Cleanup Site ID: 16833
VCP Project No. NW3393
Partner Project No. ES23-424487
YouConnect Project Number: 504010

Dear Mr. Pereira,

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the assessment performed at the above-referenced property. The following report describes the field activities, methods, and findings of the Remedial Investigation and Cleanup Action performed at the above-referenced property (herein referred to as the Site).

This assessment was performed consistent with acceptable industry standards. The independent conclusions represent Partner's best professional judgment based upon existing conditions and the information and data available to us during the course of this assignment.

Partner has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Remedial Investigation and Cleanup Action Report; and Partner has no personal interest with respect to the subject matter of the Remedial Investigation and Cleanup Action Report of the parties involved and Partner has no relationship with the property or the owners thereof which would prevent an independent analysis of the environmental or other conditions of the property.

Unless expressly authorized in writing by Umpqua Bank, no one is permitted or intended to rely upon the findings, conclusions or recommendations found herein. This information is provided as a courtesy only and its accuracy has not been verified. The recipient accepts this information understanding that no representations or warranties are made with respect to this information and that recipient must make an independent determination of the accuracy of any information contained herein.

The recipient acknowledges that Umpqua Bank has no responsibility for this information and the recipient releases Umpqua Bank from liability for any inaccuracy, mistake or other defect in this information.

PARTNER

If you have any questions concerning this Remedial Investigation and Cleanup Action Report, please contact Cory Martini at (916) 405-1275.

Sincerely,

Partner Engineering and Science, Inc.

1.0 INTRODUCTION

1.1 Purpose

The purpose of the remedial investigation and cleanup action was to characterize the extent of the stained soil observed by the Washington Department of Ecology (Ecology) during an April 2023 site visit and excavate the impacted soil for proper off-site disposal. Umpqua Bank provided project authorization of Partner Proposal Number P23-424487.1 by issuing an Environmental Services Task Order dated September 22, 2023.

1.2 Limitations

This report presents a summary of work performed by Partner. The work includes observations of site conditions encountered and the analytical results provided by an independent third-party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. It cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.3 User Reliance

Partner was engaged by Umpqua Bank (the Addressee), or their authorized representative, to perform this investigation. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at <http://www.partneresi.com/terms-and-conditions.php>.

2.0 SITE BACKGROUND

2.1 Site Description

The Site consists of one parcel of land comprising 0.33 acres located on the north side of Bella Street within a residential area of Sedro-Woolley, Skagit County, Washington. The Site is currently developed with a single-family residence and a detached garage.

The Site is bounded by Highway 20 and Walders Road, beyond which is unimproved land to the north; a hotel property to the north; Bella Street, beyond which is a residential property to the south; unimproved land to the east; and a residential property to the west. Please see **Figure 1** for a Site Location Map.

2.2 Site Background

The Site is listed on the Ecology Confirmed or Suspected Contaminated Sites List (CSCSL) (Cleanup Site ID 16833) due to suspected petroleum impacted soil from observed staining throughout the property in areas associated with vehicle, recreation vehicle (RV) and/or machinery storage. Ecology received an initial complaint about potential contamination from hazardous substances in January 2023 and an initial site visit to document the reported release was performed by Ecology on April 18, 2023. During the April 2023 Ecology investigation, Ecology determined that contamination may exist. Ecology issued an Early Notice Letter, dated September 12, 2023, regarding the release of hazardous substances on the property. The letter indicated that suspected contaminants to soil include petroleum as gasoline, diesel and other.

2.3 Geology and Hydrogeology

The Site is situated within the Puget Sound Physiographic Region of Washington. A series of north-south trending elongate ridges and drift uplands dominate the area. Glaciers once covered the Puget Sound area during the Vashon Stade of the Frazier glaciation, which ended approximately 15,000 years ago. As a result of the advancing and retreating glaciers, the soil sequence in the Puget Sound region typically consists of glacial till and outwash deposits (unsorted clay, silt, sand and gravel). Vashon Till is a commonly found glacial sediment and is characterized by poor drainage, low permeability and relatively high in-situ strength.

According to geotechnical boring logs reviewed on the Ecology Well report viewer Website, for a property located approximately 0.25 miles west of the Site (34280 State Route 20), the depth to groundwater in the vicinity of the Site is approximately 20 feet below ground surface (bgs). The inferred groundwater flow direction is to the south-southwest toward the Skagit River.

3.0 REMEDIAL INVESTIGATION FIELD ACTIVITIES

The purpose of the remedial investigation was to characterize the lateral and vertical extent of the stained areas observed during the Ecology April 2023 site visit.

3.1 Pre-Field Activities

Prior to the initiation of the remedial investigation field work, Partner completed the following activities.

