## EXECUTIVE SUMMARY

Farallon Consulting, L.L.C. (Farallon) has prepared this Phase I Environmental Site Assessment (Phase I ESA) Report for the property at 2885 78<sup>th</sup> Avenue Southeast in Mercer Island, Washington (herein referred to as the Site). The Phase I ESA was conducted by Ms. Jennifer L. Moore and was reviewed and approved by Ms. Tina M. Huff. Both are experienced Environmental Professionals in the field of Phase I ESAs and related environmental investigations.

This Phase I ESA Report was prepared for Xing Hua Group Ltd., a Washington Corporation in accordance with the letter regarding Proposal for Due Diligence, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington dated May 7, 2018, from Ms. Moore and Mr. J. Riley Conkin of Farallon to Xing Hua Group Ltd, a Washington Corporation c/o Mr. William Hsu of Oseran Hahn P.S. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). ASTM E1527-13 is intended to assist the user in satisfying one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

There were no deviations from ASTM E1527-13 during this Phase I ESA. Limiting conditions encountered during the Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment stored in the Site building that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all tenant spaces. Based on information obtained from the Site representative and Farallon’s actual knowledge of the Site, these limiting conditions are not expected to hinder the conclusions of this report.

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site or proximate to the Site that have caused and/or may cause an adverse environmental condition. This Phase I ESA Report provides the results of investigation into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice.

The Site consists of King County Parcel No. 531510-1326, which totals 1.0 acre of land developed with a two-story retail strip mall building that was constructed in 1962 and totals 12,100 square feet. Remaining areas of the Site consist of paved parking and landscaped areas. The Site building currently is occupied by Tiger Garden Chinese Restaurant and Lounge, King Insurance, Q. Nails, Goesling Gallery, and various other tenants and used as retail, restaurant, and office spaces. Access to the Site is gained from Southeast 29<sup>th</sup> Street, south of the Site; 78<sup>th</sup> Avenue Southeast, east of

the Site; and 77<sup>th</sup> Avenue Southeast, west of the Site. According to the King County Department of Assessments, the Site owner is King Enterprises of Washington LLC.

At the time of the site reconnaissance, Farallon observed minor amounts of sealed chemicals in the Q. Nails tenant space and janitorial cleaning supplies in multiple tenant spaces. The containers ranged in size from 16-ounce plastic bottles to 1-gallon plastic jugs. Quart-sized or smaller containers of automotive maintenance chemicals were stored outside the Tiger Garden Chinese Restaurant and Lounge. The various chemicals stored in and outside the tenant spaces appeared to be in good condition, with no evidence of leaks or spills noted.

Farallon observed de minimis petroleum staining on the paved parking areas of the Site that appeared to be from parked vehicles. Farallon observed de minimis staining proximate to two 55-gallon drums of used cooking oil that appeared to be from drips and leaks associated with transferring the used cooking oil to and from the drums. In addition, Farallon observed a sealed 20-gallon metal drum on the southern exterior of the Site building. The drum contained purge water generated from a groundwater monitoring event conducted at the Site by Farallon in September 2017.

Historically, the Site was depicted as undeveloped in the 1937 aerial photograph reviewed. A residence was constructed on the Site in 1949 and used an oil burner as a source of heat. The current Site building was constructed in 1962 and was visible in the 1968 aerial photograph and 1967 fire insurance map. The Site appeared relatively unchanged to the present. Oil burners are often associated with heating oil tanks. The files available for review did not document heating oil underground storage tanks (USTs) at the Site. In the event a UST is encountered during future redevelopment of the Site, the UST should be removed and disposed of in accordance with local and state regulations. The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site represents a recognized environmental condition in connection with the Site.

Prior remedial investigations performed at the Site by Farallon and others have confirmed the presence of the dry cleaning solvent tetrachloroethene, which is a halogenated volatile organic compound (HVOC), at concentrations exceeding the Washington State Model Toxics Control Act Cleanup Regulation (MTCA) Method A cleanup level, Chapter 173-340 of the Washington Administrative Code, in soil proximate to the dry cleaning facility in the strip mall building. In addition, tetrachloroethene and associated degradation compounds, including trichloroethene and cis-1,2-dichloroethene, have also been detected at low concentrations less than MTCA cleanup levels in soil and/or groundwater samples collected from the subsurface beneath the strip mall building and a portion of the south-adjacent parking lot on the Site. Total petroleum hydrocarbons as oil-range organics (ORO) were detected at concentrations exceeding the MTCA Method A cleanup level in soil in a localized area on the southern portion of the Site. Groundwater and soil with detected concentrations of HVOCs and ORO on the southwestern portion of the Site will require special handling and disposal during redevelopment.

Based on Farallon's actual knowledge and review of reasonably ascertainable information, the confirmed release of hazardous substances associated with historical dry cleaning operations on the Site represents a recognized environmental condition in connection with the Site.

Adjacent properties at the time of the site reconnaissance included a McDonald's restaurant to the north, a QFC grocery store and a retail and residential property to the east across 78<sup>th</sup> Avenue Southeast, a Shell fuel station and Century Link telecommunication facility to the south across Southeast 29<sup>th</sup> Street, and a demolition and construction site and a retail building to the west.

Historically, adjacent properties appeared largely undeveloped and forested or used for agricultural purposes in the 1937 aerial photograph. By 1968, buildings appeared on adjacent properties to the north, east, and south of the Site, including the current south-adjacent Shell fuel station. The 1967 fire insurance map depicted the current two buildings on the west-adjacent property as occupied by a picture-framing business, a residence, and an unspecified commercial store.

The Environmental Risk Information Services (ERIS) regulatory database report prepared for the Site (ERIS Report) did not identify the Site address in the databases reviewed.

The ERIS Report identified the Texaco #63/Jacksons 623/Shell Oil Products US SAP facility as the south-adjacent fuel station across Southeast 29<sup>th</sup> Street. The south-adjacent fuel station had a known release that was remediated under oversight by the Washington State Department of Ecology, which issued a No Further Action determination for the release.

The ERIS Report also identified several facilities in the vicinity of the Site within the respective search radii. Several of these facilities, including current and historical fuel stations, fire department facilities, and dry cleaning facilities, have known or suspected releases of hazardous substances to soil and/or groundwater. However, based on the results of previous investigations conducted at the Site, discussed above, none of these facilities represents a recognized environmental condition in connection with the Site.

Based on review of the Site history, interviews with persons knowledgeable about the Site, reconnaissance of the Site, Farallon's actual knowledge, and review of regulatory agency lists, this Phase I ESA identified the following recognized environmental conditions in connection with the Site:

- The confirmed release of hazardous substances associated with historical dry cleaning operations on the Site; and
- The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site.

## **1.0 INTRODUCTION**

This Phase I Environmental Site Assessment (Phase I ESA) Report was prepared by Farallon Consulting, L.L.C. (Farallon) for the property at 2885 78<sup>th</sup> Avenue Southeast in Mercer Island, Washington (herein referred to as the Site) (Figure 1). This section discusses the project authorization, and the qualifications of the Environmental Professionals conducting and reviewing the Phase I ESA work. Also included in this section are the project purpose, objective, scope of services, deviations, limiting conditions, and data gaps.

### **1.1 PROJECT AUTHORIZATION**

This Phase I ESA Report was prepared for Xing Hua Group Ltd., a Washington Corporation in accordance with the letter regarding Proposal for Due Diligence, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington dated May 7, 2018, from Ms. Jennifer Moore and Mr. J. Riley Conkin of Farallon to Xing Hua Group Ltd, a Washington Corporation c/o Mr. William Hsu of Oseran Hahn P.S. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

### **1.2 PROFESSIONAL QUALIFICATIONS**

The Phase I ESA was conducted by Ms. Moore and was reviewed and approved by Ms. Tina M. Huff. Both have an understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions, and the ability to develop opinions regarding conditions indicative of a release or threatened release of hazardous substances and petroleum products. These Environmental Professionals have developed and performed all appropriate inquiry, in conformance with the standards and practices set forth in Part 312 of Title 40 of the Code of Federal Regulations. The professional qualifications of Mss. Moore and Huff are provided in Appendix A.

### **1.3 PROJECT PURPOSE AND OBJECTIVE**

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site and within the appropriate study area that have caused and/or may cause an adverse environmental impact. ASTM E1527-13 is intended to permit a user to satisfy one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

The objective of the Phase I ESA was to perform an appropriate inquiry into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice. This

Phase I ESA Report is to be used as a risk management tool to meet all appropriate inquiry requirements and the Comprehensive Environmental Response, Compensation, and Liability Act liability defense. The Phase I ESA does not guarantee that there are no impacts to the Site.

For the purpose of this Phase I ESA Report, the term “recognized environmental condition” is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at the Site due to releases to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The term is not intended to include “de minimis conditions” that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the applicable governmental agencies.

The term “controlled recognized environmental condition” is defined as a recognized environmental condition resulting from a past release of a hazardous substance or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in-place subject to implementation of required controls.

