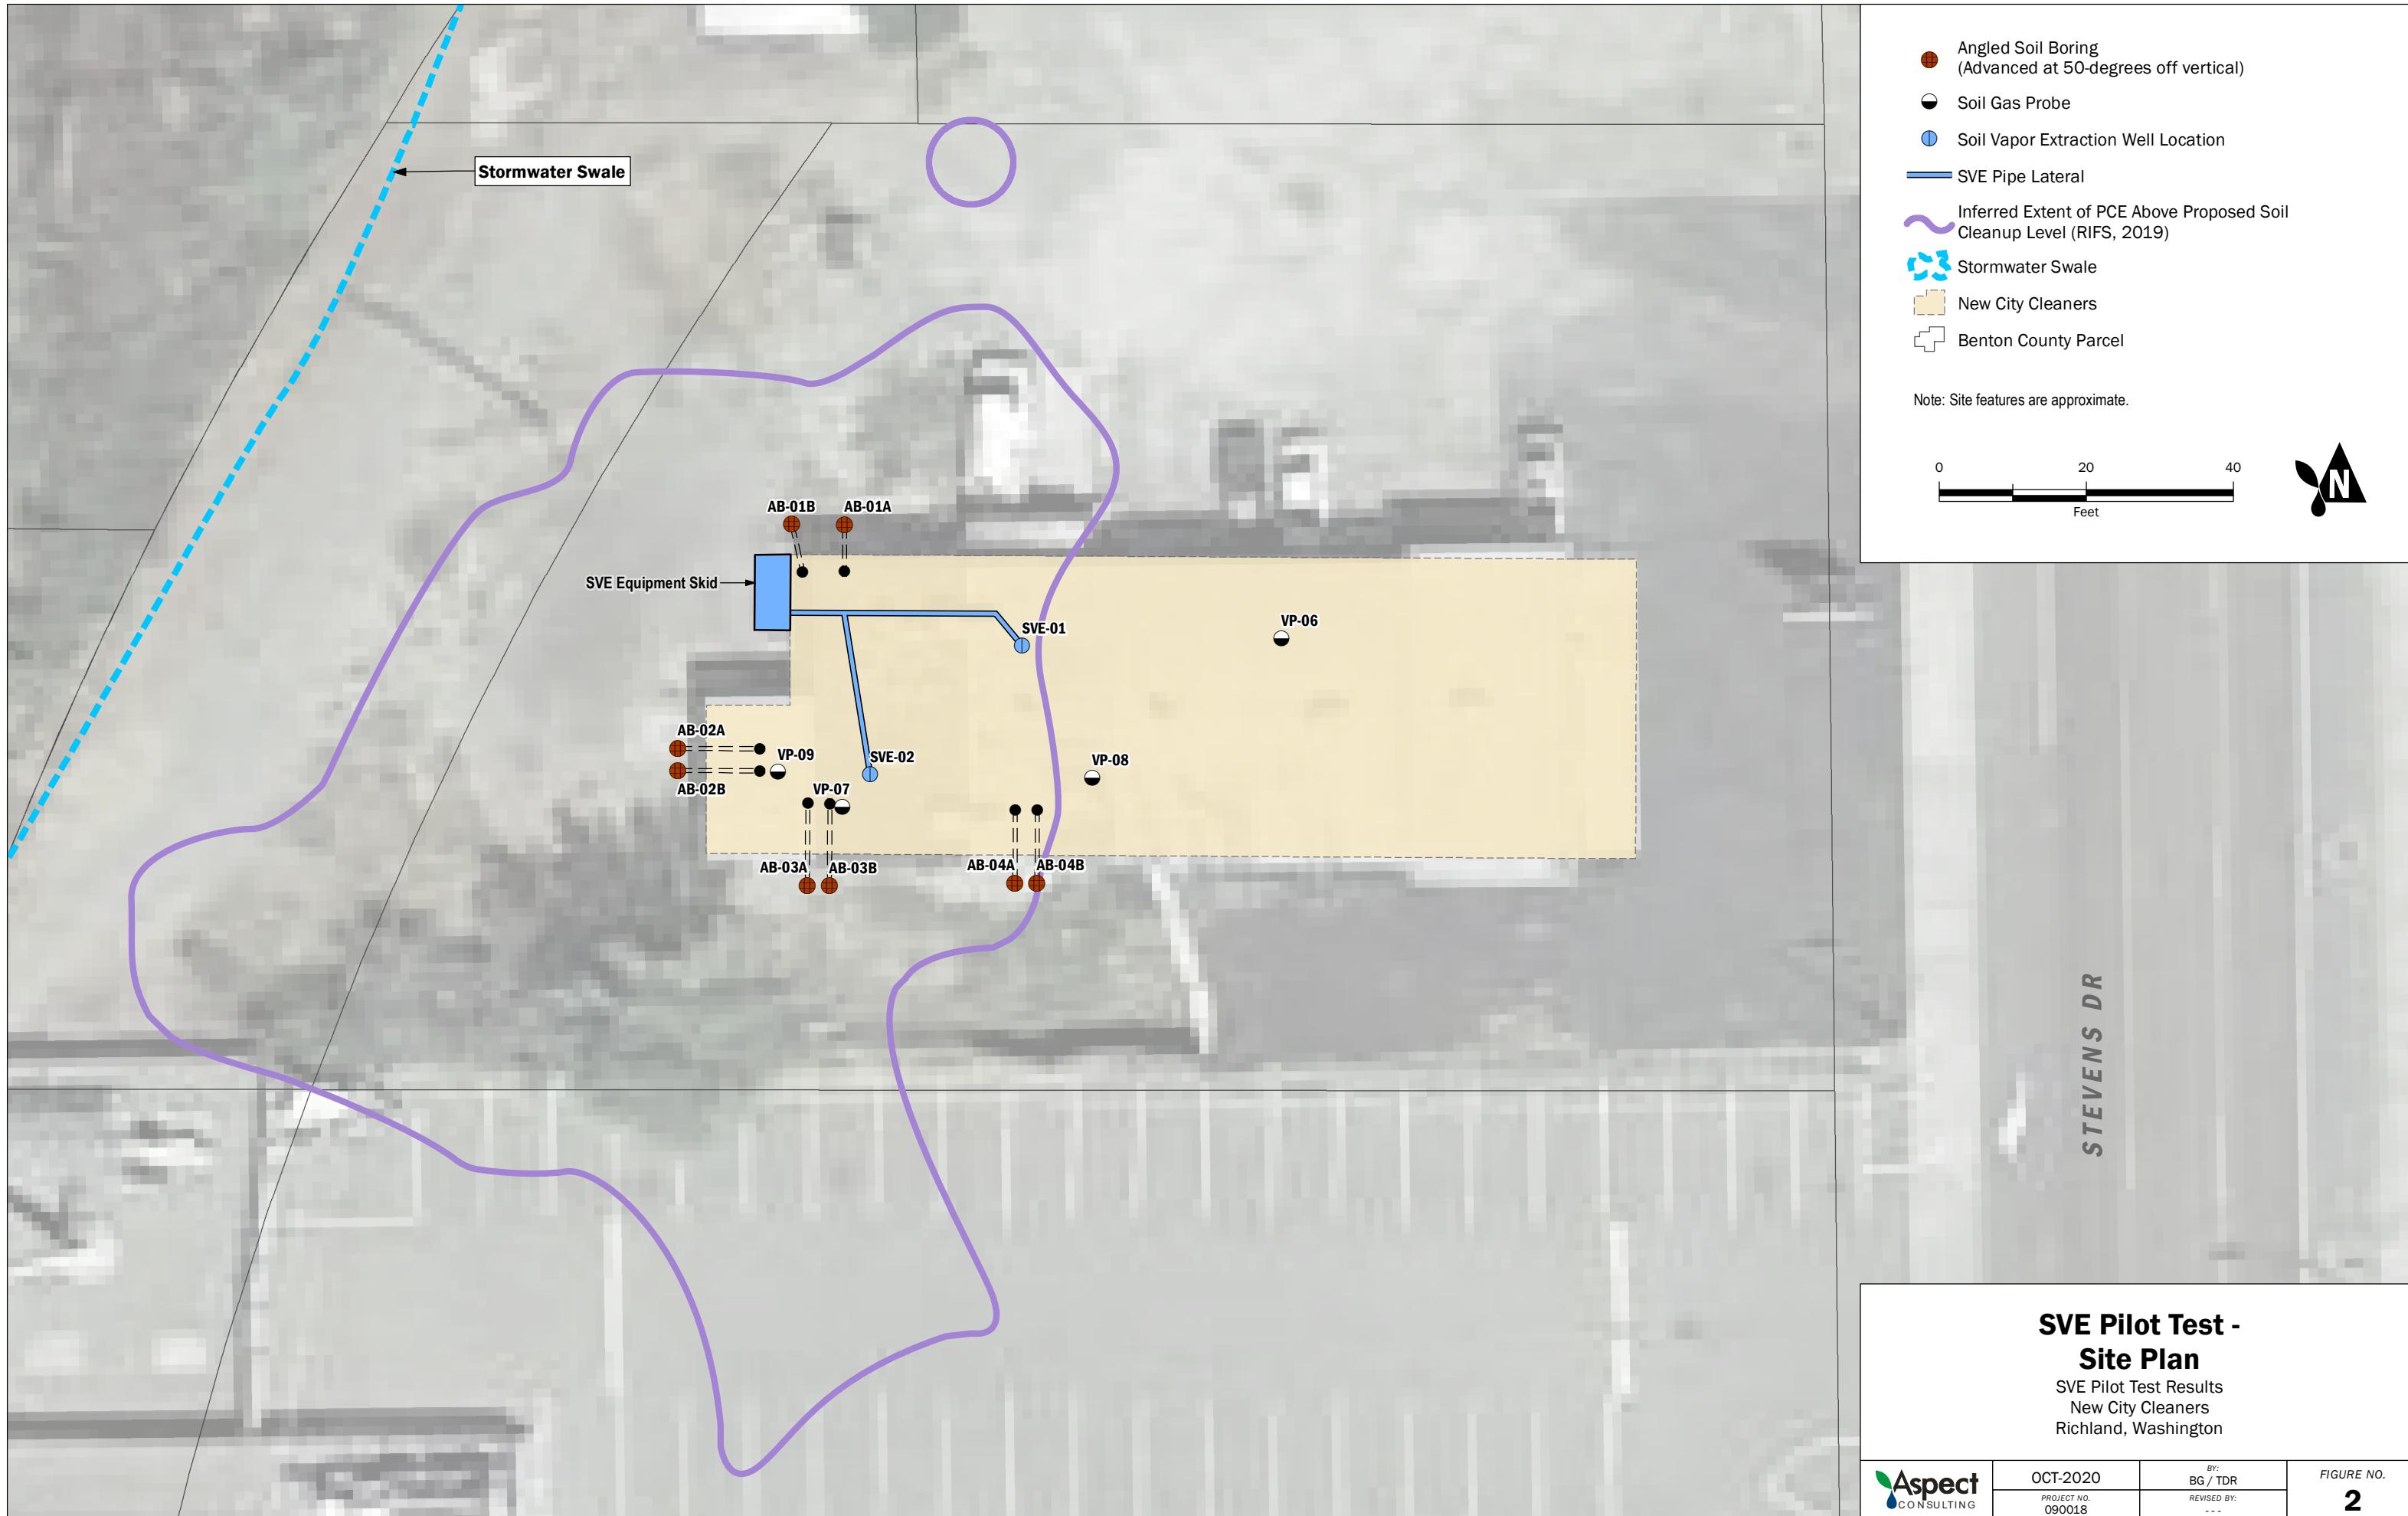

J - Result value estimated

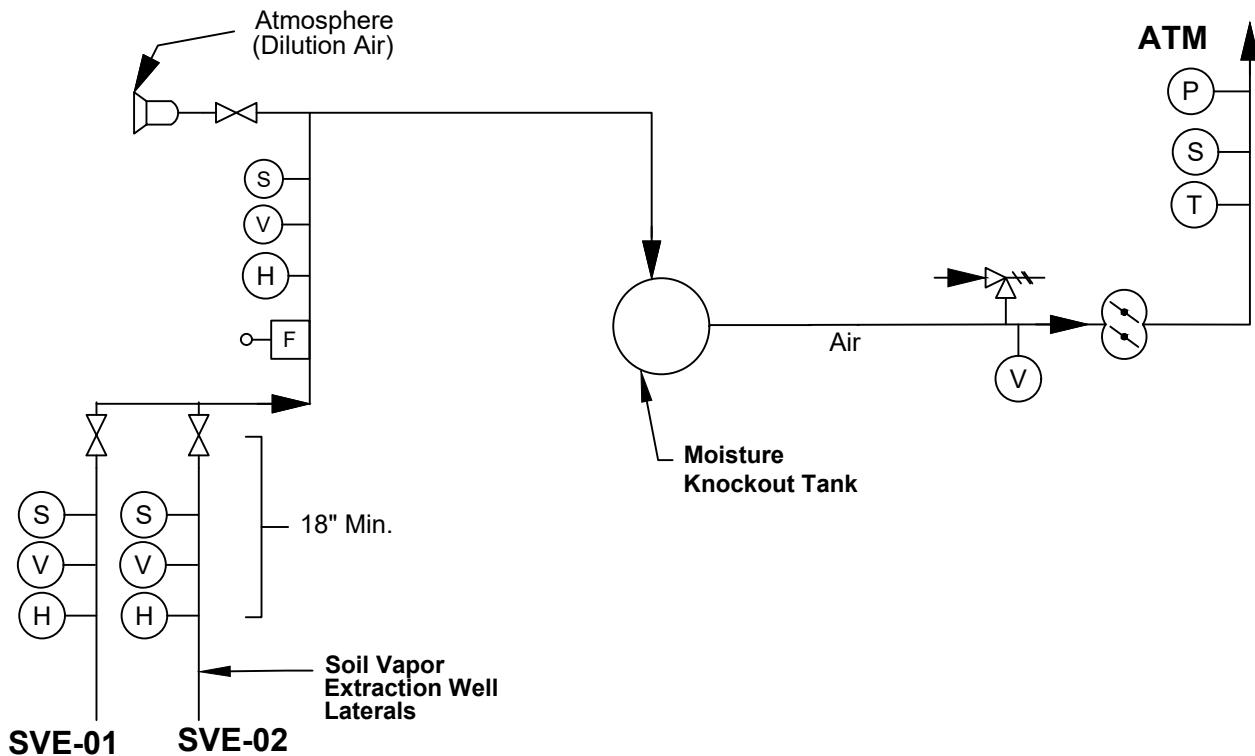

UJ - Analyte not detected and the Reporting Limit (RL) is an estimate

Symbol	Component	Specifications
(S)	Sample Port	Hose Barb with Ball Valve
(T)	Thermometer	0-200° F
(V)	Vacuum Gauge	0-60" Water
(P)	Pressure Gauge	0-60" Water
(H)	Hole with Threaded Plug	1/4" Threaded Brass Plug Tap-and-Die
(o) F	Flowmeter or Rotameter	Extraction Air 25-125 scfm (Combined)
→ ←	Vacuum Relief Valve to Match Blower	
↔	Gate Valve	
⚡	Regenerative Blower	125 scfm @ 20" Water Vacuum Rotron EN404 or equiv.
→	Inlet Silencer / Filter	
—	Piping	2" PVC from wells, UV Resistant

Equipment Notes

1. Blower motor shall have thermal overload protection.
2. Discharge stack shall be a minimum 2" diameter and discharge above adjacent roof-line. Effluent gas temperature not to exceed piping temperature limit.
3. Knockout tank shall have internal 100-micron particulate filter and provide max. 6 inches of water column pressure drop at 120 scfm.
4. The blower shall be single phase and compatible with 120V power supply.

Piping Notes

1. Soil vapor extraction piping shall be 2-inch diameter DR 17 HDPE or schedule 40 PVC.
2. Piping shall be installed in accordance with manufacturer's specifications. Flexible pipe bends shall have a minimum radius six times the pipe diameter. Angled fittings shall be sweep bends.
3. Soil vapor extraction piping shall be installed to slope towards the well at a minimum 1% slope with no sags.
4. Piping shall be protected from physical damage or excessive temperature during asphalt or concrete patching.

Equipment Layout and Enclosure Notes

1. Equipment shall be provided on a skid capable of being positioned by the contractor using a forklift or built on a custom poured concrete slab.
2. Equipment shall be placed in such a manner to provide easy access to all equipment, controls, valves, and gauges.
3. Piping shall be connected to the vapor extraction manifolds provided by the equipment supplier.
4. Effluent stack shall be provided by the equipment supplier and extend to the building roof and be rain protected.
5. Placement and access to motors and controls shall be in accordance with applicable codes.