3.1.1 Health and Safety Plan

Partner prepared a Site-specific health and safety plan (HASP), which was reviewed with on-site personnel involved in the project prior to the commencement of sampling activities.

3.1.2 Utility Clearance

Partner notified Washington Utility Notification Center (WUNC) to clear public utility lines as required by law at least two business days prior to remedial investigation field activities.

3.2 Soil Sampling

Soil sampling activities were performed at the Site on October 27, 2023. Based on field observations in conjunction with the findings of the April 2023 Ecology investigation 13 areas (TA1 through TA12 and BP1) of stained soil were observed at the Site. Initial delineation of the 13 areas was performed by visual observations and field-screening the surface of the stained areas with a photoionization detector (PID) calibrated to isobutylene.

A total of 37 soil samples were collected from the 13 areas at depths ranging from 0.5 to 2 feet bgs. Soil was manually excavated from each sample location with a hand-auger. Sampling equipment was pre-cleaned prior to arriving onsite and was decontaminated between each boring location with a three-stage decontamination procedure using deionized water and phosphate free soap.

At the desired sampling depths, soil was transferred from the hand-auger bucket into an unpreserved glass jar, which was sealed with a threaded, Teflon-lined lid. The jars were filled with soil to capacity to minimize headspace and reduce the potential for volatilization. Samples were collected from the jars using a disposable plastic syringe and retained in two methanol-preserved volatile organics analysis (VOA) vials in accordance with United States Environmental Protection Agency (EPA) Method 5035 sampling protocol. The jars and VOA vials were labeled for identification and stored in an iced cooler.

Boreholes were backfilled with soil cuttings following sampling activities.

The remedial investigation sample locations are shown on **Figure 2**.

3.3 Laboratory Analysis

Partner collected 37 soil samples on October 27, 2023, which were transported in an iced cooler under chain-of-custody protocol to Pace Analytical (Pace) a state-certified laboratory [Environmental Laboratory Accreditation Program (ELAP) certificate number C847] in the City of Mount Juliet, Tennessee. Each sample was analyzed for gasoline range organics (GRO) via Method NWTPH-Gx, diesel range organics (DRO) and residual range organics (RRO) via Method NWTPH-Dx. In order to pre-profile the soil for off-site disposal each soil sample was analyzed for Resource Conservations and Recovery Act (RCRA) 8 Metals via EPA

Method 6010/7470 and 10 of the soil samples were analyzed for volatile organic compounds (VOCs) via EPA Method 8260.

3.4 Regulatory Agency Comparison Criteria

Washington Department of Ecology Model Toxics Control Act

Ecology promulgated the Model Toxics Control Act (MTCA) Cleanup Regulation (Chapter 173-340 of the WAC) to establish administrative processes and standards for identifying, investigating, and cleaning up facilities where there has been a release or threatened release of a hazardous substance or substances that may pose a threat to human health and/or the environment. The MTCA Cleanup Regulation provides Method A for establishing cleanup levels for soil for unrestricted land use (ULU) and Method B for establishing cleanup levels for sites that do not have a Method A cleanup level. Method B consists of a Cancer Cleanup Level (soil and groundwater) or Screening Level (soil gas) and Noncancer Cleanup Level or Screening Level. MTCA B Cancer establishes the concentration threshold for analytes at which the human health risk is cancer. MTCA B Noncancer establishes concentration thresholds for analytes at which the human health risk is a noncancer effect. In cases where MTCA Method B is used, data is compared to the most conservative Cleanup or Screening Level. Per Based on the current and presumed future residential use of the subject property, results were compared to MTCA Method A Cleanup Levels for ULU.

3.5 Remedial Investigation Laboratory Analytical Results

GRO was detected in 24 of the soil samples at concentrations above the laboratory reported detection limits (RDLs). The detected concentration of GRO in sample BP1 (56.6 milligrams per kilogram [mg/kg]) exceeded the MTCA Method A Cleanup Level for ULU of 30 mg/kg. Remaining concentrations of GRO detected in the soil samples at concentrations above the laboratory RDLs did not exceed the MTCA Method A Cleanup Level for ULU.

DRO was detected in each of the 37 soil samples at concentrations above the laboratory RDLs. The detected concentrations of DRO in soil samples TA4-1 (4,320 mg/kg) and TA7-1 (3,430 mg/kg) exceeded the MTCA Method A Cleanup Level for ULU of 2,000 mg/kg. Remaining concentrations of DRO detected in the soil samples at concentrations above the laboratory RDLs did not exceed the MTCA Method A Cleanup Level for ULU.

