| Benzo(b)fluoranthene | mg/kg (ppm) | 0.83 | 102 | 69-125 |
| Benzo(k)fluoranthene | mg/kg (ppm) | 0.83 | 98 | 70-130 |
| Indeno(1,2,3-cd)pyrene | mg/kg (ppm) | 0.83 | 102 | 67-129 |
| Dibenz(a,h)anthracene | mg/kg (ppm) | 0.83 | 97 | 67-128 |
| Benzo(g,h,i)perylene | mg/kg (ppm) | 0.83 | 93 | 64-127 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

# SAMPLE CONDITION UPON RECEIPT CHECKLIST

PROJECT # 205113 CLIENT Hart Crowser INITIALS/ DATE: TWC 05/06/22

If custody seals are present on cooler, are they intact? ☒ NA ☐ YES ☐ NO

Cooler/Sample temperature 4 °C

Were samples received on ice/cold packs? ☒ YES ☐ NO

How did samples arrive? ☒ Over the Counter ☐ Picked up by F&BI ☐ FedEx/UPS/GSO

Number of days samples have been sitting prior to receipt at laboratory 1 > 4 days

Is there a Chain-of-Custody* (COC)? ☒ YES ☐ NO
*or other representative documents, letters, and/or shipping memos

Are the samples clearly identified? (explain "no" answer below) ☐ YES ☒ NO

Is the following information provided on the COC* ? (explain "no" answer below)

| | | | | | |
|---|---|---|---|---|---|
| Sample ID's | ☐ Yes | ☒ No | # of Containers | ☐ Yes | ☒ No |
| Date Sampled | ☐ Yes | ☒ No | Relinquished | ☒ Yes | ☐ No |
| Time Sampled | ☐ Yes | ☒ No | Requested analysis | ☐ Yes | ☒ No |

Were all sample containers received intact (i.e. not broken, leaking etc.)? (explain "no" answer below) ☒ YES ☐ NO

Were appropriate sample containers used? ☒ YES ☐ NO ☐ Unknown

If custody seals are present on samples, are they intact? ☒ NA ☐ YES ☐ NO

Are samples requiring no headspace, headspace free? ☒ NA ☐ YES ☐ NO

Air Samples: Were any additional canisters received? ☒ NA ☐ YES ☐ NO

If Yes, number of unused 1L canisters _____

number of unused 6L canisters _____

Explain "no" items from above (use the back if needed)

times not match COC * Page 11 > 14 coc generated at lab.

Seattle, WA 98119

**RE: 205113**
**Work Order Number: 2205254**

June 07, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 38 sample(s) on 5/12/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Sample Moisture (Percent Moisture)***
***Volatile Petroleum Hydrocarbons by NWVPH***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Date:** *06/07/2022*

**CLIENT:** Friedman & Bruya
**Project:** 205113
**Work Order:** 2205254

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

# Case Narrative

WO#: **2205254**
Date: **6/7/2022**

**CLIENT:** Friedman & Bruya
**Project:** 205113

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

# Sample Log-In Check List

| | | | |
|---|---|---|---|
| Client Name: | FB | Work Order Number: | 2205254 |
| Logged by: | Gabrielle Coeuille | Date Received: | 5/12/2022 1:32:00 PM |

## Chain of Custody

| | | | | | | |
|---|---|---|---|---|---|---|
| 1. | Is Chain of Custody complete? | Yes | ☑ | No | ☐ | Not Present ☐ |
| 2. | How was the sample delivered? | Client | | | | |

## Log In

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | Coolers are present? | Yes | ☑ | No | ☐ | NA ☐ |
| 4. | Shipping container/cooler in good condition? | Yes | ☑ | No | ☐ | |
| 5. | Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) | Yes | ☐ | No | ☐ | Not Present ☑ |
| 6. | Was an attempt made to cool the samples? | Yes | ☑ | No | ☐ | NA ☐ |
| 7. | Were all items received at a temperature of >2°C to 6°C * | Yes | ☑ | No | ☐ | NA ☐ |
| 8. | Sample(s) in proper container(s)? | Yes | ☑ | No | ☐ | |
| 9. | Sufficient sample volume for indicated test(s)? | Yes | ☑ | No | ☐ | |
| 10. | Are samples properly preserved? | Yes | ☑ | No | ☐ | |
| 11. | Was preservative added to bottles? | Yes | ☐ | No | ☑ | NA ☐ |
| 12. | Is there headspace in the VOA vials? | Yes | ☐ | No | ☐ | NA ☑ |
| 13. | Did all samples containers arrive in good condition(unbroken)? | Yes | ☑ | No | ☐ | |
| 14. | Does paperwork match bottle labels? | Yes | ☑ | No | ☐ | |
| 15. | Are matrices correctly identified on Chain of Custody? | Yes | ☑ | No | ☐ | |
| 16. | Is it clear what analyses were requested? | Yes | ☑ | No | ☐ | |
| 17. | Were all holding times able to be met? | Yes | ☐ | No | ☑ | |

## Special Handling (if applicable)

| | | | | | | |
|---|---|---|---|---|---|---|
| 18. | Was client notified of all discrepancies with this order? | Yes | ☑ | No | ☐ | NA ☐ |

| | | | |
|---|---|---|---|
| Person Notified: | Eric Young, Mike Erdahl | Date: | 5/12/2022 |
| By Whom: | Matt Langston | Via: | ☑ eMail ☑ Phone ☐ Fax ☐ In Person |
| Regarding: | Hold times will not be met for all analysis/samples. | | |
| Client Instructions: | | | |

19. Additional remarks:

Item Information

| Item # | Temp ºC |
|---|---|
| Sample 1 | 3.7 |

* Note: DoD/ELAP and TNI require items to be received at 4°C +/- 2°C

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Surface water Samples**

**Sample Date(s): 28 June 2022**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA**

**Fremont Analytical – Seattle, WA**

**Validation Performed by: Kirkland Broadwell**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 13 December 2022**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Number 206449**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL)

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Number 206449

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number 206499, dated 11 July 2022. The samples were sent to Fremont Analytical for hexavalent chromium analyses (subcontracted SDG number 2206479). Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol. Samples were also received appropriately, identified correctly, and analyzed according to the COC.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| SW-1-20220628 | N | 206499-01 | 06/28/2022 | WS | A, B, C, D, E, F |
| SW-2-20220628 | N | 206499-02 | 06/28/2022 | WS | A, B, C, D, E, F |
| SW-3-20220628 | N | 206499-03 | 06/28/2022 | WS | A, B, C, D, E, F |
| SW-1-20220628 | N | 2206479-001 | 06/28/2022 | WS | G |
| SW-2-20220628 | N | 2206479-002 | 06/28/2022 | WS | G |
| SW-3-20220628 | N | 2206479-003 | 06/28/2022 | WS | G |

| Method Holding Times | | | |
|---|---|---|---|
| A. | E1631E | Mercury | 28 days preserved; 48 hours unpreserved |
| B. | NWTPH-DX | Total Petroleum Hydrocarbons (TPH) – Diesel | 14 days preserved; 7 days unpreserved |
| C. | NWTPH-GX | Total Petroleum Hydrocarbons (TPH) - Gasoline | 14 days preserved; 7 days unpreserved |
| D. | SW6020 | Metals | 180 days |
| E. | SW8260D | Volatile Organic Compounds (VOCs) | 14 days for liquid, preserved 7 days unpreserved |
| F. | SW8270E | Polycyclic Aromatic Hydrocarbons (PAHs) | 7 days extraction / 40 days analysis |
| G. | SM3500-CR B | Hexavalent Chromium | 24 hours |

## 1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

## 1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum reporting limit (RL) requirements specified by the project specific QAPP, with the following exceptions:

- The reporting limit for hexavalent chromium was 45 µg/L, rather than 1.2 µg/L as specified in the QAPP.

## 1.4 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| SW8270E | SW-1-20220628 | 206499-01 | 2-Fluorophenol | 1x | 7% | None, target analytes not reported |
| | | | Phenol-d6 | 1x | 8% | |
| | SW-2-20220628 | 206499-02 | 2-Fluorophenol | 1x | 7% | |
| | | | Phenol-d6 | 1x | 7% | |
| | SW-3-20220628 | 206499-03 | 2-Fluorophenol | 1x | 8% | |
| | | | Phenol-d6 | 1x | 8% | |

## 1.5 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses exhibited recoveries and relative percent differences (RPDs) within the specified limits.

## 1.6 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 206499-01 | SW-1-20220628 | SW 6020, SM3500-CR B |

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits.

## 1.7 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

## 1.8 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL):

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 2206479-001 | SW-1-20220628 | SM3500-CR B |

## 1.9 PRECISION AND ACCURACY

Refer to section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

## 1.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. No qualifiers were applied to any data in this report.

## 2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

# 3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg microgram per kilogram
  - µg/L microgram per liter
  - µg/$m^3$ microgram per cubic meter
  - mg/kg milligram per kilogram
  - mg/L milligram per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

| VOC | Volatile Organic Compounds |
| WP | Work Plan |

# 5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U — The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B — The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E — The compound was quantitated above the calibration range.

  D — The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J — The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ — The result is an estimated quantity, but the result may be biased high.

