LIST OF ABBREVIATIONS AND ACRONYMS

µg/L ..... micrograms per liter
µmoles/L ..... micromoles per liter
AMEE ..... acetylene, methane, ethane, ethene
AOC ..... Area of Concern
ARI ..... Analytical Resources, Inc.
Boeing ..... The Boeing Company
BTEX ..... benzene, toluene, ethylbenzene, and xylenes
cDCE cis-1,2-dichloroethene
CO_2 ..... carbon dioxide
DC ..... Developmental Center
Dhc ..... *Dehalococcoides sp.*
DO ..... dissolved oxygen
Ecology ..... Washington State Department of Ecology
EPA ..... US Environmental Protection Agency
$FeCl_2$ ..... ferrous chloride
ft ..... feet, foot
IA ..... interim action
IAWP ..... interim action work plan
LAI ..... Landau Associates, Inc.
mg/L ..... milligrams per liter
mg-N/L ..... milligrams per liter as nitrogen
MNA ..... monitored natural attenuation
MTCA ..... Model Toxics Control Act
NAPL ..... non-aqueous phase liquid
ORP ..... oxidation-reduction potential
ORC® ..... Oxygen Release Compound
PCE ..... tetrachloroethene
PCUL ..... proposed cleanup level
RCRA ..... Resource Conservation and Recovery Act
redox ..... reduction-oxidation
RFA ..... RCRA Facility Assessment
SWMU ..... Solid Waste Management Unit
TCE ..... trichloroethene
TOC ..... total organic carbon
TPH ..... total petroleum hydrocarbons
TPH-G ..... gasoline-range total petroleum hydrocarbons
UST ..... underground storage tank

VC ..... vinyl chloride
VCP ..... voluntary cleanup program
VOC ..... volatile organic compound
WAC ..... Washington Administrative Code

1.0 INTRODUCTION

This document presents a 2020 annual report for the interim actions (IAs) underway at The Boeing Company's (Boeing) Developmental Center (DC) in Tukwila, Washington (Figure 1). The DC is a regulated facility under the Resource Conservation and Recovery Act (RCRA) with a facility identification number of WAD-09363-9946. The Washington State Department of Ecology (Ecology) is authorized by the US Environmental Protection Agency (EPA) to implement RCRA corrective action through its Model Toxics Control Act (MTCA) regulations.

IAs are underway at Area of Concern (AOC)-05, Solid Waste Management Unit (SWMU)-17, and SWMU-20. Boeing has performed these IAs at the DC under Ecology's Voluntary Cleanup Program (VCP), and this work will continue under Agreed Order No. DE 16275 signed July 23, 2019, and per the information presented in the Interim Action Work Plan (IAWP; Landau Associates, Inc. [LAI] 2019b). Beginning with the 2018 report, annual reporting for the three IAs was combined into a single report (LAI 2019a).

1.1 Site Description

The DC site is located at 9725 East Marginal Way South in Tukwila, Washington near Boeing Field and the Military Flight Center (now called the Military Delivery Center; Figure 2). The site is bounded by the Duwamish Waterway on the west and East Marginal Way South on the east. Boeing has been operating on portions of this site since 1956 (SAIC 1994), and the site currently consists of more than 30 buildings on approximately 117 acres.[1] The DC is an aircraft and aerospace research and development complex, primarily supporting projects for the US Department of Defense. Activities that have occurred at the DC facility include research and development programs and manufacturing (Boeing 2009, SAIC 1994). The DC facility continues to be the primary research and development center for carbon fiber composite structures.

1.2 Background

Under its RCRA corrective action authority, the EPA conducted a RCRA Facility Assessment (RFA) in 1994 and identified 157 SWMUs and five AOCs at the DC (SAIC 1994). Each of these SWMUs and AOCs was evaluated in a comprehensive Summary Report prepared for Boeing by LAI (LAI 2002). Based on this initial evaluation and the demonstration that they did not pose a threat to human health of the environment, Ecology approved the exclusion of most SWMUs and AOCs from further investigation.

After approving the Summary Report (LAI 2002), Ecology determined that only two SWMUs (SWMU-17 and SWMU-20) and three AOCs (AOC-01/02, AOC-03/04, and AOC-05) remained subject to continued monitoring and evaluation. Following additional groundwater monitoring at AOC-01/02 and

[1] Site acreage recalculated using publicly-available parcel information for King County, Washington. Previous documents stated 112 acres (LAI 2019a).

AOC-03/04 (Boeing 2002, 2003), Ecology agreed that no further monitoring or other remedial action was required.

IAs are underway at three areas requiring further remedial action (AOC-05, SWMU-17, and SWMU-20), as described in the following sections. A facility boundary map showing the locations of these three areas within the DC facility is presented on Figure 2. A site plan showing the specific IA areas, including monitoring wells and facility buildings of interest, is presented on Figure 3. Groundwater elevation contours in the vicinity of the three areas for May and November 2020 are presented on Figures 4 and 5, respectively.

1.2.1 AOC-05

AOC-05 is located in the vicinity of Building 9-61 (Figure 3). This AOC consists of a former 1,000-gallon steel underground storage tank (UST) designated as DC-01 and former associated pump island, which were located approximately 25–30 feet (ft) south of the southwest corner of Building 9-61. UST DC-01 contained unleaded gasoline and was removed in 1985 after it was punctured by a measuring rod and released approximately 830 gallons of unleaded gasoline (LAI 2004). Contaminants targeted by IA in AOC-05 are gasoline-range total petroleum hydrocarbons (TPH-G) and benzene, toluene, ethylbenzene, and xylenes (BTEX).

1.2.2 SWMU-17

SWMU-17 is located west of Building 9-64 (Figure 3). This SWMU consists of a former 67-gallon sump and former 4,000-gallon steel UST designated DC-05. Waste oil generated by the hydraulic testing shops, automotive maintenance shops, and other operations at the DC was poured into the sump, which drained to the UST. Periodically, waste oil was pumped from the UST for offsite treatment and disposal. Both the sump and UST were removed in 1986 (LAI 2004). Contaminants targeted by IA in SWMU-17 are volatile organic compounds (VOCs), arsenic, and copper. The specific VOCs of concern are tetrachloroethene (PCE) and its breakdown products (trichloroethene [TCE], cis-1,2-dichloroethene [cDCE], and vinyl chloride [VC]).

1.2.3 SWMU-20

SWMU-20 is located at the northwest corner of Building 9-101 (Figure 3). This SWMU consists of a former vapor degreaser located in the northwest corner of Building 9-101. PCE and TCE were reportedly used during the operation of the degreaser from 1956 to 1984. The vapor degreaser, associated piping, and other equipment were removed in 1984 and all openings through walls and floor slabs were plugged. The concrete-lined degreaser pits and sumps were backfilled with compacted sand material and capped with 10 inches of concrete slab (LAI 2004). Contaminants targeted by IA in SWMU-20 are VOCs resulting from a suspected solvent leak from the former vapor degreaser pit. Specific VOCs of concern are PCE, TCE, and breakdown products (cDCE and VC), as well as benzene and naphthalene.

2.0 AOC-05

This section describes the IA underway in AOC-05. A description of the remedial approach and a summary of previous work is provided. IA activities and performance monitoring results are presented for the 2020 reporting period.

2.1 Remedial Approach

Anaerobic bioremediation is performed as the IA at AOC-05 through stimulation of microorganisms present in the aquifer to degrade petroleum hydrocarbons. The addition of nitrate (electron acceptor) allows native bacteria to utilize total petroleum hydrocarbons (TPH; electron donors) as a source of energy. Biodegradation of TPH can occur under both aerobic and anaerobic conditions and is the result of microbially mediated reduction-oxidation (redox) reactions. In these redox reactions, TPH are used as the electron donor, while various other compounds are utilized as electron acceptors when available (e.g., oxygen, nitrate, manganese [IV], iron [III], sulfate, carbon dioxide [CO_2]). Bacteria gain the most energy by utilizing oxygen as an electron acceptor because it is a highly oxidized compound, meaning it can more readily accept electrons from electron donors, like TPH. When oxygen is depleted, microorganisms preferentially use less oxidized electron acceptors in the following order, based on energy gained: nitrate, manganese (IV), iron (III), sulfate, and CO_2.

In aquifers that are naturally anaerobic, with low dissolved oxygen (DO) and high natural organic carbon, it may be more effective to stimulate anaerobic bioremediation instead of aerobic bioremediation. Naturally anaerobic aquifers, like at the DC, have a high natural oxygen demand that make oxygen addition ineffective for stimulation of aerobic bioremediation. Nitrate is the ideal electron acceptor to stimulate anaerobic bioremediation.

In 2002, an attempt to stimulate aerobic bioremediation of TPH-G at AOC-05 through injection of Oxygen Release Compound (ORC®; LAI 2004) was unsuccessful because of the high oxygen demand in the naturally anaerobic aquifer. As a result, the IA has stimulated anaerobic bioremediation through injection of nitrate as an electron acceptor. Nitrate amendment to enhance anaerobic biodegradation has been successfully implemented on other full-scale remediation projects for gasoline-range and fuel oil-range TPH, both nationally (Lozier and Hicks 2005, Wasserman et. al. 2005) and in Washington State (LAI 2012).

