RE: L-Bar Site Compliance Monitoring Program—2020 Year-End Groundwater Monitoring Data Submittal

Dear Mr. Gruenenfelder:

On behalf of Alcoa, Great West Engineering has prepared this revised letter and associated attachments to summarize the groundwater monitoring results collected in 2020 as part of the *Compliance Monitoring Program* (CMP) at the L-Bar site. This year-end data package has been updated to address Ecology comments received March 5, 2020, and based on the teleconference call held on March 31, 2021 with representatives from Ecology, Alcoa, and Great West Engineering.

The following attachments summarize the groundwater monitoring data collected in 2020:

Attachment A	Site Map and CMP Monitoring Network
Attachment B	Groundwater Elevation Hydrograph
Attachment C	Spring 2020 Groundwater Flow Map
Attachment D	Fall 2020 Groundwater Flow Map
Attachment E	Groundwater Field Measurements and Analytical Data
Attachment F	Groundwater Quality Analytical Laboratory Data Packages
Attachment G	Groundwater Time Series Concentration Plots: G-1 Chloride Concentrations G-2 Ammonia Concentrations G-3 Total Dissolved Solids Concentrations

Attachment A is the site map showing the current CMP groundwater monitoring network, which includes thirteen (13) sampling locations, including twelve (12) shallow resource-protection groundwater monitoring wells and one (1) deep production well (PW). Groundwater monitoring is conducted semi-annually at the L-Bar site as initiated in the *L-Bar Material Removal and Compliance Monitoring Work Plan* (CH2M, 2001) and as recently updated in the *L-Bar Site Compliance Monitoring Program Sampling and Analysis Work Plan, 2020 Revision* (Jacobs, 2020). Per the CMP, the primary indicator parameters (ammonia, chloride, and TDS) are consistently sampled twice (semi-annual) per year. The secondary parameters (nitrate, nitrite, barium [total], manganese [total], selenium [total], and thallium [total], plus laboratory analyzed turbidity) are sampled twice per year every other year (i.e., secondary constituents are

sampled during even numbered years and excluded during odd numbered years). As such, both primary and secondary indicator parameters were sampled in 2020.

Attachment B is the updated groundwater elevation hydrograph showing the groundwater level fluctuations from semi-annual CMP monitoring events conducted over the past 20 years from 2001 through the latest 2020 sampling event. Previous 5-year Review Reports have discussed the seasonal fluctuations, which were persistent in 2020 monitoring events.

Attachments C and D present the groundwater flow maps for the respective spring and fall 2020 monitoring events. The dashed lines represent the inferred groundwater elevation contours, and the blue arrows represent the generalized and inferred groundwater flow direction, perpendicular to the groundwater elevation contours. Both the spring and fall groundwater flow maps support a general flow direction to the north-northwest, illustrating groundwater discharging towards and into the Colville River, which is consistent with previously reported flow conditions.

Attachment E presents the groundwater monitoring field measurements and the groundwater analytical results for both spring and fall monitoring events performed in 2020. Bold-font values are detected concentrations that exceed the site-specific cleanup levels as specified in the *L-Bar Site Compliance Monitoring Program Sampling and Analysis Work Plan, 2020 Revision* (Jacobs, 2020).

Attachment F are the laboratory reports for the respective spring and fall semi-annual groundwater sampling events. Note that several non-detect results for manganese, selenium, and thallium are marked with a star (for example <0.01*) represent cases where the laboratory reported the result as a “non-detect,” but the laboratory did not meet the method reporting limit. The case narrative provides an explanation for these data quality issues. The goal of the CMP is to achieve 100 percent completeness of sampling data, and to analyze all constituents per their respective methods to achieve constituent-specific reporting limits to enable appropriate comparisons to the cleanup levels. This laboratory error on reporting limits was for secondary constituents which are typically non-detect, and is not considered a substantive limitation to track long-term remedy progress which focuses on the primary indicator parameters.

