Date: Wednesday, September 18, 2024 8:44:50 AM

Hi Brandon,

The Washington Department of Ecology (Ecology) received a letter from Sandra Bramble, U.S. EPA Section Manger, Emergency Preparedness & Site Assessment Section, dated August 26, 2024. That letter acknowledged that the above-referenced site is a State-led cleanup site, and requested annual updates from Ecology on its progress towards cleanup and the protection of human health and the environment.

Ecology is managing cleanup at the Site as Independent Cleanup under the Model Toxics Control Act (MTCA). The site is enrolled in our expedited Voluntary Cleanup Program (VCP) process as project XN0021. Under Independent Cleanup, Ecology does not drive the cleanup schedule, per se, but provides technical assistance towards achieving a No Further Action (NFA) determination. We understand that excavation and offsite disposal of the contaminated soils at this site are anticipated to occur in the relatively near future.

Site information, including all pertinent documents, are available at the following publicly-available website: <https://apps.ecology.wa.gov/cleanupsearch/site/15285>

If EPA wishes to periodically review the status of the Site, we suggest first visiting the above website and reviewing the documents that are available there. If additional information is needed that is not found on that website, please send me an email or telephone me at the below number.

Thanks, Frank

Frank P. Winslow, LHG
