## Sign-off Sheet

The conclusions in the Report titled First Quarter 2024 Groundwater Monitoring Report are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Chevron Environmental Management Company and Remediation Management Services Company (the "Clients") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Clients in accordance with Stantec's contract with the Clients. While the Report may be provided to applicable authorities having jurisdiction and others for whom the Clients are responsible, Stantec does not warrant the services to any third party. The report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec's discretion.

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

## 1.0 Introduction

This document summarizes the activities and results of the First Quarter 2024 (1Q24) semi-annual groundwater monitoring event for the Bee-Jay Scales Site in Sunnyside, Washington (Site). The event was conducted by Stantec Consulting Services Inc. (Stantec) for Chevron Environmental Management Company and Remediation Management Services Company, on behalf of Chevron Chemical Company and American Oil Company, respectively. This project is being implemented in accordance with the Washington State Department of Ecology (Ecology) Model Toxics Control Act and under Consent Decree No. 132017660 (Consent Decree).

The Site is in the city of Sunnyside, Washington, within Yakima County, and includes two parcels where contaminants were historically released and the parcels where those contaminants have come to be located. The Site location is shown on **Figure 1**. The two parcels where contaminants were historically released include the southern portions of Parcel No. 22102522014, located at 110 North 1st Street and owned by Bee-Jay Scales, Inc., and Parcel No. 22102522015, located at 301 Warehouse Avenue and owned by Western General Land, LLC (i.e., source area). Historical releases from these parcels have impacted the groundwater at those parcels and have extended down-gradient.

The Site Plan, including parcel numbers, monitoring well locations, injection well locations, building locations, and other important features, is shown on **Figure 2**. The first six digits of the parcel numbers (221025) repeat for all parcels and are not shown in full on the figures for presentation purposes.

This 1Q24 semi-annual groundwater monitoring event continues post-Phase II enhanced in-situ bioremediation (EISB) groundwater monitoring requirements. Phase II EISB injection activities were completed at 47 injection wells (IW-1-1 through IW-1-4, IW-2-2 through IW-2-7, IW-3-1 through IW-3-20, and IW-4-1 through IW-4-17; shown on **Figure 2**) between July and October 2022, followed by completion of five quarterly EISB groundwater remedy performance monitoring events in December 2022, March 2023, May 2023, August 2023, and December 2023. Beginning in First Quarter 2024, the groundwater monitoring program for the Site switched to the semi-annual post-EISB groundwater remedy performance monitoring program per the *Groundwater Remedy Compliance Monitoring Plan (GW CMP)*, dated May 1, 2019 (Stantec, 2019).

Fieldwork for the 1Q24 semi-annual groundwater monitoring event was completed March 11 through 14, 2024. A summary of the 1Q24 semi-annual groundwater monitoring event conclusions and recommendations follows:

- The 1Q24 groundwater flow direction was generally to the southeast throughout most of the Site and to the east in the northern portion of the Site, as shown on **Figure 3**. Groundwater flow direction, elevations, and hydraulic gradients were consistent with historical data.

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

- As outlined in the GW CMP, monitoring parameter concentrations were compared to calculated pre-treatment threshold concentrations to determine if groundwater at a well location is under monitored natural attenuation (MNA) or EISB conditions (defined in Section 4.1). As of the 1Q24 sampling event, Site groundwater remained under or has returned to MNA conditions in all but three wells: MW-5R, MW-13, and MW-23; however, the groundwater appears to be transitioning out of EISB conditions. The indicator hazardous substance (IHS) concentration data support this observed transition.
- In comparing iso-concentrations from the First Quarter 2020 Phase I pre-treatment sampling event to 1Q24 post-Phase II EISB iso-concentrations (**Figures 4 through 7**) and considering trends:
  - The nitrate plume footprint decreased overall, most notably in the area of the plume with concentrations above 100 milligrams per liter (mg/L).
  - The overall dinoseb plume size decreased by more than 50 percent (%); in 1Q24, there were no dinoseb concentrations above 0.7 mg/L and concentrations are currently below the cleanup level (CUL) in several wells that had previously been within the plume boundary.
  - There was no significant change in the 1,2-dichloropropane (1,2-DCP) plume extent; however, the magnitude of concentrations decreased and in 1Q24, there were no 1,2-DCP concentrations above 0.5 mg/L.
  - The distribution of total arsenic continues to differ from the distribution of other Site IHSs and appears not to be exclusively related to historical Site operations. The arsenic plume sizes have increased overall, specifically in the source area and the area down-gradient of the source area. This increased mobility is expected due to the Phase II EISB groundwater remedy implementation; however, the lower concentrations in the further down-gradient wells demonstrate that residual metals in groundwater are being attenuated before reaching these locations.
- It is recommended that the semi-annual post-EISB groundwater remedy performance monitoring program continue.

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

## 2.0 Summary of Groundwater Monitoring Activities

The objectives of the post-EISB monitoring per the GW CMP were to:

- Assess the progress of the groundwater remedy throughout the Site groundwater plume, including both EISB and MNA performance, as applicable; and
- Maintain monitoring of the Site boundary monitoring wells (e.g., MW-1, MW-7, MW-10, etc.) in addition to the Site point of compliance (POC) wells or wells within the nitrate groundwater plume. The Site POC wells are currently: MW-4R, MW-5R, MW-6, and MW-12R; and down-gradient monitoring wells, including MW-9, MW-13 through MW-21, MW-23, and MW-24.

### 2.1 GROUNDWATER MONITORING

Groundwater samples were collected from 22 monitoring wells during this event: MW-1, MW-3, MW-4R, MW-5R, MW-7 through MW-11, MW-12R, and MW-13 through MW-24. Well MW-6 was not accessible due to metal debris and vegetation. Well locations are shown on **Figure 2**. The groundwater sampling procedures are detailed in the GW CMP.

#### 2.1.1 Groundwater Elevation Measurement

Before sampling activities commenced, an electronic water level indicator was used to measure the depth to groundwater and total well depth from the surveyed point of each well's top of casing (TOC). Results were recorded on the Groundwater Field Log (**Appendix A**). Cumulative groundwater elevation data from Third Quarter 2005 to present are summarized in **Table 1**.

Groundwater elevation contours were generated for the 1Q24 groundwater monitoring event, as illustrated on **Figure 3**. Depth to groundwater ranged from 5.96 feet below TOC in well MW-11 to 13.45 feet below TOC in well MW-18. The groundwater elevation ranged from 731.44 feet above mean sea level (MSL) at well MW-20 to 739.70 feet above MSL at well MW-11.

Groundwater elevations were consistent with historical ranges except for wells MW-22, MW-23, and MW-24, which were measured at historical highs.

The 1Q24 groundwater flow direction is generally to the southeast throughout most of the Site and to the east in the northern portion of the Site, which is consistent with historical groundwater flow directions. The calculated hydraulic gradient for the 1Q24 monitoring event ranged from approximately 0.004 to 0.032 feet per foot (ft/ft), with an average hydraulic gradient of approximately 0.013 ft/ft. These hydraulic gradients were consistent with historical ranges.

#### 2.1.2 Sampling Activities

Groundwater samples were collected from each of the monitoring wells using low-flow sampling procedures. During well purging using a peristaltic pump, water levels and indicator field

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

parameters were generally recorded on the Low-Flow Groundwater Sampling Data Sheet (**Appendix A**) every 5 minutes. Purging was considered complete and sampling began when indicator field parameters stabilized. Stabilization was achieved when three consecutive readings were within the following limits:

- Dissolved oxygen (DO) in mg/L (10%)
- Conductivity in microSiemens per centimeter ( $\mu\text{S}/\text{cm}$ ) (3%)
- Temperature in degrees Celsius ( $^{\circ}\text{C}$ ) (3%)
- pH in standard units ( $\pm 0.1$  units)
- Oxidation-reduction potential (ORP) in millivolts (mV) ( $\pm 10$  mV)

Exceptions were noted at wells MW-10, MW-12R, and MW-24, where conductivity or ORP readings did not stabilize prior to sampling; however, these wells were purged for 30 minutes prior to sample collection. Turbidity was also measured but was not used to determine stabilization. Measurements were obtained using a multi-parameter meter with flow-through cell. Field instruments were calibrated in accordance with the manufacturer's directions prior to use. Purge volumes for each well were recorded on the Low-Flow Groundwater Sampling Data Sheet. After collection of the samples, the pump tubing was dedicated to the well for re-sampling (by hanging the tubing inside the well) or containerized and properly disposed. Any non-dedicated sampling equipment (including water level indicator) that contacted the ground surface or groundwater was decontaminated between sampling points according to the procedures detailed in the GW CMP.

