Max,

Thank you so much for your patience these past couple weeks. The new year has been exceptionally busy for us, but we are doing our best to keep at it!

Unfortunately, I will not have the opinion issued in time for your drilling next week.

However, I have been able to go through the Draft Work Plan in greater detail since early January and feel that a sound investigation and monitoring strategy have been laid out. The 4 proposed monitoring well locations seem adequate given the release, and they seem positioned at the source and down/cross-gradient of the release, based on previous excavation sampling detections. As noted in Section 3.4 of the Draft Work Plan, if concentrations remain above cleanup levels, additional site investigation may be recommended.

Based on this information, I will continue to move forward with a neutral opinion response to the Draft Work Plan and we will look forward to the quarterly sampling results over the next year.

Thank you again for your patience and let me know if you have any questions. Good luck next week!

Best,

Andrew Weinrich (He/Him)

Hi Andrew,
Thank you for the update. We appreciate Ecology's feedback and assistance.
Regards

Hi Max,

I hope you're doing well! Thank you for following up regarding the draft work plan for the Tanner Electric site. I am currently in the process of reviewing it.

While I will make every effort to provide you with an official opinion before the scheduled drilling in early February, there is a chance I may not be able to issue a formal response in time. If that's the case, I will ensure you receive a technical assistance or informal email response with my comments on your proposed drilling and sampling approach.

I understand the importance and financial impact of maintaining your scheduled drilling date and will do my best to provide input promptly to help guide your next steps.

Thank you for your patience, and I'll be in touch soon with a schedule update or more information. Have a great weekend!

Best,

Andrew Weinrich (He/Him)

Hi Andrew,

I hope all is well. I am checking in to see if you have reviewed our draft work plan yet for the Tanner Electric site in North Bend. Per your email below, we scheduled our drilling for the first week of February. We would like to keep this date because it is hard to reschedule sonic drilling these days, but we would really like Ecology's buy-off on our proposed approach prior to doing the drilling. If you are unable to provide a formal opinion at this time, could you please just provide an informal email response just to let us know we aren't "way out in the weeds" so to speak on our proposed approach. The site and cleanup are fairly straight forward, so I'm not too worried about our approach, but would still like verification and input from Ecology.

Thank you

Max

Max & Andrew,

Howdy! I hope you two are doing well! It is a pleasure to have Tanner back on the radar and on its way to cleanup. I wanted to reach out and touch base with you two.

I have copies of the Draft Work Plan and the Interim Cleanup Action Report, and I understand you are currently standing down on additional action while the Draft Work Plan is in review. Luckily, I am already familiar with the Site and have had eyes on the Interim Cleanup Action Report before, so I can save some time getting up to speed with the Site. However, it is still looking like it will take approx. 90 days for me to issue the opinion, unless you are looking for a more informal technical assistance. I apologize if that is spelled out in the Work Plan draft – I haven't gotten too deep into that report yet.

Please reach out if you have any questions or if you would like to discuss any Site updates! I will do the same as I work through my review of the Site docs.

I hope you both have a great rest of your week and weekend.

Thanks,

Andrew Weinrich (He/Him)
