1.0 INTRODUCTION

This report summarizes groundwater monitoring and remedial activities completed during 2020 at the Shell Puget Sound Refinery SWMU 11 site. SWMU 11 is a surface impoundment (West Impounding Basin) located in the central portion of the Shell Puget Sound Refinery near the southwest corner of the facility tank farm. The site location is shown on Figure 1.

The scope of the remedial action at the SWMU 11 site consists of the operation and maintenance of a fluid recovery system in one well and the semi-annual collection and analysis of groundwater samples from the monitoring well network. The current monitoring well system is made up of 16 wells and one piezometer. Groundwater sampling is conducted at 13 of the 16 wells, with approval from the Department of Ecology. Well depths range from 25 feet to 83 feet.

One fluid recovery well (MW-59) is currently used to remove light non-aqueous phase liquid (LNAPL) (floating diesel range petroleum compounds) from the SWMU 11 site. MW-64 had also contained a fluid recovery system but operations ceased in 2008 and the equipment was later removed due to the elimination of LNAPL from that area. A total of 69,680 gallons of fluids were extracted from MW-64 during the lifespan of the system.

This report includes the results of groundwater monitoring conducted in 2020. This information is being submitted to keep Ecology informed of ongoing activities at the site.

2.0 SITE ACTIVITIES

Groundwater samples were collected at the SWMU 11 site in May and October 2020. The groundwater monitoring well system was sampled for EPA Skinner List volatiles and diesel range total petroleum hydrocarbons (TPH), as approved by Ecology in 2012. Due to the depth to water in most wells at the site, groundwater samples were collected using disposable bailers. Prior to collecting each sample, 1 to 3 well volumes of water were bailed from the well. Samples were then collected using sample containers provided by the analytical laboratory and placed in a cooler with ice. Groundwater samples were sent to Eurofins TestAmerica Laboratory in Seattle, WA for analysis.

For each 2020 sampling event a duplicate sample and an equipment blank sample were collected. The duplicate samples were labeled WES-DUP-1. The equipment blank samples were collected using distilled water and labeled WES-FEB-1.

LNAPL thickness and depth to water measurements are collected prior to groundwater sampling in wells MW-63 and MW-64 and in piezometer P-21 using an oil/water interface meter. Depth to water measurements are collected from all other wells prior to sampling using a water level meter.

A fluid recovery system at well MW-59 continues to remove LNAPL and contaminated groundwater from the SWMU 11 site. Measurements from the recovery pump flow meter are recorded during each sampling event. LNAPL thickness measurements, depth to water measurements, and groundwater samples cannot be collected from MW-59 due to pump obstruction.

3.0 GROUNDWATER MONITORING RESULTS

3.1 FIELD MEASUREMENTS

LNAPL was observed in piezometer P-21 during both sampling events in 2020; 2.07 feet of LNAPL was measured in May, and 2.01 feet was measured in October. No other wells contained measurable amounts of LNAPL during either sampling event. Historical LNAPL thickness measurements are provided in Table 1.

Depth to water measurements and LNAPL thickness measurements collected in 2020 are presented in Tables 2 and 3. Groundwater elevation contour maps with well locations are included as Figures 2 and 3 (May and October 2020, respectively).

Flow meter readings indicate the fluid recovery system removed approximately 50,440 gallons from MW-59 during 2020. Approximately 702,892 gallons have been extracted from the site since installation of the fluid recovery system in 1992 (including from former recovery well MW-64). A graph of the cumulative quantity of liquids pumped from the site is included as Figure 4.

