CS3WT

Calibration and Verification Solution (EPA-1613CS3) combined with Window Defining and 2,3,7,8-TCDD Resolution Testing Congeners

PRODUCT CODE:	CS3WT
LOT NUMBER:	CS3WT0918
SOLVENT(S):	Nonane/Toluene
DATE PREPARED: (mm/dd/yyyy)	10/24/2018
LAST TESTED: (mm/dd/yyyy)	10/29/2018
EXPIRY DATE: (mm/dd/yyyy)	10/29/2025
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

DESCRIPTION:

CS3WT is a solution/mixture of native and $^{13}C_{12}$-labelled chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components and their concentrations are given in Table A.

CS3WT was designed and prepared to be used as a HRMS calibration standard according to U.S. EPA Method 1613B.

It is to be used for calibration verification in place of EPA-1613CS3 (Lot: 13CS30918). It also contains the PCDD and PCDF window defining congeners for a DB-5 (or equivalent) capillary column as well as the TCDD isomers required to test and confirm the resolution of 2,3,7,8-TCDD.

The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%. The individual native 2,3,7,8-substituted PCDD and PCDF congeners all have chemical purities of >98%; the other congeners (window defining and resolution testing) should only be considered semi-quantitative.

This current lot of CS3WT is to be used with the 1613 calibration solutions having the following lot numbers:

PRODUCT CODE	LOT NUMBER
EPA-1613CS1	13CS10918
EPA-1613CS2	13CS20918
EPA-1613CS3	13CS30918

EPA-1613CS5	13CS50918
EPA-1613CSL	13CSL0918
EPA-1613CS0.5	13CS0.50918

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

DOCUMENTATION/ DATA ATTACHED:

Table A: Components and Concentrations of the Solution/Mixture
Figure 1: HRGC/HRMS Data (SIR; 10,000 mass resolving power)

ADDITIONAL INFORMATION:

- See page 3 for further details.
- Only the 2,3,7,8-substituted PCDDs and PCDFs should be used for quantitation. The other congeners (window defining and 2378-TCDD resolution testing) should be considered semi-quantitative (within ±20% of their design value). Impurities have been identified where possible.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Prepared By Joshua Rains 6/23/2020

DESCRIPTION:

EPA-1613CVS is a series of 5 calibration solutions containing native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$ and $^{37}Cl_4$) chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components of each solution, and their concentrations, are given in Table A.

They were designed for, and prepared to be used according to, U.S. EPA Method 1613 (Revision B). They are to be used as received.

EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to EPA-1613CVS. Neither is required by the method, but either or both can be used to extend the calibration to lower levels.

The individual native PCDDs and PCDFs all have chemical purities of >98%. The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-Tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

ADDITIONAL INFORMATION:

- See page 3 for further details.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a series of standards for the identification and quantification of specific chemical compounds.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values, and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analytes is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Prepared By Joshua Rains 6/23/2020

DESCRIPTION:

EPA-1613CVS is a series of 5 calibration solutions containing native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$ and $^{37}Cl_4$) chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components of each solution, and their concentrations, are given in Table A.

They were designed for, and prepared to be used according to, U.S. EPA Method 1613 (Revision B). They are to be used as received.

EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to EPA-1613CVS. Neither is required by the method, but either or both can be used to extend the calibration to lower levels.

The individual native PCDDs and PCDFs all have chemical purities of >98%. The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-Tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

ADDITIONAL INFORMATION:

- See page 3 for further details.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a series of standards for the identification and quantification of specific chemical compounds.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values, and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analytes is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

1613 CS4 CAL STD
Expires 10/24/2026
Prepared By Joshua Rains 6/23/2020

DESCRIPTION:

EPA-1613CVS is a series of 5 calibration solutions containing native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$ and $^{37}Cl_4$) chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components of each solution, and their concentrations, are given in Table A.

They were designed for, and prepared to be used according to, U.S. EPA Method 1613 (Revision B). They are to be used as received.

EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to EPA-1613CVS. Neither is required by the method, but either or both can be used to extend the calibration to lower levels.

The individual native PCDDs and PCDFs all have chemical purities of >98%. The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-Tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Table C: 7-point HRGC/HRMS Calibration and RRF Summary
Figure 1: HRGC/HRMS Data for EPA-1613CS3 (SIR; 10,000 mass resolving power)

ADDITIONAL INFORMATION:

- See page 3 for further details.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a series of standards for the identification and quantification of specific chemical compounds.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values, and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analytes is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

EPA-1613CVS

U.S. EPA Method 1613 Calibration and Verification Solutions
plus Supplemental Calibration Solutions EPA-1613CSL & EPA-1613CS0.5

PRODUCT CODES:	EPA-1613CVS	**LOT NUMBERS:**	(see below)
	EPA-1613CS1		13CS11019
	EPA-1613CS2		13CS21019
	EPA-1613CS3		13CS31019
	EPA-1613CS4		13CS41019
	EPA-1613CS5		13CS51019

Note: EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to this calibration set that must be ordered separately.

EPA-1613CS0.5	13CS0.51019
EPA-1613CSL	13CSL1019

SOLVENT(S):	Nonane/Toluene
DATE PREPARED: (mm/dd/yyyy)	10/22/2019
LAST TESTED: (mm/dd/yyyy)	10/24/2019
EXPIRY DATE: (mm/dd/yyyy)	10/24/2026
RECOMMENDED STORAGE:	Store ampoules in a cool, dark place

I005459
1613 CS5 CAL STD
Expires 10/24/2026
Prepared By Joshua Rains 6/23/2020

DESCRIPTION:

EPA-1613CVS is a series of 5 calibration solutions containing native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$ and $^{37}Cl_4$) chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components of each solution, and their concentrations, are given in Table A.

They were designed for, and prepared to be used according to, U.S. EPA Method 1613 (Revision B). They are to be used as received.

EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to EPA-1613CVS. Neither is required by the method, but either or both can be used to extend the calibration to lower levels.

The individual native PCDDs and PCDFs all have chemical purities of >98%. The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-Tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

ADDITIONAL INFORMATION:

- See page 3 for further details.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a series of standards for the identification and quantification of specific chemical compounds.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values, and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analytes is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

EXPIRY DATE: (mm/dd/yyyy)	10/24/2026
RECOMMENDED STORAGE:	Store ampoules in a cool, dark place

I005460
1613 CSL CAL STD
Expires 10/24/2026
Prepared By Joshua Rains 6/23/2020

DESCRIPTION:

EPA-1613CVS is a series of 5 calibration solutions containing native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$ and $^{37}Cl_4$) chlorinated dibenzo-p-dioxins (PCDDs) and dibenzofurans (PCDFs). The components of each solution, and their concentrations, are given in Table A.

They were designed for, and prepared to be used according to, U.S. EPA Method 1613 (Revision B). They are to be used as received.

EPA-1613CSL and EPA-1613CS0.5 are lower level extensions to EPA-1613CVS. Neither is required by the method, but either or both can be used to extend the calibration to lower levels.

The individual native PCDDs and PCDFs all have chemical purities of >98%. The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-$^{37}Cl_4$-Tetrachlorodibenzo-p-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

ADDITIONAL INFORMATION:

- See page 3 for further details.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a series of standards for the identification and quantification of specific chemical compounds.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values, and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analytes is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

DESCRIPTION:

EPA-1613PAR is a solution/mixture of all the 2,3,7,8-substituted polychlorinated dibenzo-*p*-dioxins (PCDDs) and dibenzofurans (PCDFs). The components and their concentrations are given in Table A.

EPA-1613PAR was designed and prepared to be used according to U.S. EPA Method 1613, Revision B.

The individual PCDDs and PCDFs all have chemical purities of >98%.

DOCUMENTATION/ DATA ATTACHED:

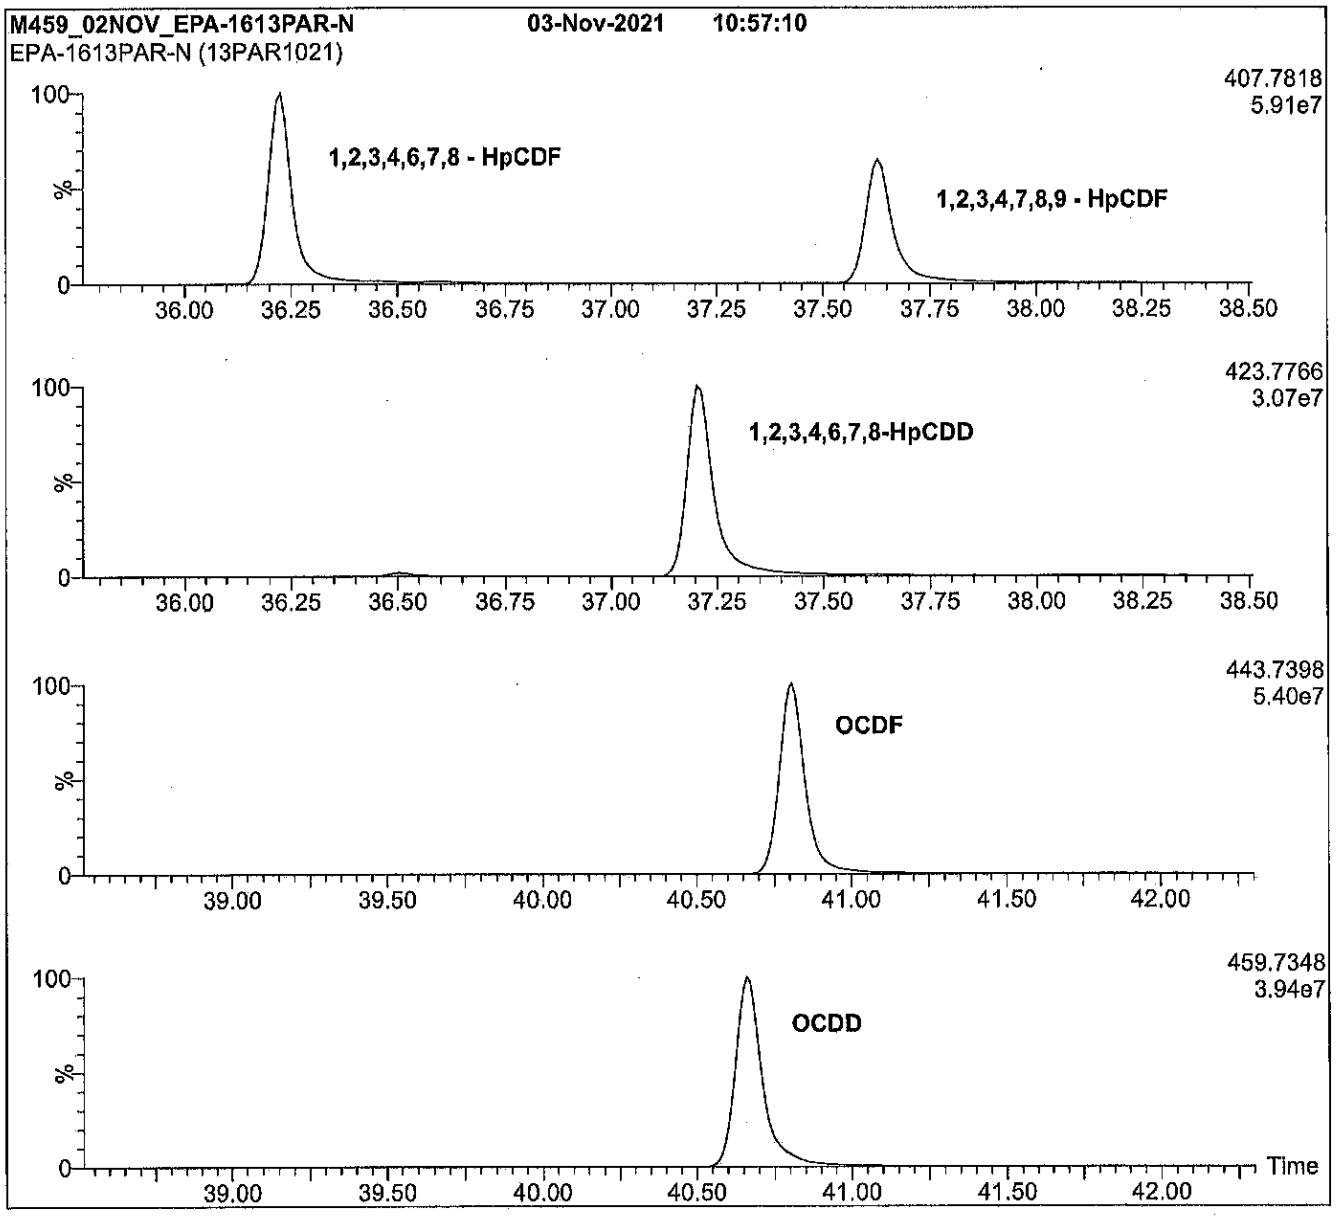
FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE



Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, ...x_n$ on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A1226), and ISO 17034 by ANSI National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ANSI National Accreditation Board ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

CS3WT

Calibration and Verification Solution (EPA-1613CS3) combined with Window Defining and 2,3,7,8-TCDD Resolution Testing Congeners

PRODUCT CODE:	CS3WT
LOT NUMBER:	CS3WT1021
SOLVENT(S):	Nonane/Toluene
DATE PREPARED: (mm/dd/yyyy)	11/01/2021
LAST TESTED: (mm/dd/yyyy)	11/02/2021
EXPIRY DATE: (mm/dd/yyyy)	11/02/2028
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

DESCRIPTION:

CS3WT is a solution/mixture of native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$) polychlorinated dibenzo-*p*-dioxins (PCDDs) and dibenzofurans (PCDFs). The components and their concentrations are given in Tables A and B.

CS3WT is an HRGC/HRMS calibration solution that was designed and prepared to be used according to U.S. EPA Method 1613, Revision B, in place of EPA-1613CS3 (lot: 13CS31021). Additionally, it contains the PCDD and PCDF isomers required to set retention time windows as well as test and establish isomer specificity for 2,3,7,8-TCDD on a DB-5 (or equivalent) capillary column.

The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-($^{37}Cl_4$)tetrachlorodibenzo-*p*-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%. The individual native 2,3,7,8-substituted PCDD and PCDF congeners all have chemical purities of >98%; the other congeners (window defining and resolution testing) should only be considered semi-quantitative.

This current lot of CS3WT is to be used with the 1613 calibration solutions having the following lot numbers:

PRODUCT CODE	LOT NUMBER
EPA-1613CS1	13CS11021
EPA-1613CS2	13CS21021
EPA-1613CS3	13CS31021
EPA-1613CS4	13CS41021
EPA-1613CS5	13CS51021
EPA-1613CSL	13CSL1021
EPA-1613CS0.5	13CS0.51021

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) has been assigned to the quantitative components in this product. A maximum combined percent relative uncertainty of ±20% has been assigned to the semi-quantitative components in this product.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EPA-1613CSS

U.S. EPA Method 1613 Cleanup Standard Spiking Solution

PRODUCT CODE:	EPA-1613CSS
LOT NUMBER:	13CSS1021
SOLVENT(S):	Nonane
DATE PREPARED: (mm/dd/yyyy)	10/29/2021
LAST TESTED: (mm/dd/yyyy)	10/31/2021
EXPIRY DATE: (mm/dd/yyyy)	10/31/2028
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

L 3420

DESCRIPTION:

EPA-1613CSS contains 2,3,7,8-($^{37}Cl_4$)tetrachlorodibenzo-*p*-dioxin at the concentration given in Table A.

EPA-1613CSS was designed and prepared to be used according to U.S. EPA Method 1613, Revision B.

2,3,7,8-($^{37}Cl_4$)Tetrachlorodibenzo-*p*-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%.

DOCUMENTATION/ DATA ATTACHED:

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 11/05/2021 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters x_1, x_2,...x_n on which it depends is:

$$u_c(y(x_1, x_2, ...x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

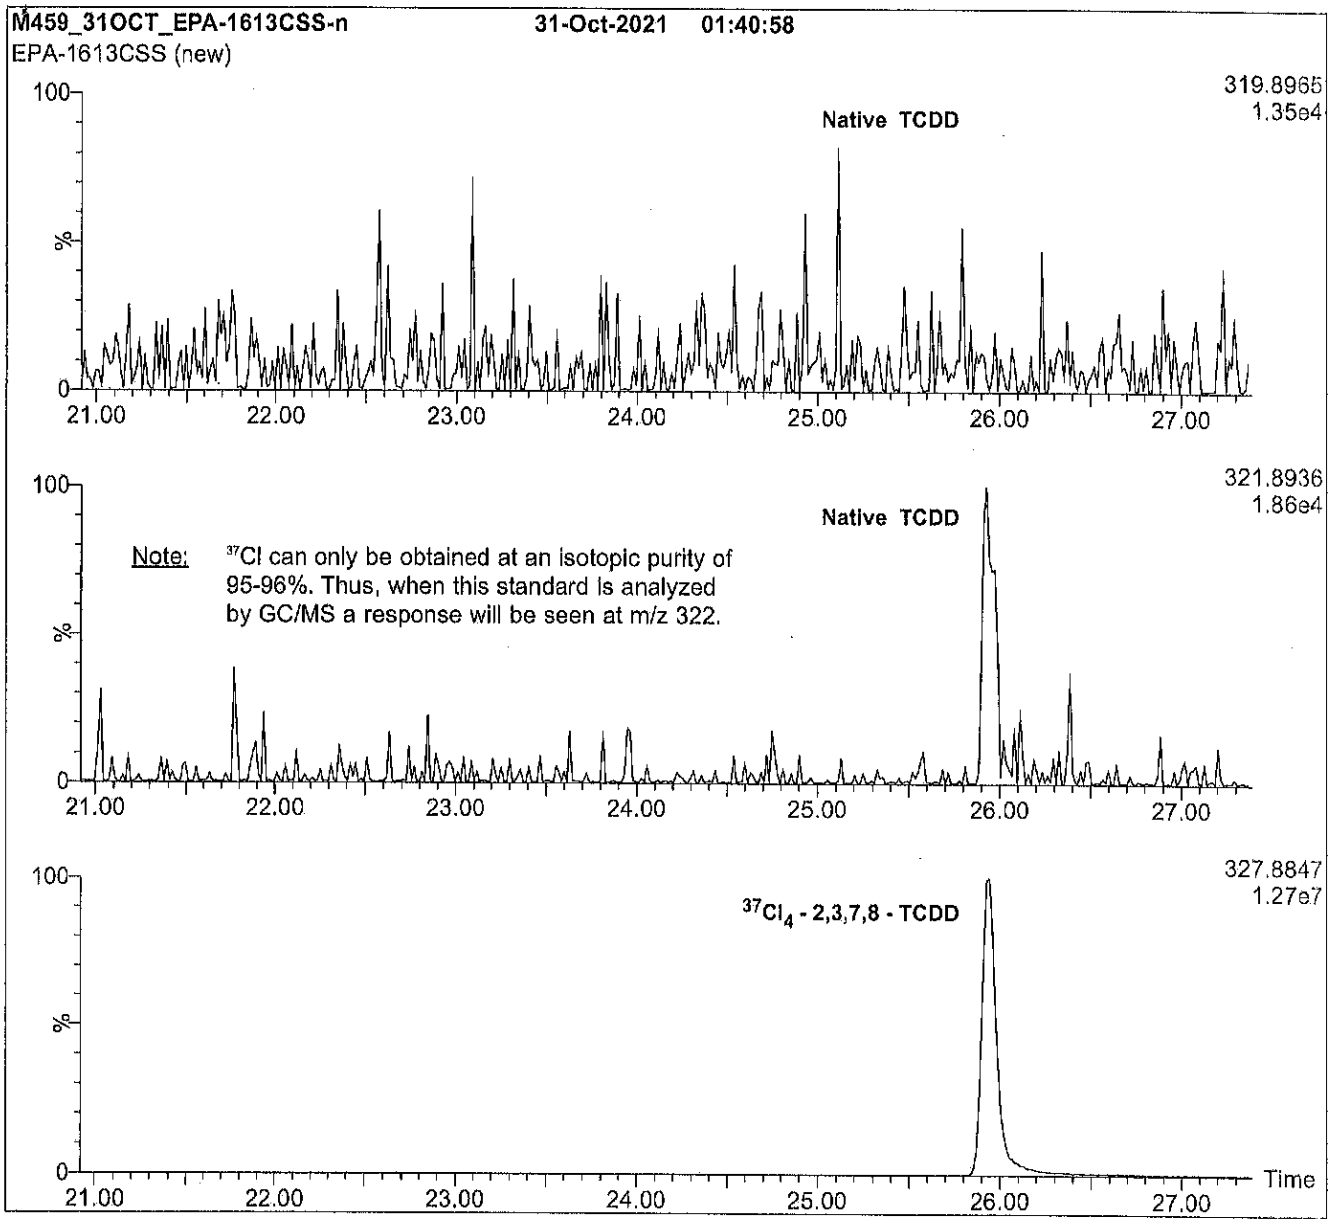
EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:



This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A1226), and ISO 17034 by ANSI National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ANSI National Accreditation Board ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

DESCRIPTION:

EPA-1613LCS is a solution/mixture of mass-labelled ($^{13}C_{12}$) polychlorinated dibenzo-*p*-dioxins (PCDDs) and dibenzofurans (PCDFs). The components and their concentrations are given in Table A.

EPA-1613LCS was designed and prepared to be used according to U.S. EPA Method 1613, Revision B.

The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%.

CS3WT

Calibration and Verification Solution (EPA-1613CS3) combined with Window Defining and 2,3,7,8-TCDD Resolution Testing Congeners

PRODUCT CODE:	CS3WT
LOT NUMBER:	CS3WT1021
SOLVENT(S):	Nonane/Toluene
DATE PREPARED: (mm/dd/yyyy)	11/01/2021
LAST TESTED: (mm/dd/yyyy)	11/02/2021
EXPIRY DATE: (mm/dd/yyyy)	11/02/2028
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

LOO 6734

DESCRIPTION:

CS3WT is a solution/mixture of native ($^{12}C_{12}$) and mass-labelled ($^{13}C_{12}$) polychlorinated dibenzo-*p*-dioxins (PCDDs) and dibenzofurans (PCDFs). The components and their concentrations are given in Tables A and B.

CS3WT is an HRGC/HRMS calibration solution that was designed and prepared to be used according to U.S. EPA Method 1613, Revision B, in place of EPA-1613CS3 (lot: 13CS31021). Additionally, it contains the PCDD and PCDF isomers required to set retention time windows as well as test and establish isomer specificity for 2,3,7,8-TCDD on a DB-5 (or equivalent) capillary column.

The individual ^{13}C-labelled PCDDs and PCDFs all have chemical purities of >98% and isotopic purities of ≥99%. The 2,3,7,8-($^{37}Cl_4$)tetrachlorodibenzo-*p*-dioxin has a chemical purity of >98% and an isotopic (^{37}Cl) purity of ≥95%. The individual native 2,3,7,8-substituted PCDD and PCDF congeners all have chemical purities of >98%; the other congeners (window defining and resolution testing) should only be considered semi-quantitative.

This current lot of CS3WT is to be used with the 1613 calibration solutions having the following lot numbers:

PRODUCT CODE	LOT NUMBER
EPA-1613CS1	13CS11021
EPA-1613CS2	13CS21021
EPA-1613CS3	13CS31021
EPA-1613CS4	13CS41021
EPA-1613CS5	13CS51021
EPA-1613CSL	13CSL1021
EPA-1613CS0.5	13CS0.51021

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA

DOCUMENTATION/ DATA ATTACHED:

Table A: Quantitative Components and Concentrations of the Solution/Mixture
Table B: Semi-Quantitative Components and Concentrations of the Solution/Mixture
Figure 1: HRGC/HRMS Data (SIR; 10,000 mass resolving power)

ADDITIONAL INFORMATION:

- See page 3 for further details.
- Only the 2,3,7,8-substituted PCDDs and PCDFs should be used for quantitation. The other congeners (window defining and 2,3,7,8-TCDD resolution testing) should be considered semi-quantitative (within ±20% of their design value). Impurities have been identified where possible.

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) has been assigned to the quantitative components in this product. A maximum combined percent relative uncertainty of ±20% has been assigned to the semi-quantitative components in this product.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A1226), and ISO 17034 by ANSI National Accreditation Board (ANAB; AR-1523).

CALA Testing Accreditation No. A1226

ANAB ANSI National Accreditation Board ACCREDITED ISO 17034 REFERENCE MATERIAL PRODUCER

For additional information or assistance concerning this or any other products from Wellington Laboratories Inc., please visit our website at www.well-labs.com or contact us directly at info@well-labs.com

Dear Ms Osterhout:

Included are the results from the testing of material submitted on August 16, 2023 from the PKG-Smith Kem, F&BI 308255 project. There are 16 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

CASE NARRATIVE

This case narrative encompasses samples received on August 16, 2023 by Friedman & Bruya, Inc. from the Floyd-Snider PKG-Smith Kem, F&BI 308255 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Floyd-Snider
308255 -01	MW-1-081523
308255 -02	MW-2-081523
308255 -03	MW-6-081623
308255 -04	MW-10-081523

Samples MW-1-081523, MW-2-081523, and MW-10-081523 were sent to Fremont Analytical for alkalinity, total aluminum, and TOC analyses. The report is enclosed.

The 8260D acetone and 2-hexanone calibration standard exceeded the acceptance criteria. The compounds were not detected, therefore this did not represent an out of control condition.

All quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

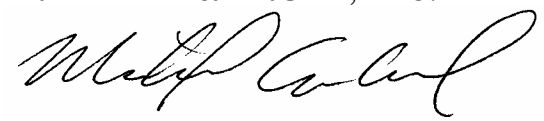
Pamela Osterhout, Project Manager
Floyd-Snider
Two Union Square
601 Union St, Suite 600
Seattle, WA 98101



Dear Ms Osterhout:

Included are the additional results from the testing of material submitted on September 8, 2023 from the Smith Kem, F&BI 309097 project. There are 5 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 8, 2023 by Friedman & Bruya, Inc. from the Floyd-Snider Smith Kem, F&BI 309097 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Floyd-Snider
309097 -01	AOC5-01-06-6.5
309097 -02	AOC5-01-07
309097 -03	AOC5-04-05-06
309097 -04	AOC5-04-08-09
309097 -05	AOC5-04-11-12
309097 -06	AOC5-04-14-15
309097 -07	AOC4-03-2.0
309097 -08	AOC4-103-2.0
309097 -09	AOC4-03-6.5
309097 -10	AOC4-03-7.0
309097 -11	AOC4-04-2.5
309097 -12	AOC4-02-2.5
309097 -13	AOC4-02-8.5
309097 -14	AOC4-02-9.5
309097 -15	AOC2-04-6.0
309097 -16	AOC2-04-8.5
309097 -17	AOC2-04-9.5
309097 -18	AOC2-03-6.5
309097 -19	AOC2-03-8.5

All quality control requirements were acceptable.

Analysis for TCLP Metals By EPA Method 6020B and 1311

Project: Smith Kem, F&BI 309097

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF SOIL/SOLID SAMPLES FOR TCLP METALS USING EPA METHODS 6020B AND 1311

Laboratory Code: 310414-01 (Matrix Spike)

Analyte	Reporting Units	Spike Level	Sample Result	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Lead	mg/L (ppm)	1.0	<1	89	92	75-125	3

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Lead	mg/L (ppm)	1.0	92	80-120

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Seattle, WA 98101

Dear Ms Osterhout:

Included are the results from the testing of material submitted on September 8, 2023 from the Smith Kem, F&BI 309097 project. There are 11 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Date of Report: 09/26/23
Date Received: 09/08/23
Project: Smith Kem, F&BI 309097

QUALITY ASSURANCE RESULTS FROM THE ANALYSIS OF SOIL SAMPLES FOR TOTAL PETROLEUM HYDROCARBONS AS DIESEL EXTENDED USING METHOD NWTPH-Dx

Laboratory Code: 309120-07 (Matrix Spike)

Analyte	Reporting Units	Spike Level	(Wet wt) Sample Result	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Diesel Extended	mg/kg (ppm)	5,000	<50	94	96	64-136	2

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Diesel Extended	mg/kg (ppm)	5,000	92	78-121

Date of Report: 09/26/23
Date Received: 09/08/23
Project: Smith Kem, F&BI 309097

QUALITY ASSURANCE RESULTS FROM THE ANALYSIS OF SOIL SAMPLES FOR TOTAL PETROLEUM HYDROCARBONS AS DIESEL EXTENDED USING METHOD NWTPH-Dx

Laboratory Code: 309174-01 (Matrix Spike)

Analyte	Reporting Units	Spike Level	(Wet wt) Sample Result	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Diesel Extended	mg/kg (ppm)	5,000	<50	102	104	64-136	2

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Diesel Extended	mg/kg (ppm)	5,000	108	78-121

Date of Report: 09/26/23
Date Received: 09/08/23
Project: Smith Kem, F&BI 309097

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF SOIL SAMPLES FOR TOTAL METALS USING EPA METHOD 6020B

Laboratory Code: 309098-01 x5 (Matrix Spike)

Analyte	Reporting Units	Spike Level	Sample Result (Wet wt)	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Lead	mg/kg (ppm)	50	<5	95	102	75-125	7

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Lead	mg/kg (ppm)	50	96	80-120

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

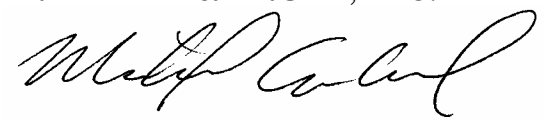
Pamela Osterhout, Project Manager
Floyd-Snider
Two Union Square
601 Union St, Suite 600
Seattle, WA 98101



Dear Ms Osterhout:

Included are the additional results from the testing of material submitted on December 15, 2023 from the Smith Kem, F&BI 312274 project. There are 4 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 15, 2023 by Friedman & Bruya, Inc. from the Floyd-Snider Smith Kem, F&BI 312274 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Floyd-Snider
312274 -01	AOC4-09-5.5-6.0
312274 -02	AOC4-09-7.0
312274 -03	AOC4-09-8.5
312274 -04	AOC2-11-6.0-6.5
312274 -05	AOC2-11-7.5
312274 -06	AOC2-12-6.5
312274 -07	AOC2-12-8.5-9.5
312274 -08	AOC2-12-10.0
312274 -09	AOC2-13-6.5
312274 -10	AOC2-13-7.5
312274 -11	AOC2-13-10.0
312274 -12	AOC2-14-6.0-6.5
312274 -13	AOC2-14-8.5
312274 -14	AOC2-14-9.0
312274 -15	AOC2-15-6.0-6.5
312274 -16	AOC2-16-6.5
312274 -17	AOC2-16-8.5
312274 -18	AOC2-17-6.5
312274 -19	AOC2-17-8.5
312274 -20	AOC2-15-7.5

The NWTPH-Dx analysis of sample AOC2-17-6.5 was requested outside of the holding time. The data were flagged accordingly.

All other quality control requirements were acceptable.

Date of Report: 01/05/24
Date Received: 12/15/23

QUALITY ASSURANCE RESULTS FROM THE ANALYSIS OF SOIL SAMPLES FOR TOTAL PETROLEUM HYDROCARBONS AS DIESEL EXTENDED USING METHOD NWTPH-Dx

Laboratory Code: 401013-01 (Matrix Spike)

Analyte	Reporting Units	Spike Level	(Wet wt) Sample Result	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Diesel Extended	mg/kg (ppm)	5,000	3,900	100	110	64-136	10

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Diesel Extended	mg/kg (ppm)	5,000	90	78-121

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Two Union Square
601 Union St, Suite 600
Seattle, WA 98101

Dear Ms Osterhout:

Included are the results from the testing of material submitted on December 15, 2023 from the Smith Kem, F&BI 312274 project. There are 7 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 15, 2023 by Friedman & Bruya, Inc. from the Floyd-Snider Smith Kem, F&BI 312274 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Floyd-Snider
312274 -01	AOC4-09-5.5-6.0
312274 -02	AOC4-09-7.0
312274 -03	AOC4-09-8.5
312274 -04	AOC2-11-6.0-6.5
312274 -05	AOC2-11-7.5
312274 -06	AOC2-12-6.5
312274 -07	AOC2-12-8.5-9.5
312274 -08	AOC2-12-10.0
312274 -09	AOC2-13-6.5
312274 -10	AOC2-13-7.5
312274 -11	AOC2-13-10.0
312274 -12	AOC2-14-6.0-6.5
312274 -13	AOC2-14-8.5
312274 -14	AOC2-14-9.0
312274 -15	AOC2-15-6.0-6.5
312274 -16	AOC2-16-6.5
312274 -17	AOC2-16-8.5
312274 -18	AOC2-17-6.5
312274 -19	AOC2-17-8.5
312274 -20	AOC2-15-7.5

All quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: PKG Smith Kem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory August 17, 2023
For your reference, these analyses have been assigned our service request number **K2309259.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Steroids and Endocrine Disrupting Compounds

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Date Received: 08/17/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Two water samples were received for analysis at ALS Environmental on 08/17/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

No significant anomalies were noted with this analysis.

Subcontracted Analytical Parameters:

No significant anomalies were noted with this analysis.

Organic LC:

Method 1694M, 08/24/2023:The internal standard recovery of Atrazine-C13 in both samples was outside control criteria due to suspected matrix interference. The samples were analyzed at a dilution with acceptable results. All analytes were reported from the diluted analysis. The reporting limits were elevated to reflect the dilution. No further corrective action was taken.

Received: 8-17-23 Opened: 8-17-23 By: DS Unloaded: 8-17-23 By: DS

1. Samples were received via? USPS (Fed Ex) UPS DHL PDX Courier Hand Delivered
2. Samples were received in: (circle) (Cooler) Box Envelope Other _____ NA
3. Were custody seals on coolers? NA (Y) N If yes, how many and where? 1 Front
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (Y) N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
7.0	5.6	IR02				773076619300	
		~~IR07~~				773074806572 DS	

4. Was a Temperature Blank present in cooler? NA (Y) N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA (Y) N
   If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. (NA) Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* *Baggies* *Bubble Wrap* (*Gel Packs*) (*Wet Ice*) *Dry Ice* *Sleeves* _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Were samples received in good condition (unbroken) NA (Y) N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA (Y) N
10. Did all sample labels and tags agree with custody papers? NA Y (N)
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* (NA) Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
14. Was C12/Res negative? (NA) Y N
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM (NA) Y N
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? (NA) Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, Resolutions: Temp was further away from IR gun. Received 3 out of 6 on both samples.

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2310173.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Client: Floyd Snider
Project: SmithKem
Sample Matrix: Soil

Service Request: K2310173
Date Received: 09/12/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Twenty soil samples were received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B, 10/16/2023:The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 4,4'-DDD. The results were reported from the column with an acceptable CCV KQ2318448-05. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/17/2023:The recoveries for all surrogates in sample AOC1-09-08 were 0%. A re-extraction and re-analysis was performed. The recoveries for the surrogates were acceptable for the second extract. The results for both analyses were reported. No further corrective action was required.

Method 8081B, 10/31/2023:The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for cis-Nonachlor. The results were reported from the column with an acceptable CCV KQ2319283-05. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/30/2023:The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 4,4'-DDT and cis-Nonachlor. The results were reported from the column with an acceptable CCV KQ2319283-02. The data quality was not affected. No further corrective action was necessary.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Toxaphene	ND U	798	966	83	783	882	89	16-114	2	40

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

QA/QC Report

Client:	Floyd Snider	**Service Request:**	K2310173
Project:	SmithKem	**Date Analyzed:**	10/13/23 18:19
Sample Matrix:	Soil	**Date Extracted:**	09/14/23

Lab Control Sample Summary
Low Level Organochlorine Pesticides by GC

Sample Name:	Lab Control Sample	**Instrument ID:**	K-GC-22
Lab Code:	KQ2316059-08	**File ID:**	J:\GC22\DATA\101323A\1013F011.D\
Analysis Method:	8081B	**Analysis Lot:**	820939,821228,821606
Prep Method:	EPA 3546	**Extraction Lot:**	426417

This Lab Control Sample applies to the following analyses.

Floyd Snider
601 Union Street, Suite 600
Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2310181.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

ALS Environmental

Client: Floyd Snider
Project: SmithKem
Sample Matrix: Soil

Service Request: K2310181
Date Received: 09/12/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Twenty soil samples were received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B:The analysis of method EPA 8081 requires the use of dual column confirmation. When the Initial Calibration Verification (ICV) criteria are met for both columns, the higher of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 4,4'-DDT. The ICV results were reported from the acceptable column. The data quality was not affected. No further corrective action was necessary.

Method 8081B, 10/13/2023:The analysis of method EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 2,4'-DDE or 2,4'-DDD in CCVs KQ2318580 -02/-05. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.

Method 8081B, 10/13/2023: The detection limit was elevated for cis-Chlordane in sample AOC4-03-2.0. The chromatogram indicated the presence of non-target background components. The matrix interference prevented adequate resolution of the target compound at the normal limit. The result was flagged to indicate the matrix interference.

Method 8081B, 10/13/2023:The analysis of method EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for Tetrachloro-m-xylene in CCV KQ2318580-05. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.

Method 8081B, 10/13/2023: The lower control criterion was exceeded for 2,4'-DDT in Continuing Calibration Verification (CCV) KQ2318580-05. The problem indicated a potential low bias for results reported from this analytical batch. The analyte in question was not detected in the associated field samples. Additional analysis of the associated field samples was performed and produced similar results. The results of the original analysis were reported. The data was flagged to indicate the problem.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Analytical Report for Service Request No: K2310183
Revised Service Request No: K2310183.01

Pamela Osterhout
Floyd Snider
601 Union Street, Suite 600
Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2310183.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Table of Contents

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

ALS Environmental

Client: Floyd Snider
Project: SmithKem
Sample Matrix: Soil

Service Request: K2310183
Date Received: 09/12/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Twenty soil samples were received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B, 10/13/2023:The analysis of EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for cis-Nonachlor. The results were reported from the column with an acceptable CCV KQ2318307-02, -05, -08. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/14/2023:The upper control criterion was exceeded for cis-Nonachlor in Continuing Calibration Verification (CCV) KQ2318307-08. Sample AOC2-01-4.0, analyzed in this sequence did not contain the analyte in question. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.

Method 8081B, 10/14/2023: Samples AOC1-03-2.0 and AOC1-04-2.0 required dilution due to the presence of elevated levels of several target analytes. In accordance with client instructions, all results from the undiluted and diluted analyses are reported. The reporting limits are adjusted to reflect the dilution.
Method 8081B, 10/18/2023: The detection limit was elevated for cis-Nonachlor in sample AOC1-04-4.0. The chromatogram indicated the presence of non-target background components. The matrix interference prevented adequate resolution of the target compounds at the normal limit. The results were flagged to indicate the matrix interference.

Method 8081B, 10/18/2023: The detection limit was elevated for several analytes in the diluted analysis of samples AOC1-03-2.0 and AOC1-04-2.0. The chromatogram indicated the presence of non-target background components. The analytes in question exhibited poor peak resolution or poor peak separation. The matrix interference prevented adequate resolution of the target compounds at the normal limit. The results were flagged to indicate the matrix interference.
Method 8081B, 10/18/2023: The analysis of method EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for cis-Nonachlor and 2,4-DDT. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.

Approved by Noe D. Dave Date 01/11/2024

Client Pamela Osterhout Service Request K23 10183

Received: 9/12/23 Opened: 9/12/23 By: AR Unloaded: 9/12/23 By: AR

1. Samples were received via? *USPS* (*Fed Ex*) *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA (N) N If yes, how many and where? 1 Front
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (N) N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
4.2	5.0	1801	1 of 3			773374221969	
4.7	-	1801	2 of 3			773374227807	
3.1	3.4	1801	3 of 3			773374227900	

4. Was a Temperature Blank present in cooler? NA (Y) N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA (Y) N
   If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. (NA) Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* (*Baggies*) (*Bubble Wrap*) *Gel Packs* (*Wet Ice*) *Dry Ice* *Sleeves* _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Were samples received in good condition (unbroken) NA (Y) N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA (Y) N
10. Did all sample labels and tags agree with custody papers? NA (Y) N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* (NA) Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
14. Was C12/Res negative? (NA) Y N
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM (NA) Y N
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? (NA) Y N Underfilled Overfilled

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2310186.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Sample Matrix: Soil

Service Request: K2310186
Date Received: 09/12/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Twenty two soil samples were received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B, 10/14/2023:The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for cis-Nonachlor. The results were reported from the column with an acceptable CCV KQ2318307-02, -05, -08. The data quality was not affected. No further corrective action was necessary.

Approved by _____ Date 01/11/2024

Cooler Receipt and Preservation Form

Client Pamela Osterhout Service Request K23 10186

Received: 9/12/23 Opened: 9/12/23 By: AR Unloaded: 9/12/23 By: AR

1. Samples were received via? *USPS* (*Fed Ex*) *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other*_____ *NA*
3. Were custody seals on coolers? NA (Y) N If yes, how many and where? 1 front
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (Y) N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
4.2	5.0	IR01	1 of 3			773374221969	
4.7	-	IR01	2 of 3			773374227807	
3.1	3.4	IR01	3 of 3			773374227900	

4. Was a Temperature Blank present in cooler? NA (Y) N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA (Y) N
   If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. (NA) Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* (*Baggies*) (*Bubble Wrap*) *Gel Packs* (*Wet Ice*) *Dry Ice* *Sleeves* _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Were samples received in good condition (unbroken) NA (Y) N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA (Y) N
10. Did all sample labels and tags agree with custody papers? NA (Y) N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* (NA) Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
14. Was C12/Res negative? (NA) Y N
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM (NA) Y N
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? (NA) Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

QA/QC Report

Client:	Floyd Snider	**Service Request:**	K2310186
Project:	SmithKem	**Date Analyzed:**	10/13/23 23:57
Sample Matrix:	Soil	**Date Extracted:**	09/15/23

Lab Control Sample Summary
Low Level Organochlorine Pesticides by GC

Sample Name:	Lab Control Sample	**Instrument ID:**	K-GC-38
Lab Code:	KQ2316147-09	**File ID:**	J:\GC38\DATA\101323\1013F012.D\
Analysis Method:	8081B	**Analysis Lot:**	820774
Prep Method:	EPA 3546	**Extraction Lot:**	426498

This Lab Control Sample applies to the following analyses.

Sample Name	Lab Code	File ID	Date Analyzed
Method Blank	KQ2316147-10	J:\GC38\DATA\101323\1013F009.D\	10/13/23 21:52

Analytical Report for Service Request No: K2310188
Revised Service Request No: K2310188.01

Pamela Osterhout
Floyd Snider
601 Union Street, Suite 600
Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2310188.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Table of Contents

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Steroids and Endocrine Disrupting Compounds
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

ALS Environmental

Client: Floyd Snider
Project: SmithKem
Sample Matrix: Soil

Service Request: K2310188
Date Received: 09/12/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Nineteen soil samples were received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B, 10/17/2023: The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for cis-Nonachlor in CCV KQ2319084-05. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/17/2023: The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 2,4'-DDT in CCV KQ2319084-08. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/16/2023: The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 4,4'-DDE, cis-Nonachlor, and Decachlorobiphenyl in CCV KQ2319084-02. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/17/2023: The detection limit was elevated for cis-Nonachlor in sample AOC2-07-2.0. The chromatogram indicated the presence of non-target background components. The chromatogram exhibited poor peak shape for the analyte in question. The matrix interference prevented adequate resolution of the target compound at the normal limit. The result was flagged to indicate the matrix interference.
Method 8081B, 10/17/2023: The control criteria were exceeded for Decachlorobiphenyl in the undiluted analysis of sample AOC2-08-2.0 due to matrix interference. The presence of non-target background components prevented adequate resolution of the surrogate. The sample in question was reanalyzed at multiple dilution levels, but produced similar results. Accurate quantitation was not possible. No further corrective action was appropriate.

Method 8081B, 10/17/2023: The result for several target analytes in sample AOC2-08-2.0 was above the range of the associated calibration in the undiluted analysis. The sample was also reanalyzed at multiple dilution levels to bring the analytes within the range of the associated calibration. In accordance with client instructions, all results from each injection are reported. The results above the range of the calibration were flagged with "E" to indicate the issue.

Method 8081B, 10/30/2023: The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for Tetrachloro-m-xylene in CCV KQ2319327-02. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/30/2023: CCV KQ2319327-02 was not not spiked with all target analytes. The CCV was processed with the spike list that included Dieldrin because it is the only analyte scheduled for 200X dilution. Dieldrin was above ICAL range on one column for both 100X analyses.

Approved by Noe D. Dan Date 01/11/2024

Method 8081B, 10/28/2023: The analysis of sample AOC2-08-2.0 for all compounds was initially performed within the recommended holding time. Reanalysis at dilutions was required. The re-analyses were performed 3-5 days past the recommended holding time. In accordance with client instructions, all results from each injection are reported.
Method 8081B, 10/30/2023: The analysis of Chlorinated Pesticides by EPA 8081B requires the use of dual column confirmation. When the Continuing Calibration Verification (CCV) criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for 2,4'-DDE, cis-Nonachlor, and 4,4'-DDT in CCV KQ2319283-02. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.
Method 8081B, 10/28/2023: CCV KQ2319283-02 was not not spiked with all target analytes. The CCV was processed with the spike list for all analytes requiring a 10X dilution for sample AOC2-08-2.0. Several analytes requiring a 100X dilution for sample AOC2-08-2.0 are not included. The 100X was re-analyzed 10/30/23 with a CCV spiked with all target analytes.

Organic LC:
Method 1694M, 09/27/2023: All samples were received past holding time. The analysis was performed as soon as possible after receipt by the laboratory. The data was flagged to indicate the holding time violation.

Approved by Noe D. Diaz Date 01/11/2024

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Cooler Receipt and Preservation Form

Client Pamela Osterhout Service Request K23 10188

Received: 9/12/23 Opened: 9/12/23 By: AR Unloaded: 9/12/23 By: AP

1. Samples were received via? *USPS* (*Fed Ex*) *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA (Y) N If yes, how many and where? 1 front
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (Y) N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
4.2	5.0	IR01	1 of 3			7733 7422 1969	
4.7	-	IR01	2 of 3			7733 7422 7807	
3.1	3.4	IR01	3 of 3			7733 7422 7900	

4. Was a Temperature Blank present in cooler? NA (Y) N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA (Y) N
   If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. (NA) Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* (*Baggies*) (*Bubble Wrap*) *Gel Packs* (*Wet Ice*) *Dry Ice* *Sleeves* _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Were samples received in good condition (unbroken) NA (Y) N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA (Y) N
10. Did all sample labels and tags agree with custody papers? NA (Y) N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* (NA) Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
14. Was C12/Res negative? (NA) Y N
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM (NA) Y N
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? (NA) Y N Underfilled Overfilled

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Analytical Report for Service Request No: K2312104
Revised Service Request No: K2312104.01

Pamela Osterhout
Floyd Snider
601 Union Street, Suite 600
Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed is the revised report for the sample(s) submitted to our laboratory September 12, 2023 For your reference, these analyses have been assigned our service request number **K2312104.**

The report has been revised to Level III.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Acronyms
Qualifiers
State Certifications, Accreditations, And Licenses
Case Narrative
Chain of Custody
Total Solids
Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

One soil sample was received for analysis at ALS Environmental on 09/12/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8081B, 10/31/2023:Sample AOC1-03-4.0 required dilution due to the presence of elevated levels of target analyte. The reporting limits are adjusted to reflect the dilution.

Approved by Noe D. Diaz Date 01/11/2024

Analytical Report for Service Request No: K2314243

Pamela Osterhout
Floyd Snider
601 Union Street, Suite 600
Seattle, WA 98101

RE: SmithKem

Dear Pamela,

Enclosed are the results of the sample(s) submitted to our laboratory December 19, 2023
For your reference, these analyses have been assigned our service request number **K2314243.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Mark Harris
Project Manager

Low Level Organochlorine Pesticides by GC

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Sample Matrix: Soil

Service Request: K2314243
Date Received: 12/19/2023

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier III level requested by the client.

Sample Receipt:

Five soil samples were received for analysis at ALS Environmental on 12/19/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

No significant anomalies were noted with this analysis.

Cooler Receipt and Preservation Form

Client Floyd Snyder Service Request K23 14243

Received: 12/19/23 Opened: 12/19/23 By: AP Unloaded: 12/19/23 By: AP

1. Samples were received via? *USPS* (*Fed Ex*) *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) (*Cooler*) *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA (Y) N If yes, how many and where? 1 Right 1 left
   If present, were custody seals intact? (Y) N If present, were they signed and dated? (Y) N

Temp Blank	Sample Temp	IR Gun	Cooler #/COC ID / NA	Out of temp Indicate with "X"	PM Notified If out of temp	Tracking Number NA	Filed
2.9	2.3	IR06				774524544704	

4. Was a Temperature Blank present in cooler? NA (Y) N If yes, notate the temperature in the appropriate column above:
   If no, take the temperature of a representative sample bottle contained within the cooler; notate in the column "Sample Temp":
5. Were samples received within the method specified temperature ranges? NA (Y) N
   If no, were they received on ice and same day as collected? If not, notate the cooler # above and notify the PM. (NA) Y N

If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*

6. Packing material: *Inserts* *Baggies* (*Bubble Wrap*) *Gel Packs* (*Wet Ice*) *Dry Ice* *Sleeves* _____
7. Were custody papers properly filled out (ink, signed, etc.)? NA (Y) N
8. Were samples received in good condition (unbroken) NA (Y) N
9. Were all sample labels complete (ie, analysis, preservation, etc.)? NA (Y) N
10. Did all sample labels and tags agree with custody papers? NA (Y) N
11. Were appropriate bottles/containers and volumes received for the tests indicated? NA (Y) N
12. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* (NA) Y N
13. Were VOA vials received without headspace? *Indicate in the table below.* (NA) Y N
14. Was C12/Res negative? (NA) Y N
15. Were samples received within the method specified time limit? If not, notate the error below and notify the PM (NA) Y N
16. Were 100ml sterile microbiology bottles filled exactly to the 100ml mark? (NA) Y N Underfilled Overfilled

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

QC	Quality control
SDG	Sample delivery group
SM	Standard Methods
TPH	Total petroleum hydrocarbons
USEPA	U.S. Environmental Protection Agency
VOC	Volatile organic compound

1.0 Project Narrative

1.1 OVERVIEW OF DATA VALIDATION

This report summarizes the results of the Compliance Screening (USEPA Stage 2A and Stage 2B) performed on the sample data for the Pre-Remedial Design Investigation Phase 1 Groundwater sampling event. A complete list of sample IDs provided in the Project Sample Index Table (Attachment 1).

A total of 4 groundwater samples were collected August 15 and 16, 2023. Samples were submitted to Friedman and Bruya, Inc. (FBI) in Seattle, Washington; ALS Environmental (ALS) in Kelso, Washington; and Analytical Resources, LLC (ARL) in Tukwila, Washington. Analytical results were submitted by FBI, ALS, and ARL under three sample delivery groups (SDGs): 308255, K2309259, and 23H0253. The following analytical parameters were reviewed in this validation:

- Metals—U.S. Environmental Protection Agency (USEPA) Method 200.8
- Hardness by USEPA 2340B
- Pesticides—USEPA Method 8081B and 1694 modified
- Volatile organic compounds (VOCs)—USEPA Method 8260D
- Total petroleum hydrocarbons (TPH)—NWTPH-Dx/NWTPH-Gx
- Alkalinity by Standard Methods (SM) 2320B
- Total organic carbon by SM 5310C

The data were reviewed using guidance and quality control (QC) criteria documented in the Remedial Investigation Work Plan (Floyd|Snider 2016), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (USEPA 1986), *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a), and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b).