2.2 Summary of Prior Work and Findings

Prior to the reporting period, work at AOC-05 included bioremediation pilot testing, monitoring and injection well installation, baseline sampling, full-scale treatment, and performance groundwater monitoring. Pilot testing of nitrate injection in 2007 using a single injection well (BDC-103; LAI 2006a) was expanded to full-scale treatment in 2008 utilizing existing injection well BDC-103 and new injection well BDC-104. Eleven full-scale nitrate injections have been performed through the last

injection in December 2016. Injection events are detailed in the IAWP (LAI 2019b) and prior annual reports for AOC-05.

2.2.1 Pilot Testing

Bioremediation pilot testing in 2007 demonstrated degradation of petroleum hydrocarbons resulting from a one-time addition of ammonium nitrate (LAI 2007a). Post-injection monitoring showed that concentrations of TPH-G decreased by about 50 percent, compared to baseline, over 4 months of post-injection monitoring. BTEX compounds decreased as much as 98 percent (LAI 2007a). As expected, contaminant concentrations rebounded upon depletion of injected nitrate as groundwater returned to equilibrium with sorbed mass and non-aqueous phase liquid (NAPL) mass remaining in the aquifer. Based on these promising pilot test results, full-scale anaerobic bioremediation was implemented as described below.

2.2.2 Well Installation and Baseline Sampling

Full-scale implementation of anaerobic bioremediation began in February 2008 with the installation of one additional injection well (BDC-104) and baseline sampling of all four AOC-05 wells (BDC-101, BDC-102, BDC-103, and BDC-104). The new injection well (BDC-104) was installed upgradient (east) and crossgradient (north) of existing injection well BDC-103, located within the former UST tank pit. BDC-104 is located near the known upgradient edge of contamination associated with the former UST (LAI 2004). Injection of both wells allowed for groundwater transport of injected nitrate solution to the area of highest contamination.

Baseline sampling was performed prior to full-scale treatment to determine initial contaminant concentrations and aquifer redox conditions at the four AOC-05 wells (BDC-101, BDC-102, BDC-103, and BDC-104). Baseline results indicated nitrate- to sulfate-reducing conditions at source zone wells BDC-103 and BDC-104, nitrate- to iron-reducing conditions at downgradient well BDC-102, and aerobic to nitrate-reducing conditions at downgradient well BDC-101. The same conditions were indicated by pre-pilot test monitoring (LAI 2006a). Baseline TPH-G concentrations at both source zone wells (BDC-103 and BDC-104) were in excess of the preliminary screening level, and baseline benzene concentrations at BDC-103 exceeded the preliminary screening level (preliminary screening levels in use at that time were developed in the Summary Report [LAI 2002]). TPH-G and BTEX were not detected at downgradient wells BDC-101 and BDC-102 during baseline sampling, but had been during prior sampling. Baseline sampling results and proposed cleanup levels (PCULs) are included in the data summary presented in Table 1.

2.2.3 Full-Scale Bioremediation and Performance Results

Eleven full-scale nitrate injections to stimulate bioremediation have been performed to date; the most recent injection was performed in December 2016. Performance monitoring results from 2008 through 2018 indicated effective treatment of TPH-G and BTEX at source zone wells BDC-103 and BDC-104, while maintaining relatively low or non-detect contaminant levels at downgradient wells

BDC-101 and BDC-102. As was observed during the pilot test, contaminant concentrations have demonstrated some degree of rebound at well BDC-103 following the depletion of injected nitrate, prompting additional nitrate injection. Rebound will continue to occur as long as contaminant mass remains in the sorbed-phase or as NAPL within the aquifer or in upper portions of the smear zone that are periodically contacted by the water table. The historical timeline of AOC-05 bioremediation is summarized as follows:[2]

- Nitrate solution was injected to both wells BDC-103 and BDC-104 a total of five times during 2008 and 2009. Post-injection monitoring results demonstrated that concentrations had declined below PCULs at BDC-104 following the fifth injection. As a result, injection was discontinued at BDC-104.
- Following the sixth injection in September 2010, contaminant concentrations at BDC-103 decreased to historical lows in February 2011.
- Repeated cycles of nitrate depletion and contaminant rebound prompted a seventh and an eighth injection in 2012 and a ninth injection in November 2013.
- In February 2013, contaminant concentrations at all wells declined below the PCULs for the first time since treatment began.
- In May 2014, contaminant concentrations at all wells declined to below their reporting limits for the first time since treatment began.
- The 2013 injection was followed by a period of slow nitrate consumption and a tenth injection was not needed until March 2016. Slower utilization of nitrate between 2013 and 2016 is indicative of decreased TPH mass remaining in the source.
- Contaminant concentrations rebounded once again in August and November 2016 at BDC-103, which prompted the eleventh nitrate injection in December 2016.

TPH concentration rebound in 2016 followed a period of higher groundwater levels. The higher water table caused groundwater to contact higher portions of the contaminant smear zone not treated by prior injection events, resulting in increased TPH concentrations in groundwater. Groundwater elevations over time at AOC-05 are shown on Figure 6. The highest groundwater elevations recorded in AOC-05 occurred in spring of 2016 and 2018. Cumulative performance monitoring results are presented in Table 1.

As indicated in the AOC-05 Work Plan (LAI 2007b), Ecology required an action level for nitrate of 10 milligrams nitrogen per liter (mg-N/L) for IA at AOC-05. Detection of nitrate above the action level at either of the two nearest downgradient wells (BDC-101 or BDC-102) for two consecutive sampling events triggers implementation of additional groundwater monitoring at four wells (BDC-05-04, MW-17A, MW-18A, and MW-21A) located farther downgradient (Figure 3). Semiannual monitoring for nitrate is required to continue at these four downgradient wells for 1 year after nitrate at wells BDC-101 and BDC-102 decreases below 10 mg-N/L. Based on continued periodic exceedances of the action level at wells BDC-101 and BDC-102, semiannual nitrate monitoring has been performed at the

[2] Additional details of each injection are provided in the footnotes to Table 1.

four downgradient wells since November 2009. Nitrate has not been detected above the 10 mg-N/L action level at the four furthest downgradient wells (BDC-05-04, MW-17A, MW-18A, and MW-21A). Cumulative downgradient nitrate results are included in Table 2.

2.3 2020 Activities

Activities in AOC-05 for 2020 included two semiannual monitoring events. All monitoring events were conducted at the four AOC-05 wells, while semiannual events also included measurement of nitrate at further downgradient wells. Groundwater monitoring transitioned from quarterly to semiannual following the February 2019 event in accordance with the IAWP (LAI 2019b). No nitrate injections were performed.

Bioremediation progress was evaluated through monitoring performed in May and November 2020. Groundwater levels were measured during both events. In accordance with the AOC-05 Work Plan (LAI 2007b) and the IAWP (LAI 2019b), samples were analyzed for contaminant concentrations (TPH-G and BTEX) and parameters indicative of aquifer redox conditions (DO, oxidation-reduction potential [ORP], nitrate, ferrous iron, sulfate, and pH). Samples were also analyzed for nitrite, a short-lived intermediary product of nitrate reduction. TPH-G, BTEX, nitrate, nitrite, and sulfate were analyzed in the laboratory, while other parameters (DO, ORP, ferrous iron, and pH) were measured in the field. All laboratory analyses were performed by Analytical Resources, Inc. (ARI) in Tukwila, Washington. Cumulative monitoring results for the four AOC-05 wells (BDC-101 through BDC-104) are presented in Table 1. Laboratory reports for the reporting period are presented in Appendix A. Groundwater elevation contours for May and November 2020 are presented on Figures 4 and 5, respectively. Cumulative groundwater levels are presented in Appendix B.

Semiannual monitoring for nitrate continued in May and November 2020 at the four monitoring wells located farther downgradient of AOC-05 (MW-17A, MW-18A, MW-21A, and BDC-05-04). These results are presented with cumulative data in Table 2.

2.4 2020 Results and Discussion

Monitoring results through 2020 continue to suggest that bioremediation of TPH-G and BTEX is nearing completion in AOC-05, but additional nitrate injection may be required to complete treatment of residual contaminant mass. This is indicated by the extended period of contaminant concentrations below the PCULs followed by slight rebounds and depleted nitrate in November 2019 and November 2020. Highlights from 2020 results are as follows:

- Contaminant Reduction: Contaminant concentrations at all four AOC-05 wells remained below the PCULs and/or below the laboratory reporting limits for 3 years from November 2016 until November 2019. At BDC-103, TPH-G and BTEX concentrations rebounded slightly in November of 2019, with TPH-G (1.3 milligrams per liter [mg/L]), benzene (13.2 micrograms per liter [µg/L]) and ethylbenzene (24.8 µg/L). TPH-G and BTEX at the other three AOC-05 wells remained below the PCULs and/or below reporting limits. Concentrations rebounded slightly

again in November 2020; of the four AOC-05 wells, only BDC-103 had a detection exceeding a PCUL (ethylbenzene at 27.7 µg/L). As previously noted, these seasonal rebounds appear to be the result of an elevated water table during the wet months contacting the high portion of the smear zone. The rebound at BDC-103 was more minor in 2020 than in 2019 and does not indicate a sustained contaminant rebound or a need for an additional nitrate injection at this time.

