Subject: Focused Phase II Subsurface Investigation
Former Special Interest Auto Wrecking
25923 78th Avenue South
Kent, Washington

Dear Mr. Singh:

Atlas Geosciences NW (Atlas) is pleased to provide this letter report presenting the results of our Focused Phase II Subsurface Investigation (Phase II) for the Former Special Interest Auto Wrecking property at 25923 78th Avenue South in Kent, Washington (subject property). The subject property consists of an approximately 3.93-acre trucking yard improved with a 576-square-foot modular office, a 1,728-square-foot shop building, and a 360-square-foot dismantling building, designated as King County parcel number 0004400015. Atlas understands that Mr. Victor Singh (Client) is the owner of the subject property, the location of which relative to the surrounding area is shown on Figure 1.

This investigation was requested by the Client to further evaluate environmental concerns identified during previous investigations at the subject property. The scope of work completed for this investigation was based on the results of previous investigations, discussions with the Client, and supplemental property research completed by Atlas.

1.0 BACKGROUND

Previous investigations at the subject property identified elevated concentrations of total petroleum hydrocarbons (TPH), arsenic, lead, cadmium, chromium, polychlorinated biphenyls (PCBs), tetrachloroethene (PCE), and ethylene dibromide (EDB) in soil and elevated concentrations of the above metals in groundwater. A summary of previous investigation findings and the primary regulatory standards applicable to this subject property investigation are included below.

1.1 Previous Investigations

A *Level I Environmental Audit* was performed at the subject property and adjacent properties to the south in 1991. As part of the investigation, eight surficial soil samples were

collected at the subject property and analyzed for TPH by test method 418.1. Four soil samples collected from the eastern half of the subject property contained TPH concentrations ranging from 3,200 to 23,000 milligrams per kilogram (mg/kg), above the Model Toxics Control Act (MTCA) Method A Soil Cleanup Level for Unrestricted Land Uses (Method A) of 2,000 mg/kg for diesel- and oil-range TPH. The exact locations of these historical soil samples is not clear.

The Washington Department of Ecology (Ecology) placed the subject property on the Confirmed and Suspected Contaminated Sites List (CSCSL) in 1997 as *Green River Auto Wrecking* under Facility ID #58738426 based on the use of the subject property at that time as an auto wrecking yard. Subsequent soil sampling conducted by the Environmental Coalition of South Seattle (ECOSS) in coordination with Ecology identified low levels (i.e., below applicable MTCA cleanup levels) of lead, cadmium, chromium, barium, and silver in surficial soils at the subject property and one sample containing oil-range TPH at a concentration of 2,100 mg/kg, above the MTCA Method A cleanup level of 2,000 mg/kg. Based, in part, on the detected concentrations and an inferred assessment that the adversely affected areas appeared to be limited in number and extent, it was determined this contamination did not represent a threat to human health or the environment. Public Health – Seattle and King County, acting on behalf of Ecology, determined no further action (NFA) was required at the subject property, as stated in a letter from ECOSS dated January 21, 2000. However, the subject property remains on the CSCSL, regardless.

A previous Phase II of the subject property was completed on February 20, 2021, following the Client's acquisition of the subject property. Ten explorations (B1 through B10) were advanced across the subject property in the locations shown on Figure 2. Based on the findings of the previous Phase II, the following environmental concerns were identified:

- TPH, lead, and cadmium were detected in surficial soil and EDB was detected in soil at 15 feet below ground surface (bgs) from test probe B7 at concentrations greater than applicable cleanup levels in the area east of the shop building.
- PCBs, arsenic, and lead were detected in surficial soil south of the shop building (B4) at concentrations greater than applicable cleanup levels.
- Lead and arsenic were detected in surficial soil at the southeast corner of the subject property (B2) at concentrations greater than applicable cleanup levels.
- PCE was detected in surficial soil northwest of the dismantling building (B6) at concentrations greater than applicable cleanup levels.
- Arsenic, lead, cadmium, and/or total chromium were detected in groundwater grab samples collected from test probes B6, B7, B8, and B10 throughout the northern portion of the subject property at concentrations greater than applicable cleanup levels. However, since the samples were not collected from properly developed groundwater monitoring wells and it appears the samples may not have been filtered to account for potential turbidity, these analytical results may not be representative of actual groundwater conditions.

The nature and extents of the elevated contaminant concentrations were not indicated in the report.

1.2 Regulatory Background

The law that guides the remediation process at sites located within Washington state is MTCA, Chapter 70.105D Revised Code of Washington. The regulation implementing MTCA is in Chapter 173-340 Washington Administrative Code (WAC). The MTCA regulation is administered by Ecology. MTCA “establishes administrative processes and standards to identify, investigate, and cleanup facilities where hazardous substances have come to be located” (Chapter 173-340-100 WAC). MTCA regulations also list prescriptive numerical Method A cleanup levels that “provide conservative cleanup levels for sites with relatively few hazardous substances.” Toxics substances that do not have designated Method A cleanup levels often have risk-based cleanup levels established under MTCA Method B. MTCA Method B often includes different cleanup levels to separately address carcinogenic and non-carcinogenic health effects of contaminants. For simple sites such as the subject property, use of the MTCA Method A and Method B cleanup levels are typically appropriate for preliminary screening of regulatory compliance conditions applicable to investigations similar to the one described in this report.

2.0 SUPPLEMENTAL PROPERTY RESEARCH AND RECONNAISSANCE

Atlas visited the subject property, researched available historical records, and reviewed regulatory agency databases to identify potential sources of the contamination previously identified at the subject property. Excerpts of the historical and regulatory records sources are included in Appendix A.

Based on the historical records reviewed, the subject property was developed as a cherry orchard from at least 1936 until the early 1960s, when the orchard was cleared and stripped. The subject property was redeveloped as an automotive wrecking yard by 1970 and occupied by various automotive wrecking facilities until 2021. Since 2021, the property has been used as a trucking yard.

Atlas inspected the subject property on June 25 and 28, 2021. At that time, equipment and automobiles associated with the former auto wrecking yard were being cleared and the business vacated. Automotive wastes (e.g., antifreeze and waste oil) were being stored in approximately 500-gallon poly totes on a concrete pad in a sheltered portion of the dismantling building. Staining in the vicinity of the former totes was predominantly limited to the concrete, with minor staining noted south and north of the pad area. A car crusher was observed west-adjacent to the shop building. Significant staining was not evident on the soil surrounding the crusher. The shop building was mostly vacant at the time but appeared to have historically been the location of minor vehicle repair operations, with minor staining on the concrete floor. A small parts washing unit located in the shop building was empty at the time of the inspection. Minor staining was observed throughout the former wrecking yard. Limited inspection of a representative number of stained areas suggested that impacts were predominantly surficial in nature and limited

in areal extent. Other issues of potential environmental concern were not observed during the on-site inspection.

The subject property was subsequently regraded by the Client in 2021, following the initial field sampling event on July 20, 2021 (discussed further in Section 3.0, below), to accommodate its future use. Surficial soils and debris in several areas were removed and stockpiled in the western corner of the subject property (Figure 2). Atlas performed a limited inspection of this stockpile, which appeared to consist of surficial yard scrapings (gravel and soil) and various plastic and metal automotive debris (discussed further in Section 3.3). As discussed above, the subject property has since been graveled and is currently being used as a commercial trucking yard, with numerous parking spaces for commercial semi trucks and trailers. Fueling and/or servicing of vehicles do not appear to be part of the existing operation.

Based on the supplemental property research, regulatory database review, and subject property inspection, the following potential source considerations were identified relative to the previously-identified contamination on the subject property:

- **Historical Cherry Orchard:** The subject property was historically occupied by a cherry orchard for at least 21 years from at least 1936 through 1957. Lead arsenate was commonly used as a pesticide in orchards until the 1950s. Although it appears that the surficial orchard soils were stripped and removed from the subject property (based on aerial photograph review and observations during subsurface explorations, discussed above and in 4.2, below), this historical usage is considered as a possible source of lead and arsenic previously identified in soil and groundwater on the subject property.
- **Historical Auto Wrecking Yard:** The subject property was used as an automotive wrecking yard from approximately 1970 until 2021. The full extent of the storage, handling, and disposal practices of automotive chemicals and waste associated with this historical usage are unknown. The potential for petroleum products, automotive chemicals, and metals associated with the historical automotive wrecking yard to have been released to soil and groundwater at the subject property is considered as a potential source for the previously-identified contaminants.
- **South-Adjoining Automotive Wrecking Yard:** The south-adjoining property has been used as an automotive wrecking yard since approximately 1970. The storage, handling, and disposal practices of chemicals and waste associated with this adjoining facility throughout its history are largely unknown. Subsurface investigations on the south-adjoining property identified elevated concentrations of arsenic, lead, and carcinogenic polynuclear aromatic hydrocarbons (cPAHs) in shallow soils near the southeastern portion of the subject property and is considered herein as a potential source for the previously-identified contaminants on the subject property.

Atlas developed the scope of this Focused Phase II to further evaluate soil and groundwater conditions on the subject property, including the concerns listed above, and to characterize soils within the abovementioned stockpile.

3.0 SUBSURFACE INVESTIGATION ACTIVITIES

For this Focused Phase II, Atlas oversaw a geophysical survey and the advancement of explorations across the subject property to further evaluate environmental concerns identified during previous investigations and Atlas's supplemental property research. Atlas also collected soil samples from the soil/debris stockpile on the western corner of the subject property to characterize the stockpiled soil to ensure environmental compliance in its potential reuse and/or disposal. Figure 2 shows the approximate locations of the explorations and sampling points.

3.1 Geophysical Survey

Prior to each field event, geophysical surveys were performed in the accessible areas of the subject property using electromagnetic scanning techniques and ground-penetrating radar. The purpose of the surveys was to assess the proposed exploration locations for subsurface obstructions and to perform a screen of the yard area for indications of abandoned USTs or obvious backfill areas. The results of the geophysical surveys are discussed in Section 4.1.

3.2 Subsurface Explorations

Between July 30, 2021, and November 21, 2022, Atlas oversaw the advancement of 20 test pit explorations and 18 direct-push test probe explorations across the subject property (Figure 2) to a maximum depth of 30 feet bgs. The explorations were advanced to assess the soil and/or groundwater quality in areas of interest identified during the previous investigation (2021) and Atlas's subject property reconnaissance, including the vicinity of the shop building, the vicinity of the dismantling building, the southeast corner of the subject property, and the northern edge of the trucking yard. The test pit explorations were completed using a track-mounted mini excavator and a backhoe. The direct-push explorations were completed by driving a hollow probe tube with a hydraulic impact hammer, which was mounted to a Ford F-550 truck.

Initial explorations were advanced in the areas of concern to further assess the presence of affected soil and/or groundwater in each area. Subsequent explorations were advanced to further investigate the extent of soil contamination encountered in the initial explorations (discussed further in Section 4.4.1).