Floyd|Snider's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes, but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. When compounds are analyzed at multiple dilutions or by multiple analysis methods, select results will be assigned a Do Not Report (DNR) qualifier because a more appropriate result will be reported from another dilution or analysis method. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents previously referenced.

Data qualifiers and data qualifier definitions are included in Attachment 2. The Qualified Data Summary Table is included as Attachment 3.

This page intentionally left blank.

2.0 Data Validation Report

This report documents the review of analytical data for the analyses of water samples and the associated field and laboratory QC samples. A USEPA Stage 2B Compliance Screening was performed on pesticide data and a USEPA Stage 2A Compliance Screening was performed on all other analytical data by Cheronne Oreiro as the primary data reviewer, and secondary review was performed by Chell Black.

2.1 DATA PACKAGE COMPLETENESS

The laboratories submitted all required deliverables and followed adequate corrective action processes, and all anomalies were discussed in the laboratory report case narrative.

2.2 TECHNICAL DATA VALIDATION

Field and laboratory QC requirements that were reviewed are listed in the following sections, and unless noted, laboratory results for samples listed in Attachment 1 were within QC criteria.

2.2.1 Cooler Temperatures and Sample Preservation

All samples were appropriately preserved and received within the required temperature range.

2.2.2 Reporting Limits and Reported Results

All laboratory qualified results detected between the method detection limit and the reporting limit (RL) were qualified as “J” to indicate they are estimated.

2.2.3 Extraction and Analysis Holding Times

All samples were extracted and analyzed within recommended holding times.

2.2.4 Initial and Continuing Calibrations (Pesticides)

All initial and continuing calibrations were within control limits.

2.2.5 Internal Standards (Pesticides)

All internal standards were within control limits.

2.2.6 Method Blanks

All method blanks were free of detections.

2.2.7 Surrogates

All surrogates recovered within laboratory control limits.

2.2.8 Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCSs) and LCS duplicates (LCSDs) were analyzed at the required project frequencies. All LCS/LCSD recoveries and associated relative percent difference (RPD) values were within control limits with the following exceptions:

SDG 308255

- VOCs: The acetone and 2-butanone LCS and LCSD recovered below the control limit. Associated sample results were non-detect, so no data were qualified.

SDG 23H0523

- Pesticides: The aldrin and trans-chlordane LCS and all LCSD analytes recovered below the control limits. Associated sample results were qualified "J" or "UJ" to indicate they are estimated.

Refer to Attachment 3 for a summary for qualified results.

2.2.9 Matrix Spike and Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies, and MS and MSD analyses conducted on non-project samples were not included in this evaluation. No data were qualified if the sample result was greater than 4 times the spike concentration. Most MS and MSD recoveries were within project-required control limits except for the acetone MS analyzed on sample MW-1-081523, which recovered below the control limit. The associated parent sample result was qualified "UJ" to indicate the result is estimated.

Refer to Attachment 3 for a summary for qualified results.

2.2.10 Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or in place of MSDs. Laboratory duplicate analyses conducted on non-project samples were not included in this evaluation. Parent sample and laboratory duplicate results less than 5 times the RL may have exaggerated RPD values. Therefore, if the sample or duplicate results were less than 5 times the RL, the results were evaluated using the absolute value of the difference between the concentrations using the RL as the control limit. All duplicate RPDs and difference values were within control limits.

2.2.11 Dual Column Confirmation (Pesticides)

All dual column confirmation RPD values were within control limits with the following exceptions:

SDG 23H0523

- Pesticides: The laboratory flagged select pesticide results to indicate dual column RPDs were above the method control limit. Sample results were qualified "J" to indicate they are estimated.

Refer to Attachment 3 for a summary of qualified data.

2.2.12 Analyte Quantitation (Pesticides)

The laboratory flagged select pesticide results in sample MW-1-081523 “E” to indicate the analyte concentrations exceed the calibration range of the instrument. The sample was reanalyzed at a dilution and all analytes were reported from the dilution, with the exception of trans-nonachlor, which was reported from the initial analysis. Initial results that were not reported were qualified as “DNR.”

The laboratory flagged select pesticide results in sample MW-6-081523 “E” to indicate the analyte concentrations exceed the calibration range of the instrument. The sample was reanalyzed at a dilution and all analytes were reported from the dilution. Initial results for all analytes were qualified as “DNR.”

Refer to Attachment 3 for a summary of qualified data.

2.3 OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable, as demonstrated by the MS, MSD, LCS, and LCSD percent recovery values. Precision was acceptable, as demonstrated by the MS/MSD, and laboratory duplicate RPD or difference values.

All data are acceptable for use as reported or qualified; refer to Attachment 3 for a summary of qualified results.

1.0 Project Narrative

1.1 OVERVIEW OF DATA VALIDATION

This report summarizes the results of the Compliance Screenings (USEPA Stage 2A and USEPA Stage 2B) performed on the sample data for the Pre-Remedial Design Investigation Phase 1 Drilling sampling event. A complete list of sample IDs is provided in the Project Sample Index Table (Attachment 1).

A total of 59 soil samples and 4 field duplicate samples were collected September 5, 6, and 7, 2023. Samples were submitted to Friedman and Bruya, Inc. (FBI) in Seattle, Washington; ALS Environmental (ALS) in Kelso, Washington; and Pacific Agricultural Laboratory in Sherwood, Oregon. Analytical results were submitted by the laboratories under sample delivery groups (SDGs) 309097, K2310173, K2310181, K2310183, K2310186, K2310188, K2312104, and P232142. The following analytical parameters were reviewed in this validation:

- Metals—U.S. Environmental Protection Agency (USEPA) Method 6020
- Pesticides—USEPA Method 8081B, 1649 modified, and 8321B modified
- Total petroleum hydrocarbons (TPH)—NWTPH-Dx
- Percent solids—USEPA 160.3M

The data were reviewed using guidance and quality control (QC) criteria documented in the Remedial Investigation Work Plan (Floyd|Snider 2016) and Pre-Remedial Design Investigation Work Plan (Floyd|Snider 2023), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (USEPA 1986), *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a), and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b).

Floyd|Snider's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes, but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. When compounds are analyzed at multiple dilutions or by multiple analysis methods, select results will be assigned a Do Not Report (DNR) qualifier because a more appropriate result will be reported from another dilution or analysis method. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents previously referenced.

Data qualifiers and data qualifier definitions are included in Attachment 2. The Qualified Data Summary Table is included as Attachment 3.

This page intentionally left blank.

2.0 Data Validation Report

This report documents the review of analytical data for the analyses of soil samples and the associated field and laboratory QC samples. A USEPA Stage 2B Compliance Screening was performed on pesticide results and a USEPA 2A Compliance Screening was performed on all other analytical results by Cheronne Oreiro as the primary data reviewer, and secondary review was performed by Chell Black.

2.1 DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables and followed adequate corrective action processes, and all anomalies were discussed in the laboratory report case narrative.

2.2 TECHNICAL DATA VALIDATION

Field and laboratory QC requirements that were reviewed are listed in the following sections, and unless noted, laboratory results for samples listed in Attachment 1 were within QC criteria.

2.2.1 Cooler Temperatures and Sample Preservation

All samples were appropriately preserved and received within the required temperature range.

2.2.2 Reporting Limits and Reported Results

All laboratory qualified results detected between the method detection limit and the reporting limit (RL) were qualified as “J” to indicate they are estimated.

2.2.3 Extraction and Analysis Holding Times

All samples were extracted and analyzed within recommended holding times for samples stored refrigerated or frozen.

2.2.4 Initial and Continuing Calibrations (Pesticides)

Initial and continuing calibrations associated with reported sample results were within control limits with the following exceptions:

SDG K2310173

- Pesticides:
  - 4,4'-Dichlorodiphenyltrichloroethane (DDT) in continuing calibration verification (CCV) KQ2318448-05 was below the control limit. Associated sample results were qualified “UJ” or “J” to indicate they are estimated.
  - Several analytes in CCVs KQ2318448-05, KQ2319283-02, and KQ2319283-05 were above the control limits. Associated sample results were non-detect, so no data were qualified.

SDG K2310181

- Pesticides: 2,4'-Dichlorodiphenyldichloroethane (DDD) in CCV KQ2318580-02 was below the control limit. 2,4'-DDD, 2,4'-DDT, and 2,4'-dichlorodiphenyldichlorethylene (DDE) in CCV KQ2318580-05 were also below the control limit. Associated sample results were qualified "UJ" to indicate they are estimated.

SDG K2310183

- Pesticides:
  - 2,4'-DDT in CCV K2318519-02 fell below the control limit. *cis*-Nonachlor in the same CCV was above the control limit. Associated 2,4'-DDT results were qualified "UJ" to indicate they are estimated. *cis*-Nonachlor results were non-detect, so no data were qualified.
  - *cis*-Nonachlor in CCVs KQ2318307-02, -05, and -08 were above the control limits. Associated sample results were non-detect, so no data were qualified.

SDG K2310186

- Pesticides: All *cis*-nonachlor CCVs in this SDG were above the control limits. Associated sample results were non-detect, so no data were qualified.

SDG K2310188

- Pesticides:
  - 4,4'-DDE and *cis*-nonachlor in CCV KQ2319084-02, as well as 2,4'-DDE, cis-nonachlor, and 4,4'-DDT in CCV KQ2319283-02 were above control limits. No sample results were associated with these CCVs, so no data were qualified.
  - *cis*-Nonachlor in CCV KQ2319084-05 was above the control limits. Associated sample results were non-detect, so no data were qualified.
  - 2,4'-DDT in CCV KQ2319084-08 was below the control limit. Associated sample results were qualified "UJ" to indicate they are estimated.

Refer to Attachment 3 for a summary for qualified results.

2.2.5 Internal Standards (Pesticides)

All internal standards were within control limits.

2.2.6 Method Blanks

All method blanks were free of detections.

2.2.7 Surrogates

Most surrogates recovered within laboratory control limits. Due to the inability to accurately quantify surrogates when a sample was analyzed at a dilution, no data were qualified when surrogate recoveries were outside of control limits in these instances.

2.2.8 Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCSs) and LCS duplicates (LCSDs) were analyzed at the required project frequencies. All LCS/LCSD recoveries and associated relative percent difference (RPD) values were within project-required control limits.

2.2.9 Matrix Spike and Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies, and MS and MSD analyses conducted on non-project samples were not included in this evaluation. No data were qualified if the sample result was greater than 4 times the spike concentration. Some MS or MSD recoveries could not be accurately quantified due to sample dilutions, so no data were qualified in these instances. All MS and MSD recoveries were within project-required control limits.

2.2.10 Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or in place of MSDs. Laboratory duplicate analyses conducted on non-project samples were not included in this evaluation. Parent sample and laboratory duplicate results less than 5 times the RL may have exaggerated RPD values. Therefore, if the sample or duplicate results were less than 5 times the RL, the results were evaluated using the absolute value of the difference between the concentrations with a control limit of 2 times the RL. All duplicate RPDs and difference values were within control limits.

2.2.11 Dual Column Confirmation

Select pesticide results were flagged “P” by the laboratory to indicate the dual column RPD value was above the control limit. These results were qualified “J” to indicate they are estimated.

Refer to Attachment 3 for a summary of qualified data.

2.2.12 Analyte Quantitation

The dieldrin result for sample AOC1-03-4.0 exceeded the instrument calibration range in the initial analysis. The sample was re-analyzed and the diluted result was reported. The initial result was qualified as “DNR.”

Refer to Attachment 3 for a summary of qualified data.

2.2.13 Field Quality Control Samples

2.2.13.1 Field Duplicates

Four field duplicate samples were collected in association with these sample sets. Field duplicate RPD values were evaluated using a default control limit of 75%. Parent and field duplicate results less than 5 times the RL may have exaggerated RPD values. Therefore, if the sample or duplicate results were less than 5 times the RL, the results are evaluated using the absolute difference between them with a control limit of 2 times the RL. Field duplicate RPDs and difference values were within control limits, with the exception of the lead duplicate RPD value for samples AOC4-03-2.0 and AOC4-103-2.0, which was above the control limit. Both sample results were qualified "J" to indicate they are estimated.

Refer to Attachment 3 for a summary of qualified data.

2.3 OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable, as demonstrated by the MS, MSD, LCS, and LCSD percent recovery values. Precision was acceptable, as demonstrated by the MS/MSD, laboratory duplicate, and field duplicate RPD or difference values.

All data are acceptable for use as reported or qualified; refer to Attachment 3 for a summary of qualified results.

Attachment 2
Data Qualifier Definitions

Attachment 2
Data Qualifier Definitions

Qualifer	Definition
U	The analyte is not detected at the specified reporting limit.
UJ	The analyte is not detected and the reporting limit is estimated.
J	The result value is estimated.
R	The result was rejected during validation.
DNR	The result was rejected in favor of a more appropriate result/analysis.

Attachment 3
Qualified Data Summary Table

Attachment 3
Qualified Data Summary Table

Sample ID	Internal Lab Sample ID	Analyte Class	Analyte	Result	Unit	Lab Qualifier	Interpreted Qualifier	Reason
AOC4-03-2.0	309097-07	Metals	Lead	154	mg/kg		J	Field duplicate difference or RPD value above CL

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on soil and quality control (QC) sample data for the Smith-Kem Pre-RDI Dioxin Soil Sampling. The data received full validation (EPA Stage 4). A complete list of samples is provided in the Sample Index.

Samples were analyzed by analytical Resources, Inc., Tukwila Washington. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins	EPA 1613B	A. Bodkin	C. Ransom

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Pre-Remedial Design Investigation Work Plan* (Floyd Snider, June 2023); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2016); and *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith Kem – Pre-RDI Dioxin Soil Sampling
Dioxin/Furan Compounds by Method 1613B

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Analytical Resources, LLC, Tukwila, Washington. Refer to the SAMPLE INDEX for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
23I0156	4 Soil	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Sample results and related quality control data were received as an electronic data deliverable (EDD) and laboratory report. The EDD was verified against the laboratory report (10%). No errors were noted.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements reviewed are summarized in the following table:

✓	Sample Receipt, Preservation, and Holding Times	1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	System Performance and Resolution Checks	2	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
1	Calibration Verification	✓	Reported Results
1	Blanks (Laboratory and Field)	2	Compound Identification
✓	Labeled Compounds	2	Compound Quantification
✓	Ongoing Precision and Recovery (OPR)	1	Calculation Verification

✓ ***Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.***
1 ***Quality control results are discussed below, but no data were qualified.***
2 ***Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.***

Calibration Verification

The percent difference (%D) value for one or more labeled compound was outside the control limit in each calibration verification standard. All %D values for the native compounds were within control limits. No action was taken.

Blanks

In order to assess the impact of blank contamination on the reported sample results, action levels were established at 2x and 5x the concentration in the method blank. The following table lists the decision process for qualification of results:

SAMPLE RESULT	QUALIFIER
< Reporting Limit	U-7 < 5x Action Level
> Reporting Limit	U-7 < 2x Action Level
	J-7H between 2x and 5x Action Level

The laboratory assigned an "EMPC" flag to an analyte result when a peak was detected but did not meet identification criteria; these are "estimated maximum potential concentrations". These values are considered positive results for blank evaluation. Blank qualifiers are not assigned to homolog groups.

There were positive results for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8-HpCDF, OCDD, and OCDF in the method blank. All positive results for these compounds in the associated samples were greater than the 5x action level. No qualifiers were assigned.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate analyses were not performed; they are not required by the method. Accuracy was evaluated using the labeled compound and ongoing precision and recovery (OPR) standard results. Precision was evaluated using the field duplicate analyses.

Field Duplicates

The Work Plan specified relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than 2x the RL. For RPD or difference outliers, the results in the parent sample and field duplicate were estimated (J-9).

Samples AOC3-03-05-1.0 and AOC3-103-0.5-1.0 were submitted as field duplicates. The following outliers were noted:

COMPOUND	RPD OUTLIER (%)	QUALIFIER
2,3,7,8-TCDD	75.7	J-9
1,2,3,4,6,7,8-HpCDF	85.6	J-9
OCDF	109.6	J-9
Total PeCDD	88.4	J-9
Total HxCDD	90.2	J-9
Total HpCDF	99.3	J-9

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF using an alternate GC column if the primary column does not fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory uses an RTX-Dioxin2 column, which adequately resolved the TCDF isomers; no confirmation was necessary.

The laboratory assigned an "EMPC" flag when the ion ratio did not meet the compound identification criterion. This indicates a potential matrix interference and that the result is an "estimated maximum potential concentration". These "EMPC" flagged results were estimated (J-25) at the reported concentration.

Compound Quantification

Chlorinated diphenyl ether (CDPE) interferences were noted for 2,3,7,8-TCDF. The lab flagged these results with an "X". The results exhibited interference were estimated (J-23H) to indicate a potential high bias.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the noted exceptions, accuracy was acceptable as demonstrated by the labeled compound and OPR recoveries and precision was acceptable as demonstrated by the field duplicate RPD values.

Results were estimated based on ion ratio outliers, CDPE interference, and field duplicate precision outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Draft Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2016, 2020 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	Waters/Solids ≤ 6°C & in the dark Tissues <-10°C & in the dark **Preservation Aqueous:** If Cl_2 is present Thiosulfate must be added and if pH > 9 it must be adjusted to 7 - 9	NFG [1] Method[2,3]	J(pos)/R(ND) if thiosulfate not added if Cl_2 present; J(pos)/UJ(ND) if pH not adjusted J(pos)/UJ(ND) if temp > 20°C	1	**EcoChem PJ, see TM-05**
Holding Time	**If properly stored, 1 year or:** **Extraction (all matrices):** 30 days from collection **Analysis (all matrices)**: 45 days from extraction	NFG [1] Method[2,3]	If not properly stored or HT exceedance: J(pos)/UJ(ND)	1	**EcoChem PJ, see TM-05** Gross exceedance = > 1 year 2011 NFG **Note:** Under CWA, SDWA, and RCRA the HT for H2O is 7 days.
Instrument Performance					
Mass Resolution (PFK)(Tuning)	PFK (Perfluorokerosene) Analyzed prior to ICAL and at the beginning and end of each 12 hr. shift. ≥10,000 resolving power at m/z low and high mass (e.g. 304.9824 and 380.9760) Lock-mass for each descriptot w/in 5 ppm of theoretical value	NFG [1] Method [2,3]	R(pos/ND) all analytes in all samples associated with the tune	24	Notify PM
Windows Defining Mix (WDM)	Peaks for first and last eluters must be within established retention time windows for each selector group (chlorination level)	NFG [1] Method [2,3]	If peaks are not completely within windows (clipped): If natives are ok, J(pos)/UJ(ND) homologs (Totals) If natives are affected, R all results for that selector group	24	Notify PM

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on one archive soil sample and quality control (QC) sample data for the Smith-Kem Pre-RDI Dioxin Soil Sampling. The data received full validation (EPA Stage 4). A complete list of samples is provided in the Sample Index.

Samples were analyzed by analytical Resources, Inc., Tukwila Washington. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins	EPA 1613B	A. Bodkin	C. Ransom

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Pre-Remedial Design Investigation Work Plan* (Floyd Snider, June 2023); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2016); and *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith Kem – Soil Sampling
Dioxin/Furan Compounds by Method 1613B

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, LLC, Tukwila, Washington. Refer to the SAMPLE INDEX for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
23I0156 rev2	1 Soil	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Sample results and related quality control data were received as an electronic data deliverable (EDD) and laboratory report. The EDD was verified against the laboratory report (10%). No errors were noted.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements reviewed are summarized in the following table:

✓	Sample Receipt, Preservation, and Holding Times	2	Laboratory Duplicate
✓	System Performance and Resolution Checks	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Calibration Verification	✓	Reported Results
1	Blanks (Laboratory and Field)	2	Compound Identification
✓	Labeled Compounds	2	Compound Quantification
✓	Ongoing Precision and Recovery (OPR)	1	Calculation Verification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓ ***Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.***
1 ***Quality control results are discussed below, but no data were qualified.***
2 ***Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.***

Blanks

In order to assess the impact of blank contamination on the reported sample results, action levels were established at 2x and 5x the concentration in the method blank. The following table lists the decision process for qualification of results:

SAMPLE RESULT	QUALIFIER
< Reporting Limit	U-7 < 5x Action Level
> Reporting Limit	U-7 < 2x Action Level
	J-7H between 2x and 5x Action Level

The laboratory assigned an "EMPC" flag to an analyte result when a peak was detected but did not meet identification criteria; these are "estimated maximum potential concentrations". These values are considered positive results for blank evaluation. Blank qualifiers are not assigned to homolog groups.

There was a positive result for OCDD in the method blank. The OCDD result in the field sample was greater than the 5x action level. No action was taken.

No field blanks were submitted.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate analyses were not performed; they are not required by the method. Accuracy was evaluated using the labeled compound and ongoing precision and recovery (OPR) standard results. Precision was evaluated using the laboratory duplicate analyses.

Laboratory Duplicates

A laboratory duplicate was performed using Sample H4H-05-0.5-1.0. The relative percent difference (RPD) values for 2,3,4,6,7,8-HxCDF and Total PeCDD were greater than the control limit; results in the parent sample were estimated (J-9A).

Field Duplicates

No field duplicates were included in this SDG.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF using an alternate GC column if the primary column does not fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory uses an RTX-Dioxin2 column, which adequately resolved the TCDF isomers; no confirmation was necessary.

The laboratory assigned an "EMPC" flag when the ion ratio did not meet the compound identification criterion. This indicates a potential matrix interference and that the result is an "estimated maximum potential concentration". These "EMPC" flagged results were estimated (J-25) at the reported concentration.

Compound Quantification

A diphenyl ether (CDPE) interference was noted for 2,3,7,8-TCDF in Sample H4H-05-0.5-1.0. The lab flagged these results with an "X". The 2,3,7,8-TCDF result was estimated (J-23H) to indicate a potential high bias.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the noted exceptions, accuracy was acceptable as demonstrated by the labeled compound and OPR recoveries, and precision was acceptable as demonstrated by the laboratory duplicate RPD values.

Results were estimated based on ion ratio outliers, CDPE interference, and laboratory duplicate precision outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Draft Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2016, 2020 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	Waters/Solids ≤ 6°C & in the dark Tissues <-10°C & in the dark **Preservation Aqueous:** If Cl_2 is present Thiosulfate must be added and if pH > 9 it must be adjusted to 7 - 9	NFG [1] Method[2,3]	J(pos)/R(ND) if thiosulfate not added if Cl_2 present; J(pos)/UJ(ND) if pH not adjusted J(pos)/UJ(ND) if temp > 20°C	1	**EcoChem PJ, see TM-05**

PROJECT NARRATIVE

Basis for the Data Validation

This report has been revised to address adjustments to the laboratory report. It summarizes the results of data validation performed on soil and quality control (QC) sample data for the Smith-Kem Pre-RDI Dioxin Soil Sampling. The data received full validation (EPA Stage 4). A complete list of samples is provided in the Sample Index.

Samples were analyzed by analytical Resources, Inc., Tukwila Washington. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins	EPA 1613B	A. Bodkin	C. Ransom

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Pre-Remedial Design Investigation Work Plan* (Floyd Snider, June 2023); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2016); and *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith Kem – Soil Sampling
Dioxin/Furan Compounds by Method 1613B

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Analytical Resources, LLC, Tukwila, Washington. Refer to the SAMPLE INDEX for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
23I0564	4 Soil	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

Due to an entry error, the original laboratory report was based on the wrong sample weights. The lab identified the issue and submitted a revised report and EDD.

EDD TO HARDCOPY VERIFICATION

Sample results and related quality control data were received as an electronic data deliverable (EDD) and laboratory report. The EDD was verified against the laboratory report (10%). No errors were noted.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements reviewed are summarized in the following table:

✓	Sample Receipt, Preservation, and Holding Times	1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	System Performance and Resolution Checks	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Calibration Verification	✓	Reported Results
2	Blanks (Laboratory and Field)	2	Compound Identification
✓	Labeled Compounds	2	Compound Quantification
✓	Ongoing Precision and Recovery (OPR)	1	Calculation Verification
2	Laboratory Duplicate		

✓ ***Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.***
1 ***Quality control results are discussed below, but no data were qualified.***
2 ***Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.***

Blanks

In order to assess the impact of blank contamination on the reported sample results, action levels were established at 2x and 5x the concentration in the method blank. The following table lists the decision process for qualification of results:

SAMPLE RESULT	QUALIFIER
< Reporting Limit	U-7 < 5x Action Level
> Reporting Limit	U-7 < 2x Action Level
	J-7H between 2x and 5x Action Level

The laboratory assigned an "EMPC" flag to an analyte result when a peak was detected but did not meet identification criteria; these are "estimated maximum potential concentrations". These values are considered positive results for blank evaluation. Blank qualifiers are not assigned to homolog groups.

There were positive results for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8-HpCDF, OCDD, and OCDF in the method blank. The results for 1,2,3,4,6,7,8-HpCDD and OCDD were estimated (J-7H) in Samples H4H-01-0.5-1.0, H4H-02-0.5-1.0, and H4H-03-0.5-1.0.

Laboratory Duplicates

The Work Plan specified relative percent difference (RPD) control limit is 25%. For results less than 5x the RL, the difference between the sample and duplicate was evaluated; a control limit of 2X the RL was used to evaluate the difference values. For RPD or difference outliers, the results in the parent sample were estimated (J-9).

