Source/source area description
Washington State Fairgrounds in Puyallup had an old transformer with PCB containing mineral oil being stored for disposal. The transformer was vandalized, and the contents leaked onto a gravel driveway and an adjacent grassy area. There is an unnamed stream and wetland area southwest of the area where surface soil and water samples were collected. The extents of the hazardous substances was not defined. Mineral oil was not analyzed in either the soil or groundwater samples, only PCBs were analyzed.

Soil comments
polychlorinated biphenyls (PCBs) is the extremely toxic chemical and VOC.

Groundwater comments
groundwater was not sampled, and this was a surface release of PCB-containing mineral oil from an electric transformer. Groundwater depth is unknown, but given proximity to a stream and wetlands, groundwater may be shallow.

Surface water comments

surface water was sampled on the Site, however, it may be seasonal and not meet the WAC definitions of wetland or sediment. A stream and wetlands are in close proximity to the Site.
