RE: WEEKLY AIR MONITORING REPORT
MAY 29 - JUNE 2, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges:

This document represents the first report of weekly air monitoring data for the BNSF Skykomish Levee Zone Interim Action for the town of Skykomish, Washington, conducted by Argus Pacific, Inc. (Argus Pacific) during the week of May 29 through June 2, 2006. The purpose of this and subsequent weekly air and noise monitoring reports is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action project. Argus Pacific conducted the sampling in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

In order to establish baseline conditions, Argus Pacific collected the first set of air monitoring samples on June 1, 2006, prior to excavation work in the town. During sampling on that day, workers were beginning to grade the soil staging area of the railyard. No other construction work related to the levee zone interim action project was conducted during the sampling.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology. On June 1, 2006, Argus Pacific collected air samples in two locations: one adjacent to the northwest corner of the railyard, the other near the levee, approximately 100 feet west of the bridge. Approximate sample locations are indicated on the attached Air Monitoring Sample Locations map. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), and diesel particulate. Argus Pacific also conducted respirable dust monitoring at the railyard.

SAMPLING RESULTS

None of the target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations were also well below project action limits during the sampling period. Sample results are summarized below. Laboratory results and dust monitoring data are included as attachments.

SK-DP-2	Diesel Particulate (as Elemental Carbon)	320 minutes	2.0 µg/m ³	<2.0 µg/m ³	20 µg/m ³

CONCLUSIONS

Based on this data, background conditions in Skykomish on June 1, 2006 were in compliance with the BNSF Skykomish Air and Noise Monitoring Plan.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

** Result cannot be calculated for samples missing air volume.
ppm formula: $(24.45 * (\text{Result} * 1000)) / (\text{Volume} * \text{MW})$
"VM&P Naphtha" is the sum of all peaks in the chromatogram minus the solvent peak and was quantitated against n-hexane.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
No field blank was submitted with this set.
The samples of this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR MONITORING REPORT
JUNE 5 - JUNE 9, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges:

This document represents the second report of weekly air monitoring data for the BNSF Skykomish Levee Zone Interim Action for the town of Skykomish, Washington, conducted by Argus Pacific, Inc. (Argus Pacific) during the week of June 5 through June 9, 2006. The purpose of this report is to summarize and interpret air monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the sampling in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples on June 6 and June 9, 2006. During sampling, workers continued to grade the soil staging area of the railyard. Workers also graded and paved the water treatment area northwest of the schoolyard.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On June 6 and 9, 2006, Argus Pacific collected one set of air samples beginning at the northwest corner of the railyard. Halfway through the sampling period on both days, the samples were moved to the northwest corner of the schoolyard near the staging area grading activities for the water treatment system. Approximate samples locations are indicated on the attached Air Monitoring Sample Locations map. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), and diesel particulate. Argus Pacific also conducted respirable dust monitoring at the railyard and schoolyard in the same locations on both days.

SAMPLING RESULTS

For samples collected on June 6, none of the target compounds were identified at or above the laboratory limit of detection. On June 9, 2006, diesel particulate (as elemental carbon) was detected in the sample, but in concentrations well below the action limit. None of the other contaminants of concern were detected at or above the limit of detection during the sampling period on either day. Respirable dust concentrations were below project action limits during the sampling period on both days. Sample results are summarized below. Laboratory results and dust monitoring data are included as attachments.

CONCLUSIONS

Based on this data, the grading and paving work conducted on June 6 and 9, 2006 was in compliance with the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

No field blank was submitted with this set.

The sample of this set was analyzed by Sunset Laboratory.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
The samples of this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR MONITORING REPORT
JUNE 12 - JUNE 16, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges:

This document represents the third report of weekly air monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington, conducted by Argus Pacific, Inc. (Argus Pacific) during the week of June 12 through June 16, 2006. The purpose of this report is to summarize and interpret air monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the sampling in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected samples on June 13 and June 15, 2006. During sampling, workers removed vegetation from the levee and continued to grade and prepare the railyard. Argus Pacific conducted respirable dust monitoring every day from June 12 through June 16, 2006.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On June 13, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and at the northwest corner of the schoolyard. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On June 15, 2006, Argus Pacific collected air samples for lead, arsenic, and Naphthas in the same locations. Approximate sample locations are indicated on the attached Air Monitoring Sample Locations Plan. Argus Pacific also conducted respirable dust monitoring at the railyard every day of that workweek, from June 12 through June 16, 2006.

