RE: L-Bar Site Compliance Monitoring Program—2020 Year-End Groundwater Monitoring Data Submittal

Dear Mr. Gruenenfelder:

On behalf of Alcoa, Great West Engineering has prepared this letter and associated attachments to summarize the groundwater monitoring results collected in 2020 as part of the *Compliance Monitoring Program (CMP)* at the L-Bar site.

The following attachments summarize the groundwater monitoring data collected in 2020:

Attachment A	Site Map and CMP Monitoring Network
Attachment B	Groundwater Elevation Hydrograph
Attachment C	Spring 2020 Groundwater Flow Map
Attachment D	Fall 2020 Groundwater Flow Map
Attachment E	Groundwater Field Measurements and Analytical Data
Attachment F	Groundwater Time Series Concentration Plots: F-1 CMP Wells (excluding the SA Wells) F-2 SA-series Wells atop the Magnesite Residue Pile
Attachment G	Groundwater Analytical Lab Data

As shown in **Attachment A**, the current CMP groundwater monitoring network includes thirteen (13) sampling locations, including twelve (12) shallow resource-protection groundwater monitoring wells and one (1) deep production well (PW). Groundwater monitoring is conducted semi-annually at the L-Bar site as initiated in the *L-Bar Material Removal and Compliance Monitoring Work Plan (CH2M, 2001)* and as recently updated in the *L-Bar Site Compliance Monitoring Program Sampling and Analysis Work Plan, 2020 Revision (Jacobs, 2020)*. Per the CMP, the primary indicator parameters (ammonia, chloride, and TDS) are consistently sampled twice (semi-annual) per year. The secondary parameters (nitrate, nitrite, barium [total], manganese [total], selenium [total], and thallium [total], plus laboratory analyzed turbidity) are sampled twice per year every other year (i.e., secondary constituents are sampled during even numbered years and excluded during odd numbered years). As such, both primary and secondary indicator parameters were sampled in 2020.

Attachment B is the updated groundwater elevation hydrograph showing the groundwater level fluctuations from semi-annual CMP monitoring events conducted over the past 20 years from 2001 through the latest 2020 sampling event. Previous 5-

year Review Reports have discussed the seasonal fluctuations, which were persistent in 2020 monitoring events.

Attachments C and D present the seasonal high and low groundwater flow maps for the respective spring and fall 2020 monitoring events. Both the spring and fall groundwater flow maps support a general flow direction to the north, illustrating groundwater discharging towards and into the Colville River, which is consistent with previously reported flow conditions.

Attachment E presents a table of the groundwater monitoring field measurements and the groundwater analytical results for both monitoring events performed in 2020. Bold-font values are those which exceed the site-specific cleanup levels as specified in the *L-Bar Site Compliance Monitoring Program Sampling and Analysis Work Plan, 2020 Revision* (Jacobs, 2020).

Attachments F-1 and F-2 are the updated time-series concentration plots. **Attachment F-1** includes all wells except for the SA wells; **Attachment F-2** shows only SA Wells atop the Magnesite Residue Pile. The yellow box illustrates the approximate timing of source removal actions from 1999 to 2003. These plots are developed into two separate groupings since the primary indicator parameters are generally elevated for the SA-wells located atop the Magnesite Residue Mound and are screened near or within the location of where former source material has been removed. As shown from the updated time-series concentration plots, the latest 2020 groundwater quality results suggest overall continued improved conditions (i.e., decreased concentration levels) for primary indicator constituents, and relatively low-level or non-detect for the secondary parameters.

Attachment G contains the laboratory analytical reports, which are included as backup documentation of the data presented in this year-end submittal. These laboratory reports were reviewed and demonstrate the data quality objectives were met, and that all the 2020 values are deemed representative for ongoing assessment of the groundwater conditions and evaluating progress towards achievement of cleanup goals.

We understand that these latest groundwater monitoring data will build upon the existing dataset, and that future CMP monitoring will be conducted to support Ecology's periodic reviews. Please feel free to contact me should you have any questions or comments regarding this latest CMP groundwater data submittal.

Sincerely,

Great West Engineering, Inc.

Authorized Signature,

Kathleen Sattler, Laboratory Manager

H3 Sample was received past holding time.
M1 Matrix spike recovery was high; the associated blank spike recovery was acceptable. Potential matrix effect
M2 Matrix spike recovery was low; the associated blank spike recovery was acceptable. Potential matrix effect.
M3 Spike recovery value is unusable. Analyte concentration disproportionate to the spike level. Blank spike recovery acceptable.
PQL Practical Quantitation Limit
ND Not Detected
MCL EPA's Maximum Contaminant Level
Dry Sample results reported on a dry weight basis
* Not a certified analyte
RPD Relative Percent Difference
%REC Percent Recovery
Source Sample that was spiked or duplicated.

This report shall not be reproduced except in full, without the written approval of the laboratory
The results reported related only to the samples indicated.

QA/QC Checks

<u>Parameters</u>	<u>Yes / No</u>	<u>Exceptions / Deviations</u>
Sample Holding Time Valid?	N	See Comment Section
Surrogate Recoveries Valid?	Y	NA
QC Sample(s) Recoveries Valid?	Y	NA
Method Blank(s) Valid?	Y	NA
Comments	N	See Comments Section

1. Holding Time Requirements

110520P12, 110520P13, 110520SA10, 110520SA11, 110520SA14, 110520P09, 110520PW, 110520P05, 110520P06, 110520P19, 110520P20B, 110520P25, and 110520P27 pH's were all analyzed out of holding time. 110520SA11, 110520SA14, 10520P27 and 110520FD3 chlorides were initially analyzed within holding time and were then re-analyzed outside of holding time to achieve more accurate results with better dilutions.

2. Calibration Requirements

No problems encountered.

3. Surrogate Recovery Requirements

Anatek Labs, Inc.

1282 Alturas Drive - Moscow, ID 83843 - (208) 883-2839 - Fax (208) 8829246 - email moscow@anateklabs.com
504 E Sprague Ste. D - Spokane, WA 99202 - (509) 838-3999 - fax (509) 838-4433 - email spokane@anateklabs.com

No problems encountered.

4. QC Sample (LCS/MS/MSD) Recovery Requirements

No problems encountered.

5. Method Blank Requirements

The method blanks were non-detect for all analytes. No problems encountered.

6. Internal Standard(s) Response Requirements

No problems encountered

7. Comments

**I certify that this data package is in compliance with the terms and conditions of the contract.
Release of the data contained in this data package has been authorized by the Laboratory
Manager or his or her designee.**

Authorized Signature,

Kathleen Sattler, Laboratory Manager

H2	Initial analysis within holding time, Reanalysis for the required dilution was past holding time.
H8	Analysis performed past the recommended method holding time as per client instructions
M2	Matrix spike recovery was low; the associated blank spike recovery was acceptable. Potential matrix effect.
U	Compound was analyzed for but not detected
PQL	Practical Quantitation Limit
ND	Not Detected
MCL	EPA's Maximum Contaminant Level
Dry	Sample results reported on a dry weight basis
*	Not a state-certified analyte
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was spiked or duplicated.

This report shall not be reproduced except in full, without the written approval of the laboratory
The results reported related only to the samples indicated.
