Subject: Current 200 yd.³ soil remediation project at Port of
Camas/Washougal

Dear Mr. Scoles:

With reference to your correspondence of April 30, 1990, and regarding the need for Best Available Control Technology (BACT) for soil venting (cross-media pollutant transfers), please be reminded that preconstruction review and permitting is required by the Authority for new and modified air contaminant sources in this area.

The enclosed materials describe the Authority's New Source Review procedures and outline the information required for approval. Please return them as appropriate at the earliest possible date, together with the \$75.00 filing and evaluation fee.

Thank you for your attention in this matter. If you have any questions on the above, feel free to contact us further.

Sincerely,

William Prastka, P.E.
Chief Engineer