SAMPLING RESULTS

On June 13, 2006, diesel particulate (as elemental carbon) was detected in both samples collected, but in concentrations well below the action limit. None of the other contaminants of concern were detected at or above the limit of detection during the sampling period on June 13 or June 15, 2006. Respirable dust concentrations were below project action limits during the sampling period on all days. Sample results are summarized below. Laboratory results and respirable dust monitoring data are included as attachments.

CONCLUSIONS

Based on this data, the vegetation removal conducted during the week of June 12 through June 16, 2006 did not release the contaminants of concern or respirable dust in concentrations above the action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
The samples of this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
JUNE 19 - JUNE 23, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges:

This document represents the fourth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington, conducted by Argus Pacific, Inc. (Argus Pacific) during the week of June 19 through June 23, 2006. The purpose of this report is to summarize and interpret air and noise monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the sampling in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on June 20 and June 21, 2006. RETEC technicians collected respirable dust samples and noise measurements on June 19, 22, and 23 of that week. During sampling, workers removed vegetation from the levee north of the schoolyard, and cleaned and removed the monitoring wells beneath the street adjacent to the levee. Workers were also in the process of installing the water treatment system near the northwest corner of the schoolyard.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On June 20, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and on the north side of the schoolyard near the levee. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On June 21, 2006, Argus Pacific collected air samples for lead, arsenic, and Naphthas in the same locations. Argus Pacific also conducted respirable dust monitoring at the railyard and schoolyard on June 20 and 21, 2006. On days during the week that Argus Pacific was not on site

(June 19, 22, and 23), RETEC employees conducted respirable dust monitoring at the railyard and schoolyard. To survey noise levels, Argus Pacific and RETEC also collected noise measurements using a Quest handheld sound level meter during construction and equipment operations.

Approximate air sample locations are indicated on the attached Air Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate was found on June 20, 2006 in both of the sample locations. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations were below project action limits during the sampling period for the whole week. Sample results are shown below. Laboratory results and dust monitoring data are included as attachments.

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

No field blank was submitted with this set.

The samples in this set were analyzed by Sunset Laboratory.

General Set Comments

** Result cannot be calculated for samples missing air volume.

ppm formula: $(24.45 * (\text{Result} * 1000)) / (\text{Volume} * \text{MW})$

"Total Hydrocarbons" is the sum of all peaks in the chromatogram minus the solvent peak and was quantitated against n-hexane.

mg/m³ formula: $(\text{Result} * 1000) / \text{Volume}$

RE: WEEKLY AIR MONITORING REPORT
JUNE 26 - JUNE 30, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the fifth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington, conducted by Argus Pacific, Inc. (Argus Pacific) during the week of June 26 through June 30, 2006. The purpose of this report is to summarize and interpret air and noise monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the sampling in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on June 26 and June 29, 2006. RETEC technicians collected respirable dust samples and noise measurements on June 27, 28, and 30 of that week. During sampling, workers excavated the levee and areas surrounding homes. Trucks hauled excavated soil to the railyard where the dirt was screened and sorted. A water truck wetted roadways and a street sweeper was used to remove rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On June 26, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and on the north side of the schoolyard near the levee. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On June 29, 2006, Argus Pacific collected air samples for lead, arsenic, and Naphthas in the railyard and on the northeast corner of the schoolyard.

Argus Pacific also conducted respirable dust monitoring at the railyard and schoolyard on June 26 and 29, 2006. During days of the week that Argus Pacific was not on site (June 27, 28, and 30), RETEC employees conducted respirable dust monitoring at the railyard and schoolyard. To survey noise levels during construction and equipment operations, Argus Pacific and RETEC also collected noise measurements using a Quest handheld sound level meter.

Approximate air sample locations are indicated on the attached Air Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate was found on June 26, 2006 in both of the sample locations. A detectable concentration of Naphthas was also found at the railyard sample collected on June 26, 2006. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations and noise levels were below project action limits during sampling for the whole week. Laboratory results and dust monitoring data are included as attachments.