- Nitrate: Nitrate at BDC-103 remained elevated for 3 years after the injection in December 2016. Nitrate reached an all-time maximum of 215 mg-N/L in May 2017, approximately 5 months post-injection, and persisted at 113 mg-N/L in May 2019, 29 months post-injection. Nitrate was depleted at 0.4 mg-N/L in November 2019, increased to 61.8 mg-N/L in May 2020, and then was not detected in November 2020. Depleted nitrate coincides with rebound in TPH constituents which results in a higher rate of nitrate consumption.
- Groundwater Elevations: The May and November 2020 groundwater elevations in AOC-05 were lower than 2016–2018 elevations but were generally higher than 2019 elevations.
- Downgradient Monitoring: Nitrate concentrations at BDC-101 and BDC-103 exceeded the action level during the May 2020 monitoring event but were below the action level in November 2020. As a result, the downgradient monitoring continued during this reporting period with detections remaining below the 10-mg-N/L action level and below laboratory detection limits. Based on these results, semiannual nitrate monitoring will continue at the four downgradient wells in May 2021.
- Nitrite: Detection of low levels of nitrite is a result of nitrate reduction. Nitrite is a highly reactive, short-lived compound that is further reduced to nitrous oxide, nitric oxide, and finally nitrogen gas (Environment Agency 2005). Nitrite has been commonly detected at injection wells since the start of full-scale injection activities, but has not persisted. Nitrite was not detected at any well during 2020. This data confirms that nitrite continues to be further reduced in the treatment area.

Monitoring results are presented in the following tables and figures: Cumulative monitoring results for wells BDC-101 through BDC-104 are presented in Table 1, with results compared to PCULs (LAI 2013b). Cumulative monitoring results for downgradient nitrate monitoring are presented in Table 2. Concentrations of TPH-G, benzene, and nitrate at BDC-103 and BDC-104 over time are presented on Figures 7 and 8, respectively.

3.0 SWMU-17

This section describes the IA in SWMU-17. A description of the remedial approach and a summary of previous work is provided. IA activities and performance monitoring results are presented for the 2020 reporting period.

3.1 Remedial Approach

IA at SWMU-17 consists of anaerobic bioremediation, which is accomplished through stimulation of microorganisms present in the aquifer to enhance reductive dechlorination of chlorinated ethenes. The addition of electron donor substrates stimulates the required reduced aquifer conditions and the biological reductive dechlorination of PCE and its breakdown products TCE, cDCE, and VC.

Reductive dechlorination of PCE and TCE occurs through microbially mediated (biotic) reactions, whereby microorganisms obtain energy through redox reactions. Anaerobic conditions are required for reductive dechlorination of PCE/TCE and breakdown products. Electron donors (natural organic carbon or injected substrates) are used by microbes to sequentially reduce the natural electron acceptors (oxygen, nitrate, manganese [IV], iron [III], sulfate, and CO_2), resulting in successively more reduced aquifer conditions. When oxygen is depleted, bacteria sequentially use the less-oxidized electron acceptors in the following order: nitrate, manganese (IV), iron (III), sulfate, and CO_2.

Chlorinated ethenes can also be used as electron acceptors by dechlorinating microorganisms. In this process, PCE and its breakdown products are used as electron acceptors and degraded to less chlorinated breakdown products. Degradation occurs sequentially from PCE through TCE, cDCE, and VC, to innocuous end products ethene and ethane. PCE is the most oxidized electron acceptor in typical groundwater systems after oxygen and, therefore, can be reduced as soon as oxygen is depleted (Vogel et al. 1987). TCE, cDCE, and VC, however, require successively more reducing aquifer conditions for degradation. Depletion of natural electron acceptors (e.g., oxygen, iron, sulfate, CO_2) creates the highly reducing aquifer conditions (sulfate-reducing to methanogenic conditions) required for complete reductive dechlorination of PCE and breakdown products.

Reductive dechlorination is enhanced through the injection of fermentable substrates (e.g., vegetable oil and lactate) as a source of electron donors for aquifer microorganisms. Substrates are injected into the contaminated aquifer, where a consortium of indigenous bacteria first ferment the substrate to volatile fatty acids and hydrogen. Other bacteria in this consortium then use these fermentation products to reduce natural electron acceptors and chlorinated ethenes. Hydrogen is the required electron donor for the primary chlorinated ethene degraders (i.e. *Dehalococcoides sp*. [*Dhc*]) that can completely degrade PCE to the non-toxic end products ethene and ethane.

3.2 Summary of Prior Work and Findings

Prior to 2019, field activities consisted of pilot testing, installation of injection and monitoring wells, baseline sampling, full-scale injections to stimulate anaerobic bioremediation, and performance groundwater monitoring. Two full-scale electron donor injection events were performed in 2011 and 2017; injection events and other IA work previously performed in SWMU-17 are described in detail in the IAWP (LAI 2019b) and prior annual reports.

3.2.1 Pilot Testing

A pilot test was performed in October 2008 to determine if electron donor (sodium lactate and vegetable oil) and ferrous sulfate amendments could successfully enhance anaerobic biodegradation of PCE and immobilization of copper and arsenic. One monitoring well (BDC-05-02) received injection solution containing the electron donor and ferrous sulfate amendments.

Monitoring results demonstrated that bioremediation of PCE at SWMU-17 was successfully stimulated by the electron donor pilot test injection. However, the relatively limited extent of PCE and TCE treatment observed during the pilot test indicated that the radius of injection created was smaller than anticipated and that the downgradient transport of electron donor was slow (LAI 2010b). Over the course of the pilot test, PCE and TCE concentrations decreased substantially at SWMU-17, but the lack of substantial VC, ethene, or ethane production indicated that the process of reductive dechlorination was incomplete. Copper and arsenic concentrations remained within the range of pre-injection results (LAI 2010b). Based on pilot test results, full-scale bioremediation of PCE and breakdown products was undertaken as described below.

3.2.2 Well Installation and Baseline Sampling

Full-scale IA began with installation of additional groundwater wells. Sixteen additional wells (BDC-05-09 through BDC-05-24) were installed for injection and/or monitoring in July 2011. This supplemented six existing wells (BDC-05-02 through BDC-05-05, BDC-05-07, and BDC 05-08) for a total of 22 wells utilized for IA in SWMU-17. Well locations are presented on Figure 3.

Baseline sampling was performed immediately following new well installation in July 2011, followed by quarterly (10 wells) and semiannual (22 wells) post-injection sampling through 2017 in accordance with the SWMU-17 Work Plan (LAI 2011). In 2018, monitoring transitioned to a semiannual frequency. Samples were analyzed for target contaminants and breakdown products (PCE, TCE, cDCE, and VC); non-toxic end products (ethene and ethane); parameters indicative of aquifer redox conditions (DO, ORP, nitrate, ferrous iron, sulfate, and methane); total organic carbon (TOC) and pH indicative of electron donor; and total and dissolved copper and arsenic. Laboratory analysis of acetylene, methane, ethane, and ethene (AMEE) was performed at select wells. Nitrate, which was consistently not detected, was determined to not be useful for evaluation of aquifer redox conditions at SWMU-17, and nitrate analysis was discontinued beginning in May 2012 (LAI 2013a). AMEE was added

to wells BDC-05-03, BDC-05-21, and BDC-05-24 beginning with the May 2013 semiannual sampling event to improve evaluation of treatment progress (LAI 2013a).

3.2.3 Full-Scale Electron Donor Injections

Two full-scale electron donor injections were performed through 2017. Various electron donor substrates have been used to stimulate treatment of PCE and TCE; additional amendments have also been added to the injection solution to provide secondary benefits. The injection timeline for this area is as follows:

- The first full-scale electron donor injection was performed at 11 wells in August 2011. Each of the 11 wells (BDC 05-02, BDC-05-07, and BDC-05-09 through BDC-05-17) was injected with injection solution containing LactOil®, a combination donor substrate containing both soluble (fast-release) ethyl lactate and insoluble (slow-release) soybean oil.
- A second, focused electron donor injection was performed at five wells in November 2017. The purpose of this injection was to address PCE and/or TCE concentrations that were greater than 1 µg/L within the source area. Injection solution containing molasses was delivered to each of the five wells (BDC-05-02, BDC-05-03, BDC-05-04, BDC-05-07, and BDC-05-10); molasses was used as the soluble (fast-release) electron donor instead of LactOil. Each well was also injected with ferrous chloride ($FeCl_2$) solution to provide ferrous iron for formation of iron sulfides. Iron sulfides are produced as a reactive coating on aquifer minerals when sulfate present in the molasses is reduced to sulfide and the sulfide complexes with ferrous iron. PCE, TCE, and cDCE are degraded abiotically on contact with iron sulfides to short-lived and non-toxic acetylene compounds without the production of VC. This favorable abiotic destruction mechanism is complementary and occurs simultaneously with biotic reductive dechlorination of TCE (LAI 2017).

3.2.4 Summary of Prior Results

Post-injection monitoring results through November 2018 demonstrated substantial treatment in 88 months (more than 7 years) following the first donor injection.