The term “historical recognized environmental condition” is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the Site to any required controls.

## **1.4 PROJECT SCOPE OF WORK**

This Phase I ESA Report has been prepared in accordance with the scope of work presented in ASTM E1527-13 and the letter regarding Proposal for Due Diligence, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington dated May 7, 2018, from Ms. Moore and Mr. Conkin of Farallon to Xing Hua Group Ltd., a Washington Corporation c/o Mr. Hsu of Oseran Hahn P.S. The scope of work for this Phase I ESA included a records review, literature research and review, a site reconnaissance, interviews with individuals familiar with the Site, interviews with local governmental officials, and preparation of this report.

## **1.5 DEVIATIONS**

There were no deviations from ASTM E1527-13 during this Phase I ESA.

## **1.6 LIMITING CONDITIONS**

Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site building that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all tenant spaces. Based on information obtained from the Site representative and Farallon’s

knowledge of the Site, these limiting conditions are not expected to hinder the conclusions of this report.

## **1.7 DATA GAPS**

Data gaps may affect the ability to identify recognized environmental conditions and Farallon's ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon did not identify significant data gaps during this Phase I ESA.

## **2.0 SITE OVERVIEW**

This section includes an overview of the Site location, improvements, and operations. A description of adjacent and surrounding land use also is provided.

### **2.1 SITE LOCATION**

The Site is northwest of the intersection of Southeast 29<sup>th</sup> Street and 78<sup>th</sup> Avenue Southeast in downtown Mercer Island, Washington. The Site vicinity is shown on Figure 1.

### **2.2 SITE DESCRIPTION**

The Site consists of King County Parcel No. 531510-1326, which totals 1.0 acre of land developed with a two-story retail strip mall building that was constructed in 1962 and totals 12,100 square feet in area. Remaining areas of the Site consist of paved parking and landscaped areas. Access to the Site is gained from Southeast 29<sup>th</sup> Street, south of the Site; 78<sup>th</sup> Avenue Southeast, east of the Site; and 77<sup>th</sup> Avenue Southeast, west of the Site.

Figure 2 presents a plan map of the Site. Additional details pertaining to the Site are provided in Section 8.2, Site Reconnaissance Observations. Site photographs are presented in Appendix B.

### **2.3 SITE OPERATIONS**

The Site building currently is occupied by Tiger Garden Chinese Restaurant and Lounge, King Insurance, Q. Nails, Goesling Gallery, and various other tenants and used as retail, restaurant, and office spaces. According to the King County Department of Assessments, the Site owner is King Enterprises of Washington LLC.

A+ Cleaners, a dry cleaning facility, operated at the Site for approximately 12 years and ceased operations in April 2015. The former dry cleaning facility currently is used by the Site owner for storage of items being prepared for a garage sale. A confirmed release of hazardous substances associated with historical dry cleaning operations on the Site represents a recognized environmental condition in connection with the Site.

### **2.4 ADJACENT AND SURROUNDING LAND USE**

Adjacent properties at the time of the site reconnaissance included a McDonald's restaurant to the north, a QFC grocery store and a retail and residential property to the east across 78<sup>th</sup> Avenue Southeast, a Shell fuel station and Century Link telecommunication facility to the south across Southeast 29<sup>th</sup> Street, and a demolition and construction site and a retail building to the west.

No visual evidence of recognized environmental conditions was observed on abutting or nearby properties during the site reconnaissance. Observations were restricted to areas readily observable from the Site, and to public rights-of-way.

### **3.0 PHYSICAL SETTING**

The physical setting of the Site, including topography, geology, and hydrogeology, is described in this section. Farallon's assessment of sensitive receptors in the area also is discussed.

#### **3.1 TOPOGRAPHY**

Farallon reviewed the U.S. Geological Survey (USGS) topographic map for Mercer Island, Washington dated 2014 provided by Environmental Risk Information Services (ERIS). The Site topography is tiered, with the eastern portion of the Site at an elevation of approximately 91 feet above mean sea level and the northwestern portion of the Site at an elevation of approximately 81 feet above mean sea level. Regional topography includes hills to the south, west, and east and an overall slope down to the north.

#### **3.2 GEOLOGY AND HYDROGEOLOGY**

The Puget Sound region is underlain by Quaternary sediments deposited by a number of glacial episodes. Deposition occurred during a number of glacial advances and retreats, which created the existing subsurface conditions. The regional sediments consist primarily of interlayered and/or sequential deposits of alluvial clays, silts, and sands that typically are situated over deposits of glacial till that consist of silty sand to sandy silt with gravel. Outwash sediments consisting of sands, silts, clays, and gravels were deposited by rivers, streams, and post-glacial lakes during the glacial retreats. With the exception of the most-recent recessional deposits, the outwash sediments have been over-consolidated by the overriding ice sheets.

Groundwater migration in the Puget Sound region generally is confined to the most-recent alluvial deposits of sands and gravel. These materials are commonly underlain and occasionally overlain by relatively impermeable glacial till deposits. Lateral and vertical migration of the groundwater is impeded by the dense and relatively impermeable nature of the till, and by the commonly laterally discontinuous nature of the aquifer-bearing materials. Perched and discontinuous zones of shallow groundwater may be present seasonally and locally above the impervious till. Shallow groundwater flow direction typically can be estimated by examination of surface topography or by nearby surface water bodies.

Based on observations made during the subsurface investigations conducted by Farallon in September and December 2013 and September and October 2014, the general stratigraphy of the Site comprises varying amounts of fill consisting of silty sand with some gravel, underlain by alternating layers of silt and silty sand to the total depth explored of approximately 35 feet below ground surface (bgs). Groundwater in the vicinity of the Site flows to the southwest, and is encountered at depths of between 2 and 3 feet bgs proximate to the former dry cleaning facility with a horizontal hydraulic gradient of approximately 0.011 foot per foot. This information is further discussed in Section 4.5, Previous Environmental Studies.

### **3.3 SENSITIVE RECEPTORS**

Farallon conducted a limited assessment of sensitive receptors on or in the vicinity of the Site that was confined to visually apparent features such as surface water bodies (e.g., low-lying wet areas, streams, ponds) and residential and recreational areas. Farallon's assessment of sensitive receptors included a review of readily ascertainable information relating to the presence of private, semiprivate, public, and industrial water supply wells.

According to ERIS and Farallon's actual knowledge, the Site is not within a 100- or 500-year flood plain. The nearest federal designated wetlands are approximately 0.4 mile northeast of the Site. No public water supply wells were identified within 1 mile of the Site. The nearest water body identified is Lake Washington approximately 0.4 mile northeast of the Site, 0.5 mile north of the Site, and 0.75 mile northwest and southwest of the Site.

## **4.0 USER-PROVIDED INFORMATION**

Farallon understands that the user of this report, Xing Hua Group Ltd., a Washington Corporation, is seeking to follow the standards set forth in ASTM E1527-13 to complete an environmental assessment of the Site. The user has specific responsibilities for fulfilling ASTM E1527-13 requirements to help identify the possibility of recognized environmental conditions in connection with the Site. These responsibilities do not require the technical expertise of an Environmental Professional, and were not performed by the Environmental Professional who conducted the Phase I ESA at the Site.

To facilitate fulfillment of the ASTM E1527-13 requirements identified below, Farallon provided Xing Hua Group Ltd., a Washington Corporation with a copy of the *Phase I ESA User Questionnaire* (User Questionnaire) to complete. The User Questionnaire is provided in Appendix C of this Phase I ESA Report.

### **4.1 TITLE AND LIEN RECORDS**

Xing Hua Group Ltd., a Washington Corporation indicated that it was not aware of environmental liens against the Site.

### **4.2 EXPERIENCE AND SPECIALIZED KNOWLEDGE**

Xing Hua Group Ltd. , a Washington Corporation indicated that it has no experience or specialized knowledge regarding the Site, but did disclose that a related entity owns a property adjacent to the Site.

### **4.3 COMMONLY KNOWN INFORMATION**

Xing Hua Group Ltd. , a Washington Corporation provided Farallon with previous environmental assessments of the Site, which are summarized in Section 4.5, Previous Environmental Studies.

### **4.4 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT USERS**

Xing Hua Group Ltd., a Washington Corporation and its related entities and owners will rely on this Phase I ESA Report.

### **4.5 PREVIOUS ENVIRONMENTAL STUDIES**

The following describes previous investigations conducted at the Site by Farallon and others. Additional information pertaining to the investigation activities is provided in the referenced documents.

