Proposal to remove Aluminum Recycling Trentwood from Contaminated Sites List

Public comment period November 4 – December 4, 2024

The Washington Department of Ecology invites you to comment on our proposal to remove the Aluminum Recycling Trentwood site from the Contaminated Sites List (CSL). This site, located at 2317 N Sullivan Road in Spokane Valley, was used to process and store aluminum. The processing created waste byproducts including dross, and waste piles remained after processing ended. They contained metals (arsenic, barium, chromium, copper, and mercury) at levels requiring cleanup and were a risk to neighboring properties and the Spokane River.

Between October 2022 and July 2023, Union Pacific Railroad (UPRR) disposed the waste and contaminated soil at a landfill. Remaining contaminated soil was consolidated on UPRR's property and capped with a protective cover, so animals and people can't contact it. Two other properties that were part of the site, owned by Pentzer and the Washington State Department of Transportation, are now clean. Because UPRR completed the work following Ecology's Cleanup Action Plan, we will remove the site from the CSL if public comments don't change our proposal. We will hold a public meeting if 10 or more people request it.