Attachment G provides updated time-series plots for the primary indicator parameters (Chloride, Ammonia, and TDS in Attachment G.1, G.2, and G.3, respectively) and all the CMP groundwater monitoring wells. Overall, the concentrations for primary indicator parameters are showing continued progress towards achievement of cleanup levels. The next periodic review will provide a focused assessment to track progress towards achievement of cleanup levels. Secondary parameters are not presented in time-series plots since the majority of results are low-level concentrations or are non-detect; the secondary parameters are tabulated in Attachment E and compared to their respective cleanup levels.

Please feel free to contact me should you have any questions or comments regarding this revised 2020 CMP groundwater data submittal.

Sincerely,

Great West Engineering, Inc.

Notes:

Bold values are those that exceed their respective cleanup level

Non-detect values shown as ND or preceded with "<" symbol; non-detect value is Practical Quantitation Limit (PQL)

Non-detect values flagged with ** indicate non-detect result but the laboratory did not meet the target reporting limits per the method (see case narrative in laboratory report).

Authorized Signature,

Kathleen Sattler, Laboratory Manager

- H3 Sample was received past holding time.
M1 Matrix spike recovery was high; the associated blank spike recovery was acceptable. Potential matrix effect
M2 Matrix spike recovery was low; the associated blank spike recovery was acceptable. Potential matrix effect.
M3 Spike recovery value is unusable. Analyte concentration disproportionate to the spike level. Blank spike recovery acceptable.
PQL Practical Quantitation Limit
ND Not Detected
MCL EPA's Maximum Contaminant Level
Dry Sample results reported on a dry weight basis
* Not a state-certified analyte

RPD Relative Percent Difference
%REC Percent Recovery
Source Sample that was spiked or duplicated.

QA/QC Checks

<u>Parameters</u>	<u>Yes / No</u>	<u>Exceptions / Deviations</u>
Sample Holding Time Valid?	N	See Comment Section
Surrogate Recoveries Valid?	Y	NA
QC Sample(s) Recoveries Valid?	Y	NA
Method Blank(s) Valid?	N	See Comment Section
Comments	N	See Comment Section

1. Holding Time Requirements

110520P12, 110520P13, 110520SA10, 110520SA11, 110520SA14, 110520P09, 110520PW, 110520P05, 110520P06, 110520P19, 110520P20B, 110520P25, and 110520P27 pH's were all analyzed out of holding time. 110520SA11, 110520SA14, 10520P27 and 110520FD3 chlorides were initially analyzed within holding time and were then re-analyzed outside of holding time to achieve more accurate results with better dilutions.

2. Calibration Requirements

No problems encountered.

3. Surrogate Recovery Requirements

No problems encountered.

4. QC Sample (LCS/MS/MSD) Recovery Requirements

Anatek Labs, Inc.

1282 Alturas Drive - Moscow, ID 83843 - (208) 883-2839 - Fax (208) 8829246 - email moscow@anateklabs.com
504 E Sprague Ste. D - Spokane, WA 99202 - (509) 838-3999 - fax (509) 838-4433 - email spokane@anateklabs.com

No problems encountered.

5. Method Blank Requirements

The method blanks were non-detect for all analytes. The thallium, selenium and bariums were analyzed at a dilution of 1:10 to get the manganese within calibration. The samples are normally analyzed without a dilution after a 1:10 dilution. The analyst did not analyze them without a dilution. The samples in the future will be analyzed without a dilution and with an appropriate dilution to get all analytes within the calibration range.

6. Internal Standard(s) Response Requirements

No problems encountered

7. Comments

**I certify that this data package is in compliance with the terms and conditions of the contract.
Release of the data contained in this data package has been authorized by the Laboratory Manager or his or her designee.**

Authorized Signature,

Kathleen Sattler, Laboratory Manager

H2 Initial analysis within holding time, Reanalysis for the required dilution was past holding time.

H8 Analysis performed past the recommended method holding time as per client instructions

M2 Matrix spike recovery was low; the associated blank spike recovery was acceptable. Potential matrix effect.