#### **4.5.1 Limited Subsurface Investigation – Pacific Crest Environmental, June 2012**

Pacific Crest Environmental performed a limited subsurface investigation at the Site for PMF Investments, LLC in June 2012 (Limited SI). Previously, Pacific Crest Environmental had conducted a Phase I ESA at the Site and identified the historical and current dry cleaning operations on the Site, and known or suspected releases on properties adjacent and proximate to the Site as recognized environmental conditions in connection with the Site. The Limited SI included the advancement and sampling of borings KP-1 through KP-4 proximate to the Site building (Figure 2). Soil and reconnaissance groundwater samples were analyzed for halogenated volatile organic compounds (HVOCs) and total petroleum hydrocarbons (TPH) by Northwest Method Hydrocarbon Identification. Based on the results of the Hydrocarbon Identification analysis, the soil sample collected from boring KP-3 was subsequently analyzed for TPH as diesel-range organics (DRO) and as oil-range organics (ORO) by Northwest Method NWTPH-Dx. ORO was detected at a concentration of 580 milligram per kilogram (mg/kg) in a soil sample collected from boring KP-3 at a depth of 4 feet bgs, which is less than the Washington State Model Toxics Control Act Cleanup Regulation (MTCA) Method A cleanup level of 2,000 mg/kg for ORO in soil. TPH as gasoline-range organics (GRO), DRO, ORO, and HVOCs were reported non-detect at the laboratory practical quantitation limit (PQL) in each of the remaining samples analyzed from borings KP-1 through KP-4.

#### **4.5.2 Subsurface Investigation – Farallon, September 2013**

Farallon conducted an initial subsurface investigation at the Site in September 2013 to evaluate the potential release of contaminants of potential concern (COPCs) to soil gas, soil, and/or groundwater from historical and/or current operations at the Site, and/or migration of COPCs onto the Site from adjacent properties. The September 2013 subsurface investigation consisted of groundwater monitoring using existing groundwater monitoring wells MW-1 through MW-4, advancement and sampling of borings B-1 through B-8, and installation and sampling of a soil gas monitoring probe in the dry cleaning facility. Soil and groundwater samples collected from the Site were analyzed for GRO; DRO; ORO; benzene, toluene, ethylbenzene, and total xylenes (BTEX); HVOCs; and/or total Resource Conservation and Recovery Act (RCRA) metals, including arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver. A soil gas sample was collected from the soil gas monitoring probe and analyzed for HVOCs.

Trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), degradation products of tetrachloroethene (PCE), were detected in the reconnaissance groundwater sample collected from boring B-1, advanced on the down-gradient southwestern portion of the dry cleaning facility. Although TCE and cis-1,2-DCE were detected at concentrations less than MTCA cleanup levels, data indicated a potential release of PCE to the subsurface proximate to the dry cleaning facility. All COPCs analyzed, including HVOCs, DRO, ORO, GRO, and BTEX, were reported non-detect at the laboratory PQL in groundwater samples collected from borings B-2, B-4, and B-5 and existing monitoring wells MW-1 through MW-4.

Total RCRA metals barium and chromium were detected at low concentrations less than MTCA cleanup levels in a soil sample collected from boring B-1, consistent with background metals concentrations. The remaining RCRA metals were reported non-detect at the laboratory PQL.

The remaining COPCs, including BTEX, DRO, ORO, and HVOCs, were reported non-detect at the laboratory PQL in the remaining soil samples collected from borings advanced during the September 2013 subsurface investigation conducted by Farallon.

PCE was detected at a concentration of 2,000 micrograms per cubic meter and TCE was detected at a concentration of 5.2 micrograms per cubic meter in the soil gas sample collected from the soil gas monitoring probe installed in the dry cleaning facility, which exceed the MTCA Method B screening levels for soil gas in a residential setting. In addition, the PCE concentration exceeds the MTCA Modified Method B screening level for soil gas calculated for a commercial setting. The remaining associated PCE degradation products, including cis-1,2-DCE, trans-1,2-dichloroethene, and vinyl chloride, were reported non-detect at the laboratory PQL.

Details of the scope of work for the September 2013 subsurface investigation conducted by Farallon and the results are presented in the letter regarding Summary of Subsurface Investigation, Mercer Island Apartments, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington dated November 15, 2013, from Ms. Moore and Mr. Conkin of Farallon to Ms. Cathy Dempsey of Hines Real Estate Investment Trust Properties, L.P.

The available data indicated a suspected release of PCE to the shallow subsurface beneath the dry cleaning facility, and a potential release of ORO on the southwestern portion of the Site. Based on these data, additional characterization was recommended to further assess the nature and extent of a suspected HVOC source area proximate to the dry cleaning facility and of ORO on the southwestern portion of the Site.

#### **4.5.3 Additional Subsurface Investigation – Farallon, December 2013**

Farallon conducted additional subsurface investigation activities at the Site in December 2013 to evaluate the potential release of COPCs in soil and groundwater beneath the Site building and proximate to prior boring KP-3 on the southwestern portion of the Site. The December 2013 subsurface investigation consisted of groundwater monitoring using existing groundwater monitoring wells MW-1 through MW-4 and advancement and sampling of borings B-9 through B-14. Soil and reconnaissance groundwater samples collected from borings B-9 through B-12 advanced beneath the Site building were analyzed for HVOCs. Soil samples collected from borings B-13 and B-14, proximate to prior boring KP-3, were analyzed for DRO and ORO.

PCE was detected at concentrations ranging from 0.01 to 0.051 mg/kg in the soil samples analyzed from borings B-9 through B-12 in the dry cleaning facility and adjacent storage room. The highest PCE concentration of 0.051 mg/kg, which slightly exceeded the MTCA Method A cleanup level of 0.05 mg/kg, was detected in a soil sample collected from boring B-10, proximate to the western side of the dry cleaning machine, at a depth of approximately 2.5 feet bgs.

Low concentrations of PCE ranging from 0.3 to 1.6 micrograms per liter, less than the MTCA Method A cleanup level, were detected in the reconnaissance groundwater samples collected from borings B-9, B-10, and B-12 advanced proximate to the dry cleaning machine. The soil and groundwater data obtained from the borings beneath the Site building indicated a suspected release of PCE proximate to the dry cleaning machine and/or associated sanitary side sewer lines.

ORO was detected at a concentration of 5,600 mg/kg in a soil sample collected from boring B-13 at a depth of 0.5 foot bgs, which exceeded the MTCA Method A cleanup level of 2,000 mg/kg. ORO was detected at lower concentrations of 81 and 860 mg/kg in soil samples collected from borings B-13 and B-14 at a depth of approximately 4 feet bgs. ORO was reported non-detect at the laboratory PQL in the deeper soil samples collected from borings B-13 and B-14 at a depth of approximately 7 feet bgs. These data indicated a localized source of petroleum-contaminated soil on the southwestern portion of the Site.

Details of the scope of work for the December 2013 subsurface investigation conducted by Farallon and the results are presented in the letter regarding Summary of Additional Subsurface Investigation, Mercer Island Apartments, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington dated January 21, 2014, from Ms. Moore and Mr. Conkin of Farallon to Mr. Evan Kaseguma of Hines Real Estate Investment Trust Properties, L.P.

#### **4.5.4 Subsurface Investigation – Farallon, September and October 2014**

Farallon conducted additional subsurface investigation activities in September and October 2014 to further evaluate the nature and extent of the confirmed HVOC source area proximate to the dry cleaning facility on the Site and a localized source of petroleum-contaminated soil south of the Site building on the southwestern portion of the Site. The additional subsurface investigation included soil and groundwater reconnaissance sampling and monitoring well installation and sampling.

PCE was detected at a concentration of 0.0056 mg/kg, less than the MTCA Method A cleanup level, in the soil sample collected from boring B-21 at a depth of 1 foot bgs in the central portion of the Goesling Gallery tenant space. HVOCs were reported non-detect at the laboratory PQL in the remaining soil samples collected from boring B-21 to a total depth of 9.5 feet bgs. In addition, HVOCs were reported non-detect at the laboratory PQL in soil samples collected from borings B-19 and B-20 advanced south and north of boring B-21, respectively.

PCE was reported non-detect at the laboratory PQL in the soil samples collected from boring B-16 to a total depth of 11 feet bgs at the northern end of the dry cleaning facility. These data bound the extent of PCE-contaminated soil north of prior boring B-9.

PCE was reported non-detect in the soil samples collected from borings B-17 and B-18 advanced proximate to and in the east-adjacent King Insurance tenant space. These data bound the extent of PCE-contaminated soil northeast and east of prior borings B-9, B-11, and B-12 advanced in the dry cleaning facility and the adjacent storage room.

Borings B-22 through B-25 were advanced in the parking area south of the Site building to evaluate the nature and extent of petroleum-contaminated soil previously detected in prior borings KP-3, B-13, and B-14. The soil sample collected from boring B-15 at a depth of 5 feet bgs was also used as a part of the evaluation of this localized ORO source area. The highest concentration of ORO of 5,600 mg/kg, which exceeds the MTCA Method A cleanup level of 2,000 mg/kg for ORO, was detected in a soil sample collected from prior boring B-13 at a depth of 0.5 foot bgs. ORO was detected at concentrations less than the MTCA Method A cleanup level and was reported non-detect at the laboratory PQL in deeper soil samples collected from boring B-13 at depths of 4 and 6.5 feet bgs, respectively.