Key

HDPE = High Density Polyethylene
 PVC = Polyvinyl Chloride

090018

BY
BMG/CMV

REVISED BY:
-

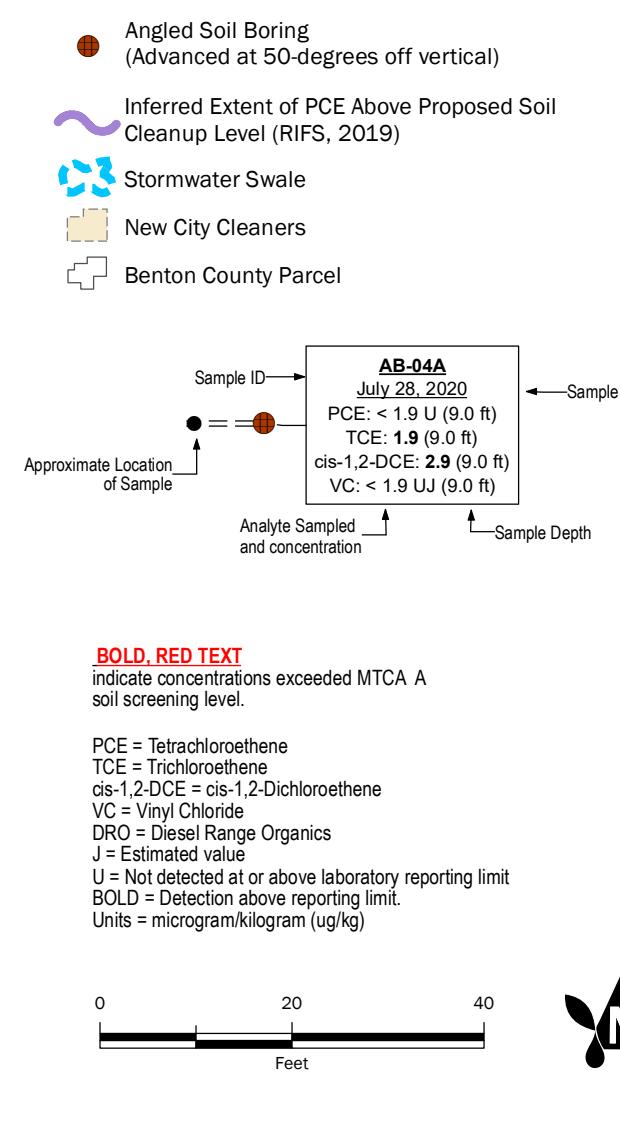

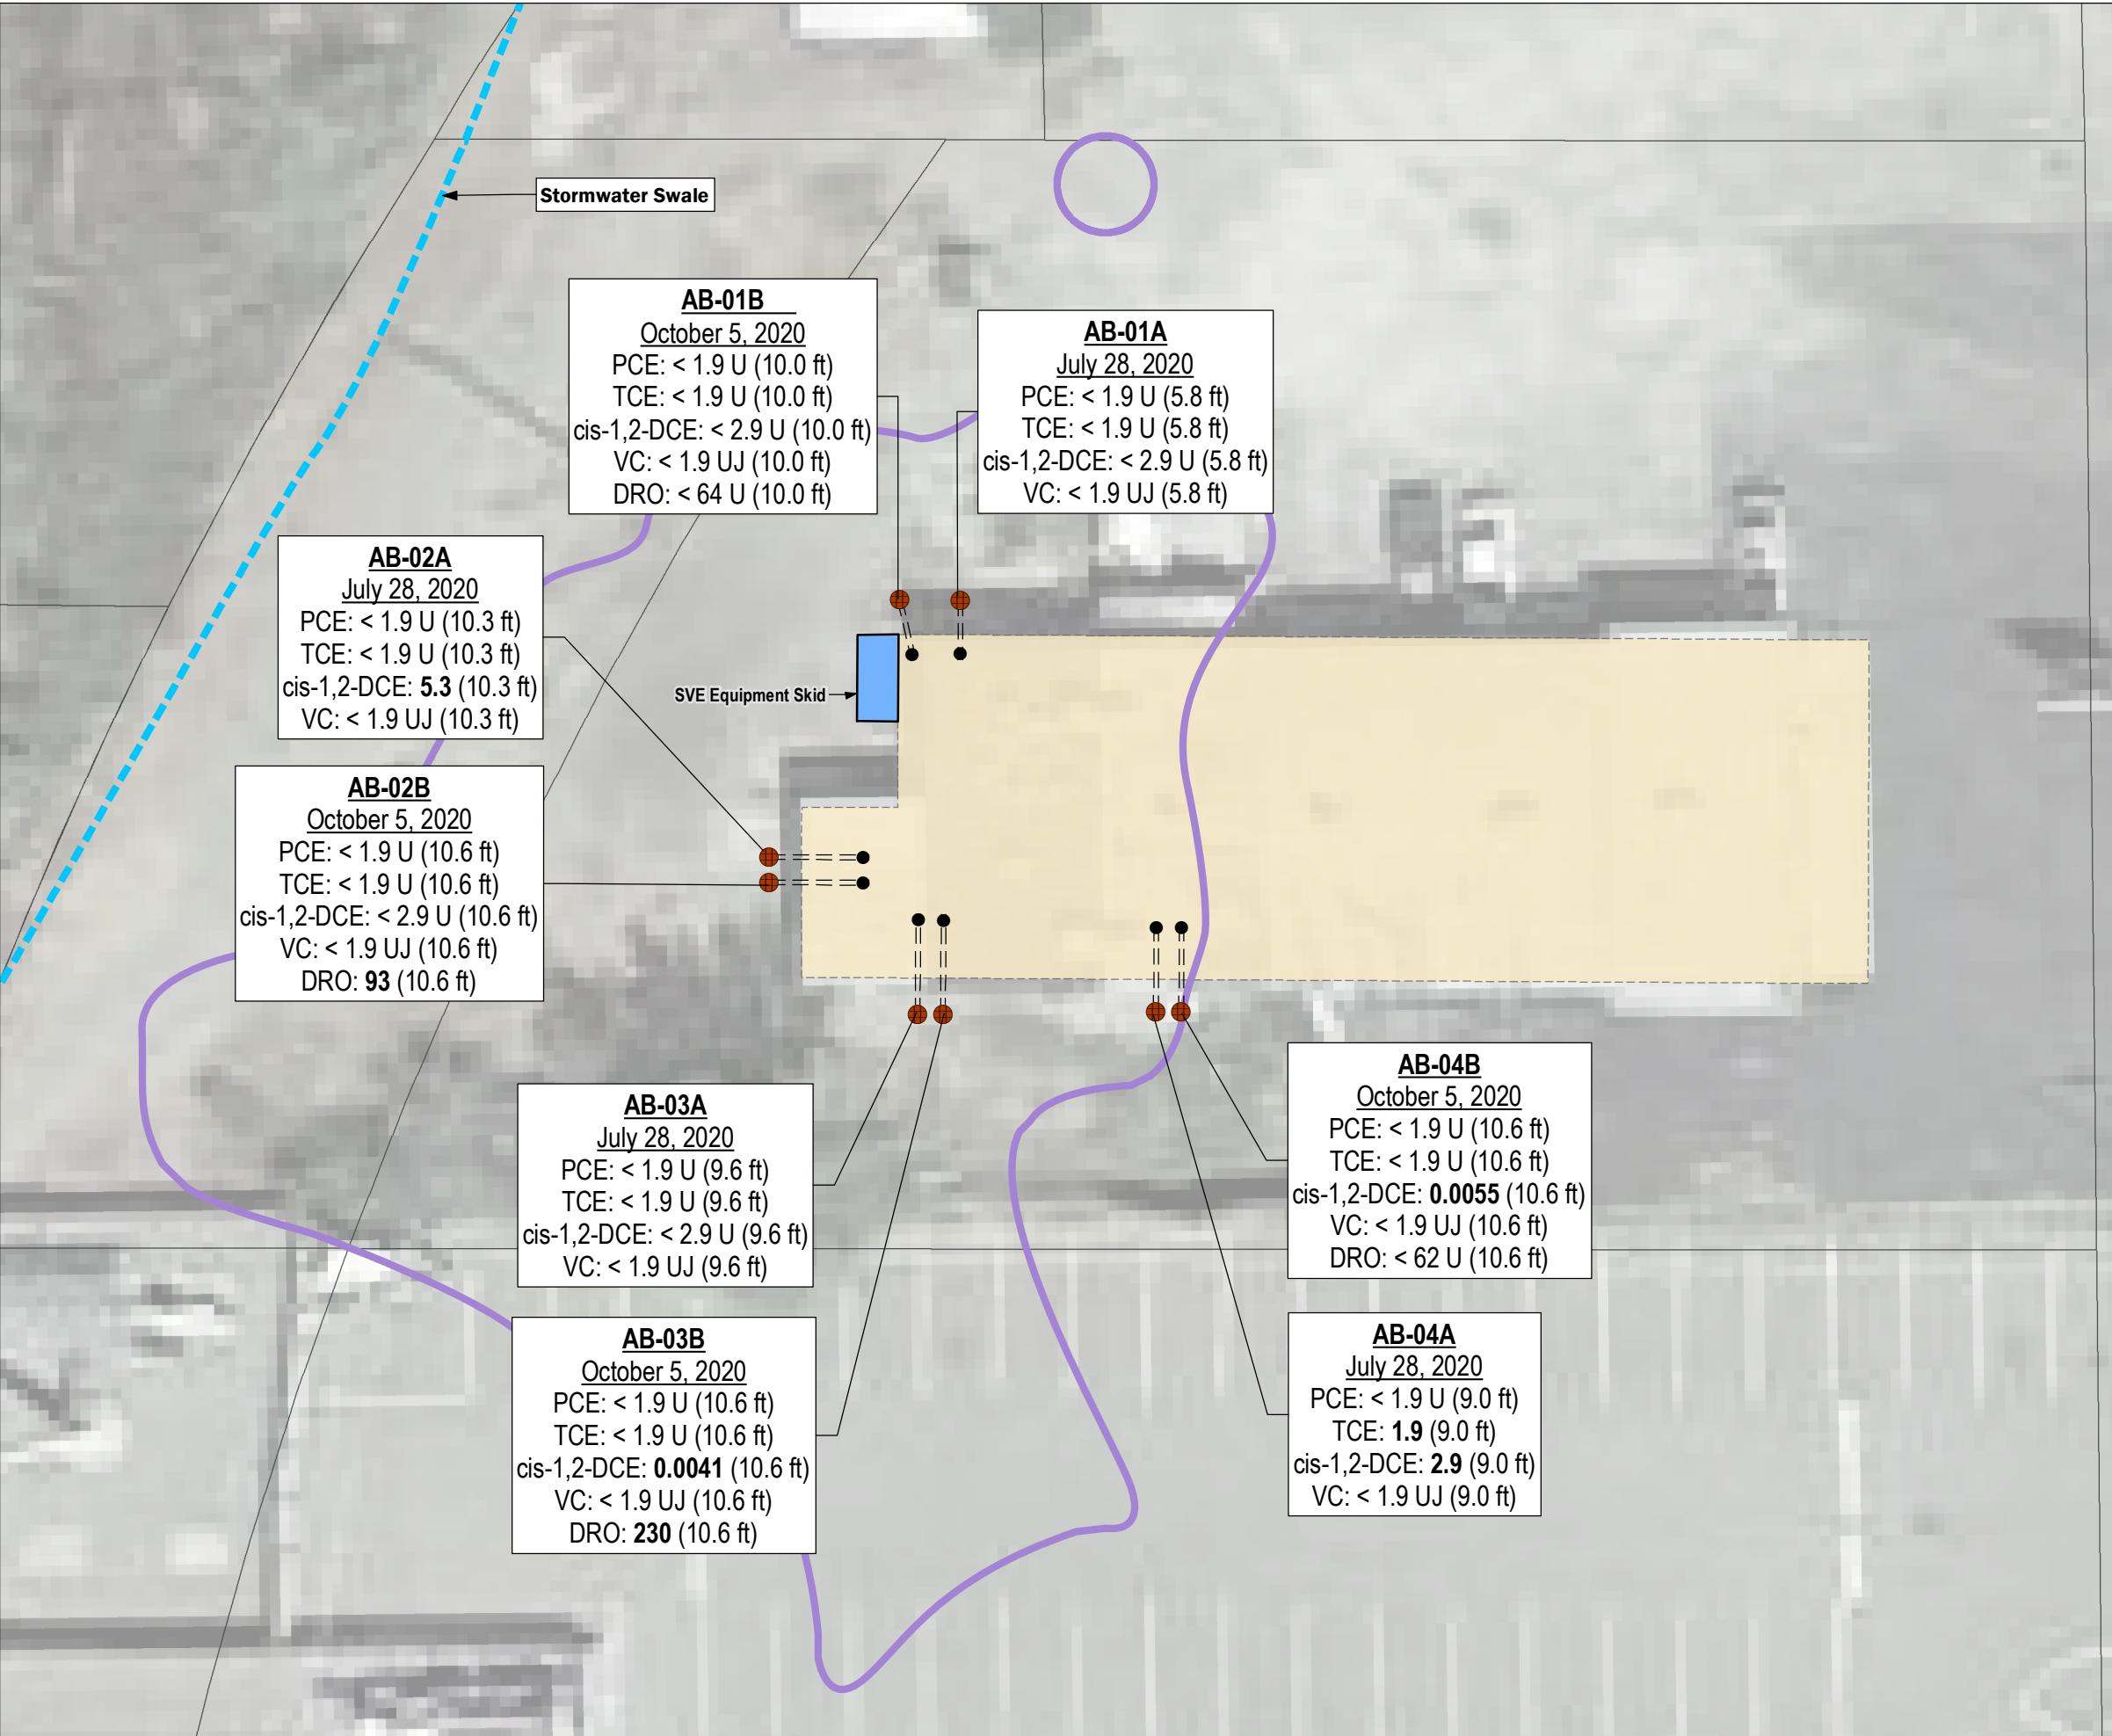

FIGURE NO.
3

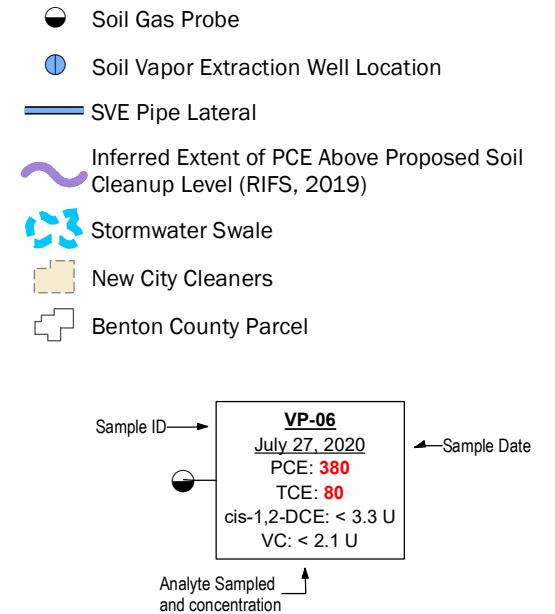

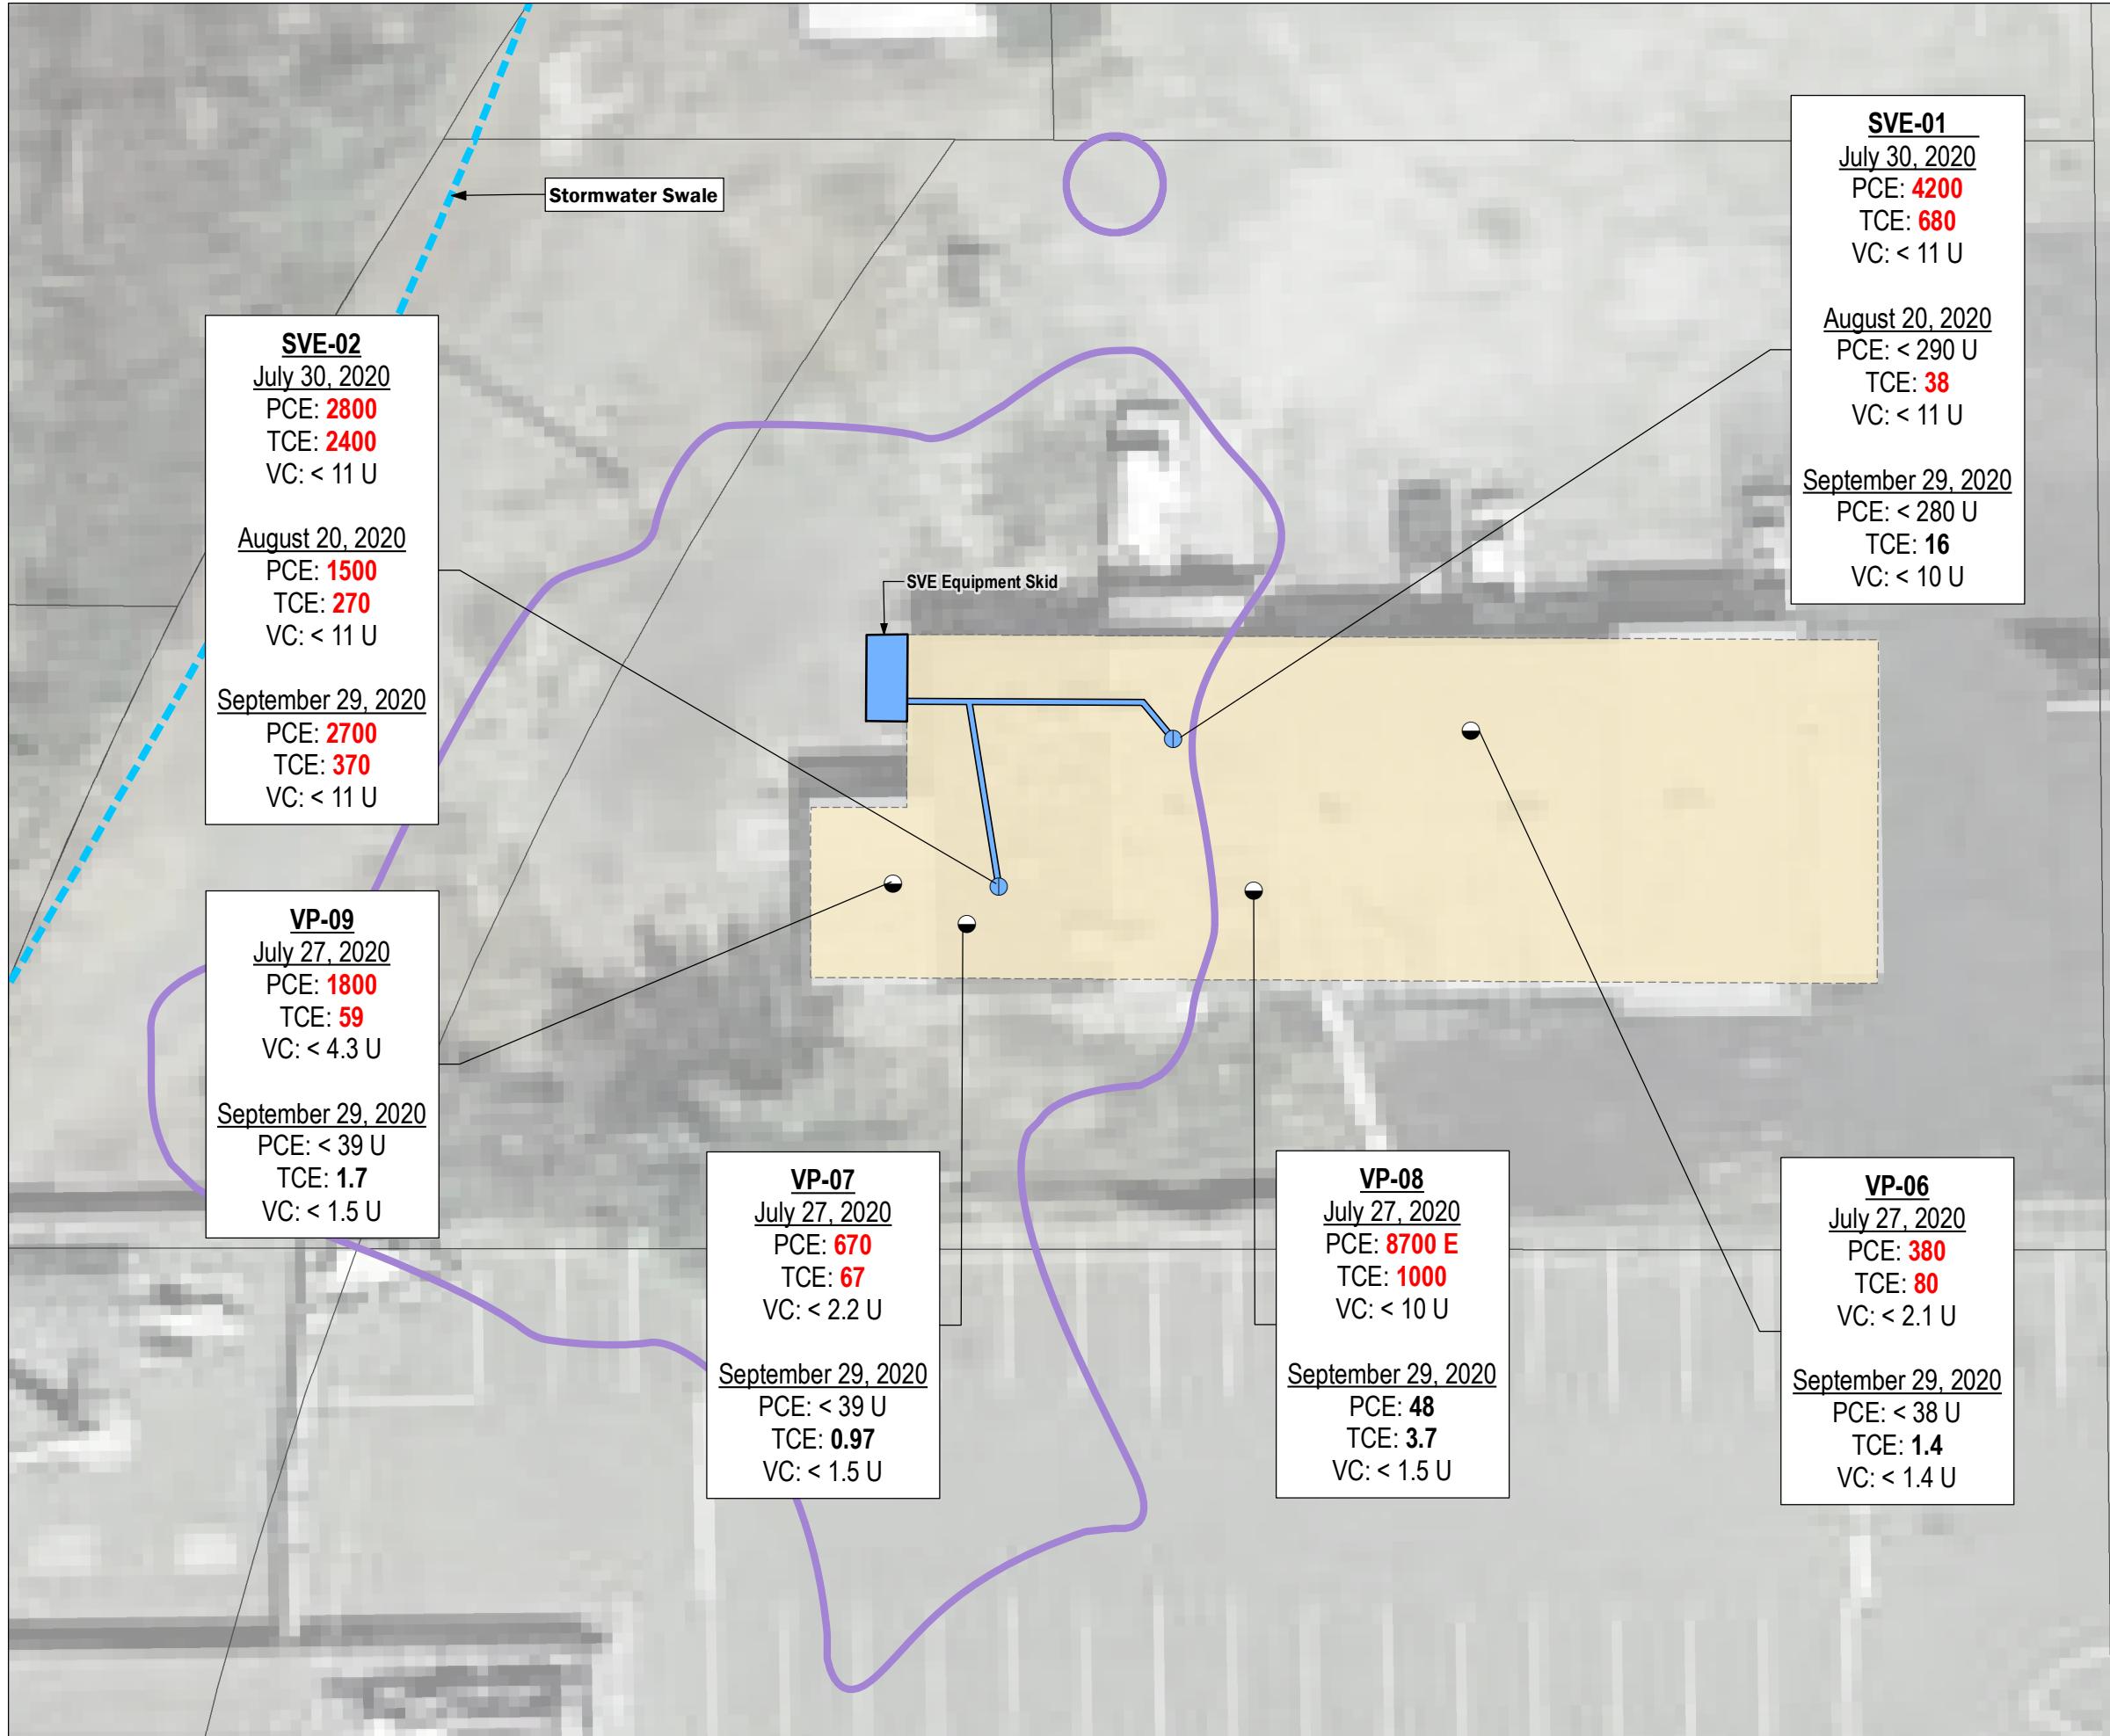

**Notes:**

- 1) Measurements taken while both SVE-01 and SVE-02 were in use; vacuum influence includes both wells.
- 2) Flow calculated by multiplying measured velocity (feet per minute) by pipe cross sectional area (square feet).

Key Inches of water = " H₂O

CFM = Cubic Feet Per Minute

BOLD, RED TEXT
indicate concentrations exceeded MTCA Sub-Slab soil gas screening level for VP Probes and exceeded MTCA Sub-Slab Deep screening level for SVE Wells.