3.2.1 Soil Sampling

Soil samples from test pit explorations were collected by first utilizing the excavator bucket to obtain soils from the locations of interest. Soil samples were collected directly from the bucket using disposable implements, ensuring that no soils collected were in direct contact with the bucket wall. Soils were then placed into laboratory-prepared sample containers for possible analytical testing.

Soil samples from test probe explorations were collected using a plastic liner within the aforementioned hollow probe tube in four- to five-foot increments. After each drive interval, the probe was removed from the exploration and the plastic sleeve, containing a sample of the subsurface materials encountered during that drive interval, was removed. The plastic liner was cut open to expose the soil sample and laboratory-prepared sample containers were filled with soil for possible analytical testing.

Soil recovered from the explorations was also screened in the field using a photoionization detector (PID) and visual and olfactory methods. Field screening observations are discussed in Section 4.3 below. Soil samples collected for analysis were selected based on the results of field screening and target depths of interest correlating to samples collected during previous investigations.

3.2.2 Groundwater Grab Sampling

Groundwater was encountered and grab samples were successfully collected from explorations SP1, SP2, SP5, SP6, and SP7. The groundwater sampling procedure consisted of inserting a dedicated plastic tube extending from the borehole to a peristaltic pump used to withdraw water. The pump was run for approximately 15 minutes, or until purged dry, to reduce the turbidity in the recovered groundwater. Due to visible turbidity in the recovered groundwater, discussed further in Section 4.2, samples intended for analysis of metals were filtered using a 0.45-micrometer in-line filter, resulting in a significant reduction in observed turbidity. Each groundwater grab sample was then collected into laboratory-prepared sample containers for possible analytical testing. The tubing was then removed and disposed of.

3.3 Stockpile Sampling

On October 19, 2021, Atlas collected three soil samples from the soil/debris stockpile on the western corner of the subject property (estimated to be less than 100 cubic yards) to characterize the stockpiled soil as a possible contaminant source and for future management. The sample locations were distributed throughout the highest-volume area of the stockpile and the upper few inches of soil were removed prior to sampling. Each soil sample was then collected directly into laboratory-prepared sample containers for analytical testing, using disposable sampling implements.

3.4 Soil and Groundwater Sample Management

All soil and groundwater grab samples collected for chemical analysis were placed in appropriate sample containers supplied by an Ecology-approved laboratory subcontracted to Atlas. The portions of the soil samples intended for analysis of volatile organic compounds (VOCs) were collected using the approved 5035A sampling method. Each container was labeled with the project number, project name, date, time, sample number, and sampling personnel. Sample containers were placed in a chilled cooler immediately after sampling, and subsequently transported to On-Site Environmental, Inc., of Redmond, Washington (a Washington-accredited analytical laboratory), via courier under strict chain-of-custody procedures.

3.5 Property Restoration

Explorations were abandoned in accordance with Ecology guidelines. Test pit explorations were backfilled in kind and direct push explorations were sealed with bentonite. Permanent wells were not installed as part of this investigation.

3.6 Laboratory Analysis

Select soil samples, exhibiting the highest or most suspect field indication of adverse impacts or corresponding to a targeted depth of interest, and all collected groundwater and stockpile samples were analyzed for one or more of the following compounds:

- Arsenic, lead, cadmium, chromium, and/or mercury by USEPA Method 6020/6010 series and 7471/7470 series.
- Hydrocarbon Identification by Method NWTPH-HCID.
- Diesel- and oil-range TPH by Method NWTPH-Dx.
- Gasoline-range TPH by Method NWTPH-Gx.
- Halogenated or Full VOCs by United States Environmental Protection Agency (USEPA) Method 8260D.
- Benzene, toluene, ethylbenzene, and xylenes by USEPA Method 8260D and/or Method 8021B.
- PCBs by USEPA Method 8082A.
- Carcinogenic Polynuclear Aromatic Compounds (cPAHs), using USEPA Method 8270E/SIM.
- EDB by USEPA 8011.

The soil, groundwater grab, and stockpile sample analytical results are discussed in Section 4.4.

4.0 SUBSURFACE INVESTIGATION RESULTS

This section summarizes the results of the Focused Phase II completed by Atlas at the subject property.

4.1 Geophysical Survey

Suspect subsurface anomalies and/or apparent backfilled excavations were not identified in the areas of the subject property at which the geophysical surveys were performed. It should be noted that subsurface conditions (e.g., obstructions, buried metal debris, etc.) can interfere with geophysical methods' ability to identify subsurface

improvements. However, these methods are generally considered the best available for conducting such an investigation.

4.2 Subsurface Conditions

Subsurface conditions at the subject property were inferred from observations made during the explorations advanced during this investigation and are depicted in cross section in Figures 3 and 4. The subject property is currently surfaced with 6 to 18 inches of imported gravel fill. Miscellaneous debris (e.g., wood, metal, and plastic) was observed at various locations across the subject property as deep as 4 feet bgs. Wood fragments, possibly remnant root material, were also observed in the upper 8 feet of soil in several explorations. Native soil at the subject property generally consisted of up to 5.5 feet of sandy silt overlying approximately 6.5 to 21.5 feet of fine- to medium-grained silty sand, beneath which is 4 to 6 feet of well-graded, medium- to coarse-grained sand. Saturated, elastic silt was encountered in several explorations at a depth of approximately 24 feet bgs to the maximum explored depth of 30 feet bgs. A layer of peat was observed at a depth of 28 feet bgs in exploration SP2. Detailed descriptions of the conditions encountered in each exploration are noted on the exploration logs included in Appendix B.

Groundwater was encountered at depths ranging from 22 to 25 feet bgs in explorations SP1, SP2, SP5, SP6, and SP7. Observed groundwater levels, where encountered, are depicted on exploration logs (Appendix B). Recovered groundwater was visibly turbid, even following purging of temporary well screens as described in Section 3.2.2. Groundwater conditions should be expected to vary in response to changes in weather, season, on- and off-site land usage, and other factors.

4.3 Field Observations

PID readings ranged from 0.0 volumetric parts per million (vppm) to 3.3 vppm, the highest reading detected occurring in exploration SP10 at a depth of approximately 1 to 2 feet bgs. Organic odors were observed at and below the groundwater table in saturated soils in several explorations. An unknown chemical odor was observed in test pit TP3 from a depth of 0.7 to 4 feet bgs. Additional suspect odors or staining were not observed in soils collected at the subject property. PID readings and observations pertaining to staining and/or odors are noted on the exploration logs (Appendix B).

4.4 Laboratory Analytical Results

The soil, groundwater, and stockpile analytical results are summarized in Table 1: Soil Sample Analytical Results and Table 2: Groundwater Sample Analytical Results, and the laboratory analytical reports are included in Appendix C. The analytical results are discussed in detail below.

4.4.1 Soil and Stockpile Analytical Results

Oil-range TPH, arsenic, lead, and cadmium were detected in soils samples collected to a depth of four feet bgs east of the shop building at concentrations greater than their applicable MTCA Method A soil cleanup levels for unrestricted land use (Method A soil

cleanup levels). Arsenic was also detected at concentrations greater than the Method A soil cleanup level in soil samples collected to depths ranging from three to five feet bgs south of the shop building. Soil samples collected at approximately five feet bgs and deeper in both areas either did not have detectable concentrations of the contaminants of concern or had concentrations below their respective and applicable Method A soil cleanup levels. The approximate extents of identified contaminated soil are depicted on Figures 2, 3, and 4.

Methylene chloride was detected at elevated concentrations in four soil and stockpile samples but is reasonably attributed to laboratory contamination as the four samples were associated with the same batch and contained relatively similar methylene chloride results. Gasoline- and diesel-range TPH, other VOCs, chromium, PCBs, and cPAHs were either not detected or were detected at concentrations below their respective and applicable Method A soil cleanup levels in soil samples analyzed from the subject property. Specifically, detections of contaminants elsewhere at the subject property in the previous 2021 investigation could not be corroborated, including: soils collected from explorations SP18 (at the approximate location of historical boring B6, where elevated PCE was historically detected), TP2 through TP4 (in the vicinity of historical boring B2, where elevated arsenic and lead were historically detected), SP14 and SP15 (at or near the vicinity of historical boring B4, where elevated PCBs were historically detected), and SP2 (at the approximate location of historical boring B7, where elevated EDB was historically detected). Concentrations of all of the analyzed contaminants of concern were either not detected or were detected at concentrations below their respective and applicable Method A soil cleanup levels in the stockpile samples (consisting of historical surficial soils across the subject property).

4.4.2 Groundwater Analytical Results

Total arsenic, total lead, and total chromium were detected at respective concentrations of 57 micrograms per liter ($\mu\text{g/L}$), 160 $\mu\text{g/L}$, and 200 $\mu\text{g/L}$ in the unfiltered groundwater grab sample collected at exploration SP2, which are greater than the MTCA Method A groundwater cleanup levels of 5 $\mu\text{g/L}$, 15 $\mu\text{g/L}$, and 50 $\mu\text{g/L}$, respectively. Total cadmium and total mercury were either not detected or were detected at concentrations less than their MTCA Method A groundwater cleanup levels in the unfiltered groundwater grab sample collected at exploration SP2. The detected metals concentrations from the unfiltered groundwater sample from SP2 differ by as much as an order of magnitude compared to the concentrations of the corresponding metals in the unfiltered groundwater grab sample W7, collected from historical boring B7 (from approximately the same location). Dissolved arsenic, lead, cadmium, chromium, and mercury were either not detected or were detected at concentrations less than their MTCA Method A groundwater cleanup levels in filtered groundwater grab samples analyzed from explorations SP2, SP5, and SP6.

Gasoline-, diesel-, and oil-range TPH, and VOCs (including EDB) were not detected in groundwater grab samples analyzed from the subject property.

4.5 Quality Assurance/Quality Control Results

The analytical results for this investigation were checked for completeness immediately upon receipt from the laboratory to ensure that data and quality assurance / quality control (QA/QC) information requested were present. QA/QC review was completed using guidance described in USEPA Contract Laboratory Program National Functional Guidelines for Data Review (USEPA 2020). Our evaluation assumes that the QA/QC is correct as reported by the laboratory, and merely provides an interpretation of the QA/QC results. Based on the results of the laboratory QA/QC data reviewed, it is the opinion of Atlas that the data quality as indicated in the analytical laboratory report is acceptable and the sample results are suitable as presented for the purposes of this investigation.

5.0 WASTE MANAGEMENT

Soil cuttings, purge water, and equipment cleaning water generated during the field activities were placed into Department of Transportation (DOT)-approved, 55-gallon steel drums, which were left on-site for subsequent characterization and disposal. Disposal of drummed material is not included in this scope of work. Based on the analytical results, the contents of the drums should be disposed of at facilities licensed to accept petroleum- and metal-contaminated wastes. Atlas can assist with this effort, upon request.