  J- — The result is an estimated quantity, but the result may be biased low.

  J/UJ — as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ — The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ — The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R — The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S — Result is suspect. See DUSR for details.

Dear Ms Goodwin:

Included are the results from the testing of material submitted on June 28, 2022 from the Kosmos 0202832-001, F&BI 206499 project. There are 23 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 28, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 0202832-001, F&BI 206499 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 206499 -01 | SW-1 |
| 206499 -02 | SW-2 |
| 206499 -03 | SW-3 |

The samples were sent to Fremont Analytical for hexavalent chromium analysis. The report is enclosed.

The 8270E surrogates 2-fluorophenol and phenol-d6 were outside of control lmits for several samples. The surrogate compounds were not associated with the target compounds, therefore the data were reported.

All quality control requirements were acceptable.

| Benzo(b)fluoranthene | ug/L (ppb) | 5 | 104 | 109 | 62-130 | 5 |
| Benzo(k)fluoranthene | ug/L (ppb) | 5 | 106 | 107 | 70-130 | 1 |
| Indeno(1,2,3-cd)pyrene | ug/L (ppb) | 5 | 104 | 108 | 70-130 | 4 |
| Dibenz(a,h)anthracene | ug/L (ppb) | 5 | 100 | 104 | 70-130 | 4 |
| Pyrene | ug/L (ppb) | 5 | 105 | 107 | 70-130 | 2 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**Work Order Number: 2206479**

July 01, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 3 sample(s) on 6/29/2022 for the analyses presented in the following report.

***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**CLIENT:** Friedman & Bruya
**Project:** 206499

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Associated LCS is outside of control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Method Detection Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Grab Groundwater Samples**

**Sample Date(s): 29 June 2022**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA**

**Fremont Analytical – Seattle, WA**

**OnSite Environmental Inc. – Redmond, WA**

**Validation Performed by: Eric Hitchens**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 10 August 2022**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Numbers**
2. **Precision and Accuracy [for SDG(s) above]**
3. **Explanations**
4. **Glossary**
5. **Abbreviations**
6. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL)

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Numbers

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number 206533. The samples were sent to Fremont Analytical for hexavalent chromium and EPH analyses (subcontracted SDG number 06-34). In addition, the samples were sent to Onsite Environmental for VPH analysis (subcontracted SDG number 206533). Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol. Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| MW-1S-20220629 | N | 206533-01 | 06/29/2022 | WG | A, B, C, D, E, F, G |
| MW-2S-20220629 | N | 206533-02 | 06/29/2022 | WG | A, B, C, D, E, F, G |
| MW-3S-20220629 | N | 206533-03 | 06/29/2022 | WG | A, B, C, D, E, F, G |
| MW-3SD-20220629 | FD | 206533-04 | 06/29/2022 | WG | A, B, C, D, E, F, G |
| MW-4S-20220629 | N | 206533-05 | 06/29/2022 | WG | A, B, C, D, E, F, G |
| MW-1S-20220629 | N | 06-347-01 | 06/29/2022 | WG | H, I |
| MW-2S-20220629 | N | 06-347-02 | 06/29/2022 | WG | H, I |
| MW-3S-20220629 | N | 06-347-03 | 06/29/2022 | WG | H, I |

| H. | NWTPH-VPH | Volatile Petroleum Hydrocarbon Fractions | 14 days preserved<br>7 days unpreserved |
| I. | SW8021B | Volatile Organic Compounds (VOCs) | 14 days |
| J. | NWTPH-EPH | Extractable Petroleum Hydrocarbon Fractions | 14 days preserved<br>7 days unpreserved |
| K. | SM3500-CR B | Chromium | 24 hours |

## 1.2 CASE NARRATIVE

The laboratory report case narrative lists various additional quality control issues such as internal standard exceedances and initial calibration verification (ICV) and/or continuing calibration verification (CCV) exceedances. Since these additional quality control issues were not required for the project's data quality objectives, these quality control issues were not reviewed:

- A 6020B internal standard failed the acceptance criteria for the total and dissolved metals analysis of sample MW-2S. The sample was diluted and reanalyzed with acceptable results. Both data sets were reported. The validator chose results from the first analysis and rejected the alternative.
- Methylene chloride was detected in the 8260D analysis of sample MW-1S, MW-2S, and MW-3SD. The data were flagged as due to laboratory contamination and the detections were flagged "LC" due to do suspected laboratory contamination.

## 1.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol with the following exceptions:

| Method | Matrix | Holding Time | Preservation | Sample ID, Violation, Qualification |
|---|---|---|---|---|
| SM3500-CR B | Water | 24 hours | Cool to ≤ 6 °C | MW-4S-20220629 was analyzed outside of analytical holding time. Qualify "UJ". |

## 1.4 REPORTING LIMITS AND SAMPLE DILUTIONS

The reporting limits for the samples within this SDG met or were below the minimum reporting limit requirements specified by the Project-specific Quality Assurance Project Plan (QAPP) except where diluted due to matrix effects or non-target analytes.

## 1.5 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| 8270E | MW-4S | 206533-04 | 2-Fluorophenol | 1x | 9% | None, target analytes not reported. |
| 8270E | MW-3SD | 206533-05 | 2-Fluorophenol | 1x | 10% | |
| 8270E | MW-3SD | 206533-05 | Phenol-d6 | 1x | 10% | |

## 1.6 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses exhibited recoveries and relative percent differences (RPDs) within the specified limits with the following exceptions:

| Sample Type | Method | Batch ID | Analyte | %R | Qualifier | Affected Samples |
|---|---|---|---|---|---|---|
| LCS/LCSD | NWTPH-EPH | 37022 | TPH (C10-C12) Aliphatic | 65.8%/57.9% | J/UJ | All samples |
| LCS | NWTPH-EPH | 37022 | TPH (C10-C12) Aromatic | 67.6% | J/UJ | |

## 1.7 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 206533-01 (Matrix Spike) | MW-1S | 6020B |
| 06-347-03 | MW-3S | NWTPH-VPH, 8021B |
| 2206506-001BMS<br>2206506-001MSD | MW-1S | SM-3500-CR B |

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

| Sample Type | Method | Parent Sample | Analyte | %R | Qualifier | Affected Samples |
|---|---|---|---|---|---|---|
| MS | SM 3500 CR B | MW-1S | Hexavalent Chromium | 0%/0% | UJ | All samples |

## 1.8 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

## 1.9 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL):

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 2206506-001DUP | MS-1S | SM 3500 CR B |

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

| Primary Sample ID | Duplicate Sample ID | Method(s) |
|---|---|---|
| MW-3S-20220629 | MW-3SD-20220629 | E1631E, NWTPH-DX, NWTPH-EPH, NWTPH-GX, NWTPH-VPH, SM 2540D, SM 3500-CR B, EPA 6020B, EPA 8021B, EPA 8260D, EPA 8270E |

**Field Duplicate RPD Calculations:**

| Method | Analyte (µg/L) | Primary Sample ID | Duplicate Sample ID | % RPD | Qualification |
|---|---|---|---|---|---|
| | | MW-3S-20220629 | MW-3SD-20220629 | | |
| NWTPH-VPH | TPH (C10-C12) Aromatic | 140 | ND | NA | J/UJ, Abs. Diff. > RL |
| NWTPH-EPH | TPH (C12-C16) Aromatic | 151 | ND | NA | J/UJ, Abs. Diff. > RL |
| NWTPH-EPH | TPH (C16-C21) Aromatic | 111 | 51.2 | NA | J, Abs. Diff. > RL |
| NWTPH-VPH | TPH (C12-C13) Aromatic | 570 | ND | 168 | J/UJ, RPD>35 |

## 1.10 CALCULATION ACCURACY

Total chromium and hexavalent chromium were not detected.

## 1.11 SUSPECTED LABORATORY CONTAMINATION

Methylene chloride was detected in several samples, however the detections were flagged “LC” due to do suspected laboratory contamination (methylene chloride is frequently used for cleaning equipment in the laboratory).

## 1.12 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. A summary of qualifiers applied to this data set is shown in Table E-11.

## 2. Precision and Accuracy [for SDG(s) above]

Refer to section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

## 3. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (%RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.

- Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%Rec) of certain spiked compounds. This can be assessed using LCS, BS, MS, and/or surrogate recoveries.

# 4. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg microgram per kilogram
  - µg/L microgram per liter
  - µg/m3 microgram per cubic meter
  - mg/kg milligram per kilogram
  - mg/L milligram per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

# 6. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

***Notes***

*FDP = Field duplicate qualifier due to an exceedance of the specified limits.*

*HTQ = Holding time exceedance.*

*LC = Laboratory contamination.*

*LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.*

*MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.*

*J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.*

*UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.*

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on June 29, 2022 from the Kosmos 0202832-001, F&BI 206533 project. There are 43 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 29, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 0202832-001, F&BI 206533 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 206533 -01 | MW-1S |
| 206533 -02 | MW-2S |
| 206533 -03 | MW-3S |
| 206533 -04 | MW-4S |
| 206533 -05 | MW-3SD |

The samples were sent to Fremont Analytical for hexavalent chromium and EPH analyses. In addition, the samples were sent to Onsite Environmental for VPH analysis. The reports are enclosed.