3.2 ANALYTICAL RESULTS

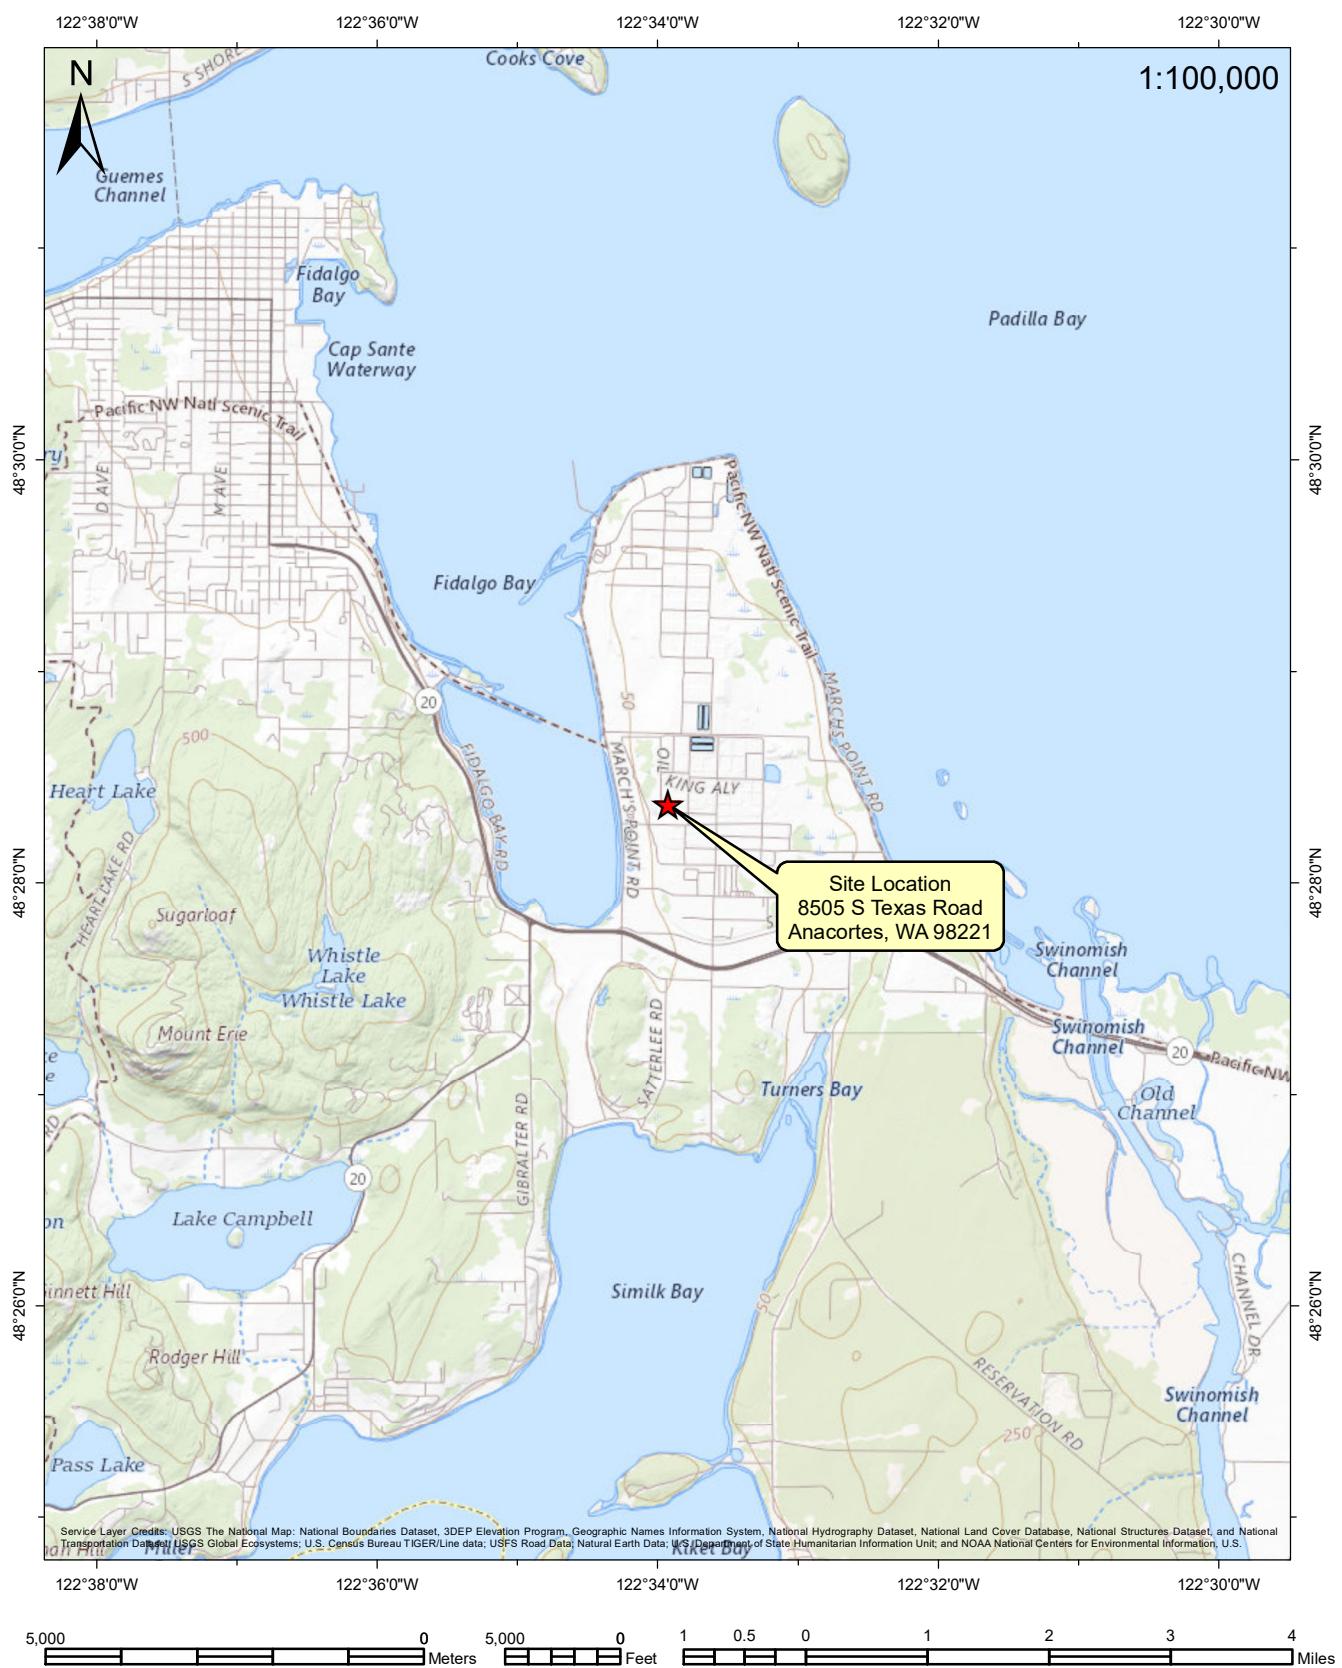

During the May 2020 sampling event, volatile organic constituents were detected in 4 of the 13 wells sampled (MW-63, MW-64, MW-65, and MW-95). Diesel range TPH were detected in all sampled wells (MW-60, MW-61, MW-63, MW-64, MW-65, MW-91, MW-92, MW-93, MW-94, MW-95, MW-96, MW-97, and MW-98). May 2020 groundwater analytical data are summarized in Table 4. Original laboratory reports and chain of custody forms are included in Appendix A.

During the October 2020 sampling event, volatile organic constituents were detected in 5 of the 13 wells sampled (MW-63, MW-64, MW-65, MW-92 and MW-95). Diesel range TPH were detected in 12 of the wells (MW-60, MW-61, MW-63, MW-64, MW-65, MW-92, MW-93, MW-94, MW-95, MW-97, and MW-98). October 2020 groundwater analytical data are summarized in Table 5. Original laboratory reports and chain of custody forms are included in Appendix B.

4.0 CONCLUSIONS

LNAPL continues to be observed floating on groundwater in piezometer P-21. The fluid recovery system at well MW-59 appears to have created a capture zone with drawdown that encompasses well P-21 based on historic potentiometric surface data. Approximately 702,892 gallons of fluid have been removed from the site since installation of the fluid recovery system in 1992. LNAPL and contaminated groundwater extraction at the site will continue.

The extent of the contaminated groundwater plume has been delineated, and the groundwater monitoring well system will continue to be sampled on a semi-annual schedule.

Comments

No additional comments.

Receipt

The samples were received on 5/8/2020 1:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 6.0° C and 6.1° C.

Receipt Exceptions

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC).

GC/MS VOA

Method 8260C: Samples MW-60 (580-94578-1), MW-61 (580-94578-2), MW-63 (580-94578-3), MW-64 (580-94578-4), MW-65 (580-94578-5), WES-FEB-1 (580-94578-6), WES-DUP-1 (580-94578-7), MW-91 (580-94578-8), MW-92 (580-94578-9), MW-93 (580-94578-10), MW-94 (580-94578-11), MW-95 (580-94578-12), MW-96 (580-94578-13), MW-97 (580-94578-14), MW-98 (580-94578-15) and Trip Blank (w) (580-94578-16) reanalyzed due to carry over in the previous analysis.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method NWTPH-Dx: The following samples were diluted due to the nature of the sample matrix: MW-63 (580-94578-3) and MW-64 (580-94578-4). Elevated reporting limits (RLs) are provided.