6.0 CONCLUSIONS AND RECOMMENDATIONS

This Focused Phase II was conducted to further evaluate environmental concerns identified during previous investigations at the subject property. Based on the results of this investigation, Atlas concludes the following:

- Oil-range TPH, arsenic, lead, and cadmium were identified in soil east of the shop building at concentrations greater than the applicable MTCA cleanup levels, consistent with the findings of previous investigations. The area of the identified contaminated soil covers approximately 4,350 square feet and was identified in the upper 4 feet of soil.
- Arsenic was identified in soil south of the shop building at concentrations greater than the applicable MTCA cleanup levels, consistent with the findings of previous investigations. The area of the identified contaminated soil extends approximately 11,000 square feet and was identified in the upper 3 to 5 feet of soil.
- Based on the historical anecdotal information and analytical results from the soil samples collected during previous investigations and this supplemental investigation, other contaminants of concern that were previously detected elsewhere at the subject property appear to be associated with isolated surficial staining of limited extents that are reasonably considered to be de minimis conditions, consistent with the NFA determination issued by the Ecology representative as part of its 1999 Site Hazard Assessment.

- Based on the analytical results, adversely affected shallow soils associated with surficial releases on the south-adjointing property were not identified on the subject property.
- Based on the reduction of detected metals concentrations between the filtered and unfiltered groundwater grab samples and the high turbidity observed in recovered groundwater, the dissolved metals concentrations identified during this investigation are considered to be more representative of groundwater conditions at the subject property. Based on the groundwater analytical results, observed groundwater conditions, and the depth of separation between groundwater and areas of identified contaminated soil, indications of adverse effects to groundwater from historical activities on the subject property were not identified.
- Based on the analytical results, soil within the stockpile on the western portion of the subject property is compliant with applicable MTCA cleanup standards and suitable for disposal as category 2 petroleum-affected soil. Based on the debris content, other special disposal requirements may be imposed by an accepting facility.

Remediation of the shallow contaminated soils east and south of the shop building on the subject property is likely best achieved by excavation and off-property disposal at an approved facility.

7.0 LIMITATIONS AND EXCEPTIONS

This subsurface investigation is intended to reduce, but not eliminate, uncertainty regarding the potential for adversely-affected media in connection with the subject property. In addition, performance of this subsurface investigation does not eliminate uncertainty regarding subject property hazards not covered by the scope of work or the potential for future identification of adversely-affected media at the subject property.

The findings, conclusions, and/or recommendations of this subsurface investigation are based strictly on information available, and conditions observed, at the time of this assessment. Subsequent changes to subject property conditions, such as subject property redevelopment or changes to ground cover, or changes in applicable regulatory requirements have the potential to materially affect the conclusions and/or recommendations of this report. If any such changes are apparent, the Client should contact Atlas about reevaluating the findings of this investigation to incorporate the new information. The conclusions and/or recommendations are not to be construed as legal interpretation or advice. No warranties, express or implied, are intended or made herein.

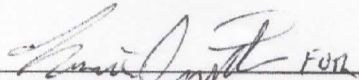

The property owner is solely responsible for notifying all governmental agencies and the public at large of the existence, release, treatment, or disposal of any hazardous materials identified at the subject property. Atlas assumes no responsibility or liability whatsoever for any claim, loss of property value, damage, or injury which results from pre-existing hazardous materials being encountered or present on the subject property, or from the discovery of such hazardous materials.

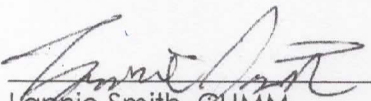

8.0 CLOSURE

This report was prepared for the exclusive use of the Client and its agents for specific application to the subject property and is subject to the agreed-upon terms and conditions included in our proposal for this scope of work. Atlas personnel performed this assessment in accordance with generally accepted standards of care that existed in the State of Washington at the time of this study. Our findings and conclusions have been prepared in accordance with generally accepted professional practice in the area at this time. We make no other warranty, either express or implied.

We appreciate this opportunity to provide these services. Please do not hesitate to call if you have any questions.

Sincerely,
ATLAS GEOSCIENCES NW

Notes:

Refer to Figure 2 for exploration locations. Refer to laboratory reports for analytical methods.

- ¹ MTCA Method A Soil Cleanup Level for Unrestricted Land Uses, Chapter 173-340 Washington Administrative Code, Table 740-1
- ² Higher cleanup level applies if no benzene is present in the soil sample and the sum of toluene, ethylbenzene and xylenes is less than 1% of the gasoline mixture.
- ³ The higher cleanup level applies to Chromium III, the lower cleanup level applies to Chromium VI. The concentrations noted above are considered to be within anticipated natural background concentrations for Chromium III.
-
- Not analyzed.
- <0.0013 The analyte was not detected at a concentration greater than the indicated practical quantitation limit.
- 43 Bold value and yellow shading indicates concentration exceeds applicable cleanup level.
- BTEX Benzene, Toluene, Ethylbenzene, and Xylenes. Only detected analytes are listed.
- cPAHs Carcinogenic Polycyclic Aromatic Hydrocarbons.
- ft bgs feet below ground surface.
- H The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- MTCA Model Toxics Control Act.
- N Hydrocarbons in the lube oil range are impacting the diesel range result. Result reflects sum of both ranges.
- PCBs Polychlorinated Biphenyls.
- PCE Tetrachloroethene.
- TPH Total Petroleum Hydrocarbons.
- VOCs Volatile Organic Compounds. Only detected analytes are listed.
- Y The calibration verification for this analyte exceeded the method standard. Value reported as an estimate.

Subject: Phase II Environmental Site Assessment
Special Interest Auto Wrecking
25923 78th Avenue South, Kent, WA 98032

Envitechnology, Inc. is pleased to submit our report describing the finding of the Subsurface Investigation performed at the above property.

The purpose of this assessment is to evaluate the Recognized Environmental Conditions (RECs) for the purpose of providing sufficient information regarding the nature and extent of contamination to assist in making informed business decisions about the property; and where applicable, providing the level of knowledge necessary to satisfy the innocent purchaser defense under CERCLA.

This assessment was prepared in general accordance with the American Society of Testing and Materials (ASTM) Standard Practices for Environmental Site Assessments: Phase II ESA Process (ASTM Designation: E1903).

If you have any questions or require further clarification of the report findings, please contact the undersigned at your convenience. Thank you for the opportunity to be of service to you.

Yours very truly,

Jake S. Lee, Ph.D.

APPENDIX A. BORING LOGS

APPENDIX B. SITE PHOTOGRAPHS

APPENDIX C. LABORATORY REPORT

1. EXECUTIVE SUMMARY

The Subject Property was used as an auto salvage yard from the 1970s to present. Operations included stockpiling of old tires, scrap cars, and automotive parts. The environmental concern with salvage yard is the issue with soil and groundwater contamination with various contaminants such as petroleum hydrocarbons, heavy metals, MTBE, PCBs, PAHs, and VOCs.

A total of ten (10) soil borings were advanced into native soils on January 21, 2020. Five (5) soil borings (B1 through B5) were advanced in the south portion of the Site to a depth of 5 feet bgs. Five (5) soil borings (B6 through B10) were advanced in the north portion of the Site along the northern property boundary closed to Green River to a depth of 20 feet bgs.

Total twenty (20) soil samples were collected from the Site. Two (2) undisturbed soil samples were collected from each borehole – one shallow sample at 6 inches bgs and one deeper sample at a boring depth of 5 or 15 feet bgs. Five (5) groundwater samples (W6 through W10) were collected from boreholes (B6 through B10), respectively. Groundwater was encountered at a depth of 15 feet bgs during soil borings.

The soil borings were extended up to 20 feet below ground surface (bgs). Native soils beneath fill or other surface cover materials include a layer of grayish brown SILT with some gravels to a depth of 1-5 feet bgs, underlain by a layer of brown to gray, moist silty fine SAND or fine SAND to a depth of 20 feet bgs. Groundwater was encountered at a depth of 15 feet bgs.

The soil and groundwater samples were analyzed for the presence of GRO, DRO, VOCs, PCBs, PAHs, and five metals (lead, cadmium, chromium, arsenic and mercury).

The following is the summary of the laboratory results:

- Petroleum hydrocarbons were identified in five (5) of the soil samples analyzed. The highest concentration of ORO was observed in B7-0.5 at 14,000 mg/kg, exceeding its MTCA Method A cleanup level of 2,000 mg/kg. Other petroleum hydrocarbons were below the cleanup levels.
- VOCs were identified in three (3) of the soil samples analyzed. PCE and EDB were observed in two samples at concentrations exceeding their MTCA Method A cleanup levels.
- PCBs were identified in two (2) of the soil samples analyzed. Total PCBs was observed in one sample at 8.8 mg/kg, exceeding its Method A cleanup level of 1 mg/kg.
- Metals were identified in fourteen (14) of the soil sample analyzed. Lead, cadmium, and arsenic were observed in three samples at concentrations exceeding their MTCA Method A cleanup levels. The highest concentration of lead was observed in B7-0.5 at 330 mg/kg, exceeding its Method A cleanup level of 250 mg/kg.
- PHAs were identified in three (3) of the soil samples analyzed. Total naphthalene was observed in one sample at concentration exceeding its Method A cleanup level.

- Four (4) metals (lead, cadmium, chromium and arsenic) were identified in all of the groundwater samples analyzed. Four samples exhibited concentrations exceeding their corresponding MTCA Method A cleanup levels. The highest concentration of lead was observed in W7 at 300 µg/L, exceeding its MTCA Method A cleanup level of 15 µg/L.

Contaminants detected in soil and groundwater on the Subject Property include DRO, PCE, EDB, PCBs, and metals. Contaminants detected in soil appears to be limited to surface soil (0.5 feet bgs). Metals impact in groundwater appear to be widespread throughout the Subject Property.

Based on the result of this assessment, DRO, PCE, EDB, PCBs, metals (lead, cadmium and arsenic), and naphthalene were identified at concentrations exceeding their corresponding cleanup levels in the soil samples at the Subject Property. Metals (lead, cadmium, chromium and arsenic) were identified at concentrations exceeding their corresponding cleanup levels in the groundwater samples at the Subject Property.

Envitechnology recommends additional subsurface investigation in order to verify the lateral and vertical extent and magnitude of contamination. To achieve lawful compliance with Chapter 173-340-300 (site discovery and reporting), Envitechnology recommends that copies of this report along with any future reports regarding the environmental conditions thus far encountered be forwarded to the Washington State Department of Ecology.

2. INTRODUCTION

GK Transport LLC. engaged Envitechnology to conduct a Phase II Environmental Site Assessment (ESA) on the property, Special Interest Auto Wrecking, located at 25923 78th Avenue South, Kent, WA 98032, subsequently referred to in this report as “the Subject Property”.