A 6020B internal standard failed the acceptance criteria for the total and dissolved metals analysis of sample MW-2S. The sample was diluted and reanalyzed with acceptable results. Both data sets were reported.

Methylene chloride was detected in the 8260D analysis of sample MW-1S, MW-2S, and MW-3SD. The data were flagged as due to laboratory contamination.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 90 | 96 | 35-146 | 6 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Re: Analytical Data for Project 206533
Laboratory Reference No. 2206-347

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on June 30, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: July 11, 2022
Samples Submitted: June 30, 2022
Laboratory Reference: 2206-347
Project: 206533

**Case Narrative**

Samples were collected on June 29, 2022 and received by the laboratory on June 30, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

**RE: 206533**
**Work Order Number: 2206506**

July 15, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 5 sample(s) on 6/30/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2206506**
Date: **7/15/2022**

**CLIENT:** Friedman & Bruya
**Project:** 206533

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

## Chain of Custody

| | | | | | | |
|---|---|---|---|---|---|---|
| 1. | Is Chain of Custody complete? | Yes | ☑ | No | ☐ | Not Present ☐ |
| 2. | How was the sample delivered? | Client | | | | |

## Log In

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | Coolers are present? | Yes | ☑ | No | ☐ | NA ☐ |
| 4. | Shipping container/cooler in good condition? | Yes | ☑ | No | ☐ | |
| 5. | Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) | Yes | ☐ | No | ☐ | Not Present ☑ |
| 6. | Was an attempt made to cool the samples? | Yes | ☑ | No | ☐ | NA ☐ |
| 7. | Were all items received at a temperature of >2°C to 6°C * | Yes | ☑ | No | ☐ | NA ☐ |
| 8. | Sample(s) in proper container(s)? | Yes | ☑ | No | ☐ | |
| 9. | Sufficient sample volume for indicated test(s)? | Yes | ☑ | No | ☐ | |
| 10. | Are samples properly preserved? | Yes | ☑ | No | ☐ | |
| 11. | Was preservative added to bottles? | Yes | ☐ | No | ☑ | NA ☐ |
| 12. | Is there headspace in the VOA vials? | Yes | ☐ | No | ☐ | NA ☑ |
| 13. | Did all samples containers arrive in good condition(unbroken)? | Yes | ☑ | No | ☐ | |
| 14. | Does paperwork match bottle labels? | Yes | ☑ | No | ☐ | |
| 15. | Are matrices correctly identified on Chain of Custody? | Yes | ☑ | No | ☐ | |
| 16. | Is it clear what analyses were requested? | Yes | ☑ | No | ☐ | |
| 17. | Were all holding times able to be met? | Yes | ☑ | No | ☐ | |

## Special Handling (if applicable)

| | | | | | | |
|---|---|---|---|---|---|---|
| 18. | Was client notified of all discrepancies with this order? | Yes | ☐ | No | ☐ | NA ☑ |

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Surface Water Samples**

**Sample Date(s): 17 October through 8 November 2022**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA;**

**Fremont Analytical – Seattle, WA;**

**Onsite Environmental – Seattle, WA**

**Validation Performed by: Oscar Cervantes**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 15 December 2022**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Numbers**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL)

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Numbers

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of the following SDGs:

- SDG number 210348 (2210406), dated 28 October 2022.
- SDG number 211083 (2211107), dated 23 November 2022.
- SDG number 211082 (2211108), dated 23 November 2022.
- SDG number 210420 (2210543), dated 30 November 2022.
- SDG number 210408 (2210513), dated 22 November 2022.
- SDG number 210409 (2211095) (2211-050), dated 22 November 2022.
- SDG number 210464 (2211250) (2211-172) dated 30 November 2022.
- SDG number 210248 (2210299), dated 11 November 2022.
- SDG number 210370, dated 29 November 2022.
- SDG number 210371, dated 22 November 2022.
- SDG number 211025, dated 23 November 2022.

The samples were sent to Fremont Analytical for hexavalent chromium analyses (subcontracted SDG numbers 2210406, 2211107, 2211108, 2210543, 2210513, 2211095, 2211-050, 2211250, and 2210299). Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol. Samples were also received appropriately, identified correctly, and analyzed according to the COC.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| SS-1-0.75 | N | 2210299-001A | 10/17/2022 | SE | A, B |

## 1.1 CASE NARRATIVE

The laboratory report case narratives included the following issues:

- The analyte concentration for arsenic is reported below the lowest calibration standard. The value reported is an estimate for the following samples: SW-1-20221103, SW-2-20221103, and SW-3-20221103.
- The analyte concentration for copper is reported below the lowest calibration standard. The value reported is an estimate for the following samples: MW-1D-20221103, MW-1DD-20221103, MW-2D-20221103.
- Methylene chloride was detected in the 8260D analysis of samples B17-S5-25, SS-11-0.5, SS-9-0.5, B12-S10-50, and B12-S4-20. The data were flagged as due to laboratory contamination and the detections were flagged "LC" due to do suspected laboratory contamination.
- An 8270E internal standard failed the acceptance criteria for sample 210464-02. The affected samples were diluted and reanalyzed. The diluted results were marked non-reportable as the results were similar.
- Selenium was reanalyzed for samples 210409-49 and 210409-52. The reanalysis was marked non-reportable as the results were similar.

## 1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol with the following exceptions:

| Method | Matrix | Holding Time | Preservation | Sample ID, Violation, Qualification |
|---|---|---|---|---|
| SM-3500-CR B | Water | 24 hours | Cool to ≤ 6 °C | The following samples were analyzed outside the holding time and qualified UJ:<br>SW-1-20221103<br>SW-2-20221103<br>SW-3-20221103<br>B11-W-20221026 |

## 1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. Dilution of the project samples were required to bring calibration of target analytes within calibration range, matrix interference, foaming at the time of purging, or abundance of non-target analytes.

| Sample ID | Lab ID | Analyte/ Method | Dilution Factor | Issue/Explanation |
|---|---|---|---|---|
| B13-S1-5, B13-S2-10, B13-S4-20, B13-S10-5, B17-S1-5, B17-S3-15, B17-S3-15, B17-S5-25, B17-S8-40, B17-S1D | 210409-1, 2, 4, 10, 11, 13, 15, 18, 21 | 1,1,2,2-Tetrachloroethane, Bromoform, Dichlorodifluoromethane, Hexane, Vinyl Chloride/ 8260D | 0.25x | Result above quantitation range. Results qualified J. |
| MW3D-S1-5, MW3D-S2-10, MW3D-S3-15, MW3D-S4-20, MW3D-S5-25, MW3D-S11-55, MW4D-S1-3, MW4D-S2-10, MW4D-S3-15, MW4D-S5-25 | 210464-1, 2, 3, 4, 5, 11, 13, 14, 15, 17 | 1,3-Dichloropropane/ 8260D | 0.25x | Result above quantitation range. Results qualified J. |
| MW4D-S8-40, MW2D-S1-5, MW2D-S1-5-DUP, MW2D-S2-10, MW2D-23-15, MW2D-S4-20, MW2D-S8-40 | 210464-20, 24, 25, 26, 27, 28, 32 | Vinyl chloride/ 8260D | 0.25x | Result above quantitation range. Results qualified J. |

## 1.4 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| NWEPH | B11-W | 2210543-001 | 1-Chlorooctadecane | 1x | 9.36% | J-/R target compounds* |
| NWEPH | B17-W | 2210513-001 | 1-Chlorooctadecane | 1x | 6.2% | J-/R target compounds* |
| NWEPH | B16-W | 2210513-002 | 1-Chlorooctadecane | 1x | 9.7% | J-/R target compounds* |
| NWEPH | B14-W | 2210513-003 | 1-Chlorooctadecane | 1x | 9.36% | J-/R target compounds* |

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| NWEPH | B14-W | 2210513-003 | o-Terphenyl | 1x | 49.7% | J-/UJ target compounds** |

**Compounds targeted by 1-Chlorooctadecane: all aliphatic compounds*
***Compounds targeted by o-Terphenyl: all aromatic compounds*

## 1.5 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses exhibited recoveries and relative percent differences (RPDs) within the specified limits with the following sections:

| SDG # | Sample Type | Method | Analyte | %R/RPD | Qualifier | Affected Samples |
|---|---|---|---|---|---|---|

## 1.6 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 2211107-001 | MW-1D | SM3500-CR B |
| 211082-01 | SW-1 | 1631E |
| 2210406-001 | B12-W | SM3500-CR B |
| 2210543-001 | B11-W | SM3500-CR B |
| 210408-02 | B16-W | 8260D |
| 2210513-001 | B17-W | NWEPH |
| 210409-01 | B13-S1-5 | NWTPH-Dx, 6020B, 1631E |
| 210409-49 | B11-S7-35 | 6020B, 1631E |
| 210409-04 | B13-S4-20 | 8270E |
| 210464-03 | MW3D-S3-15 | NWTPH-Dx |
| 210464-01 | MW3D-S1-5 | 6020B |
| 210464-15 | MW4D-S3-15 | 8270E |
| 210248-01 | SS-1-0.75 | NWTPH-Dx, 6020B, 1631E, 8270E |
| 2210299-001 | SS-1-0.75 | 7196A |
| 2210299-006 | SS-4-1.5 | 9060 |
| 2210299-014 | SS-12-0.5 | 9060 |
| 210370-01 | B12-S1-5 | NWTPH-Dx |
| 210371-01 | B15-W | 6020B, 1631E |
| 211025-01 | MW1D-S1-5 | NWTPH-Dx |