RRO was detected in each of the 37 soil samples at concentrations above the laboratory RDLs. The detected concentrations of RRO in soil samples TA1-1 (9,650 mg/kg), TA1-2 (6,350 mg/kg), TA1-3 (10,900 mg/kg), TA3-1 (8,110 mg/kg), TA4-1 (42,000 mg/kg), TA4-1-2 (2,220 mg/kg), TA7-1 (3,200 mg/kg), and TA8-1 (8,430 mg/kg) exceeded the MTCA Method A Cleanup Level for ULU of 2,000 mg/kg. Remaining concentrations of RRO detected in the soil samples at concentrations above the laboratory RDLs did not exceed the MTCA Method A Cleanup Level for ULU.

Various VOCs were detected in one or more of the soil samples at concentrations above the laboratory method detection limits (MDLs). The detected concentration of benzene in soil sample BP1 (0.24 mg/kg) exceeded the MTCA Method A Cleanup Level for ULU of 0.03 mg/kg. Remaining concentrations of VOCs detected in the soil samples at concentrations above the laboratory MDLs did not exceed the MTCA Method A Cleanup Level for ULU.

Various metals were detected in one or more of the soil samples at concentrations above the laboratory RDLs. The detected concentration of arsenic in soil sample BP1 (34.0 mg/kg) exceeded the MTCA Method A Cleanup Level for ULU of 20 mg/kg. Remaining concentrations of metals detected in the soil samples at concentrations above the laboratory MDLs did not exceed the MTCA Method A Cleanup Level for ULU.

Please refer to **Tables 1, 2 and 3** for a summary of the remedial investigation soil sample GRO, DRO and RRO, VOCs, and RCRA 8 Metals laboratory analytical results, respectively. Laboratory analytical results are included in **Appendix A**.

4.0 CLEANUP ACTION

The purpose of the cleanup action was to remediate areas at the Site where remedial investigation soil samples contained GRO, DRO and/or RRO at concentrations above the MTCA Method A Cleanup Level for ULU. Based on the remedial investigation soil sample results, the excavation areas consisted of the central and northern portions of TA1, TA3, the southwest portion of TA4, TA7, the northern portion of TA8, and BP1. The excavation areas are shown on **Figure 3**.

4.1 Pre-Field Activities

Prior to the initiation of the cleanup action field work, Partner completed the following activities.

4.1.1 Health and Safety Plan

Partner updated the Site-specific HASP, which was reviewed with on-site personnel involved in the project prior to the commencement of sampling activities.

4.1.2 Utility Clearance

Partner notified WUNC to clear public utility lines as required by law at least two business days prior to cleanup action field activities.

In addition, Partner subcontracted with Blood Hound on January 15, 2024 to clear excavation areas of utilities. Blood Hound systematically free-traversed each proposed excavation area with a Geonics EM-61 and a Fischer M-Scope electromagnetic induction (EM) equipment, a Schonstedt GA-52 magnetic gradiometer, a Sensors and Software Noggin ground penetrating radar (GPR) unit, and a Metrotech 9890 utility locator with line-tracing capabilities and the data was interpreted in real time for evidence of utility lines and/or other subsurface features of potential concern. Based on the findings of the GPR survey, a water line was identified the south side of proposed excavation area TA4 and east side of proposed excavation area TA7. No other subsurface utilities were identified within the proposed excavation areas.

4.2 Cleanup Action Activities

On January 25, 2024, Saybr Contractors, Inc. (Saybr) under the oversight of Partner excavated areas TA1, TA3, TA4, TA7, TA8, and BP1 with a mini-excavator and hand tools. Excavation activities consisted of excavating areas of approximately 100 square feet, centered on remedial investigation sample locations (10 feet by 10 feet) with an excavation depth of 0.5 feet below the depth of the remedial investigation sample with GRO, DRO and/or RRO concentrations that exceeded the MTCA Method A Cleanup Level for ULU. Due to the water line identified during the geophysical survey, the horizontal dimensions of excavation areas TA4 and TA7 were 10 feet by 8 feet. Refer to **Table 4** for the excavation dimensions, depth and volumes.

Upon completion of each excavation area to the proposed dimensions and depth, confirmatory soil samples were collected from the base and sidewalls of the excavations on January 25, 2024. Two discrete confirmatory soil samples were collected from the base of excavation area TA1, and one discrete confirmatory soil sample was collected from the bases of excavation areas TA3, TA4, TA7, TA8, and BP1. A total of four discrete soil samples were collected from the center point of the east and west sidewalls (two per sidewall) and a total of two discrete soil samples were collected from the center point of the north and south sidewalls (one per sidewall) of excavation area TA1. One discrete soil sample was collected from the

center point of each exposed sidewall (four per excavation area) of excavation areas TA3, TA4, TA7, TA8, and BP1. Confirmation soil sample locations are shown on **Figure 3**.