Sample H4H-01-0.5-1.0 was used for the laboratory duplicate analysis. The following outliers were noted:

COMPOUND	RPD OUTLIER (%)	QUALIFIER
2,3,7,8-TCDD	43.5	J-9
2,3,4,7,8-PeCDF	48.5	J-9
1,2,3,6,7,8-HxCDF	31.1	J-9
2,3,4,6,7,8-HxCDF	28.6	J-9
1,2,3,4,6,7,8-HpCDD	25.9	J-9
OCDD	30.5	J-9
Total TCDF	38.8	J-9
Total TCDD	58.9	J-9
Total PeCDF	52.0	J-9
Total PeCDD	46.5	J-9
Total HxCDF	37.4	J-9
Total HxCDD	40.8	J-9
Total HpCDD	29.4	J-9

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate analyses were not performed; they are not required by the method. Accuracy was evaluated using the labeled compound and ongoing precision and recovery (OPR) standard results. Precision was evaluated using the laboratory duplicate RPD values.

Field Duplicate

Field duplicates were not submitted.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF using an alternate GC column if the primary column does not fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory uses an RTX-Dioxin2 column, which adequately resolved the TCDF isomers; no confirmation was necessary.

The laboratory assigned an "EMPC" flag when the ion ratio did not meet the compound identification criterion. This indicates a potential matrix interference and that the result is an "estimated maximum potential concentration". These "EMPC" flagged results were estimated (J-25) at the reported concentration.

Compound Quantification

Chlorinated diphenyl ether (CDPE) interferences were noted for 2,3,7,8-TCDF in some samples. The lab flagged these results with an "X". The results exhibited interference were estimated (J-23H) to indicate a potential high bias.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the noted exceptions, accuracy was acceptable as demonstrated by the labeled compound and OPR recoveries and precision was acceptable as demonstrated by the laboratory duplicate RPD values.

Results were estimated based on method blank contamination, ion ratio outliers, CDPE interference, and laboratory duplicate precision outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Draft Dioxin/Furan Analysis by HRMS

TPH	Total petroleum hydrocarbons
USEPA	U.S. Environmental Protection Agency

1.0 Project Narrative

1.1 OVERVIEW OF DATA VALIDATION

This report summarizes the results of the Compliance Screening (USEPA Stage 2A and USEPA Stage 2B) performed on the sample data for the Pre-Remedial Design Investigation Phase 2 Drilling sampling event. A complete list of sample IDs provided in the Project Sample Index Table (Attachment 1).

A total of 24 soil samples and 1 field duplicate sample were collected December 14 and 15, 2023. Samples were submitted to Friedman and Bruya, Inc. (FBI) in Seattle, Washington and ALS Environmental (ALS) in Kelso, Washington. Analytical results were submitted by FBI and ALS under two sample delivery groups: 312274 and K2314243. The following analytical parameters were reviewed in this validation:

- Pesticides— U.S. Environmental Protection Agency (USEPA) Method 8081B
- Total petroleum hydrocarbons (TPH)—NWTPH-Dx with and without silica gel cleanups
- Percent solids—USEPA 8000D

The data were reviewed using guidance and quality control (QC) criteria documented in the Pre-Remedial Design Investigation Work Plan (Floyd|Snider 2023), *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (USEPA 1986), *National Functional Guidelines for Organic Superfund Methods Data Review* (USEPA 2020a), and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (USEPA 2020b).

Floyd|Snider's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes, but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. When compounds are analyzed at multiple dilutions or by multiple analysis methods, select results will be assigned a Do Not Report qualifier because a more appropriate result will be reported from another dilution or analysis method. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents previously referenced.

Data qualifiers and data qualifier definitions are included in Attachment 2. The Qualified Data Summary Table is included as Attachment 3.

This page intentionally left blank.

2.0 Data Validation Report

This report documents the review of analytical data for the analyses of sediment samples and the associated field and laboratory QC samples. A USEPA Stage 2B Compliance Screening was performed on pesticide results and a USEPA Stage 2A Compliance Screening was performed on all other analytical results by Chell Black as the primary data reviewer, and secondary review was performed by Cheronne Oreiro.

2.1 DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables and followed adequate corrective action processes, and all anomalies were discussed in the laboratory report case narrative.

2.2 TECHNICAL DATA VALIDATION

Field and laboratory QC requirements that were reviewed are listed in the following sections, and unless noted, laboratory results for samples listed in Attachment 1 were within QC criteria.

2.2.1 Cooler Temperatures and Sample Preservation

All samples were appropriately preserved and received within the required temperature range.

2.2.2 Reporting Limits and Reported Results

All laboratory qualified results detected between the method detection limit and the reporting limit (RL) were qualified as “J” to indicate they are estimated.

2.2.3 Extraction and Analysis Holding Times

Samples were extracted and analyzed within recommended holding times with the following exceptions:

- Sample AOC2-17-6.5 was extracted 6 days outside the recommended hold time for NWTPH-Dx. The results for this sample were qualified “UJ” to indicate they are estimated.
- Sample AOC2-16-6.5 was extracted more than 80 days outside the recommended hold time for NWTPH-Dx. The results for this sample were rejected.

Refer to Attachment 3 for a summary for qualified results.

2.2.4 Initial and Continuing Calibrations (Pesticides)

All initial and continuing calibrations were within control limits.

2.2.5 Internal Standards (Pesticides)

All internal standards were within control limits.

2.2.6 Method Blanks

All method blanks were free of detections.

2.2.7 Surrogates

All surrogates recovered within laboratory control limits.

2.2.8 Laboratory Control Samples and Laboratory Control Sample Duplicates

Laboratory control samples (LCSs) were analyzed at the required project frequencies. All LCS recoveries were within project-required control limits.

2.2.9 Matrix Spike and Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were analyzed at the required frequencies, and MS and MSD analyses conducted on non-project samples were not included in this evaluation. No data were qualified if the sample result was greater than 4 times the spike concentration. All MS and MSD recoveries were within project-required control limits.

2.2.10 Laboratory Duplicates

Laboratory duplicates were analyzed at the required frequencies or in place of MSDs. Laboratory duplicate analyses conducted on non-project samples were not included in this evaluation. Parent sample and laboratory duplicate results less than 5 times the RL may have exaggerated relative percent difference (RPD) values. Therefore, if the sample or duplicate results were less than 5 times the RL, the results were evaluated using the absolute value of the difference between the concentrations with a control limit of 2 times the RL. All duplicate RPDs and difference values were within control limits.

2.2.11 Dual Column Confirmation (Pesticides)

All dual column confirmation RPD values were within control limits.

2.2.12 Field Quality Control Samples

2.2.12.1 Field Duplicates

One field duplicate sample was collected in association with these sample sets. Field duplicate RPD values were evaluated using a default control limit of 75%. Parent and field duplicate results less than 5 times the RL may have exaggerated RPD values. Therefore, if the sample or duplicate results were less than 5 times the RL, the results are evaluated using the absolute value of the

difference between them with a control limit of 2 times the RL. All field duplicate RPDs and difference values were within control limits.

2.3 OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods and all requested sample analyses were completed. Accuracy was acceptable, as demonstrated by the MS, MSD, and LCS percent recovery values. Precision was acceptable, as demonstrated by the MS/MSD, laboratory duplicate, and field duplicate RPD or difference values.

Most data are acceptable for use as reported or qualified. The diesel and motor oil results for sample AOC2-16-16.5 were rejected due to hold time exceedances.

Refer to Attachment 3 for a summary of qualified results.

Regarding: Geotechnical Engineering Letter Report
Smith-KEM Project
S Railroad Avenue
Ellensburg, Washington
PBS Project 66290.000

Dear Ms. Grochala:

PBS Engineering and Environmental Inc. (PBS) has prepared this letter report summarizing geotechnical engineering services completed for the Smith-KEM project located east of S Railroad Avenue in Ellensburg, Washington. The purpose of PBS' services was to provide geotechnical recommendations related to earthwork and grading, cut, fill, and subgrade preparation. The general site location is shown on the Vicinity Map, Figure 1. The locations of areas explored in relation to existing site features are shown on the Site Plan, Figure 2.

PROJECT UNDERSTANDING

PBS understands soils impacted by fertilizer production and petroleum storage/handling have been identified in several locations at this site. As part of the environmental cleanup plan, impacted soil will be removed from select areas and transferred to a suitable disposal facility. The resulting excavations will be backfilled with structural fill and a geosynthetic clay liner (GCL) will be installed over the fill at subgrade elevation within the areas shown on Figure 2 to reduce surface water infiltration into any potentially impacted soils present below the surface. This water will be directed to a collection point and piped to the stormwater system. A 12-inch-thick gravel layer will be placed over the GCL and will be expected to support daily truck traffic. A layer of geogrid will be incorporated into the 12-inch-thick gravel layer to help extend the life of the GCL. PBS understands the GCL is designed to accommodate truck traffic. A gravel surface will require periodic maintenance, including regrading, to maintain relatively flat driving surfaces.

Environmental professionals have organized the site into several areas of concern (AOC) and are recommending varying depths of mass excavation based on available data. Floyd|Snider (F|S) design depths of mass excavation range from 1 to 8.5 feet below the existing ground surface (bgs) within AOCs. Some AOCs encroach upon existing structures. Depending on the proximity of excavations to existing structures, it could be necessary to shore or underpin existing foundations to limit structurally damaging settlement or foundation failure. PBS was not engaged to evaluate the need for shoring/underpinning or provide shoring recommendations and does not currently have sufficient information to do so.

SCOPE OF WORK

PBS completed the following scope of work.

Review of Subsurface Exploration Logs
PBS reviewed boring logs provided by F|S. Subsurface conditions were explored by drilling 41 borings to depths of 3 to 15 feet bgs. The borings were logged, observed groundwater levels noted, and representative soil samples collected by a member of F|S. The drilling was performed using sonic drilling techniques and continuous sampling.

Soils Testing
F|S provided soil samples to our laboratory. The selected sample was classified in general accordance with the Unified Soil Classification System (ASTM D2487) and/or the Visual-Manual Procedure (ASTM D2488). Laboratory tests included natural moisture contents and grain-size analyses. Laboratory test results are shown on Figure 3.

Geotechnical Engineering Analyses
The boring logs provided to PBS were reviewed to develop geotechnical recommendations related to earthwork and grading, cut, fill, and subgrade preparation.

SUBSURFACE CONDITIONS

Site Soils

Based on PBS' review of boring logs provided by F|S, PBS has summarized the subsurface units as follows:

FILL:	Undocumented fill was reported at the surface of all borings and extended to depths of approximately 0.5 to 4 feet bgs. The average thickness of fill was approximately 1.4 feet. The ground surface across the site is generally covered with gravel fill and used for heavy vehicle parking and access. Additional fill materials below the gravel consisted of silt, sand, and gravel with occasional debris such as brick fragments and charcoal.
GRAVEL to Silty GRAVEL (GW, GM-GW, GM):	Gravel intermixed with varying amounts of fine- to coarse-grained sand and silt was reported in nearly all borings and was the dominant native soil type at the site. Gravel was generally brown to gray or black, with cobbles frequently noted.
SILT to SAND (ML, SP, SW):	Lenses of brown to dark brown silt and sand were reported at variable depths and ranged between 0.3 to 3 feet thick. These lenses were most common near the surface at depths of approximately 1 to 3 feet bgs. Silt was reported below undocumented fill in borings AOC3-04 and AOC3-05 and extended to the termination depth of 3 feet bgs.

Groundwater

The F|S boring logs indicate static groundwater was encountered, or inferred based on saturated soil, in all borings advanced to depths greater than 3 feet bgs. The reported depth to static groundwater ranged from 2.3 to 8 feet bgs with an average of approximately 5 feet bgs. Please note that groundwater levels can fluctuate during the year depending on climate, irrigation season, extended periods of precipitation, drought, and other factors.

RECOMMENDATIONS

Geotechnical Considerations

The subsurface conditions at the site consist primarily of gravel with cobbles and interbedded sand and silt lenses. Based on our review of the logs provided by F|S, we believe excavation with a 70,000-pound excavator will be

feasible at this site. A toothed bucket will likely be necessary. Boring logs report frequent observation of gravel and cobbles with relatively low amounts of silt and sand. Based on our experience with similar materials, caving should be anticipated; however, PBS does not have enough information to say at what depths. A contingency should be included in earthwork budgets and schedules to accommodate increased excavation and backfill volumes.

The average depth to static groundwater was approximately 5 feet bgs, with many reported observations of static groundwater at shallower depths. The earthwork contractor should expect to encounter groundwater during mass excavation of contaminated areas. Dewatering may be required. If dewatering is used, we recommend that the type and design of the dewatering system be the responsibility of the contractor, who is in the best position to choose systems that fit the overall plan of operation.

Subgrade Preparation
Subgrades for structural fill, GCL, and geogrid should be carefully prepared to a neat and undisturbed state. A representative from PBS should confirm suitable bearing conditions and evaluate all exposed subgrades. Observations should also confirm that loose or soft materials have been removed. Localized deepening of exposed subgrades may be required to penetrate loose, wet, or deleterious materials.

Proofrolling/Subgrade Verification
Following mass excavation of contaminated soils, the exposed subgrade should be evaluated either by proofrolling or another method of subgrade verification. If possible, the subgrade should be proofrolled with a fully loaded dump truck or similar heavy, rubber-tire construction equipment to identify unsuitable areas. If proofrolling is not feasible, they should be evaluated by PBS using a steel foundation probe. We recommend that PBS be retained to observe the proofrolling and perform the subgrade verifications. Unsuitable areas identified during the field evaluation should be compacted to a firm condition or be excavated and replaced with structural fill.

Wet/Freezing Weather and Wet Soil Conditions
Due to the presence of fine-grained silt and sands reported in boring logs, construction equipment may have difficulty operating on the near-surface soils when the moisture content of the surface soil is more than a few percentage points above the optimum moisture required for compaction. Soils disturbed during site preparation activities, or unsuitable areas identified during proofrolling or probing, should be removed and replaced with compacted structural fill.

Site earthwork and subgrade preparation should not be completed during freezing conditions, except for mass excavation to the subgrade design elevations. We recommend the earthwork construction at the site be performed during the dry season.

Structural Fill
PBS understands that mass excavation of impacted soils will extend to depths of up to 8.5 feet bgs within AOCs. These excavations will be replaced with structural fill to restore the ground surface elevation to near present-day elevations. Structural fill should be placed over subgrade that has been prepared in conformance with the Subgrade Preparation and Wet/Freezing Weather and Wet Soil Conditions sections of this report. Structural fill material should consist of relatively well-graded soil, or an approved rock product that is free of organic material and debris, and contains particles not greater than 3 inches nominal dimension.

The suitability of soil for use as compacted structural fill will depend on the gradation and moisture content of the soil when it is placed. As the amount of fines (material finer than the US Standard No. 200 Sieve) increases, soil becomes increasingly sensitive to small changes in moisture content and compaction becomes more difficult to achieve. Soils containing more than about 5% fines cannot consistently be compacted to a dense, non-yielding condition when the water content is significantly greater (or significantly less) than optimum.

On-Site Soil

On-site soils consistent with soils reported in the boring logs may be suitable for placement as structural fill for mass grading to backfill excavations at the site during dry weather when moisture contents can be maintained by air drying and/or addition of water. If reuse of on-site soil is considered, F|S should be consulted to evaluate potential impacts due to fertilizer production. Screening may be required to remove particles greater than 3 inches nominal dimension.

The fine-grained fraction of the site soils are moisture sensitive, and during wet weather, may become unworkable because of excess moisture content. In order to reduce moisture content, some aerating and drying of fine-grained soils may be required. The material should be placed in lifts with a maximum uncompacted thickness of approximately 8 inches and compacted to at least 92% of the maximum dry density, as determined by ASTM D1557 (modified proctor).

Imported Granular Materials

Imported granular material used to backfill mass excavated areas should be pit or quarry run rock, crushed rock, or crushed gravel and sand, and should meet the specifications provided in WSDOT SS 9-03.14(2) – Select Borrow.[1] In addition, the imported granular material should be fairly well graded between coarse and fine, and of the fraction passing the US Standard No. 4 Sieve, less than 5% by dry weight should pass the US Standard No. 200 Sieve.

Imported granular material should be placed in lifts with a maximum uncompacted thickness of 8 inches and be compacted to not less than 95% of the maximum dry density, as determined by ASTM D1557.

Base Aggregate

Base aggregate should be placed above the GCL and should be clean crushed rock or crushed gravel. The base aggregate should contain no deleterious materials, meet specifications provided in WSDOT SS 9-03.9(3) – Crushed Surfacing Base Course, and have less than 5% (by dry weight) passing the US Standard No. 200 Sieve. The imported granular material should be placed in one lift and compacted to at least 95% of the maximum dry density, as determined by ASTM D1557.

Temporary Slopes

All temporary cut slopes should be excavated with a smooth-bucket excavator, with the slope surface repaired if disturbed. In addition, upslope surface runoff should be rerouted to not run down the face of the slopes. Equipment should not be allowed to induce vibration or infiltrate water above the slopes. Temporary slopes up to 8 feet high should be inclined no steeper than 1.5H:1V (horizontal to vertical).

[1] Washington State Department of Transportation (WSDOT SS). (2023). Standard Specifications for Road, Bridge, and Municipal Construction, M 41-10, Olympia, Washington.

Excavation Near Existing Buildings
Mass excavation of impacted soils is expected near existing building foundations. Undermining foundation bearing soils could result in structurally damaging settlement or foundation failure. Unprotected excavation shall not extend beyond a 1H:1V line projected from the outside, bottom edge of the footing. Excavation within this zone shall require shoring or other appropriate method of protecting the foundation. We recommend that the type and design of foundation protection measures be the responsibility of the contractor, who is in the best position to select systems that fit the overall plan of operation.

Geogrid Selection and Installation
Geogrid should be incorporated into the 1-foot-thick gravel section and placed 4 inches above the GCL to help increase the life of the GCL. The selected geogrid should consist of a polymer that is punched and stretched to form sheets. The geogrid should have a minimum tensile strength of 280 pounds per foot at 2% strain and a maximum aperture of 3 inches or less. Biaxial geogrid is commonly available, though other grid patterns may be suitable, provided the minimum tensile and maximum aperture recommendations are satisfied.

Geogrid should be installed 4 inches above the GCL on compacted gravel and pulled taut with no creases or wrinkles. Edges may be staked, if necessary. Crushed rock should be placed over the geogrid and pushed outward to maintain tension. Seams should overlap by at least 12 inches.

Recommendations include placing orange grid material 4 inches below the finished gravel surface to serve as an indicator of surface wear. Gravel drive and parking surfaces are expected to migrate with use and will require periodic maintenance, such as grading, to maintain flat surfaces and maintain a minimum thickness of crushed rock over the GCL. This grid layer is not expected to provide reinforcement. The selected material should be composed of high-density polyethylene (HDPE) with a maximum aperture of 3 inches or less.

LIMITATIONS
This report has been prepared for the exclusive use of the addressee, and their architects and engineers, for aiding in the design and construction of the proposed development and is not to be relied upon by other parties. It is not to be photographed, photocopied, or similarly reproduced, in total or in part, without express written consent of the client and PBS. It is the addressee's responsibility to provide this report to the appropriate design professionals, building officials, and contractors to ensure correct implementation of the recommendations.

The opinions, comments, and conclusions presented in this report are based upon information derived from our literature review, review of field explorations provided by others, laboratory testing, and engineering analyses. It is possible that soil, rock, or groundwater conditions could vary between or beyond the points explored. If soil, rock, or groundwater conditions are encountered during construction that differ from those described herein, the client is responsible for ensuring that PBS is notified immediately so that we may reevaluate the recommendations of this report.

Unanticipated fill, soil and rock conditions, and seasonal soil moisture and groundwater variations are commonly encountered and cannot be fully determined by merely taking soil samples or completing explorations such as borings. Such variations may result in changes to our recommendations and may require additional funds for expenses to attain a properly constructed project; therefore, we recommend a contingency fund to accommodate such potential extra costs.

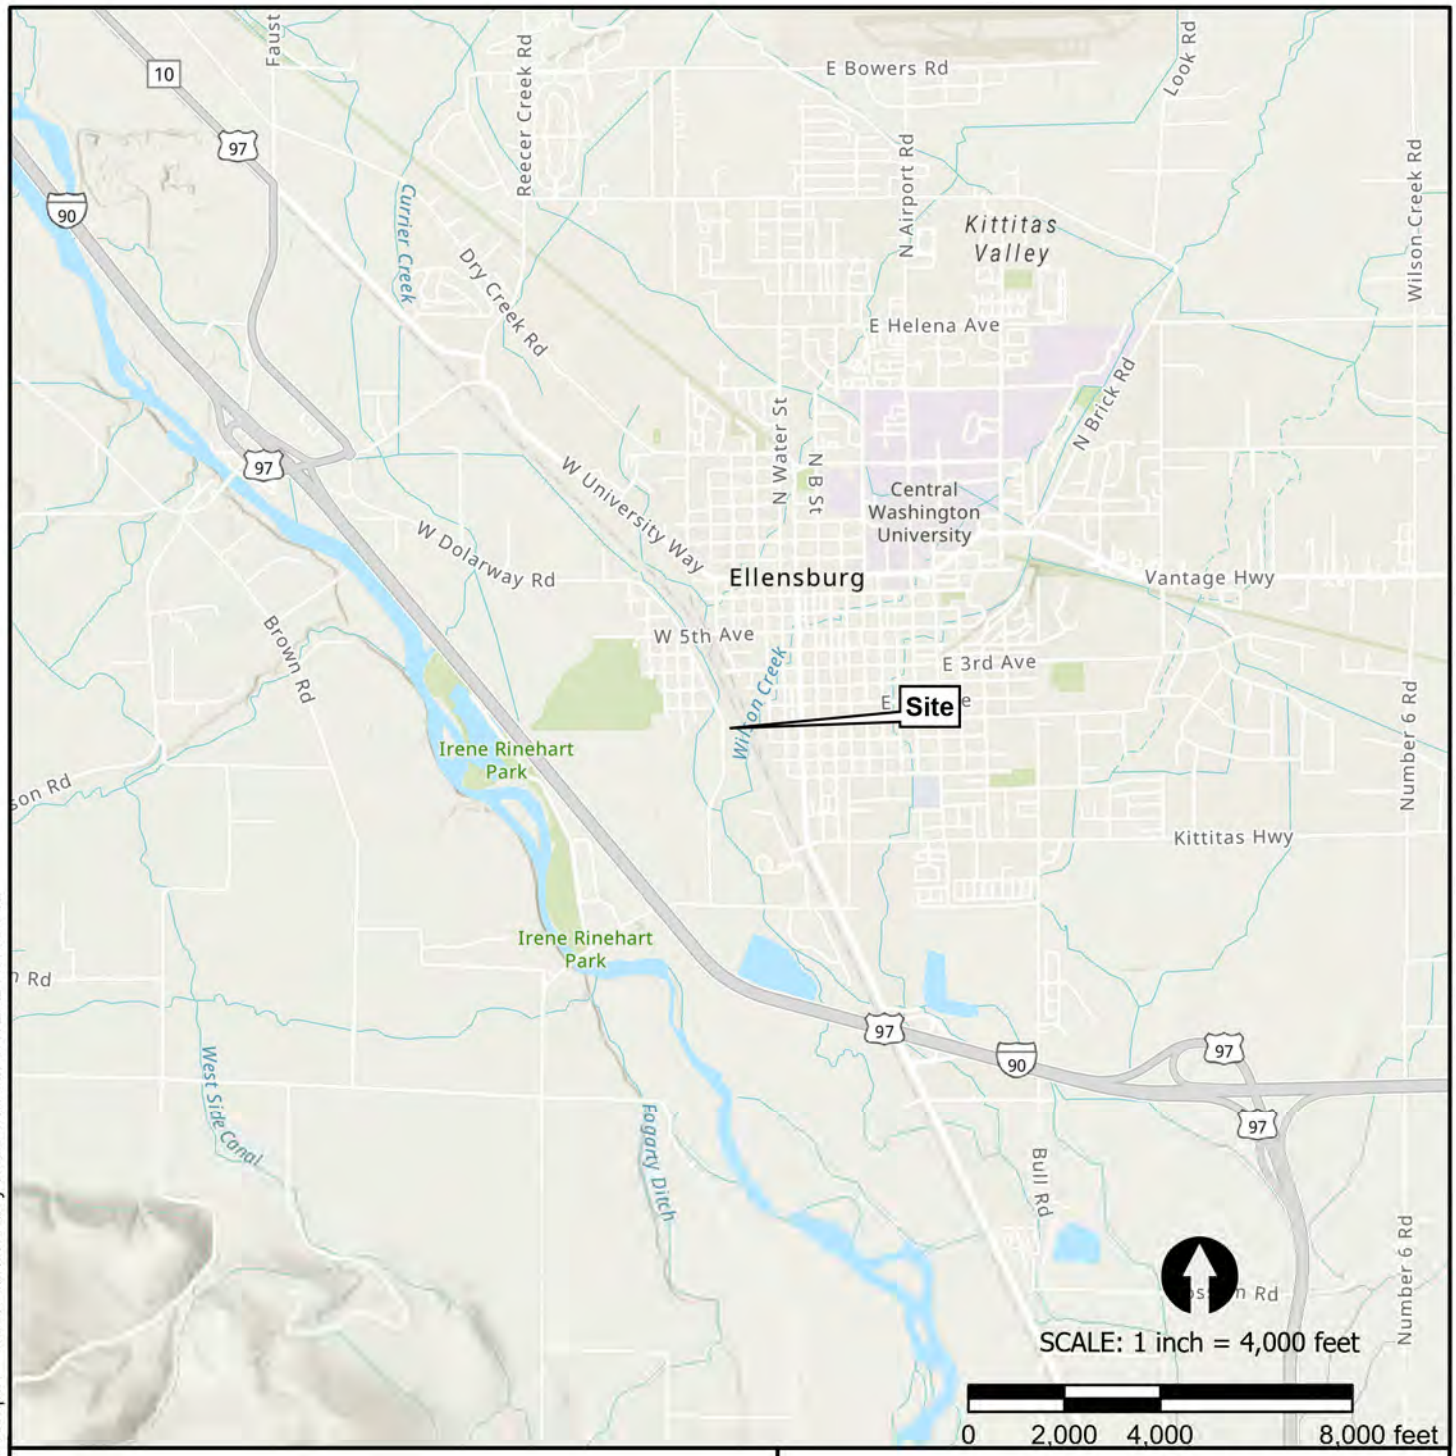
The scope of work for this subsurface exploration and geotechnical report did not include environmental assessments or evaluations regarding the presence or absence of wetlands or hazardous substances in the soil, surface water, or groundwater at this site.

