RE: WEEKLY AIR AND NOISE MONITORING REPORT
OCTOBER 2 – OCTOBER 6, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the nineteenth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of October 2 through October 6, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the town of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the revised BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on September 19, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and dust samples and noise measurements on October 2 and 5, 2006. RETEC technicians collected dust samples and noise measurements on October 3 and 4 of that week, and noise measurements on October 6. Respirable dust samples were not collected on October 6, 2006 due to heavy and persistent rain.

During sampling, workers excavated materials in the levee zone west of the bridge, trucks moved and hauled dirt from the levee to the railyard, and workers cleaned up contaminated water. Excavation also took place for shoring wall installation around the perimeter of the excavation zone south of the river. Impacted materials were loaded into railcars near the railyard stockpiles. Large rocks and other backfilling materials were hauled from the railyard to the levee area for backfilling. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On October 2, 2006, Argus Pacific collected air samples at the northwest corner of the railyard (just north of the railroad tracks, at the corner of N 5th Street and Railroad Avenue) in a downwind direction relative to construction activities. Air samples were also collected at the northeast corner of the schoolyard, not directly downwind of construction activities, but immediately adjacent to the primary area of excavation and truck traffic. Samples taken on October 2, 2006 at these two locations were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), diesel particulate matter, and polynuclear aromatic hydrocarbons (PAHs). Air samples were also taken inside the school building (third floor, northeast room). Samples taken on October 2, 2006 inside the school building were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

On October 5, 2006, Argus Pacific collected air samples at the northwest corner of the railyard, the northeast corner of the schoolyard, and inside the school building. Samples collected on October 5, 2006 from the railyard and schoolyard were analyzed for lead, arsenic, and petroleum hydrocarbons (Naphthas). The samples collected on October 5, 2006 inside the school were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at the northwest corner of the railyard, in a downwind direction relative to construction activities, and at the northeast corner of the schoolyard, immediately adjacent to the primary area of excavation and truck traffic. Respirable dust monitoring was also conducted on the south side of the bridge (west side of North 5th Street on the northernmost guardrail post) in a downwind direction relative to construction activities. On days during the week when Argus Pacific was not on site (October 3, 4, and 6), RETEC technicians conducted community noise monitoring at the northwest corner of the railyard and the northeast corner of the schoolyard. RETEC technicians conducted respirable dust monitoring at the northwest corner of the railyard, the northeast corner of the schoolyard, and on the south side of the bridge on October 3 and 4, 2006. RETEC technicians did not collect respirable dust samples on October 6, 2006 due to heavy and persistent rain throughout the day.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

A detectable concentration of polynuclear aromatic hydrocarbons was found in the sample collected inside the school building on October 5, 2006. PAHs were not detected at the outdoor school location during the same time. None of the other target compounds were identified at or above the laboratory limits of detection at any of the three sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, backfilling, and contaminated water cleanup conducted from October 2 through October 6, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

PAHs were detected inside the school on October 2, 2006 below the plan action limit. A sample for PAHs was collected on the same date, at the same time just outside of the school building. No PAHs were detected in that sample, where PAH concentrations would have been expected to be

much higher if originating from excavation activities. Based on this, it appears likely that the source of the PAHs was inside the school building, not associated with cleanup action activities.

Also of note for the data collected during this week, there was one three minute period of high respirable dust levels recorded at the outdoor school monitoring location on October 2, 2006 from 2:18 to 2:20 pm. The dust levels were as high as 3,754 $\mu\text{g}/\text{m}^3$ for a one-minute average during that period. The time immediately prior to and following this three minute event had typical readings. The average for the day was 19.5 $\mu\text{g}/\text{m}^3$, which is of the same order of magnitude for daytime averages for the project duration. Although we do not know what caused this brief spike in respirable dust levels, it appears to have been an anomaly and has not been repeated since that event.

The average noise levels documented from October 2 to October 6, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and schoolyard monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Laboratory Group Name 06I-5305-02

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

** Result cannot be calculated for samples missing air volume.

µg/m³ formula: (Result)*(1000µg/mg)/Volume

Date _____

Laboratory Group Name 06I-5390-03

General Set Comments

mg/m³ formula: (Result * 1000) / Volume

Naphthas were calculated by summing all chromatographic peak areas, excluding the solvent peak, and quantitating against a hexane calibration curve.