Baseline data showed conditions conducive to limited biodegradation of PCE and TCE. The highest baseline concentrations of PCE and TCE were 39 µg/L (BDC-05-10) and 28 µg/L (BDC-05-15), respectively. cDCE, the first reductive dechlorination sequential breakdown product, was commonly detected (detections ranged from 0.2 to 58 µg/L), but VC and end products ethene and ethane were not detected. Baseline aquifer redox conditions were variable, with more highly reducing conditions (sulfate-reducing to methanogenic) occurring at source zone wells BDC-05-02 and BDC-05-07 because of prior pilot testing, and predominantly mild to moderately reducing conditions (nitrate- to iron-reducing) occurring elsewhere in the plume. TOC concentrations were below 10 mg/L at most wells, which is the threshold generally considered to represent sufficient electron donor to support substantial reductive dechlorination (Major et al. 2003).

Post-injection monitoring results through November 2019 indicated that bioremediation was substantially enhanced by the electron donor injection. Evidence of biodegradation consisted of

elevated TOC; more highly reduced aquifer redox conditions; and changes in concentrations of PCE, TCE, breakdown products, and end products. Continued production of end products ethene and ethane indicated complete reductive dechlorination through to non-toxic end products (LAI 2020).

3.3 2020 Activities

Activities in 2020 consisted of two semiannual performance monitoring events at all 22 wells to evaluate ongoing treatment and included measurement of groundwater elevations. No injections were performed in 2020.

Samples collected during monitoring events were analyzed for target contaminants and breakdown products (PCE, TCE, cDCE, and VC); parameters indicative of aquifer redox conditions (DO, ORP, ferrous iron, and sulfate); TOC and pH indicative of electron donor; and total and dissolved copper and arsenic. Laboratory analysis of AMEE was also performed at all wells except four (BDC-05-05, BDC-05-08, BDC-05-22, and BDC-05-23). Laboratory analysis of contaminant and breakdown products, sulfate, TOC, metals, and AMEE was performed by ARI in Tukwila, Washington. Parameters DO, ORP, ferrous iron, and pH were measured in the field. Groundwater monitoring data are presented in Table 3. Laboratory reports for the reporting period are presented in Appendix A.

Groundwater elevations were measured during the May and November 2020 semiannual sampling events. Consistent with previous measurements, groundwater flow is generally west-southwesterly in direction. These groundwater flow directions are consistent with the alignment of the contaminant plume. Groundwater elevation contours for May and November 2020 are presented on Figures 4 and 5, respectively. Cumulative groundwater elevations for SWMU-17 wells are presented in Appendix B.

3.4 2020 Results and Discussion

This section presents discussion and interpretation of data collected during 2020. Groundwater monitoring results show that aquifer conditions continue to be enhanced for anaerobic bioremediation, as indicated by elevated TOC concentrations since the 2017 injection and highly reducing (sulfate-reducing to methanogenic) aquifer redox conditions. Detections of end products ethene and/or ethane demonstrate continued complete reductive dechlorination of the toxic parent and breakdown products to non-toxic end products. November 2020 data were collected 112 months (more than 9 years) following the first electron donor injection in August 2011 and 36 months from the focused second injection in November 2017.

Monitoring results, including VOC molar fractions, are summarized in a cumulative data table (Table 3), presented on various figures and appendices, and discussed further in the following sections. Appendix C presents time plots of VOC concentrations at representative injection wells and monitoring wells. Time plots for molar concentrations of VOCs and breakdown products for the same representative wells are presented in Appendix D. Time plots of redox parameters (methane and sulfate) and TOC for the representative wells are presented in Appendix E.

3.4.1 Reductive Dechlorination of VOCs

Enhanced reductive dechlorination following the August 2011 and November 2017 donor injections has resulted in substantially decreased PCE/TCE concentrations, with conversion through intermediary breakdown products cDCE and VC to end products ethene and ethane. In May 2020, PCE, TCE, cDCE, and VC concentrations were below PCULs at all wells except BDC-05-18. TCE was detected at BDC-05-18 at 2.57 µg/L in May but decreased to below the PCUL in November 2020. PCE, TCE, cDCE, and VC concentrations were also below PCULs at all other wells in November 2020, excluding upgradient well BDC-05-05. TCE was detected at BDC-05-05 at 1.42 µg/L, slightly above the 1.40-µg/L PCUL. This well is outside the treatment area. PCE/TCE concentrations in groundwater are presented on Figure 9 for November 2020.

At well BDC-05-10, which had the highest baseline concentration of PCE and the second highest TCE concentration, PCE and TCE have remained persistently less than the reporting limit from May 2012 through 2020; this represents a concentration reduction of greater than 99 percent.

Concentrations of breakdown products cDCE and VC increased temporarily after the first injection in 2011, but remained low or below PCULs at wells until November 2019. After reaching a maximum concentration of 250 µg/L at well BDC-05-09 in May 2012, cDCE concentrations have remained below the PCUL (134 µg/L) at all wells since November 2012. Neither cDCE nor VC was detected above their respective PCULs in 2020, indicating effective biodegradation of chlorinated compounds to non-toxic end products. November 2020 VC concentrations in groundwater are presented on Figure 10.

Complete reductive dechlorination resulting from bioremediation treatment has been evidenced by occurrence and molar predominance of innocuous end products ethene and ethane. Ethene+ethane represented just 1.7 percent of the total ethenes (i.e., 1.7 percent molar fraction) during baseline sampling in July 2011. Because of biodegradation stimulated by the 2011 injections, the ethene+ethane molar fraction increased to a maximum level of 91.5 percent in November 2016. Ethane was detected in November 2020, but not in May. The number of wells where ethene+ethane is detected is decreasing over time, as treatment results in more wells that are low to non-detect for PCE, TCE, cDCE, and VC. Ethene and/or ethane were detected at just one of the 18 wells (BDC-05-13) where analyzed in 2020, compared to detections at 15 wells in 2016. Figure 11 presents the percentage (average molar fraction) of total ethenes contributed by PCE, TCE, cDCE, VC, and ethene+ethane over time for all 18 SWMU-17 wells where ethene and ethane are analyzed; the shift from parent product and breakdown product predominance to predominance of non-toxic ethene+ethane is readily apparent from November 2012 to May 2019. In May 2019, ethene+ethane constituted just more than 50 percent of total ethenes detected on a molar basis. In November 2020, ethene+ethane constituted 47 percent of total ethenes at the single well where detected. The observed decrease in ethene+ethane is expected as chlorinated parent compounds have decreased to low residual levels below PCULs and/or below laboratory detection limits.

The succession of chlorinated ethene conversion to innocuous end products results in a decrease in total chlorinated ethenes concentrations (micromoles per liter [µmoles/L]) over time. Total chlorinated ethenes is the molar sum of PCE + TCE + cDCE + VC. A decrease in the concentration of total chlorinated ethenes demonstrates mass destruction, not just conversion to a less-chlorinated breakdown product (e.g., TCE to VC). Initial periods of increased total chlorinated ethenes commonly indicate enhanced desorption of contaminant mass that was partitioned to the aquifer soil matrix and liberated by surfactant properties of the injected donor solution and by biosurfactants released by stimulated bacteria. Decreasing concentrations of total chlorinated ethenes reflects the final conversion step from VC to non-chlorinated end products ethene and ethane. Total chlorinated ethenes are tabulated in Table 3 and are shown on time plots for representative wells in Appendix D. Figure 11 presents a time plot of average total chlorinated ethenes for all SWMU-17 wells. As shown on Figure 11, the average total chlorinated ethenes increase through May 2012 was due to enhanced desorption; it then decreased substantially through 2020. Average total chlorinated ethenes through November 2020 show a substantial reduction (approximately 96 percent) compared to baseline and a 97 percent reduction compared to the May 2012 peak.

In summary, data show that PCE and its associated breakdown products have been effectively converted to non-toxic end products by bioremediation in SWMU-17. Comparison of current contaminant concentrations to PCULs indicates that treatment is in its final stages. As of November 2020, PCE, TCE, cDCE, and VC concentrations were below PCULs at 21 wells, with the exception of a minor exceedance for TCE at upgradient well BDC-05-05. Detection and long-term predominance of ethene+ethane has confirmed complete reductive dechlorination to these non-toxic end products. No additional electron donor injections are needed at this time.

3.4.2 TOC and Redox Conditions

Monitoring results indicate aquifer TOC and/or redox conditions have been enhanced throughout the core of the contaminant plume and at many of the crossgradient and downgradient monitoring wells following the August 2011 and November 2017 electron donor injections. These results indicate conditions conducive to continued enhanced bioremediation of PCE/TCE and breakdown products. As a result of the November 2017 injection, TOC increased from near baseline levels (5.3 to 33 mg/L) at the five injected wells (BDC-05-02, BDC-05-03, BDC 05-04, BDC-05-07, and BDC-05-10) to a range of 627–9,629 mg/L in May 2018.

As of November 2020, TOC remains greater than 10 mg/L (20.5–894 mg/L) at the five wells injected in 2017. A TOC concentration of 10 mg/L or more is generally considered to represent sufficient electron donor to support substantial reductive dechlorination (Major et al. 2003). Lower levels of TOC may support an extended period of residual treatment.