Purge and decontamination water from the event was collected and transferred to a 55-gallon drum that was labeled with contents and date it was first used; the drum is temporarily being stored on-site. Due to the low-flow sampling procedures utilized, only a small volume of purge water (generally 1 gallon per well or less) was generated. The purge and decontamination water will be disposed during a future event, and disposal documentation will be included in the report at that time. In accordance with State of Washington and federal regulations, drums containing purge and decontamination water will be removed from the property by a licensed waste hauler.

### 2.1.3 Analytical Program

The 1Q24 semi-annual groundwater monitoring event followed the semi-annual post-EISB groundwater remedy performance monitoring program detailed in the GW CMP, along with additions to the program recommended in a letter from Stantec to Ecology dated February 14, 2020 (Stantec, 2020a) and in the *Third Quarter 2021 Groundwater and Storm/Irrigation Drain Monitoring Report* (Stantec, 2021). **Table 2** provides a summary of the groundwater sample analytes and methods used for analysis. Analytical results are discussed in Section 3.1.

## **FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT**

Bee-Jay Scales Site  
October 18, 2024

### **2.1.4 Quality Assurance/Quality Control Program**

The following quality assurance/quality control (QA/QC) samples were collected during the groundwater sampling activities: field duplicates, field equipment blanks, a water blank, and trip blanks.

- Two field duplicate samples were collected to evaluate the laboratory's performance by comparing the analytical results of two samples collected at the same location.
- Four field equipment blanks were collected by pouring deionized (DI) water over the decontaminated water level indicator to evaluate for cross-contamination due to possible inadequate decontamination of sampling equipment. Only the water level indicator required decontamination because the pump tubing is dedicated to the well or disposed after use.
- A water blank consisting of a sample of the store-bought DI water used for decontamination and field equipment blanks was analyzed to determine if there were any analytes detected in the DI water.
- Because volatile organic compounds (VOCs) were part of the analytical program, trip blanks were placed in each cooler that contained samples for VOC analysis to evaluate possible cross-contamination during sample shipment. Trip blanks were analyzed for VOCs only.

QA/QC results are discussed in Section 3.2.

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

## 3.0 Presentation of Results

### 3.1 GROUNDWATER SAMPLING RESULTS

**Table 2** summarizes the groundwater monitoring results and a comparison to Site-specific CULs, when applicable. Analytical laboratory reports are included in **Appendix B**.

As stated in Section 2.1.3, The 1Q24 semi-annual groundwater monitoring event followed the semi-annual post-EISB groundwater remedy performance monitoring program detailed in the GW CMP. Per this program, samples were not analyzed for certain analytes if they were collected from outside of the plume area or historically did not have detections for specified analytes.

#### 3.1.1 Indicator Hazardous Substance Results

The following is a summary of the 1Q24 groundwater monitoring results for Site IHSs above CULs. IHS concentrations were compared with historical results at each well to evaluate if concentrations were within historical limits, defined as within 5% of previous historical high or low concentrations at that well location. **Table 2** includes data from First Quarter 2020 to present; historical data used in the historical limit evaluation are not all included in **Table 2** and were provided in previous reports. If less than three results were available for an analyte at a single well location, a historical comparison was not performed.

- Nitrate concentrations ranging from 17 mg/L to 180 mg/L were detected in groundwater samples collected from ten wells (MW-3, MW-4R, MW-8, MW-9, MW-12R, MW-13, MW-16, MW-21, MW-22, and MW-23) above the CUL of 10 mg/L. Nitrate concentrations were within historical limits except for historical lows at MW-7 and MW-24 and a historical high at MW-20.
- Nitrite concentrations ranging from 1.5 mg/L to 17 mg/L were detected in groundwater samples collected from three wells (MW-5R, MW-22, and MW-23) above the CUL of 1 mg/L. Nitrite concentrations were within historical limits except for historical highs in MW-14 and MW-23.
- 1,2-DCP concentrations ranging from 0.013 mg/L to 0.37 mg/L were detected in groundwater samples collected from six wells (MW-9, MW-12R, MW-16, MW-19, MW-23, and MW-24) above the CUL of 0.005 mg/L, where analyzed. 1,2-DCP concentrations were within historical limits except for historical highs in MW-23 and MW-24.
- Dinoseb concentrations ranging from 0.0077 mg/L to 0.12 mg/L were detected in groundwater samples collected from three wells (MW-4R, MW-12R, and MW-16) above the CUL of 0.007 mg/L, where analyzed. Dinoseb concentrations were within historical limits.

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

- Total arsenic concentrations ranging from 0.011 mg/L to 0.029 mg/L were detected in groundwater samples collected from 14 wells (MW-1, MW-4R, MW-7, MW-8, MW-10, MW-11, MW-12R, MW-13, MW-15, MW-17, MW-18, MW-19, MW-20, and MW-23) equal to or above the CUL of 0.01 mg/L. Total arsenic concentrations were within historical limits except for historical lows at MW-14, MW-21, and MW-24.
- A benzene concentration of 0.0056 mg/L was detected in the groundwater sample collected from one well (MW-12R) above the CUL of 0.005 mg/L, where analyzed. Benzene concentrations were within historical limits.
- A chlorobenzene concentration of 0.12 mg/L was detected in the groundwater sample collected from one well (MW-12R) above the CUL of 0.1 mg/L, where analyzed. Chlorobenzene concentrations were within historical limits.
- Total manganese concentrations of 2.4 mg/L and 3.4 mg/L were detected in the groundwater samples collected from two wells (MW-5R and MW-22) above the CUL of 2.2 mg/L, where analyzed. The total manganese concentrations were within historical limits.

Total iron, 2,4-dichlorophenoxyacetic acid (2,4-D), and 2-methylnaphthalene were not detected above their respective CULs in samples that were analyzed for these parameters. Total iron, 2,4-D, and 2-methylnaphthalene concentrations were within historical limits except for a 2,4-D historical high at MW-5R and a total iron historical low at MW-16.

## 3.1.2 Monitoring Parameter Results

The following is a summary of the 1Q24 post-EISB groundwater monitoring results for EISB monitoring parameters. Monitoring parameter concentrations were compared with historical results at each well to evaluate if concentrations were within historical limits, defined as within 5% of previous historical high or low concentrations at that well location. **Table 2** includes data from First Quarter 2020 to present; historical data used in the historical limit evaluation are not all included in **Table 2** and were provided in previous reports. If less than three results were available for an analyte at a single well location, a historical comparison was not performed.

- Biochemical oxygen demand (BOD) was detected in groundwater samples from five Site wells, where analyzed, at concentrations ranging from 2.0 mg/L (MW-12R) to 13 mg/L (MW-23). BOD concentrations were within historical limits except for a historical high at well MW-9.
- Dissolved iron was detected in groundwater samples from nine Site wells, where analyzed, at concentrations ranging from 0.025 J (estimated) mg/L (MW-21) to 0.97 mg/L (MW-23). Dissolved iron concentrations were within historical limits except for historical lows at MW-16 and MW-22.

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

- Sulfate was detected in groundwater samples from 15 Site wells, where analyzed, at concentrations ranging from 23 mg/L (MW-19) to 530 mg/L (MW-5R). Sulfate concentrations were within historical limits except for a historical high at MW-23 and historical lows at MW-13 and MW-22.
- Alkalinity was measured in groundwater samples from 15 Site wells, where analyzed, at concentrations ranging from 140 mg/L (MW-19) to 1,500 mg/L (MW-23). Alkalinity concentrations were within historical limits except for a historical high at MW-24.
- Ammonia was detected in groundwater samples from seven Site wells, where analyzed, at concentrations ranging from 0.080 J mg/L (MW-21) to 210 mg/L (MW-4R). Ammonia concentrations were within historical limits except for historical lows at MW-5R, MW-8, and MW-22 and a historical high at MW-23.
- Phosphorus was detected in nine Site wells, where analyzed, at concentrations ranging from 0.071 J mg/L (MW-5R) to 2.0 mg/L (MW-3). Phosphorus concentrations were within historical limits except for historical lows at MW-5R, MW-16, and MW-24 and a historical high at MW-19.