General Lab Comments

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted in the General Set Comments above.

Samples have not been field blank corrected unless otherwise noted in the General Set Comments above.

This test report shall not be reproduced, except in full, without written approval of DataChem Laboratories, Inc.

This page is the concluding page of the report.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
OCTOBER 9 – OCTOBER 13, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the twentieth report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of October 9 through October 13, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the town of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the revised BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on September 19, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and dust samples and noise measurements on October 10 and 13, 2006. RETEC technicians collected dust samples and noise measurements on October 9, 11 and 12 of that week.

During sampling, workers excavated around the perimeter of the levee zone south of the river for shoring wall installation. Backfilling materials were imported and backfilling activities continued throughout the levee zone. Workers began installing storm sewer catch basins in the levee zone. Workers continued grading and compacting backfilled areas. Loaders loaded railcars with impacted materials from the railyard stockpiles. A water truck wetted roadways and a street sweeper removed rocks from the roadway.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On October 10, 2006, Argus Pacific collected air samples at the northwest corner of the railyard (just north of the railroad tracks, at the corner of N 5th Street and Railroad Avenue) in a downwind direction relative to construction activities. Air samples were also collected at the northeast corner of the schoolyard, not directly downwind of construction activities, but immediately adjacent to the primary area of construction and truck traffic. Samples taken on October 10, 2006 at these two locations were analyzed for lead, arsenic, and petroleum hydrocarbons (Naphthas). Air samples were also taken inside the school building (third floor, northeast room). Samples taken on October 10, 2006 inside the school building were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

In addition, a new air monitoring and respirable dust sampling location was set up on October 13, 2006 at the east end of the railyard. The purpose of establishing this new location was to collect air and respirable dust samples in a downwind direction relative to the daily loading of impacted materials from the railyard stockpiles into railcars. Air monitoring pumps were attached to a four foot step ladder that was placed between the east end of the railyard stockpiles and the easternmost railcar used for loading impacted materials. The inlets of the air monitoring cassettes were pointed west, directly downwind relative to railyard construction activities.

On October 13, 2006, Argus Pacific collected air samples at the northeast corner of the schoolyard, immediately adjacent to the primary area of construction and truck traffic, and inside the school building.

Samples collected on October 13, 2006 from the east end of the railyard and northeast corner of the schoolyard were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), diesel particulate matter, and polynuclear aromatic hydrocarbons (PAHs). The samples collected on October 13, 2006 inside the school were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

Argus Pacific also conducted respirable dust monitoring and community noise monitoring at the northwest corner of the railyard, in a downwind direction relative to construction activities, and at the northeast corner of the schoolyard, immediately adjacent to the primary area of excavation and truck traffic. Respirable dust monitoring was also conducted on the south side of the bridge (west side of North 5th Street on the northernmost guardrail post) in a downwind direction relative to construction activities.

A new respirable dust monitoring location was established on October 13, 2006. Starting on this day, the DataRam4 usually set up at the northwest corner of the railyard (#D417) was moved to the east end of the railyard, where it was placed on a four foot step ladder with the air monitoring pumps.

On days during the week when Argus Pacific was not on site (October 9, 11, and 12), RETEC technicians conducted community noise monitoring at the northwest corner of the railyard and the northeast corner of the schoolyard. RETEC technicians conducted respirable dust monitoring at the northwest corner of the railyard, the northeast corner of the schoolyard, and on the south side of the bridge on October 9, 11 and 12, 2006.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

None of the target compounds were identified at or above the laboratory limits of detection at the railyard (both sampling locations), schoolyard, or interior school sampling stations on either of the two days Argus Pacific conducted sampling. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, backfilling, shoring wall installation, loading of impacted materials into railcars, and contaminated water cleanup conducted from October 9 through October 13, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented from October 9 to October 13, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and schoolyard monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

OCT 27 2006

Date _____

Laboratory Group Name 06I-5662-03

General Set Comments

Method Reference: NIOSH Manual of Analytical Methods (NMAM), fourth ed., 3/15/03

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

** Result cannot be calculated for samples missing air volume.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
OCTOBER 16 – OCTOBER 20, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the twenty-first report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of October 16 through October 20, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the town of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the revised BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on September 19, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical samples and noise measurements on October 16 and 19, 2006. No respirable dust samples were taken on either of these two days due to heavy and persistent rain. RETEC technicians collected noise measurements on October 17, 18, and 20 of that week. Respirable dust samples were only collected on October 20, 2006 due to heavy and persistent rain during the rest of the week.