ORO was detected at concentrations of 1,200, 100, and 94 mg/kg in soil samples collected from boring B-25, advanced west of prior boring B-13, at depths of 0.5, 3, and 5 feet bgs, respectively.

ORO was detected at a decreased concentration of 190 mg/kg in the soil sample collected from boring B-23, advanced east of boring B-13, at a depth of approximately 0.5 foot bgs. ORO was reported non-detect at the laboratory PQL in deeper soil samples collected from boring B-23 at depths of 3 and 5 feet bgs. ORO was reported non-detect at the laboratory PQL in soil samples collected from boring B-24, south of prior boring B-13, at depths of 0.5, 3, and 5 feet bgs.

These data bound the ORO concentrations exceeding the MTCA Method A cleanup level in shallow soil. However, the lateral extent of petroleum-contaminated soil with detected concentrations of ORO less than the MTCA Method A cleanup level west of boring B-25 is not fully characterized.

HVOCs and petroleum hydrocarbons were reported non-detect at the laboratory PQL in groundwater samples collected from adjacent monitoring well MW-2.

Details of the scope of work for the September and October 2014 subsurface investigation conducted by Farallon and the results are presented in the letter regarding Summary of Subsurface Investigation, Mercer Island Apartments – King Parcel Property, 2885 78<sup>th</sup> Avenue Southeast, Mercer Island, Washington from Ms. Moore and Mr. Conkin of Farallon to Mr. Kaseguma of Hines Real Estate Investment Trust Properties, L.P.

Based on Farallon's review of reasonably ascertainable information and actual knowledge, the confirmed release of hazardous substances associated with historical dry cleaning operations on the Site, and the potential release of hazardous substances in connection with the historical oil burner with a possible heating oil underground storage tank (UST) on the Site represent recognized environmental conditions in connection with the Site.

#### **4.5.5 Groundwater Monitoring Event – Farallon, September 2017 and May 2018**

Farallon conducted groundwater monitoring events for a previous prospective purchaser in September 2017 and more recently in May 2018. The monitoring well network of five monitoring wells was gauged, and down-gradient monitoring wells MW-3 and MW-5 were sampled. The groundwater samples were analyzed for HVOCs to assess groundwater quality. HVOCs were

reported non-detect at the laboratory PQL in the groundwater samples analyzed from monitoring wells MW-3 and MW-5 during the September 2017 and May 2018 groundwater monitoring events. These data are consistent with previous data from these two monitoring wells.

## **5.0 SITE BACKGROUND AND HISTORY**

Farallon reviewed the following historical sources as part of this Phase I ESA:

- Aerial photographs of the Mercer Island, Washington area dated 1937, 1968, 1972, 1980, 1990, 1990, 2005, 2006, 2009, 2011, 2013, 2015, and 2017 obtained from ERIS;
- Digital Business and Cole Directories of Mercer Island, Washington dated 1944, 1950, 1955, 1960, 1970, 1975, 1978, 1980, 1985, 1990, 1996, 2000, 2005, 2009, 2014, and 2018 obtained from ERIS;
- USGS topographic maps of Mercer Island, Washington dated 1950, 1968, 1973, and 2014 obtained from ERIS; and
- Fire insurance map for the Site dated 1967 obtained from ERIS.

Farallon is not responsible for the accuracy or completeness of the historical sources reviewed. The historical sources documented were reasonably ascertainable and practically reviewable during this Phase I ESA.

### **5.1 SITE**

The Site appeared to be forested and undeveloped in the 1937 aerial photograph reviewed. A residence was constructed on the Site in 1949 and used an oil burner as a source of heat. The current Site building was apparent in the 1968 aerial photograph and the 1967 fire insurance map. The 1967 fire insurance map depicted the current Site building as occupied by three unspecified commercial stores. The Site appeared relatively unchanged to the present. The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site represents a recognized environmental condition in connection with the Site. City directory listings for the Site included Queen Nails, Sporting Goods USA LLC, Islander Barber Shop, JM Sales Co, Seven Stars Restaurant, and Toni Maroni's Famous Gourmet Pizza.

According to the Site representative, a dry cleaning facility operated on the Site until approximately April 2015. Additional information regarding the Site history is provided in Section 4.5, Previous Environmental Studies. Based on previous reports reviewed during completion of this Phase I ESA Report, the confirmed release of hazardous substances associated with historical dry cleaning operations on the Site represents a recognized environmental condition in connection with the Site.

### **5.2 ADJACENT PROPERTIES**

Adjacent properties appeared largely undeveloped and forested or used for agricultural purposes in the 1937 aerial photograph. By 1968, buildings appeared on adjacent properties to the north, east, and south of the Site, including the current south-adjacent Shell fuel station. The south-adjacent Shell fuel station is further discussed in Section 6.2, Adjacent and Other Facility Listings.

The 1967 fire insurance map depicted the current two buildings on the west-adjacent property as occupied by a picture-framing business, a residence, and an unspecified commercial store.

### **5.3 PUGET SOUND REGIONAL ARCHIVES**

Farallon reviewed historical records for the Site at the Puget Sound Regional Archives at Bellevue College in Bellevue, Washington. Historical assessor records indicated that a residence was built on the Site in 1949 and that it used an oil burner as a source of heat. The current Site building was built in 1962.

Oil burners are often associated with heating oil tanks. The files available for review did not document heating oil USTs at the Site. In the event a UST is encountered during future redevelopment of the Site, the UST should be removed and disposed of in accordance with local and state regulations. The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site represents a recognized environmental condition in connection with the Site. Based on previous environmental investigations completed at the Site, the confirmed release of ORO on the southwestern portion of the Site may be related to the historical presence of this oil burner.

## 6.0 REGULATORY REVIEW

ERIS conducted a review of environmental regulatory agency database listings to identify reported environmental issues related to the Site and facilities in the Site vicinity. Farallon used the greater of each approximate minimum search distance from the Site for each of the referenced federal and state environmental databases, as specified in ASTM E1527-13.

Farallon reviewed the results from the ERIS database report prepared for the Site dated May 17, 2018 (ERIS Report) to note reported facilities in the vicinity of the Site that were considered to have a potential to adversely impact the Site (i.e., are known to have resulted in or are expected to result in a recognized environmental condition). Reported facilities identified in the ERIS Report were evaluated with respect to the nature and extent of a given release, the distance of the reported facility from the Site, the stratigraphy of soils, the expected soil permeability, and the topographic position of a reported facility with respect to known or expected local and/or regional groundwater flow direction.

The descriptions of the databases searched, the complete database names for the abbreviations used in this Phase I ESA Report, and the associated search distances from the Site are provided in the ERIS Report presented in Appendix D.

### 6.1 ON-SITE LISTINGS

The ERIS Report did not identify the Site address in the databases reviewed.

Farallon searched the Washington State Department of Ecology (Ecology) Toxics Cleanup Program database (Ecology database) for the Site address, but found no listings. Regulatory files were not reviewed during completion of this report due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Additional information regarding the Site is provided in Section 4.5, Previous Environmental Studies.

### 6.2 ADJACENT AND OTHER FACILITY LISTINGS

Reported facilities within 0.25 mile up-gradient, 0.125 mile cross-gradient, or adjacent down-gradient of the Site are considered to have a potential to have impacted the Site. Facilities that were listed in the ERIS Report but not identified as a reported facility (e.g., a facility listed as a hazardous waste generator but not as having had a release), and facilities that were listed as “Closed” were not considered to have a potential to have impacted the Site.

- **Texaco #63/Jacksons 623/Shell Oil Products US SAP**, south-adjacent to the Site and at a similar topographic elevation, was identified in the SPILLS, ICR, CSCSL NFA, ALLSITES, RCRA NonGen, UST, and VCP databases. According to the ERIS Report, the facility removed four USTs as of August 1996, and four operational USTs remain on the property. The facility was a handler of hazardous materials, with no reported violations. The facility had soil and groundwater contamination by petroleum products and received

a No Further Action determination in November 2008. The facility reported a release of 6 gallons of gasoline to impermeable containment in June 2009. No additional information regarding the spill was provided. Farallon searched the Ecology database for the facility, which indicated that the facility had benzene and petroleum contamination in soil and groundwater. Regulatory files were not reviewed during completion of this report due to the time and/or cost constraints of this Phase I ESA; additional information may be available at Ecology. Based on the current regulatory status of this facility, it does not represent a recognized environmental condition in connection with the Site.