Based on the total lead analytical result for the remedial investigation soil sample TA4-1, the receiving facility requested a waste characterization soil sample be collected from the stockpiled soil from excavation area TA4 and analyzed for lead via the toxicity characteristic leaching procedure (TCLP) extraction. On January 25, 2024, Partner collected one four-part composite soil sample from the TA4 excavation stockpile for waste characterization.

Soil samples were collected with a hand trowel and transferred into an unpreserved glass jar, which was sealed with a threaded, Teflon-lined lid. The jars were filled with soil to capacity to minimize headspace and reduce the potential for volatilization. The jars were labeled for identification and stored in an iced cooler.

Sampling equipment was pre-cleaned prior to arriving onsite and was decontaminated between each sampling location with a three-stage decontamination procedure using deionized water and phosphate free soap.

4.3 Confirmation Soil Sample Laboratory Analysis and Results

Partner collected 33 confirmation soil samples and one waste characterization soil sample on January 25, 2024, which were transported in an iced cooler under chain-of-custody protocol to Pace. Each confirmation sample was analyzed for GRO via Method NWTPH-Gx, and DRO and RRO via Method NWTPH-Dx. The waste characterization soil sample was analyzed for lead via EPA Method 6010D TCLP.

GRO, DRO and/or RRO were detected in one or more of the confirmation soil samples at concentrations above the laboratory MDLs. The concentrations of GRO, DRO and RRO detected in the confirmation soil samples did not exceed the MTCA Method A Cleanup Level for ULU.

Lead was not detected in the waste characterization sample above the laboratory RDL.

Please refer to **Table 5** for a summary of the confirmation soil sample GRO, DRO and RRO laboratory analytical results. Laboratory analytical results are included in **Appendix A**.

4.4 Soil Management and Excavation Backfill

A total of approximately 40.9 cubic yards of excavated soil was stockpiled on-Site on January 25, 2024. The stockpiles were underlain by and covered with visqueen plastic.

On February 8, 2024, Saybr under the oversight of Partner loaded the stockpiled soil into two dump trucks and transported the soil under proper waste manifest to Republic Services, an appropriate licensed off-Site facility for recycling and/or disposal. A copy of the waste manifest is included in **Appendix B**.

The excavation areas were backfilled by Saybr on the same day. Excavation area TA1 was backfilled with gravel to match the existing driveway ground cover. The remaining excavation areas were backfilled with clean imported topsoil.

5.0 ADDITIONAL INVESTIGATION ACTIVITIES

5.1 Voluntary Cleanup Program Enrollment

Partner on behalf of Umpqua Bank enrolled the Site into the Ecology Voluntary Cleanup Program (VCP) on February 16, 2024, and presented the findings of the October 2023 Remedial Investigation and January 2024 Cleanup Action to Ecology for their review. The Site was accepted into the VCP on May 29, 2024.

Following Ecology's review of the findings of the October 2023 Remedial Investigation and January 2024 Cleanup Action, Ecology requested the following additional items be performed.

- Collection of additional confirmation soil samples from the BP1 excavation area to confirm benzene and arsenic are not present above their respective Method A cleanup levels in this area.
- The remedial investigation soil sample TA1-4 and the confirmation soil sample TA1-S contained DRO and RRO at concentrations above the cleanup level protective of ecological receptors. Collection of two additional soil samples west and south of remedial investigation soil sample TA1-4 at approximately the same depth to delineate DRO and RRO in soil above the cleanup level protective of ecological receptors.

5.2 Additional Soil Sample Collection Activities

On June 10, 2024, Partner collected five additional confirmation soil samples (BP1-N2, BP1-S2, BP1-E2, BP1-W2, and BP1-B2) from excavation area BP1 and two step out soil samples (TA1-5 and TA1-6) from the remedial investigation sample location TA1-4.

The additional BP1 confirmation soil samples BP1-N2, BP1-S2, BP1-E2, and BP1-W2 were collected from the north, south, east, and west sidewalls of excavation area BP1, respectively, at depths of 0.5 feet bgs. The additional BP1 confirmation soil sample BP1-B2, was collected from the base depth (one-foot bgs) of excavation area BP1 in the location of the October 2023 remedial investigation sample BP1, which contained benzene at a concentration above the MTCA Method A Cleanup Level for ULU. The TA1-4 step out soil samples TA1-5 and TA1-6 were collected approximately five feet west and south of sample location TA1-4, respectively, at depths of 0.5 feet bgs.

Soil was manually excavated from each sample location with a hand-auger. Sampling equipment was pre-cleaned prior to arriving onsite and was decontaminated between each boring location with a three-stage decontamination procedure using deionized water and phosphate free soap.

