RE: WEEKLY AIR MONITORING REPORT
JULY 31 – AUGUST 5, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This report represents the tenth report of weekly air monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of July 31 through August 5, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on August 1 and August 3, 2006. RETEC technicians collected respirable dust samples and noise measurements on July 31, and August 2, 4, and 5 of that week. During sampling, workers moved and hauled dirt from the cofferdam to the railyard, and screened dirt at the railyard. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On August 1, 2006, Argus Pacific collected air samples at the southeast exit from the railyard and on the west side of the bridge directly east of the excavation. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On August 3, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. Community noise monitors were placed at the northwest corner of the railyard and at the southeast corner of the bridge. On days during the week that Argus Pacific was not on site (July 31, and August 2, 4, and 5), RETEC employees conducted respirable dust monitoring and community noise monitoring at the northwest corner of the railyard and at the bridge.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

None of the target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, and screening conducted during the week of July 31 through August 5, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented during the week of July 31 to August 5, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations. These exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
The samples of this set analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
AUGUST 7 – AUGUST 12, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the eleventh report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of August 7 through August 12, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006, and amended on August 5, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on August 7 and August 10, 2006. RETEC technicians collected respirable dust samples and noise measurements on August 8, 9, 11, and 12 of that week.

During sampling, workers excavated soils and other materials near the bridge, trucks moved and hauled dirt from the levee to the railyard, and workers engaged in contaminated water cleanup. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On August 7, 2006, Argus Pacific collected air samples at the southeast exit from the railyard and on the west side of the bridge directly east of the excavation, in a downwind direction relative to construction activities. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On August 10, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations, also in a downwind direction relative to construction activities.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. Community noise monitors were placed at the southeast exit from the railyard and at the southeast corner of the bridge, in a downwind direction relative to construction activities. On days during the week that Argus Pacific was not on site (August 8, 9, 11, 12), RETEC employees conducted respirable dust monitoring and community noise monitoring at the same bridge location. RETEC placed the second set of instruments for respirable dust monitoring and community noise monitoring at the northwest corner of the railyard instead of the southeast corner of the railyard to address tourist and public traffic at the intersection of Railroad Avenue and 5th Street.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate matter was found in the sample collected at the bridge on August 7, 2006. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, and contaminated water cleanup conducted from August 7 through August 12, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan and Addendum for the areas monitored.

The average noise levels documented during the week of August 7 to August 12, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sincerely,

Scott Rinear

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
The samples of this set were analyzed by Sunset Laboratory.

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

The samples of this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
AUGUST 14 – AUGUST 19, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the twelfth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of August 14 through August 19, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006, and amended on August 5, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on August 14 and August 17, 2006. RETEC technicians collected respirable dust samples and noise measurements on August 15, 16, 18, and 19 of that week.

During sampling, workers excavated materials in the levee zone west of the bridge, trucks moved and hauled dirt from the levee to the railyard, power screening of soils at the railyard, and workers cleaned up contaminated water. Large rocks were imported to the levee zone and backfilling of cleaned areas began. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On August 14, 2006, Argus Pacific collected air samples at the southeast exit from the railyard and on the west side of the bridge directly east of the excavation, in a downwind direction relative to construction activities. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On August 17, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations, also in a downwind direction relative to construction activities.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. Community noise monitors were placed at the southeast exit from the railyard and at the southeast corner of the bridge, in a downwind direction relative to construction activities. On days during the week when Argus Pacific was not on site (August 15, 16, 18, 19), RETEC employees conducted respirable dust monitoring and community noise monitoring at the same bridge location. RETEC placed the second set of instruments for respirable dust monitoring and community noise monitoring at the northwest corner of the railyard instead of the southeast corner of the railyard to address tourist and public traffic at the intersection of Railroad Avenue and 5th Street.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate matter was found in the sample collected at the bridge on August 14, 2006. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, power screening, backfilling, and contaminated water cleanup conducted from August 14 through August 19, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented from August 14 to August 19, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sincerely,

Scott Rinear

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

The samples in this set were analyzed by Sunset Laboratory.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
AUGUST 21 – AUGUST 26, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the thirteenth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of August 21 through August 26, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the City of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on June 20, 2006, and amended on August 5, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on August 21 and August 24, 2006. RETEC technicians collected respirable dust samples and noise measurements on August 22, 23, 25, and 26 of that week.

During sampling, workers excavated materials in the levee zone west of the bridge, trucks moved and hauled dirt from the levee to the railyard, and workers cleaned up contaminated water. Large rocks were imported to the levee zone and workers began backfilling cleaned areas. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On August 21, 2006, Argus Pacific collected air samples at the southeast exit from the railyard and on the west side of the bridge directly east of the excavation, in a downwind direction relative

to construction activities. Samples were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), polynuclear aromatic hydrocarbons (PAHs), and diesel particulate. On August 24, 2006, Argus Pacific collected samples for lead, arsenic, and Naphthas in the same locations, also in a downwind direction relative to construction activities.

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at both of the aforementioned locations. Community noise monitors were placed at the southeast exit from the railyard and at the southeast corner of the bridge, in a downwind direction relative to construction activities. On days during the week when Argus Pacific was not on site (August 22, 23, 25, 26), RETEC employees conducted respirable dust monitoring and community noise monitoring at the northwest corner of the railyard and at the same bridge location. RETEC placed the second set of instruments for respirable dust and community noise monitoring at the northwest corner of the railyard instead of the southeast corner of the railyard to address tourist and public traffic at the intersection of Railroad Avenue and 5th Street.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of diesel particulate matter was found in the sample collected at the bridge on August 21, 2006. None of the other target compounds were identified at or above the laboratory limit of detection at either of the two sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, backfilling, and contaminated water cleanup conducted from August 21 through August 26, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented during the week of August 21 to August 26, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and bridge monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sincerely,

Scott Rinear (rv)

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported $\mu\text{g}/\text{sample}$ values correspond to the entire exposed area of the sample. The $\mu\text{g}/\text{sample}$ values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
The samples in this set were analyzed by Sunset Laboratory.