Highly reducing conditions required for reductive dechlorination persist throughout the core of the plume, as indicated by generally low concentrations of sulfate and elevated concentrations of

methane in all injection wells through November 2020. These enhanced redox conditions also continue at three monitoring wells. At other downgradient and crossgradient monitoring wells, redox changes were minor (e.g., decreased DO or increased ferrous iron) or short-lived (e.g., a brief decrease in sulfate followed by a rebound to baseline levels) following the two injection events.

3.4.3 Copper and Arsenic

Total and/or dissolved copper concentrations were above the PCUL (0.008 mg/L) at three of 22 wells as of the November 2020 sampling event. These are three of the five wells injected in 2017. A similar increase in copper concentrations was observed at many of the wells injected in 2011, followed by a decrease to below the PCUL.

As of November 2020, total and/or dissolved arsenic concentrations remained above the PCUL (0.008 mg/L) at 14 of 22 sampled wells, compared to 16 of 22 wells above the PCUL in November 2017. Concentrations at these 14 wells have been consistently near or above the PCUL for arsenic since the first injection, except for BDC-05-04 which, had been below the PCUL from May 2014 to until November 2017. The highest detections in November 2020 were total and dissolved arsenic results of 0.053 mg/L at well BDC-05-15.

Reducing conditions may cause mobilization of naturally occurring arsenic (along with manganese and iron) as a localized and temporary phenomenon within the portion of the aquifer that has been artificially reduced through donor amendment. Once the injected donor has been consumed and natural conditions are re-established, these metals will precipitate as the less soluble forms that existed prior to donor amendment (Solutions-EIS 2006, Suthersan et al. 2003). However, because of elevated natural background concentrations of arsenic commonly observed within the Duwamish area because of naturally reduced aquifer conditions, arsenic concentrations are not expected to achieve the PCUL at project completion. Final cleanup levels for arsenic and copper will need to consider appropriate background concentrations in accordance with Washington Administrative Code (WAC) 173-340-720 (7)(c).

Time plots for total copper and arsenic are presented for injection wells and monitoring wells in Appendix F.

4.0 SWMU-20

This section describes the IA underway at SWMU-20. A description of the remedial approach and a summary of previous work is provided. IA activities and performance monitoring results are presented for the 2020 reporting period.

4.1 Remedial Approach

IA in SWMU-20 has consisted of groundwater pump-and-treat followed by bioremediation for the treatment of PCE and TCE in groundwater. Anaerobic bioremediation of VOCs like PCE and TCE relies on reductive dechlorination—the microbially mediated process by which these compounds are reduced to transformation products, cDCE and VC, and non-toxic end products, ethene and ethane. Microorganisms gain energy through reductive dechlorination by utilizing PCE, TCE, and breakdown products as electron acceptors and hydrogen as an electron donor. Fermentable substrates like sodium lactate and vegetable oil can serve as sources of electron donor for this process. The reductive dechlorination process is described in more detail in Section 3.1.

Full-scale implementation of anaerobic bioremediation through addition of fermentable substrates has been successful. Treatment methods and performance results are summarized in the following section. The details of the pump-and-treat system shutdown and indoor air modeling and sampling are also provided in the following section.

4.2 Summary of Prior Work and Findings

Prior to the reporting period, work at SWMU-20 included groundwater pump-and-treat, bioremediation injections, indoor air evaluations and sampling, and performance groundwater monitoring. Five full-scale electron donor injections for bioremediation have been performed to date; all events are detailed in the IAWP (LAI 2019b) and prior annual reports for SWMU-20.

4.2.1 Groundwater Pump and Treat

Following soil and groundwater investigations around the former degreaser location, a groundwater treatment system was installed to remove chlorinated VOCs from groundwater for source area treatment and for the prevention of further contaminant migration. The treatment system, consisting of two extraction wells (E-1 and E-2) and a sieve tray aerating treatment system, operated from Fall 1993 to December 2001 (approximately 8 years). The system was shut down in December 2001 to allow the groundwater to equilibrate for evaluation of potential rebound and evaluation of natural attenuation as a remedial alternative to achieve site PCULs (LAI 2004).

Substantial contaminant concentration rebound was observed within 2 years following the shutdown of the groundwater treatment system. Enhanced reductive dechlorination through electron donor amendment (i.e., bioremediation) was recommended to address the rebound in VOC concentrations observed following groundwater treatment system shutdown (LAI 2002).

The groundwater treatment system in SWMU-20 was decommissioned in June 2014. Ecology agreed that the treatment system was not likely to be needed in the future because of effective bioremediation treatment. The air stripper was relocated to another Boeing site for reuse. Submersible pumps were removed from extraction wells and system piping was disconnected and capped. The treatment building remained at the site for future use or later removal.

4.2.2 Bioremediation

A series of five bioremediation injection events were performed to address contaminant concentrations near the former degreaser, downgradient, and ultimately at peripheral wells not affected by the earlier injections. Iterative full-scale bioremediation was implemented without pilot testing. These injections are described in detail in the IAWP (LAI 2019b) and summarized below:

- Injection solution containing sodium lactate and vegetable oil emulsion was injected at six monitoring wells (MW-6A, MW-6B, MW-6C, MW-9A, MW-9B, and MW-9C) during the first injection in June 2004 using groundwater from two extraction wells (E-1 and E-2). Post-injection monitoring results indicated that the first injection was successful at establishing more reducing redox conditions and enhancing reductive dechlorination.
- A second injection was performed in December 2004, just 6 months after the first injection to maintain elevated TOC concentrations for continued bioremediation. Four monitoring wells (MW-6A, MW-6B, MW-9A, and MW-9B) were injected with injection solution containing sodium lactate and vegetable oil; the mixture of the two substrates was intended to maximize the extent and longevity of treatment. Groundwater extracted from two extraction wells (E-1 and E-2) was used in the injection solution.
- One monitoring well (MW-14A) was used for the third injection in March 2005. Injection solution containing groundwater from extraction wells (E-1 and E-2), sodium lactate, and vegetable oil was injected at MW-14A only in order to extend the treatment zone downgradient of the source and to treat relatively high concentrations of VC observed at the well following prior injections nearer the source zone. Two additional monitoring wells (MW-22A and MW-23A) were installed to monitor the effects of the third injection and to monitor treatment progress farther downgradient.
- The fourth injection in August 2008 utilized groundwater from two extraction wells (E-1 and E-2) and solution was injected at three monitoring wells (MW-6A, MW-9A, and MW-10A) to provide additional source zone treatment. Injection solution contained sodium lactate and vegetable oil emulsion mixed with groundwater.
- Nine monitoring wells (MW-6A, MW-6B, MW-10C, MW-15C, MW-16A, MW-16C, MW-17A, MW-20C, and MW-22A) were injected during the fifth injection in October and November 2015 to target residual contaminant mass at source zone wells and additional wells located on the fringes of the treatment area. Injection solution contained sodium lactate mixed with tap water; only soluble donor substrate was injected in order to provide rapid treatment of residual contaminant mass without persistent elevated TOC concentrations.

It is anticipated that biodegradation stimulated by the fifth injection event will result in VOC concentrations below anticipated final cleanup levels at all SWMU-20 wells. Once TOC concentrations fall below approximately twice the baseline concentration at monitored wells, it is anticipated that 1–

2 years of semiannual monitoring will be required to demonstrate no rebound of VOCs above final cleanup levels.

4.2.3 Groundwater Monitoring

Quarterly to semiannual monitoring began in January 1994. After reviewing long-term monitoring data at SWMU-20 wells, sampling reductions were proposed in April 2010 and again in March 2015. The 2010 sampling reduction discontinued semiannual monitoring at 11 of the 29 existing SWMU-20 monitoring wells, where VOCs of concern (PCE, TCE, cDCE, and VC) had been below reporting limits for 2 years or more (LAI 2010a). Ecology approved additional sampling reduction in 2015, which discontinued semiannual monitoring at four of the 18 sampled wells.[3] The 14 wells retained for ongoing sampling were all wells where PCE, TCE, or VC was detected at a concentration of more than half of the PCUL in May 2014 or were of continued interest for Ecology. Semiannual monitoring at these 14 wells will continue during 2021 to evaluate ongoing monitored natural attenuation (MNA) in SWMU-20 (LAI 2015a, b). Wells not included in the current monitoring program have not yet been decommissioned.

4.2.4 Indoor Air Evaluation and Sampling

Indoor air evaluations were performed in the vicinity of SWMU-20 using the Johnson-Ettinger model to estimate potential human health risks associated with exposure to indoor air because of VOCs in the underlying shallow groundwater. These evaluations were performed for Building 9-101, a manufacturing building which overlies the source, and Building 9-90, an office building located hydraulically downgradient of the source (Figure 3). The model concluded that the associated risk levels for occupational inhalation of potentially impacted indoor air were at, or below, the regulatory criteria (LAI 2005a).

Further evaluation of indoor air followed increased VC concentrations in groundwater at MW-14A in October 2004 (LAI 2005a). Recognizing that ongoing SMWU-20 source zone treatment (i.e., bioremediation injections) could result in higher VC concentrations at downgradient well MW-14A, the model was run to identify the threshold average groundwater VC concentration beneath Building 9-90. Above this threshold, a potential would exist for unacceptable risks to human health from inhalation of indoor air. The model output estimated that the threshold VC groundwater concentration protective of human health was 43 µg/L. Ecology comments to this additional evaluation resulted in indoor air sampling in Building 9-90 (LAI 2005b).