The purpose of the Phase II ESA was to collect and evaluate environmental data at the Site to determine potential impacts to human health and the environment resulting from on-site exposure and/or off-site migration of site contaminants.

This assessment was prepared in general accordance with the American Society of Testing and Materials (ASTM) Standard Practices for Environmental Site Assessments: Phase II ESA Process (ASTM Designation: E1903).

2.1. SCOPE OF SERVICES

The scope of work for this assessment was in general accordance with the American Society of Testing and Materials (ASTM) Standard Practices for Environmental Site Assessments: Phase II ESA Process (ASTM Designation: E1903, 2011 and 2019). The methodologies are described as representing good commercial and customary practice for conducting a Phase II ESA of a property for the purpose of evaluating Recognized Environmental Conditions.

The scope of work included the following tasks:

- Review of Existing Information
- Geophysical survey
- Field Exploration
- Sampling and Chemical Analyses
- Evaluation of Results
- Discussion of Finding and Conclusions

2.2. LIMITATIONS AND EXCEPTIONS OF ASSESSMENTS

This assessment was prepared in general accordance with the American Society of Testing and Materials (ASTM) Standard Practices for Environmental Site Assessments: Phase II ESA Process (ASTM Designation: E1903, 2011 and 2019), and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.

No ESA can eliminate all uncertainty. Furthermore, any sample, either surface or subsurface, taken for chemical analysis may or may not be representative of a larger population. Professional

judgment and interpretation are inherent in the process and uncertainty is inevitable. Additional assessment may be able to reduce the uncertainty.

Even when Phase II ESA work is executed with an appropriate site-specific standard of care, certain conditions present especially difficult detection problems. Such conditions may include, but are not limited to, complex geological settings, the fate and transport characteristics of certain hazardous substances, the distribution of existing contamination, physical limitations imposed by the location of utilities and other man-made objects, and the limitations of assessment technologies.

Phase II ESA does not generally require an exhaustive assessment of environmental conditions on a property. There is a point at which the cost of information obtained and the time required to obtain it outweigh the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. If hazardous substance releases are confirmed on a parcel of property, the extent of further assessment is related to the degree of uncertainty that is acceptable to the user with respect to the real estate transaction.

Measurements and sampling data only represent the site conditions at the time of data collection. Therefore, the usability of data collected as part of this Phase II ESA may have a finite lifetime depending on the application and use being made of the data. An environmental professional should evaluate whether the generated data are appropriate.

3. BACKGROUND

3.1. SITE DESCRIPTION AND FEATURES

The Subject Property is an auto wrecking yard located on the west end of 78th Ave South in Kent, King County, Washington. The site is bordered on the east by 78th Avenue South and on the north by Green River. The surrounding area is a commercial setting.

The Subject Property consists of a parcel of commercial land (parcel number 0004400015) with a reported total area of an approximately 3.93 acres. The parcel of land is improved by an auto wrecking yard known as Special Interest Auto Wrecking.

The office building is located on the east end of the Site. The shop building is located in the middle of the Site. The dismantle building is located on the west portion of the Site. The rest of the area is packed with full of junked cars and parts on an unpaved land. Access of the Subject Property is achieved from 78th Ave South.

The legal description of the Subject Property is:

Parcel # 000440-0015

KIRKLAND DLC NO 40 PORTION OF NE QTR STR 25-22-04 DAF: BEG AT NW CORNER OF MOSES KIRKLAND DONATION CLAIM IN STR 26-22-04 TH ALONG N LINE OF SAID CLAIM N89-21-15E 3343.16 FT TH S06-15-10E 549.39 FT TH N89-07-50E 1246.02 FT TO ELY MARGIN CHICAGO MILWAUKEE & ST PAUL RR RIGHT-OF-WAY TH ALONG SAID ELY MARGIN N06-18-10W 482.11 FT TO TPOB TH CONTINUING N06-28-20W ALONG SAID ELY MARGIN TO SELY BANK OF WHITE RIVER TH ELY ALONG SAID BANK TO W MARGIN OF ROAD ALONG W BANK OF WHITE RIVER TH SLY ALONG SAID MARGIN TO POINT WHICH BEARS S70-33-10E FROM TPOB TH N70-33-10W 870 FT MORE OR LESS TO TPOB EXC SWLY 290.76 FT AS MEAS AT RIGHT ANGLE TO SWLY BOUNDARY OF ABOVE-DESC TRACT

PLat Block:

Plat Lot: PORTION

3.2. ADJOINING PROPERTIES

An adjoining property is any real estate property whose border is contiguous or partially contiguous with the Subject Property, or that would be if the properties were not separated by a roadway, street, public thoroughfare, river or stream. The following identifies specific adjacent property tenants and/or use:

Direction	Site Use	Adjoining Street
East	Commercial – Field Roof Service, Inc	78 th Ave S
West	Auto Wrecking – Binford Metals	Non-applicable
South	Auto Wrecking – Binford Metals	Non-applicable
North	N/A	Green River

3.3. PHYSICAL SETTING

The objective of reviewing physical setting is to provide information about the impact of potential environmental contaminant migration.

Current USGS 7.5 Minute Topographic Maps (Kent, WA, 1985) was reviewed to determine the topography of the Subject Property. The Quad Map shows no physical features that may have environmentally impacted the Subject Property.

The surface elevation at the site is approximately 35 feet above mean sea level. The parcel is fairly level. Information on groundwater flow and soil type was obtained to determine the ease with which contaminants from surrounding properties can reach the Subject Property. Based upon the USGS map and surface topography, groundwater is inferred to flow generally to the north towards Green River. However, topography is not always a reliable basis for predicting the groundwater flow direction. Local gradient under the Subject Property may be influenced by naturally by zones of higher or lower permeability, or artificially by nearby pumping or recharge, and may deviate in any particular location for the overall regional trend. Significant body of water includes Kent Bay 3.0-mile to the southeast. The nearest surface water is Bell Creek which runs adjacent to the west of the Subject Property. This stream may be intermittent.

According to the USDA Soil Conservation, the dominant soil type of this area is *Urban Land*". Urban soils are composed of geological material that has been drastically disturbed by anthropogenic activities. Urban soil geochemistry is strongly influenced by the effect of human activities, motor vehicle emissions and many other factors are responsible for releasing large amounts of organic and inorganic pollutants to the environment.

Review of the Ecology's well log on the adjoining property to the south indicates that the general vicinity of the Subject Property is underlain by a layer of silty sand to a depth of 6 feet, underlain by a layer sand to a depth of 12 feet bgs, underlain by a layer of silt to a depth of 16 feet bgs, underlain by a layer of silty sand to a depth of 22 feet bgs, and underlain by a layer of sand to a depth of 50 feet bgs.

3.4. SITE HISTORY AND LAND USE

According to the city directories and aerial photographs, the Subject Property was used as an auto wrecking yard from the 1970s to present, under various business names – A to Z Auto Wrecking (1973); Green River Auto Wrecking (1980 – 2002); and Specialty Interest Auto Sales (2014 – 2018).

4. FIELD INVESTIGATIONS

4.1. UTILITY LOCATION

Prior to conducting the next phase of the field investigation, Envitechnology requested Public Utility locating service to check proposed boring locations for the presence of underground utilities.

Envitechnology subcontracted with Mt. View Locating Services, LLC., Sumner, WA to perform an additional site-specific utility clearance on the subject property prior to drilling. Underground utilities that were detected were spray painted on the surface of the subject property. All drilling locations were completed without encountering underground utilities or obstructions during the collection of soil samples on the Subject Property.

4.2. GEOPHYSICAL SURVEY

Because of the limited information regarding the configuration of the Site, geophysical survey was conducted at the Site. Envitechnology subcontracted with Mt View Locating Services, LLC., Sumner, WA to perform a geophysical survey. The geophysical survey employs the use of both electro-magnetic (EM) equipment and ground penetrating radar (GPR) to screen the Site for subsurface anomalies characteristics of USTs and other buried metallic objects.

A magnetometer is a measuring instrument used to measure the strength and the direction of magnetic field. Magnetometer is widely used for measuring the earth's magnetic fields and in geophysical surveys. The magnetic properties of naturally occurring materials such as magnetic ore bodies and basic igneous rocks allows them to be identified and mapped by magnetic surveys. Strong local magnetic fields or anomalies are also produced by buried steel objects. Magnetometer surveys find underground storage tanks, drums, piles and reinforced concrete foundations by detecting the magnetic anomalies they produce.

Ground Penetrating Radar (GPR) is a geophysical method that uses radar pulses to image the subsurface which is the most common method used to locate underground storage tanks (USTs) and other metallic objects. Metal or any other material that has different electrical or conductive properties than the surrounding subsurface soil and rocks.

4.3. HEALTH AND SAFETY

A Site-Specific Health and Safety Plan was prepared prior to field activities. Envitechnology performed air monitoring for total VOC during all field activities and also enforced the appropriate protective equipment including hard hats, safety glasses, hearing protection, steel-

toed boots, and chemical resistant gloves. Air monitoring performed throughout the day indicated that the use of breathing protection equipment was not necessary.

4.4. EXPLORATION METHODS

A total of ten (10) soil borings were advanced into native soils on January 21, 2020, as follows:

- Five (5) soil borings (B1 through B5) were advanced in the south portion of the Site to a depth of 5 feet bgs.
- Five (5) soil borings (B6 through B10) were advanced in the north portion of the Site along the northern property boundary closed to Green River to a depth of 20 feet bgs.

The method of boring was a direct push probe (Geoprobe Systems Model 6600) performed by Standard Environmental Probe Inc., which involves the use of truck-mounted hydraulic hammer to push a series of 1.5-inch diameter steel rods to the sampling depth. Every five feet, the rods were removed and disposable Teflon sampling tubes were recovered. New sections of Teflon sampling tubes were used for each sampling depth.

Each borehole was logged according to the United Soil Classification System as described in Figure A1 in Appendix A. Borehole logs are included in Appendix A as Figure A2 through A11.

The location of the borings is shown in Figure 2. Site Plan.

4.5. SUBSURFACE SOIL SAMPLING METHODS

The sampling was designed to prove for the collection of potentially contaminated environmental media, if they occur, at locations and depths where the highest concentrations are likely to occur.

Total twenty (20) soil samples were collected from the Site. Two (2) undisturbed soil samples were collected from each borehole – one shallow sample at 6 inches bgs and one deeper sample at a boring depth of 5 or 15 feet bgs.