- **Banner Bank Mercer Island/Pacific Northwest Bank**, southeast-adjacent to the Site and at a lower topographic elevation, was identified in the ALLSITES, CSCSL, and VCP databases. According to the ERIS Report, the facility is listed as “Cleanup Started” for suspected soil and groundwater contamination by halogenated organics, and for confirmed soil and suspected groundwater contamination by petroleum products. Farallon searched the Ecology database for the facility, which indicated that the facility enrolled in the Voluntary Cleanup Program in February 2003 and was terminated from the program in June 2006. No additional information was provided. Farallon searched the Ecology database, which indicated that the initial investigation was completed in December 2002, but no additional investigations or remedial activities have been conducted at the property. Based on the previous investigations conducted at the Site discussed in Section 4.5, Previous Environmental Studies, this facility does not represent a recognized environmental condition in connection with the Site.
- **Corry’s Dry Cleaning**, less than 0.125 mile south-southeast of the Site and at a lower topographic elevation, was identified on the RCRA NonGen, DRYCLEANERS, and ALLSITES databases. According to the ERIS Report, the facility was a handler of hazardous materials, with no reported violations. Farallon searched the Ecology database for the facility, but found no listings. Based on the previous investigations conducted at the Site discussed in Section 4.5, Previous Environmental Studies, this facility does not represent a recognized environmental condition in connection with the Site.
- **Silers Cleaners**, less than 0.125 mile south-southeast of the Site and at a lower topographic elevation, was identified on the RCRA NonGen and ALLSITES databases. According to the ERIS Report, the facility was a handler of hazardous materials, with no reported violations as of January 2018. Farallon searched the Ecology database for the facility, but found no listings. Based on the previous investigations conducted on the Site discussed in Section 4.5, Previous Environmental Studies, this facility does not represent a recognized environmental condition in connection with the Site.
- **Mercer Island Fire Department**, less than 0.125 mile south-southeast of the Site and at a lower topographic elevation, was identified on the CSCSL, ICR, LUST, RCRA NonGen, and ALLSITES databases. The facility was listed as “Awaiting Cleanup” and reportedly had suspected and/or confirmed soil and groundwater contamination by benzene, diesel fuel, gasoline, and other petroleum products. The facility was a handler of hazardous materials, with no reported violations as of January 2018. Farallon searched the Ecology

database for the facility, which indicated that there was soil contamination exceeding applicable cleanup levels and free product in a former UST excavation, and that groundwater was not assessed at the facility. Based on the previous investigations conducted at the Site discussed in Section 4.5, Previous Environmental Studies, this facility does not represent a recognized environmental condition in connection with the Site.

- **Lakeview Cleaners/Four Seasons Dry Cleaners**, less than 0.125 mile south-southeast of the Site and at a lower topographic elevation, was identified on the RCRA NonGen, ALLSITES, and DRYCLEANERS databases. According to the ERIS Report, the facility was a handler of hazardous materials, with no reported violations. The facility was listed as having confirmed soil, groundwater, and surface water contamination by halogenated organics, with the status of “Awaiting Cleanup.” Farallon searched the Ecology database for the facility, which indicated that the facility reported an unspecified release in May 2007. Based on the previous investigations conducted on the Site discussed in Section 4.5, Previous Environmental Studies, this facility does not represent a recognized environmental condition in connection with the Site.

### 6.3 UNMAPPABLE LISTINGS

ERIS identified six facilities as “unplottable” that ERIS was unable to map due to inaccurate or inadequate address information. Farallon located these unplottable sites and, according to the addresses provided by ERIS, the facilities are not located within the respective search radii. The orphan sites located do not represent a recognized environmental condition in connection with the Site.

## **7.0 INTERVIEWS**

Farallon conducted interviews with individuals familiar with the Site and contacted relevant local governmental agencies to obtain additional Site information. The responses from the parties contacted are provided below.

### **7.1 INTERVIEW WITH SITE REPRESENTATIVE**

During the site reconnaissance, Farallon interviewed Mr. Scott Robertson, a representative of King Enterprises of Washington LLC, owner of the Site, on May 17, 2018. The following information was obtained from this interview:

- The Site is unchanged since the previous work conducted at the Site by Farallon from 2013 to 2015;
- The Site building is heated by space heaters;
- The floor drains are connected to the sanitary sewer system;
- No known aboveground storage tanks (ASTs) or USTs are present on the Site; and
- Hazardous materials on the Site generally consist of janitorial cleaning supplies, maintenance materials, and used cooking oil from restaurant operations on the Site.

Mr. Robertson stated that he had not been made aware of any pending, threatened, or past:

- Litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

### **7.2 INTERVIEW WITH FIRE DEPARTMENT**

Farallon contacted the Mercer Island Fire Department regarding previous and current ASTs and USTs at the Site. No response from the Mercer Island Fire Department was received prior to completion of this Phase I ESA Report.

### **7.3 INTERVIEW WITH HEALTH DEPARTMENT**

Farallon contacted the King County Health Department regarding previous and current ASTs and USTs at the Site. No response from the King County Health Department was received prior to completion of this Phase I ESA Report.

## 8.0 SITE RECONNAISSANCE

Farallon conducted a site reconnaissance on May 16, 2018 to observe the Site for physical evidence of recognized environmental conditions. The methodology used for the site reconnaissance and the observations made during the reconnaissance are discussed below. A description of the Site is provided in Section 2.2, Site Description. Photographs taken during the site reconnaissance are presented in Appendix B.

### 8.1 SITE RECONNAISSANCE METHODOLOGY

Farallon completed a walk around the entire perimeter of the Site and inspected accessible interior portions of the Site buildings. There were no deviations from ASTM E1527-13 during the Phase I ESA. Limiting conditions encountered during the Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site building that prevented Farallon from observing the entire interior floor surface. In addition, Farallon was not provided access to all tenant spaces. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

### 8.2 SITE RECONNAISSANCE OBSERVATIONS

Weather conditions at the time of the reconnaissance were cloudy, with a temperature of approximately 60 degrees Fahrenheit. No weather-related Site-access restrictions were encountered during the reconnaissance.

The Site consists of King County Parcel No. 531510-1326, which totals 1.0 acres of land developed with a two-story retail strip mall building that was constructed in 1962 and totals 12,100 square feet. Remaining areas of the Site consist of paved parking and landscaped areas. Access to the Site is gained from Southeast 29<sup>th</sup> Street, south of the Site; 78<sup>th</sup> Avenue Southeast, east of the Site; and 77<sup>th</sup> Avenue Southeast, west of the Site.

#### 8.2.1 Interior Observations

Farallon's observations of the interior of the Site building during the site reconnaissance are documented in the table below. Comments pertaining to notable interior observations follow in Section 8.2.2. Photographs taken during the site reconnaissance are provided in Appendix B.

INTERIOR OBSERVATIONS	YES	NO
Odor		X
Heating/Cooling System	X	
Drain(s) and/or Sump(s)	X	
Staining and/or Corrosion		X

INTERIOR OBSERVATIONS	YES	NO
Storage Tank(s), Vent Pipe(s), Fuel Port(s), and/or Fill Pipes		X
Clarifier(s)		X
Discharge Area		X
Drum(s) and/or Other Container(s)		X
Pool(s) of Liquid		X
Automobile Lift(s)		X
Monitoring Well(s)		X
Hazardous Material(s) and/or Petroleum Product(s)	X	
Hazardous Waste		X

### 8.2.2 Interior Observation Comments

#### Heating/Cooling System

According to the Site representative, the Site building is heated by space heaters. Natural gas and electrical utilities are provided by Puget Sound Energy.

#### Drain(s) and/or Sump(s)

Farallon observed a floor drain in the former dry cleaning facility proximate to the location where the former dry cleaning machine existed, a floor drain in the second-floor men's restroom, and two floor drains in a former pizza restaurant on the second floor in the western portion of the building. According to the Site representative, the floor drains are connected to the sanitary sewer. No visible staining or evidence of improper disposal of hazardous materials was observed.

#### Hazardous Material(s) and/or Petroleum Product(s)

Farallon observed closed and sealed chemicals related to the operation of the Q. Nails tenant space, and janitorial cleaning supplies in multiple tenant spaces. The containers ranged in size from 16-ounce plastic bottles to 1-gallon plastic jugs. The various materials observed appeared to be in good condition, with no evidence of leaks or spills noted.

### 8.2.3 Exterior Observations

Farallon's observations of the exterior of the Site during the site reconnaissance are documented in the table below. Comments pertaining to notable exterior observations follow in Section 8.2.4. Photographs taken during the site reconnaissance are provided in Appendix B.

EXTERIOR OBSERVATIONS	YES	NO
Odor		X
Staining and/or Corrosion	X	
Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)		X
Drum(s) and/or Other Container(s)	X	
Pool(s) of Liquid		X
Hazardous Material(s) and/or Petroleum Product(s)	X	
Hazardous Waste		X
Pit(s), Pond(s), and/or Lagoon(s)		X
Stressed Vegetation		X
Solid (Non-Hazardous) Waste—Evidence of Dumping		X
Wastewater		X
Domestic Water	X	
Water Well(s)	X	
Septic/Sewer System	X	
Stormwater	X	
Transformer(s)		X
Significant Amount of Fill Material		X

## 8.2.4 Exterior Observation Comments

### Staining and/or Corrosion

Farallon observed de minimis petroleum staining throughout paved areas of the Site that appeared to be from parked vehicles on the Site.