PCE = Tetrachloroethene
TCE = Trichloroethene
VC = Vinyl Chloride
J = Estimated value
U = Not detected at or above laboratory reporting limit
E = Result exceeded calibration range
BOLD = Detection above reporting limit.
Units = microgram/cubic meter ($\mu\text{g}/\text{m}^3$)

TPH-G	= Gasoline-Range Petroleum Hydrocarbons
VOCs	= Volatile Organic Compounds
SVOCs	= Semi-Volatile Organic Compounds
PAHs	= Polycyclic Aromatic Hydrocarbon Compounds
PCBs	= Polychlorinated Biphenyls
Metals	
RCRA8	= As, Ba, Cd, Cr, Pb, Hg, Se, Ag, (d = dissolved, t = total)
MTCAs5	= As, Cd, Cr, Hg, Pb (d = dissolved, t = total)
PP-13	= Ag, As, Be, Cd, Cr, Cu, Hg, Ni, Pb, Sb, Se, Ti, Zn (d=dissolved, t=totals)
FIELD TESTS	
PID	= Photoionization Detector
Sheen	= Oil Sheen Test
SPT ²	= Standard Penetration Test
NSPT	= Non-Standard Penetration Test
DCPT	= Dynamic Cone Penetration Test

Descriptive Term	Size Range and Sieve Number	COMPONENT DEFINITIONS
Boulders	= Larger than 12 inches	
Cobbles	= 3 inches to 12 inches	
Coarse Gravel	= 3 inches to 3/4 inches	
Fine Gravel	= 3/4 inches to No. 4 (4.75 mm)	
Coarse Sand	= No. 4 (4.75 mm) to No. 10 (2.00 mm)	
Medium Sand	= No. 10 (2.00 mm) to No. 40 (0.425 mm)	
Fine Sand	= No. 40 (0.425 mm) to No. 200 (0.075 mm)	
Silt and Clay	= Smaller than No. 200 (0.075 mm)	