The undisturbed soil samples were gathered continuously using core samplers attached to drive rods. One sample per each borehole was collected in accordance with EPA method 5035A. (US EPA, 2002). Soil samples were recovered using a hand sampler to take about 5 grams of soil from each soil core. Samples were transferred from the samplers directly to sterilized glassware with Teflon-sealed lids furnished by the project laboratory. Samples were stored in an iced chest at the site and taken to the lab in this condition to minimize excessive dissipation of volatile fraction hydrocarbons. Each container was clearly labeled as to boring number, sample number, geologist, etc. EPA recommended 5035 sampling protocol for sample collection and management including maintenance of chain-of-custody documentation was observed at each stage of the project. Each sample was collected into a two-ounce jar for dry weight determination.

4.6. GROUNDWATER SAMPLING METHODS

Five (5) groundwater samples (W6 through W10) were collected from boreholes (B6 through B10), respectively. Groundwater was encountered at a depth of 15 feet bgs during soil borings.

Direct push was used to advance temporary sampler below the groundwater level. Groundwater sample was collected with a peristaltic pump utilizing low flow techniques. A temporary well screens were installed between 10 ft bgs and boring depth. The intake of the pump tubing was set approximately one foot below the water. Dedicated polyethylene tubing was used. Discharge from the pump was directed into sample container. When an untreated one-liter bottle and two HCl-treated VOC glass containers were immediately filled with water, they were sealed, and then checked for air bubbles to ensure that there was no container head space. The bottle was labeled, a chain of custody form was prepared and the sample was transferred to chilled cooler and ready for transport to analytical laboratory.

4.7. FIELD SCREENING

Soil samples obtained from the core sampler were screened with visual and olfactory indications and/or photoionization detector (PID). Prior to use, the PID was calibrated against a 100 parts per million (ppm) isobutylene span gas in air mixture. The instrument was then zeroed against the ambient air near the work area. The PID is useful for qualitative field screening of volatile organic compounds (VOCs) and provides a basis for comparison between soil samples collected in the field. Soil samples were placed into sealable plastic bags and allowed to sit in a warm area for volatilization to occur. After approximately 5 minutes, VOCs were field measured by placing the tip of the PID into the head space above each sample in each bag. This is not a compound-specific analysis and is affected by, among other influences, climate (e.g., temperature and humidity), soil type and conditions, instrument calibration and operation, and type of VOCs present.

4.8. CHEMICAL ANALYTICAL METHODS

The chemical testing was designed to detect the contaminants suspected to be present in the samples collected. The testing plan included tests which provide quality assurance (QA) and techniques that provide quality control (QC) over the chemical analysis. A completed chain of custody record accompanied each sample shipment to the analytical laboratory. Chain of custody records provide written documentation regarding sample collection and handling, identify the persons involved in the chain of sample possession, and a written record of requested analytical parameters.

The soil and groundwater samples were analyzed for the presence of the following contaminants.

- Gasoline range organic (GRO) via NWTPH-Gx

- Diesel range organics (DRO) and heavy oil range organics (ORO) via NWTPH-Dx
- Volatile organic compounds (VOCs) via EPA 8260D
- Metals (lead, cadmium, chromium, arsenic and mercury) via EPA 7010/7471/245.1
- Polychlorinated Biphenyls (PCBs) via EPA 8082
- Polyaromatic Hydrocarbons (PAHs) via EPA 8270

The location, depth and type of samples collected are summarized in Table 1.

4.9. DECONTAMINATION AND HOLE CLOSURE

Boreholes were filled with bentonite granules, 2 feet of concrete mix, and patched with top soil. Disposable sampling equipment were disposed of at each sample interval. Non-disposable sampling equipment were decontaminated by scrubbing in a solution of Alconox and potable water, followed by rinses with potable water between test holes. Soil cuttings, decontamination water, and purge water were stored in labeled drums in a secure location until they can be profiled and appropriately disposed of.

5. ANALYTICAL RESULTS

5.1. SUBSURFACE CONDITIONS

A general characterization of the on-site soil units encountered during our exploration is presented in this section. The Boring Logs in Appendix A present details of the soil encountered at each exploration location.

The soil borings were extended up to 20 feet below ground surface (ft bgs). Native soils beneath fill or other surface cover materials include a layer of grayish brown SILT with some gravels to a depth of 1-5 feet bgs, underlain by a layer of brown to gray, moist silty fine SAND or fine SAND to a depth of 20 feet bgs. Groundwater was encountered at a depth of 15 feet bgs.

All soil samples were screened for VOCs with a MiniRae 3000 Photoionization Detector (PID). No VOCs were detected in all soil samples with the PID. The physical condition did not indicate the presence of petroleum impact (e.g., soil staining, petroleum odor or dark gray color). No other additional samples or boring locations were added based on the lack of any field indicators of subsurface contamination.

5.2. GEOPHYSICAL SURVEY

Prior to conducting the subsurface investigation, a geophysical survey using electromagnetic (EM) equipment and ground penetrating radar (GPR) was conducted. The ground penetrating radar (GPR) survey did not reveal the presence of any anomaly indicative of former USTs at the Site. However, the survey identified buried electric lines, underground utilities and other buried objectives at the Site.

5.3. SOIL ANALYTICAL RESULTS

Soil analytical results along with the Washington State Department of Ecology (WSDOE) cleanup levels are summarized in Table 2. Laboratory documents are located in Appendix C. Laboratory Report.

Twenty (20) soil samples were collected from ten (10) soil boring locations. The following is the summary of the laboratory results:

- Petroleum hydrocarbons were identified in five (5) of the soil samples analyzed. The highest concentration of ORO was observed in B7-0.5 at 14,000 mg/kg, exceeding its MTCA Method A cleanup level of 2,000 mg/kg. Other petroleum hydrocarbons were below the cleanup levels.

- VOCs were identified in three (3) of the soil samples analyzed. PCE and EDB were observed in two samples at concentrations exceeding their MTCA Method A cleanup levels.
- PCBs were identified in two (2) of the soil samples analyzed. Total PCBs was observed in one sample at 8.8 mg/kg, exceeding its Method A cleanup level of 1 mg/kg.
- Metals were identified in fourteen (14) of the soil sample analyzed. Lead, cadmium, and arsenic were observed in three samples at concentrations exceeding their MTCA Method A cleanup levels. The highest concentration of lead was observed in B7-0.5 at 330 mg/kg, exceeding its Method A cleanup level of 250 mg/kg.
- PHAs were identified in three (3) of the soil samples analyzed. Total naphthalene was observed in one sample at concentration exceeding its Method A cleanup level.

Based on the result of this assessment, DRO, PCE, EDB, PCBs, metals (lead, cadmium and arsenic), and naphthalene were identified at concentrations exceeding their corresponding cleanup levels in the soil samples at the Subject Property.

5.4. GROUNDWATER ANALYTICAL RESULTS

Groundwater analytical results along with the Washington State Department of Ecology (WSDOE) cleanup levels are summarized in Table 3. Laboratory documents are located in Appendix C. Laboratory Report.

Five (5) groundwater samples were collected from five (5) soil boring locations. The following is the summary of the laboratory results:

- Petroleum hydrocarbons, VOCs, PAHs, and PCBs were not identified in the groundwater samples analyzed.
- Four (4) metals (lead, cadmium, chromium and arsenic) were identified in all of the groundwater samples analyzed. Four samples exhibited concentrations exceeding their corresponding MTCA Method A cleanup levels. The highest concentration of lead was observed in W7 at 300 µg/L, exceeding its MTCA Method A cleanup level of 15 µg/L.

Based on the result of this assessment, metals (lead, cadmium, chromium and arsenic) were identified at concentrations exceeding their corresponding cleanup levels in the groundwater samples at the Subject Property.

6. PROPOSED CLEANUP STANDARD

6.1. RECOGNIZED ENVIRONMENTAL CONDITIONS

The Subject Property was used as an auto salvage yard from the 1970s to present. Operations included stockpiling of old tires, scrap cars, and automotive parts.

The environmental concern with salvage yard is the issue with soil and groundwater contamination. There are several environmental concerns with automotive wrecking yards, including:

- Petroleum hydrocarbons – These vehicles contain motor oil, petroleum, gasoline and diesel fuel. All of these fluids have hydrocarbons, which are toxic and known carcinogens.
- Heavy metals – Vehicles are known to have heavy metals such as nickel, aluminum, mercury, arsenic, lead, and cadmium. These heavy metals migrate from salvage yards during storm runoff to contaminate groundwater.
- MTBE – Methyl Tertiary Butyl Ether (MTBE) – This commercial compound was a fuel additive for gasoline as an octane enhancer. While modern vehicles no longer use MTBE, old vehicles (those likely in salvage yards) have MTBE leaching into groundwater.
- PCBs – PCBs (polychlorinated biphenyls) were used as coolants and lubricants before 1977. PCB is harmful to human health.
- PAHs – Source of PAHs in wrecking yard includes incomplete combustion of fossil fuels, vehicular engine combustion smelting, and waste incinerators.
- VOCs – Petroleum contains a wide variety of volatile organic compounds (VOCs), which are present in the auto wrecking yard.

6.2. SOURCE CHARACTERIZATION

The release mechanisms are most likely to have resulted in contaminant releases to subsurface.

Contaminants detected in soil and groundwater on the Subject Property include DRO, PCE, EDB, PCBs, and metals. Contaminants detected in soil appears to be limited to surface soil (0.5 feet bgs). Metals impact in groundwater appear to be widespread throughout the Subject Property.

6.3. CONCEPTUAL SITE MODEL

The conceptual site model takes into consideration the potential distribution of contaminants with respect to the properties, behaviors and fate and transport characteristics of the contaminant in a setting such as that being assessed. The sampling plan was designed to provide for the collection of potentially contaminated environmental media, if they occur, at locations and depths where the higher concentrations are likely to occur.

The Conceptual Site Model (CSM) describes potential chemical sources, release mechanisms, environmental transport processes, exposure routes, and receptors. The primary purpose of the CSM is to describe pathways by which human and ecological receptors could be exposed to site-related chemicals. A complete exposure pathway consists of four necessary elements: (1) a source and mechanism of chemical release to the environment, (2) an environmental transport medium for a released chemical, (3) a point of potential contact with the impacted medium (referred to as the exposure point), and (4) an exposure route (e.g., soil ingestion) at the exposure point.

The possible exposure pathways and the related potential receptors associated with soil impacted by COCs include the following:

Potential Soil Exposure Scenarios

The following pathways are potentially complete for human health exposure to soil:

- **On-site occupational workers**—Workers currently occupy the Subject Property and neighboring properties and residents could occupy the Property in the future. The pathways by which current or future residents could potentially be exposed to chemicals in soil include direct skin contact with soil, incidental ingestion of soil, inhalation of soil particulates, and inhalation of indoor/outdoor air vapors emanating from soil.
- **On-site construction workers**—There are currently no construction workers (e.g., excavation workers, trench workers) on the Property. However, construction activities would be performed as part of property redevelopment. Future construction workers could contact chemicals in soil through incidental ingestion, dermal contact, inhalation of impacted soil particulates, and inhalation of outdoor air vapors emanating from soil.