### Drum(s) and/or Other Container(s)

Farallon observed two 55-gallon metal drums containing used cooking oil near the southeastern corner of the Site building, and one 20-gallon metal drum containing purge water associated with a previous groundwater monitoring event conducted by Farallon in September 2017.

### Hazardous Material(s) and/or Petroleum Product(s)

Quart-sized or smaller containers of automotive maintenance chemicals were stored outside the Tiger Garden Chinese Restaurant and Lounge. The containers were sealed and in good condition. No staining associated with these containers was observed.

### **Domestic Water**

Domestic water is supplied to the Site building by the City of Mercer Island.

### **Water Wells**

Farallon observed five groundwater monitoring wells on the Site related to previous investigations conducted on the Site, as discussed in Section 4.5, Previous Environmental Studies.

### **Septic/Sewer System**

Sanitary sewage generated at the Site discharges to the City of Mercer Island sanitary sewer system.

### **Stormwater**

Stormwater on the Site is directed into catch basins on the Site, which discharge to the City of Mercer Island stormwater system.

## 9.0 FINDINGS AND OPINIONS

Farallon observed de minimis petroleum staining on the paved parking areas of the Site that appeared to be from parked vehicles. Farallon observed de minimis staining proximate to two 55-gallon drums of used cooking oil that appeared to be from drips and leaks associated with transferring the used cooking oil to and from the drums.

During prior investigations, Farallon observed a dry cleaning machine in the A+ Cleaners tenant space within secondary containment. The dry cleaning tenant no longer operates on the Site and the dry cleaning machine has been removed. The dry cleaning tenant operated at the Site for approximately 12 years prior to the cessation of operations in April 2015.

Historical research at the Puget Sound Regional Archive indicated that a residence with an oil burner was present on the Site prior to the existing commercial building. The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site represents a recognized environmental condition in connection with the Site. Farallon identified petroleum-contaminated soil with concentrations of ORO that exceeded the MTCA Method A cleanup level on the southwestern portion of the Site. This petroleum-contaminated soil could be linked to the former oil burner associated with the historical residence on the Site.

Farallon was provided with several previous environmental assessments that were conducted for the Site and surrounding properties. These documents indicated localized areas of soil contamination on the southwestern portion of the Site, where PCE and ORO were detected at concentrations exceeding MTCA Method A cleanup levels. Groundwater and soil with detected concentrations of HVOCs and ORO on the southwestern portion of the Site will require special handling and disposal during redevelopment. The confirmed release of hazardous substances associated with historical dry cleaning operations on the Site, and the potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site represent recognized environmental conditions in connection with the Site.

The ERIS Report did not identify the Site address in the databases reviewed. The ERIS Report identified several facilities in the vicinity of the Site within the respective search radii. Several of these facilities, including fuel stations, a Mercer Island Fire Department facility, and dry cleaning facilities, have known or suspected releases of hazardous substances to soil and/or groundwater. Based on Farallon's review of available and reasonably ascertainable information and previous environmental investigations conducted at the Site, none of the facilities discussed in this Phase I ESA represent a recognized environmental condition in connection with the Site.

## 10.0 CONCLUSIONS

Farallon conducted a Phase I ESA for the property at 2885 78<sup>th</sup> Avenue Southeast in Mercer Island, Washington in conformance with the scope and limitations of ASTM E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5, Deviations.

This assessment identified the following recognized environmental conditions in connection with the Site:

- The confirmed release of hazardous substances associated with historical dry cleaning operations on the Site; and
- The potential release of hazardous substances in connection with the historical oil burner with a possible heating oil UST on the Site.

## 12.0 LIMITATIONS

### 12.1 GENERAL LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitations:

- **Accuracy of Information.** Farallon obtained, reviewed, and evaluated certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy or authenticity. Should the information upon which Farallon relied prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.
- **Reconnaissance and/or Characterization.** Farallon performed a reconnaissance and/or characterization of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous materials conditions. Contamination may exist in other areas of the Site that were not investigated or were inaccessible. Site activities beyond Farallon's control could change at any time after the completion of this report/assessment.

For the foregoing reasons, Farallon cannot and does not warrant or guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions can be considered valid only as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and Xing Hua Group Ltd., a Washington Corporation, and currently accepted industry standards. No other warranties, representations, or certifications are made.

### 12.2 LIMITATION ON RELIANCE BY THIRD PARTIES

**Reliance by third parties is prohibited.** This report/assessment has been prepared for the exclusive use of Xing Hua Group Ltd., a Washington Corporation and its related entities and owners to address the unique needs of Xing Hua Group Ltd., a Washington Corporation at the Site at a specific point in time.

This is not a general grant of reliance. No one other than Xing Hua Group Ltd., a Washington Corporation may rely on this report unless Farallon agrees in advance to such reliance in writing. Any unauthorized use, interpretation, or reliance on this report/assessment is at the sole risk of that party, and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

PHASE I  
ENVIRONMENTAL SITE ASSESSMENT REPORT  
2885 78<sup>th</sup> Avenue Southeast  
Mercer Island, Washington

Farallon PN: 2049-001

**JENNIFER L. MOORE**  
Senior ScientistMS Forestry, BS Earth Science  
17 years experience

Ms. Moore is a scientist with more than 17 years of professional experience in the environmental consulting industry that includes subsurface investigations, remedial actions, permit compliance, hazardous waste characterization and management, visible emissions monitoring, environmental compliance auditing, environmental due diligence and asbestos and lead-based paint inspections. She has conducted Phase I and Phase II Environmental Site Assessments, RCRA management and inspections, stormwater management and inspections, asbestos inspections, visible emissions monitoring and remediation system installations. Ms. Moore has conducted remedial feasibility testing, including dual-phase extraction, soil vapor extraction, and air sparge pilot testing, and has been involved in remediation system construction, installation, operation and maintenance, and oversight. Project reporting experience encompasses preparation of Phase I and Phase II Environmental Site Assessments, SWPPPs, SPCC Plans, Hazardous Waste Contingency Plans, various work plans, site characterization reports, site conceptual model reports, corrective action plans, monitoring reports and a variety of other documents.

**TINA M. HUFF**  
Principal Regulatory SpecialistBA Environmental Studies  
17 years experience

Ms. Huff has a broad range of experience with environmental due diligence and regulatory requirements. She manages and conducts environmental due diligence for property transactions, including Phase I ESAs, risk assessment audits, environmental compliance audits, and Phase II Site Investigations throughout the western United States. She is Asbestos Hazard Emergency Response Act-certified for asbestos, and has completed training for ASTM E1527-13 Phase I ESA protocol and for mold in construction. Ms. Huff has certificates in Dangerous Waste Management and Occupational Safety and Health Administration Compliance.

**USER QUESTIONNAIRE**

PHASE I  
ENVIRONMENTAL SITE ASSESSMENT REPORT  
2885 78<sup>th</sup> Avenue Southeast  
Mercer Island, Washington

Farallon PN: 2049-001

## PHASE I ENVIRONMENTAL SITE ASSESSMENT USER QUESTIONNAIRE

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the Phase I Environmental Site Assessment (Phase I ESA) Report user must provide the following information (if available) to the environmental professional (Farallon Consulting, L.L.C.). Failure to provide this information could result in the determination that "all appropriate inquiry" has not been completed.

Date: 5/16/18

### ■ PROJECT/SITE INFORMATION

Client Name: XING HUA GROUP LTD. Client Telephone: 425-455-3900

Client Address: C/O OSERAN HAHN PS, 929 - 108<sup>TH</sup> AVE NE, STE 1200, BELLEVUE, WA 98004

Asset #: Project/Site Name: KING BUILDING

Project Street Address: 2885 77<sup>TH</sup> AVE SE

City: MERCER ISLAND County: KING State: WA Zip: 98040

Why is this Phase I ESA required?