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

| Sample Type | Method | Parent Sample | Analyte | %R/RPD | Qualifier | Affected Samples |
|---|---|---|---|---|---|---|
| MS/MSD | 6020B | B13-S1-5 | Arsenic | 69%/64% | J-/UJ | All samples in SDG210409 |
| MS/MSD | 6020B | B13-S1-5 | Selenium | 80%/51% RPD = 44 | J-/UJ | All samples in SDG210409 |
| MSD | 6020B | B13-S1-5 | Zinc | 70% | J-/UJ | All samples in SDG210409 |
| MS/MSD | 6020B | B11-S7-35 | Barium | 149%/145% | J+/None | All samples in SDG210409 |
| MS/MSD | 6020B | B11-S7-35 | Chromium | 73%/73% | J-/UJ | All samples in SDG210409 |
| MSD | 6020B | B11-S7-35 | Copper | 74% | J-/UJ | All samples in SDG210409 |
| MS | 6020B | B11-S7-35 | Nickel | 73% | J-/UJ | All samples in SDG210409 |
| MSD | 1631E | B13-S1-5 | Mercury | 152% | J+/None | None, samples are ND |
| MS/MSD | 6020B | MW3D-S1-5 | Barium | 142%/101% RPD = 34 | J+/None | All samples in SDG210464 |
| MS/MSD | 6020B | MW3D-S1-5 | Selenium | 65%/42% RPD = 43 | J-/UJ | All samples in SDG210464 |
| MS/MSD | 8270E | MW3D-S1-5 | Naphthalene | 68%/51% RPD = 29 | J/None | None, samples are ND |
| MS | 6020B | SS-1-0.75 | Selenium | 69%/74% | J-/UJ | All samples in SDG210248 |
| MS/MSD | 9060 | SS-12-0.5 | Total Organic Carbon | 104%/128% | J/None | 2210299-014 |
| MS | 1631E | B15-W | Mercury (Total) | 15%/65% RPD = 125 | J-/UJ | All samples in SDG210371 |

## 1.7 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

| Blank Type | SDG | Analyte Detected in Blank | Concentration (µg/L) | Qualifier | Affected Samples |
|---|---|---|---|---|---|
| Method Blank | 210348 | Phenanthrene | 0.02 | Result U | 210348-01 |
| | 211082 | Benz(a)anthracene | 0.037 | NA | None, samples are ND |
| | 211082 | Chrysene | 0.033 | NA | None, samples are ND |
| | 211082 | Benzo(a)pyrene | 0.03 | NA | None, samples are ND |

| Blank Type | SDG | Analyte Detected in Blank | Concentration (µg/L) | Qualifier | Affected Samples |
|---|---|---|---|---|---|
| | 211082 | Benzo(b)fluoranthene | 0.035 | NA | None, samples are ND |
| | 211082 | Benzo(k)fluoranthene | 0.031 | NA | None, samples are ND |
| | 211082 | Indeno(1,2,3-cd)pyrene | 0.029 | NA | None, samples are ND |
| | 211082 | Dibenz(a,h)anthracene | 0.028 | NA | None, samples are ND |

The analysis of the blank samples for field quality control was free of target compounds.

## 1.8 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 2211107-001ADUP | MW-1D-20221103 | J |
| 2210406-001ADUP | B12-W | J |
| 2210299-001ADUP | SS-1-0.75 | A |
| 2210299-006ADUP | SS-4-1.5 | B |
| 2210299-014ADUP | SS-12-0.5 | B |
| 211082-01 | SW-1-20221103 | E |
| 210408-01 | B17-W | E |

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s)/Analyte | % RPD | Qualification |
|---|---|---|---|---|
| 2210299-014ADUP | SS-12-0.5 | Carbon | 49.4 | J/UJ, RPD > 20% |

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

| Primary Sample ID | Duplicate Sample ID | Method(s) |
|---|---|---|
| MW-1D-20221103 | MW-1DD-20221103 | D, E, J |
| B17-S1-5 | B17-S1D | C, D, E, G, H, I |
| B11-S1-5 | B11-S1D | C, D, E, G, H, I |
| MW2D-S1-5 | MW2D-S1-5-DUP | C, D, E, G, H, I |

**Field Duplicate RPD Calculations:**

| Method(s): USEPA 8260D | | | | |
|---|---|---|---|---|
| Analyte (µg/L) | Primary Sample ID | Duplicate Sample ID | % RPD | Qualification |
| | B17-S1-5 | B17-S1D | | |
| Toluene | 0.0036 | 0.001 U | NA | J/UJ, Abs Diff > RL |
| o-Xylene | 0.0021 | 0.001 U | NA | J/UJ, Abs Diff > RL |

## 1.9 PRECISION AND ACCURACY

Refer to section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

## 1.10 SUSPECTED LABORATORY CONTAMINATION

Methylene chloride was detected in several samples, however the detections were flagged "LC" due to do suspected laboratory contamination (methylene chloride is frequently used for cleaning equipment in the laboratory).

## 1.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected except for rejected data noted below. A summary of qualifiers applied to this data set is shown in Table E-12.

## 2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The relative percent difference (RPD) or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

# 3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg microgram per kilogram
  - µg/L microgram per liter
  - µg/$m^3$ microgram per cubic meter
  - mg/kg milligram per kilogram
  - mg/L milligram per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

# 4. Abbreviations

| | |

# 5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

***Notes:***

*DUP = Laboratory duplicate relative percent difference exceeds the specified limits.*

*EXE = Result exceeds the calibration range.*

*FDP = Field duplicate qualifier due to an exceedance of the specified limits.*

*HTQ = Holding time exceedance.*

*LC = Laboratory contamination.*

*LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.*

*MBK = Method blank contamination.*

*MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.*

*SUR = Surrogate percent recovery outside the specified limits.*

*VCM = Validator's choice of method.*

*J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.*

*J- = The result is an estimated quantity, but the result may be biased low.*

*J+ = The result is an estimated quantity, but the result may be biased high.*

*R = The sample results were rejected as unusable; the compound may or may not be present in the sample.*

*U = The compound was analyzed for but not detected.*

*UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.*

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 18, 2022 from the Kosmos 0202832-001-001, F&BI 210248 project. There are 66 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 18, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 0202832-001-001, F&BI 210248 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210248 -01 | SS-1-0.75 |
| 210248 -02 | SS-2-0.5 |
| 210248 -03 | SS-3-0.5 |
| 210248 -04 | SS-4-0.5 |
| 210248 -05 | SS-4-1.0 |
| 210248 -06 | SS-4-1.5 |
| 210248 -07 | SS-5-0.5 |
| 210248 -08 | SS-6-0.5 |
| 210248 -09 | SS-7a-0.5 |
| 210248 -10 | SS-8-0.5 |
| 210248 -11 | SS-9-0.5 |
| 210248 -12 | SS-10-0.5 |
| 210248 -13 | SS-11-0.5 |
| 210248 -14 | SS-12-0.5 |

Samples SS-1-0.75, SS-2-0.5, SS-3-0.5, SS-4-1.5, SS-5-0.5, SS-6-0.5, SS-7a-0.5, SS-8-0.5, SS-9-0.5, SS-10-0.5, SS-11-0.5, and SS-12-0.5 were sent to Fremont Analytical for hexavalent chromium and total organic carbon analyses. The report is enclosed.

Methylene chloride was detected in the 8260D analysis of sample SS-9-0.5. The data were flagged as due to laboratory contamination.

Selenium in the 6020B matrix spike and matrix spike duplicate failed the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

All other quality control requirements were acceptable.

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**RE: 210248**
**Work Order Number: 2210299**

October 28, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 14 sample(s) on 10/19/2022 for the analyses presented in the following report.

***Hexavalent Chromium by EPA Method 7196***
***Sample Moisture (Percent Moisture)***
***Total Organic Carbon by EPA 9060***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2210299**
Date: **10/28/2022**

**CLIENT:** Friedman & Bruya
**Project:** 210248

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 24, 2022 from the Kosmos 02028, F&BI 210348 project. There are 24 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 24, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 02028, F&BI 210348 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210348 -01 | B12-W |

The sample was sent to Fremont Analytical for hexavalent chromium analysis. The report is enclosed.

Phenanthrene was detected in the 8270 method blank at a level greater than one tenth the concentration detected in the sample. The data were flagged accordingly.

Several metals failed below the acceptance criteria in the 6020B matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 102 | 102 | 35-146 | 0 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

October 28, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 1 sample(s) on 10/25/2022 for the analyses presented in the following report.

