SITE INFORMATION

SITE IN ORWATION		
Site Name (Name over door):	Site Address (including City, State and Zip):	<u>Phone</u>
Wenatchee Riverfront Park	525 Riverside Drive, Wenatchee WA 98801	Email Igloria@wenatcheewa.gov
Site Contact, Title, Business: Laura Gloria, City of Wenatchee	Site Contact Address (including City, State and Zip): 1350 McKittrick Street, Wenatchee WA 98801	Phone Email Igloria@weatcheewa.gov
Site Owner, Title, Business: City of Wenatchee	Site Owner Address (including City, State and Zip): 1350 McKittrick Street, Wenatchee, WA 98801	Phone Email Igloria@wenatcheewa.gov
Site Owner Contact, Title, Business:	Site Owner Contact Address (including City, State and Zip):	<u>Phone</u>
Ciy of Wenatchee	1350 McKittrick Street, Wenatchee, WA 98801	Email Igloria@wenatcheewa.gov
Previous Site Owner(s):	Additional Info (for any Site Information Item):	·
Alternate Site Name(s):		
Latitude (Decimal Decimal Deci	egrees): 47.43284	

Longitude (Decimai i	Degrees): 1	20.31286				
INSPECTION INFORMATION		Please check this box if there is relevant inspection information, such as dail photos, in an existing site report for this site.				
Inspection Conducted? Date/Tin Yes ☐ No ☒	ne:	Entry Notice: Announced 🔲 Unannounced 🔲				
Photographs taken? Yes □	No 🗵	Note: Attach photographs or upload to PIMS				
Samples collected? Yes 🗵	No 🔲	Note: Attach record with media, location, depth, etc.				

RECOMMENDATION

	LICT and Confirmed and Commented
No Further Action (Check appropriate box below):	LIST on Confirmed and Suspected Contaminated Sites List:
Release or threatened release does not pose a threat	Containinated Sites List.
No release or threatened release	
Refer to program/agency (Name:)	
Independent Cleanup Action Completed (contamination removed)	

COMPLAINT (Brief Summary of ERTS Complaint):

During site investigation activities, soil borings collected from the 0-5 foot below ground surface level were screened for soil gas results. Analytical results revealed soil gas concentrations exceeding MTCA Method B cleanup levels for acrolein, bromodichloromethane, benzene and chloroform

CURRENT SITE STATUS (Brief Summary of why Site is recommended for Listing or NFA):

Investigations in 2022 reveal the presence of soil gas exceeding Ecology's Vapor Intrusion cleanup levels.

Investigator: Mary Monahan	Date Submitted: 1/31/2023
----------------------------	---------------------------

DBSERVATIONS Please check this box if you included information on the Supplemental Page at end of report.
Description (If site visit made, please be sure to include the following: site observations, site features and cover, chronology of events, sources/past practices likely responsible for contamination, presence of water supply wells and other potential exposure pathways, etc.):
During site investigation activities for potential redevelopment activities at Riverfront Park in Wenatchee, the consultant for the City of Wenatchee conducted a number of soil borings at the park. The parcels have been a public park since the 1980s, but prior use of the parcels indicated that they were used as a municipal landfill from the 1930s to 1972. This contamination at this location may be associated with the Wenatchee City Worthen St Landfill site, Cleanup Site ID 4085, Facility/Site ID 343 and will be considered additional information for that site.
Documents reviewed:
Phase II Environmental Site Assessment, Maul Foster Alongi, January 3, 2023.

CONTAMINANT GROUP	CONTAMINANT	TIOS	GROUNDWATER	SURFACE WATER	AIR	SEDIMENT	DESCRIPTION
	Phenolic Compounds						Compounds containing phenols (Examples: phenol; 4-methylphenol; 2-methylphenol)
	Non-Halogenated Solvents						Organic solvents, typically volatile or semi-volatile, not containing any halogens. To determine if a product has halogens, search HSDB (http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB) and look at the Chemical/Physical Properties, and Molecular Formula. If there is not a Cl, I, Br, F in the formula, it's not halogenated. (Examples: acetone, benzene, toluene, xylenes, methyl ethyl ketone, ethyl acetate, methanol, ethanol, isopropranol, formic acid, acetic acid, stoddard solvent, Naptha). Use this when TEX contaminants are present independently of gasoline.
Non-	Polynuclear Aromatic Hydrocarbons (PAH)						Hydrocarbons composed of two or more benzene rings.
Halogenated Organics	Tributyltin						The main active ingredients in biocides used to control a broad spectrum of organisms. Found in antifouling marine paint, antifungal action in textiles and industrial water systems. (Examples: Tributyltin; monobutyltin; dibutyltin)
	Methyl tertiary-butyl ether						MTBE is a volatile oxygen-containing organic compound that was formerly used as a gasoline additive to promote complete combustion and help reduce air pollution.
	Benzene	S 🔽	S 🔽		C 🔽]	Benzene
	Other Non-Halogenated Organics						TEX
	Petroleum Diesel						Petroleum Diesel
	Petroleum Gasoline		1			1	Petroleum Gasoline
	Petroleum Other						Oil-range organics
	PBDE						Polybrominated di-phenyl ether
	Other Halogenated Organics						Other organic compounds with halogens (chlorine, fluorine, bromine, iodine). search HSDB (http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB) and look at the Chemical/Physical Properties, and Molecular Formula. If there is a Cl, I, Br, F in the formula, it is halogenated. (Examples: Hexachlorobutadiene; hexachlorobenzene; pentachlorophenol)
Halogenated	Halogenated solvents	S	S 🔽		C]	PCE, chloroform, EDB, EDC, MTBE
Organics (see notes at bottom)	Polychlorinated Biphenyls (PCB)						Any of a family of industrial compounds produced by chlorination of biphenyl, noted primarily as an environmental pollutant that accumulates in animal tissue with resultant pathogenic and teratogenic effects
	Dioxin/dibenzofuran compounds (see notes at bottom)						A family of more than 70 compounds of chlorinated dioxins or furans. (Examples: Dioxin; Furan; Dioxin TEQ; PCDD; PCDF; TCDD; TCDF; OCDD; OCDF). Do not use for 'dibenzofuran', which is a non-chlorinated compound that is detected using the semivolatile organics analysis 8270
	Metals - Other						Cr, Se, Ag, Ba, Cd
Metals	Lead						Lead
	Mercury						Mercury
	Arsenic						Arsenic
Pesticides	Non-halogenated pesticides						Pesticides without halogens (Examples: parathion, malathion, diazinon, phosmet, carbaryl (sevin), fenoxycarb, aldicarb)
	Halogenated pesticides						Pesticides with halogens (Examples: DDT; DDE; Chlordane; Heptachlor; alpha-beta and delta BHC; Aldrin; Endosulfan, dieldrin, endrin)