Three indoor air samples were collected in January 2006 in the north portion of Building 9-90 and along the estimated axis of the VOC groundwater plume in order to characterize potential vapor intrusion. This sampling event occurred as the result of VC concentrations increasing as high as

[3] Ecology approved discontinued sampling at four of 18 sampled wells and not nine, as previously stated (LAI 2019b). This section has been updated to reflect that sampling is performed at 14 wells in SWMU-20. The correct number of wells has been sampled for SWMU-20 since the 2015 sampling reduction.

1,000 µg/L at upgradient well MW-14A as a result of source zone bioremediation. A concurrent ambient air sample was collected outdoors near ground level to assess possible background contributions to any indoor air detections. Low levels of PCE and TCE were detected in all three indoor air samples and in the outdoor ambient air sample. cDCE and VC were not detected in any sample. The detected concentrations of corrected indoor air results for PCE and TCE were below the MTCA Method B cleanup levels (LAI 2006b).

4.3 2020 Activities

Activities in 2020 consisted of two semiannual performance monitoring events at 14 wells in SWMU-20 to evaluate the progress of MNA following the bioremediation injection in 2015. No injections were performed in 2020.

All samples collected during monitoring events were analyzed for VOCs and several aquifer redox parameters (DO, ORP, and pH). Four wells (MW-6A, MW-6B, MW-9A, and MW-22A) were also analyzed for parameters indicative of MNA performance (methane, ethane, ethene, TOC, and sulfate). Laboratory analysis for VOCs, methane, ethane, ethene, TOC, and sulfate was performed by ARI in Tukwila, Washington. Aquifer redox parameters DO, ORP, and pH were measured in the field.

4.4 2020 Results and Discussion

Groundwater monitoring data for wells in the source zone and non-source zone are summarized in Tables 4 and 5, respectively. Results for PCE, TCE, and breakdown products are also presented on Figures 12 through 15, with detections highlighted. Contaminant concentration trend charts are presented in Appendix G. Laboratory reports for analytical results are presented in Appendix A. Cumulative groundwater elevation data for SWMU-20 wells are presented in Appendix B.

Groundwater monitoring results indicate concentrations of PCE, TCE, and breakdown products were below the PCULs at all SWMU-20 monitoring wells in November 2020 for the fifth consecutive event. Results indicate aquifer redox conditions remain conducive to continued bioremediation following the fifth electron donor injection in October and November 2015 (LAI 2019b); sulfate-reducing to methanogenic aquifer conditions continue at most wells. Additional electron donor injection is not anticipated.

5.0 PLANNED ACTIONS AND SCHEDULE

Planned actions for 2021 consist of two site-wide semiannual (May and November) monitoring events and reporting. Site-wide monitoring will be conducted in accordance with the sampling matrix presented in the IAWP (LAI 2019b) and in Table 6.[4] Monitoring locations are presented on Figure 16. Additional nitrate injection may be conducted in AOC-05, dependent on monitoring results.

Reporting will consist of two monthly site-wide progress reports and one site-wide annual report submitted in early 2022. On March 23, 2021, Boeing provided a request in writing to Ecology to eliminate semiannual reports and adjust the timeline on the annual reports (Erickson 2021). More specifically, Boeing requested that sampling data, once validated, be presented with select tables and figures and included as an attachment to a monthly progress report. A brief discussion of semiannual sampling results would be included in the body of the monthly progress report, if necessary. With the elimination of semiannual reports, Boeing proposed that annual reports be prepared and submitted earlier in the year than the May 15th deadline specified in the IAWP. Ecology approved this request on March 26, 2021 (Colouzis 2021).

[4] The matrix has been updated to indicate that MW-17A is sampled as part of AOC-05, but that VOCs at this well are reported for SWMU-20. The matrix has also been corrected to show that VOCs at MW-17A are collected in non-preserved containers. Revision notes have been added to the matrix (Table 6). Wells sampled and analyses performed have not been added or removed. See Footnote 3.

6.0 USE OF THIS REPORT

This annual evaluation report has been prepared for the exclusive use of The Boeing Company for specific application to the Developmental Center site in Tukwila, Washington. No other party is entitled to rely on the information, conclusions, and recommendations included in this document without the express written consent of LAI. Further, the reuse of information, conclusions, and recommendations provided herein for extensions of the project or for any other project, without review and authorization by LAI, shall be at the user's sole risk. LAI warrants that within the limitations of scope, schedule, and budget, our services have been provided in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions as this project. We make no other warranty, either express or implied.

Abbreviations and Acronyms:

µg/L = micrograms per liter
DO = dissolved oxygen
mg/L = milligrams per liter
mV = millivolts
NA = not applicable, not available
ORP = oxidation reduction potential
TOC = total organic carbon
TPH-G = total petroleum hydrocarbon-gasoline

Notes:

(a) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).
(b) BTEX data questionable for this event. Concentrations inconsistent with TPH-G data for indicated event and BTEX data from other events.

= No sample collected or sample not analyzed for specified constituent.
Box = Exceedance of proposed cleanup level

Injection Dates	Months Since Prior Injection Event	
5/7/2002		ORC
1/18/2007	57	Pilot -scale nitrate
2/26/2008	13	1st full scale injection
6/24/2008	4	2nd full scale injection
10/30/2008	4	3rd full scale injection
6/17/2009	8	4th full scale injection (start ammonium phosphate, 1/3 ammonium nitrate dose to both wells)
10/28/2009	4	5th full scale injection (103 full dose, 104 half dose)
9/22/2010	11	6th full scale injection (103 only full dose)
2/14/2012	17	7th full scale injection (103 only full dose)
10/23/2012	8	8th full scale injection (103 only 1.5x volume dose)
11/12/2013	13	9th full scale injection (103 only 1.5x volume dose)
3/23/2016	29	10th full scale injection (103 only 1.5x volume, half concentration dose)
12/6/2016	9	11th full scale injection (103 only 1.5x volume dose)

Table 2
AOC-05 Nitrate Concentrations at Downgradient Monitoring Locations
Boeing Developmental Center
Tukwila, Washington

Abbreviations and Acronyms:
DO = dissolved oxygen
mg/L = milligrams per liter
mV = millivolts
ORP = oxidation-reduction potential

Notes:
Nitrate-nitrogen column **bolded** for emphasis of target compound. Other results included for aquifer redox evaluation.
= not analyzed

Table 3
SWMU-17 Groundwater Data Cleanup Action Summary
Boeing Developmental Center
Tukwila, Washington

		Pilot Injection	Full Injection #1	Full Injection #2	Volatile Organic Compounds							Metals				Aquifer Redox Conditions						Donor Indicators		VOCs- micromoles/Liter (b)							Molar Fraction (c)				
		Elapsed Time From Injection (days)	Elapsed Time From Injection (days)	Elapsed Time From Injection (days)	PCE (µg/L)	TCE (µg/L)	cDCE (µg/L)	VC (µg/L)	Ethene (µg/L)	Ethane (µg/L)	Acetylene (µg/L)	As, Tot (mg/L)	As, Dis (mg/L)	Cu, Tot (mg/L)	Cu, Dis (mg/L)	DO (mg/L)	Nitrate-Nitrogen (mg/L)	Iron II (mg/L)	Sulfate (mg/L)	Methane (mg/L)	ORP (mV)	TOC (mg/L)	pH	PCE	TCE	c DCE	VC	Ethene	Ethane	Total Chloroethenes (d)	Ethene + Ethane	PCE	TCE	c DCE	VC	Ethene + Ethane

Abbreviations and Acronyms:

PCE = tetrachloroethene
TCE = trichloroethene
cDCE = cis-1,2-dichloroethene
VC = vinyl chloride
As = arsenic
Cu = copper
Tot = total
Dis = dissolved
DO = dissolved oxygen
ORP = oxidation reduction potential
TOC = total organic carbon
NA = not applicable, not available
µg/L = micrograms per liter
mg/L = milligrams per liter
IW = Injection Well
MW = Monitoring Well
DG = Downgradient; distance from nearest injection well
UG = Upgradient; distance from nearest injection well
XG = Crossgradient; distance from nearest injection well

Notes:

(a) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).
(c) Indicates the fraction of total ethenes due to each compound.
(d) Calculated by dividing the concentration in groundwater by the molecular weight of the compound. Reporting limits for non-detect results replaced with zero.
(e) Sum of PCE, TCE, cDCE, and VC.
(b) Calculated by dividing the concentration in groundwater by the molecular weight of the compound. Reporting limits for non-detect results replaced with zero.
(c) Indicates the fraction of total ethenes (PCE+TCE+cDCE+VC+ethene/ethane) due to each individual compound on a molar basis.
(d) Sum of PCE, TCE, cDCE, and VC.