***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Project:** 210348

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 25, 2022 from the Kosmos, F&BI 210370 project. There are 55 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

| 210370 -17 | B15-S7-40 |
| 210370 -18 | B15-S8-45 |
| 210370 -19 | B15-S9-50 |

The 8260D calibration standard failed the acceptance criteria for acetone. The data were flagged accordingly.

Methylene chloride was detected in the 8260D analysis of several samples. The data were flagged as due to laboratory contamination.

Chromium in the 6020B matrix spike and matrix spike duplicate failed the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

All other quality control requirements were acceptable.

| Benzo(g,h,i)perylene | mg/kg (ppm) | 0.83 | 101 | 67-126 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 25, 2022 from the Kosmos, F&BI 210371 project. There are 28 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE

This case narrative encompasses samples received on October 25, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Komos project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210371 -01 | B15-W |
| 210371 -02 | B13-W |

The samples were sent to Fremont Analytical for hexavalent chromium analysis. The report is enclosed.

Several compounds in the 8270E laboratory control sample did not meet the acceptance criteria. The data were flagged accordingly.

Several metals in the 6020B and 1631E matrix spike and matrix spike duplicate did not meet the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D laboratory control sample exceeded the acceptance criteria for 2,2-dichloropropane. The compound waas not detected, therefore the data were acceptable.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 94 | 96 | 35-146 | 2 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 26, 2022 from the Kosmos, F&BI 210408 project. There are 35 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 26, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 210408 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210408 -01 | B17-W |
| 210408 -02 | B16-W |
| 210408 -03 | B14-W |

The samples were sent to Fremont Analytical for hexavalent chromium and EPH. The reports are enclosed.

Several compounds in the 8270E laboratory control sample failed the acceptance criteria. The data were flagged accordingly.

Several metals in the 6020B and 1631E matrix spike and matrix spike duplicate did not meet the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D laboratory control sample and laboratory control sample duplicate exceeded the acceptance criteria for 2,2-dichloropropane. The compound was not detected, therefore the data were acceptable.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 94 | 96 | 35-146 | 2 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

210408

**RE: 201408**
**Work Order Number: 2210513**

November 16, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 3 sample(s) on 10/27/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Date:** *11/16/2022*

**CLIENT:** Friedman & Bruya
**Project:** 201408
**Work Order:** 2210513

# Work Order Sample Summary

| Lab Sample ID | Client Sample ID | Date/Time Collected | Date/Time Received |
|---|---|---|---|
| 2210513-001 | B17-W | 10/26/2022 9:30 AM | 10/27/2022 8:30 AM |
| 2210513-002 | B16-W | 10/26/2022 1:30 PM | 10/27/2022 8:30 AM |
| 2210513-003 | B14-W | 10/26/2022 11:30 AM | 10/27/2022 8:30 AM |

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

# Case Narrative

WO#: **2210513**
Date: **11/16/2022**

**CLIENT:** Friedman & Bruya
**Project:** 201408

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

11/16/22: Revision 1 includes additional analysis requested by the client.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 26, 2022 from the Kosmos, F&BI 210409 project. There are 115 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

| 210409 -52 | B11-S10-50 |

Samples B13-S1-5 and B11-S1D were sent to Fremont Analytical for EPH analysis. In addition, sample B11-S1D was sent to Onsite for VPH analysis. The report is enclosed.

Several metals in the 6020B matrix spike and matrix spike duplicate failed the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D calibration standard failed the acceptance criteria for several analytes. The data were flagged accordingly. In addition, methylene chloride detections were qualified as due to laboratory contamination.

The 8260D laboratory control sample and laboratory control sample duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

Benzo(b)fluoranthene in the 8270E laboratory control sample exceeded the acceptance criteria. Any associated detections were qualified accordingly.

All other quality control requirements were acceptable.

Project: Kosmos, F&BI 210409
Date Extracted: 11/03/22
Date Analyzed: 11/03/22

**RESULTS FROM THE ANALYSIS OF SOIL SAMPLES FOR TOTAL PETROLEUM HYDROCARBONS AS DIESEL AND MOTOR OIL USING METHOD NWTPH-Dx**

Results Reported on a Dry Weight Basis
Results Reported as mg/kg (ppm)

| Sample ID<br>Laboratory ID | Diesel Range<br>($C_{10}$-$C_{25}$) | Motor Oil Range<br>($C_{25}$-$C_{36}$) | Surrogate<br>(% Recovery)<br>(Limit 56-165) |

| Benzo(b)fluoranthene | mg/kg (ppm) | 0.17 | 152 vo | 69-125 |
| Benzo(k)fluoranthene | mg/kg (ppm) | 0.17 | 122 | 70-130 |
| Indeno(1,2,3-cd)pyrene | mg/kg (ppm) | 0.17 | 103 | 67-129 |
| Dibenz(a,h)anthracene | mg/kg (ppm) | 0.17 | 107 | 67-128 |
| Benzo(g,h,i)perylene | mg/kg (ppm) | 0.17 | 94 | 64-127 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**RE: 210409**
**Work Order Number: 2211095**

November 18, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 23 sample(s) on 11/3/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Sample Moisture (Percent Moisture)***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2211095**
Date: **11/18/2022**

**CLIENT:** Friedman & Bruya
**Project:** 210409

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

| Logged by: | Clare Griggs | Date Received: | 11/3/2022 12:18:00 PM |

## Chain of Custody

| | | | | | | |
|---|---|---|---|---|---|---|
| 1. | Is Chain of Custody complete? | Yes | ☑ | No ☐ | Not Present | ☐ |
| 2. | How was the sample delivered? | Courier | | | | |

## Log In

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | Coolers are present? | Yes | ☑ | No ☐ | NA | ☐ |
| 4. | Shipping container/cooler in good condition? | Yes | ☑ | No ☐ | | |
| 5. | Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) | Yes | ☐ | No ☐ | Not Present | ☑ |
| 6. | Was an attempt made to cool the samples? | Yes | ☑ | No ☐ | NA | ☐ |
| 7. | Were all items received at a temperature of >2°C to 6°C * | Yes | ☑ | No ☐ | NA | ☐ |
| 8. | Sample(s) in proper container(s)? | Yes | ☑ | No ☐ | | |
| 9. | Sufficient sample volume for indicated test(s)? | Yes | ☑ | No ☐ | | |
| 10. | Are samples properly preserved? | Yes | ☑ | No ☐ | | |
| 11. | Was preservative added to bottles? | Yes | ☐ | No ☑ | NA | ☐ |
| 12. | Is there headspace in the VOA vials? | Yes | ☐ | No ☐ | NA | ☑ |
| 13. | Did all samples containers arrive in good condition(unbroken)? | Yes | ☑ | No ☐ | | |
| 14. | Does paperwork match bottle labels? | Yes | ☑ | No ☐ | | |
| 15. | Are matrices correctly identified on Chain of Custody? | Yes | ☑ | No ☐ | | |
| 16. | Is it clear what analyses were requested? | Yes | ☑ | No ☐ | | |
| 17. | Were all holding times able to be met? | Yes | ☑ | No ☐ | | |

## Special Handling (if applicable)

| | | | | | | |
|---|---|---|---|---|---|---|
| 18. | Was client notified of all discrepancies with this order? | Yes | ☐ | No ☐ | NA | ☑ |

Re: Analytical Data for Project 210409
Laboratory Reference No. 2211-050

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on November 4, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 14, 2022
Samples Submitted: November 4, 2022
Laboratory Reference: 2211-050
Project: 210409

**Case Narrative**

Samples were collected on October 25, 2022 and received by the laboratory on November 4, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 14, 2022

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 27, 2022 from the Kosmos, F&BI 210420 project. There are 27 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 27, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 210420 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210420 -01 | B11-W |

The sample was sent to Fremont Analytical for hexavalent chromium and EPH analyses. The report is enclosed.

The dissolved metals samples were filtered at Friedman and Bruya. The data were flagged accordingly.

Several metals in the 6020B and 1631E matrix spike and matrix spike duplicate failed the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D laboratory control sample exceeded the acceptance criteria 2,2-dichloropropane. The compound was not detected, therefore the data were acceptable.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 102 | 102 | 35-146 | 0 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**RE: 210420**
**Work Order Number: 2210543**

November 16, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 1 sample(s) on 10/27/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Date:** *11/16/2022*

**CLIENT:** Friedman & Bruya
**Project:** 210420

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on October 28, 2022 from the Kosmos, F&BI 210464 project. There are 67 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 28, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 210464 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 210464 -01 | MW3D-S1-5 |
| 210464 -02 | MW3D-S2-10 |
| 210464 -03 | MW3D-S3-15 |
| 210464 -04 | MW3D-S4-20 |
| 210464 -05 | MW3D-S5-25 |
| 210464 -06 | MW3D-S6-30 |
| 210464 -07 | MW3D-S7-35 |
| 210464 -08 | MW3D-S8-40 |
| 210464 -09 | MW3D-S9-45 |
| 210464 -10 | MW3D-S10-50 |
| 210464 -11 | MW3D-S11-55 |
| 210464 -12 | MW3D-S12-60 |
| 210464 -13 | MW4D-S1-3 |
| 210464 -14 | MW4D-S2-10 |
| 210464 -15 | MW4D-S3-15 |
| 210464 -16 | MW4D-S4-20 |
| 210464 -17 | MW4D-S5-25 |
| 210464 -18 | MW4D-S6-30 |
| 210464 -19 | MW4D-S7-35 |
| 210464 -20 | MW4D-S8-40 |
| 210464 -21 | MW4D-S9-45 |
| 210464 -22 | MW4D-S10-50 |
| 210464 -23 | MW4D-S11-55 |
| 210464 -24 | MW2D-S1-5 |
| 210464 -25 | MW2D-S1-5-DUP |
| 210464 -26 | MW2D-S2-10 |
| 210464 -27 | MW2D-S3-15 |
| 210464 -28 | MW2D-S4-20 |
| 210464 -29 | MW2D-S5-25 |
| 210464 -30 | MW2D-S6-30 |
| 210464 -31 | MW2D-S7-35 |
| 210464 -32 | MW2D-S8-40 |
| 210464 -33 | MW2D-S9-45 |
| 210464 -34 | MW2D-S10-50 |
| 210464 -35 | MW2D-S11-55 |

CASE NARRATIVE (continued)

Samples MW3D-S1-5, MW3D-S2-10, MW3D-S4-20, MW2D-S1-5, MW2D-S1-5-DUP , and MW2D-S2-10 were sent to Fremont Analytical for EPH analysis and to Onsite Environmental for VPH analysis. The report is enclosed.