CONTAMINANT GROUP	CONTAMINANT	SOIL	GROUNDWATER	SURFACE WATER	AIR	SEDIMENT	DESCRIPTION	
	Radioactive Wastes						Wastes that emit more than background levels of radiation.	
	Conventional Contaminants, Organic						Unspecified organic matter that imposes an oxygen demand during its decomposition (Example: Total Organic Carbon)	
	Conventional Contaminants, Inorganic						Non-metallic inorganic substances or indicator parameters that may indicate the existence of contamination if present at unusual levels (Examples: Sulfides, ammonia)	
Other Contaminants	Asbestos						All forms of Asbestos. Asbestos fibers have been used in products such as building materials, friction products and heat-resistant materials.	
	Other Deleterious Substances						Other contaminants or substances that cause subtle or unexpected harm to sediments (Examples: Wood debris; garbage (e.g., dumped in sediments))	
	Benthic Failures						Failures of the benthic analysis standards from the Sediment Management Standards.	
	Bioassay Failures						For sediments, a failure to meet bioassay criteria from the Sediment Management Standards. For soils, a failure to meet TEE bioassay criteria for plant, animal or soil biota toxicity.	
	Unexploded Ordinance						Weapons that failed to detonate or discarded shells containing volatile material.	
Reactive Wastes	Other Reactive Wastes						Other Reactive Wastes (Examples: phosphorous, lithium metal, sodium metal)	
	Corrosive Wastes						Corrosive wastes are acidic or alkaline (basic) wastes that can readily corrode or dissolve materials they come into contact with. Wastes that are highly corrosive as defined by the Dangerous Waste Regulation (WAC 173-303-090(6)). (Examples: Hydrochloric acid; sulfuric acid; caustic soda)	

(fill in contaminant matrix above with appropriate status choice from the key below the table)

Status choices for contaminants	
Contaminant Status	Definition
B— Below Cleanup Levels (Confirmed)	The contaminant was tested and found to be below cleanup levels. (Generally, we would not enter each and every contaminant that was tested; for example if an SVOC analysis was done we would not enter each SVOC with a status of "below". We would use this for contaminants that were believed likely to be present but were found to be below standards when tested
S— Suspected	The contaminant is suspected to be present; based on some knowledge about the history of the site, knowledge of regional contaminants, or based on other contaminants known to be present
C— Confirmed Above Cleanup Levels	The contaminant is confirmed to be present above any cleanup level. For example—above MTCA method A, B, or C; above Sediment Quality Standards; or above a presumed site-specific cleanup level (such as human health criteria for a sediment contaminant).
RA— Remediated - Above	The contaminant was remediated, but remains on site above the cleanup standards (for example—capped area).
RB— Remediated - Below	The contaminant was remediated, and no area of the site contains this contaminant above cleanup standards (for example— complete removal of contaminated soils).

Halogenated chemicals and solvents: Any chemical compound with chloro, bromo, iodo or fluoro is halogenated; those with eight or fewer carbons are generally solvents (e.g. halogenated methane, ethane, propane, butane, pentane, hexane, heptane or octane) and may also be used for or registered as pesticides or fumigants. Most are dangerous wastes, either listed or categorical. Organic compounds with more carbons are almost always halogenated pesticides or a contaminant or derivative. Referral to the HSDB is recommended if you are unfamiliar with a chemical name or compound, as it contains useful information about synonyms, uses, trade names, waste codes, and other regulatory information about most toxic or potentially toxic chemicals.

Dibenzodioxins and dibenzofurans are normalized to a combined equivalent toxicity based on 2,3,7,8-tetrachloro-p-dibenzodioxin as set out in WAC 173-340-708(8)(d) and in the Evaluating the Toxicity and Assessing the Carcinogenic Risk of Environmental Mixtures using Toxicity Equivalency Factors Focus Sheet (https://fortress.wa.gov/ecy/clarc/FocusSheets/tef.pdf). Results may be reported as individual compounds and isomers (usually lab results), or as a toxic equivalency value (reports).