% by Weight	Modifier	% by Weight	Modifier	ESTIMATED ¹ PERCENTAGE
<1	= Subtract	15 to 25	= Little	
1 to <5	= Trace	30 to 45	= Some	
5 to 10	= Few	>50	= Mostly	

Dry	= Absence of moisture, dusty, dry to the touch	MOISTURE CONTENT
Slightly Moist	= Perceptible moisture	
Moist	= Damp but no visible water	
Very Moist	= Water visible but not free draining	
Wet	= Visible free water, usually from below water table	

Non-Cohesive or Coarse-Grained Soils			RELATIVE DENSITY
Density ³	SPT ² Blows/Foot	Penetration with 1/2" Diameter Rod	
Very Loose	= 0 to 4	≥ 2'	
Loose	= 5 to 10	1' to 2'	
Medium Dense	= 11 to 30	3" to 1"	
Dense	= 31 to 50	1" to 3"	
Very Dense	= > 50	< 1"	

Cohesive or Fine-Grained Soils			CONSISTENCY
Consistency ³	SPT ² Blows/Foot	Manual Test	
Very Soft	= 0 to 1	Penetrated >1" easily by thumb. Extrudes between thumb & fingers.	
Soft	= 2 to 4	Penetrated 1/4" to 1" easily by thumb. Easily molded.	
Medium Stiff	= 5 to 8	Penetrated >1/4" with effort by thumb. Molded with strong pressure.	
Stiff	= 9 to 15	Indented ~1/4" with effort by thumb.	
Very Stiff	= 16 to 30	Indented easily by thumbnail.	
Hard	= > 30	Indented with difficulty by thumbnail.	

GEOREGIC CONTACTS	Observed and Distinct	Observed and Gradual	Inferred
Exploration Log Key			

"WITH SILT" or "WITH CLAY" means 5 to 15% silt and clay, denoted by a "—" in the group name; e.g., SP-SM • "SILTY" or "CLAYEY" means >15% silt and clay • "WITH SAND" or "WITH GRAVEL" means 15 to 30% sand and gravel. • "SANDY" or "GRAVELLY" means >30% sand and gravel. • "Well-graded" means approximately equal amounts of fine to coarse grain sizes • "Poorly graded" means unequal amounts of grain sizes • Group names separated by "/" means soil contains layers of the two soil types; e.g., SM/ML.

Soils were described and identified in the field in general accordance with the methods described in ASTM D2488. Where indicated in the log, soils were classified using ASTM D2487 or other laboratory tests as appropriate. Refer to the report accompanying these exploration logs for details.

- Estimated or measured percentage by dry weight
- (SPT) Standard Penetration Test (ASTM D1586)
- Determined by SPT, DCPT (ASTM STP399) or other field methods. See report text for details.

PID Calibration

Ambient (0) = 0.0

Cal (100) = 97.4 ppm

EJJ discussed with BMG via text the need to temporarily turn down the system to collect PID readings on the SVE laterals. BMG OK'd process
PID would flow fault with system at 60", reduce to ~10" for PID readings.

Equipment Notes:

* For GasTec to get 100ml but the arrow on the pulley in alignment with the white arrow on the plunger.
Keep tubes in the fridge; can be used up to 4 times if non-Detect

* For PID, Check calibration with the Cal Gas provided but no need to re-cal unless greater than 5% off.
Call me if you need to calibrate. Don't seal PID to gas container due to pump.

* Anemometer was working pretty well at high flow rates, give it a couple minutes to narrow down on the value.

* Re-zero digital micromanometer if more than a few decimal points off.

Only use digital micromanometer on VPs.

Time of Arrival: _____ 730

Check in at Front (Y)

System Running (Y)

Condensate Collected: _____ 0 _____ % of collection pot

Visual Equipment Inspection Notes:

System Vac @ -61" H₂O, reduced to -60" before measurements collected.

	Vacuum	Velocity	GasTec	PID	Temp.	Pressure
Well	(in Water)	(fpm)	(ppm)	(ppm)	(F)	(psi)

Breeyn Greer, Project Manager
Aspect Consulting, LLC
710 2nd Ave S, Suite 550
Seattle, WA 98104

Dear Ms Greer:

Included are the results from the testing of material submitted on July 31, 2020 from the New City Cleaners PO 090018, F&BI 007544 project. There are 10 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 31, 2020 by Friedman & Bruya, Inc. from the Aspect Consulting, LLC New City Cleaners PO 090018, F&BI 007544 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Aspect Consulting, LLC</u>
007544 -01	VP-06-072720
007544 -02	VP-07-072720
007544 -03	VP-08-072720
007544 -04	VP-09-072720
007544 -05	SVE-01-073020
007544 -06	SVE-02-073020

The TO-15 tetrachloroethene concentration in sample VP-08-072720 exceeded the calibration range of the instrument. The data were flagged accordingly.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE
Client: Aspect Consulting
Project: New City Cleaners
Report Number: 580-96357-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 07/29/2020; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples AB-01A-9.0 (580-96357-1), AB-02A-16.0 (580-96357-2), AB-03A-15.0 (580-96357-3), AB-04A-14.0 (580-96357-4) and Trip-Blank-01 (580-96357-5) were analyzed for volatile organic compounds (GC-MS) in accordance with 8260D. The samples were prepared on 07/29/2020 and analyzed on 08/07/2020.

The laboratory control sample (LCS) for preparation batch 580-335059 and 580-335059 and analytical batch 580-335064 recovered outside control limits for the following analytes: 1,2-Dibromo-3-Chloropropane and Naphthalene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The CCVIS for preparation batch 580-335059 and analytical batch 580-335064 recovered outside control limits for the following analyte(s): Bromomethane, Chloroethane and Chloromethane. Bromomethane, Chloromethane and Chloroethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

The continuing calibration verification (CCV) associated with batch 580-335064 recovered outside acceptance criteria, low biased, for Vinyl chloride. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

The method blank for preparation batch 580-335059 and 580-335059 and analytical batch 580-335064 contained Hexachlorobutadiene, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene and Naphthalene above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-extraction and/or re-analysis of samples was not performed.

The following samples were provided to the laboratory with a significantly different initial weight than that required by the reference method: AB-01A-9.0 (580-96357-1), AB-02A-16.0 (580-96357-2) and AB-04A-14.0 (580-96357-4). Deviations in the weight by more than 20% may affect reporting limits and potentially method performance. The method specifies 5g. The amount provided was above this range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples AB-01A-9.0 (580-96357-1), AB-02A-16.0 (580-96357-2), AB-03A-15.0 (580-96357-3) and AB-04A-14.0 (580-96357-4) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 07/30/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-96357-1

Client Sample ID: AB-01A-9.0

Lab Sample ID: 580-96357-1

No Detections.

Accreditation/Certification Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-96357-1

Laboratory: Eurofins TestAmerica, Seattle

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C553	02-18-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids

Method Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-96357-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	TAL SEA
2540G	SM 2540G	SM22	TAL SEA
5035	Closed System Purge and Trap	SW846	TAL SEA

Protocol References:

SM22 = Standard Methods For The Examination Of Water And Wastewater, 22nd Edition

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Lot No.: A0158872

Description : 8260 List 1 / Std #4 2-CEVE (2015)

8260 List 1 / Std #4 2-CEVE (2015) 2,500 μ g/mL, P&T Methanol,
1mL/ampul

Container Size : 2 mL

Pkg Amt: > 1 mL

Expiration Date : March 31, 2023

Storage: 0°C or colder

C E R T I F I E D V A L U E S

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)		
1	2-Chloroethyl vinyl ether	2,500.5 μ g/mL	+/-	14.5381 μ g/mL	Gravimetric
	CAS # 110-75-8		+/-	53.5360 μ g/mL	Unstressed
	Purity 99%		+/-	55.0924 μ g/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Degradation of tetrachloroethylene to pentachloroethane may occur if solutions containing 2-chloroethyl vinyl ether are combined with solutions that contain tetrachloroethylene.

Column:

105m x 0.53mm x 3.0 μ m
Rtx-502.2 (cat.#10910)

Carrier Gas:

hydrogen-constant pressure 11.0 psi.

Temp. Program:

40°C (hold 2 min.) to 240°C
@ 8°C/min. (hold 5 min.)

Inj. Temp:

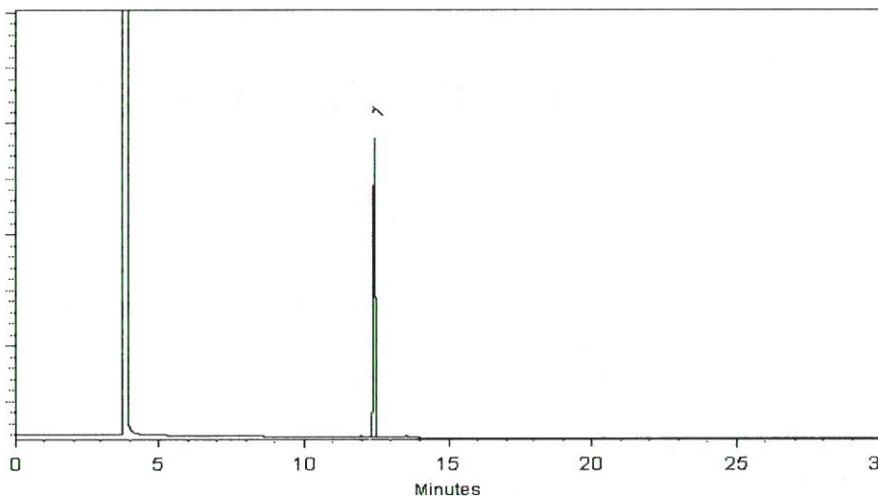

200°C

Det. Temp:

250°C

Det. Type:

FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Expiration date extended from July 31, 2020 to July 31, 2021.