During sampling, workers excavated materials around the perimeter of the levee zone south of the river for shoring wall installation. Backfilling materials were imported and backfilling activities continued throughout the levee zone. Workers continued with storm sewer catch basin installation in the levee zone. Workers continued grading and compacting backfilled areas. Loaders loaded railcars with impacted materials from the railyard stockpiles.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On October 16, 2006, Argus Pacific collected air samples at the east end of the railyard (on ladder between eastern-most railcar and east end of railyard stockpiles) in a downwind direction relative to construction activities. Air samples were also collected at the northeast corner of the schoolyard, not directly downwind of construction activities, but immediately adjacent to the primary area of excavation and truck traffic. Samples taken on October 16, 2006 at these two locations were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), diesel particulate matter, and polynuclear aromatic hydrocarbons (PAHs). Air samples were also taken inside the school building (third floor, northeast room). Samples taken on October 16, 2006 inside the school building were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

On October 19, 2006, Argus Pacific collected air samples at the east end of the railyard, the northeast corner of the schoolyard, and inside the school building. Samples collected on October 19, 2006 from the railyard and schoolyard were analyzed for lead, arsenic, and petroleum hydrocarbons (Naphthas). The samples collected on October 19, 2006 inside the school were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

Argus Pacific also conducted community noise monitoring at the northwest corner of the railyard (just north of railroad tracks on the corner of Railroad Avenue and North 5th Street), and at the northeast corner of the schoolyard, immediately adjacent to the primary area of excavation and truck traffic. Argus Pacific conducted no respirable dust monitoring this week due to heavy and persistent rain on October 16 and 19, 2006. On days during the week when Argus Pacific was not on site (October 17, 18, and 20), RETEC technicians conducted community noise monitoring at the northwest corner of the railyard and the northeast corner of the schoolyard. RETEC technicians conducted respirable dust monitoring at the northwest corner of the railyard, the northeast corner of the schoolyard, and on the south side of the bridge on October 20, 2006. RETEC technicians did not collect respirable dust samples on October 17 or 18, 2006 due to heavy and persistent rain.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

Detectable concentrations of diesel particulate matter were found in the samples collected at both the east end of the railyard and the northeast corner of the schoolyard on October 16, 2006. Also, a detectable concentration of polynuclear aromatic hydrocarbons (PAHs) was identified inside the school building on October 16, 2006. However, polynuclear aromatic hydrocarbons were not detected outside of the school (northeast corner) on the same day. None of the other target compounds were identified at or above the laboratory limits of detection at any of the three sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the excavating, dirt hauling, backfilling, shoring wall and storm sewer catch basin installation, and loading of impacted materials into railcars conducted from October 16 through October 20, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

Also, the source of the PAHs detected inside the school building on October 16, 2006 was most likely located inside the school because no PAHs were detected outside of the school (northeast corner of the schoolyard) on that same day.

The average noise levels documented from October 16 to October 20, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and schoolyard monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
OCTOBER 23 – OCTOBER 27, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the twenty-second report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of October 23 through October 27, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the town of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the revised BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on September 19, 2006.

WORK ACTIVITIES

Argus Pacific collected chemical and respirable dust samples and noise measurements on October 23 and 26, 2006. RETEC technicians collected noise measurements on October 24, 25, and 27 of that week. RETEC technicians did not collect respirable dust samples on these days due to heavy and persistent rain.