## 3.2 QUALITY ASSURANCE/QUALITY CONTROL RESULTS

Sample receiving or analysis issues reported by the laboratory are detailed in the qualifiers and case narratives in the laboratory reports in **Appendix B**. The full laboratory notes are available in the case narratives, but a few key issues that affected sample analysis as reported by the laboratory are summarized below:

- Due to FedEx shipping delays, laboratory error, or laboratory re-analysis requirements, samples collected from wells MW-1, MW-7, MW-10, MW-11, MW-13, MW-14, MW-17, MW-18, MW-20, MW-21, and MW-24 for nitrite analysis and wells MW-1, MW-11, MW-21, and MW-23 for BOD analysis were analyzed outside of laboratory holding times and qualified as "H" on **Table 2**.
- Manganese was detected in samples collected from wells MW-4R, MW-8, and MW-22 and the associated method blank and qualified as "B" on **Table 2**; sample results were greater than ten times the value found in the method blank and therefore, not considered to be impacted by the method blank contamination, so associated samples were not re-extracted and/or re-analyzed.

Two field duplicate samples (MW-8-WD-240314 from well MW-8 and MW-17-WD-240312 from well MW-17) were collected per the required frequency in the GW CMP. The relative percent difference (RPD) was evaluated using Equation 1 and the results are summarized in **Appendix C**.

$$RPD = \left[ \frac{|S - D|}{(S + D) \div 2} \right] \times 100$$

Equation 1

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

Where:  
RPD = Relative Percent Difference  
S = First Sample Value (original)  
D = Second Sample Value (duplicate)

The average RPD was 2.88%, indicating acceptable sample collection procedures and precision by the analytical laboratory for each given method and analytical batch.

Four field equipment blanks (EB-1-W-240311, EB-1-W-240312, EB-1-W-240313, and EB-1-W-240314) were collected following decontamination of the non-dedicated sampling equipment (i.e., water level indicator) after sampling of wells MW-1, MW-20, MW-15, and MW-8, respectively, and submitted for laboratory analysis. In EB-1-W-240311, sulfate was detected at a concentration of 5.8 mg/L, nitrate was detected at a concentration of 0.14 mg/L, and alkalinity was detected at a concentration of 6.4 J mg/L. In EB-1-W-240312, nitrate was detected at a concentration of 0.14 mg/L. In EB-1-W-240314, sulfate was detected at a concentration of 0.56 J mg/L. A DI water blank (WB-1-W-240314) was collected to assess the DI water as a source for contaminants found in field equipment blank analysis. In the water blank, nitrate was detected at a concentration of 0.14 mg/L, sulfate was detected at a concentration of 6.1 J mg/L, alkalinity was detected at a concentration of 6.7 J mg/L, 2-butanone was detected at a concentration of 0.0013 J mg/L, and acetone was detected at a concentration of 0.0040 J mg/L. Acetone and 2-butanone are common laboratory contaminants. Detections of nitrate, sulfate, and alkalinity in the equipment blanks and water blank were of similar magnitude and indicate the DI water is the source of the equipment blank detections. Therefore, equipment decontamination is evaluated as sufficient.

Four trip blanks were submitted for VOC analysis in association with groundwater samples. There were no detections in the trip blanks, indicating proper sample handling.

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

### 4.0 Evaluation

Per the GW CMP, EISB and MNA performance monitoring data are to be evaluated on a semi-annual basis by:

- Evaluating EISB and MNA mechanisms through an analysis of the following geochemical indicators at the Site: BOD, alkalinity, sulfate, dissolved or ferrous iron, and ORP.
- Analyzing plume stability using:
  - The Mann-Kendall non-parametric statistical analysis on a well-by-well basis; and
  - Groundwater plume iso-concentrations over time.

These evaluations were performed utilizing the 1Q24 data, and the results are summarized below.

#### 4.1 EISB AND MNA GEOCHEMICAL INDICATOR EVALUATION

The GW CMP identified four EISB monitoring parameters for determining whether groundwater is influenced by EISB or is under MNA conditions: alkalinity, BOD, ferrous iron, and sulfate. In First Quarter 2020, prior to implementation of the Phase I EISB remedy, pre-treatment threshold concentrations were calculated using historical groundwater monitoring data. These calculations were completed as detailed in the *Pre-Treatment Groundwater Monitoring Report*, dated July 2, 2020 (Stantec, 2020b) using United States Environmental Protection Agency (EPA) ProUCL software version 5.1 (EPA, 2016) for alkalinity, BOD, and ferrous iron and EPA Scout software (EPA, 2008) for sulfate. Since the initial calculation, pre-treatment threshold concentrations were calculated using the same methods for well MW-8, and the assumptions used for well MW-21 were applied to new wells MW-22, MW-23, and MW-24. Also, the calculation for ferrous iron was updated to dissolved iron using the dissolved iron laboratory analytical results in place of ferrous iron field test kit results. The resulting pre-treatment threshold concentrations are summarized in **Table 3**.

EISB monitoring parameter concentrations were compared to calculated pre-treatment threshold concentrations to determine if groundwater at a well is classified as under MNA or EISB conditions. Monitoring parameters that were above (for alkalinity, BOD, or ferrous iron) or below (for sulfate) (i.e., outside) calculated pre-treatment threshold concentrations were highlighted in orange on **Table 2**; parameters within calculated pre-treatment threshold concentrations were highlighted in green.

For this evaluation, groundwater at a well is generally defined as under EISB conditions if it meets the following conditions:

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

- 1) at least two EISB parameters were outside the calculated threshold concentrations (see paragraph above) listed in **Table 3**; or
- 2) one EISB parameter was outside its calculated threshold concentration listed in **Table 3** and a trend of EISB conditions (i.e., results outside pre-treatment threshold concentrations) at the well has been observed during at least two consecutive recent sampling events for this parameter.

Therefore, detections of two or more EISB parameters outside the calculated threshold concentrations during a single sampling event or detection of one EISB parameter outside the calculated threshold concentrations over at least two consecutive sampling events would define groundwater in a well as under EISB conditions. However, only one detection of one EISB parameter outside the calculated threshold concentrations during a single sampling event would not define groundwater in a well as under EISB conditions (e.g., during the 1Q22 event, the alkalinity concentration at MW-9 would not classify the well as under EISB conditions). This evaluation considers that naturally fluctuating concentrations have been observed at the Site unrelated to EISB injections. Wells not designated as under EISB conditions are defined as under MNA conditions. Case-by-case determinations may be made going forward on whether the groundwater concentrations indicate EISB or MNA conditions at the monitoring well locations, and the determination process may be modified in the future as more data are evaluated.

Based on a comparison of the 1Q24 analytical results (**Table 2**) to the calculated threshold concentrations (**Table 3**), three wells yielded data consistent with EISB conditions during 1Q24: MW-5R, MW-13 and MW-23. At well MW-5R, one EISB monitoring parameter (alkalinity at a concentration of 980 mg/L) was outside of the threshold concentration (366 mg/L) following a trend of alkalinity concentrations outside of the threshold concentration (consecutively for 13 sampling events since 3Q20). At well MW-13, two EISB monitoring parameters (sulfate and alkalinity at concentrations of 92 mg/L, and 270 mg/L, respectively) were outside of the threshold concentrations (102.8 mg/L and 262.8 mg/L, respectively); both parameters have been outside of the threshold concentrations for three consecutive sampling events since 3Q23. At well MW-23, one EISB monitoring parameter (alkalinity at a concentration of 1,500 mg/L) was outside of the threshold concentration (711 mg/L) following a trend of alkalinity concentrations outside of the threshold concentration (consecutively for three sampling events since 3Q23). In addition, the ORP levels at wells MW-5R and MW-23 were -43.7 mV and -40.1 mV, respectively, providing another line of evidence that the aquifer in these locations is under reducing conditions, which are necessary for denitrification to occur. The number of EISB monitoring parameters outside of the threshold concentrations is decreasing at these well locations, indicating that the EISB treatment capacity from the Phase II acetate injections appears to be decreasing at these locations as it is consumed by bacteria and/or dispersed through the aquifer. This response was expected and has been indicated previously at other monitoring wells near injection wells (MW-4R, MW-12R, MW-13, and MW-21).

For the 1Q24 event, the following monitoring wells had BOD, dissolved iron, sulfate, or alkalinity concentrations within threshold concentrations that were consistent with MNA conditions: MW-1,

# FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

MW-3, MW-4R, MW-8, MW-9, MW-11, MW-12R, MW-16, MW-19, MW-21, MW-22, and MW-24. EISB and MNA conditions were not monitored at MW-7, MW-10, MW-14, MW-15, MW-17, MW-18, and MW-20 because the wells are generally outside of the plume and EISB treatment zones.