Box = exceedance of proposed cleanup level

= not analyzed
= Highlights the predominant ethene

Injection Dates:

10/28/2008 Pilot Injection: BDC-05-02 only
8/18/2011 Full Injection #1: BDC-05-02, BDC-05-07, and BDC-05-09 through BDC-05-17; performed 8/15/11-8/18/11
11/10/2017 Full Injection #2: BDC-05-02, BDC-05-03, BDC-05-04, BDC-05-07, and BDC-05-10; performed 11/7/17-11/10/2017

Abbreviations and Acronyms:

µg/L = micrograms per liter
cDCE = cis-1,2-dichloroethene
DO = dissolved oxygen
mg/L = milligrams per liter
mV = millivolts
NA = not analyzed
NM = not measured
ORP = oxidation reduction potential
PCE = tetrachloroethene
TCE = trichloroethene
TOC = total organic carbon
VC = vinyl chloride

Notes:

(a) Injections occurred on:
6/17/04 (6A, B, C; 9A, B, C)
12/16-17/04 (6A, 6B;9A,9B)
3/17/05 (14A)
8/25-28/08 (6A, 9A, 10A)
10/27-11/11/15 (6A, 6B, 10C, 15C, 16A, 16C, 17A, 20C, 22A)

(b) Conducted at Well MW-14A only.

(c) MW-06A installed June 2004.

(d) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).

Box = exceedance of proposed cleanup level

Bold = detected compund

Abbreviations and Acronyms:

PCE = tetrachloroethene
TCE = trichloroethene
cDCE = cis-1,2-dichloroethene
VC = vinyl chloride
µg/L = micrograms per liter

Box = Exceedance of proposed cleanup level
Bold = detected compund

Notes:

(a) Injections occurred on:
6/17/04 (6A, B, C; 9A, B, C)
12/16-17/04 (6A, 6B;9A,9B)
3/17/05 (14A)
8/25-28/08 (6A, 9A, 10A)
10/27-11/11/15 (6A, 6B, 10C, 15C, 16A, 16C, 17A, 20C, 22A)

(b) Conducted at Well MW-14A only.

(c) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).

Notes:

Analytical method designated in parentheses following each anaylte name (e.g. "8260C").
Laboratory services changed to Analytical Resources, Inc. per client (January 2018).
Nitrate contingency monitoring locations are only sampled for nitrate if upgradient action levels are exceeded.
Matrix updated May 2020:
MW-17A sampled as part of AOC-05, but VOCs at this well are reported for SWMU-20.
Samples at MW-17A for VOC analysis collected in non-preserved containers.
Unused columns removed.

Abbreviations and Acronyms:

AMEE = acetylene, methane, ethane, and ethene
AOC = area of concern
BTEX = benzene, toluene, ethylbenzene, and xylenes
cDCE = *cis* -1,2-dichloroethene
MNA = monitored natural attenuation
PCE = tetrachloroethene
SWMU = solid waste management unit
TCE = trichloroethene
TOC = total organic carbon
VC = vinyl chloride
VOCs = volatile organic compounds

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20E0049	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in it entirety.

Work Order Case Narrative

Gasoline by NWTPH-g (GC/MS)

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing
Project Name: DC Regional Gh
COC No(s): NA
Delivered by: Fed-Ex UPS Courier Hand Delivered Other:
Assigned ARI Job No: 20E0049
Tracking No: NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	NO
Were custody papers included with the cooler?	YES	NO
Were custody papers properly filled out (ink, signed, etc.)	YES	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1455 — 5.8 4.4

If cooler temperature is out of compliance fill out form 00070F — Temp Gun ID#: DOO 5006

Cooler Accepted by: JJ — Date: 05/05/2020 — Time: 1455

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	NO
What kind of packing material was used?	Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other:		
Was sufficient ice used (if appropriate)?	NA	YES	NO
How were bottles sealed in plastic bags?	Individually	Grouped	Not
Did all bottles arrive in good condition (unbroken)?		YES	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA		

Were the sample(s) split by ARI? NA YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: KD Date: 5/6/2020 Time: 0859 Labels checked by: KD

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20E0023	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

The matrix spike/matrix spike duplicate recoveries and RPD were within limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

The matrix spike/matrix spike duplicate recoveries and RPD were within limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing / Landa

Project Name: DC Regional Ch

COC No(s): _____ (NA)

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20E0023

Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1455 4.1C

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D00 5206

Cooler Accepted by: JS Date: 05/04/2020 Time: 1455

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used? ...	(Bubble Wrap) Wet Ice (Gel Packs) (Baggies) (Foam Block) Paper Other: Boxes		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) ...	(NA)	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA	05/01/2020	

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: JS Date: 05/04/2020 Time: 1538 Labels checked by: JS

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20K0112	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Gasoline by NWTPH-g (GC/MS)

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing

COC No(s): NA

Assigned ARI Job No: 20K0112

Project Name: DC Regional Gw ACC-5

Delivered by: Fed-Ex UPS Courier Hand Delivered Other:

Tracking No: NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	NO
Were custody papers included with the cooler?	YES	NO
Were custody papers properly filled out (ink, signed, etc.)	YES	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1620 1.9 2.3 ____ ____ ____ ____

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: DOO 5306

Cooler Accepted by: JB Date: 11/05/2020 Time: 1620

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	NO
What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other:			
Was sufficient ice used (if appropriate)?	NA	YES	NO
How were bottles sealed in plastic bags?	Individually	Grouped	Not
Did all bottles arrive in good condition (unbroken)?		YES	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) ...	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA	10/26/2020	

Were the sample(s) split by ARI? NA YES Date/Time: ____ Equipment: ____ Split by: ____

Samples Logged by: SC Date: 11/6/2020 Time: 0812 Labels checked by: SC

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Revised Report December 15, 2020

This report has been revised to correct 8260D narrative.

Gasoline by NWTPH-g (GC/MS)

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception of all associated "Q" flagged analytes. The sample was analyzed in batch BIK0181/sequence SIK0108 for which Bromoform was out of control low and 1,2,4-Trimethylbenzene and Isopropyl Benzene which were out of control high. The tripblank was analyzed in batch BIK0286/sequence SIK0146 for which 1,2-Dibromo-3-chloropropane, Acetone and Bromoform which were out of control low. All associated samples that contain analyte have been flagged with a "Q" qualifer.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Wet Chemistry

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

4611 S. 134th Place, Suite 100 • Tukwila, WA 98168 • Ph: (206) 695-6200 • Fax: (206) 695-6202

PO Box 3703 MS 2R-96	Project Number: Boeing Regional GW Developmental Center	**Reported:**
Seattle WA, 98124	Project Manager: Jennifer Parsons	15-Dec-2020 11:06

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The reference material (SRM) percent recoveries were within control limits.

The matrix spike (MS) percent recoveries and the duplicate (DUP) relative percent difference (RPD) were within advisory control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
Y1	Raised reporting limit due to interference
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits with the exception of surrogates flagged on the associated forms.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing / Landau Project Name: DC Regional Gh

COC No(s): _____ (NA) Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20E0064 Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1310 2.7 4.8°C ____ ____ ____ ____

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: DOO 5006

Cooler Accepted by: JS Date: 05/06/2020 Time: 1310

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used?	Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: _____		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	(NA)		_____

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: JS Date: 05/06/2020 Time: 1521 Labels checked by: JS

Notes and Definitions

*	Flagged value is not within established control limits.
B	This analyte was detected in the method blank.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
H	Hold time violation - Hold time was exceeded.
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20E0067	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing / Landau Project Name: DC Regional Gh

COC No(s): _____ (NA) Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20E0067 Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1310 2.2° 4.8° ___ ___ ___ ___

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D00 5306

Cooler Accepted by: JG Date: 05/06/2020 Time: 1310

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used?	Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: _____		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA	05/01/2020	

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: JG Date: 05/06/2020 Time: 1645 Labels checked by: JG

Notes and Definitions

*	Flagged value is not within established control limits.
B	This analyte was detected in the method blank.
D	The reported value is from a dilution
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20E0055	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in it entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Cooler Receipt Form

ARI Client: Boeing

Project Name: DC Regional Lab

COC No(s): NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other:

Assigned ARI Job No: 20E0055

Tracking No: NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	NO
Were custody papers included with the cooler?	YES	NO
Were custody papers properly filled out (ink, signed, etc.)	YES	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1455 — 5.8 4.4

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: DOO 5006

Cooler Accepted by: JJ Date: 05/05/2020 Time: 1455

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	NO
What kind of packing material was used?	Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other:		
Was sufficient ice used (if appropriate)?	NA	YES	NO
How were bottles sealed in plastic bags?	Individually	Grouped	Not
Did all bottles arrive in good condition (unbroken)?		YES	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA		

Were the sample(s) split by ARI? NA YES Date/Time: Equipment: Split by:

Samples Logged by: JJ Date: 05/06/2020 Time: 1254 Labels checked by: JJ

Notes and Definitions

*	Flagged value is not within established control limits.
B	This analyte was detected in the method blank.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20E0056	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Boeing

COC No(s): NA

Assigned ARI Job No: 20E0056

Project Name: DC Regional 6-In

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: ____

Tracking No: NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	NO
Were custody papers included with the cooler?	YES	NO
Were custody papers properly filled out (ink, signed, etc.)	YES	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1455 — 5.8 4.4 ____ ____ ____ ____

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: DOO 5006

Cooler Accepted by: JL Date: 05/05/2020 Time: 1455

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	NO
What kind of packing material was used?	Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: ____		
Was sufficient ice used (if appropriate)?	NA	YES	NO
How were bottles sealed in plastic bags?	Individually	Grouped	Not
Did all bottles arrive in good condition (unbroken)?		YES	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA	5/1/2020	

Were the sample(s) split by ARI? NA YES Date/Time: ____ Equipment: ____ Split by: ____

Samples Logged by: KD Date: 5/6/2020 Time: 1313 Labels checked by: KD

Notes and Definitions

*	Flagged value is not within established control limits.
B	This analyte was detected in the method blank.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20K0114	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits with the exception of surrogates flagged on the associated forms. The sample was re-analyzed
with the same matrix effects.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The reference material (SRM) percent recoveries were within control limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Darby Project Name: DC Regional / Gun SWMU-17

COC No(s): _____ (NA) Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20K0114 Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1620 1.9 2.3 ___ ___ ___ ___

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: DOO 5306

Cooler Accepted by: TG Date: 11/05/2020 Time: 1620

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used?	Bubble Wrap (Wet Ice) Gel Packs (Baggies) (Foam Block) Paper Other: _____		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA	10/26/2020	

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: SC Date: 11/6/2020 Time: 0942 Labels checked by: SC

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
J	Estimated concentration value detected below the reporting limit.
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20K0133	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Revised Report - December 21, 2020

This report was revised for Dissolved Copper re-analysis of sample 20K0133-26.