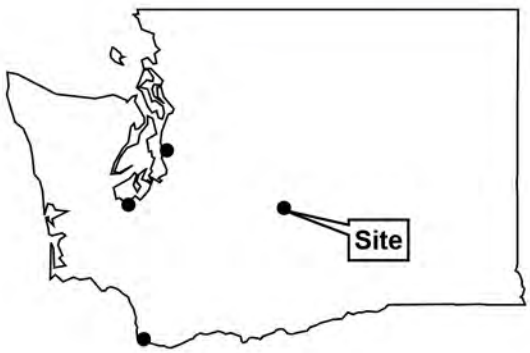
If there is a substantial lapse of time between the submission of this report and the start of work at the site, if conditions have changed due to natural causes or construction operations at or adjacent to the site, or if the basic project scheme is significantly modified from that assumed, this report should be reviewed to determine the applicability of the conclusions and recommendations presented herein. Land use, site conditions (both on and off site), or other factors may change over time and could materially affect our findings; therefore, this report should not be relied upon after three years from its issue, or in the event that the site conditions change (for example, regrading or fill placement).

CLOSING

Please feel free to contact me at 509.375.7844 or clint.nealey@pbsusa.com with any questions or comments.

Sincerely,





August 23, 2024

Clint Nealey, PE
Project Geotechnical Engineer

GENERAL CONSTRUCTION NOTES

1. A MINIMUM OF TWO FULL BUSINESS DAYS PRIOR TO BEGINNING CONSTRUCTION, THE CONTRACTOR SHALL CALL 1-800-424-5555 (NORTHWEST UTILITY NOTIFICATION CENTER) FOR LOCATION MARK-UP OF EXISTING UTILITIES.
2. CONSTRUCTION HOURS TO BE BETWEEN THE HOURS OF 6am TO 10pm.
3. CONTRACTOR SHALL VERIFY THE LOCATION OF EXISTING UTILITIES PRIOR TO CONSTRUCTION.
4. SITE GRADING AND FILL MATERIAL AND WORKMANSHIP SHALL CONFORM TO THE "STANDARD SPECIFICATIONS FOR ROAD, BRIDGE AND MUNICIPAL CONSTRUCTION" (LATEST EDITION) PREPARED BY WSDOT/APWA, AND THE STANDARD AND PRACTICES OF THE CITY OF ELLENSBURG DEPARTMENT OF PUBLIC WORKS, WHERE THE CITY OF ELLENSBURG GENERAL REQUIREMENTS SHALL TAKE PRECEDENCE.
5. ANY SIGNIFICANT DEVIATIONS FROM THE PLANS WILL REQUIRE A REQUEST FROM THE APPLICANT'S ENGINEER AND APPROVAL FOR THE CITY'S LAND DIVISION ENGINEER(S) AND CITY INSPECTOR.
6. EROSION CONTROL METHODS SHALL COMPLY WITH THE CITY OF ELLENSBURG LATEST VERSION OF GENERAL REQUIREMENTS AND STANDARD DETAILS AND WASHINGTON STATE DEPARTMENT OF ECOLOGY STORMWATER MANAGEMENT MANUAL FOR EASTERN WASHINGTON, WHERE THE CITY OF ELLENSBURG GENERAL REQUIREMENTS SHALL TAKE PRECEDENCE.
7. ALL CONSTRUCTION WITHIN THE CITY OF ELLENSBURG OR KITTITAS COUNTY RIGHT-OF-WAY SHALL HAVE AN APPROVED TRAFFIC CONTROL PLAN AND RIGHT-OF-WAY PERMIT PRIOR TO ANY OFF-SITE CONSTRUCTION ACTIVITY.
8. THE APPLICANT MAY BE REQUIRED TO PROVIDE FLAGGING, SIGNS, AND OTHER TRAFFIC CONTROL DEVICES FOR SAFE TRUCK ACCESS ONTO PUBLIC STREETS. ALL SUCH DEVICES SHALL CONFORM TO THE STANDARD ESTABLISHED IN THE LATEST ADOPTED EDITION OF THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" (MUTCD) PUBLISHED BY THE U.S. DEPARTMENT OF TRANSPORTATION AND THE MODIFICATION OF THE MUTCD FOR STREET AND HIGHWAYS FOR THE STATE OF WASHINGTON.
9. IN ORDER TO ENHANCE TRAFFIC AND SAFETY ELEMENTS, THE APPLICANT SHALL MAINTAIN ADEQUATE SIGHT DISTANCE AT THE SITE ACCESS POINTS AND INTERSECTION. DRIVEWAY EXITS SHALL MEET THE SIGHT DISTANCE REQUIREMENTS PER EMC 15.420.060, CITY STANDARD PLAN T04-03 AND T04-04. ANY OBSTRUCTION BY LANDSCAPING, SIGNING, PARKING, BUILDING, OR OTHER OBJECTS ARE UNSAFE. THE APPLICANT SHALL INSURE THE NONE OF THESE INTERFERE WITH VISION CLEARANCE REQUIREMENTS.
10. TWO-WAY TRAFFIC MUST BE MAINTAINED AT ALL TIMES ON THE ADJACENT PUBLIC STREETS.
11. SHOULD ANY ITEM OF ARCHAEOLOGICAL INTEREST BE FOUND DURING DEVELOPMENT, YOU ARE REQUIRED TO STOP WORK AND NOTIFY THE PLANNING CASE MANAGER IN DEVELOPMENT REVIEW SERVICES, AND THE WASHINGTON STATE DEPARTMENT OF ARCHAEOLOGY AND HISTORIC PRESERVATION AT 360-753-4011 IMMEDIATELY. FAILURE TO DO SO COULD RESULT IN A FELONY CONVICTION. SEE PROVIDED INADVERTENT DISCOVERY PLAN (IDP). (1)
12. AT THE END OF EACH WORKDAY THE CONTRACTOR SHALL CLEAN THE PROJECT AREA AND LEAVE IT IN A NEAT AND SECURE MANNER. UPON COMPLETION THE CONTRACTOR SHALL LEAVE THE PROJECT AREA FREE OF DEBRIS AND UNUSED MATERIAL.

GENERAL EROSION CONTROL NOTES:

1. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN TEMPORARY EROSION AND SEDIMENTATION CONTROLS (TESC) AS RECOMMENDED IN DIVISION 8 OF THE WSDOT CONSTRUCTION MANUAL AND CHAPTER 710 OF THE WSDOT ROADSIDE MANUAL. SPECIFIC TESC MEANS AND METHODS WILL BE SELECTED BY THE CONTRACTOR AND APPROVED BY THE ENGINEER PRIOR TO THE WORK.
2. IN ADDITION TO THE TEMPORARY EROSION AND SEDIMENT CONTROL METHODS OUTLINED ON THIS PLAN, THE CONTRACTOR IS ENCOURAGED TO EVALUATE THE PROJECT EARTHWORK REQUIREMENTS AND NATURAL DRAINAGE, AND STAGE CONSTRUCTION ACTIVITIES TO LIMIT THE EXTENT OF DISTURBED AREAS. THE CONTRACTOR SHALL EVALUATE THE EROSION AND SEDIMENT CONTROLS DURING THE COURSE OF THE PROJECT TO IDENTIFY POTENTIAL PROBLEM AREAS AND PROVIDE ADDITIONAL MEASURES TO INCREASE THEIR EFFECTIVENESS IN MINIMIZING EROSION AND SEDIMENT RUNOFF.
3. TESC MEASURES SHALL BE INSTALLED PRIOR TO ANY CONSTRUCTION WORK THAT INVOLVES EARTHWORK, AND WHERE POSSIBLE, SHALL FOLLOW THE EXISTING GROUND CONTOUR.
4. UPON COMPLETION OF ROUGH SITE GRADING, THE CONTRACTOR SHALL OBSERVE DRAINAGE RUNOFF FLOW ACROSS THE SITE AND ENSURE THAT SURFACE WATER IS NOT PERMITTED TO LEAVE THE SITE.
5. THE CONTRACTOR SHALL DESIGNATE CONSTRUCTION ENTRANCES AT INGRESS/EGRESS POINTS FOR THE WORK. AT LEAST ONE CONSTRUCTION ENTRANCE SHALL BE REQUIRED AT ANY GIVEN TIME DURING THE WORK. DESIGNATED CONSTRUCTION ENTRANCE(S) MAY CHANGE AS WORK PROGRESSES.

TESC NOTES

1. CONTAMINATED SOIL WILL BE EXCAVATED AND DIRECTLY LOADED INTO TRUCKS OR PLACED ON PLASTIC AND COVERED WITH PLASTIC SHEETING PER EASTERN WASHINGTON STORMWATER MANAGEMENT MANUAL BMP C123E, AND ENCIRCLED WITH A STRAW WATTLE PER BMP C235E.
2. THE CONTRACTOR WILL MAINTAIN A SPILL RESPONSE SPILL KIT ON THE PROPERTY TO RESPOND TO THE ANTICIPATED SPILL PER EASTERN WASHINGTON STORMWATER MANAGEMENT MANUAL BMP S104E.
3. CONTRACTOR TO IMPLEMENT DUST CONTROL MEASURES IN ACCORDANCE WITH EASTERN WASHINGTON STORMWATER MANAGEMENT MANUAL BMP C140.

(1)

COMPACTION NOTES

1. THE PLACEMENT OF FILL MATERIAL ON LOTS SHALL BE PLACED AND COMPACTED IN ACCORDANCE WITH THE 2021 VERSION OF THE INTERNATIONAL BUILDING CODE (2021 IBC) APPENDIX J AND THE GEOTECHNICAL ENGINEERING LETTER REPORT DATE AUGUST 23, 2024 PREPARED BY PBS. PBS GEOTECHNICAL ENGINEERING GROUP SHOULD BE ENGAGED TO PERIODICALLY OBSERVE GEOTECHNICAL ASPECTS OF CONSTRUCTION. THE DEVELOPER SHALL BE RESPONSIBLE FOR HIRING AN INDEPENDENT MATERIALS TESTING COMPANY TO COMPLETE AND DOCUMENT COMPACTION TESTS TO BE TAKEN AT INTERVALS CONSISTENT WITH CITY STANDARDS, AND A LICENSED PROFESSIONAL ENGINEER TO VERIFY THAT GEOTECHNICAL ASPECTS OF CONSTRUCTION ARE COMPLETED IN GENERAL ACCORDANCE WITH IBC REQUIREMENTS, PBS' RECOMMENDATIONS, AND PROJECT OBJECTIVES. A GEOTECHNICAL OPINION LETTER OF COMPLIANCE SHALL BE PROVIDED TO THE PUBLIC WORKS ENGINEERING DEPARTMENT FOLLOWING CONSTRUCTION IF REQUIRED BY THE AGENCY. (1)
2. EMBANKMENT AND BACKFILL MATERIAL PLACED ON SLOPES OR BENEATH OPERATION OR PARKING AREAS SHALL BE PLACED IN 8-INCH LOOSE LIFTS AND COMPACTED TO AT LEAST 95% OF MAXIMUM DRY DENSITY PER ASTM D1557 FOR IMPORT MATERIALS, AND 95% OF MAXIMUM DRY DENSITY PER ASTM D1557 FOR QUALIFYING ON-SITE SOILS. LANDSCAPED AREAS OUTSIDE FUTURE BUILDING AND PARKING AREAS SHALL BE PLACED IN 8-INCH LOOSE LIFTS AND COMPACTED TO AT LEAST 95% OF MAXIMUM DRY DENSITY PER ASTM D-1557. IN-PLACE DENSITY TESTS SHALL BE MADE BY AN INDEPENDENT LABORATORY TO DETERMINE THE SPECIFIED DENSITY HAS BEEN ACHIEVED. (1)

BIAXIAL GEOGRID

1. BIAXIAL GEOGRID SHALL HAVE A MINIMUM TENSILE STRENGTH AT 2% STRAIN OF 280 LB/FT OR GREATER. MAXIMUM APERTURE SHOULD BE 3 INCHES OR LESS. GEOGRID SHALL BE INSTALLED OVER THE PREPARED SUBGRADED AND PULLED TAUT WITH NO CREASES OR WRINKLES. EDGES MAY BE STAKED, IF NECESSARY. CRUSHED ROCK SHOULD BE PLACED OVER THE GEOGRID AND PUSHED OUTWARD TO MAINTAIN TENSION. SEAMS SHOULD OVERLAP BY AT LEAST 12 INCHES.

ORANGE VISIBLE GRID NOTES

1. ORANGE VISIBLE GRID SHALL BE HDPE. ORANGE VISIBLE GRID SHALL HAVE A MAXIMUM APERTURE OF 3 INCHES OR LESS.

GCL SUBGRADE

1. THE SUBGRADE SHALL BE PREPARED IN ACCORDANCE WITH GEOTECHNICAL ENGINEERING LETTER REPORT DATED AUGUST 24, 2024.
2. THE SUBGRADE SURFACE MUST BE SMOOTH AND FREE OF VEGETATION, SHARP ROCKS, STONES, STICKS, CONSTRUCTION DEBRIS AND FOREIGN MATTER.
3. THE SUBGRADE SHOULD BE ROLLED WITH A SMOOTH-DRUM COMPACTOR TO REMOVE ANY WHEEL RUTS GREATER THAN 1-INCH IN DEPTH, FOOTPRINTS, OR OTHER ABRUPT GRADE CHANGES.
4. ALL PROTRUSIONS EXTENDING MORE THAN ½-INCH FROM THE SUBGRADE SURFACE SHALL BE REMOVED.
5. THE FINISHED SURFACE SHOULD BE FIRM AND UNYIELDING, WITHOUT ABRUPT ELEVATION CHANGES, VOIDS, CRACKS, ICE OR STANDING WATER.

NON-WOVEN GEOTEXTILE FABRIC

1. A LAYER OF 10-OUNCE NON-WOVEN NEEDLE PUNCH GEOTEXTILE FABRIC SHALL BE PLACED ABOVE AND BELOW THE LAMINATED GCL.
2. A LAYER OF 10-OUNCE NON-WOVEN NEEDLE POINT GEOTEXTILE FABRIC SHALL WE WRAPPED AROUND THE PROPOSED 12" DIAMETER STORMWATER PERFORATED PIPE AND THE ASSOCIATED FRENCH DRAIN.
3. USE LAYFIELD LP10 NON-WOVEN NEEDLE PUNCH GEOTEXTILE FABRIC OR ENGINEER APPROVED ALTERNATIVE.
4. THE NON-WOVEN GEOTEXTILE FABRIC SHALL HAVE A MINIMUM GRAB TENSILE STRENGTH OF 200 POUNDS, MINIMUM TEAR STRENGTH OF 100 POUNDS AND A MINIMUM WATER FLOW OF 75 GALLONS PER MINUTE PER SQUARE FOOT.
5. NON-WOVEN GEOTEXTILE FABRIC SHALL BE OVERLAPPED BY A MINIMUM OF 12 INCHES AT SEAMS FOR USE BELOW AND ABOVE THE GCL.
6. NON-WOVEN GEOTEXTILE FABRIC ROLLS COME IN VARYING SIZES INCLUDING 15 FEET WIDE BY 350 FEET LONG.

LAMINATED GCL NOTES

1. THE GCL SHOULD NOT BE INSTALLED IN STANDING WATER OR DURING RAINY WEATHER. ONLY AS MUCH GCL SHALL BE DEPLOYED AS CAN BE COVERED AT THE END OF THE WORKDAY WITH COVER SOIL.
2. THE GCL SHALL NOT BE LEFT UNCOVERED OVERNIGHT TO PROTECT GCL INTEGRITY AND PREVENT DRYING, OR PREMATURE SWELLING DUE TO MOISTURE.
3. THE GCL SHOULD BE PLACED SO THAT THE SEAMS ARE PARALLEL TO THE DIRECTION OF THE SLOPE. END OF PANEL SEAMS SHOULD ALSO BE LOCATED AT LEAST 3 FEET FROM THE TOE AND CREST OF SLOPES STEEPER THAN 4H:1V.
4. ALL GCL PANELS SHOULD LIE FLAT, WITH NO WRINKLES OR FOLDS, ESPECIALLY AT THE EXPOSED EDGES OF THE PANELS.
5. THE CONTRACTOR SHALL USE BENTOMAT 600 CL GEOSYNTHETIC CLAY LINER OR ENGINEER APPROVED ALTERNATIVE. THE BENTOMAT 600 CL CONSISTS OF A LAYER OF SODIUM BENTONITE BETWEEN A POLYPROPYLENE WOVEN GEOTEXTILE AND A POLYPROPYLENE NONWOVEN GEOTEXTILE, WHICH ARE NEEDLE-PUNCHED TOGETHER AND LAMINATED TO A POLYETHYLENE GEOFILM. THE GCL SHALL BE INSTALLED WITH THE GEOFILM FACING UP TO RETAIN MOISTURE IN THE DRY SEASON. (1)
6. EACH GCL ROLL IS 15 FEET WIDE BY 150 FEET LONG. THE GCL SHALL BE OVERLAPPED 12 INCHES FROM EDGE OF PANEL AND 24 INCHES FROM END OF PANEL. SEE DETAIL 3 ON SHEET 902.
7. THE GCL SHOULD NOT BE HYDRATED IN THE FIELD. IN-SITU MOISTURE VAPOR WILL HYDRATE THE GCL.

CSBC NOTES

1. 12" CRUSHED SURFACING BASE COURSE (CSBC) WITH 95% COMPACTION PER ASTM D1557.
2. MEET SPECIFICATIONS PROVIDED IN WSDOT SS 9-03.9(3) - CRUSHED SURFACING BASE COURSE.
3. MATERIAL FOR CSBC SHALL MEET THE FOLLOWING REQUIREMENTS FOR GRADING AND QUALITY:

SIEVE SIZE	***PERCENT PASSING***
1-1/4"	99-100%
1"	80%-100%
5/8"	50%-80%
NO. 4	25%-45%
NO.40	3%-18%
NO.200	5% MAX
% FRACTURE	75% MIN
SAND EQUIVALENT	40% MIN

SELECT BORROW STRUCTURAL FILL NOTES

1. SELECT BORROW STRUCTURAL FILL SHALL MEET WA DOT SPEC 9-03.14(2).
2. MATERIAL FOR SELECT BORROW FILL SHALL CONSIST OF GRANULAR MATERIAL THAT SHALL MEET THE FOLLOWING REQUIREMENTS FOR GRADING AND QUALITY:

SIEVE SIZE	***PERCENT PASSING***
6"	100%
3"	75%-100%
NO. 40	50% MAX
NO. 200	5% MAX

GENERAL CONSTRUCTION NOTES

1. SEE SHEET C-002 FOR PROJECT SPECIFIC NOTES.
2. APPROXIMATE LIMITS OF DISTURBANCE ARE SHOWN ON THESE PLANS. CONTRACTOR SHALL BE RESPONSIBLE FOR DEMOLITION AND RESTORATION WITHIN LIMITS AS NECESSARY TO COMPLETE THE WORK. COORDINATE WITH OWNER FOR ANY ONSITE STAGING NEEDS.
3. ALL MATERIALS REMOVED AS PART OF CONSTRUCTION SHALL BE DISPOSED OF PROPERLY. ANY SITE FIXTURES, FENCING, ETC., SHALL BE THE PROPERTY OF THE OWNER UNLESS OTHERWISE DIRECTED TO DISPOSE OF THESE MATERIALS, BY THE OWNER.
4. SEE PROJECT GEOTECHNICAL ENGINEER LETTER REPORT, DATED AUGUST 23, 2024 BY PBS FOR SITE PREPARATION REQUIREMENTS. (1)
5. AREA OF CONCERN EXCAVATIONS WITHIN GCL CAP FOOTPRINT PROVIDED IN ENGINEERING DESIGN REPORT (EDR)(TBD)
6. AOC EXCAVATIONS ARE APPROXIMATE AND MAY CHANGE. CONTRACTOR TO COORDINATE WITH FLOYD SNIDER FOR EXACT DEPTH AND EXTENT OF EXCAVATION. AOC EXCAVATIONS OUTSIDE FOOTPRINT OF GCL CAP ARE NOT SHOWN.
7. CONTRACTOR TO COORDINATE SOIL AND DEWATERING FLUID WASTE CLASSIFICATION, MANAGEMENT AND DISPOSAL IN ACCORDANCE WITH APPLICABLE REGULATIONS. CONTRACTOR TO COORDINATE WITH OWNER AND FLOYD SNIDER.
8. CONTRACTOR TO FIELD LOCATE ALL BURIED UTILITIES INCLUDING , BUT NOT LIMITED TO, WATER, NATURAL GAS, TELECOMMUNICATION AND ELECTRICAL WITH A PRIVATE UTILITY LOCATE AND FIELD VERIFY LOCATION AND DEPTH PRIOR TO INITIATING INTRUSIVE WORK. CONTRACTOR TO PROTECT ALL UTILITIES AND UNDERGROUND STRUCTURES AND MONITORING WELLS, UNLESS OTHERWISE STATED IN THE EDR.
9. TEMPORARY EROSION AND SEDIMENT CONTROL DETAILS ARE INCLUDED IN THE EDR. CONTRACTOR RESPONSIBLE FOR TESC AND WILL PROVIDE PLAN FOR ENGINEER APPROVAL PRIOR TO THE WORK. (1)

KEYED GRADING NOTES

(1) CONTRACTOR TO PROTECT EXISTING BUILDING FOOTING, CONCRETE CONTAINMENT AREA, CONCRETE PADS AND RAILROAD SPUR FROM UNDERMINING DURING EXCAVATION. CONTRACTOR TO PROPOSE ENGINEERING CONTROLS TO PROJECT ENGINEER TO PROTECT FOOTING AND RAILROAD SPUR. EXCAVATION WITHIN A 2H:1V (HORIZONTAL TO VERTICAL) ZONE BELOW FOOTING OR RAILROAD SPUR REQUIRES ENGINEERING DESIGN.

(2) PROJECT ENGINEER TO COORDINATE ACCESS WITH ADJOINING PROPERTY OWNER.

(3) MONITORING WELL MW-4 TO BE REINSTALLED BY LICENSED WELL DRILLER. SEE GCL PENETRATION DETAIL 5 ON C-902.

ENCROACHMENT ON BNSF RIGHT OF WAY

1. THE CONTRACTOR MUST COORDINATE WITH THE PROJECT ENGINEER REGARDING WORK ADJACENT TO THE BNSF RIGHT-OF-WAY.

Project Summary

REGENESIS appreciates the opportunity to provide Floyd Snider our revised preliminary remedial design and cost estimate for the Smith-Kem project. This proposal is a second revision following additional discussion regarding the remedial plan and objectives for the site. This proposal includes an overview of our proposed solution, the project goals, technologies proposed, application design summary table and a treatment area map. The proposed costs in this proposal are a budgetary range and are not intended for final budgetary approval. Please update Regenesis in the future and your plans for implementation near for the site and Regenesis will provide accurate and firm costs to complete the proposed scope of work.

Proposed Solution

We propose two permeable reactive barriers. The northern barrier will utilize PlumeStop Liquid Activated Carbon applied through direct push injection points, a second southern barrier will utilize PetroFix applied in an excavation. Approximately 9 feet of the southern barrier's western end is outside the excavation extent and will be injected with PlumeStop through a series of direct push injection points. PlumeStop and PetroFix are both activated carbon technologies that will be used to capture the dissolved phase contaminant mass and remove it as groundwater migrates through the barriers. The location of the proposed barriers are shown on Figure 1.

A double barrier approach is recommended based on the performance well locations, groundwater flow, location of the source and contaminant types. The barriers are positioned perpendicular to groundwater flow, just down gradient of the residual source. With the combination of these two-barrier locations, we can actively treat contaminant mass migrating towards the barriers.

It should be noted that this site contains a wide array of contaminant types present in groundwater. Some contaminants will clean up rather quickly while others require more time; hence, we have positioned the two barrier locations considering the contaminant properties and timeline for optimal performance.

Groundwater flow velocity and direction were also considered for the barrier locations, orientation and length. Passive flux meters installed at the site documented that groundwater flow is up to 800 ft per year in the target treatment interval. In fast-moving aquifers we typically recommend two separate barriers for optimal performance. Note that the barrier positioning and length will affect the time frame and degree of performance observed at down gradient wells.

PlumeStop will be applied via direct push injection. Regenesis Remediation Services (RRS) will complete the product application. The PetroFix product will be applied into the excavation via soil mixing. We have provided costs for the PetroFix product in this proposal. Floyd Snider can work with a local excavation contractor to apply the PetroFix.

Technologies Proposed

- PlumeStop®
- PetroFix®

Click above to access product specification sheets

Technical Resources

- PlumeStop® Case Study: PlumeStop Application Paves The Way For Redevelopment
- PetroFix - An Animated Overview

Project Goals

- Provide treatment barriers downgradient of building footprint
- Long term performance
- Control contaminant mass leaving the building footprint.

