**VCP Project ID – EA0385**

Dear Mr. Uecker,

On March 26, 2025 Fulcrum Environmental Consulting, Inc. (Fulcrum) completed a second characterization of heavy metal contaminated soils stockpiled on the Ione dollar General site (VCP Project ID: EA0385). Characterization efforts were completed in accordance with Fulcrum’s Sampling and Analysis Plan and Technical Assistance Letter Response.

### **Background**

During initial development of the site the project engineering consultant, GN Northern, Inc. (GN Northern), identified suspected mine tailings intermixed with near surface native soils. Soil sampling completed by GN Northern confirmed the presence of lead contaminated soil above regulatory cleanup thresholds. GN Northern then utilized an X-Ray Fluorescence (XRF) analyzer to identify and consolidate lead impacted soil into a stockpile for characterization. As a conservative preliminary approach, the samples were collected from in-situ soils with the highest lead concentration and submitted for *Total Metals and Toxic Characteristic Leaching Procedure* (TCLP) SW-846 Test Method 1311 for leachable lead. Results indicated a potential for the waste stream to characterize as Dangerous Waste based on leachable lead.

### **Initial Characterization**

On October 1, 2024 Travis Trent, a Licensed Hydrogeologist and Certified Hazardous Materials Manager (CHMM) and Ethan Ducken, a Washington State recognized Geologist-in-Training, completed sampling to characterize the stockpiled soil. Fulcrum collected five samples for RCRA-8 metals analysis and two composite samples for lead TCLP analysis All samples were delivered to Eurofins Spokane, a Washington State Department of Ecology accredited laboratory (C569) located in Spokane, Washington.

The five near surface soil samples were submitted for total lead by EPA Method 6010D. The two composite samples were submitted for *Total Metals and Toxic Characteristic Leaching Procedure* (TCLP) SW-846 Test Method 1311 for leachable lead. Results are summarized in in Tables 1 and 2 below.

**Table 1: Stockpile Soil Characterization Results Summary October 1, 2024**

Sample ID	Sample Location	Lead (mg/kg)
100124-DG-01	Contaminated stockpile, northwest area	<b>450</b>
100124-DG-04	Contaminated stockpile, southeast area	170
100124-DG-05	Contaminated stockpile, west central area	<b>700</b>
100124-DG-08	Contaminated stockpile, central area	<b>550</b>
100124-DG-10	Contaminated stockpile, south central area	<b>340</b>

Concentrations in **BOLD** exceed the applicable regulatory level

Laboratory analytical identified lead concentrations above regulatory cleanup level in four of the five samples collected from the previously identified lead contaminated soil that is stockpiled on site.

**Table 2: Waste Characterization Results Summary October 1, 2024**

Sample ID	TCLP
	Lead (mg/L)
100124-DG-21	0.12
100124-DG-22	0.19
WA State Dangerous Waste Threshold (mg/L)	5.0

Concentrations in **BOLD** exceed the WA State Dangerous Waste Threshold

Soil characterization results for the stockpiled soil identified leachable lead concentrations to be below dangerous waste criteria. Fulcrum submitted these results for Ecology review under the report titled *Ione Dollar General Store, Soil Remediation Plan October 11, 2024*. On December 30, 2024 Ecology issued a technical assistance letter which determined additional waste characterization sampling was necessary to accurately characterize the potential waste stream.

### Additional Characterization

On March 26, 2025 Fulcrum completed additional soil characterization sampling of the onsite stockpile at the Dollar General site. Fulcrum completed hand coring of the stockpile soils in four locations. At each coring location soil was collected from four proportional depths and field composited for sampling and analysis. Samples were submitted to Eurofins Spokane for total and TCLP RCRA-8 metals. Results are summarized in Tables 3 and 4 below.

Concentrations in **BOLD** exceed the applicable regulatory level

Analytical results identified no detectable concentrations of leachable arsenic, chromium, mercury, selenium, or silver. Detected leachable concentrations of barium, cadmium, and lead were all below applicable Washington State Dangerous Waste thresholds.

**Conclusion**

Fulcrum completed an initial waste characterization of the onsite stockpile for the Ione dollar General site (VCP Project ID: EA0385) in October of 2024. The waste characterization consisted of two composite samples, each comprised of four near surface aliquots. The samples were submitted for lead TCLP analysis with results at 0.12 mg/L and 0.19 mg/L.

Analytical results for the full thickness core samples identified no detectable concentrations of leachable arsenic, chromium, mercury, selenium, or silver. Detected leachable concentrations of barium, cadmium, and lead were all below applicable Washington State Dangerous Waste thresholds.

Waste Management has approved the soil for disposal at their Graham Road facility in Airway Heights Washington. The soil is currently being held on site pending Ecology’s concurrence that the soil characterization supports disposal at this location.

Sincerely,

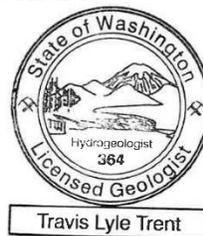

Ethan Ducken, GIT  
Environmental Scientist

## Job Narrative 590-27301-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 10/2/2024 9:34 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 22.3°C.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.