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Total and Dissolved Metals - EPA Method 200.8

The sample(s) were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The matrix spike (MS) percent recoveries and the duplicate (DUP) relative percent difference (RPD) were within advisory control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The Boeing Company [Developmental Center]	Project: Boeing Regional GW Developmental Center	
PO Box 3703 MS 2R-96	Project Number: Boeing Regional GW Developmental Center	**Reported:**
Seattle WA, 98124	Project Manager: Jennifer Parsons	21-Dec-2020 11:09

The reference material (SRM) percent recoveries were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Landau/Avery Project Name: DC Regional Gw

COC No(s): _____ (NA) Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20K0133 Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1545 4.5 2.8 1.4 ____ ____ ____

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D00

Cooler Accepted by: JB Date: 11/06/2020 Time: 1545

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used?	(Bubble Wrap) (Wet Ice) Gel Packs (Baggies) (Foam Block) Paper Other: _____		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		YES	(NO)
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	(YES)	NO
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA		10/26/20

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: KD Date: 11/7/2020 Time: 0737 Labels checked by: KD

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
J	Estimated concentration value detected below the reporting limit.
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Volatiles - EPA Method SW8260C

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception of all associated "Q" flagged analytes which are out of control low in the CCAL and chloroethane and 1,1,2-trichloro-1,2,2-Trifluoroethane are out of control high. All associated samples that contain analyte have been flagged with a "Q" qualifer.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits with the exception of surrogate 1,2-Dichloroethane-d4 which is outside of the control limits in samples 20E0028-08, 20E0028- 09, 20E0028- 11 and 20E0028-14. The samples were re-analyzed with surrogate recoveries in control.

The method blank(s) were clean at the reporting limits.

The LCS/LCSD percent recoveries and RPD were within control limits with the exception of analytes flagged on the associated forms.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits with the exception of the surrogate propane which is out of control low in the original analysis of sample 20E0028-09. The sample was re-analyzed with the surrogate recoveries outside of the control limits.

The method blank(s) were clean at the reporting limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Beezy / Landa Project Name: DC Regional Gh

COC No(s): _____ (NA) Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20E0028 Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1455 4.1C

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D00 5D06

Cooler Accepted by: JS Date: 05/04/2020 Time: 1455

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		(YES)	NO
What kind of packing material was used?	(Bubble Wrap) Wet Ice Gel Packs (Baggies) Foam Block Paper Other: Boxes		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA	5/1/2020	

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: KD Date: 5/5/2020 Time: 0910 Labels checked by: KD

*** Notify Project Manager of discrepancies or concerns ***

Sample ID on Bottle	Sample ID on COC	Sample ID on Bottle	Sample ID on COC

Additional Notes, Discrepancies, & Resolutions:

Vials contained air bubbles, please see preservation sheet.

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20K0113	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Testing Parameters

Observations/Comments

__ Allow water samples to settle, collect aliquot from clear portion ☐

__ NWTPH-Dx - Acid wash cleanup ☐
- Silica gel cleanup ☐

__ Dissolved metal samples were field filtered

Other *Boeing 68 List
**Methane, Ethane, Ethene

Work Order Case Narrative

Revised Report December 15, 2020

This report has been revised to correct 8260D narrative.

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception of all associated "Q" flagged analytes. The samples were analyzed in batch BIK0181/sequence SIK0108 for which Bromoform was out of control low and 1,2,4-Trimethylbenzene and Isopropyl Benzene which were out of control high. For reanalysis in batch BIK0226/sequence SIK0119 1,2-Dibromo 3-Chlorpropane, Acetone, Bromoform, Chloroform and Dichlorodifluoromethane were out of control low. All associated samples that contain analyte have been flagged with a "Q" qualifer.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Samples 20K0113-07 and 08 were re-analyzed for possible naphthalene carry over.

Volatile Gases - MEE by RSK175

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

Wet Chemistry

The sample(s) were prepared and analyzed within the recommended holding times.

The Boeing Company [Developmental Center]	Project: Boeing Regional GW Developmental Center	
PO Box 3703 MS 2R-96	Project Number: Boeing Regional GW Developmental Center	**Reported:**
Seattle WA, 98124	Project Manager: Jennifer Parsons	18-Dec-2020 16:53

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The reference material (SRM) percent recoveries were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Baehy

COC No(s): _____ (NA)

Assigned ARI Job No: 20K0113

Project Name: DC Regional GW SWMU-20

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1620 — 1.9 2.3 ____ ____ ____ ____

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: DOO 5306

Cooler Accepted by: TG Date: 11/05/2020 Time: 1620

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		(YES)	NO
What kind of packing material was used? ... Bubble Wrap (Wet Ice) Gel Packs (Baggies) (Foam Block) Paper Other: _____			
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
How were bottles sealed in plastic bags?	Individually	Grouped	(Not)
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		(YES)	NO
Did the number of containers listed on COC match with the number of containers received?		(YES)	NO
Did all bottle labels and tags agree with custody papers?		(YES)	NO
Were all bottles used correct for the requested analyses?		(YES)	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) ...	NA	(YES)	NO
Were all VOC vials free of air bubbles?	NA	YES	(NO)
Was sufficient amount of sample sent in each bottle?		(YES)	NO
Date VOC Trip Blank was made at ARI	NA	10/26/2020	

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: SC Date: 11/6/2020 Time: 0843 Labels checked by: SC

Notes and Definitions

*	Flagged value is not within established control limits.
D	The reported value is from a dilution
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

RE: Boeing Regional GW Developmental Center

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
20K0077	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Work Order Case Narrative

Revised Report December 15, 2020

This report has been revised to correct 8260D narrative.

Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements with the exception of all associated "Q" flagged analytes. The samples were analyzed in batch BIK0181/sequence SIK0108 for which Bromoform was out of control low and 1,2,4-Trimethylbenzene and Isopropyl Benzene which were out of control high. The tripblank was analyzed in batch BIK0322/sequence SIK0182 for which Bromoform and trans-1,4-Dichloro-2-Butene which were out of control low. All associated samples that contain analyte have been flagged with a "Q" qualifer.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Landau

Project Name: DT Regional GW

COC No(s): _____ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: 20K0077

Tracking No: _____ (NA)

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler? YES (NO)

Were custody papers included with the cooler? (YES) NO

Were custody papers properly filled out (ink, signed, etc.) (YES) NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1547 | 10.9 | | | | | |

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D00520 (a)

Cooler Accepted by: SC Date: 11/4/2020 Time: 1547

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler? YES (NO)

What kind of packing material was used? (Bubble Wrap) (Wet Ice) Gel Packs Baggies (Foam Block) Paper Other: _____

Was sufficient ice used (if appropriate)? NA YES (NO)

How were bottles sealed in plastic bags? Individually Grouped (Not)

Did all bottles arrive in good condition (unbroken)? (YES) NO

Were all bottle labels complete and legible? (YES) NO

Did the number of containers listed on COC match with the number of containers received? (YES) NO

Did all bottle labels and tags agree with custody papers? (YES) NO

Were all bottles used correct for the requested analyses? (YES) NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) (NA) YES NO

Were all VOC vials free of air bubbles? NA (YES) NO

Was sufficient amount of sample sent in each bottle? (YES) NO

Date VOC Trip Blank was made at ARI (NA) SC 10/26/2020

Were the sample(s) split by ARI? (NA) YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: SC Date: 11/5/2020 Time: 0931 Labels checked by: SC

Notes and Definitions

*	Flagged value is not within established control limits.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
[2C]	Indicates this result was quantified on the second column on a dual column analysis.

Notes:

ft = feet

Depth to Water measurements taken from top of well casing.

Top of casing elevation altered in wells MW-6B, MW-6C, MW-9A, MW-9B, and MW-9C by installation of threaded fitting on 6/19/2004.

Top of casing elevation was lowered in well MW-14A by 0.10 ft on 3/17/2005; resurveyed 9/9/05.

Top of casing elevation at wells MS-22A and MW-23A measured 9/9/05.

BDC-05-02 was modified in October 2008 for utilization as an injection well. Elevation changed from 14.37 to 14.41 ft; total depth changed from 25.35 to 25.27.