## 4.2 PLUME STABILITY

### 4.2.1 Groundwater Plume Iso-concentrations

To assess plume stability, current groundwater plume iso-concentrations and groundwater plume iso-concentrations over time were evaluated. Current 1Q24 groundwater plume iso-concentrations are shown on **Figures 4 through 7**. The iso-concentrations from the 1Q20 pre-treatment sampling event were compared to post-EISB groundwater iso-concentrations from 3Q21, 1Q22, and 3Q22 (during the period after the Phase I EISB monitoring program had ended but before Phase II EISB injections) as well as 1Q24 post-EISB iso-concentrations (after the Phase II EISB monitoring program had ended and the transition had been made to post-EISB monitoring). These groundwater iso-concentration trend maps are included as Figures D-1 through D-4 in **Appendix D**.

As shown on **Figure 4**, the maximum nitrate concentration was observed in well MW-3 (180 mg/L) during the 1Q24 event. Source area wells MW-4R, MW-8, MW-12R, and MW-22 and down-gradient wells MW-9, MW-13, MW-16, MW-21, and MW-23 also had nitrate concentrations above the CUL of 10 mg/L. Nitrate concentrations below the CUL in down-gradient and cross-gradient wells MW-5R, MW-14, MW-15, MW-17, MW-18, MW-19, and MW-20 define the Site nitrate plume to the east, west, and south.

As shown in Figure D-1 in **Appendix D**, the nitrate plume size has decreased overall since 1Q20, most notably in the area of the plume with concentrations above 100 mg/L. The overall 1Q24 nitrate plume area was approximately 8.8% smaller when compared to 1Q20 pre-treatment conditions. In addition, the area within the nitrate 100 mg/L iso-concentration was approximately 64% smaller in 1Q24 versus 1Q20.

As shown on **Figure 5**, the maximum dinoseb concentration was observed in well MW-12R (0.12 mg/L). Source area well MW-4R and down-gradient well MW-16 also had dinoseb concentrations above the CUL of 0.007 mg/L. Dinoseb concentrations in down-gradient, cross-gradient, and up-gradient wells MW-3, MW-5R, MW-9, MW-13, MW-15, MW-19, and MW-21 through MW-24 were below the CUL, defining the edges of the Site dinoseb plume boundary.

As shown in Figure D-2 in **Appendix D**, the dinoseb plume size has decreased overall since 1Q20. The overall 1Q24 dinoseb plume area was approximately 57.6% smaller when compared to 1Q20 pre-treatment conditions. In 1Q24, there were no longer dinoseb concentrations above 0.7 mg/L, and wells that had previously been within the dinoseb plume boundary (MW-3, MW-9, and MW-23) currently have concentrations below the 0.007 mg/L CUL.

As shown in **Figure 6**, the maximum 1,2-DCP concentration was observed in well MW-12R (0.37 mg/L). Source area well MW-4R and down-gradient wells MW-9, MW-16, MW-19, MW-23,

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

and MW-24 also had 1,2-DCP concentrations above the CUL of 0.005 mg/L. 1,2-DCP concentrations in down-gradient, cross-gradient, and up-gradient wells MW-3, MW-13, MW-15, and MW-21 were below the CUL, defining the edges of the Site 1,2-DCP plume.

As shown in Figure D-3 in **Appendix D**, there was no significant difference in the 1,2-DCP plume extents between 1Q20 and 1Q24; the change in plume size was approximately 8.3% larger in 1Q24; however, the magnitude of concentrations has decreased and in 1Q24 there were no longer 1,2-DCP concentrations above 0.5 mg/L.

As shown on **Figure 7**, total arsenic concentrations exceeding the CUL of 0.01 mg/L do not follow a similar distribution as the other Site IHSs and do not appear to be exclusively associated with historical operations at the Site. The maximum concentration of arsenic in 1Q24 was in well MW-11, which is the furthest up-gradient well. Total arsenic concentrations equal to or exceeding the CUL were present: 1) in up-gradient, source area, and down-gradient wells in the west, central, and east/southeast portions of the Site (MW-4R, MW-8, MW-10, MW-11, MW-12R, MW-15, MW-17, and MW-23); 2) in two wells in the northern portion of the Site (MW-1 and MW-7); and 3) in four wells at the southeast extent of the Site (MW-13, MW-18, MW-19, and MW-20). Total arsenic concentrations in down-gradient and cross-gradient wells MW-3, MW-5R, MW-9, MW-14, MW-16, MW-21, MW-22, and MW-24 were below the CUL, defining the separation of the Site arsenic plume boundaries.

As shown in Figure D-4 in **Appendix D**, the arsenic plume size has increased overall since 1Q20, specifically in the source area (wells MW-5R and MW-8) and the area down-gradient of the source area (wells MW-17 and MW-23). The overall 1Q24 arsenic plume area was approximately 36.3% larger when compared to 1Q20 pre-treatment conditions. This is expected because the EISB groundwater remedy directly increases the mobility of arsenic from aquifer soil and secondarily decreases the capacity of the aquifer to adsorb arsenic by reducing the amount of adsorbent minerals (iron and manganese oxides) in the water-bearing zone (i.e., generating more reducing aquifer conditions). As arsenic migrates out of the treatment zone where adsorbent capacity might be depleted, the residual contaminants in groundwater are attenuated by naturally-occurring iron and manganese oxides adsorbing and re-sequestering the ions (i.e., returning to more oxidizing aquifer conditions). This is reflected in the down-gradient wells (MW-9, MW-16, MW-21, and MW-24) that were below the CUL and define the separation of the Site arsenic plume boundaries.

### 4.2.2 Plume Trend Analysis

The IHS concentrations from the 1Q24 groundwater monitoring event were compared to CULs. When an IHS exceeded the CUL at a well location, a trend analysis was performed using the Mann-Kendall trend test in the Ecology Package A, Natural Attenuation Analysis Tool Package (Ecology, 2005). Trends were not analyzed at wells that indicated EISB conditions for more than one parameter or for analytes where concentrations were below the method detection limit (MDL) or CUL. The trend analysis was completed using the maximum amount of monitoring events (16) unless there were insufficient data available or there was a gap greater than 3 years

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

in the historical data; generally, this includes a data range from 3Q16 to present. In addition, to avoid bias of the trend evaluation by the EISB remedy when EISB conditions were indicated at a well, concentration data from that sampling event for constituents that are directly affected by EISB (e.g., nitrate, dinoseb, arsenic, iron, and manganese) were not included in the trend analysis, while concentration data for constituents that are not directly affected by EISB (i.e., VOCs) were retained. The calculation software outputs are provided for each applicable well in **Appendix E**.

**Table 4** summarizes the trend of each analyzed IHS that exceeded its CUL at a monitoring well during the 1Q24 monitoring event, excluding any wells that indicated EISB conditions. Only analytes that exceeded CULs are shown in the table. The status of the concentration trends for each IHS is further summarized below. No exceedances of total iron, 2,4-D, or 2-methylnaphthalene were indicated, and those IHSs are excluded from the discussion.

- **Nitrate:** Collectively, nitrate concentrations through 1Q24 generally indicate stable or decreasing trends within the plume. Nitrate concentrations exceeded the CUL at 10 of the 23 well locations (MW-3, MW-4R, MW-8, MW-9, MW-12R, MW-13, MW-16, MW-21, MW-22, and MW-23; as shown on **Figure 4**); two of these wells (MW-13 and MW-23) are under EISB conditions and trends were not calculated. Nitrate concentrations in three wells within the nitrate plume (MW-4R, MW-8, and MW-21) indicate decreasing trends (**Table 4**). Nitrate concentrations indicate an increasing trend at one well (MW-3) within the nitrate plume and a stable trend at four wells (MW-9, MW-12R, MW-16, and MW-22) located within or down-gradient of the Site source area in the northern and central portion of the overall plume area.
- **Nitrite:** Nitrite concentrations exceeded the CUL at three of the 23 well locations (MW-5R, MW-22, and MW-23); two of these wells (MW-5R and MW-23) are under EISB conditions and trends were not calculated. The nitrite concentrations at well MW-22 indicate an increasing trend within the plume, though the 1Q24 concentration is within historical limits and the concentration has decreased since the previous sampling event.
- **Dinoseb:** Collectively, dinoseb concentrations through 1Q24 indicate a decreasing trend in the source area. Dinoseb concentrations exceeded the CUL at three of the 13 well locations where it was analyzed (MW-4R, MW-12R, and MW-16; as shown on **Figure 5**). Dinoseb concentrations at well MW-4R indicate a decreasing trend (**Table 4**) in the north-central portion of the source area and at well MW-12R indicate a decreasing trend within the eastern portion of the source area. Dinoseb concentrations at well MW-16 indicate an increasing trend in the down-gradient portion of the plume, though the 1Q24 concentration is within historical limits.
- **1,2-DCP:** Collectively, the 1,2-DCP concentrations through 1Q24 indicate stable trends within the source area and a decreasing trend down-gradient. 1,2-DCP concentrations exceeded the CUL at six of the 13 well locations where it was analyzed (MW-9, MW-12R, MW-16, MW-19, MW-23, and MW-24; as shown on **Figure 6**); one of these wells (MW-23) is

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

under EISB conditions and trends were not calculated. 1,2-DCP concentrations at three wells (MW-9, MW-12R, and MW-24) indicate stable trends in the northern, eastern, and central portion of the plume (**Table 4**). 1,2-DCP concentrations at well MW-16 indicate a decreasing trend in the down-gradient portion of the plume, while the trend at down-gradient well MW-19 is undetermined.