Selenium in the 6020B matrix spike and matrix spike duplicate did not meet the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D calibration standard failed the acceptance criteria for several compounds. The data were flagged accordingly.

The 8260D laboratory control sample exceeded the acceptance criteria for acetone. The compound was not detected, therefore the data were acceptable.

An 8270E internal standard failed the acceptance criteria for sample MW3D-S2-10. The sample was diluted and reanalyzed with acceptable results. Both data sets were reported.

All other quality control requirements were acceptable.

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Re: Analytical Data for Project 210464
Laboratory Reference No. 2211-172

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on November 10, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 21, 2022
Samples Submitted: November 10, 2022
Laboratory Reference: 2211-172
Project: 210464

**Case Narrative**

Samples were collected on October 27 and 28, 2022 and received by the laboratory on November 10, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 21, 2022
Samples Submitted: November 10, 2022

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

**RE: 210464**
**Work Order Number: 2211250**

November 28, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 6 sample(s) on 11/10/2022 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Sample Moisture (Percent Moisture)***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Date:** *11/28/2022*

# Case Narrative

WO#: **2211250**
Date: **11/28/2022**

**CLIENT:** Friedman & Bruya
**Project:** 210464

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

## Chain of Custody

| | | | | | | |
|---|---|---|---|---|---|---|
| 1. | Is Chain of Custody complete? | Yes | ☑ | No | ☐ | Not Present ☐ |
| 2. | How was the sample delivered? | FedEx | | | | |

## Log In

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | Coolers are present? | Yes | ☑ | No | ☐ | NA ☐ |
| 4. | Shipping container/cooler in good condition? | Yes | ☑ | No | ☐ | |
| 5. | Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) | Yes | ☐ | No | ☐ | Not Present ☑ |
| 6. | Was an attempt made to cool the samples? | Yes | ☑ | No | ☐ | NA ☐ |
| 7. | Were all items received at a temperature of >2°C to 6°C * | Yes | ☑ | No | ☐ | NA ☐ |
| 8. | Sample(s) in proper container(s)? | Yes | ☑ | No | ☐ | |
| 9. | Sufficient sample volume for indicated test(s)? | Yes | ☑ | No | ☐ | |
| 10. | Are samples properly preserved? | Yes | ☑ | No | ☐ | |
| 11. | Was preservative added to bottles? | Yes | ☐ | No | ☑ | NA ☐ |
| 12. | Is there headspace in the VOA vials? | Yes | ☐ | No | ☐ | NA ☑ |
| 13. | Did all samples containers arrive in good condition(unbroken)? | Yes | ☑ | No | ☐ | |
| 14. | Does paperwork match bottle labels? | Yes | ☑ | No | ☐ | |
| 15. | Are matrices correctly identified on Chain of Custody? | Yes | ☑ | No | ☐ | |
| 16. | Is it clear what analyses were requested? | Yes | ☑ | No | ☐ | |
| 17. | Were all holding times able to be met? | Yes | ☑ | No | ☐ | |

## Special Handling (if applicable)

| | | | | | | |
|---|---|---|---|---|---|---|
| 18. | Was client notified of all discrepancies with this order? | Yes | ☐ | No | ☐ | NA ☑ |

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on November 2, 2022 from the Kosmos, F&BI 211025 project. There are 27 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 2, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 211025 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 211025 -01 | MW1D-S1-5 |
| 211025 -02 | MW1D-S2-10 |
| 211025 -03 | MW1D-S3-15 |
| 211025 -04 | MW1D-S4-20 |
| 211025 -05 | MW1D-S5-25 |
| 211025 -06 | MW1D-S6-30 |
| 211025 -07 | MW1D-S7-35 |
| 211025 -08 | MW1D-S8-40 |
| 211025 -09 | MW1D-S9-45 |
| 211025 -10 | MW1D-S10-50 |
| 211025 -11 | MW1D-S11-55 |
| 211025 -12 | MW1D-S12-60 |
| 211025 -13 | MW1D-S13-6 |

Selenium in the 6020B matrix spike and matrix spike duplicate failed the acceptance criteria. The laboratory control sample passed the acceptance criteria, therefore the results were due to matrix effect.

The 8260D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

| Indeno(1,2,3-cd)pyrene | mg/kg (ppm) | 0.83 | 115 | 67-129 |
| Dibenz(a,h)anthracene | mg/kg (ppm) | 0.83 | 115 | 67-128 |
| Benzo(g,h,i)perylene | mg/kg (ppm) | 0.83 | 109 | 64-127 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on November 3, 2022 from the Kosmos, F&BI 211082 project. There are 18 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 3, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 211082 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 211082 -01 | SW-1 |
| 211082 -02 | SW-2 |
| 211082 -03 | SW-3 |

The samples were sent to Fremont Analytical for hexavalent chromium analysis. The report is enclosed.

cPAHs were detected in the 8270E method blank. The data were flagged accordingly.

All other quality control requirements were acceptable.

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**RE: 211082**
**Work Order Number: 2211108**

November 09, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 3 sample(s) on 11/4/2022 for the analyses presented in the following report.

***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2211108**
Date: **11/9/2022**

**CLIENT:** Friedman & Bruya
**Project:** 211082

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on November 3, 2022 from the Kosmos, F&BI 211083 project. There are 40 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 3, 2022 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 211083 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 211083 -01 | MW-1D |
| 211083 -02 | MW-1DD |
| 211083 -03 | MW-2D |
| 211083 -04 | MW-3D |
| 211083 -05 | MW-4D |
| 211083 -06 | Trip Blank |

The requested samples were subcontracted to Fremont Analytical for hexavalent chromium analysis. The report is enclosed.

All quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 50 | 80 | 90 | 35-146 | 11 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**Work Order Number: 2211107**

November 09, 2022

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 5 sample(s) on 11/4/2022 for the analyses presented in the following report.

***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2211107**
Date: **11/9/2022**

**CLIENT:** Friedman & Bruya
**Project:** 211083

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Groundwater Samples**

**Sample Date(s): 13 February 2023**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA**

**Fremont Analytical – Seattle, WA**

**Onsite Environmental – Redmond, WA**

**Validation Performed by: Kirkland Broadwell**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 09 March 2023**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Number 302179**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL).

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQO) for the project and therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Number 302179

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number 302179, dated 23 February 2023. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol.

- Samples for Volatile Petroleum Hydrocarbon (VPH) analysis were subcontracted to Onsite Environmental, Inc. – Redmond, WA (Laboratory IDs 02-171-01 through 02-171-09).
- Samples for EPH and hexavalent chromium analysis were subcontracted to Freemont Analytical – Seattle, WA (Laboratory IDs 2302235-001 through 2302235-001).

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used when samples were transported between subcontracted laboratories.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|

|---|---|---|---|
| A. | NWTPH-DX | Total Petroleum Hydrocarbons (TPH) Total Diesel | 14 days for liquid, preserved; 7 days for liquid unpreserved |
| B. | NWTPH-GX | Total Petroleum Hydrocarbons (TPH) Total Gasoline | 14 days for liquid, preserved; 7 days for liquid unpreserved |
| C. | SW8260D | Volatile Organic Compounds (VOCs) | 14 days for liquid, preserved; 7 days for liquid unpreserved |
| D. | SW8270E | Polycyclic Aromatic Hydrocarbons (PAHs) | 7 days extraction / 40 days analysis for liquid |
| E. | SW6020B | Metals | 180 days for liquid |
| F. | E1631E | Mercury | 28 days preserved; 48 hours unpreserved |
| G. | SM2540D | Total Suspended Solids | 7 days |
| H. | NWTPH-VPH | VPH Fractions | 14 days preserved; 7 days unpreserved |
| I. | SW8021B | Volatile Organic Compounds (VOCs) | 14 days |
| J. | NWTPH-EPH | Extractable Petroleum Hydrocarbon (EPH) Fractions | 14 days preserved; 7 days unpreserved |
| K. | SM3500-CR B | Hexavalent Chromium | 24 hours |

## 1.2 CASE NARRATIVE

The laboratory report case narrative lists various additional quality control issues such as internal standard exceedances and initial calibration verification (ICV) and/or continuing calibration verification (CCV) exceedances. Since these additional quality control issues were not required for the project's data quality objectives, these quality control issues were not reviewed:

- SDG 320179: The calibration standard for acetone (SW8260D) was outside of acceptance criteria. The reported values are estimates and qualified UJ: 302179-01 through 302179-09.
- SDG 2302235: The calibration verification for Aromatic Hydrocarbons (C16-C21) and (C12-C34) for sample 2302235-006 and (C21-C34) for sample 2302235-007 are above the laboratory acceptance criteria. No qualification necessary.