During sampling, workers started foundation work in the levee zone. Backfilling materials were imported and backfilling activities continued throughout the levee zone. Workers continued with storm sewer catch basin installation in the levee zone. Workers continued grading and compacting backfilled areas. Loaders loaded railcars with impacted materials from the railyard stockpiles. A water truck wetted down construction-affected areas on days with no rain.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On October 23, 2006, Argus Pacific collected air samples at the east end of the railyard (on ladder between eastern-most railcar and east end of railyard stockpiles) in a downwind direction relative to construction activities. Air samples were also collected at the northeast corner of the schoolyard, not directly downwind of construction activities, but immediately adjacent to the levee zone. Samples taken on October 23, 2006 at these two locations were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), diesel particulate matter, and polynuclear aromatic hydrocarbons (PAHs). Air samples were also taken inside the school building (third floor, northeast room). Samples taken on October 23, 2006 inside the school building were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

On October 26, 2006, Argus Pacific collected air samples at the east end of the railyard, the northeast corner of the schoolyard, and inside the school building. Samples collected on October 26, 2006 from the railyard and schoolyard were analyzed for lead, arsenic, and petroleum hydrocarbons (Naphthas). The samples collected on October 26, 2006 inside the school were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

Argus Pacific also conducted community noise monitoring at the northwest corner of the railyard (just north of railroad tracks on the corner of Railroad Avenue and North 5th Street), and at the northeast corner of the schoolyard, immediately adjacent to the levee zone. Argus Pacific conducted respirable dust monitoring on October 23 and 26, 2006. On days during the week when Argus Pacific was not on site (October 24, 25, and 27), RETEC technicians conducted community noise monitoring at the northwest corner of the railyard and the northeast corner of the schoolyard. RETEC technicians did not conduct respirable dust monitoring on October 24, 25, or 27 due to heavy and persistent rain.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

Detectable concentrations of diesel particulate matter were found in the samples collected at both the east end of the railyard and the northeast corner of the schoolyard on October 23, 2006. None of the other target compounds were identified at or above the laboratory limits of detection at any of the three sampling stations. Respirable dust concentrations and community noise levels were below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, dirt hauling, backfilling, foundation work, storm sewer catch basin installation, and loading of impacted materials into railcars conducted from October 23 through October 27, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented from October 23 to October 27, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and schoolyard monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.

RE: WEEKLY AIR AND NOISE MONITORING REPORT
OCTOBER 30 – NOVEMBER 2, 2006
Levee Zone Interim Action
Skykomish, Washington

Ms. Voges,

This document represents the twenty-third report of weekly air and noise monitoring data for the BNSF Skykomish levee zone interim action for the town of Skykomish, Washington conducted by Argus Pacific, Inc. (Argus Pacific) during the week of October 30 through November 2, 2006. The purpose of this report is to summarize and interpret air and noise sampling data collected in the town of Skykomish during the levee zone interim action conducted by The RETEC Group (RETEC). Argus Pacific conducted monitoring in accordance with the revised BNSF Skykomish Air and Noise Monitoring Plan issued by Argus Pacific on September 19, 2006.

In addition, in past weeks air and noise monitoring was conducted each day that there was construction activity. However, during this week, neither Argus Pacific or RETEC had any technicians on site on Friday, November 3, 2006. This is the reason why this report only covers Monday (October 30, 2006) through Thursday (November 2, 2006).

Also, this report represents the last week of air monitoring activities for the levee zone interim action in Skykomish, Washington. After Thursday, November 2, 2006, collection of chemical and respirable dust samples was deemed no longer necessary due to the completion of tasks that disturb contaminated soils and the continuous use of heavy equipment in public areas (near school, on bridge). The decision to cease air monitoring for chemicals and respirable dust was approved by RETEC and the Washington State Department of Ecology. Noise measurements will continue to be collected on days with construction activity, barring inclement weather.

WORK ACTIVITIES

Argus Pacific collected chemical samples and noise measurements on October 30 and November 2, 2006. Argus Pacific collected respirable dust samples on October 30, 2006, but not on November 2, 2006 due to heavy and persistent rain. RETEC technicians collected respirable dust samples and noise measurements on October 31 and November 1 of that week. However, on October 31, 2006, respirable dust samples were only collected at the east end of the railyard.

During sampling, workers continued foundation work throughout the levee zone. The water storage tanks were moved from the levee zone to the railyard. Workers installed the water treatment plant at the railyard. Workers began loading equipment onto trucks in the levee zone for demobilization. The loading of impacted materials from the railyard stockpiles into railcars continued.