At the desired sampling depths, soil was transferred from the hand-auger bucket into an unpreserved glass jar, which was sealed with a threaded, Teflon-lined lid. The jars were filled with soil to capacity to minimize headspace and reduce the potential for volatilization. Samples were collected from the jars using a disposable plastic syringe and retained in one methanol-preserved VOA vial in accordance with EPA Method 5035 sampling protocol. The jars and VOA vials were labeled for identification and stored in an iced cooler.

Boreholes were backfilled with soil cuttings following sampling activities.

Sample locations TA1-5 and TA1-6 are shown on **Figure 2** and the additional BP1 excavation area confirmation samples are shown on **Figure 3**.

5.3 Additional Soil Sample Laboratory Analysis and Results

Partner collected five additional confirmation soil samples (BP1-N2, BP1-S2, BP1-E2, BP1-W2, and BP1-B2) from excavation area BP1 and two TA1-4 step out soil samples (TA1-5 and TA1-6) on June 10, 2024, which were transported in an iced cooler under chain-of-custody protocol to Pace. Soil samples BP1-N2, BP1-S2, BP1-E2, BP1-W2, and BP1-B2 were analyzed for benzene via EPA Method 8260 and for arsenic via EPA Method 6010. Soil samples TA1-5 and TA1-6 were analyzed for DRO and RRO via Method NWTPH-Dx.

Benzene was detected in soil samples BP1-S2, BP1-E2, BP1-W2, and BP1-B2 at concentrations above the laboratory MDLs, ranging from 0.00195 to 0.201 mg/kg. The concentrations of benzene detected in soil samples BP1-S2 (0.0405 mg/kg) and BP1-B2 (0.201 mg/kg) exceeded the MTCA Method A Cleanup Level for ULU of 0.03 mg/kg.

Arsenic was detected in soil samples BP1-N2, BP1-S2, BP1-E2, BP1-W2, and BP1-B2 at concentrations above the laboratory MDLs, ranging from 2.41 to 10.3 mg/kg. The detected concentrations of arsenic did not exceed the MTCA Method A Cleanup Level for ULU of 20 mg/kg.

DRO was detected in soil samples TA1-5 and TA1-6 at concentrations of 3.42 and 7.13 mg/kg, respectively. RRO was detected in soil samples TA1-5 and TA1-6 at concentrations of 25.4 and 41.2 mg/kg, respectively. The detected concentrations of DRO and RRO did not exceed the MTCA Method A Cleanup Levels for ULU of 2,000 mg/kg, respectively. The detected concentrations of DRO and RRO did not exceed the MTCA Simplified Terrestrial Ecological Evaluation Cleanup Level for ULU of 460 mg/kg.

Please refer to **Table 6** for a summary of the additional investigation soil sample laboratory analytical results. Laboratory analytical results are included in **Appendix A**.

6.0 ADDITIONAL CLEANUP ACTION

Based on the concentrations of benzene detected above the MTCA Method A Cleanup Level for ULU in two of the additional confirmation soil samples from excavation area BP1, Ecology recommended additional excavation in area BP1 to remove the benzene impacted soil.

6.1 Additional Cleanup Action Activities

On November 13, 2024, Saybr under the oversight of Partner excavated an additional 1-foot of soil from the base and south sidewall of area BP1 with a mini-excavator and hand tools. Prior to excavating the additional soil, the upper one-foot of clean imported topsoil used to backfill area BP1 in January 2024 was removed and stockpiled on-site for reuse as backfill following the additional excavation activities. The final excavation dimensions of area BP1 were 10 feet by 11 feet and two feet bgs. Refer to **Table 4** for the excavation dimensions, depth and volume for area BP1.

Upon completion of the additional excavation activities in area BP1, confirmatory soil samples were collected from the base and south sidewall of the excavation on November 13, 2024. One discrete confirmatory soil sample was collected from the base of excavation area BP1 at a depth of two feet bgs, and one discrete soil sample was collected from the center point of the south sidewall of excavation area BP1 at a depth of one-foot bgs. Confirmation soil sample locations are shown on **Figure 3**.

Soil samples were collected directly from the base and south sidewall with a disposable plastic syringe and retained in one methanol-preserved and two sodium bisulfate-preserved VOA vials in accordance with EPA Method 5035 sampling protocol. The VOA vials were labeled for identification and stored in an iced cooler.

6.2 Additional Confirmation Soil Sample Laboratory Analysis and Results

Partner collected two confirmation soil samples (SS and EB) from excavation area BP1 on November 13, 2024, which were transported in an iced cooler under chain-of-custody protocol to Eurofins Environmental Testing (Eurofins) a state-certified laboratory (ELAP certificate number C788) in the City of Tacoma, Washington. Each confirmation sample was analyzed for benzene via EPA Method 8260D.