- **Benzene and Chlorobenzene:** These VOCs exceeded their CULs at one of the 13 well locations where they were analyzed (MW-12R). Both constituents' concentrations indicate stable trends (**Table 4**) at this location within the eastern portion of the source area.
- **Total Arsenic:** Total arsenic concentrations through 1Q24 generally indicate stable or decreasing trends at the Site with separate areas exceeding the CUL (as shown on **Figure 7**). Decreasing trends were indicated in wells MW-10, MW-11, MW-12R, MW-18, and MW-19; stable trends were indicated in wells MW-4R, MW-7, MW-8, MW-15, and MW-20. (**Table 4**). Concentrations at wells MW-1 and MW-17 indicate an increasing trend. The trends at wells MW-13 and MW-23 were not analyzed due to EISB conditions.
  - Following the process outlined in Section 3.3.2 of the GW CMP, a statistical approach evaluating the arsenic concentrations at the Site as a whole was utilized. In addition, a remediation level for arsenic in groundwater at the Site per Washington Administrative Code 173-340-355 was defined in the *Groundwater Remedy Engineering Design Report* (Stantec, 2016). A Site-wide total arsenic 95% upper confidence limit concentration (UCL95) of 0.0152 mg/L was calculated for 1Q24 using EPA ProUCL software, which is below the total arsenic remediation level of 0.04 mg/L.
  - As discussed in Section 4.2.1, the EISB groundwater remedy likely directly increases the mobility of arsenic from aquifer soil and secondarily decreases the capacity of the aquifer to adsorb arsenic by reducing the amount of adsorbent minerals (iron and manganese oxides) in the water-bearing zone (i.e., generating more reducing aquifer conditions). Arsenic will tend to resorb to soil after returning to more oxidizing aquifer conditions, which appears to be occurring with the decreasing trends observed in select wells.
- **Total Manganese:** Total manganese concentrations exceeded the CUL at two of the 23 well locations (MW-5R and MW-22) where it was analyzed; well MW-5R is under EISB conditions and trends were not calculated. The total manganese concentrations at well MW-22 indicate a stable trend.

In addition to the Mann-Kendall trend analysis, hydrographs were prepared for each well using groundwater elevations and concentrations for key constituents from the historical monitoring period (Third Quarter 2005 to present) to illustrate trends over time. These hydrographs are included in **Appendix F**. The hydrographs were generally consistent with the Mann-Kendall trend analysis results.

## FIRST QUARTER 2024 GROUNDWATER MONITORING REPORT

Bee-Jay Scales Site  
October 18, 2024

## 5.0 Conclusions and Recommendations

The 1Q24 semi-annual groundwater monitoring event continues post-Phase II EISB groundwater monitoring requirements. As stated in Section 2.0, the objectives of the post-EISB monitoring per the GW CMP were to:

- Assess the progress of the groundwater remedy throughout the Site groundwater plume, including both EISB and MNA performance, as applicable; and
- Maintain monitoring of the Site boundary monitoring wells in addition to the Site POC wells or wells within the nitrate groundwater plume.

The EISB monitoring parameter concentrations during this event indicated that Site groundwater remained under or returned to MNA conditions in all but three wells: MW-5R, MW-13, and MW-23; however, the groundwater appears to be transitioning out of EISB conditions, with only one EISB monitoring parameter remaining outside the calculated threshold concentrations in wells MW-5R and MW-23 (alkalinity) and two parameters at well MW-13 (sulfate and alkalinity). The IHS data support this observed transition; although EISB conditions have been indicated at wells MW-5R and MW-23, as demonstrated by nitrate concentrations below reporting limits and elevated concentrations of metals (e.g., total manganese), increasing nitrate concentrations and decreasing metals concentrations have been observed at these wells over the last two or three sampling events.

Comparison of iso-concentrations from the 1Q20 Phase I pre-treatment sampling event to the 1Q24 post-Phase II EISB sampling event and considering trends, the nitrate plume footprint decreased overall, most notably in the area of the plume with concentrations above 100 mg/L. The overall dinoseb plume size decreased by more than 50%; in 1Q24, there were no dinoseb concentrations above 0.7 mg/L and concentrations are currently below the CUL in several wells that had previously been within the plume boundary. There was no significant change in the 1,2-DCP plume extent; however, the magnitude of concentrations decreased and in 1Q24, there were no 1,2-DCP concentrations above 0.5 mg/L. The distribution of total arsenic continues to differ from the distribution of other Site IHSs and appears not to be exclusively related to historical Site operations. The arsenic plume sizes have increased overall, specifically in the source area and the area down-gradient of the source area. This increased mobility is expected due to the Phase II EISB groundwater remedy implementation; however, the lower concentrations in the further down-gradient wells demonstrate that residual metals in groundwater are being attenuated before reaching these locations.

It is recommended that the semi-annual post-EISB groundwater remedy performance monitoring program continue.

**Table 1**  
**Cumulative Site Groundwater Elevations (Since 2005)**  
Bee-Jay Scales, Sunnyside, Washington

Well ID	Quarter <sup>1</sup>	Date	TOC Elevation <sup>2</sup> (feet above MSL)	Depth to GW (feet below TOC)	GW Elevation (feet above MSL)
MW-23	1Q22	03/28/22	745.29	9.69	735.60
	3Q22	07/11/22	745.29	9.58	735.71
	4Q22	12/06/22	745.29	9.75	735.54
	1Q23	03/06/23	745.29	9.57	735.72
	2Q23	05/16/23	745.29	9.58	735.71
	3Q23	08/21/23	745.29	10.03	735.26
	4Q23	12/05/23	745.29	9.63	735.66
	1Q24	03/11/24	745.29	9.20	736.09
MW-24	1Q22	03/28/22	744.62	9.24	735.38
	3Q22	07/11/22	744.62	9.08	735.54
	4Q22	12/06/22	744.62	9.22	735.40
	1Q23	03/06/23	744.62	8.99	735.63
	2Q23	05/16/23	744.62	9.27	735.35
	3Q23	08/21/23	744.62	9.58	735.04
	4Q23	12/05/23	744.62	9.34	735.28
	1Q24	03/11/24	744.62	8.61	736.01

**Notes:**

GW = groundwater

NA = not accessible

MSL = mean sea level

TOC = top of casing

<sup>1</sup> Sampling frequency reduced from quarterly to semi-annually following the 3Q08 event, increased to quarterly following the 1Q13 event, reduced to semi-annually following the 2Q14 event, increased to quarterly following the 1Q20 event, decreased to semi-annually following the 2Q21 event, increased to quarterly following the 3Q22 event, and decreased to semi-annually following the 4Q23 event.

<sup>2</sup> Based on 2020 and 2022 survey data using North American Vertical Datum of 1988 (NAVD88).

<sup>3</sup> Depth to GW at MW-12 during 4Q06 taken just prior to sampling because well was covered by a drum during gauging.

<sup>4</sup> Depth to GW at MW-9 during 3Q08 taken just prior to sampling because well was covered by boxes during gauging.

<sup>5</sup> Depth to GW at MW-13 during 3Q08 not measured because well could not be opened.

<sup>6</sup> Depth to GW at MW-9 during 1Q09 taken just prior to sampling because well was covered by boxes during gauging.

<sup>7</sup> Depth to GW at MW-13 during 1Q09 & 3Q09 taken just prior to sampling because well could not be opened during gauging.

<sup>8</sup> Depth to GW at MW-5 during 3Q11 not measured because there was biological hazard (wasp nest) adjacent to well.

<sup>9</sup> Depth to GW at MW-16 during 2Q14 taken just prior to sampling because well was covered by pallets during gauging.

<sup>10</sup> Depth to GW at MW-14 during 3Q14 taken just prior to sampling because well was covered by truck during gauging.

<sup>11</sup> Depth to GW at MW-9, MW-14, & MW-15 during 1Q17 taken just prior to sampling because well inaccessible during gauging.

<sup>12</sup> Depth to GW at MW-4R during 4Q20 was inaccurate on gauging log, so value from sampling form was used.