Property Transaction:

☐ Sale ☒ Purchase ☐ Exchange ☐ Other

Comments:

### ■ PROPERTY USE & SPECIFICATIONS

☐ Single-Family Residential ☐ Vacant or Undeveloped Land

☐ Multi-Family Residential #Units: ☐ Agricultural (*Specify type*):

☐ Commercial Office ☐ Industrial (*Specify type*):

☒ Commercial Retail ☐ Other (*Specify type*):

Provide a general Site description:

COMMERCIAL STRIP MALL IN CENTRAL BUSINESS DISTRICT OF MERCER ISLAND

Legal description/plat plan/boundary survey available? ☒ Yes ☐ No ☐ Already provided

Current Property Status: ☐ Vacant ☒ Occupied ☐ Improved ☐ Unimproved

Total Property Size: 1.7432 ACRES Original Construction Date: UNKNOWN

Total # of Buildings: 1 Was Construction Phased? ☐ Yes ☐ No ☒ Unknown

Total Sq. Ft. of Buildings: 5854 sq. ft. Date(s) of Renovation(s)/Phases:

Does Site have an undeveloped area equal to 1 acre or more? ☐ Yes ☐ No

Are any bodies of water on or immediately adjacent to the Site? ☐ Yes ☒ No If Yes, describe:  
Comments:

Potable water source at Site? ☐ On-Site well ☒ Utility (*Specify provider*)

Wastewater discharge at Site? ☐ Septic Tank/Drainfield ☒ Sanitary Sewer ☐ Other (*Specify*):

Building plans available at the Site? ☐ Yes ☐ No ☒ Unknown ☐ Already provided

## ■ OWNERS

Current Owner(s):

Previous Owner(s):

## ■ OCCUPANTS/TENANTS

Current Occupant(s)/Tenant(s) and operations:  
RESTAURANT, BAR, DRY CLEANERS, INSURANCE OFFICE

Previous Occupant(s)/Tenant(s) and operations: UNKNOWN

## ■ PREVIOUS PROPERTY USES

Describe previous use(s) of the Site: UNKNOWN

## ■ PREVIOUS INVESTIGATIONS

Has any previous environmental investigation been conducted at Site? ☒ Yes ☐ No ☐ Unknown

If Yes, note type and describe: ☒ Phase I ESA ☐ Asbestos ☐ Lead Paint ☐ Lead in Water

☐ Radon ☐ Wetlands ☐ Indoor Air ☐ UST/AST ☐ Other (*Specify type below*)

Comments:

LIMITED PHASE II. SEE PRIOT FARALLON CONSULTING LLC REPORTS.

## ■ ON-SITE ENVIRONMENTAL CONDITIONS

Are you aware of any of the following environmental conditions at the Site, either current or former?

Environmental Condition/Issue	Response	Comment if Yes Response
Aboveground Storage Tank	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Underground Storage Tank	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Hazardous/Toxic Substance	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	SEE FARALLON CONSULTING LLC REPORTS
Stored Chemical	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Chemical Spill/Release	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Dump Area/Landfill	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Waste Treatment System	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Wastewater Discharge	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Air Stack/Vent/Odor	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Indoor Air Quality Complaint	<input type="checkbox"/> Yes <input type="checkbox"/> No	

Floor Drain/Sump	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Pit, Pond, Lagoon	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Stained Soil/Vegetation Impact	<input type="checkbox"/> Yes <input type="checkbox"/> No	

Other specialized knowledge of an environmental condition or issue at the Site?  
NONE

#### ■ ADDITIONAL ON-SITE ENVIRONMENTAL CONDITIONS

Are you aware of any of the following environmental conditions on the Site, either current or former?

Environmental Condition/Issue	Response	Comment if Yes Response
Pesticide/Herbicide Use	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Polychlorinated Biphenyls	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Electrical Transformer	<input type="checkbox"/> Yes <input type="checkbox"/> No	UNKNOWN
Hydraulic Lift	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Elevator	<input type="checkbox"/> Yes <input type="checkbox"/> No	UNKNOWN
Drycleaner Business	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Asbestos	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Lead Paint	<input type="checkbox"/> Yes <input type="checkbox"/> No	UNKNOWN
Lead Piping/Lead in Water	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Elevated Radon Level	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Fluorescent Light Fixture	<input type="checkbox"/> Yes <input type="checkbox"/> No	UNKNOWN
Wetland, Flooding	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Unique Wildlife Species	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Archeological Resource	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Historic/National Landmark	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Oil/Gas Well	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Water Well	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Environmental Cleanup	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	SEE FARALLON CONSULTING LLC REPORTS
Environmental Permit	<input type="checkbox"/> Yes <input type="checkbox"/> No	UNKNOWN

#### ■ OFF-SITE ENVIRONMENTAL CONDITIONS

On adjoining property, are there any: Gasoline Stations? ☐ Yes ☐ No Drycleaners? ☐ Yes ☐ No

Are you aware of any other environmental conditions or concerns on adjacent or nearby properties?  
☒ Yes ☐ No

Comments

GAS STATION. SEE PRIOR FARALLON CONSULTING LLC REPORTS.

**(1) Environmental cleanup liens that have been filed or recorded against the Site (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25])**

Are you aware of any environmental cleanup liens against the Site that have been filed or recorded under federal, tribal, state, or local law?

NO.

**(2) Activity and land use limitations that are in place at the Site or that have been filed or recorded in a registry (40 CFR 312.26)**

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

NO.

**(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)**

As the user of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

I HAVE NO SPECIALIZED KNOWLEDGE, BUT A RELATED ENTITY OWNES THE PROPERTY NEXT DOOR.

**(4) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)**

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

YES.

**(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)**

Are you aware of commonly known or reasonably ascertainable information about the Site that would help Farallon Consulting, L.L.C. to identify conditions indicative of a chemical or other release or threatened release? For example, as user of the Phase I ESA Report:

Do you know the past use(s) of the Site? (If yes, please specify.)

SEE PRIOR FARALLON CONSULTING LLC REPORTS.

Do you know of a specific chemical(s) present at the Site, or present at one time? (If yes, please specify.)  
NO.

Do you know of a chemical and/or other spill(s) or release(s) that have taken place at the Site? (If yes, please specify.)

SEE PRIOR FARALLON CONSULTING LLC REPORTS.

Do you know of any environmental cleanup(s) that have taken place at the Site? (If yes, please specify.)

SEE PRIOR FARALLON CONSULTING LLC REPORTS.

**(6) The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Site, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Site? (If yes, please specify.)

NO.

**Identify all parties who will rely on the Phase I ESA Report, including:**

Name of Business: XING HUA GROUP LTD. AND ITS RELATED ENTITIES AND OWNERS

Name of Contact: BILL HSU

Address: 929 108<sup>TH</sup> AVE NE, STE 1200, BELLEVUE, WA 98004

Telephone Number: 425-45503900

E-mail Address: BHSU@OHSWLAW.COM

**Has any party that will rely on the Phase I ESA Report required services beyond the standard ASTM E1527-13? (For example, an asbestos, lead-based paint, lead in drinking water, or wetlands investigation) (If yes, please specify.)**

YES, PHASE II.

**Who is the Site contact, and how can the contact be reached?**

Name of Business: ROBERTSON & ASSOCIATES COMMERCIAL REAL ESTATE LLC

Name of Contact: Scott A. Robertson

Address: 8015 S.E. 28th Street, Suite 314, Mercer Island, WA 98040

Telephone Number: 206.310.5283

E-mail Address: scott@rare-llc.com

**Are there any special terms and conditions that must be agreed upon by Farallon Consulting, L.L.C.?**  
(If yes, please specify.)

NO.

## Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

### Standard Environmental Record Sources

#### Federal

##### National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date: Feb 6, 2018**

##### National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date: Feb 6, 2018**

##### Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date: Feb 6, 2018**

##### SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: Apr 11, 2018**

##### SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: Apr 11, 2018**

##### Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS:

CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**CERCLIS - No Further Remedial Action Planned:**[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Jan 24, 2018**

**RCRA non-CORRACTS TSD Facilities:**[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: Jan 24, 2018**

**RCRA Generator List:**[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Jan 24, 2018**

**RCRA Small Quantity Generators List:**[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Jan 24, 2018**

**RCRA Conditionally Exempt Small Quantity Generators List:**[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

**Government Publication Date: Jan 24, 2018**

**RCRA Non-Generators:**[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Jan 24, 2018**

**Federal Engineering Controls-ECs:**

FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Jan 20, 2016

**Federal Institutional Controls- ICs:**

FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency ) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date:** Jan 20, 2016

**Emergency Response Notification System:**

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1982-1986

**Emergency Response Notification System:**

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date:** 1987-1989

**Emergency Response Notification System:**

ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Feb 8, 2017

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** Feb 20, 2018

**FEMA Underground Storage Tank Listing:**

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date:** Dec 31, 2017

**LIEN on Property:**

SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

**Government Publication Date:** Apr 11, 2018

**State****Hazardous Sites List:**

HSL

Washington State Department of Ecology (DEC) records of sites that have been assessed and ranked using the Washington Ranking Method (WARM score) - a number between 1 and 5, where a score of 1 represents the highest level of risk and 5 the lowest. Some factors that enter into site hazard ranking include: the amount and type of contaminants present; how easily contaminants could come into contact with people and the environment; and the level of public concern. This database is state equivalent NPL.

**Government Publication Date:** Apr 2, 2018

**Confirmed and Suspected Contaminated Sites List:**

CSCSL

Confirmed & Suspected Contaminated Sites List made available by the Washington State Department of Ecology (DEC). This database is state equivalent CERCLIS.

**Government Publication Date: Apr 2, 2018**

**Delisted Confirmed and Suspected Contaminated Sites:**

DELISTED SHWS

This database contains a list of Confirmed & Suspected Contaminated Sites that were removed from the Washington State Department of Ecology (DEC).

**Government Publication Date: Apr 02, 2018**

**No Further Action Sites List:**

CSCSL NFA

A list of sites previously on the Washington State Department of Ecology (DEC) Confirmed and Suspected Contaminated Sites List (CSCSL) that have received a No Further Action (NFA) determination.