Potential Groundwater Exposure Scenarios

- **On-site occupational workers**—workers currently occupy the Subject Property and neighboring properties and residents could occupy the Property in the future. One pathway by which current or future residents could potentially be exposed to chemicals in groundwater is from ingestion of tap water from a drinking water well; however, city water is available next to the site and it is unlikely that this scenario would occur. Another potential pathway is inhalation of indoor/outdoor air vapors emanating from groundwater.
- **Off-site residents**—Residents could potentially be exposed to air vapors emanating from groundwater if impacts migrate off the Property. Note that there is no evidence that this is occurring.
- **On-site construction workers**—There are currently no construction workers (e.g., excavation workers, trench workers) on the Property; however, construction activities would be performed as part of property redevelopment. Future construction workers

could contact chemicals in groundwater soil through dermal contact and inhalation of outdoor air vapors.

6.4. AFFECTED MEDIA

Based on the results of this assessment, impacted soil and groundwater above applicable or relevant and appropriate requirements ("ARARs") was identified.

The data gathered during this assessment is sufficient to determine whether products were released or disposed at the property. With respect to the recognized environmental conditions assessed, petroleum products have been released or disposed on the Subject Property.

6.5. PROPOSED CLEANUP LEVELS

MTCA (Model Toxics Control Act) requires that cleanup actions meet cleanup standards. These standards are comprised of both cleanup levels and points of compliance. A cleanup level is the concentration of hazardous substance in soil, water, air, or sediment that is determined to be protective of human health and the environment under specified exposure conditions. A point of compliance (POC) defines the point or points on a site where cleanup levels must be met. MTCA provides three options for establishing cleanup levels, as described below:

- Method A: Applicable Laws and Tables. Method A is designed for cleanups that are relatively straightforward or involve only a few hazardous substances. This method consists of tabularized cleanup levels for the most common hazardous substances found in soil and groundwater, including those constituents identified at this site
- Method B: Universal Method. MTCA B cleanup levels are established using applicable state and federal laws and the risk equations and other requirements specified for each medium. Method B is divided into two tiers – standard and modified. Standard Method B uses generic default assumptions to calculate cleanup levels. Modified Method B provides for the use of chemical-specific or site-specific information to change selected default assumptions. For both standard and modified Method B, the human health risk level for individual carcinogens must not exceed one-in-a-million. If more than one type of hazardous substance is present, the total risk level at the site may not exceed 1 in 100,000. Levels for non-carcinogens cannot exceed a hazard quotient of 1. In addition to accounting for human health impacts, the Method B cleanup levels must account for potential terrestrial or aquatic ecological impacts, if present at the site.
- Method C: Conditional Method. Method C is similar to Method B in that it is divided into two tiers – standard and modified. The main differences are: (1) cleanup levels are based on less stringent exposure assumptions and (2) the lifetime cancer risk is set at 1 in 100,000 for both individual substances and for the total cancer risk caused by all substances at a site.

The Subject Property historically has been used for commercial purposes. Soil and groundwater were screened to MTCA Method A CULs. For certain constituents, Method A CULs are not available and Method B CULs were applied.

6.6. OTHER CONCERNS

There were no other concerns identified during this Phase II ESA.

6.7. CONCLUSIONS

Laboratory analysis of the soil samples indicates that DRO, PCE, EDB, PCBs, metals (lead, cadmium and arsenic), and naphthalene were identified at concentrations exceeding their corresponding cleanup levels in the soil samples at the Subject Property.

Laboratory analysis of the groundwater samples indicates that metals (lead, cadmium, chromium and arsenic) were identified at concentrations exceeding their corresponding cleanup levels in the groundwater samples at the Subject Property.

7. RECOMMENDATIONS

Based on the results of this assessment, the following is recommended:

1. Envitechnology recommends additional subsurface investigation in order to verify the lateral and vertical extent and magnitude of contamination.
2. To achieve lawful compliance with Chapter 173-340-300 (site discovery and reporting), Envitechnology recommends that copies of this report along with any future reports regarding the environmental conditions thus far encountered be forwarded to the Washington State Department of Ecology.

Notes

GRO – Gasoline range organics

DRO – Diesel range organics

ORO – Heavy oil range organics

VOC – Volatile organic compounds

Metals – MTCA 5 metals – Lead, Cadmium, Chromium, Arsenic & Mercury

PCB – Polychlorinated Biphenyls

PAH – Polyaromatic Hydrocarbons

Notes

All values presented in milligram per kilogram (mg/Kg)

CUL – MTCA Method A Cleanup Levels

* – MTCA Method B Cleanup Levels

“<” – not detected above laboratory detection limits

NV – No value

GRO – Gasoline range organics

DRO – Diesel range organics

ORO – Heavy oil range organics

VOC – Volatile organic compounds

PCB – Polychlorinated Biphenyls

PAH – Polyaromatic Hydrocarbons

Numbers in bold indicate concentrations detected

Numbers in highlight indicate concentrations over the CUL

APPENDIX A. BORING LOGS

Unified Soil Classification System Chart

Major Divisions			Graph	USCS	Typical Description
Coarse Grained Soils More Than 50% Retained On No. 200 Sieve	Gravel More Than 50% of Coarse Fraction Retained On No. 4 Sieve	Clean Gravels		GW	Well-graded Gravels, Gravel-Sand Mixtures
				GP	Poorly-Graded Gravels, Gravel-Sand Mixtures
		Gravels With Fines		GM	Silty Gravels, Gravel-Sand-Silt Mixtures
				GC	Clayey Gravels, Gravel-Sand-Clay Mixtures
	Sand More Than 50% of Coarse Fraction Passing No. 4 Sieve	Clean Sands		SW	Well-graded Sands, Gravelly Sands
				SP	Poorly-Graded Sands, Gravelly Sands
		Sands With Fines		SM	Silty Sands, Sand-Silt Mixtures
				SC	Clayey Sands, Clay Mixtures
Fine Grained Soils More Than 50% Passing The No. 200 Sieve	Silts & Clays Liquid Limit Less Than 50			ML	Inorganic Silts, rock Flour, Clayey Silts With Low Plasticity
				CL	Inorganic Clays of Low To Medium Plasticity
				OL	Organic Silts and Organic Silty Clays of Low Plasticity
	Silts & Clays Liquid Limit Greater Than 50			MH	Inorganic Silts of Moderate Plasticity
				CH	Inorganic Clays of High Plasticity
				OH	Organic Clays And Silts of Medium to High Plasticity
			Highly Organic Soils

APPENDIX C. LABORATORY REPORT

C

Libby Environmental, Inc.

3322 South Bay Road NE • Olympia, WA 98506-2957

February 1, 2021

Jake Lee
Envitechnology, Inc.
9805 NE 116th Street, Suite 300
Kirkland, WA 98034

Dear Mr. Lee:

Please find enclosed the analytical data report for the Special Interest Auto Wrecking Project located in Kent, Washington.

The results of the analyses are summarized in the attached tables. Applicable detection limits and QA/QC data are included. The sample(s) will be disposed of within 30 days unless we are contacted to arrange long term storage.

Libby Environmental, Inc. appreciates the opportunity to have provided analytical services for this project. If you have any further questions about the data report, please give me a call. It was a pleasure working with you on this project, and we are looking forward to the next opportunity to work together.

Sincerely,

Sherry L. Chilcutt
Senior Chemist

Sample Receipt Checklist

Chain of Custody

- | | | | |
|--------------------------------------|--|------------------------------------|----------------------------------|
| 1. Is the Chain of Custody complete? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 2. How was the sample delivered? | <input checked="" type="checkbox"/> Hand Delivered | <input type="checkbox"/> Picked Up | <input type="checkbox"/> Shipped |

Log In

- | | | | |
|---|---|--|------------------------------|
| 3. Cooler or Shipping Container is present. | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | <input type="checkbox"/> N/A |
| 4. Cooler or Shipping Container is in good condition. | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | <input type="checkbox"/> N/A |
| 5. Cooler or Shipping Container has Custody Seals present. | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No | <input type="checkbox"/> N/A |
| 6. Was an attempt made to cool the samples? | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No | <input type="checkbox"/> N/A |
| 7. Temperature of cooler (0°C to 8°C recommended) | <u>18.7 °C</u> | | |
| 8. Temperature of sample(s) (0°C to 8°C recommended) | <u>16.4 °C</u> | | |
| 9. Did all containers arrive in good condition (unbroken)? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 10. Is it clear what analyses were requested? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 11. Did container labels match Chain of Custody? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 12. Are matrices correctly identified on Chain of Custody? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 13. Are correct containers used for the analysis indicated? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 14. Is there sufficient sample volume for indicated analysis? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 15. Were all containers properly preserved per each analysis? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |
| 16. Were VOA vials collected correctly (no headspace)? | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No | <input type="checkbox"/> N/A |
| 17. Were all holding times able to be met? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No | |

Discrepancies/ Notes

- | | | | |
|---|------------------------------|-----------------------------|---|
| 18. Was client notified of all discrepancies? | <input type="checkbox"/> Yes | <input type="checkbox"/> No | <input checked="" type="checkbox"/> N/A |

RE: Special Interest Auto Wrecking
Work Order Number: 2101374

February 01, 2021

Attention Kodey Eley:

Fremont Analytical, Inc. received 25 sample(s) on 1/25/2021 for the analyses presented in the following report.

Mercury by EPA Method 245.1
Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)
Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

DoD-ELAP Accreditation #79636 by PJLA, ISO/IEC 17025:2017 and QSM 5.3 for Environmental Testing
ORELAP Certification: WA 100009 (NELAP Recognized) for Environmental Testing
Washington State Department of Ecology Accredited for Environmental Testing, Lab ID C910

CLIENT: Libby Environmental
Project: Special Interest Auto Wrecking

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Report on
SOIL SAMPLING RESULTS
at
BB PARTNERSHIP PROPERTIES
Kent, WA

Prepared by

The Environmental Coalition of South Seattle (ECOSS)
8201 - 10th Ave. South
Seattle, WA 98108
(206) 767-0432

March 10, 2000

RECEIVED

NOV 21 2007

DEPT. OF ECOLOGY
TCP-NWRO

Report on Soil Sampling Results at
BB Partnership Properties
Kent, WA

March 10, 2000

Introduction

In the fall of 1999, personnel from Public Health-Seattle and King County (PHSKC) conducted a Site Hazard Assessment (SHA) at a 15 acre tract of land located along the Green River south of Kent. The site is occupied by auto recycling yards and is divided into three properties known individually as the BB4, BB5 and BB7 Partnership Properties. The SHA was conducted at the request of the Department of Ecology (Ecology) who, according to the SHA documents, noticed on-site soil staining while investigating a complaint at a neighboring facility in April 1997. The BB Partnership properties were added to the Model Toxics Control Act (MTCA) list of confirmed and suspected hazardous sites in 1997. The purpose of the SHA is to assess the relative potential risk posed by the site to human health and the environment as per the requirements of MTCA (WAC 173-340-330 (2)).

