Subject: Oil Spill Incident; ERTS # 657576; 28514 3rd Ave NE (Kuhnhauser Rd.); Arlington, WA;
Snohomish County PUD regulator #'s 143, 145 and 155.

Dear Ms. Musa:

This correspondence and the attached documentation represent the final cleanup report for the spill event referenced above. A summary of the incident follows.

On the afternoon of June 19th, 2015, a S.U.V. traveling south on 3rd Ave. N.E., also known as Kuhnhauser Rd., collided with the first pole of a two-pole regulator rack structure. The first pole sheared while the vehicle kept moving, coming to rest at the second pole of the structure. The regulators were hanging, mid-air, for a brief amount of time, during which the driver crawled out of the back window. Sometime thereafter, coinciding with the arrival of some first responders, the regulator rack fell onto the vehicle with the powerlines still energized, and after several minutes (accounts differ), the mineral oil (<1 p.p.m. PCBs) spilled from the regulators caught fire. Firefighters arrived on scene and allowed the scene to continue to burn, wetting down adjacent trees to the west, observing the fire and maintaining a safe perimeter until the scene could be safely approached. The Sheriff's office and Snohomish County Public Works road crews assisted with blocking the roadway to all traffic. The fire burned from approximately 12:50pm until 8:00pm, though the start time for the fire is uncertain.

The regulators contained a combined total of about 270 gallons (90 gallons each) of mineral oil. Much of that burned, but the initial regulator fall and break, and the subsequent wetting of the area for fire safety, including a continuously wetted safety perimeter, allowed approximately 60-70 gallons to move down the west ditch line, contaminating about 300 linear feet of soils & vegetation in the ditch, and about 200 linear feet of roadway surface. The ditch was dry at the time of the incident, and no oil made it to surface waters, however the ditch does connect with a fish bearing stream another 1000 feet to the south of the most distal contamination. No material from the oil spill or firefighting efforts made it to this stream. While lines were still energized and the fire was burning, crews created small dams of granular absorbent in the ditch at safe distances, preventing additional oil from moving too far down the ditch line as the fire scene changed the topography of the accident scene. Soils were very dry, and absorbed oil, water and firefighting foam fairly readily; all of the soils contaminated with those materials were removed from the site as part of the oil contamination clean up.

National Response Corporation, our spill contractor, was called in to assist with the mineral oil spill clean-up at about 1pm on June 19th. From June 19th through 30th, all contaminated soils and vegetation were removed from the site over several working days. The dissolved and burned roadway, caused by heated and burning oil, was patched by Snohomish County Road crews.

On June 22nd, samples were taken to help direct remaining clean-up after the initial high surface concentrations had been removed. Regulators had historic Non-PCB oil results, but on June 23rd, oil samples

were re-taken from the remaining oil in the regulators to re-confirm that no PCBs were present. Finally, on June 29th, one day prior to restoration work and after approximately 30 yards of contaminated soils and vegetation were removed from the site, three confirmation samples were taken from locations expected to remain most contaminated after the clean-up. These samples revealed oil remaining in soil at levels of 3600ppm, 140ppm and Non-detect at 2, 30 and 60 feet from the original scene respectively. Each of these oil concentrations is below MTCA thresholds for mineral oil. The ditch was restored with gravel, soil and grass seed where vegetation was present. The confirmation sample results are documented in ALS Laboratory report # 15060146, and attached to this letter, along with all other test results mentioned above. The site with the highest concentration of oil-in-soils, at 3600 ppm, had more soil taken from that locale just before restoration, to ensure that the entire area met clean-up standards.

We are confident the site complies with Method A Cleanup Levels for Unrestricted Land Use as outlined in the Washington State Model Toxics Control Act Cleanup Regulation (MTCA), Chapter 173-340 WAC.

If you have any questions concerning this matter, please feel free to call me at 425.783.4314.

Sincerely,

A handwritten signature in blue ink, appearing to read "Amberlynn Pauley". To the right of the signature, the date "Jan 27 2016" is written in a smaller, cursive font.

Dear Ms. Pauley,

On June 22nd, 4 samples were received by our laboratory and assigned our laboratory project number EV15060146. The project was identified as your 28518 Kuhnhausen. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Ms. Amberlynn Pauley
Snohomish County PUD
PO Box 1107
Everett, WA 98206-1107

Dear Ms. Pauley,

On June 29th, 3 samples were received by our laboratory and assigned our laboratory project number EV15060197. The project was identified as your 28518 Kuhnhausen. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director