**Government Publication Date: Apr 2, 2018**

**Solid Waste Facility Database:**

SWF/LF

List of permitted solid waste and landfill facilities made available by the Washington Department of Ecology (DEC).

**Government Publication Date: Nov 14, 2017**

**Leaking Underground Storage Tank (LUST) List:**

LUST

Leaking Underground Storage Tank (LUST) list made available by the Washington Department of Ecology (DEC) contains information about underground storage tank facilities that require cleanup and their cleanup history.

**Government Publication Date: Apr 25, 2018**

**Delisted Leaking Storage Tanks:**

DELISTED LST

List of leaking storage tanks made available by the Washington Department of Ecology (DEC). A record would be removed if it violated the Facility Oil Handling Standards. This list contains all the records that been removed from the storage tank list.

**Government Publication Date: Apr 25, 2018**

**Underground Storage Tanks:**

UST

List of Underground Storage Tanks (USTs) made available by Washington Department of Ecology (DEC). The DEC regulates tanks at facilities including gas stations, industries, commercial properties and governmental entities. The DEC works to ensure these tanks are installed, managed, and monitored in a manner that prevents releases into the environment.

**Government Publication Date: Apr 25, 2018**

**Aboveground Storage Tanks:**

AST

List of aboveground storage tanks (ASTs) made available by the Washington Department of Ecology (DEC). This list includes many of the largest petroleum containing ASTs in Washington state, but there are many ASTs in many different types of services (including, for example, hydrocarbon storage), that are not subject to regulation and are not registered by the DEC. There is no inclusive AST regulation in Washington state, and the Department of Ecology ceased maintenance of this list in December 2015.

**Government Publication Date: Dec 14, 2015**

**Delisted Storage Tanks:**

DELISTED TNK

List of aboveground storage tanks made available by the Washington Department of Ecology (DEC). A record would be removed if it violated the Facility Oil Handling Standards. This list contains all the records that been removed from the storage tank list.

**Government Publication Date: Apr 25, 2018**

**Environmental Covenants - Engineering Controls:**

ENG

List of sites on the Environmental Covenants Registry which are subject to engineering controls. The Environmental Covenants Registry is made available by the Washington Department of Ecology (DEC).

**Government Publication Date: Jan 23, 2018**

**Environmental Covenants - Use Restrictions:**

INST

List of sites on the Environmental Covenants Registry which are subject to use restrictions. The Environmental Covenants Registry is made available by the Washington Department of Ecology (DEC).

**Government Publication Date: Jan 23, 2018**

**Voluntary Cleanup Program:**

VCP

List of sites under the Voluntary Cleanup Program (VCP) made available by the Washington Department of Ecology (DEC). The VCP is an option for cleaning up hazardous waste sites under the state's cleanup law.

**Government Publication Date: Apr 2, 2018**

**Brownfields Program:**

BROWNFIELDS

List of Brownfields sites made available by the Washington Department of Ecology (DEC). Brownfield sites are abandoned or underused properties where potential liability due to environmental contamination and cleanup costs complicate re-development efforts.

**Government Publication Date: Apr 2, 2018**

**Tribal**

**Leaking Underground Storage Tanks (LUSTs) on Indian Lands:**

INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 10, which includes Washington.

**Government Publication Date: Oct 24, 2017**

**Underground Storage Tanks (USTs) on Indian Lands:**

INDIAN UST

USTs on Tribal/Indian Lands in Region 10, which includes Washington.

**Government Publication Date: Oct 24, 2017**

**Delisted Tribal Leaking Storage Tanks:**

DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

**Government Publication Date: Oct 14, 2017**

**Delisted Tribal Underground Storage Tanks:**

DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

**Government Publication Date: Oct 14, 2017**

**County**

**Abandoned Landfill Study in King County:**

KING HIST LF

List of sites investigated in the King County Abandoned Landfill Study, which was conducted October through December of 1984 by the Health Department's Environmental Health Division for the purpose of determining if any public health problems existed at predetermined sites.

**Government Publication Date: April 30, 1985**

**Abandoned Landfill Study in the City of Seattle:**

SEA HIST LF

List of sites investigated in the Seattle Abandoned Landfill Study, which was conducted in June and July of 1984 by the Health Department's Environmental Health Division for the purpose of making preliminary assessments of public health hazards.

**Government Publication Date: Jul 30, 1984**

**Seattle-King County Abandoned Landfill Toxicity / Hazard Assessment Project:**

KING SKLF

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council for the purpose of making preliminary assessments of public health hazards.

**Government Publication Date: Apr 30, 1985**

**Snohomish County Solid Waste Sites of Record:**

SNO SWF/LF

The Solid Waste and Toxics (SWT) Program in the Snohomish Health District inspects or monitors a number of solid waste disposal or utilization sites and maintains a list of known solid waste sites in Snohomish County.

**Government Publication Date: Nov 16, 2011**

**Tacoma-Pierce County Closed Landfill Survey:**

TP HIST LF

Following numerous requests for information about closed dumpsites and landfills in Pierce County the Tacoma-Pierce County Health Department began to develop an inventory of these sites. The objectives of the study were to establish an inventory, identify public health risks associated with closed dumpsites and landfills, and (where possible) determine the need for further site investigation.

**Government Publication Date: Dec 31, 2010**

## ***Additional Environmental Record Sources***

### **Federal**

#### **Facility Registry Service/Facility Index:**

**FINDS/FRS**

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

**Government Publication Date: Dec 12, 2017**

#### **Toxics Release Inventory (TRI) Program:**

**TRIS**

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

**Government Publication Date: Dec 31, 2016**

#### **Hazardous Materials Information Reporting System:**

**HMIRS**

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

**Government Publication Date: Sep 11, 2017**

#### **National Clandestine Drug Labs:**

**NCDL**

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

**Government Publication Date: Dec 21, 2017**

#### **Inventory of Open Dumps, June 1985:**

**ODI**

The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

#### **EPA Report on the Status of Open Dumps on Indian Lands:**

**IODI**

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

#### **Toxic Substances Control Act:**

**TSCA**

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

**Government Publication Date: Jun 30, 2017**

#### **Hist TSCA:**

**HIST TSCA**

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

**Government Publication Date:** Dec 31, 2006

**FTTS Administrative Case Listing:**

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**FTTS Inspection Case Listing:**

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

**Government Publication Date:** Jan 19, 2007

**Potentially Responsible Parties List:**

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

**Government Publication Date:** Oct 10, 2017

**State Coalition for Remediation of Drycleaners Listing:**

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

**Government Publication Date:** Nov 08, 2017

**Integrated Compliance Information System (ICIS):**

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

**Government Publication Date:** Nov 18, 2016

**Drycleaner Facilities:**

[FED DRYCLEANERS](#)

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date:** Sep 14, 2016

**Delisted Drycleaner Facilities:**

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date:** Sep 14, 2016

**Formerly Used Defense Sites:**

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

**Government Publication Date:** Nov 22, 2016

**Material Licensing Tracking System (MLTS):**

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Historic Material Licensing Tracking System (MLTS) sites:**

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

**Mines Master Index File:**

[MINES](#)

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jul 31, 2017

**Alternative Fueling Stations:**

[ALT FUELS](#)

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Apr 25, 2018

**Superfund Decision Documents:**

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Apr 11, 2018

**Registered Pesticide Establishments:**

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 1, 2018

**Polychlorinated Biphenyl (PCB) Notifiers:**

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 30, 2017

**State**

**Spills Incidents Sites:**

[SPILLS](#)

List of spills and/or releases reported to the Washington Department of Ecology (DEC).

Government Publication Date: Apr 10, 2018

**Facility/Site Identification System:**

[ALL SITES](#)

The Facility/Site Identification System made available by the Department of Ecology (DEC) provides a central repository of key information for each facility/site of interest to DEC. The DEC has defined a facility/site as an operation at a fixed location that is of interest to the agency because it has an active or potential impact upon the environment.

Government Publication Date: Feb 18, 2018

**Independent Cleanup Reports:**

[ICR](#)

List of facilities in remedial action reports received by the Washington Department of Ecology (DEC) from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

Government Publication Date: Nov 6, 2015

**Clandestine Drug Lab Sites:**

CDL

A list of Clandestine Drug Lab sites made available by the Washington Department of Health.

**Government Publication Date:** Dec 5, 2017

**Clandestine Drug Lab Sites - Historical Listing:**

HIST CDL

List of Clandestine Drug Lab sites reported to the Department of Health from local health departments. This list contains sites that are not in the current list.

**Government Publication Date:** until 2007

**Registered Drycleaners List:**

DRYCLEANERS

A listing of registered drycleaner facilities maintained by the Department of Ecology.

**Government Publication Date:** Jan 17, 2018

**Delisted Drycleaners:**

DELISTED DRYC

Sites which once appeared on the list of registered drycleaner facilities made available by the Department of Ecology.

**Government Publication Date:** Jan 17, 2018

**Tribal**

**No Tribal additional environmental record sources available for this State.**

**County**

**No County additional environmental record sources available for this State.**

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