Benzene was not detected in the additional confirmation soil samples collected from excavation area BP1 at concentrations above the laboratory MDLs, and the laboratory MDLs were below the MTCA Method A Cleanup Level for ULU of 0.03 mg/kg.

Please refer to **Table 6** for a summary of the additional confirmation soil sample laboratory analytical results. Laboratory analytical results are included in **Appendix A**.

6.3 Additional Cleanup Action Soil Management and Excavation Backfill

On November 13, 2024, a total of approximately 4.1 cubic yards of excavated soil was directly loaded into a dump truck and transported by Saybr under proper waste manifest to Regional Disposal Intermodal, an appropriate licensed off-Site facility for recycling and/or disposal. A copy of the waste manifest is included in **Appendix B**.

The excavation area was backfilled by Saybr on the same day with clean imported topsoil.

7.0 SIMPLIFIED TERRESTRIAL ECOLOGICAL EVALUATION

As requested by Ecology, a Simplified Terrestrial Ecological Evaluation (TEE) was performed to evaluate the potential of the concentrations of DRO and RRO remaining in-place in the vicinity of remedial investigation soil sample TA1-4 and confirmation soil sample TA1-S on the southwest portion of the Site for posing a threat of significance adverse effects to terrestrial ecological receptors.

As discussed in Section 5.0, in June 2024 soil samples TA1-5 and TA1-6 were collected approximately five feet west and south of sample location TA1-4, respectively, to delineate the extent of DRO and RRO in soil above the MTCA Simplified TEE Cleanup Level for ULU. DRO was detected in soil samples TA1-5 and TA1-6 at concentrations of 3.42 and 7.13 mg/kg, respectively. RRO was detected in soil samples TA1-5 and TA1-6 at concentrations of 25.4 and 41.2 mg/kg, respectively. The detected concentrations of DRO and RRO in soil samples TA1-5 and TA1-6 did not exceed the MTCA Simplified TEE Cleanup Level for ULU of 460 mg/kg.

The extent of DRO and RRO remaining in soil above the MTCA Simplified TEE Cleanup Level for ULU is limited to the vicinity of sample locations TA1-4 and TA1-S. The January 2024 soil samples TA1-BS and TA7-W, and the June 2024 soil samples TA1-6 and TA1-5 delineate the DRO and RRO concentrations in soil above the MTCA Simplified TEE Cleanup Level for ULU to the north, east, south, and west, respectively.

According to the Simplified TEE procedures outlined in WAC 173-340-7492(2)(a)(i), the Simplified TEE may be ended if the total area of soil contamination is not greater than 350 square feet. The extent of DRO and RRO remaining in on-Site soil above the MTCA Simplified Terrestrial Ecological Evaluation Cleanup Level for ULU is less than 350 square feet; therefore, the Simplified TEE can be stopped and no further evaluation is warranted.

8.0 SOIL TO GROUNDWATER TRANSPORT PATHWAY EVALUATION

The remaining concentrations of hazardous substances in soil at the Site were evaluated for the potential migration to groundwater beneath the Site and potential impact to nearby water wells.

According to geotechnical boring logs reviewed on the Ecology Well report viewer Website, for a property located approximately 0.25 miles west of the Site (34280 State Route 20), the depth to groundwater in the vicinity of the Site is approximately 20 feet bgs. The inferred groundwater flow direction is to the south-southwest toward the Skagit River.

Partner used a combination of sources to search for water wells within a ¼-mile radius of the Site. Sources reviewed as part of Partner’s water well search included the Ecology Well report viewer Website and the Washington State Department of Health Source Water Assessment Program (SWAP) Mapping website. According to the sources reviewed, the following water well was identified within a ¼-mile radius of the Site:

Start Card No.	Distance and Direction from Site	Hydraulic Gradient from Site	Well Construction Details	Use of Well
W092735	Approximately 0.23 miles Northeast	Up-Gradient	Total Depth: 38 feet bgs Screened Interval: 33 to 38 feet bgs Surface Seal: Bentonite from ground surface to 18 feet bgs.	Domestic well

Drinking water is provided to the Site and vicinity by the Hamilton Water Department (HWD). According to the Washington State Department of Health SWAP Mapping website and Town of Hamilton website, HWD drinking water is supplied from one groundwater well located approximately 0.7 miles northeast of the Site. The HWD well depth is 200 feet bgs with a static water level of approximately 83 feet bgs. Water from the HWD well is treated prior to being supplied to the public.

