SUBJECT: Results of Groundwater Monitoring for 2020

Dear Mr. Nollmeyer,

This report presents the results of annual groundwater sampling and chemical analysis. A site plan, field parameter summary, laboratory summaries and laboratory reports with QA/QC data & Chain of Custody are attached to this report.

We collected water samples from the monitoring wells on March 13, 2020. The groundwater levels were slightly lower (approximately 1 foot on average) than the previous year's round of sampling.

Prior to the sampling event, the field equipment was calibrated using standard calibration solutions. The equipment used for measuring field parameters was a YSI ProDSS multi-meter. Field parameters were monitored while purging the wells and recorded upon stabilization.

Although the field meter was calibrated, turbidity and pH measurements were questionable. The results indicated a much higher turbidity level and slightly lower pH levels relative to previously accepted sampling events.

The water samples were placed in appropriate containers provided by the laboratory and transported on ice under Chain of Custody to Anatek Labs in Spokane, Washington. We requested that Anatek Labs analyze the samples for gasoline, diesel and oil range petroleum hydrocarbons, MTBE and BTEX (Benzene, Toluene, Ethyl-benzene and Xylene) as agreed upon by the WSDOE for a more limited monitoring scope. MTBE was not detected in the monitoring wells. A summary of the analysis is provided below:

- MW-1: Gasoline range petroleum concentrations were lower than the previous year. Diesel and heavy oil range petroleum hydrocarbons were not detected. BTEX concentrations remain below clean-up levels.

X09032 S. Wilbur Petroleum Site – Results of Groundwater Monitoring, 2019 - Report

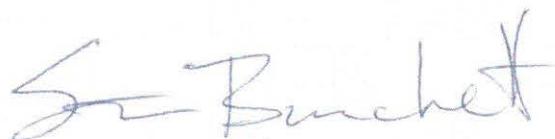

- MW-2: Gasoline range petroleum and BTEX concentrations remain higher than they've been since 2013. Benzene remains above clean up levels; diesel range and heavy oil range petroleum hydrocarbons were not detected.
- MW-3: Gasoline range petroleum concentrations were higher than the previous year. BTEX concentrations were at relatively low levels. Diesel range and heavy oil range petroleum hydrocarbons were not detected.
- MW-4: Gasoline range petroleum concentrations increased by approximately 4000 ppb when compared to the previous sample date. Benzene remains above clean up levels; Xylenes remained below 200 ppb, while diesel range and heavy oil range petroleum hydrocarbons were not detected.
- MW-6: Gasoline range petroleum concentrations decreased by roughly 4000 ppb from the previous sample date. Benzene remains above clean up levels, yet BTEX levels did not show a significant change from the previous year. Diesel range and heavy oil range petroleum hydrocarbons were not detected.
- MW-9: Petroleum constituents were not detected. MW-9 has historically been free of contamination and is used mainly as a background monitoring well.
- MW-10: This monitoring well did not have significant changes since this time last year although, gasoline range petroleum concentrations decreased from 4.41 to 2.64 ppm. BTEX concentrations remain below clean-up levels; diesel range and heavy oil range petroleum hydrocarbons were not detected.

The results of sampling from March 2020 will soon be submitted into the Washington Department of Ecology's EIM system. If you have any questions regarding this report, please feel free to contact us.

GROUNDWATER SAMPLING DATA SHEET

Well Number	MW-9	Sample Number	I
Well Depth	12.90 feet	Project/Task	X09032 - Wilbur Petroleum Site
Water Depth	5.51'	Date	3/13/20
Feet of Water	7.39'	Measuring Point (MP)	top of PVC case
Gallons per Foot	0.16		
Well Volume	1.18 gal		
Purge Method	Peristaltic Pump		
Weather	Cloudy, cool		
Sampler (s)	T. Stephens		
	Well Diameter	2"	Gallons per casing foot
	4"		0.16
	6"		
	8"		

Field Parameters

Measured with YSI meter, model PRO DSS