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Seattle, WA 98104

Dear Ms Greer:

Included are the results from the testing of material submitted on August 21, 2020 from the New City Cleaners 090018, F&BI 008339 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

TestAmerica Seattle is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Definitions/Glossary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-98033-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate recovery exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE
Client: Aspect Consulting
Project: New City Cleaners
Report Number: 580-98033-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/06/2020; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.4 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples AB-01B-15.5 (580-98033-1), AB-02B-16.5 (580-98033-2), AB-03B-16.5 (580-98033-3), AB-04B-16.5 (580-98033-4) and Trip-Blank-02 (580-98033-5) were analyzed for volatile organic compounds (GC-MS) in accordance with 8260D. The samples were prepared on 10/06/2020 and analyzed on 10/07/2020 and 10/14/2020.

Surrogate recovery for the following sample was outside control limits: AB-03B-16.5 (580-98033-3). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

The laboratory control sample duplicate (LCSD) for preparation batch 580-340245 and analytical batch 580-340383 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane and 1,3-Dichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 580-340383 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, 1,2,4-Trichlorobenzene, 1,2,4-Trimethylbenzene, 1,2-Dibromo-3-Chloropropane, 1,2-Dichlorobenzene, 1,3,5-Trimethylbenzene, 1,3-Dichlorobenzene, 1,3-Dichloropropane, 1,4-Dichlorobenzene, 4-Isopropyltoluene, Chlorobenzene, Chloroethane, Dibromomethane, Ethylbenzene, Ethylene Dibromide, Isopropylbenzene, n-Butylbenzene, N-Propylbenzene, o-Xylene, sec-Butylbenzene, tert-Butylbenzene, and Tetrachloroethene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 580-340383/3).

The continuing calibration verification (CCV) associated with batch 580-340383 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 580-340383 was outside criteria for the following analyte(s): Dichlorodifluoromethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

Baseline noise is present in chromatography for sample Trip-Blank-02 (580-98033-5), affecting surrogate recovery. Only one vial was provided; there is no volume remaining for reanalysis, therefore data is reported.

The following samples were provided to the laboratory with a significantly different initial weight than that required by the reference method: AB-02B-16.5 (580-98033-2), AB-03B-16.5 (580-98033-3) and AB-04B-16.5 (580-98033-4). Deviations in the weight by more than 20% may affect reporting limits and potentially method performance. The method specifies 5g . The amount provided was above this range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL AND EXTENDED RANGE ORGANICS

Samples AB-01B-15.5 (580-98033-1), AB-02B-16.5 (580-98033-2), AB-03B-16.5 (580-98033-3) and AB-04B-16.5 (580-98033-4) were analyzed for diesel and extended range organics in accordance with Method NWTPH-Dx. The samples were prepared on 10/13/2020 and analyzed on 10/14/2020.

Continuing calibration verification (CCV) standard associated with batch 580-340757 recovered outside %Drift acceptance criteria for o-Terphenyl surrogate. The %Recovery is within acceptance criteria for the surrogate in the CCV and associated samples; therefore, the data are qualified and reported.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples AB-01B-15.5 (580-98033-1), AB-02B-16.5 (580-98033-2), AB-03B-16.5 (580-98033-3) and AB-04B-16.5 (580-98033-4) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 10/08/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Accreditation/Certification Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-98033-1

Laboratory: Eurofins TestAmerica, Seattle

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C553	02-18-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
2540G		Solid	Percent Moisture
2540G		Solid	Percent Solids

Method Summary

Client: Aspect Consulting
Project/Site: New City Cleaners

Job ID: 580-98033-1

Method	Method Description	Protocol	Laboratory

ID: #2Diesel_Accu_00014

Exp: 10/12/28 Prod: ZIR

50mg/mL #2 Dx Stock IC St

Date Certified: Oct 12, 2018

Expiration: Oct 12, 2028

Sample Size: 1 mL

Components: 1

Storage Condition: Ambient (>5 °C)

Included on ISO/IEC 17025 Scope of Accreditation: Yes

Included on ISO 17034 Scope of Accreditation: Yes

Component	CAS #	Purity % (GC/FID)	Prepared Concentration ¹ (mg/mL)	Certified Analyte Concentration ² (mg/mL)
#2 Diesel Fuel	68334-30-5	Tech Mix	50.03	50.03

A product with a suffix (-1A, -2B, etc or -01, -02, etc) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

¹ All weights are traceable through NIST, Test No. 684/289871-17

² Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Certified By:

Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. Quality Standards:

ISO 17034 – General Requirements for the Competence of Reference Material Producers ANAB Certificate Number AR-1463

ISO/IEC 17025 – General Requirements for the Competence of Testing And Calibration Laboratories ANAB Certificate Number AT-1339

ISO 9001:2015 – Quality Management System – Requirements
Eagle Registrations Certificate Number 3774

- 2. Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 11.
- 3. Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards and calibrated using an in-house procedure. Good Laboratory Practices have been used throughout the preparation of this CRM.
- 4. Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.
- 5. Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label
- 6. Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.
- 7. Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

CERTIFICATE OF ANALYSIS

Catalog No: RRO-AK-103-RCS-10X

Description: Residuals Composite Mix

Lot: 218071289

Solvent: Dichloromethane

Hazards: Refer to SDS for complete safety information

Signal Word: Warning

Date Certified: Jul 19, 2018

Expiration: Jul 19, 2028

Sample Size: 1 mL

Components: 3

Storage Condition: Ambient (>5 °C)

Certified Reference Material

Component	CAS #	Purity % (GC/FID)	Prepared Concentration ¹ (mg/mL)	Certified Analyte Concentration ² (mg/mL)
SAE 30W Motor Oil	N/A	Tech Mix	16.61	16.61
SAE 40W Motor Oil	N/A	Tech Mix	16.70	16.70
SAE 50W Motor Oil	N/A	Tech Mix	16.70	16.70

A product with a suffix (-1A, -2B, etc or -01, -02, etc) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

¹ All weights are traceable through NIST, Test No. 822-275872-11

² Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is $\pm 2.4\%$. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Certified By:

Larry Decker, Organic QC Manager

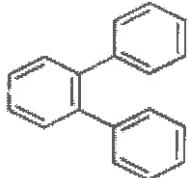

For use in routine laboratory analysis.

Reagent

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Raw material may contain trace amounts of tert-Butanol.

Column:

60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)

Carrier Gas:

helium-constant pressure 30 psi

Temp. Program:

40°C (hold 2 min.) to 240°C
@ 8°C/min. (hold 5 min.)

Inj. Temp:

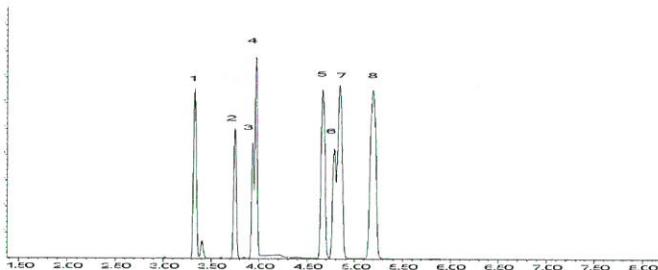

200°C

Det. Temp:

250°C

Det. Type:

MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 571992

Lot No.: A0143774

Description : 8260 List 1 / Std #1 MegaMix (2017)

8260 List 1 / Std #1 MegaMix (2017) 1,250-62,500 μ g/mL, P&T Methanol,
1mL/ampul

Container Size : 2 mL

Pkg Amt: > 1 mL

Expiration Date : June 30, 2021

Storage: 0°C or colder

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ μ ECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k \sqrt{U_{gravimetric}^2 + U_{homogeneity}^2 + U_{storage\ stability}^2 + U_{shipping\ stability}^2}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at [| Label Conditions | Standard Conditions | Non-Standard Conditions |
|---------------------------------|---------------------|-------------------------|
| 25°C Nominal \(Room Temperature\) | < 60°C | ≥ 60°C up to 7 days |
| 10°C or colder \(Refrigerate\) | < 40°C | ≥ 40°C up to 7 days |
| 0°C or colder \(Freezer\) | < 25°C | ≥ 25°C up to 7 days |](http://www.restek.com>Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.• Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.</div><div data-bbox=)

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at [### Manufacturing Notes:](http://www.restek.com>Contact-Us.• The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.</div><div data-bbox=)

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Specific Reference Material Notes:

08 April 2020

Expiration date extended from July 31, 2020 to July 31, 2021.