Based on the limited vertical extent of soil impacts (less than 2.5 feet bgs), removal of the impacted soil, and anticipated depth to groundwater beneath the Site (20 feet bgs), it is unlikely groundwater beneath the Site has been impacted by the prior surficial releases of petroleum hydrocarbons at the Site. Additionally, based on the distance and the hydraulically up-gradient location in relation to the Site, the nearby domestic well and HWD municipal well will not be impacted by the prior surficial releases of petroleum hydrocarbons at the Site.

9.0 SUMMARY AND CONCLUSIONS

On October 27, 2023, Partner assessed the areas of stained soil observed by Ecology during their April 2023 site visit, by visual inspection, screening with a PID and collection of soil samples to characterize the lateral and vertical extent of the stained soil observed. Based on Partner's October 2023 field observations in conjunction with the findings of the April 2023 Ecology investigation 13 areas (TA1 through TA12 and BP1) of stained soil were observed at the Site.

Remedial investigation soil sampling activities were performed at the Site on October 27, 2023. A total of 37 soil samples were collected from the 13 areas at depths ranging from 0.5 to 2 feet bgs. Each sample was analyzed for GRO, DRO and RRO. Each soil sample was also analyzed RCRA 8 Metals and 10 of the soil samples were analyzed for VOCs for pre-profiling purposes.

Based on the remedial investigation soil sample analytical results, one or more of the soil samples collected from areas TA1, TA3, TA4, TA7, TA8, and BP1 contained GRO, DRO and/or RRO at concentrations above the MTCA Method A Cleanup Level for ULU.

On January 25, 2024, a total of approximately 40.9 cubic yards of soil was excavated from the central and northern portions of TA1, TA3, the southwest portions of TA4, TA7, the northern portion of TA8, and BP1 and stockpiled on-Site. A total for 33 confirmation soil samples were collected from the bases and sidewalls of each excavation area and analyzed for GRO, DRO and RRO. Based on the confirmation soil sample analytical results GRO, DRO or RRO were not detected above the MTCA Method A Cleanup Level for ULU.

On February 8, 2024, the stockpiled soil was transported under proper waste manifest to an appropriate licensed off-Site facility for recycling and/or disposal. On the same day excavation area TA1 was backfilled with gravel to match the existing driveway ground cover and the remaining excavation areas were backfilled with clean imported topsoil.

The Site was accepted into the Ecology VCP on May 29, 2024. Following Ecology's review of the findings of the October 2023 Remedial Investigation and January 2024 Cleanup Action, Ecology requested collection of additional confirmation soil samples from the BP1 excavation for benzene and arsenic analysis, and further evaluation of DRO and RRO in soil above the cleanup level protective of ecological receptors on the southwest portion of the Site.

On June 10, 2024, Partner collected five additional confirmation soil samples from excavation area BP1 and two step out soil samples from the remedial investigation sample location TA1-4 on the southwest portion of the Site.

Benzene was detected in the excavation base and south sidewall additional BP1 confirmation soil samples at concentrations above the MTCA Method A Cleanup Level for ULU. Arsenic was not detected in the additional BP1 confirmation soil samples at concentrations above the MTCA Method A Cleanup Level for ULU. DRO and RRO were not detected in the two step out samples at concentrations above the MTCA Method A Cleanup Levels for ULU or the MTCA Simplified TEE Cleanup Level for ULU.

Based on the concentrations of benzene detected above the MTCA Method A Cleanup Level for ULU in two of the additional confirmation soil samples from excavation area BP1, an additional 1-foot of soil from the base and south sidewall of area BP1 (4.1 cubic yards) was excavated on November 13, 2024. Two confirmation soil samples were collected from the south sidewall and base of excavation BP1 and analyzed

for benzene. Based on the additional confirmation soil sample analytical results from BP1, benzene was not detected above the MTCA Method A Cleanup Level for ULU. The excavated soil was direct loaded into a dump truck and transported under proper waste manifest to an appropriate licensed off-Site facility for recycling and/or disposal. On the same day excavation area BP1 was backfilled with clean imported topsoil.

A Simplified TEE was performed to evaluate the potential of the concentrations of DRO and RRO remaining in-place in the vicinity of remedial investigation soil sample TA1-4 and confirmation soil sample TA1-S on the southwest portion of the Site for posing a threat of significance adverse effects to terrestrial ecological receptors.