Design Summary - PlumeStop Barrier + PlumeStop Extension-Excavation

PetroFix™ Application Summary
Excavation Estimate
Smith-Kem
Ellensburg, WA

REGENESIS
PetroFIX Remediation Fluid

PetroFix Amount	4,000 lb
Treatment Surface Area	275 ft^2
Assumed Placement Interval At Base	12 ft
Treatment Volume	122 yd^3
PetroFix Dose	32.7 lb/yd^3
Shipped PetroFix Volume	409 gal
Shipped Electron Acceptor (EA)	0 lb

Specific Area Notes:
Native soil type: Mix of Coarse and Fine

General Application Approach: PetroFix should be distributed horizontally and vertically as best possible throughout the placement interval starting at the base of the treatment zone (12 feet) and within the width of the emplaced barrier (approximately 5 feet). See excavation application instructions (link below) to learn more about direct spray and soil mixing application approaches. PetroFix application rates can be adjusted to apply higher or lower amounts across the excavation based on field observations or sampling of contaminant presence.

REGENESIS

Technology-Based Solutions for the Environment

Technical Approach

We are proposing the application of PlumeStop® Liquid Activated Carbon™ (PlumeStop) to treat residual contaminants in groundwater. PlumeStop,a form of colloidal activated carbon, is an innovative groundwater remediation technology designed to readily distribute in the subsurface and to rapidly remove contaminants from groundwater to meet remedial targets. PlumeStop is composed of very fine particles of activated carbon (1-2µm) suspended in a proprietary organic polymer dispersion chemistry and is applied under low injection pressures. The colloidal activated carbon particles are dispersed from the injection point before binding to the soil matrix to create a permeable zone with an extensive sorption capacity. Contaminants then passively flow through the PlumeStop zone where they are rapidly adsorbed out of the groundwater, preventing furthermigration. Additional information regarding the technology can be found via the links below.

PetroFix can be applied in an excavation by applying exclusively on the floor and sidewalls of the excavation or mixed throughout the backfill used in the excavation. For this site, REGENESIS recommends the spray application PetroFix into the open excavation. See the above PetroFix Excavation Application Table for more details. The volumes described above in are rough estimations and should be changed in the field as needed. TECHNICAL NOTE: The PetroFix solution applied should be mixed so that when sprayed into the excavation the viscosity is thick enough to not run or drain while still having enough volume to cover the treatment area.

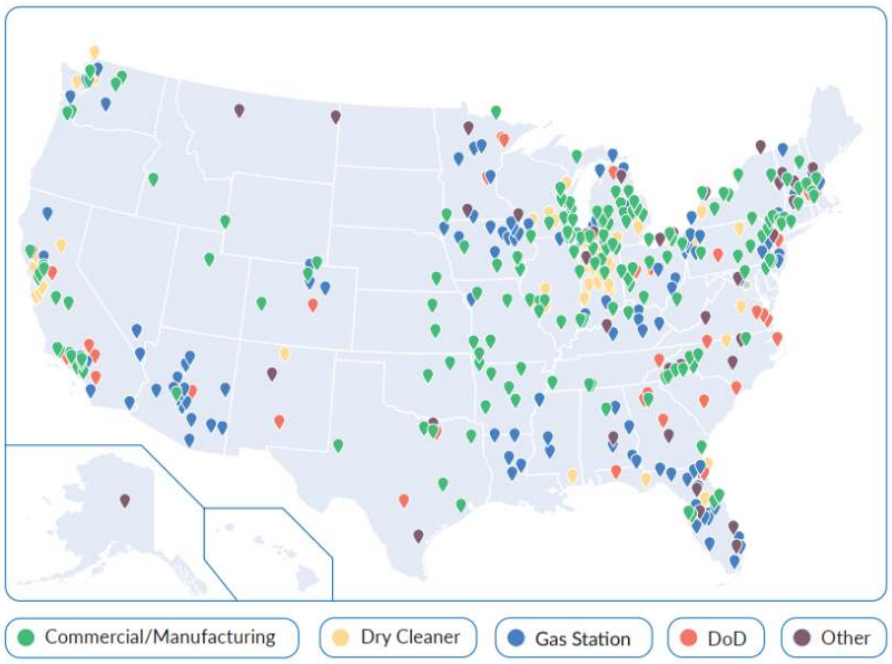
Design Verification Testing (DVT)

Design Verification Testing (DVT) describes a suite of field sampling/testing activities carried out before an *in-situ* injection program is implemented. All DVT information has been collected from the site and evaluated by Regenesis. The current design reflects the understanding of the contaminant plume and site conditions following the DVT.

RRS Statement of Qualifications

RRS provides turn-key remediation planning, design, and application services. RRS field scientists are college degreed professionals that understand the details of each remediation design, the site conceptual site model, the remediation chemistry being applied, the significance of the designed amendment dosing and achieving subsurface distribution, and how a breakdown of any one of these and other factors can result in poor remediation performance. They have the unique background and experience to understand the significance of modifications made in the field.

RRS' direct management of the injection program optimizes the design and ultimately, the overall remedy performance. No one has more professional experience handling and applying *in situ* remediation products than RRS personnel.



RRS has been offering industry-leading application services combined with excellence in field activity management for over a decade. We succeed by meeting the cleanup objectives established by the environmental engineering firms who contract our services. To produce this outcome, we employ field-experienced, disciplined, and dedicated project teams who work with our clients to address the unique requirements of each project site. Astute technical insight and timely, direct, and honest communication are hallmarks of RRS. Our reputation for meeting or exceeding clients' objectives has been proven in project successes throughout North America.

Further information on what sets RRS apart is provided in the following technical resources:

- RRS: Performance Driven, Results Based
- The RRS Difference
- RRS Project Experience

With decades of application experience, RRS is strategically located across the country to mobilize and assist on a wide range of sites throughout the US.

Over 100 Projects Completed Annually Across the US

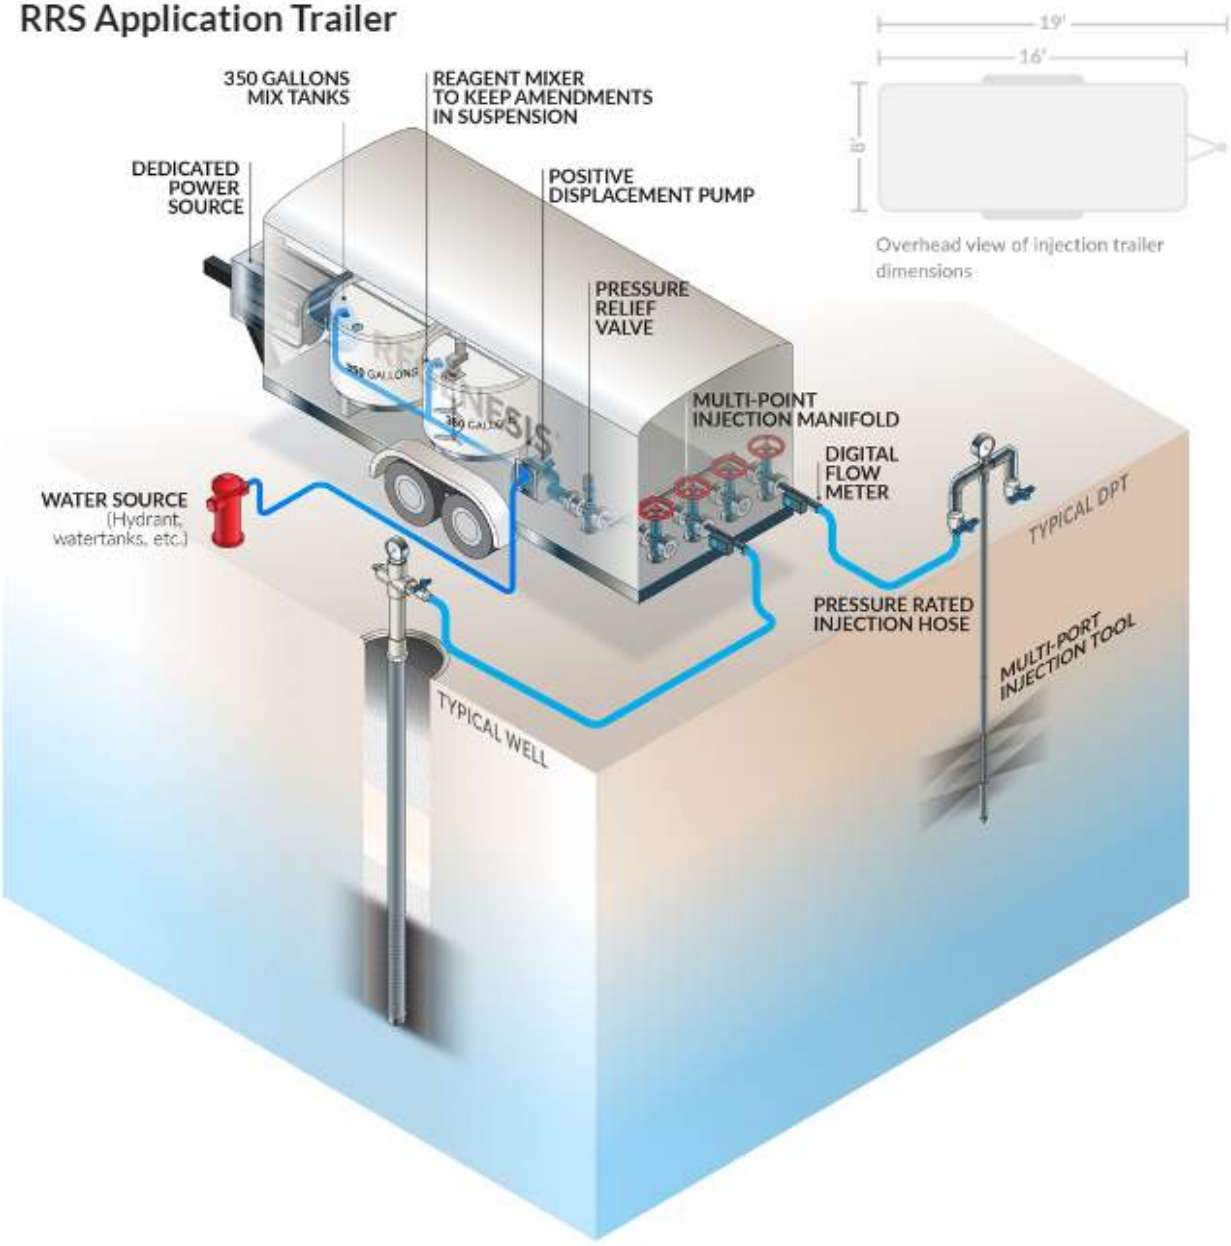
RRS Scope of Services

RRS, as part of its role, will operate under the guidance of Floyd Snider to execute the remedial actions in the field, employing the chosen remediation methodologies. The collaboration between RRS and Floyd Snider will entail joint responsibilities in carrying out this scope of work.

Additionally, prior to and during the injection, **Placement Validation (PV) testing** will be conducted. PV serves as a standard in-field methodology involving the extraction of soil cores and the observation of water samples to assess the dispersion of amendments during the remedial application. RRS will execute PV at the outset of the application and periodically thereafter. In-field adaptations may be implemented during the application if PV testing suggests adjustments are required to ensure the distribution of remedial amendments aligns with the design.

The distribution of responsibilities is elaborated upon in this section as well as under the Assumptions/Qualification segment. At the outset of each day, RRS will convene a safety tailgate meeting to discuss the day's objectives, procedures, assigned roles, and review health and safety concerns.

RRS will be outfitted with various injection tool alternatives compatible with 1.5-inch diameter Direct Push Technology (DPT) rods. The injection tool configuration will be advanced either to the upper or lower extent of the target treatment zone, and injections will be conducted utilizing either a bottom-up or top-down technique based on the subsurface lithology.



Remediation technologies will be mixed with water water utilizing a custom built injection system (see below), adhering to the specified solution concentration. This mixture will be consistently agitated during the injection process. Parameters such as pressures, flow rates, and overall volume will be closely monitored and digitally recorded for each injection interval. To enhance efficiency on-site, simultaneous injections at multiple locations may be performed. RRS will vigilantly monitor the injection points and their surroundings for any indications of surfacing, and a spill response kit will remain on standby.

Throughout the application, real-time data will be collected and analyzed to corroborate design assumptions and the dispersion of reagents in the subsurface. Depending on the remedial agent applied, the gathered and analyzed data may encompass groundwater quality parameters (e.g., pH, conductivity, Dissolved Oxygen (DO), Oxidation-Reduction Potential (ORP), etc.), measurements of water table depth, visual indicators observed via groundwater or soil samples, and in-field concentration tests of injected substances. This data collection is typically conducted during the application process when operating within 10 feet of appropriately screened monitoring wells.

Guided by the collected information, the project team may introduce adjustments to the remediation design to enhance the injection application's efficacy. These adjustments might involve alterations in injection concentrations and volume per location.

Upon the conclusion of the injection operation, RRS will demobilize all equipment and personnel from the site. A comprehensive injection summary report, encompassing details of injection points (interval depths, injection pressure/flow rates, reagent volume, time elapsed, and surfacing occurrences), on-site observations, and any notable information, will be prepared and submitted to Floyd Snider.

RRS Application Trailer

Health and Safety Plan

RRS is committed to providing a safe and healthy working environment for all on-site employees, including Floyd Sniders and contractors on-site. Before mobilization, RRS will develop a site-specific Health and Safety Plan (HASP) and designate an on-site safety officer. All personnel on-site are required to participate in daily safety tailgate meetings to proactively identify potential hazards and mitigate risks to the full extent possible.

In addition to the hours of rigorous safety training courses all personnel are required to complete, RRS also incorporates a behavior-based safety program by utilizing our DoneSafe mobile application (app) interface on every site. This app encourages our personnel to actively search for potential on-site risks and document mitigation actions. The effectiveness of our safety program can be seen in our industry-leading Experience Modification Rating (EMR) listed in table below.

	Total Hours	EMR
2022	189,458	0.73
2021	125,592	0.71
2020	162,037	0.64
2019	169,964	0.66

RRS safety tailgate meetings and HASP will include the following:

- Site map
- List of personnel and contact information for employees on-site and supporting the project.
- Route to the nearest occupational treatment facility and hospital along with contact information.
- Job Hazard Analysis (JHA) detailing each job task on-site with its potential hazards and best practices to avoid those hazards.
- Description and hazards of the contaminants of concern (COC) with appropriate Personal Protection Equipment (PPE) requirements.
- List and description of REGENESIS chemicals on-site including a Safety Data Sheet (SDS) for each chemical.
- Checklist of site safety equipment including fire extinguishers, eyewash station, first aid kit, spill prevention kit and any site-specific equipment needed.
- Daily tailgate safety meeting sheet with identified hazards and risks associated with the site and job tasks for that day, along with shared learning observations from the previous day.

Introduction

Excavation Application Guidance for PetroFix

PetroFix™ Remediation Fluid (PetroFix) is an environmentally-compatible formulation of micron-scale activated carbon (1-2 microns) that is combined with both slow and quick-release inorganic electron acceptors (Electron Acceptor Blend or EA Blend). PetroFix can be applied to the floor and sidewalls of an excavation through *in situ* soil mixing or direct spraying. PetroFix should generally be applied to the vertical interval of the excavation that is naturally saturated with groundwater or expected to become naturally saturated.

REGENESIS has prepared this guidance document for remediation practitioners who are planning to use PetroFix as an amendment for remedial excavations. Two methods of application are described: Direct and *in situ* soil mixing.

For guidance on application methods that are not described in either document, please contact REGENESIS directly at 949-366-8000 or send an inquiry to info@petrofix.com.

H&S Note: Prior to use all personnel should review the specific SDSs to assure compliance and preparedness for any type of emergency that arises. OSHA (29 CFR 1910.1200)

PetroFix Health & Safety Information

Storage and Handling Guidelines

- Store away from incompatible materials and in original closed container
- Store at temperatures between 40°F and 95°F
- Do not allow material to freeze or store in direct sunlight
- Freezing and hot weather technical memo can be accessed here
- Dispose of waste and residues in accordance with local authority requirements

LEVEL D

Level D Protection is primarily a work uniform and is used for nuisance contamination only. It requires only coveralls and safety shoes/boots. Other PPE is based upon the situation (types of gloves, etc.). It should not be worn on any site where respiratory or skin hazards exist.

Source: https://chemm.nlm.nih.gov/ppe.htm

Note: *This recommendation is only for PetroFix and does not supersede additional precautions due to site conditions and potential exposures.*

Personal Protective Equipment (PPE) Requirements for Safe Installation

PetroFix is considered nonhazardous although it is recommended that personnel working with or in areas where there is a potential for contact with PetroFix should be required at a minimum to be fitted with Level D personal protective equipment. However, this recommendation is only for PetroFix and does not supersede additional precautions due to site conditions and potential exposures.

PPE should be upgraded from modified Level D based on site-specific hazards and requirements.

Typical Requirements

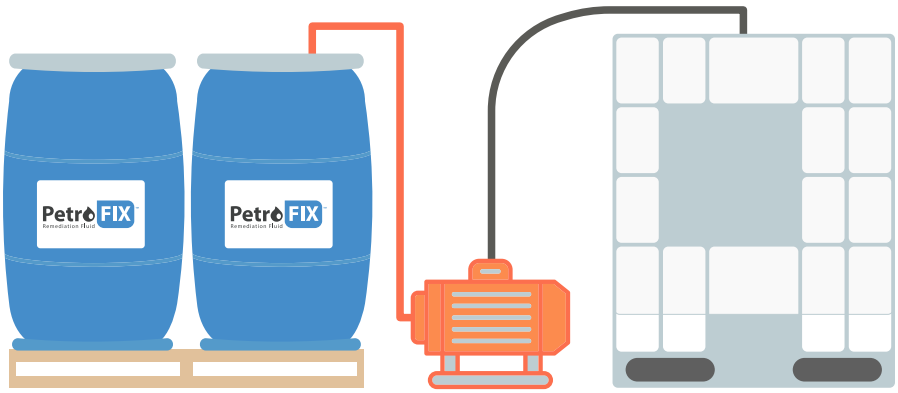
Features, Installation Equipment and Supplies Needed for PetroFix Application

- Secure storage area for PetroFix
- PetroFix SDS
- Appropriate Personal Protective Equipment (PPE)
- Qualified heavy equipment operators if mechanically mixing PetroFix
- Water source for mixing and spraying
- Access to electricity if spray pumps are used
- Mixing tanks – size based on the desired amounts of water to use and site logistics
- Drum mixer for homogenizing PetroFix in its 55-gallon drums (examples given later in this document)
- Hosing between mixing tank/drum and spray pump
- Spray pump if doing a direct spray application

More specifics are provided in the following sections.

Application Process

Pre-Mixing of PetroFix



Shipping Information: PetroFix fluid is shipped in 55-gal. polyethylene drums and the EA version is shipped in 20-lb plastic pails.

PetroFix fluid is shipped in 55-gallon polyethylene drums and the EA Blend is shipped in 20-lb plastic pails. There are 41 gallons of fluid in each drum. PetroFix fills to roughly 12 to 14 inches below the top of the drum. PetroFix fluid can be transferred from its drum into a mix tank using either a diaphragm pump, trash pump, or a drum pump.

Note: *Always add water to mixing tank prior to adding PetroFix Remediation Fluid*

In most instances PetroFix will need to be diluted in a larger mixing tank and then pumped from that mixing tank to spray or pour into the excavation. Both PetroFix and the supplied electron acceptor should be diluted in the mixing tank and not in the drum the material was shipped in. **Mix tank volumes of 200 to 500 gallons should be enough for most sites and one should expect repeated re-fills of the tank until PetroFix is distributed.** Always add water to mixing tank prior to adding PetroFix Remediation Fluid.

- Assemble product transfer system to move the PetroFix from the drums to the mix tank. A diaphragm pump such as a Yamada diaphragm pump can be used to pump PetroFix form a drum to a mix tank.

The image shows an example PetroFix transfer and mixing setup where a tote was chosen as the mix tank

The image shows the homogenization of PetroFix using a high torque/high rpm mixer with appropriate mixing paddle.

- Always pre-mix PetroFix in its container prior to pumping material out of the container

- PetroFix is easy to mix with a proper power drill/mixer and a mixing blade combination. In cold weather or prolonged storage times PetroFix may settle a few inches at the bottom of the 55-gallon poly drum. Any such settling can be resuspended in the field with little time and the right equipment. A recommended mixing combination for all circumstances would be a high torque, double handle mixer such as a QEP or Rigid thinset grout and mortar power mixer with QEP 30" pro spiral mixing paddle, or equivalent (available at Home Depot). Other high torque mixers and paddle combinations can be used if they can create a vortex in the drum.

- If the PetroFix is difficult to pump after mixing with our recommended mixer you may need to thin the material. We recommend you add 3 to 5 gallons of water to the drum and blend that into the material. This will reduce the viscosity to allow for proper homogenization and transfer to dilution tanks.

- Transfer appropriate volume of PetroFix remediation fluid to the water in the mix tank.

- Thoroughly mix PetroFix solution in the mixing tank using an impeller type drum mixer or by recirculating the product inside the tank.

- Add recommended ratio of PetroFix Electron Acceptor Blend to the mixed solution in the tank. One tip is to use a scale to measure mass of electron acceptor blend needed for partial mix batches. Standard dosing is one bucket of electron acceptor blend per one drum of PetroFix.

  CAUTION: DO NOT mix PetroFix Electron Acceptor (EA) blend from the 20 lb buckets into undiluted PetroFix Remediation Fluid in the drums or totes. Only add the PetroFix EA blend into the diluted PetroFix solution in the mix tank. Adding the EA blend directly into the PetroFix Remediation Fluid will prevent the EA blend from properly dissolving in the mix water.

- As the drum is emptied into the mixing tank, flush out the drum with water to fully use all material. Flush water can be used as mix water.

Excavation Applications

The following text provides general guidance for how to apply PetroFix by direct application through spraying or in-excavation soil mixing. This document should not be considered an exhaustive review of all potential PetroFix application techniques and only provides a brief discussion on procedures recommended by REGENESIS.

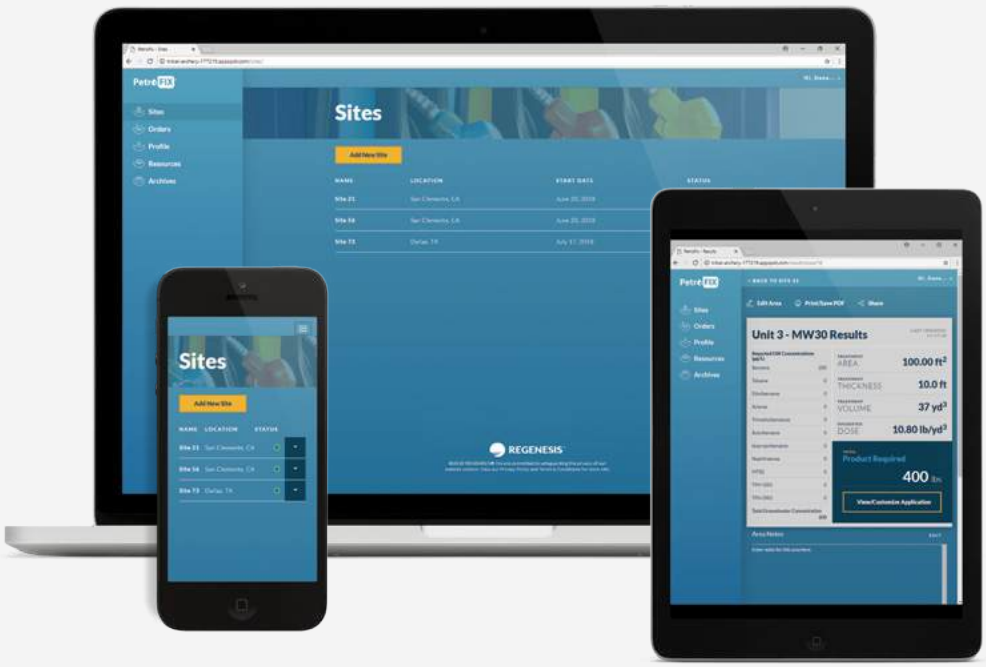
PetroFix should never be applied by personnel within the excavation, unless proper shoring or sidewall cutback is in place.

Aerial view of PetroFix application an excavation site via direct-spraying

Direct Application

PetroFix can be sprayed onto the floor and sidewalls of an excavation by mixing PetroFix with water in above-ground mixing tanks and spraying using a high-volume water pump to fully cover the treatment area. PetroFix application should be focused in areas where complete excavation was not possible or where there is a concern for potential contaminant rebound. To facilitate focused application for sidewalls or areas of concern, application of the PetroFix solution can be sequenced to coincide with the incremental lifts during the soil backfilling.

PetroFix should be applied on a mass basis per treatment area using the design recommendations provided by REGENESIS. The minimum recommended mixing ratio for PetroFix for spraying is 1:1 by volume with water (i.e. 41 gallons of PetroFix fluid + 20 lb of supplied EA Blend to 41



H&S Note: All excavations should be assessed by an "excavation competent person" as defined in OSHA (29 CFR 1926.50) to assure that personnel and equipment applying the product are a safe distance away from sheer walls to prevent engulfment and injury.

gallons of mix water) and this is usually used for relatively small excavations where a large area of distribution is not needed. Higher dilution volumes would be recommended where PetroFix is sprayed into the middle of a large excavation that is harder to reach. The volume of mix water can be increased or decreased as needed to fully cover the treatment area and is usually determined in field. As a rule-of-thumb, plan on using at least 5x as much volume of mix water as PetroFix remedial fluid used and vary as needed so that you feel you have enough water to achieve the coverage that you need. Enough water should be used to spread PetroFix through the entire excavation treatment area. If the excavation is not saturated, enough water should be used to attain coverage and saturate the first few inches of the excavation and cause some downward percolation.