## 1.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol with the following exceptions:

| Method | Matrix | Holding Time | Preservation | Sample ID, Violation, Qualification |
|---|---|---|---|---|
| SM3500-CR B | Water | 24 hours | Cool to ≤ 6 °C | The following samples were analyzed outside the holding time and qualified J/UJ: 2302235-001 through 2302235-009 |
| NWTPH-EPH | Water | 14 days | Cool to ≤ 6 °C | The following samples were analyzed outside the holding time and qualified J/UJ: MW-1D-20230213, MW-1DD-20230213, MW-1S-20230213, MW-2D-20230213, MW-2S-20230213, MW-3D-20230213, MW-3S-20230213, MW-4D-20230213, and MW-4S-20230213 |

### 1.4 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum RL requirements specified by the project specific QAPP, except were diluted due to matrix effects or non-target analytes.

### 1.5 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| NWTPH-EPH | MW-3D-20230213 | 2302235-007 | 1-Chlorooctadecane | 1x | 33.8% | J-/UJ target compounds* |

**Compounds targeted by 1-Chlorooctadecane: all aliphatic compounds*

### 1.6 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits with the following exceptions:

| Sample Type | Method | SDG # | Analyte | %R/RPD | Qualifier | Affected Samples |
|---|---|---|---|---|---|---|
| LCSD | SW8270E | 302179 | 1-Methylnaphthalene | 94% | J/None | 302179-06 |

### 1.7 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The samples below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 302179-01 | MW-1S-20230213 | SW6020B, E1631E, SW8260D |

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 2302235-003 | MW-1DD-20230213 | SM3500-CR B |
| 2302235-004 | MW-2S-20230213 | NWTPH-EPH |

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits.

### 1.8 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

### 1.9 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following samples were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL):

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method |
|---|---|---|
| 2302235-003 | MW-1DD-20230213 | SM3500-CR B |
| 2302235-006 | MW-3S-20230213 | NWTPH-EPH |

The following sample was used for field duplicate analysis. RPDs were all below 35 (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

| Primary Sample ID | Duplicate Sample ID | Methods |
|---|---|---|
| MW-1D-20230213 | MW-1DD-20230213 | A, B, C, D, E, F, G, H, I, J, K |

**Field Duplicate RPD Calculations:**

| Method: SW6020B | | | | |
|---|---|---|---|---|
| Analyte (µg/L) | Primary Sample ID | Duplicate Sample ID | % RPD | Qualification |
| | MW-1D-20230213 | MW-1DD-20230213 | | |
| Barium, dissolved | 1.05 | 2.34 | 76% | J, RPD > 35% |
| Zinc, dissolved | ND U | 11.4 | NA | J/UJ, Abs. Diff. > RL |

### 1.10 PRECISION AND ACCURACY

Refer to section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

### 1.11 CALCULATION ACCURACY

Total (non-filtered) metals were greater than dissolved (filtered) metals, and
Total chromium was greater than hexavalent chromium,
with the following exceptions:

| Sample ID | Analyte | Total (ug/L) | Dissolved (ug/L) | %RPD | Action |
|---|---|---|---|---|---|
| MW-1DD-20230213 | Barium | 2.16 | 2.34 | 8.00% | None, RPD < 100% |
| MW-1DD-20230213 | Zinc | ND | 11.4 | 78.0% | None, RPD < 100% |
| MW-1S-20230213 | Zinc | ND | 7.05 | 12.5% | None, RPD < 100% |
| MW-2S-20230213 | Nickel | ND | 1.2 | 12.4% | None, RPD < 100% |
| MW-2S-20230213 | Barium | 1 | 1.12 | 11.3% | None, RPD < 100% |
| MW-3S-20230213 | Nickel | 1.06 | 1.16 | 3.80% | None, RPD < 100% |
| MW-3S-20230213 | Barium | 1.55 | 1.61 | 3.80% | None, RPD < 100% |
| MW-3S-20230213 | Arsenic | 1.21 | 1.22 | 0.82% | None, RPD < 100% |

## 1.12 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. The qualifiers applied to this data set are summarized in the table below.

| Sample ID | Analyte | Reported Result | Validated Result | Reason for Qualifier |
|---|---|---|---|---|
| MW-1D-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| | Barium, Dissolved | 1.05 | 1.05 J | Field Duplicate calculations |
| | Zinc, Dissolved | U | UJ | |
| | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |
| | EPH (C10-C12) Aliphatic | U | UJ | |
| | EPH (C10-C12) Aromatic | U | UJ | |
| | EPH (C12-C16) Aliphatic | U | UJ | |
| | EPH (C12-C16) Aromatic | U | UJ | |
| | EPH (C16-C21) Aliphatic | U | UJ | |
| | EPH (C16-C21) Aromatic | 18.2 J | 18.2 J | |

| Sample ID | Analyte | Reported Result | Validated Result | Reason for Qualifier |
|---|---|---|---|---|
| | EPH (C21-C34) Aliphatic | U | UJ | |
| | EPH (C21-C34) Aromatic | U | UJ | |
| | EPH (C8-C10) Aliphatic | U | UJ | |
| | EPH (C8-C10) Aromatic | U | UJ | |
| MW-1DD-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| | Barium, Dissolved | 2.34 | 2.34 J | Field Duplicate calculations |
| | Zinc, Dissolved | 11.4 | 11.4 J | |
| | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |
| | EPH (C10-C12) Aromatic | U | UJ | |
| | EPH (C12-C16) Aromatic | U | UJ | |
| | EPH (C16-C21) Aromatic | U | UJ | |
| | EPH (C21-C34) Aromatic | U | UJ | |
| | EPH (C8-C10) Aromatic | 32.2 J | 32.2 J | |
| MW-1S-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| MW-1S-20230213 | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |
| | EPH (C10-C12) Aromatic | U | UJ | |
| | EPH (C12-C16) Aromatic | U | UJ | |
| | EPH (C16-C21) Aromatic | U | UJ | |
| | EPH (C21-C34) Aromatic | U | UJ | |
| | EPH (C8-C10) Aromatic | U | UJ | |
| MW-2D-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |
| | EPH (C10-C12) Aromatic | U | UJ | |
| | EPH (C12-C16) Aromatic | U | UJ | |
| | EPH (C16-C21) Aromatic | U | UJ | |
| | EPH (C21-C34) Aromatic | 35.8 J | 35.8 J | |
| | EPH (C8-C10) Aromatic | U | UJ | |

| Sample ID | Analyte | Reported Result | Validated Result | Reason for Qualifier |
|---|---|---|---|---|
| MW-2S-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |
| | EPH (C10-C12) Aromatic | U | UJ | |
| | EPH (C12-C16) Aromatic | 20.2 J | 20.2 J | |
| | EPH (C16-C21) Aromatic | U | UJ | |
| | EPH (C21-C34) Aromatic | U | UJ | |
| | EPH (C8-C10) Aromatic | U | UJ | |
| MW-3D-20230213 | Acetone | 50 EJ | 50 UJ | Calibration exceedance |
| | EPH (C21-C34) Aromatic | 46.4 Q | 46.4 J | Hold time exceedance |
| | Chromium VI (Hexavalent) | UH | UJ | Hold time exceedance |

## 2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The relative percent difference (RPD) or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

# 3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg microgram per kilogram
  - µg/L microgram per liter
  - µg/$m^3$ microgram per cubic meter
  - mg/kg milligram per kilogram
  - mg/L milligram per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

# 4. Abbreviations

| | |
|---|---|
| %D | Percent Difference |
| %R | Percent Recovery |

# 5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on February 14, 2023 from the Kosmos, F&BI 302179 project. There are 65 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on February 14, 2023 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 302179 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 302179 -01 | MW-1S |
| 302179 -02 | MW-1D |
| 302179 -03 | MW-1DD |
| 302179 -04 | MW-2S |
| 302179 -05 | MW-2D |
| 302179 -06 | MW-3S |
| 302179 -07 | MW-3D |
| 302179 -08 | MW-4S |
| 302179 -09 | MW-4D |

The samples were sent to Fremont Analytical for EPH and hexavalent chromium analyses. In addition, the samples were sent to Onsite for VPH analysis. The reports are enclosed.

The 8260D calibration standard failed the acceptance criteria for acetone. The data were flagged accordingly.