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)

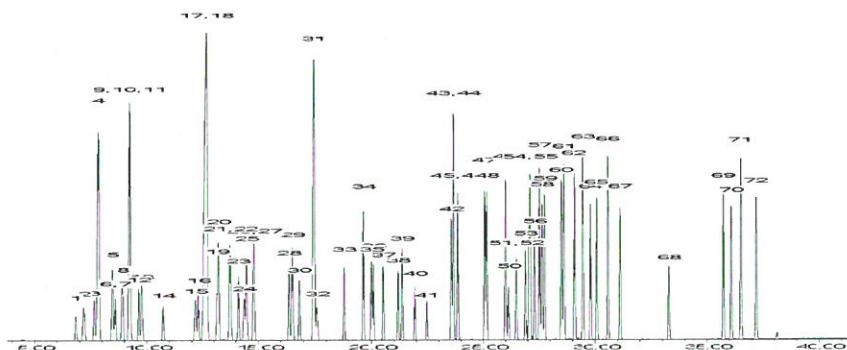

Carrier Gas:
helium-constant pressure 30 psi

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Brandon Reish
Brandon Reish - Mix Technician

Date Mixed: 17-Dec-2018 Balance: 1127510105

Diane Shaffer
Diane Shaffer - Operations Tech-ARM QC

Date Passed: 21-Dec-2018

Manufactured under Restek's ISO 9001:2015
Registered Quality System
Certificate #FM 80397

8260D

Volatile Organic Compounds by GC/MS

List Number: 1

Creator: Blankinship, Tom X

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

ATTACHMENT D

Photo Log

Photograph 1. Installing soil vapor extraction (SVE) well with hollow stem auger technology in the New City Cleaners building. Well is 2-inch PVC in an 8-inch bore hole.

Photograph 2. Rental SVE skid from Presidio Systems, Inc. This is the location of the skid throughout the pilot test, riser pipe discharging above the roof is shown.

Photograph 3. SVE-02 lateral running north from the well. Piping was painted yellow for employee safety.

Photograph 4. SVE-01 pipe lateral running northwest from the well.

Photograph 5. SVE-01 and SVE-02 lateral junction including tee, flow meter, anemometer port, and sample port.

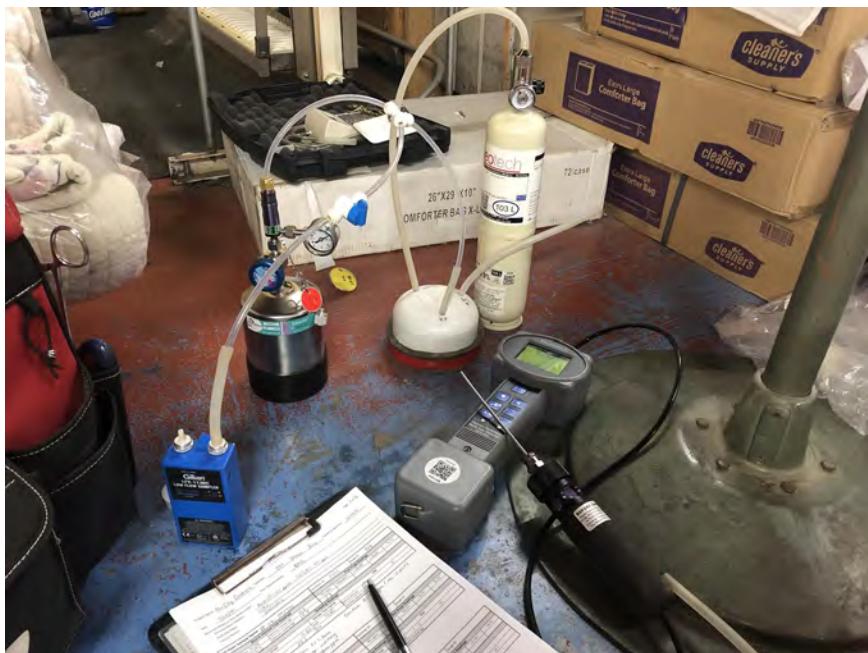

Photograph 6. Detailed view of SVE equipment provided by Presidio Systems, Inc.

Photograph 7. Electrical panel with new 30-amp circuit breaker added for SVE skid. SVE skid was wired into the control panel, and the breaker served as the on/off switch.

Photograph 8. SVE well after decommissioning, top of casing was modified such that the cap could be secured to protect employees from soil vapor intrusion.

Photograph 9. Sub-slab soil vapor sampling train and equipment. This example photo was taken at VP-06.

Report Limitations and Guidelines for Use

REPORT LIMITATIONS AND USE GUIDELINES

Reliance Conditions for Third Parties

This report was prepared for the exclusive use of the Client. No other party may rely on this report or the product of our services without the express written consent of Aspect Consulting, LLC (Aspect). This limitation is to provide our firm with reasonable protection against liability claims by third parties with whom there would otherwise be no contractual conditions or limitations and guidelines governing their use of the report. Within the limitations of scope, schedule and budget, our services have been executed in accordance with our Agreement with the Client and recognized standards of professionals in the same locality and involving similar conditions.

Services for Specific Purposes, Persons and Projects

Aspect has performed the services in general accordance with the scope and limitations of our Agreement. This report has been prepared for the exclusive use of the Client and their authorized third parties, approved in writing by Aspect. This report is not intended for use by others, and the information contained herein is not applicable to other properties.

This report is not, and should not, be construed as a warranty or guarantee regarding the presence or absence of hazardous substances or petroleum products that may affect the subject property. The report is not intended to make any representation concerning title or ownership to the subject property. If real property records were reviewed, they were reviewed for the sole purpose of determining the subject property's historical uses. All findings, conclusions, and recommendations stated in this report are based on the data and information provided to Aspect, current use of the subject property, and observations and conditions that existed on the date and time of the report.

Aspect structures its services to meet the specific needs of our clients. Because each environmental study is unique, each environmental report is unique, prepared solely for the specific client and subject property. This report should not be applied for any purpose or project except the purpose described in the Agreement.

This Report Is Project-Specific

Aspect considered a number of unique, project-specific factors when establishing the Scope of Work for this project and report. You should not rely on this report if it was:

- Not prepared for you
- Not prepared for the specific purpose identified in the Agreement
- Not prepared for the specific real property assessed
- Completed before important changes occurred concerning the subject property, project or governmental regulatory actions

If changes are made to the project or subject property after the date of this report, Aspect should be retained to assess the impact of the changes with respect to the conclusions contained in the report.

Geoscience Interpretations

The geoscience practices (geotechnical engineering, geology, and environmental science) require interpretation of spatial information that can make them less exact than other engineering and natural science disciplines. It is important to recognize this limitation in evaluating the content of the report. If you are unclear how these "Report Limitations and Use Guidelines" apply to your project or site, you should contact Aspect.

Discipline-Specific Reports Are Not Interchangeable

The equipment, techniques and personnel used to perform an environmental study differ significantly from those used to perform a geotechnical or geologic study and vice versa. For that reason, a geotechnical engineering or geologic report does not usually address any environmental findings, conclusions or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. Similarly, environmental reports are not used to address geotechnical or geologic concerns regarding the subject property.

Environmental Regulations Are Not Static

Some hazardous substances or petroleum products may be present near the subject property in quantities or under conditions that may have led, or may lead, to contamination of the subject property, but are not included in current local, state or federal regulatory definitions of hazardous substances or petroleum products or do not otherwise present potential liability. Changes may occur in the standards for appropriate inquiry or regulatory definitions of hazardous substance and petroleum products; therefore, this report has a limited useful life.

Property Conditions Change Over Time

This report is based on conditions that existed at the time the study was performed. The findings and conclusions of this report may be affected by the passage of time (for example, Phase I ESA reports are applicable for 180 days), by events such as a change in property use or occupancy, or by natural events, such as floods, earthquakes, slope failure or groundwater fluctuations. If more than six months have passed since issuance of our report, or if any of the described events may have occurred following the issuance of the report, you should contact Aspect so that we may evaluate whether changed conditions affect the continued reliability or applicability of our conclusions and recommendations.

Phase I ESAs – Uncertainty Remains After Completion

Aspect has performed the services in general accordance with the scope and limitations of our Agreement and the current version of the “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”, ASTM E1527, and U.S. Environmental Protection Agency (EPA)’s Federal Standard 40 CFR Part 312 “Innocent Landowners, Standards for Conducting All Appropriate Inquiries”.

No ESA can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with subject property. Performance of an ESA study is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental conditions affecting the subject property. There is always a potential that areas with contamination that were not identified during this ESA exist at the subject property or in the study area. Further evaluation of such potential would require additional research, subsurface exploration, sampling and/or testing.

Historical Information Provided by Others

Aspect has relied upon information provided by others in our description of historical conditions and in our review of regulatory databases and files. The available data does not provide definitive information with regard to all past uses, operations or incidents affecting the subject property or adjacent properties. Aspect makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others.

Exclusion of Mold, Fungus, Radon, Lead, and HBM

Aspect’s services do not include the investigation, detection, prevention or assessment of the presence of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Accordingly, this report does not include any interpretations, recommendations, findings, or conclusions regarding the detection, assessment, prevention or abatement of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Aspect’s services also do not include the investigation or assessment of hazardous building materials (HBM) such as asbestos, polychlorinated biphenyls (PCBs) in light ballasts, lead based paint, asbestos-containing building materials, urea-formaldehyde insulation in on-site structures or debris or any other HBMs. Aspect’s services do not include an evaluation of radon or lead in drinking water, unless specifically requested.