PetroFix can be applied directly to the soil using a towable water trailer (such as Wastecorp 500 to 1,600 gallon water trailers) equipped with an onboard centrifugal water pump and sprayed using a 1.5" lay flat hose fitted with a 1.5" fire nozzle. This equipment can be rented at most construction rental supply stores. PetroFix and the associated Electron Acceptor Blend can be mixed by recirculating the solution within the water tank using either the onboard water pump or an external pump. PetroFix and the EA Blend should be mixed with water for approximately five minutes before it is ready to be sprayed into the excavation. It is recommended to flush the pump, hose, and nozzle with clean water after spraying each PetroFix drum and at the end of the day to prevent potential clogging. Follow OSHA-required health and safety practices while spraying and follow regulations on appropriate distances to stand away from the edges of the excavation. Use caution when spraying PetroFix upwind and it is advised to wear a face shield to prevent liquid splashing on the face.

In Situ Soil Mixing

In situ soil mixing can be performed to improve PetroFix distribution within the soil targeted for remediation. PetroFix can be added undiluted into the excavated area and mixed *in situ* with standing groundwater. If the excavated area is dry, it is recommended to add water to the floor of the excavation to aid in soil mixing and saturate at a minimum the first few inches of soil. Add water as needed to aid in mixing and plan for enough water based on the volume of excavation to be treated. Another option is that PetroFix can be diluted (per instructions in the prior section) with higher volumes of water and then sprayed into the excavation at the mixing head. Mechanical mixing can be performed using a variety of excavator attachments, including bucket, auger, or rotary tool.

List of Abbreviations

Abbreviation	Definition
CUL	Cleanup level
EDD	Electronic data deliverable
EDR	Engineering Design Report

Abbreviation	Definition
Engineer	Engineer of Record
FBI	Friedman and Bruya, Inc.
ID	Identifier
IDW	Investigation-derived waste
LCS	Laboratory control sample
LCSD	Laboratory control sample duplicate
MDL	Method detection limit
MS	Matrix spike
MSD	Matrix spike duplicate
PID	Photoionization detector
PM	Project Manager
PPE	Personal protective equipment
ppm	Parts per million
PQL	Practical quantitation limit
QA	Quality assurance
QC	Quality control
REL	Remediation level
RIWP	Remedial Investigation Work Plan
RL	Reporting limit
RPD	Relative percent difference
SAP/QAPP	Sampling and Analysis Plan/Quality Assurance Project Plan
SDG	Sample delivery group
SOP	Standard Operating Procedure
TPH	Total petroleum hydrocarbons
USEPA	U.S. Environmental Protection Agency

1.0 Sampling and Analysis Plan

Implementation of the Engineering Design Report (EDR) will involve collecting performance and confirmation groundwater and soil samples to confirm achievement of applicable cleanup levels (CULs) and remediation levels (RELs) within the Smith-Kem Site (Site). Sampling procedures are described in the following sections, including field methodology, sample nomenclature, and sample handling and custody documentation. Additionally, Table I.1 presents the analytical methods, preservation requirements, bottle types, and holding times for the sampling program. Table I.2 presents the detection limits and reporting limits (RLs) for the analyses.

1.1 GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

Groundwater sample collection will be performed in accordance with the Sampling and Analysis Plan/Quality Assurance Project Plan (SAP/QAPP) presented in the Remedial Investigation Work Plan (RIWP; Floyd|Snider 2016), with updated information such as analytical methods described below.

1.1.1 Groundwater Sampling

Groundwater samples will be collected prior to construction per Section 7.1.2 of the EDR. Samples will be collected with standard low-flow pumping methods for Site groundwater COCs in accordance with the RIWP SAP/QAPP with supplemental updates per the PDI Work Plan SAP/QAPP. Additional updates to analytical methods are included in Table I.2.

1.2 SOIL SAMPLE COLLECTION AND ANALYSIS

Soil sample collection will be performed in accordance with the standard guidelines in the RIWP and RIWP Addendum (Floyd|Snider 2016, 2017), with updated information such as analytical methods described below. As described in Section 7.0 of the EDR, confirmation soil samples will be collected in AOC 2, AOC 4, and the FS-01 excavation area to confirm the lateral extents of excavation in these areas. The following sections provide field methods and sampling procedures that will be used to complete soil sampling.

1.2.1 Soil Sampling

Samples will be collected at the confirmation sample locations shown on EDR Figures 7.2, 7.4, and 7.6, or as determined by the Engineer of Record (Engineer) based on field observations of petroleum impacts. Sidewall soil samples will be collected from the depth where previous impacts were observed or at the midpoint of the selected excavation extent based on direction from the Engineer. The sample will be collected directly from the excavated sidewall using a trowel, or, if the excavation is unsafe to enter, an excavator bucket.

Soil samples will be collected into a decontaminated stainless steel bowl and will be homogenized using the trowel or a decontaminated stainless steel spoon. Soil type, lithology, and any other observations or indications of petroleum contamination for each sample will be recorded on a

soil collection form. Volatile organic compound field measurements will be taken for each soil sample with a photoionization detector (PID). Measurements will be taken by collecting a small spoonful of soil into a Ziploc bag. The PID will be inserted into the headspace of each sample bag after soil has been agitated and the soil vapor has equilibrated in a sealed bag. PID readings will be recorded on the soil collection form.

The objective of the soil excavation in FS-01 is to remove total petroleum hydrocarbons (TPH) contamination above CULs. If visual/olfactory observations of petroleum contamination or a PID reading indicate possible contamination in the sidewalls of the FS-01 excavation area, the excavation footprint will be expanded to remove petroleum contaminated soil (i.e., visually contaminated soil or soil with a PID reading above background). A sidewall sample will be collected as described above, and additional samples may be collected at the discretion of the Engineer based on field screening. Additional samples, if collected, will be archived for potential future analysis based on initial sample results.

The objective of the soil excavation in AOCs 2 and 4 is to remove TPH contamination above RELs. TPH above RELs is not present in AOCs 1, 3, or 5 or in the FS-01 excavation area. Visual observation of TPH between the CUL and RELs is anticipated in AOCs 2 and 4, so excavation to below RELs will be estimated through field screening and confirmed with laboratory analysis of confirmation samples. If visual observations of petroleum contamination or PID readings are present in AOCs 2 or 4 during excavation, the Engineer will use the field observations made during the RI and PDI (generally REL exceedances correspond to PID readings greater than 100 parts per million [ppm]) to guide excavation and sample collection decisions. The Engineer may extend the footprint of the excavation in AOCs 2 and 4 based on professional judgment or if PID readings are greater than 100 ppm, in combination with visual and olfactory observations. If PID readings are less than 100 ppm, the Engineer may stop the excavation and collect a confirmation sample to verify the remediation objective has been achieved (TPH below RELs). Excavations will not be backfilled until confirmation samples confirm that remediation objectives have been achieved. Samples will be analyzed on an expedited turnaround time to minimize the time an excavation remains open.

1.3 FIELD RECORDS

Documents and records generated in the field should be considered controlled documents that become part of the project file. Floyd|Snider field staff will keep a daily record of significant events, observations, and measurements on forms specific to the field activity. All field documents will be maintained by the field coordinator. All sampling forms will contain information on the sample collected and will include at a minimum the following information:

- Project name
- Field staff on-site
- Field observations
- Sample collection date and time

- Sampling method and/or description of field activities
- Instruments or equipment used
- Location identifier (ID) and sample ID
- Sample analysis
- Deviations from this SAP/QAPP

1.4 FIELD EQUIPMENT AND MAINTENANCE

Field equipment for water sampling that requires maintenance or calibration includes the following: pH probes, specific conductivity probes, turbidity meters, reduction–oxidation potential probes and dissolved oxygen probes, and navigation equipment.

Field equipment will be maintained and calibrated in accordance with the procedures described in the operations manuals supplied by the manufacturer at the intervals recommended in the manual. The manufacturers' manuals will accompany each instrument for use during equipment calibration and to support troubleshooting. Equipment maintenance information will be documented in the instrument's maintenance log. Equipment calibration performed by field staff will be documented in a calibration log. The calibration log will include at minimum the equipment type and model number, date and time, project name, the calibration results, and the initials of the calibrator. Any discrepancies or calibration failures will be noted in the calibration log and corrected prior to sampling. During the sampling event, any discrepancies or calibration failures will be noted in the field notes and corrected prior to continuing sampling. Maintenance and calibration records will be verified prior to each sampling event by the field coordinator.

1.5 FIELD DECONTAMINATION PROCEDURES

The decontamination procedure is designed to prevent cross-contamination between sampling locations. Before each use and between sampling locations, the sampling equipment (i.e., stainless steel bowl and spoon) will be decontaminated as follows:

1. Remove excess soil with a brush and potable water.
2. Scrub surfaces of equipment contacting sample material with brushes using an Alconox solution.
3. Rinse equipment with distilled or deionized water.

1.6 SAMPLE NOMENCLATURE

Each sample container will be labeled with a unique alphanumeric code (also known as sample name) that will facilitate tracking and cross referencing of sample information.

Each groundwater sample name will include the information and follow the formats outlined below:

- Well ID, *dash*, six-digit date of sample collection (MMDDYR). For example, a groundwater sample collected at MW-4 on July 1, 2025, will be labelled as "MW-4-070125."

Each soil sample name will include the information and follow the formats outlined below:

- AOC number, *dash*, unique number ID, *dash*, depth interval (in decimal feet). The unique number ID will continue the numbering scheme from the PDI events. For example, a soil sample collected in AOC 4 from 4 feet bgs would be labeled as "AOC4-10-4.0."
- If a sample is a duplicate, a "1" will be added to the sample location identification number (e.g., a duplicate sample collected at location "AOC4-10" will be termed "AOC4-110").

A label must be affixed to all sample containers to prevent misidentification, and at a minimum must include the following:

- Client name and project
- Unique sample name
- Date and time of collection
- Preservatives used in the sample, if applicable

The information on each sample label will be recorded on the boring log and/or in the field logbook and on the laboratory chain-of-custody.

1.7 SAMPLE PRESERVATION

Samples requiring field preservation will be placed into pre-preserved sample jars supplied by the laboratory. Immediately after the sample jars are filled with media, they will be placed in the appropriate cooler with a sufficient number of ice packs or crushed ice to keep them cool through the completion of the day's sampling and transport to the laboratory.

1.8 SAMPLE HANDLING AND CUSTODY DOCUMENTATION

Sample possession and handling must be traceable from the time of sample collection, through laboratory and data analysis, to the time sample results are reported. A sample soil collection form and field logbook entries will be completed for each location occupied and each sample collected.

1.8.1 Sample Chain-of-Custody

Technical field staff will be responsible for all sample tracking and custody procedures in the field, and the chain-of-custody procedures will be strictly followed.

At the end of each day and before sample transfer, each sample will be recorded on the chain-of-custody form in indelible ink. All sample information (e.g., sample names, sampling date/time, sample matrix, number of containers), including all required analyses, will be recorded on the chain-of-custody form before formal transfer of the sample containers to the analytical

laboratory. The sampler will place the chain-of-custody form in a Ziploc bag inside the sample cooler with the samples.

The samples are considered to be in custody if one of the following is maintained:

- The samples are in someone's physical possession.
- The samples are in someone's view.
- The samples are locked up or secured in a locked container or vehicle, or otherwise sealed so that any tampering would be evident.
- The samples are kept in a secured area that is restricted to authorized personnel only.

Any time possession of the samples is transferred, the individuals relinquishing and receiving the samples will sign, date, and note the time of transfer on the chain-of-custody form. This form also documents the transfer of custody of samples from the sampler to the laboratory. Each shipment of sample coolers will be accompanied by the chain-of-custody forms.

Copies of all forms will be retained as appropriate and included as appendices to quality assurance (QA) and quality control (QC) reports to management.

1.8.2 Sample Transport

Before transport, the field staff will take measures to preserve the integrity of the samples. This includes wrapping the sample containers and securely packing them inside the cooler with ice packs or crushed ice to maintain the required temperature range. Additionally, the original signed chain-of-custody forms will be transferred in the cooler alongside the samples. The coolers containing the samples will be delivered to the laboratory under chain-of-custody protocol after completion of sampling activities on the day of sample collection or the following day, depending on the duration of the field sampling. Alternatively, if appropriate, the samples may be shipped directly to the laboratory to maintain the required temperature range and ensure timely delivery.

1.8.3 Sample Receipt

Upon receipt of the samples, the designated sample receiver at the laboratory will accept custody of the samples and verify that the chain-of-custody forms match the samples received. The Friedman and Bruya, Inc. (FBI) Project Manager and/or sample receiver will ensure that the chain-of-custody forms are properly signed, indicating receipt of the samples. Any questions or observations regarding the integrity of the samples will be noted on the chain-of-custody forms to ensure transparency and accountability throughout the sample handling process.

1.9 INVESTIGATION-DERIVED WASTE MANAGEMENT

Generated waste will be managed and disposed of in accordance with applicable waste management regulations. Investigation-derived waste (IDW) includes contaminated purge water, decontamination wash water, soil drill cuttings (including non-soil debris that may be removed from the subsurface during drilling), and disposable materials used during field work

that may be impacted by contaminated media or decontamination wash water (e.g., disposable personal protective equipment [PPE], used filters, plastic sheeting, paper towels, tubing).

The approach to handling and disposal of these materials is as follows: For IDW that is containerized (e.g., soil cuttings and groundwater purge water), 55-gallon drums will be used for temporary storage pending profiling and disposal. Each container holding IDW will be sealed and labeled as to its contents (e.g., “soil cuttings”), the dates on which the wastes were placed in the container, the owner’s name and contact information of the field person generating the waste, the site name, and the boring(s) or well(s) from which they were obtained or extracted. At the end of each day, the drums will be transferred to a designated temporary storage area on-site.

This waste will be managed in accordance with applicable regulations and standards. Material that is designated for off-site disposal will be transported to an off-site facility permitted to accept the waste. Manifests will be used as appropriate for disposal and will be included in the Remedial Action Completion Report along with any other applicable documentation (e.g., weigh tickets).

All disposable sampling material and PPE (e.g., paper towels, disposable coveralls, and gloves) used in sample processing will be placed in heavyweight garbage bags or other appropriate containers. Disposable supplies will be removed from the Site by sampling personnel and placed in a municipal solid waste refuse container for disposal at a solid waste landfill.

1.10 INSPECTION OF SUPPLIES AND CONSUMABLES

Inspection and acceptance of field supplies, including laboratory sampling containers, will be the responsibility of Floyd|Snider field staff. Any chemical standards and solutions used in this project will be provided by a reliable, commercial source and will be traceable. Any discrepancies will be documented by Floyd|Snider field staff.

1.11 HEALTH AND SAFETY

All field investigation activities described in this SAP/QAPP will be conducted in accordance with the Site Health and Safety Plan.

2.0 Quality Assurance Project Plan

This section describes the analytical program that will be carried out for each sample selected for chemical analysis. It also discusses the laboratory QA objectives and QC procedures required to produce technically sound and reliable data. To ensure accurate and reliable results, the sampling program will adhere to specific analytical methods, preservation requirements, bottle types, and holding times, which are presented in Table I.1. This table provides a comprehensive list of parameters for each analysis method. Table I.2 presents the detection limits and RLs for each analysis.

2.1 LABORATORY ANALYSES

Laboratory analyses were selected to ensure that sample results can be compared to the applicable CULs and RELs presented in the EDR. The laboratory RLs and method detection limits (MDLs) for the selected analytical methods are presented in Table I.2.

2.1.1 Groundwater Analyses

The groundwater samples collected for chemical analysis will be transported to the following laboratories for various chemicals as summarized in Table I.1 using the specific methods applicable for water, as follows:

FBI in Seattle, Washington:

- Diesel- and oil-range TPH by NWTPH-Dx

Analytical Resources, LLC (ARL) in Tukwila, Washington:

- Pesticides (aldrin, beta hexachlorocyclohexane [beta-BHC], cis-chlordane, trans-chlordane, cis-nonachlor, trans-nonachlor, oxychlordane, and toxaphene) by U.S. Environmental Protection Agency (USEPA) Method 8081
- Nitrate and nitrite by USEPA Method 300.0

Pacific Agricultural Laboratory in Sherwood, Oregon:

- Herbicides (2,4-dichlorophenoxyacetic acid [2,4-D] and 2-methyl-4-chlorophenoxyacetic acid [MCPA]) by USEPA Method 8151A (Mod)
- Atrazine by USEPA Method 8321B (Mod)

2.1.2 Soil Analyses

The soil samples collected for chemical analysis will be transported to FBI, an accredited laboratory located in Seattle, Washington. The laboratory will analyze the samples for various chemicals, as summarized in Table I.2, using the specific methods applicable for soil, as follows:

- Diesel- and oil-range TPH by NWTPH-Dx

2.2 LABORATORY RECORDS

The analytical laboratories will retain all analytical records. Additionally, Floyd|Snider will retain a copy of analytical data in the internal project files. Laboratory data packages will include those items necessary to complete data validation.

All instrument data will be fully restorable at the laboratory from electronic backup. The laboratory will be required to maintain records relevant to project sample analyses for a minimum of 7 years. The project manager (PM) is responsible for determining and communicating specific requirements for record maintenance if they are different than the default. Data validation reports will be maintained within the Floyd|Snider internal project files with the laboratory data packages.

Each laboratory employs an internal QA manager who is responsible for ensuring that laboratory *Standard Operating Procedures (*SOPs*)* are followed, and laboratory staff perform routine audits for SOP compliance; routine audits are required for state accreditation. The Floyd|Snider PM or Ecology may request to review records of SOP compliance.

2.3 REPORTING LIMITS

The analytical methods outlined in this SAP/QAPP have achievable MDLs and RLs (or practical quantitation limits [PQLs]) that use standard methodology. Table I.2 provides the target MDLs and RLs for each analytical method. However, it should be noted that these RLs are goals only, and there may be instances where high sample concentrations, non-homogeneity of samples, or matrix interferences may prevent the laboratory from achieving the desired RL and associated QA/QC criteria. In such cases, the laboratory will report the reason for any deviation from these RLs.

2.4 LABORATORY QUALITY ASSURANCE/QUALITY CONTROL OBJECTIVES

The laboratory's QA/QC objectives are to obtain technically sound and well-documented data, which have been evaluated against established criteria for the principle data quality indicators. These indicators include precision, accuracy, representativeness, completeness, and comparability, as defined in Ecology and USEPA guidance (Ecology 2004; USEPA 2002). The laboratory will follow the QA/QC criteria presented in Table I.3, which are described in detail in the following sections.

2.4.1 Precision

Precision measures the reproducibility of measurements under a given set of conditions. Specifically, precision is a quantitative measure of the variability of a group of measurements compared to their average values. Analytical precision is measured through matrix spike (MS)/matrix spike duplicate (MSD) samples for organic analysis, through laboratory duplicate samples for inorganic analyses, and on project-specific samples.

To ensure analytical precision, project-specific samples will be analyzed at a minimum frequency of one sample per laboratory analysis group. The laboratory will evaluate precision against quantitative relative percent difference (RPD) performance criteria.

Field precision will be evaluated through the collection of field duplicates. Currently, no performance criteria have been established for field duplicates. Therefore, field duplicate precision will be screened against an RPD of 75% for all samples. However, it is important to note that no data will be qualified based solely on field duplicate precision.

Precision measurements can be affected by the proximity of a chemical concentration to the MDL, which can result in an increase in the percent error (expressed as RPD). The equation used to express precision is as follows:

$$RPD = \frac{(C_1 - C_2) \times 100\%}{(C_1 + C_2)/2}$$

Where:

RPD = relative percent difference
C_1 = larger of the two observed values
C_2 = smaller of the two observed values

2.4.2 Accuracy

Accuracy is an expression of the degree to which a measured or computed value represents the true value. To assess analytical accuracy, spiked samples with known concentrations (surrogates, laboratory control samples [LCSs], and/or MS) will be analyzed, and the percent recovery will be measured.

Accuracy measurements on MS samples will be carried out at a minimum frequency of one per laboratory analysis group per matrix analyzed. The laboratory will perform MS/MSDs only on samples from this investigation and not from other projects because MS/MSDs measure the effects of potential matrix interferences of a specific matrix. Surrogate recoveries will be determined for every sample analyzed for organics.

The laboratory accuracy will be evaluated against quantitative LCS, MS, and surrogate spike recoveries using limits for each applicable analyte. Accuracy can be expressed as a percentage of the true or reference value, or as a percent recovery in those analyses where reference materials are not available and spiked samples are analyzed. The equation used to express accuracy is as follows:

$$\%R = 100\% \times (S - U)/C_{sa}$$

Where:

%R = percent recovery
S = measured concentration in the spiked aliquot
U = measured concentration in the unspiked aliquot
C_{sa} = actual concentration of spike added

2.4.3 Representativeness

Representativeness expresses the degree to which sample data accurately and precisely represent a characteristic of a population, parameter variations at a sampling point, or an environmental condition. To ensure representativeness, the sampling program has been carefully designed with proper selection of sample locations, sufficient numbers of samples collected, and representative samples obtained. A sufficient volume of samples will be collected at each sampling location to minimize bias or errors associated with sample particle size and heterogeneity.

2.4.4 Comparability

Comparability is a qualitative parameter that indicates the confidence with which one dataset can be compared to another. To ensure the comparability of results, all samples will be analyzed using standard USEPA methods and protocols. Calibration and reference standards will be traceable to certified standards, and standard data reporting formats will be employed. The data will be reviewed to verify that precision and accuracy criteria were achieved. Any deviations from established QA/QC criteria will be documented and explained in the final report.

2.4.5 Completeness

Completeness is a measure of the amount of data that is determined to be valid in proportion to the amount of data collected. Completeness will be calculated as follows:

$$C = \frac{\text{(Number of acceptable data points)} \times 100}{\text{(Total number of data points)}}$$

The QA/QC objectives for completeness for all components of this project are set at 95%. Any data that were qualified as estimated due to not meeting the QA/QC criteria will still be considered valid for the purpose of assessing completeness. However, any data that were qualified as rejected will not be considered valid for assessing completeness.

2.5 LABORATORY AND FIELD QUALITY ASSURANCE/QUALITY CONTROL PROCEDURES

The quality of analytical data generated will be assessed both by the implementation of field QC procedures and by the frequency and type of internal laboratory QA/QC checks developed for analysis type and method.

2.5.1 Field Quality Control Sampling

Field QC will be evaluated through the analysis of field duplicates. Field duplicates will be collected to evaluate the efficiency of field decontamination procedures, variability from sample handling, and sample heterogeneity. Field duplicate samples will be collected at a rate of 1 per 20 investigation samples.

2.5.2 Laboratory Sample Handling

Samples will be stored in accordance with the conditions specified in the methods or laboratory SOPs. All samples will be handled to prevent contamination or sample loss. Any remaining sample material will be disposed of upon receipt of written notification by the Floyd|Snider PM. Holding times will vary by analysis and are summarized in Table I.1.

Archive samples will be stored frozen as allowed by the analytical method (refer to Table I.1). Samples will be disposed of after hold times expire, following written authorization from the Floyd|Snider PM. The Floyd|Snider PM may elect to hold archived samples past the specified hold time as needed to gather the additional project data.

2.5.3 Laboratory Instruments Calibration and Frequency

Laboratory equipment will be maintained and calibrated according to the manufacturers' recommendations, the laboratory QA plan, SOPs, and standard methodologies. Calibrations will be performed on each analytical instrument prior to analysis. Calibrations are performed at a frequency determined by the analytical method and/or the laboratory SOP. The analysis must stop if the calibration does not meet the specified criteria. The analysis may resume after corrective actions have been taken to meet the method specifications. All project samples analyzed by an instrument found to be out of compliance must be reanalyzed. Laboratories will be responsible for their own preventative maintenance and calibration of laboratory equipment.

2.5.4 Laboratory Quality Assurance/Quality Control

Laboratory results will be evaluated by reviewing analytical results of method blanks, MS/MSD, field duplicate samples, LCS, calibrations, performance evaluation samples, and interference checks as specified by the analytical methods used.

The QA/QC samples from each laboratory analysis group will be reviewed by the laboratory analyst immediately after completion of the analysis. The QA/QC samples from each laboratory analysis group will be evaluated to determine whether control limits were exceeded. If control limits are exceeded, corrective action such as method modifications followed by reprocessing of the affected samples will be initiated before processing a subsequent group of samples.

All primary chemical standards and standard solutions used will be obtained from documented and reliable commercial sources and will be traceable. Standards will be validated for accuracy by comparing them with an independent standard, and any impurities identified in the standard will be documented.

The procedures that will be used to assess data quality throughout sample analysis are summarized in the following sections.

2.5.5 Sample Delivery Groups

A sample delivery group (SDG) is defined by the laboratory and is generally considered 20 samples, or a group of samples from the same sampling period received at the laboratory on the same day. Although an SDG may span 2 weeks, all holding times specific to each analytical method will be met for each sample in the SDG.

2.5.6 Laboratory Duplicates

Laboratory duplicates are subsamples of the original sample that are prepared and analyzed as a separate sample to assess the precision of the analysis and potential sample heterogeneity and matrix effects. A minimum of one laboratory duplicate will be analyzed per laboratory analysis group, even when there are fewer than 20 samples.

2.5.7 Matrix Spikes and Matrix Spike Duplicates

Analysis of MS samples provides information on the extraction efficiency of the method on the sample matrix. By performing MSD analyses, information on the precision of the method is also provided for organic analyses. A minimum of one MS/MSD will be analyzed for every laboratory analysis group for which MS/MSD sample analysis is applicable per the approved method. When feasible, MS/MSD analyses will be performed on project-specific samples. A laboratory duplicate sample may be analyzed in place of MSD samples, as allowed by the analytical method.

2.5.8 Laboratory Control Samples and Laboratory Control Sample Duplicate

An LCS is a method blank sample carried throughout the same process as the samples to be analyzed, with a known amount of standard added. The blank spike compound recovery assesses analytical accuracy in the absence of any sample heterogeneity or matrix effects. All LCS and LCS duplicate (LCSD) data for metals and organic compounds will be reported. The LCS/LCSD will be performed once per laboratory analysis group.