CONCLUSIONS

Based on this data, levee excavation, home removal, and dirt hauling and screening conducted during the week of June 26 through 30, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored. In addition, noise levels documented during activities that week were below the project action limit for community noise in the areas monitored.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

No field blank was submitted with this set.

The samples in this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
JULY 3 - JULY 8, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the sixth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of July 3 through July 8, 2006. The purpose of this report is to summarize and interpret air and noise monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on July 6, 2006. Due to the July 4th Holiday, Argus Pacific collected only one day of monitoring data for that week. RETEC technicians collected respirable dust samples and noise measurements on July 5 and 7. Construction and monitoring activities were also conducted on Saturday July 8, 2006.

During sampling, workers placed a plastic barrier in the river, excavated the levy, and began lifting homes for removal. Trucks hauled the excavated soil to the railyard where it was screened and sorted. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On July 6, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and on the west side of the bridge directly east of the excavation area. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate.

Argus Pacific also conducted respirable dust monitoring at both of the above locations. On days during the week that Argus Pacific was not on site, RETEC employees conducted respirable dust monitoring at the railyard and bridge. To survey noise levels during construction and equipment operations, Argus Pacific and RETEC also collected noise measurements using a Quest handheld sound level meter.

Approximate air sample locations are indicated on the attached Air Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate was found in the railyard sample. None of the other target compounds were identified at or above the laboratory limit of detection. Respirable dust concentrations and noise levels were below project action limits during all sampling days. Laboratory results and dust monitoring data are included as attachments.

NOISE MONITORING RESULTS

LOCATION	ACTIVITY	SOUND LEVEL AT PROPERTY LINE OR 50 FEET	MONITORING PLAN LIMIT
Across tracks from railyard	Screening/moving dirt	55-60 dB	90 dB
At bridge	Placing plastic in river and digging levee	85 dB	
At street corner next to Stove Shop	Trucks passing	60-82 dB	
At main road next to truck exit from railyard	Screening/Hauling dirt	70-75 dB	

CONCLUSIONS

Based on this data, levee excavation, installing plastic barrier in river, and dirt hauling and screening conducted during the week of July 3 through 8, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored. In addition, noise levels documented during activities that week were below the project action limit for community noise in the areas monitored.

We appreciate the opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

No field blank was submitted with this set.

The samples in this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
JULY 10 – JULY 15, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the seventh report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of July 10 through July 15, 2006. The purpose of this report is to summarize and interpret air and noise monitoring data collected in the City of Skykomish during the levee zone interim action project conducted by The RETEC Group (RETEC). Argus Pacific conducted the monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on July 10 and July 14, 2006. RETEC technicians collected respirable dust samples and noise measurements on July 11, 12, 13, and 15 (Saturday) of that week.

During sampling, workers filled sand bags in the river, moved and hauled dirt from the levee to the railyard, and screened dirt at the railyard. A water truck wetted roadways and a street sweeper was used to remove rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On July 10, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and on the west side of the bridge directly east of the excavation. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On July 14, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations.

Argus Pacific also conducted respirable dust monitoring at both of the above locations. On days during the week that Argus Pacific was not on site (July 11, 12, 13, and 15), RETEC employees conducted respirable dust monitoring at the railyard and bridge. The data collected at the bridge was lost due to equipment malfunction.

Argus Pacific and RETEC collected noise measurements using a Quest handheld sound level meter during construction and equipment operations from July 10 through 13, 2006. On July 14, 2006 Argus Pacific began noise monitoring with a Larson-Davis Model 820 sound level meter to record continuous noise levels at the railyard and bridge.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate was found in the sample collected on July 10, 2006 at the bridge. No other compound was found at or above the limit of detection on either of the two sampling days. Respirable dust concentrations were below project limits. Sample results are shown below. Laboratory results and dust and noise monitoring data are included as attachments.