Method NWTPH-Dx: Surrogate recovery for the following sample was outside control limits: MW-63 (580-94578-3) and MW-91 (580-94578-8). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method NWTPH-Dx: (CCV 580-328759/14), (CCV 580-328759/25) and (CCVRT 580-328759/3) recovered outside drift limits for o-Terphenyl surrogate. Associated QC and client samples recovered within control limits; therefore, the data is reported.

Method NWTPH-Dx: MW-60 (580-94578-1), MW-91 (580-94578-8), MW-92 (580-94578-9), MW-93 (580-94578-10), MW-94 (580-94578-11), MW-95 (580-94578-12), MW-96 (580-94578-13), MW-97 (580-94578-14) and MW-98 (580-94578-15) contained unusual discrete peaks later than the C40 retention time marker.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with 328312 LCS and LCSD was used instead.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Whatcom Environmental Services Inc.
Project/Site: Shell Corrective Action - SWMU 11

Job ID: 580-94578-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate recovery exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Whatcom Environmental Services Inc.
Project/Site: Shell Corrective Action - SWMU 11

Job ID: 580-94578-1

Laboratory: Eurofins TestAmerica, Seattle

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C553	02-18-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	1,1,1-Trichloroethane
8260C		Water	1,2,4-Trimethylbenzene
8260C		Water	1,2-Dibromoethane
8260C		Water	1,2-Dichloroethane
8260C		Water	1,3,5-Trimethylbenzene
8260C		Water	2-Butanone
8260C		Water	Acetone
8260C		Water	Benzene
8260C		Water	Carbon disulfide
8260C		Water	Chlorobenzene
8260C		Water	Chloroform
8260C		Water	Ethylbenzene
8260C		Water	n-Butylbenzene
8260C		Water	N-Propylbenzene
8260C		Water	p-Isopropyltoluene
8260C		Water	Styrene
8260C		Water	Toluene
8260C		Water	Trichloroethene
8260C		Water	Xylenes, Total

List Number: 1

Creator: Blankinship, Tom X

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received Trip Blank(s) not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 10/16/2020 9:50 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.9° C and 2.4° C.

Receipt Exceptions

A container label for the following sample did not match the information listed on the Chain-of-Custody (COC): MW-95 (580-98301-12). The container label of one VOA vial lists the sample ID 'MW-94', while the COC lists 'MW-95'. All other information matches on the label and all vials of MW-95 are accounted for.

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC). It was logged in for 8260 VOA's.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method NWTPH-Dx: The following sample contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: MW-64 (580-98301-4).

Method NWTPH-Dx: Surrogate recovery for the following samples were outside control limits: MW-63 (580-98301-3) and MW-64 (580-98301-4). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method NWTPH-Dx: The following samples were diluted due to the nature of the sample matrix: MW-63 (580-98301-3) and MW-64 (580-98301-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 580-341657. A LCS/LCSD were used instead.

Method 3510C: The following sample formed emulsions during the extraction procedure: MW-61 (580-98301-2). The emulsions were broken up using sodium sulfate and a solvent rinse.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 580-341807. A LCS/LCSD were used instead.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Whatcom Environmental Services Inc.
Project/Site: Shell Corrective Action - SWMU11

Job ID: 580-98301-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate recovery exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client Sample Results

Client: Whatcom Environmental Services Inc.

Accreditation/Certification Summary

Client: Whatcom Environmental Services Inc.
Project/Site: Shell Corrective Action - SWMU11

Job ID: 580-98301-1

Laboratory: Eurofins TestAmerica, Seattle

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Washington	State	C553	02-18-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	1,1,1-Trichloroethane
8260C		Water	1,2,4-Trimethylbenzene
8260C		Water	1,2-Dibromoethane
8260C		Water	1,2-Dichloroethane
8260C		Water	1,3,5-Trimethylbenzene
8260C		Water	2-Butanone
8260C		Water	Acetone
8260C		Water	Benzene
8260C		Water	Carbon disulfide
8260C		Water	Chlorobenzene
8260C		Water	Chloroform
8260C		Water	Ethylbenzene
8260C		Water	n-Butylbenzene
8260C		Water	N-Propylbenzene
8260C		Water	p-Isopropyltoluene
8260C		Water	Styrene
8260C		Water	Toluene
8260C		Water	Trichloroethene
8260C		Water	Xylenes, Total

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