2.5.9 Surrogate Spikes

All project samples analyzed for organic compounds will be spiked with appropriate surrogate compounds as defined in the analytical methods. Surrogate recoveries will be reported by the laboratories. However, no sample result will be corrected for recovery using these values.

2.5.10 Method Blanks

Method blanks are analyzed to assess possible laboratory contamination at all stages of sample preparation and analysis. A minimum of one method blank will be analyzed for every extraction batch.

2.5.11 Internal Standards

Internal standards may be used for calibrating and quantifying organic compounds and metals. If internal standards are required by the method, all calibration, QC, and project samples will be spiked with the same concentration of the selected internal standards. Internal standard recoveries and retention times must be within method criteria, laboratory criteria, or both.

2.6 DATA VALIDATION

Data validation programs have been established in accordance with USEPA guidance (USEPA 2002a). Data validation will be based on the QA/QC criteria as recommended in the methods identified in this SAP/QAPP and in the USEPA's National Functional Guidelines (USEPA 2020a and b) and environmental data verification and validation guidance (USEPA 2002b).

Once data are received from the laboratory, Floyd|Snider will review the laboratory reports for internal consistency, transmittal errors, laboratory protocols, and adherence to the objectives specific in this SAP/QAPP. Data validation will be conducted at the specified levels for each analyte class listed below, with specific procedures to assess data precision, accuracy, and completeness. A USEPA Stage 2B Data Quality Review will be performed on soil and groundwater data resulting from pesticides, herbicides, TPH, and conventional analyses. The results of the Data Quality Review will be summarized in the Remedial Action Completion Report and subsequent compliance monitoring reports.

For additional information on data validation/reduction, refer to the Work Plan (Floyd|Snider 2016).

2.7 DATA MANAGEMENT AND DATA REPORTING

Analytical chemistry results will be provided in data packages by the laboratories in PDFs and electronically in the Floyd|Snider standard electronic data deliverable (EDD) format. Guidelines for EDDs will be communicated to the analytical laboratories by Floyd|Snider prior to sample submittal. Data packages will be returned within the time frame specified in the work order between Floyd|Snider and the laboratories, with a duration not to exceed 15 business days, unless delays are otherwise communicated to and approved by the Floyd|Snider PM.

After completion of data validation, the Floyd|Snider database manager will load all records to Floyd|Snider's electronic database accessed using Microsoft Access software. The database is maintained on the Floyd|Snider server and is backed up with a hard disk.

Validated chemical data will be compiled and presented in tables that include the location of soil sampling points, concentrations with appropriate qualifiers, and comparison to relevant criteria. These data will be incorporated into the Remedial Action Completion Report.

2.8 CORRECTIVE ACTIONS

Corrective action procedures are described in this section.

2.8.1 Corrective Action for Field Sampling

The Field Lead will be responsible for correcting field errors in sampling or documenting equipment malfunctions during the field sampling effort and will be responsible for resolving situations in the field that may result in non-compliance with this SAP/QAPP. All corrective measures will be immediately documented in the field logbook.

2.8.2 Corrective Action for Laboratory Analyses

The laboratories are required to comply with their SOPs. The laboratory PMs will be responsible for ensuring that appropriate corrective actions are initiated as required for conformance with this SAP/QAPP. All laboratory personnel will be responsible for reporting problems that may compromise the quality of the data.

Test sample and QC sample data will be reviewed to determine whether there is an exceedance of QC limits. If any QC sample exceeds the project-specified control limits, the analyst will identify and correct the anomaly before continuing with the sample analysis. The analyst will document the corrective action taken in a memorandum submitted to the QA Manager. A narrative describing the anomaly, the steps taken to identify and correct the anomaly, and the treatment of the relevant sample batch (i.e., recalculation, reanalysis, and/or re-extraction) will be submitted with the data package.

Appendix I

Tables

Table I.1
Analytical Methods, Bottle Type, Preservation, and Holding Times

Laboratory	Chemical	Analytical Method	Bottle Type	Preservative	Holding Time
Soil					
FBI	Total petroleum hydrocarbons: diesel- and oil-range	NWTPH-Dx	One 4-oz WMG	None, cool to <6 °C	14 days to extract, then 40 days to analyze
				Freeze -18 °C	1 year to extract, then 40 days to analyze
Groundwater					
FBI	Total petroleum hydrocarbons: diesel- and oil-range	NWTPH-Dx	One 500-mL amber glass	Cool to <4 °C, HCl to pH<2	14 days to extract (7 days without HCl), then 40 days to analyze
ARL	Pesticides (Aldrin, beta-BHC, Chlordanes, Toxaphene)	USEPA 8081B LL	Two 500-mL glass amber	None, Cool <6 °C	7 days; 40 days if extracted

Smith-Kem Site

Appendix J
Inadvertent Discovery Plan

INADVERTENT DISCOVERY PLAN

PLAN AND PROCEDURES FOR THE DISCOVERY OF CULTURAL RESOURCES AND HUMAN SKELETAL REMAINS

To request ADA accommodation, including materials in a format for the visually impaired, call Ecology at 360-407-6000 or visit https://ecology.wa.gov/accessibility. People with impaired hearing may call Washington Relay Service at 711. People with a speech disability may call TTY at 877-833-6341.

Site Name(s): Smith-Kem Site Location: Ellensburg, WA

Project Lead/Organization: Pamela Osterhout/Floyd|Snider County: Kittitas

If this Inadvertent Discovery Plan (IDP) is for multiple (batched) projects, ensure the location information covers all project areas.

1. INTRODUCTION

The IDP outlines procedures to perform in the event of a discovery of archaeological materials or human remains, in accordance with applicable state and federal laws. An IDP is required, as part of Agency Terms and Conditions for all grants and loans, for any project that creates disturbance above or below the ground. An IDP is not a substitute for a formal cultural resource review (Executive 21-02 or Section 106).

Once completed, **the IDP should always be kept at the project site** during all project activities. All staff, contractors, and volunteers should be familiar with its contents and know where to find it.

2. CULTURAL RESOURCE DISCOVERIES

A cultural resource discovery could be prehistoric or historic. Examples include (see images for further examples):

- An accumulation of shell, burned rocks, or other food related materials.
- Bones, intact or in small pieces.
- An area of charcoal or very dark stained soil with artifacts.
- Stone tools or waste flakes (for example, an arrowhead or stone chips).
- Modified or stripped trees, often cedar or aspen, or other modified natural features, such as rock drawings.
- Agricultural or logging materials that appear older than 50 years. These could include equipment, fencing, canals, spillways, chutes, derelict sawmills, tools, and many other items.
- Clusters of tin cans or bottles, or other debris that appear older than 50 years.
- Old munitions casings. ***Always assume these are live and never touch or move.***
- Buried railroad tracks, decking, foundations, or other industrial materials.
- Remnants of homesteading. These could include bricks, nails, household items, toys, food containers, and other items associated with homes or farming sites.

The above list does not cover every possible cultural resource. When in doubt, assume the material is a cultural resource.

3. ON-SITE RESPONSIBILITIES

If any employee, contractor, or subcontractor believes that they have uncovered cultural resources or human remains at any point in the project, take the following steps to ***Stop-Protect-Notify***. **If you suspect that the discovery includes human remains, also follow Sections 5 and 6.**

STEP A: Stop Work.

All work must stop immediately in the vicinity of the discovery.

STEP B: Protect the Discovery.

Leave the discovery and the surrounding area untouched and create a clear, identifiable, and wide boundary (30 feet or larger) with temporary fencing, flagging, stakes, or other clear markings. Provide protection and ensure integrity of the discovery until cleared by the Department of Archaeological and Historical Preservation (DAHP) or a licensed, professional archaeologist.

Do not permit vehicles, equipment, or unauthorized personnel to traverse the discovery site. Do not allow work to resume within the boundary until the requirements of this IDP are met.

STEP C: Notify Project Archaeologist (if applicable).

If the project has an archaeologist, notify that person. If there is a monitoring plan in place, the archaeologist will follow the outlined procedure.

STEP D: Notify Project and Washington Department of Ecology (Ecology) contacts.

Project Lead Contacts

Primary Contact		Alternate Contact	
Name:	Pamela Osterhout	Name:	Emily Jones
Organization:	Floyd|Snider	Organization:	Floyd|Snider
Phone:	(206) 387-9440	Phone:	(206) 719-6993
Email:	pamela.osterhout@floydsnider.com	Email:	emily.jones@floydsnider.com

Ecology Contacts (completed by Ecology Project Manager)

Ecology Project Manager		Alternate or Cultural Resource Contact	
Name:	John Mefford	Name:	Tavi Wise
Program:	Toxics Cleanup	Program:	Toxics Cleanup
Phone:	(509) 731-9613	Phone:	(509) 406-6959
Email:	JMEF461@ecy.wa.gov	Email:	TWIS461@ecy.wa.gov

STEP E: Ecology will notify DAHP.

Once notified, the Ecology Cultural Resource Contact or the Ecology Project Manager will contact DAHP to report and confirm the discovery. To avoid delay, the Project Lead/Organization will contact DAHP if they are not able to reach Ecology.

DAHP will provide the steps to assist with identification. DAHP, Ecology, and Tribal representatives may coordinate a site visit following any necessary safety protocols. DAHP may also inform the Project Lead/Organization and Ecology of additional steps to further protect the site.

Do not continue work until DAHP has issued an approval for work to proceed in the area of, or near, the discovery.

DAHP Contacts:

Name: Rob Whitlam, PhD
Title: State Archaeologist
Cell: 360-890-2615
Email: Rob.Whitlam@dahp.wa.gov
Main Office: 360-586-3065

Human Remains/Bones:

Name: Guy Tasa, PhD
Title: State Anthropologist
Cell: 360-790-1633 (24/7)
Email: Guy.Tasa@dahp.wa.gov

4. TRIBAL CONTACTS

In the event cultural resources are discovered, the following tribes will be contacted. See Section 10 for Additional Resources.

Tribe:	Confederated Tribes and Bands of the Yakama Nation	Tribe:	
Name:	Kate Valdez	Name:	
Title:	Tribal Historic Preservation Officer	Title:	
Phone:	(509) 985-7596	Phone:	
Email:	kate@yakama.com	Email:	
Tribe:	Confederated Tribes and Bands of the Yakama Nation	Tribe:	
Name:	Johnson Meninick	Name:	
Title:	Cultural Resources	Title:	
Phone:	(509) 865-5121 (Ext 4737)	Phone:	
Email:	johnson@yakama.com	Email:	

Please provide contact information for additional tribes within your project area, if needed, in Section 11.

5. FURTHER CONTACTS (if applicable)

If the discovery is confirmed by DAHP as a cultural or archaeological resource, or as human remains, and there is a partnering federal or state agency, Ecology or the Project Lead/Organization will ensure the partnering agency is immediately notified.

Federal Agency:		State Agency:	
Agency:	N/A	Agency:	DAHP
Name:	N/A	Name:	Stephanie Jolivette
Title:	N/A	Title:	Local Government Archaeologist
Phone:	N/A	Phone:	(360) 628-2755
Email:	N/A	Email:	Stephanie.Jolivette@dahp.wa.gov

6. SPECIAL PROCEDURES FOR THE DISCOVERY OF HUMAN SKELETAL MATERIAL

Any human skeletal remains, regardless of antiquity or ethnic origin, will at all times be treated with dignity and respect. Follow the steps under ***Stop-Protect-Notify.*** For specific instructions on how to handle a human remains discovery, see: *RCW 68.50.645: Skeletal human remains—Duty to notify—Ground disturbing activities—Coroner determination—Definitions*.

Suggestion: If you are unsure whether the discovery is human bone or not, contact Guy Tasa with DAHP, for identification and next steps. Do not pick up the discovery.

Guy Tasa, PhD State Physical Anthropologist
Guy.Tasa@dahp.wa.gov
(360) 790-1633 (Cell/Office)

For discoveries that are confirmed or suspected human remains, follow these steps:

1. Notify law enforcement and the Medical Examiner/Coroner using the contacts below. **Do not call 911** unless it is the only number available to you.

   Enter contact information below (required):
   - Local Medical Examiner or Coroner name and phone: Nick Henderson, Coroner (509) 856-4970
   - Local Law Enforcement main name and phone: Ken Wade, Police Chief (509) 962-7280
   - Local Non-Emergency phone number (911 if without a non-emergency number): Ellensburg Police Department (509) 962-7280
2. The Medical Examiner/Coroner (with assistance of law enforcement personnel) will determine if the remains are human or if the discovery site constitutes a crime scene and will notify DAHP.
3. **DO NOT speak with the media, allow photography or disturbance of the remains, or release any information about the discovery on social media.**
4. If the remains are determined to be non-forensic, Cover the remains with a tarp or other materials (not soil or rocks) for temporary protection and to shield them from being photographed by others or disturbed.

Further activities:

- Per RCW 27.44.055, RCW 68.50, and RCW 68.60, DAHP will have jurisdiction over non-forensic human remains. Ecology staff will participate in consultation. Organizations may also participate in consultation.
- Documentation of human skeletal remains and funerary objects will be agreed upon through the consultation process described in RCW 27.44.055, RCW 68.50, and RCW 68.60.
- When consultation and documentation activities are complete, work in the discovery area may resume as described in Section 8.

If the project occurs on federal lands (such as a national forest or park or a military reservation) the provisions of the Native American Graves Protection and Repatriation Act of 1990 (NAGPRA) apply and the responsible federal agency will follow its provisions. Note that state highways that cross federal lands are on an easement and are not owned by the state.

If the project occurs on non-federal lands, the Project Lead/Organization will comply with applicable state and federal laws, and the above protocol.

7. DOCUMENTATION OF ARCHAEOLOGICAL MATERIALS

Archaeological resources discovered during construction are protected by state law RCW 27.53 and assumed eligible for inclusion in the National Register of Historic Places under Criterion D until a formal Determination of Eligibility is made.

The Project Lead/Organization must ensure that proper documentation and field assessment are made of all discovered cultural resources in cooperation with all parties: the federal agencies (if any), DAHP, Ecology, affected tribes, and the archaeologist.

The archaeologist will record all prehistoric and historic cultural material discovered during project construction on a standard DAHP archaeological site or isolate inventory form. They will photograph site overviews, features, and artifacts and prepare stratigraphic profiles and soil/sediment descriptions for minimal subsurface exposures. They will document discovery locations on scaled site plans and site location maps.

Cultural features, horizons, and artifacts detected in buried sediments may require the archaeologist to conduct further evaluation using hand-dug test units. They will excavate units in a controlled fashion to expose features, collect samples from undisturbed contexts, or to interpret complex stratigraphy. They may also use a test unit or trench excavation to determine if an intact occupation surface is present. They will only use test units when necessary to gather information on the nature, extent, and integrity of subsurface cultural deposits to evaluate the site's significance. They will conduct excavations using standard archaeological techniques to precisely document the location of cultural deposits, artifacts, and features.

The archaeologist will record spatial information, depth of excavation levels, natural and cultural stratigraphy, presence or absence of cultural material, and depth to sterile soil, regolith, or bedrock for each unit on a standard form. They will complete test excavation unit level forms, which will include plan maps for each excavation level and artifact counts and material types, number, and vertical provenience (depth below

surface and stratum association where applicable) for all recovered artifacts. They will draw a stratigraphic profile for at least one wall of each test excavation unit.

The archaeologist will screen sediments excavated for purposes of cultural resources investigation through 1/8-inch mesh, unless soil conditions warrant 1/4-inch mesh.

The archaeologist will analyze, catalogue, and temporarily curate all prehistoric and historic artifacts collected from the surface and from probes and excavation units. The ultimate disposition of cultural materials will be determined in consultation with the federal agencies (if any), DAHP, Ecology, and the affected tribe(s).

Within 90 days of concluding fieldwork, the archaeologist will provide a technical report describing any and all monitoring and resultant archaeological excavations to the Project Lead/Organization, who will forward the report to Ecology, the federal agencies (if any), DAHP, and the affected tribe(s) for review and comment.

If assessment activities expose human remains (burials, isolated teeth, or bones), the archaeologist and Project Lead/Organization will follow the process described in **Section 6**.

8. PROCEEDING WITH WORK

The Project Lead/Organization shall work with the archaeologist, DAHP, and affected tribe(s) to determine the appropriate discovery boundary and where work can continue.

Work may continue at the discovery location only after the process outlined in this plan is followed and the Project Lead/Organization, DAHP, any affected tribe(s), Ecology, and the federal agencies (if any) determine that compliance with state and federal laws is complete.

9. ORGANIZATION RESPONSIBILITY

The Project Lead/Organization is responsible for ensuring:

- This IDP has complete and accurate information.
- This IDP is immediately available to all field staff at the sites and available by request to any party.
- This IDP is implemented to address any discovery at the site.
- That all field staff, contractors, and volunteers are instructed on how to implement this IDP.

10. ADDITIONAL RESOURCES

Informative Video

Ecology recommends that all project staff, contractors, and volunteers view this informative video explaining the value of IDP protocol and what to do in the event of a discovery. The target audience is anyone working on the project who could unexpectedly find cultural resources or human remains while excavating or digging. The video is also posted on DAHP's inadvertent discovery language website.

11. ADDITIONAL INFORMATION

Please add any additional contact information or other information needed within this IDP.

The Washington Department of Archaeology and Historic Preservation (DAHP) has classified the site as being within an area of "Very High Risk" for encountering cultural resources. Despite this classification, there are no archaeological sites recorded either on or in the vicinity of the Smith-Kem Site, and previous surveys have not identified any cultural resources in the area. Additionally, site investigation work completed by Floyd| Snider at Smith-Kem, including test pits, did not reveal the presence of cultural resources.

Based on a reivew of DAHP's Washington Information System for Architectural and Archaeological Records Data (WISAARD), in 2022, Plateau Archaeological Investigations completed a Cultural Resource Survey for the Ellensburg Bypass Sewer Project, which included a portion of S. Railroad Avenue adjacent to the Smith-Kem site. The project involved a pedestrian survey and the excavation of eight subsurface geotechnical test pits. No cultural resources were identified during the survey or subsurface investigations. Further, the survey documented heavy disturbance in the project area, resulting from human activities, development, and construction. This disturbance has likely altered the natural state of the area, impacting the preservation of cultural and archaeological resources.

Implement the IDP if you see…

Chipped stone artifacts.

Examples are:

- Glass-like material.
- Angular material.
- “Unusual” material or shape for the area.
- Regularity of flaking.
- Variability of size.

Stone artifacts from Oregon.

Stone artifacts from Washington.

Biface-knife, scraper, or pre-form found in NE Washington. Thought to be a well knapped object of great antiquity. Courtesy of Methow Salmon Rec. Foundation.

Implement the IDP if you see…

Ground stone artifacts.

Examples are:

- Unusual or unnatural shapes or unusual stone.
- Striations or scratching.
- Etching, perforations, or pecking.
- Regularity in modifications.
- Variability of size, function, or complexity.

Above: Fishing Weight - credit CRITFC Treaty Fishing Rights website.

Artifacts from unknown locations (left and right images).

Implement the IDP if you see…

Bone or shell artifacts, tools, or beads.

Examples are:

- Smooth or carved materials.
- Unusual shape.
- Pointed as if used as a tool.
- Wedge shaped like a “shoehorn”.
- Variability of size.
- Beads from shell (dentalium) or tusk.

Upper Left:*Bone Awls from Oregon.*

Upper Center: *Bone Wedge from California.*

Upper Right: *Plateau dentalium choker and bracelet, from Nez Perce National Historical Park, 19th century, made using Antalis pretiosa shells Credit: Nez Perce - Nez Perce National Historical Park, NEPE 8762, Public Domain.*

Above: *Tooth Pendants. Right: Bone Pendants. Both from Oregon and Washington.*

Implement the IDP if you see…

Culturally modified trees, fiber, or wood artifacts.

Examples are:

- Trees with bark stripped or peeled, carvings, axe cuts, de-limbing, wood removal, and other human modifications.
- Fiber or wood artifacts in a wet environment.
- Variability of size, function, and complexity.

Left and Below: *Culturally modified tree and an old carving on an aspen (Courtesy of DAHP).*

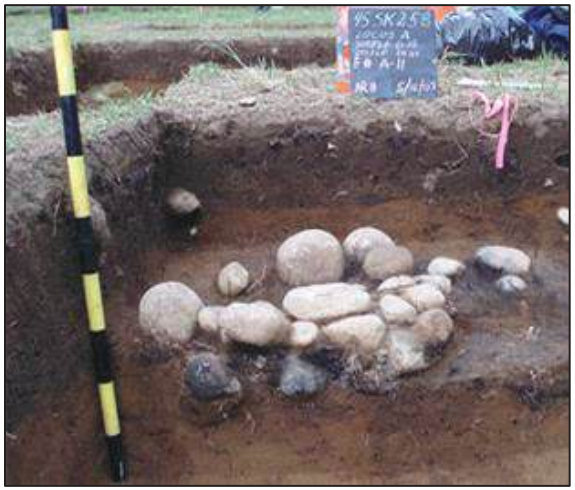
Right, Top to Bottom: *Artifacts from Mud Bay, Olympia: Toy war club, two strand cedar rope, wet basketry*.

Implement the IDP if you see…

Strange, different, or interesting looking dirt, rocks, or shells.

Human activities leave traces in the ground that may or may not have artifacts associated with them. Examples are:

- "Unusual" accumulations of rock (especially fire-cracked rock).
- "Unusual" shaped accumulations of rock (such as a shape similar to a fire ring).
- Charcoal or charcoal-stained soils, burnt-looking soils, or soil that has a "layer cake" appearance.
- Accumulations of shell, bones, or artifacts. Shells may be crushed.
- Look for the "unusual" or out of place (for example, rock piles in areas with otherwise few rocks).



Shell Midden pocket in modern fill discovered in sewer trench.

Underground oven. Courtesy of DAHP.

Shell midden with fire cracked rock.

Hearth excavated near Hamilton, WA.

Implement the IDP if you see…

Historic period artifacts (historic archaeology considered older than 50 years).

Examples are:

- Agricultural or logging equipment. May include equipment, fencing, canals, spillways, chutes, derelict sawmills, tools, etc.
- Domestic items including square or wire nails, amethyst colored glass, or painted stoneware.

Left: Top to Bottom: *Willow pattern serving bowl and slip joint pocket knife discovered during Seattle Smith Cove shantytown (45-KI-1200) excavation.*

Right: *Collections of historic artifacts discovered during excavations in eastern Washington cities.*

Implement the IDP if you see…

Historic period artifacts (historic archaeology considered older than 50 years).

Examples are:

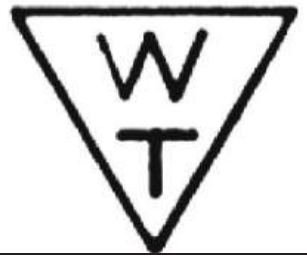
- Railway tokens, coins, and buttons.
- Spectacles, toys, clothing, and personal items.
- Items helping to understand a culture or identity.
- Food containers and dishware.

Main Image: *Dishes, bottles, workboot found at the North Shore Japanese bath house (ofuro) site, Courtesy Bob Muckle, Archaeologist, Capilano University, B.C. This is an example of an above ground resource.*

Right, from Top to Bottom: *Coins, token, spectacles and Montgomery Ward pitchfork toy discovered during Seattle Smith Cove shantytown (45-KI-1200) excavation.*

Implement the IDP if you see…

- Old munition casings – if you see ammunition of any type – ***always assume they are live and never touch or move!***
- Tin cans or glass bottles with an older manufacturer's technique – maker's mark, distinct colors such as turquoise, or an older method of opening the container.



Far Left: .303 British cartridge found by a WCC planting crew on Skagit River. Don't ever touch something like this!
Left: Maker's mark on bottom of old bottle.

Right: *Old beer can found in Oregon. ACME was owned by Olympia Brewery. Courtesy of Heather Simmons.*

Logo employed by Whithall Tatum & Co. between 1924 to 1938 (Lockhart et al. 2016).

Can opening dates, courtesy of W.M. Schroeder.

Implement the IDP if you see…

You see historic foundations or buried structures.

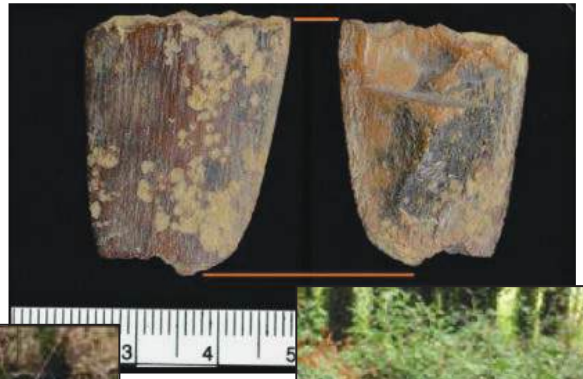
Examples are:

- Foundations.
- Railroad and trolley tracks.
- Remnants of structures.

Counter Clockwise, Left to Right: *Historic structure 45KI924, in WSDOT right of way for SR99 tunnel. Remnants of Smith Cove shantytown (45-KI-1200) discovered during Ecology CSO excavation, City of Spokane historic trolley tracks uncovered during stormwater project, intact foundation of historic home that survived the Great Ellensburg Fire of July 4, 1889, uncovered beneath parking lot in Ellensburg.*

Implement the IDP if you see...

Potential human remains.



Examples are:

- Grave headstones that appear to be older than 50 years.
- Bones or bone tools--intact or in small pieces. It can be difficult to differentiate animal from human so they must be identified by an expert.
- These are all examples of animal bones and are not human.

Center: *Bone wedge tool, courtesy of Smith Cove Shantytown excavation (45KI1200).*

Other images (Top Right, Bottom Left, and Bottom) Center: Courtesy of DAHP.

Directly Above: This is a real discovery at an Ecology sewer project site.

What would you do if you found these items at a site? Who would be the first person you would call?

Hint: *Read the plan!*