SAMPLING METHODOLOGY

All samples were collected in accordance with the methods specified in the BNSF Skykomish Air and Noise Monitoring Plan. Please refer to this Plan for specific details on sampling methodology.

On October 30, 2006, Argus Pacific collected air samples at the east end of the railyard (on ladder between eastern-most railcar and east end of railyard stockpiles) in a downwind direction relative to construction activities. Air samples were also collected at the northeast corner of the schoolyard, not directly downwind of construction activities, but immediately adjacent to the levee zone. Samples taken on October 30, 2006 at these two locations were analyzed for lead, arsenic, petroleum hydrocarbons (Naphthas), diesel particulate matter, and polynuclear aromatic hydrocarbons (PAHs). Air samples were also taken inside the school building (third floor, northeast room). Samples taken on October 30, 2006 inside the school building were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

On November 2, 2006, Argus Pacific collected air samples at the east end of the railyard, the northeast corner of the schoolyard, and inside the school building. Samples collected on November 2, 2006 from the railyard and schoolyard were analyzed for lead, arsenic, and petroleum hydrocarbons (Naphthas). The samples collected on November 2, 2006 inside the school were analyzed for petroleum hydrocarbons (Naphthas) and polynuclear aromatic hydrocarbons (PAHs).

Argus Pacific also conducted community noise monitoring at the northwest corner of the railyard (just north of railroad tracks on the corner of Railroad Avenue and North 5th Street), and at the northeast corner of the schoolyard, immediately adjacent to the levee zone. Argus Pacific conducted respirable dust monitoring on October 30, 2006. Argus Pacific collected no respirable dust samples on November 2, 2006 due to heavy and persistent rain. On days during the week when Argus Pacific was not on site (October 31 and November 1, 2006), RETEC technicians conducted community noise monitoring at the northwest corner of the railyard and the northeast corner of the schoolyard. RETEC technicians conducted respirable dust monitoring on both days. However, on October 31, 2006, RETEC technicians only collected respirable dust samples at the east end of the railyard, and no dust monitors were set up at the northeast corner of the schoolyard or southwest of the bridge on the west side of North 5th Street.

Approximate air and noise sample locations are indicated on the attached Air and Noise Monitoring Sample Locations Plan.

SAMPLING RESULTS

None of the target compounds were identified at or above the laboratory limits of detection at any of the three sampling stations. Respirable dust concentrations and community noise levels were

below project action limits during sampling for the entire week. Laboratory results, and dust and noise monitoring data are attached.

CONCLUSIONS

Based on this data, the foundation work, water storage tank removal from the levee zone and water treatment plant installation at the railyard, truck traffic, and loading of impacted materials into railcars from railyard stockpiles conducted from October 30 through November 2, 2006 did not release the contaminants of concern or respirable dust in concentrations above the project action limits specified in the BNSF Skykomish Air and Noise Monitoring Plan for the areas monitored.

The average noise levels documented from October 30 to November 2, 2006 were below the project action limit for community noise in the areas monitored. Maximum noise levels were recorded above the project action level at both locations; however, these exceedances were for extremely short durations and occurred when BNSF trains passed through the town and during some heavy equipment operations.

Although the elevated noise limits are above the project action limit, they do not exceed the King County Noise Code or the Skykomish Municipal Noise Code, which allow for any source of construction noise that is of short duration to be increased by:

- 5 dB(A) for a total of fifteen minutes in any one-hour period; or
- 10 dB(A) for a total of five minutes in any one-hour period; or
- 15 dB(A) for a total of one and one-half minutes in any one-hour period.

All readings greater than 100 dB for the railyard and schoolyard monitoring stations were instantaneous readings that occurred while a train passed through town. Since train noise is exempt from the applicable noise codes, no exceedances of County or Municipal Code were recorded at either location during the monitoring period.

We appreciate this opportunity to be of service to you. Please contact us at (206) 285-3373 if you have questions regarding this report, or if you require additional information.

Scott Rinear

Sample analysis was performed on a representative 1x1.5 cm² area of the sample filter. The reported µg/sample values correspond to the entire exposed area of the sample. The µg/sample values assume an even distribution of organic and elemental carbon on the exposed area of the sample filter. The value for the exposed area was calculated by the analyst after measuring the diameter of the sample area.

The reported results have not been blank corrected.