The June 2024 soil samples TA1-5 and TA1-6 were collected to delineate the extent of DRO and RRO in soil above the MTCA Simplified TEE Cleanup Level for ULU. The detected concentrations of DRO and RRO in soil samples TA1-5 and TA1-6 did not exceed the MTCA Simplified TEE Cleanup Level for ULU. The extent of DRO and RRO remaining in soil above the MTCA Simplified TEE Cleanup Level for ULU is limited to the vicinity of sample locations TA1-4 and TA1-S. The January 2024 soil samples TA1-BS and TA7-W and the June 2024 soil samples TA1-6 and TA1-5 delineate the DRO and RRO concentrations in soil above the MTCA Simplified TEE Cleanup Level for ULU to the north, east, south, and west, respectively. The extent of DRO and RRO remaining in on-Site soil above the MTCA Simplified TEE Cleanup Level for ULU is less than 350 square feet; therefore, the Simplified TEE can be stopped and no further evaluation is warranted.

The remaining concentrations of hazardous substances in soil at the Site were evaluated for the potential migration to groundwater beneath the Site and potential impact to nearby water wells. Based on the limited vertical extent of soil impacts (less than 2.5 feet bgs), removal of the impacted soil, and anticipated depth to groundwater beneath the Site (20 feet bgs), it is unlikely groundwater beneath the Site has been impacted by the prior surficial releases of petroleum hydrocarbons at the Site. Additionally, based on the distance and the hydraulically up-gradient location in relation to the Site, the nearby domestic well and HWD municipal well will not be impacted by the prior surficial releases of petroleum hydrocarbons at the Site.

The excavation confirmation sample laboratory analytical results have demonstrated that the areas of stained soil with identified GRO, DRO, RRO, benzene and/or arsenic soil impacts have been remediated. Based upon these results, it is Partner's professional opinion that delisting the Site from the CSCSL, with no further action required with regards to the environmental circumstances related to the Site, is appropriate at this time and we respectfully request that Ecology make such a written determination.

MTCA Method A ULU				30/100*	2,000	2,000	

Notes:

GRO = gasoline-range organics

DRO = diesel-range organics

RRO = residual-range organics

NWTPH = Northwest Total Petroleum Hydrocarbons

mg/kg = milligrams per kilogram

MTCA Method A = Soil cleanup levels for unrestricted land use (ULU) (Washington State Department of Ecology [Ecology], Model Toxics Control Act [MTCA], July 2024)

* MTCA Method A Cleanup Level for soil is 30 mg/kg if benzene is present in the sample and 100 mg/kg if benzene is not present in the sample

< = not detected above indicated laboratory Method Detection Limit (MDL)

Values in **bold** exceed laboratory MDLs

APPENDIX A: LABORATORY ANALYTICAL REPORTS

Partner Engineering & Science - WA

Sample Delivery Group: L1672560
Samples Received: 11/01/2023
Project Number: 23-424487.1
Description: 503 Bella Street

Report To: Brian Godbois
2708 James Street
Bellingham, WA 98225

Entire Report Reviewed By:

Marty Edwards III
Project Manager

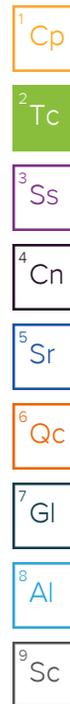

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

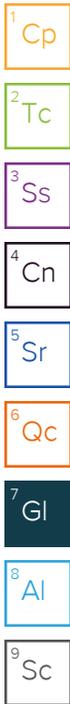

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
C3	The reported concentration is an estimate. The continuing calibration standard associated with this data responded low. Method sensitivity check is acceptable.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier Description

The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

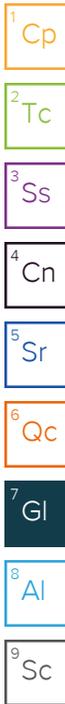

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier Description

J	The identification of the analyte is acceptable; the reported value is an estimate.

ANALYTICAL REPORT

PREPARED FOR

Attn: Brian Godbois
Partner Engineering and Science, Inc
3607 1st Avenue NW
Seattle, Washington 98107

Generated 11/22/2024 6:40:19 PM

JOB DESCRIPTION

Sedro-Wooley, WA

JOB NUMBER

580-145878-1

Eurofins Seattle

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northwest, LLC Project Manager.

Job ID: 580-145878-1

Eurofins Seattle

Job Narrative 580-145878-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/15/2024 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.3°C.

Receipt Exceptions

Client provided a MeOH VOA with no Sample ID and did not include the MeOH VOA TB on the COC. SS (580-145878-1), EB (580-145878-2) and Trip Blank (580-145878-3)

Method 8260D - Volatile Organic Compounds by GC/MS

Samples SS (580-145878-1), EB (580-145878-2) and Trip Blank (580-145878-3) were analyzed for Volatile Organic Compounds by GC/MS. The samples were prepared and analyzed on 11/19/2024.

Method 2540G - SM 2540G

Samples SS (580-145878-1) and EB (580-145878-2) were analyzed for SM 2540G. The samples were analyzed on 11/20/2024.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