This report reviews the results of the SHA and combines its data with that of earlier soil sampling to provide a summary document on site contamination at the BB Partnership properties. The Site Hazard Assessment documents and supporting laboratory analytical data are attached as Appendix I and II.

Background

According to file records, the tract was converted from agricultural/residential use to automobile wrecking and salvage in the late 1960's. In 1991, Moran Geotechnical Consultants conducted a Level I Environmental Audit which included collection of 25 soil samples "...at locations of surface staining, which *by visual observation*, were deemed to represent 'worst case' condition" (*italics added*). This work was done on behalf of the BB Partnership and suggested that the site might be remediated by removing the upper 1 to 1.5 feet of soil which would generate an estimated 37,000 cubic yards of material for treatment or disposal. The Moran Report is attached as Appendix III.

The attached map (Exhibit A) shows the approximate location of soil samples collected by Moran in 1991 and by the SHA in 1999. Soil sample analytical data from both sampling programs is included in Tables 1 and 2 (Exhibit B).

BB 4 Parcel

The northernmost parcel is the BB4 Partnership property occupied by Green River Auto Wrecking. Within this parcel, Moran collected seven soil samples and the SHA two samples. All of the Moran samples that were analyzed for TPH (total petroleum hydrocarbon) contained petroleum contamination up to as high as 23,000 mg/kg (parts per million). The selected SHA samples however contained heavy oil up to only 2100

mg/kg. As indicated in the SHA report in Appendix I, the areas of soil contamination are very small and show no potential as a threat to human health or the environment. For this reason, the SHA recommended that BB 4 parcel be given a "no further action" (NFA) rating under MTCA. This recommendation however, does not take the site off the MTCA list.

BB 5 Parcel

The BB 5 parcel occupied by Astro Auto Wrecking contains 12 sample sites, 10 are from the Moran program and two from the SHA. Of the 10 Moran samples, two were not analyzed for TPH. Instead, they were run for BETX which was not detected. The TPH analyses varied from 420 mg/kg to 63,000 mg/kg. The two SHA samples were 9,000 and 12,000 mg/kg respectively for heavy oil, above MTCA cleanup standard of 200 mg/kg or even the proposed revised standard of 2,000 mg/kg for heavy oil.

The BB 5 Partnership property was ranked a number 5 on the hazards ranking list using the Washington Ranking Method (WARM) Scoring Manual. Under this method, this property ranked as a 5 on the hazard ranking list where 5 is the least hazardous and 1 poses the greatest theoretical threat to human health and the environment. The SHA Summary Score Sheet is included in Appedix I.

BB 7 Parcel

The BB 7 Partnership parcel contains 9 sample points. This includes 2 Moran sites with TPH below the 200 mg/kg MTCA threshold and one site run for BETX only. However it also includes two sample sites with 15,000 mg/kg TPH and, most importantly, one SHA site with 13,000 mg/kg heavy oil and 41.9 mg/kg carcinogenic PAH (polynuclear aromatic hydrocarbon). PAHs are formed by the incomplete combustion of organic compounds with insufficient oxygen. These PAHs may be the result of oil or tire burning or they can be due to spilled motor oil or even asphalt. The MTCA method A cleanup level for carcinogenic PAH is 1.0 mg/kg for residential and 20 mg/kg for industrial soil. One Moran sample (M024) had levels of lead (860 mg/kg) above the MTCA cleanup level for residential soil (250 mg/kg) but less than the cleanup level for industrial soil (1000mg/kg).

Under the WARM ranking method, this site ranked a 2, principally due to higher toxicity values assigned because of carcinogenic PAH, specifically the substances Benzo(A)Pyrene and Chrysene.

Conclusions

Analyses of near surface soil samples taken from the BB Partnership Properties show that there are a number of areas with shallow, petroleum contaminated soil (PCS), and at least one site with regulated levels of carcinogenic PAH. This type of "spotty" contaminant distribution is consistent with auto wrecking and salvage operations where, over time, vehicles and their related fluids can impact many different areas. The data do not

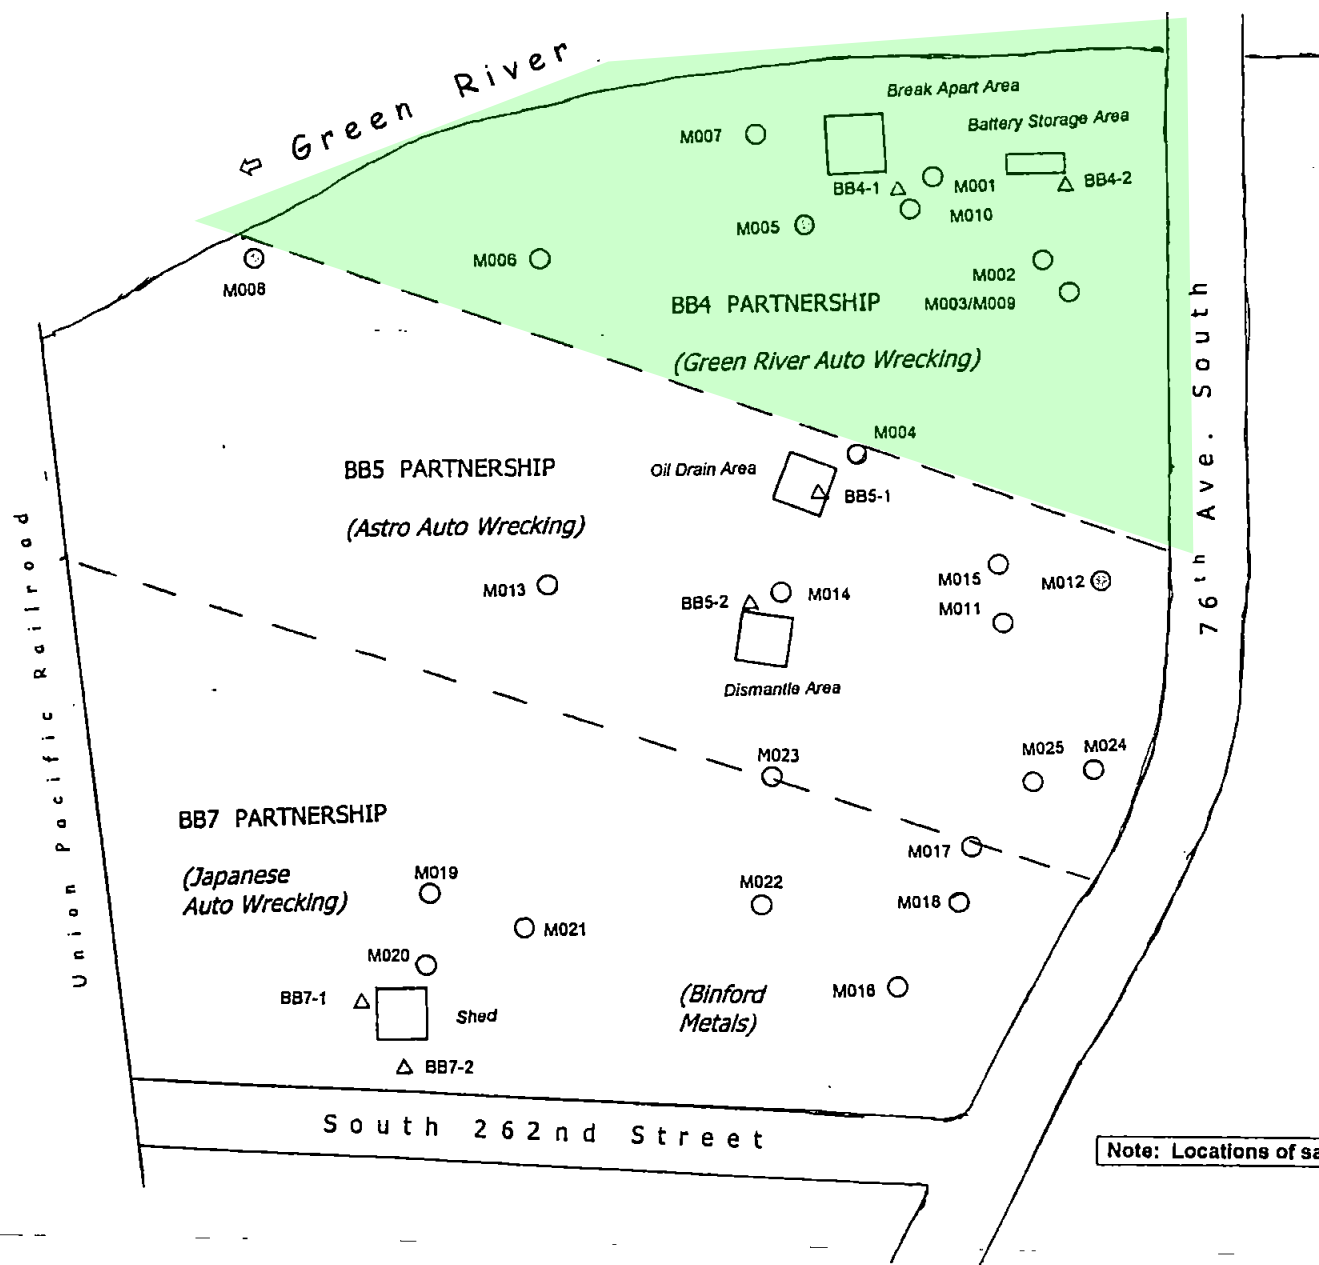

demonstrate that contamination is pervasive since sample points were deliberately selected to demonstrate "worst case" conditions.

Cleanup of this type of contamination would not necessarily require removing the upper 12 to 18 inches of soil over the entire property as suggested by Moran. Rather, a systematic long term program of selective soil removal and follow up sampling could accomplish the same thing. Such a program would require a well defined plan to inspect soils within potentially impacted areas when they become exposed and accessible by the removal of automobiles and scrap. If the inspection revealed contamination, the soil would be removed and stockpiled. This would be followed by verification sampling to demonstrate cleanup. If such a program were instituted, along with implementation of Best Management Practices (BMP) program to prevent future contamination, over time, the property could be remediated. This program would of course require the complete cooperation from tenant wrecking yard operators.

	Benzo[g,h,i]perylene	NA	NA	ND	ND	5.3	ND	--

Note: NA=not analyzed, ND=analyzed but not detected. Analyses exceeding MTCA levels are shown in bold.

¹ Possibly a laboratory contaminant.

² As per WAC 173-340-200, carcinogenic PAH's include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene.

³ The total cPAH reported by the SHA on page 2 is 38.1ppm. This apparently does not include 3.8 ppm dibenzo(a,h)anthracene shown on page 6 of the lab report, which if added totals to 41.9 ppm.