<sup>13</sup> Depth to GW at MW-6 during 3Q23, 4Q23, and 1Q24 not measured because brush and metal debris covered well area.

<sup>14</sup> Depth to GW at MW-16 during 4Q23 not measured because well was covered by pallets.

Table 2

**Notes:**

<sup>A</sup> Groundwater CULs for Site Indicator Hazardous Substances defined in the Cleanup Action Plan, dated March 8, 2013.

<sup>B</sup> Enhanced in-situ bioremediation (EISB) threshold concentration calculation defined in the Pre-Treatment Groundwater Monitoring Report, dated July 2, 2020.

<sup>C</sup> Calculated using pre-treatment dissolved iron laboratory data (field test kit data not included) per method identified in Pre-Treatment Groundwater Monitoring Report, dated July 2, 2020.

Results greater than or equal to the CULs are in **bold**

**85** Results indicate monitoring parameter is above (for alkalinity, BOD, or ferrous iron) or below (for sulfate) calculated Enhanced In-Situ Bioremediation Threshold Concentration

**0.72** Results indicate monitoring parameter is within calculated Enhanced In-Situ Bioremediation Threshold Concentration

\*Potential pH and ORP probe malfunction affecting parameter results at several wells in 1Q23. DO probe malfunction affecting results at several wells in 3Q23 and 4Q23. See Water Sample Field Data Sheets for details.

\*\*Converted DO from % saturation to mg/L at 13.1 °C using U of MN Natural Resources Research Institute % Saturation Calculator (<https://www.waterontheweb.org/under/waterquality/dosatcalc.html>).

1,2-DCP = 1,2-Dichloropropane

2,4-D = 2,4-Dichlorophenoxyacetic acid

2-MN = 2-Methylnaphthalene

BOD = Biochemical oxygen demand

CUL = Clean-up Level

DO = dissolved oxygen

EPA = United States Environmental Protection Agency

NA = Not applicable

ORP = oxidation-reduction potential

SM = Standard Methods

mg/L = milligrams per liter

°C = degrees Celsius

µS/cm = microSiemens per centimeter

mV = millivolts

NTU = nephelometric turbidity units

-- = not analyzed

< = less than the method detection limit

J = estimated value

B = compound was found in the blank and sample

H = holding time not met

**Table 3****EISB Groundwater Remedy Pre-Treatment Threshold Concentrations**

Bee-Jay Scales Site, Sunnyside, Washington

Monitoring Well ID	Well Designation	EISB Parameter	Source of Pre-Treatment Data	Number of Pre-Treatment Observations	Date Range of Pre-Treatment Data	Pre-Treatment Threshold Concentration
All Wells	Any	BOD	Nitrate Plume + MW-19	21	8/20/2019 - 3/13/2020	64.2 mg/L <sup>1</sup>

**Notes:**

MNA = Monitored Natural Attenuation

CUL = Cleanup Level

mg/L = Milligrams Per Liter

<sup>1</sup> Arsenic and manganese are total, not dissolved, concentrations.

