Site history

[Go to top](#)

Inman Landfill is a closed municipal solid waste (MSW) landfill that is regulated under Chapter 173-304 of the Washington Administrative Code (minimum functional standards for solid waste handling). The landfill was constructed in a former sand and gravel pit in two phases:

The Phase I area received MSW from 1973 through circa 1985, when new solid waste management standards were implemented. The Phase I area does not have a bottom liner, which were not required before November 1985, and is partially overlain by the Phase II landfill area. The approximate 16-acre Phase I area is on eastern portion of the landfill.

The Phase II area received MSW and MSW incinerator ash from 1986 until April 1994. The approximate 10-acre Phase II area, which partially overlays the Phase I area, was constructed with an engineered composite liner and engineered composite cap.

Landfill closure construction was completed in 1995. Leachate is collected from above the Phase II liner and discharged to a surface impoundment located near the northwest corner of the landfill. The landfill also has a landfill gas collection system and flare located near the southwest corner of the landfill.

Overflow - Site contamination and cleanup history

The ten site parcels are P107468, P107472, P107478, P34543, P34545, P34550, P34568, P34569, P34591, P34592. All parcels are owned by Skagit County.