BB Partnership Properties

Appendix I

Site Hazard Assessment Report and Scoresheets

SITE HAZARD ASSESSMENT
Recommendation for No Further Action

Site Name/Location (Street, City, County, Section/Township/Range, TCP ID Number):

B&B Partnership area BB4
25923 78th Avenue South
Kent, WA 98032
King County
T-22N, R-4E, Sec-25
TCP ID: N-17-5471-000
Longitude: 122° 14' 11.05"
Latitude: 47° 22' 10.62"
December 29, 1999

Site Description (Include management areas, substances of concern, and quantities):

The B&B Partnership area BB4 site located at 25923 78th Ave. South, Kent, WA is one of three properties that are connected to make up an area of fifteen acres. All of the properties are used for auto recycling operations. Area BB4 is leased by Green River Auto Wrecking. The properties are bordered on the south by South 262nd Street to the east by 78th Avenue South, to the north by the Green River and to the west by a railroad right of way. Each of the three sites contain numerous damaged cars and trucks from which parts are removed for resale and then the vehicles are crushed and sold for scrap metal. Municipal sewer and water systems serve the area.

Area BB4 has a small office structure on the site within a fenced area. There is also post and beam structure with a slab-on-grade floor which is used for the removal of any fluids left in the vehicles and automobile motors. At present, the ground surface of area BB4 is level and sparsely vegetated with grasses and weeds. There are some larger trees that follow the property fence lines. Except for the structures on the site that cover the ground, the rest of the property is a mix of gravel and soil.

Before development for wrecking and salvage operations, past use of the property was apparently limited to development as a cherry orchard with associated storage facilities and a single-family residential structure. A company called Kent Central purchased the property in 1966 and converted it to an auto-wrecking yard in 1967. By 1974 all of the orchard trees had been removed and the entire site was devoted to auto wrecking, a practice which continues to the present time.

In April of 1997, the Washington State Department of Ecology (Ecology) discovered the B&B Partnership sites while investigating a complaint at a neighboring facility. The Ecology inspectors noticed soil staining on the properties and decided that further investigation was needed at the sites. On July 13, 1997 the B&B Properties were added to Ecology's Site Information System (SIS) list.

Carsten Thomsen and Yolanda King of Public Health-Seattle & King County (PHSKC) conducted a site hazard assessment (SHA) visit on October 1, 1999. A property representative, Brad Corner, provided commentary about history and current applications of the site during an inspection of the property. During the SHA visit it was noted that there was some minor staining of the soil at certain locations around the site. It was decided that soil samples would be collected at a later date and analyzed. On October 27, 1999 Carsten Thomsen and Yolanda King from PHSKC collected two soil samples. Sample one was collected next to the post and beam structure in the middle of a small stained patch of soil. Sample two was collected next to an area used for charging and storing automotive batteries. Both samples were analyzed for Northwest Total Petroleum Hydrocarbons Diesel Extended (NWTPEH-Dx)

and Total Metals. Both samples contained lead and other metals that were at levels well below the Model Toxics Control Act (MTCA) Method A clean-up levels. Sample one also contained levels of heavy oil at 2100 ppm and sample two had levels of heavy oil at 390 ppm. Both of these samples would exceed the current MTCA Method A clean-up level of 200 ppm. However, the revised MTCA rule, which has now been filed, allows a soil level of 2000 ppm for heavy oil.

Although the two soil samples tested above the current MTCA Method A clean-up levels for NWTPH-Dx, the areas of concern are very small in size and show no potential threats to the surrounding surface waters or groundwater. On the basis of this SHA, the PHSKC's Environmental Health Division recommends that this site receives no further action (NFA) under the MTCA, based on its documented insignificant threat to human health and the environment.

Special Considerations (Include limitations in site file data or data which cannot be accommodated in the model, but which are important in evaluating the risk associated with the site, or any other factor(s) over-riding a decision of no further action for the site): N/A

Mr. Brad Comer
FPG & Corner Properties
10900 NE 8th Street, Suite 900
Bellevue, WA 98004

Dear Mr. Comer:

The King County Health Department has completed the site hazard assessment (SHA) of the B&B Partnership area BB4 site, as required under the Model Toxics Control Act. A determination of no further action (NFA) at this site has been made by Ecology based on this SHA.

For your information, Ecology will be publishing the results of this, and other recently completed, SHAs in the February 29, 2000 Special Issue of the Site Register.

Ecology reserves the right to initiate further investigation at this site where new information is received indicating a potential/actual threat to human health and/or the environment through the release of hazardous substance(s).

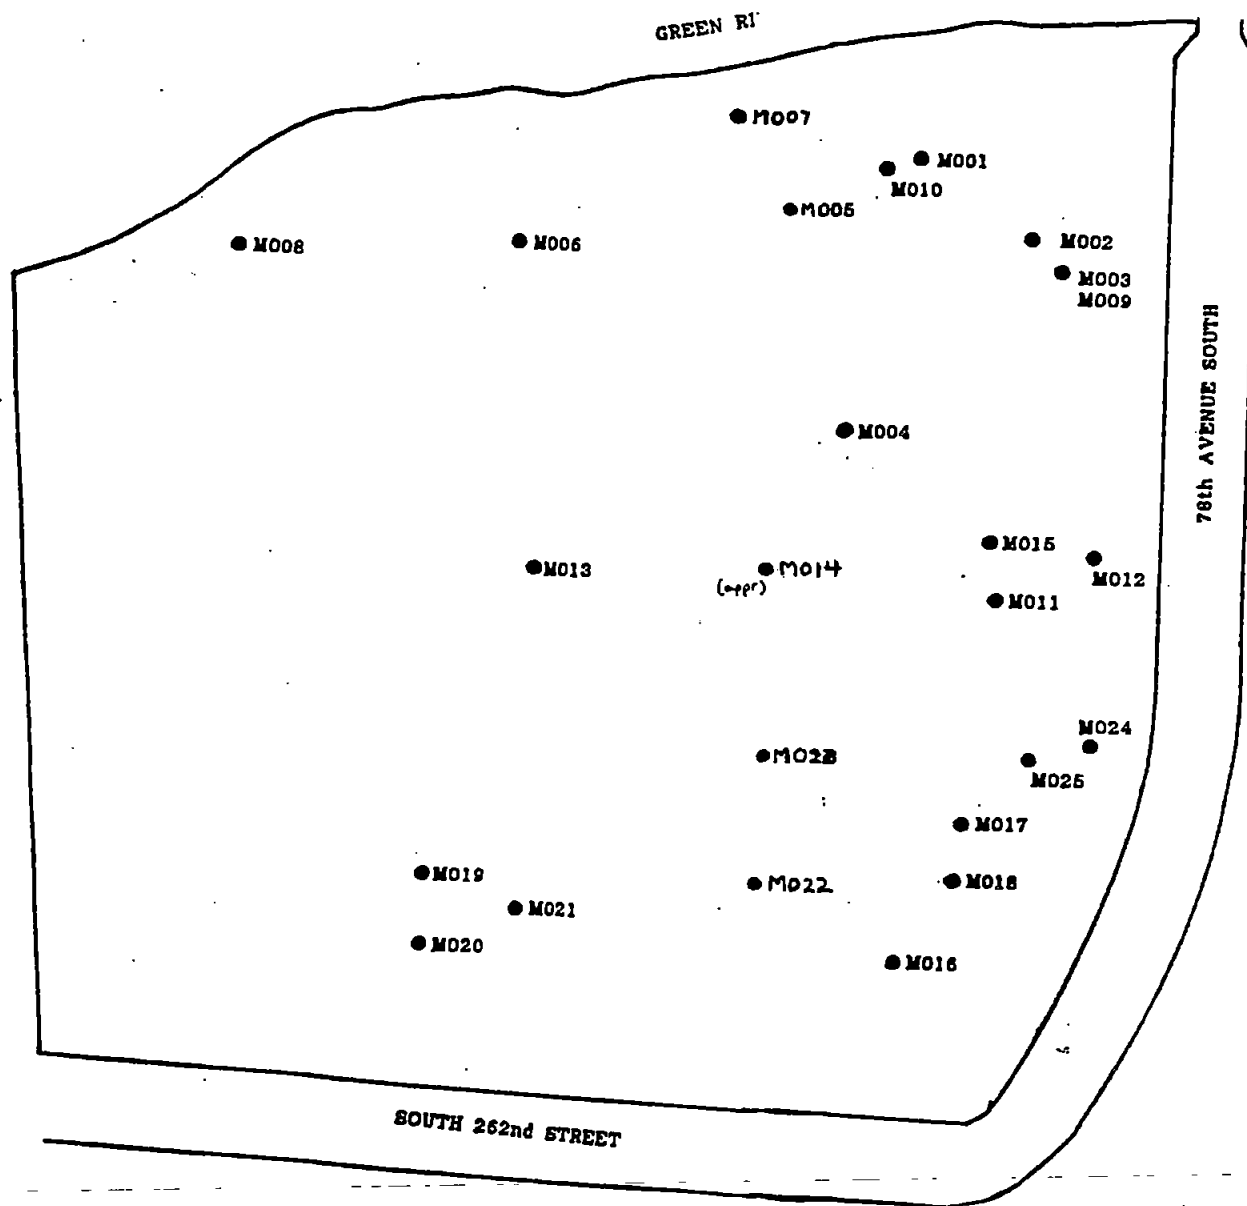

Please contact me at (206) 296-4830 if you have any questions/comments regarding this SHA/determination of NFA.

Sincerely,

Carsten Thomsen
Senior Environmental Health Specialist

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/24/2021 has revealed that there are 6 WA HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/12/2021 has revealed that there are 31 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, has revealed that there are 4 WA SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 02/09/2021 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 01/12/2021 has revealed that there are 8 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

WA AQUEOUS FOAM: Aqueous film-forming foam-laced water running off from fuel spills, firefighting events and routine training sessions has put those chemicals in ground water, surface water, sediments, biota, and other natural resources of the state.

A review of the WA AQUEOUS FOAM list, as provided by EDR, and dated 12/31/2020 has revealed that there are 2 WA AQUEOUS FOAM sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past

EXECUTIVE SUMMARY

sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Record Entry: Aug 4, 2005
Record Edit: Nov 4, 2005
Site Comment: Tires were dumped on the site by a former tenant (Japanese Auto Wrecking) in the late 1990s and early 2000s. There is an Agreed Order on Consent (AOC) from King County to remove 2,000 tires per month. The property owners have been removing tires since December of 2004, with total of approximately 21,000 removed as of September 2005.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE

Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RISK AND TECHNOLOGY REVIEW

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U155
Waste Description: 1,2-ETHANEDIAMINE, N,N-DIMETHYL-N'-2-PYRIDINYL-N'-(2-THIENYLMETHYL)- (OR) METHAPYRILENE

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