CONCLUSIONS

Based on this data, the sandbag filling, dirt hauling, and screening conducted during the week of July 10 through July 15, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented during activities from July 10 to 15, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded at both locations above the project action level. These exceedances were for extremely short durations and occurred during periods when BNSF trains passed through the town, and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

Noise levels recorded at both locations during the week of July 10 to 15, 2006 did not exceed these County or Municipal Code limits. For the railyard, the maximum reading of 112.3 dB was an instantaneous reading that occurred while a train passed through town at 4:00 pm. The minute average during that event was 94.3 dB; noise levels were below 80 dB immediately prior to and

following that event. For the bridge, the maximum reading of 98.3 dB was an instantaneous reading at 1:58 pm. The minute average was 89.2 dB.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sincerely,

Alex Peck
Industrial Hygienist

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

No field blank was submitted with this set.

The samples in this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
JULY 17 - JULY 22, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the eighth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of July 17 through July 22, 2006. The purpose of this report is to summarize and interpret air and noise monitoring data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted the monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on July 18 and July 20, 2006. RETEC technicians collected respirable dust samples and noise measurements on July 17, 19, 21, and 22 of that week.

During sampling, workers filled sand bags in the river, moved and hauled dirt from the levee to the railyard, and screened dirt at the railyard. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On July 18, 2006, Argus Pacific collected air samples at the northwest corner of the railyard and on the west side of the bridge directly east of the excavation. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On July 20, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. On days during the week that Argus Pacific was not on site (July 17, 19, 21, and 22), RETEC employees conducted respirable dust monitoring and community noise monitoring at the railyard and bridge. Argus Pacific and RETEC collected noise measurements using a Quest handheld sound level meter during construction and equipment operations from July 17 through 22, 2006.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

None of the target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations on either of the two days Argus Pacific conducted sampling. Respirable dust concentrations and community noise levels were below project action limits. Laboratory results and dust and noise monitoring data are included as attachments.

CONCLUSIONS

Based on this data, the sandbag filling, dirt hauling, and screening conducted during the week of July 17 through July 22, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented during activities from July 18 to 22, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded at both locations above the project action level. These exceedances were for extremely short durations and occurred during periods when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allows for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Alex Peck

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area is either specified by the client or calculated by subtracting 2 mm (the width of the cassette rim) from the edge of the filter.

The reported results have not been blank corrected.

The samples of this set were analyzed by Sunset Laboratory.

General Set Comments

** Result cannot be calculated for samples missing air volume.

ppm formula: $(24.45 * (\text{Result} * 1000)) / (\text{Volume} * \text{MW})$

"Naphtha" is the sum of all peaks in the chromatogram minus the solvent peak and was quantitated against n-hexane.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
JULY 24 - JULY 29, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the ninth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of July 24 through July 29, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted the monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on July 24 and July 27, 2006. RETEC technicians collected respirable dust samples and noise measurements on July 25, 26, 28, and 29 of that week.

During sampling, workers filled sand bags in the river, moved and hauled dirt from the levee to the railyard, and screened dirt at the railyard. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On July 24, 2006, Argus Pacific collected air samples at the southeast exit from the railyard and on the west side of the bridge directly east of the excavation. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On July 27, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. On days during the week that Argus Pacific was not on site (July 25, 26, 28, and 29), RETEC employees conducted respirable dust monitoring and community noise monitoring at the railyard and bridge. Argus Pacific and RETEC collected noise measurements using a Quest handheld sound level meter during construction and equipment operations from July 24 through 29, 2006.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of PAHs was found in the sample collected at the bridge on July 24, 2006. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling locations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are included as attachments.

CONCLUSIONS

Based on this data, the sandbag filling, dirt hauling, and screening conducted during the week of July 24 through July 29, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented during the week of July 24 to 29, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded at both locations above the project action level. These exceedances were for extremely short durations and occurred during periods when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allows the action level for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate the opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sincerely,

Alex Peck

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area is either specified by the client or calculated by subtracting 2 mm (the width of the cassette rim) from the edge of the filter.

The reported results have not been blank corrected.
The samples of this set were analyzed by Sunset Laboratory.

Method Reference: NIOSH Manual of Analytical Methods(NMAM), 4th ed., 08/15/94.

Results are not blank-corrected.

General Lab Comments

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted in the General Set Comments above.

Samples have not been field blank corrected unless otherwise noted in the General Set Comments above.

ppm formula: $(24.45 * (\text{Result} * 1000)) / (\text{Volume} * \text{MW})$

"Naphtha" is the sum of all peaks in the chromatogram minus the solvent peak and was quantitated against n-hexane.