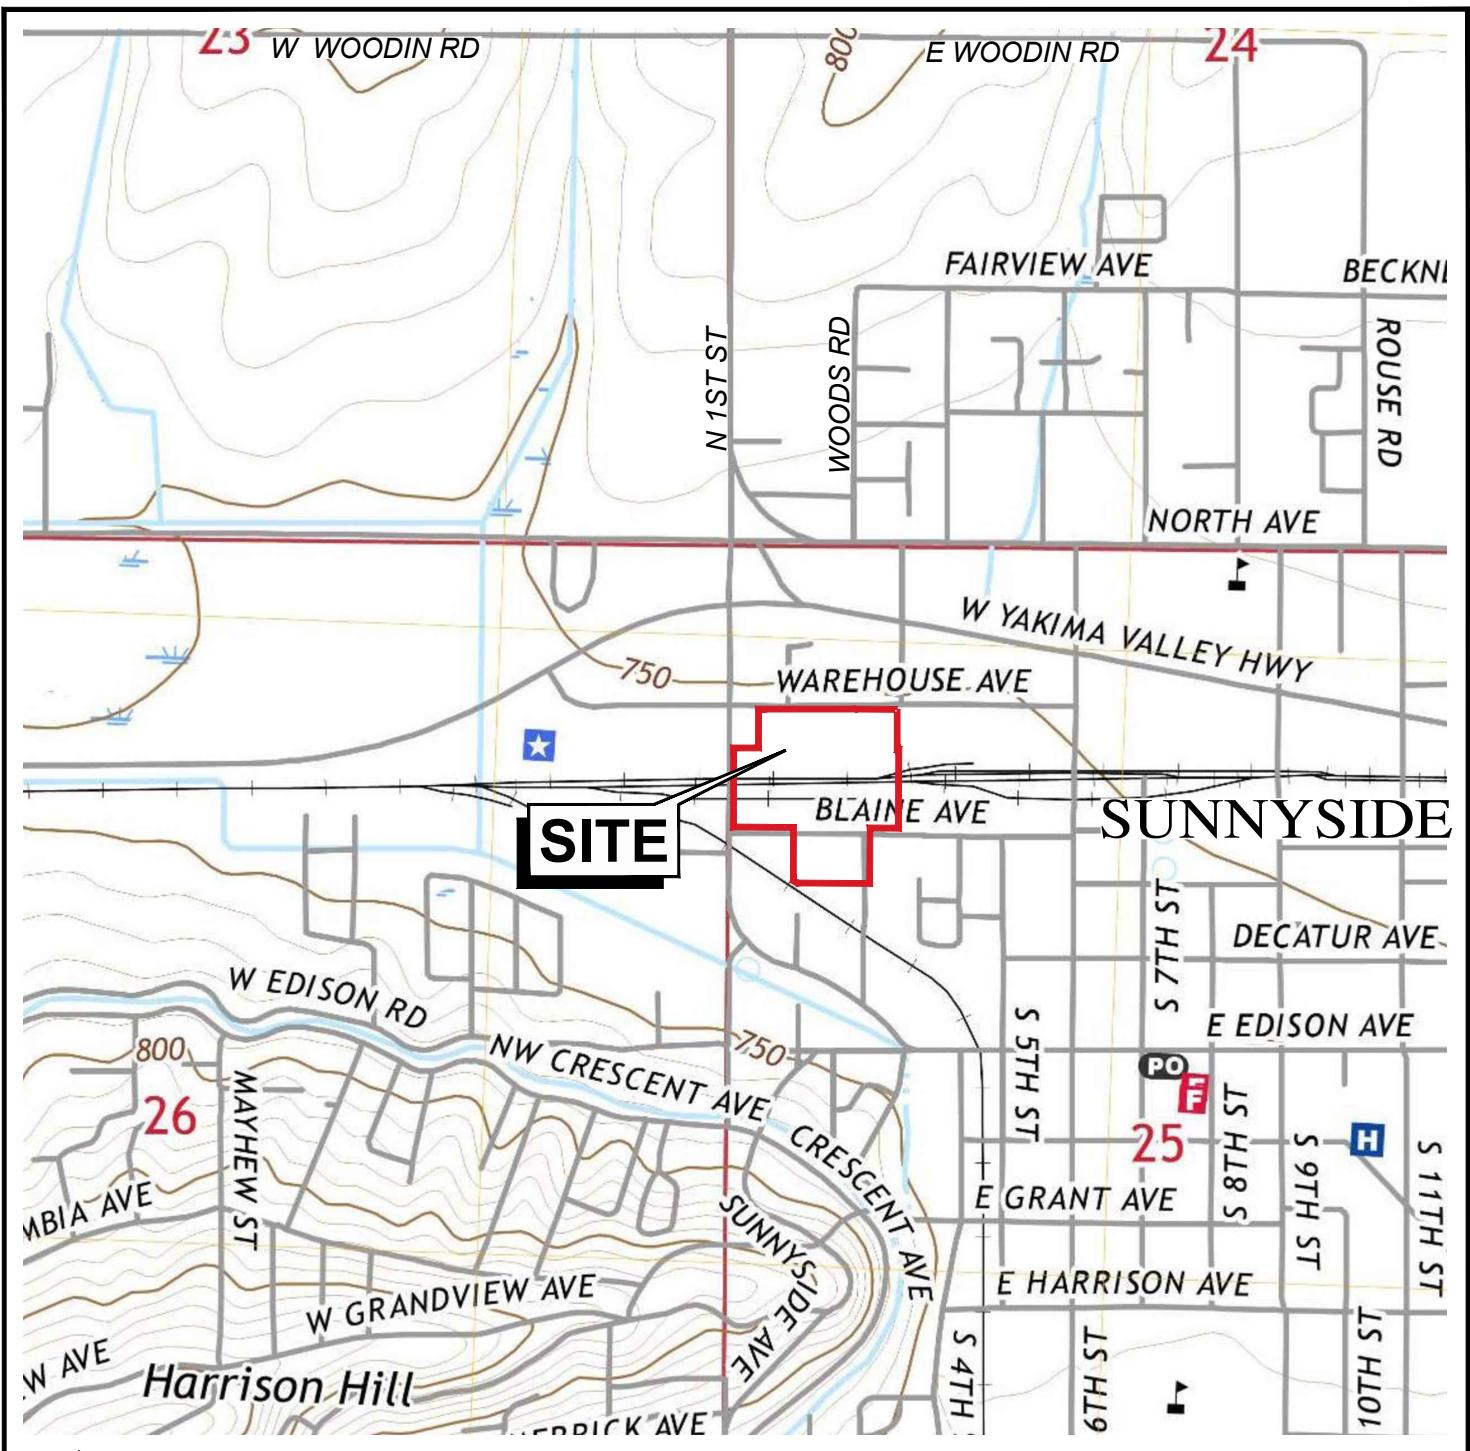

<sup>2</sup> Only IHSs that exceeded the CUL at a monitoring well are shown in this table. Trend analysis was not completed for results that were non-detect or detected concentration was below the CUL, or for wells that currently indicate enhanced in-situ bioremediation (EISB) conditions.

<sup>3</sup> Data from timeframes when well was under EISB conditions were excluded in monitoring well trend analysis for select analytes affected by EISB. EISB conditions indicated by: 1) at least two EISB parameters above (for alkalinity, BOD, or ferrous iron) or below (for sulfate) calculated threshold concentrations; or 2) one parameter above or below calculated threshold concentrations and a trend of EISB conditions in past events.

<sup>4</sup> This well was not analyzed for EISB monitoring parameters.

<sup>5</sup> Trend undetermined because data set is below 85% level of confidence with a Coefficient of Variation (CV) > 1.

### **Analytical Laboratory Reports**

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Marisa Kaffenberger  
Stantec Consulting Corporation  
2321 Club Meridian Drive  
Suite E  
Okemos, Michigan 48864

Generated 3/22/2024 5:39:52 PM

## JOB DESCRIPTION

Bee Jay Scales

## JOB NUMBER

410-163744-1

# Eurofins Lancaster Laboratories Environment Testing, LLC

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Authorized for release by  
Amek Carter, Project Manager  
[Loran.Carter@et.eurofinsus.com](mailto:Loran.Carter@et.eurofinsus.com)  
(717)556-7252

Generated

## Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

**Eurofins Lancaster Laboratories Environment**

## Job Narrative 410-163744-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 3/13/2024 9:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.8°C and 3.0°C.

### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. The COC is missing Sample Preservation. This does not meet regulatory requirements.

### GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) analyzed on 410-484496 is compliant under 8260C/D method criteria for Acetone . The software does not display the % Drift data to the whole number as is listed in the method (i.e. limit of 20%). When applying the evaluation to a whole number, the check passes the criteria with a value of 20% Drift.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-484496 recovered outside acceptance criteria, low biased, for 2-Methylnaphthalene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The preservative used in the sample containers provided is not compatible with the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-1-W-240312 (410-163744-12). The requested target analyte list includes Acrylonitrile , acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Herbicides

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### General Chemistry

Method 353.2\_Nitrite: Reanalysis of the following samples was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. MW-7-W-240311 (410-163744-1), MW-1-W-240311 (410-163744-2), EB-1-W-240311 (410-163744-3), MW-10-W-240311 (410-163744-4), MW-14-W-240311 (410-163744-5), MW-17-W-240312 (410-163744-6), MW-17-WD-240312 (410-163744-7), MW-18-W-240312 (410-163744-8) and MW-20-W-240312 (410-163744-9)

Method SM5210B\_Calc: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: MW-1-W-240311 (410-163744-2) and EB-1-W-240311 (410-163744-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## Accreditation/Certification Summary

Client: Stantec Consulting Corporation  
Project/Site: Bee Jay Scales

Job ID: 410-163744-1

### Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C457	04-11-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	2-Methylnaphthalene
8260D		Water	Ethyl ether

## Method Summary

Client: Stantec Consulting Corporation

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable, where thermal pres is required (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temp acceptable, where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Container preservation not listed on COC.
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	True	
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	True	

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Marisa Kaffenberger  
Stantec Consulting Corporation  
2321 Club Meridian Drive  
Suite E  
Okemos, Michigan 48864

Generated 3/25/2024 5:58:37 PM

## JOB DESCRIPTION

Bee Jay Scales

## JOB NUMBER

410-163914-1

# Eurofins Lancaster Laboratories Environment Testing, LLC

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Authorized for release by  
Amek Carter, Project Manager  
[Loran.Carter@et.eurofinsus.com](mailto:Loran.Carter@et.eurofinsus.com)  
(717)556-7252

Generated  
3/25/2024 5:58:37 PM

## Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
H3	Sample was received and analyzed past holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
s	Seeded Control Blank (SCB) Recovery High

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

## Job Narrative 410-163914-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 3/14/2024 9:40 AM and 3/15/2024 8:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.5°C, 3.9°C and 4.5°C.

### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. The COC is missing Sample Preservation. This does not meet regulatory requirements.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, the sample was not received. MW-11-W-240312 (410-163914-1) and TB-1-W-240313 (410-163914-4)

Samples received 3/15/24 08:50.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, only two 1000mL unpreserved ambers were received. MW-21-W-240312 (410-163914-2)

Missing containers received 3/15/24 08:50.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, only two 1000mL unpreserved ambers, one 500mL plastic sulfuric preserved, and one 250mL plastic nitric preserved container for total metals received. MW-23-W-240313 (410-163914-3)

Missing containers received 3/15/24 08:50.

The following sample(s) was listed on the Chain-of-Custody (COC); however, due to a shipping delay, only two 1000mL unpreserved ambers, one 500mL unpreserved plastic, one 500mL sulfuric preserved plastic, one 250mL sulfuric preserved plastic, and one 250mL nitric preserved plastic container for filtered metals were received. MW-9-W-240313 (410-163914-5)

Missing containers received 3/15/24 08:50.

### GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) analyzed on 410-484496 is compliant under 8260C/D method criteria for Acetone . The software does not display the % Drift data to the whole number as is listed in the method (i.e. limit of 20%). When applying the evaluation to a whole number, the check passes the criteria with a value of 20% Drift.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-484496 recovered outside acceptance criteria, low biased, for 2-Methylnaphthalene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The preservative used in the sample containers provided is not compatible with the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW-21-W-240312 (410-163914-2), MW-23-W-240313 (410-163914-3), TB-1-W-240313 (410-163914-4), MW-9-W-240313 (410-163914-5), MW-15-W-240313 (410-163914-6) and EB-1-W-240313 (410-163914-7). The requested target analyte list includes Acrylonitrile , acid-labile compounds that degrade

## Case Narrative

Client: Stantec Consulting Corporation  
Project: Bee Jay Scales

Job ID: 410-163914-1

### Job ID: 410-163914-1 (Continued)

### Eurofins Lancaster Laboratories Environment

in an acidic medium.

Method 8260D: The following sample(s) was collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The sample was analyzed within the 7-day holding time specified for unpreserved samples: MW-23-W-240313 (410-163914-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### Herbicides

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### HPLC/I/C

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### General Chemistry

Method 353.2\_Nitrite: The following sample was analyzed outside of analytical holding time due to laboratory error: MW-21-W-240312 (410-163914-2).

Method 365.1: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 7: MW-23-W-240313 (410-163914-3). The sample(s) were preserved to the appropriate pH in the laboratory.

This does not meet regulatory requirements.

Method SM5210B\_Calc: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: MW-21-W-240312 (410-163914-2) and MW-23-W-240313 (410-163914-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## Accreditation/Certification Summary

Client: Stantec Consulting Corporation  
Project/Site: Bee Jay Scales

Job ID: 410-163914-1

### Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C457	04-11-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	2-Methylnaphthalene
8260D		Water	Ethyl ether

## Method Summary

Client: Stantec Consulting Corporation

Project/Site: Bee Jay Scales

Job ID: 410-163914-1

Method	Method Description	Protocol	Laboratory

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Marisa Kaffenberger  
Stantec Consulting Corporation  
2321 Club Meridian Drive  
Suite E  
Okemos, Michigan 48864

Generated 3/28/2024 7:21:22 PM

## JOB DESCRIPTION

Bee Jay Scales

## JOB NUMBER

410-164178-1

# Eurofins Lancaster Laboratories Environment Testing, LLC

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Authorized for release by  
Amek Carter, Project Manager  
[Loran.Carter@et.eurofinsus.com](mailto:Loran.Carter@et.eurofinsus.com)  
(717)556-7252

Generated

## Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
s	Seeded Control Blank (SCB) Recovery High

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
d	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present

## Job Narrative 410-164178-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 3/15/2024 12:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.5°C, 3.1°C and 4.6°C.

### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. The COC is missing Sample Preservation. This does not meet regulatory requirements.

### GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-486596 recovered outside acceptance criteria, low biased, for Acetone. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-486596 recovered above the upper control limit for 1,3,5-Trimethylbenzene, 2-Methylnaphthalene, n-Butylbenzene, p-Isopropyltoluene, sec-Butylbenzene and tert-Butylbenzene. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: TB-1-W-240314 (410-164178-3). The requested target analyte list includes Acrylonitrile , an acid-labile compound that degrades in an acidic medium.

Method 8260D: The preservative used in the sample containers provided is not compatible with the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW-24-W-240313 (410-164178-1), MW-13-W-240313 (410-164178-2), MW-12R-W-240314 (410-164178-4), MW-3-W-240314 (410-164178-5), MW-16-W-240314 (410-164178-6) and WB-1-W-240314 (410-164178-7). The requested target analyte list includes Acrylonitrile , acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) result for batch 410-487018 was outside acceptance criteria, low biased for Ethyl ether. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Herbicides

Method 8151A: Surrogate recovery for the following sample was outside control limits: MW-12R-W-240314 (410-164178-4). Evidence of matrix interference is present.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### General Chemistry

### Eurofins Lancaster Laboratories Environment

Method 353.2\_Nitrite: The following samples were received with less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: MW-24-W-240313 (410-164178-1) and MW-13-W-240313 (410-164178-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Suite E  
Okemos, Michigan 48864

Generated 3/29/2024 12:28:25 AM

## JOB DESCRIPTION

Bee Jay Scales

## JOB NUMBER

410-164256-1

# Eurofins Lancaster Laboratories Environment Testing, LLC

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Authorized for release by  
Amek Carter, Project Manager  
[Loran.Carter@et.eurofinsus.com](mailto:Loran.Carter@et.eurofinsus.com)  
(717)556-7252

Generated  
3/29/2024 12:28:25 AM

## Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent

## Job Narrative 410-164256-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 3/16/2024 9:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 3.0°C, 3.7°C and 4.1°C.

### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. The COC is missing Sample Preservation. This does not meet regulatory requirements.

### GC/MS VOA

Method 8260D: The preservative used in the sample containers provided is not compatible with the Method 8260 analytes requested. The following samples were received preserved with hydrochloric acid: MW-22-W-240314 (410-164256-1), MW-4R-W-240314 (410-164256-6) and TB-1-W-240315 (410-164256-7). The requested target analyte list includes Acrylonitrile , acid-labile compounds that degrade in an acidic medium.

Method 8260D: The initial calibration verification (ICV) result for batch 410-487018 was outside acceptance criteria, low biased for Ethyl ether. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-487991 recovered above the upper control limit for Trichlorofluoromethane. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-487991 recovered outside acceptance criteria, low biased, for 2-Butanone and trans-1,4-Dichloro-2-butene. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The preservative used in the sample containers provided is not compatible with the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid: MW-5R-W-240314 (410-164256-2). The requested target analyte list includes Acrylonitrile , acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Herbicides

Method 8151A: Surrogate recovery for the following sample was outside control limits: MW-4R-W-240314 (410-164256-6). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method 8151A: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 410-485876 and analytical batch 410-486046 recovered outside control limits for multiple analytes. The associated sample(s) was re-prepared and/or re-analyzed outside holding time and the LCS is within limits. Results are reported from the initial trial. MW-22-W-240314 (410-164256-1), MW-5R-W-240314 (410-164256-2) and MW-4R-W-240314 (410-164256-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Metals

## Case Narrative

Client: Stantec Consulting Corporation

Job ID: 410-164256-1

### Job ID: 410-164256-1 (Continued)

### Eurofins Lancaster Laboratories Environment

Method 6020B - Total Recoverable: The method blank for 410-485996 contained Manganese above the method detection limit (MDL) at a concentration of 0.0012 mg/L. Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

## Surrogate Summary

Client: Stantec Consulting Corporation  
Project/Site: Bee Jay Scales

Job ID: 410-164256-1

### Method: 8260D - Volatile Organic Compounds by GC/MS

Matrix: Water

Prep Type: Total/NA

Lab Sample ID	Client Sample ID	Percent Surrogate Recovery (Acceptance Limits)			
		DCA (80-120)	BFB (80-120)	DBFM (80-120)	TOL (80-120)
410-164256-1	MW-22-W-240314	103	98	102	101
410-164256-2	MW-5R-W-240314	100	98	104	100
410-164256-6	MW-4R-W-240314	104	98	103	102
410-164256-7	TB-1-W-240315	103	98	104	101
LCS 410-487018/4	Lab Control Sample	102	96	101	103
LCS 410-487991/4	Lab Control Sample	100	99	102	101
LCSD 410-487018/5	Lab Control Sample Dup	103	97	101	102
LCSD 410-487991/5	Lab Control Sample Dup	101	97	102	100
MB 410-487018/7	Method Blank	101	97	101	104
MB 410-487991/7	Method Blank	101	97	103	99

#### Surrogate Legend

DCA = 1,2-Dichloroethane-d4 (Surr)

BFB = 4-Bromofluorobenzene (Surr)

DBFM = Dibromofluoromethane (Surr)

TOL = Toluene-d8 (Surr)

### Method: 8151A - Herbicides (GC)

Matrix: Water

Prep Type: Total/NA

Lab Sample ID	Client Sample ID	Percent Surrogate Recovery (Acceptance Limits)	
		DCPAA1 (34-142)	DCPAA2 (34-142)
410-164256-1	MW-22-W-240314	58 cn	52 cn
410-164256-2	MW-5R-W-240314	73 cn	67 cn
410-164256-6	MW-4R-W-240314	30 S1- cn	23 S1- cn
LCS 410-485876/2-A	Lab Control Sample	74	71
LCSD 410-485876/3-A	Lab Control Sample Dup	45	40
MB 410-485876/1-A	Method Blank	47	43

#### Surrogate Legend

DCPAA = 2,4-Dichlorophenylacetic acid (Surr)

## Accreditation/Certification Summary

Client: Stantec Consulting Corporation  
Project/Site: Bee Jay Scales

Job ID: 410-164256-1

### Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C457	04-11-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	2-Methylnaphthalene
8260D		Water	Ethyl ether

## Method Summary

Client: Stantec Consulting Corporation

Project/Site: Bee Jay Scales

Job ID: 410-164256-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	ELLE
8151A	Herbicides (GC)	SW846	ELLE
EPA 300.0 R2.1	Anions, Ion Chromatography	EPA	ELLE
6020B	Metals (ICP/MS)	SW846	ELLE
2320B-2011	Alkalinity, Total	SM	ELLE
353.2	Nitrate by Calculation	EPA	ELLE
353.2	Nitrogen, Nitrite	EPA	ELLE
365.1	Phosphorus, Total	EPA	ELLE
5210 B-2016	BOD, 5-Day	SM	ELLE
EPA 350.1	Nitrogen, Ammonia	EPA	ELLE
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	ELLE
365.1	Sample Digestion for Total Phosphorus	MCAWW	ELLE
5030C	Purge and Trap	SW846	ELLE
8151A	Extraction (Herbicides)	SW846	ELLE
Non-Digest Prep	Preparation, Non-Digested Aqueous Metals	EPA	ELLE

**Creator: Miller, Wesley R**

Question	Answer	Comment	
The cooler's custody seal is intact.	N/A		1
The cooler or samples do not appear to have been compromised or tampered with.	True		2
Samples were received on ice.	True		3
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True		4
Cooler Temperature is recorded.	True		5
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A		6
WV: Container Temperature is recorded.	N/A		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
There are no discrepancies between the containers received and the COC.	True		11
Sample containers have legible labels.	True		12
Containers are not broken or leaking.	True		13
Sample collection date/times are provided.	True		14
Appropriate sample containers are used.	True		15
Sample bottles are completely filled.	True		
There is sufficient vol. for all requested analyses.	True		
Is the Field Sampler's name present on COC?	True		
Sample custody seals are intact.	True		
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	True