1-Methylnaphthalene in the 8270E laboratory control sample duplicate failed the acceptance criteria. The compound was not detected, therefore the data were acceptable.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 96 | 92 | 35-146 | 4 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased high; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Re: Analytical Data for Project 302179
Laboratory Reference No. 2302-171

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on February 14, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: February 23, 2023
Samples Submitted: February 14, 2023
Laboratory Reference: 2302-171
Project: 302179

**Case Narrative**

Samples were collected on February 13, 2023 and received by the laboratory on February 14, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

**RE: 302179**
**Work Order Number: 2302235**

March 02, 2023

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 9 sample(s) on 2/14/2023 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

| 2302235-009 | MW-4D | 02/13/2023 5:00 PM | 02/14/2023 11:00 AM |

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

# Case Narrative

WO#: **2302235**

Date: **3/2/2023**

**CLIENT:** Friedman & Bruya
**Project:** 302179

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Associated LCS is outside of control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Method Detection Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Groundwater Samples**

**Sample Date(s): 10 and 11 May 2023**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA**

**Fremont Analytical – Seattle, WA**

**Onsite Environmental – Redmond, WA**

**Validation Performed by: Santa McKenna**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 5 July 2023**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Number 305192**
2. **Sample Delivery Group Number 305211**
3. **Precision and Accuracy [for SDG(s) above]**
4. **Explanations**
5. **Glossary**
6. **Abbreviations**
7. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL) [OR] the laboratory method detection limit (MDL). Results found between the MDL and RL are flagged J as estimated.

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQO) for the project and therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Number 305192

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number 305192, dated 6 June 2023. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol.

- Samples for Volatile Petroleum Hydrocarbon (VPH) analysis were subcontracted to Onsite Environmental, Inc. – Redmond, WA (Laboratory IDs 2305-121-01through 2305-121-04).
- Samples for EPH and hexavalent chromium analysis were subcontracted to Freemont Analytical – Seattle, WA (Laboratory IDs 2305262-001A through 2305262-004A).

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used when samples were transported between subcontracted laboratories.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| MW-1D-20230510 | N | 305192-01 | 05/10/2023 | WG | A, B, C, D, E, F, G |
| MW-2D-20230510 | N | 305192-02 | 05/10/2023 | WG | A, B, C, D, E, F, G |
| MW-3D-20230510 | N | 305192-03 | 05/10/2023 | WG | A, B, C, D, E, F, G |
| MW-4D-20230510 | N | 305192-04 | 05/10/2023 | WG | A, B, C, D, E, F, G |
| MW-1D-20230510 | N | 2305-121-01 | 05/10/2023 | WG | H, I |

| MW-2D-20230510 | N | 2305262-002A | 05/10/2023 | WG | J, K |
| MW-3D-20230510 | N | 2305262-003A | 05/10/2023 | WG | J, K |
| MW-4D-20230510 | N | 2305262-004A | 05/10/2023 | WG | J, K |

| Method Holding Times | | | |
|---|---|---|---|
| A. | E1631E | Mercury | 28 days preserved; 48 hours unpreserved |
| B. | NWTPH-DX | Total Petroleum Hydrocarbons (TPH) Total Diesel | 14 days for liquid, preserved 7 days for liquid unpreserved |
| C. | NWTPH-GX | Total Petroleum Hydrocarbons (TPH) Total Diesel | 14 days for liquid, preserved 7 days for liquid unpreserved |
| D. | SM2540D | Total Suspended Solids | 7 days |
| E. | SW6020B | Metals | 180 days for liquid |
| F. | SW8260D | Volatile Organic Compounds (VOCs) | 14 days for liquid, preserved 7 days for liquid unpreserved |
| G. | SW8270E | Polycyclic Aromatic Hydrocarbons (PAHs) | 7 days extraction / 40 days analysis for liquid |

| Method Holding Times | | | |
|---|---|---|---|
| H. | NWTPH-VPH | VPH Fractions | 14 days preserved; 7 days unpreserved |
| I. | SW8021B | VOCs | 14 days |
| J. | NWEPH | Extractable Petroleum Hydrocarbon (EPH) Fractions | 14 days preserved; 7 days unpreserved |
| K. | SM3500-CR B | Hexavalent Chromium | 24 hours |

## 1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

## 1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum reporting limit (RL) requirements specified by the project specific QAPP with the following exceptions:

| Sample ID | Lab ID | Analyte/ Method | Dilution Factor |
|---|---|---|---|
| All samples | All samples | NWTPH-diesel | 1.2x |
| All samples | All samples | Copper | 1x |
| All samples | All samples | 2-Butanone (MEK) | 1x |
| All samples | All samples | Acetone | 1x |
| All samples | All samples | Bromoform | 1x |
| All samples | All samples | Bromomethane | 1x |
| All samples | All samples | Hexane | 1x |

## 1.4 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Lab ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| NWEPH | MW-2D-20230510 | 2305262-002A | 1-Chlorooctadecane | 1x | 34.1 % | J-/UJ target compounds |

## 1.5 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits.

## 1.6 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 305192-04 | 305192-04 MS | 6020B |
| 305129-02 | 305129-02 MS | 1631E |
| 2305230-001A | 2305230-001AMS/MSD | SM 3500 |

The MS/MSD recoveries and the relative percent difference (RPD) between the MS and MSD results were within the specified limits.

### 1.7 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

The analysis of the blank samples for field quality control was free of target compounds.

### 1.8 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL):

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 305192-01 | 305192-01 (Duplicate) | NWTPH-Gx |
| 305192-02 | 305192-02 (Duplicate) | 2540D |
| 2305262-003A | 2305262-003ADUP | NWEPH |
| 2305230-001A | 2305230-001ADUP | SM 3500 |

No field duplicates were collected in this data set.

### 1.9 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. A summary of qualifiers applied to this data set is shown in Table E-13.

# 2. Sample Delivery Group Number 305211

## 2.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number 305211, dated 6 June 2023. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol.

- Samples for Volatile Petroleum Hydrocarbon (VPH) and analysis were subcontracted to Onsite Environmental, Inc. – Redmond, WA (Laboratory IDs 05-148-01 through 05-148-05).
- Samples for EPH and hexavalent chromium analysis were subcontracted to Freemont Analytical – Seattle, WA (Laboratory IDs 2305259-001 through 2305259-005).

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used when samples were transported between subcontracted laboratories.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| MW-1S-20230511 | N | 305211-01 | 05/11/2023 | WG | A, B, C, D, E, F, G |
| MW-2S-20230511 | N | 305211-02 | 05/11/2023 | WG | A, B, C, D, E, F, G |
| MW-2SD-20230511 | FD | 305211-03 | 05/11/2023 | WG | A, B, C, D, E, F, G |
| MW-3S-20230511 | N | 305211-04 | 05/11/2023 | WG | A, B, C, D, E, F, G |
| MW-4S-20230511 | N | 305211-05 | 05/11/2023 | WG | A, B, C, D, E, F, G |
| MW-1S-20230511 | N | 2305-148-01 | 05/11/2023 | WG | H, I |
| MW-2S-20230511 | N | 2305-148-02 | 05/11/2023 | WG | H, I |
| MW-2SD-20230511 | FD | 2305-148-03 | 05/11/2023 | WG | H, I |
| MW-3S-20230511 | N | 2305-148-04 | 05/11/2023 | WG | H, I |
| MW-4S-20230511 | N | 2305-148-05 | 05/11/2023 | WG | H, I |
| MW-1S-20230511 | N | 2305259-001A | 05/11/2023 | WG | J |

| MW-4S-20230511 | N | 2305259-005B | 05/11/2023 | WG | K |

| Method Holding Times | | | |
|---|---|---|---|
| A. | E1631E | Mercury | 28 days preserved; 48 hours unpreserved |
| B. | NWTPH-DX | Total Petroleum Hydrocarbons (TPH) Total Diesel | 14 days for liquid, preserved 7 days for liquid unpreserved |
| C. | NWTPH-GX | Total Petroleum Hydrocarbons (TPH) Total Diesel | 14 days for liquid, preserved 7 days for liquid unpreserved |
| D. | SM2540D | Total Suspended Solids | 7 days |
| E. | SW6020B | Metals | 180 days for liquid |
| F. | SW8260D | Volatile Organic Compounds (VOCs) | 14 days for liquid, preserved 7 days for liquid unpreserved |
| G. | SW8270E | Polycyclic Aromatic Hydrocarbons (PAHs) | 7 days extraction / 40 days analysis for liquid |
| H. | NWTPH-VPH | VPH Fractions | 14 days preserved; 7 days unpreserved |
| I. | SW8021B | VOCs | 14 days |
| J. | NWEPH | Extractable Petroleum Hydrocarbon (EPH) Fractions | 14 days preserved; 7 days unpreserved |
| K. | SM3500-CR B | Hexavalent Chromium | 24 hours |

## 2.2 CASE NARRATIVE

The laboratory report case narrative lists various additional quality control issues such as internal standard exceedances and initial calibration verification (ICV) and/or continuing calibration verification (CCV) exceedances. Since these additional quality control issues were not required for the project's data quality objectives, these quality control issues were not reviewed:

- SDG 305211: The calibration standard for several compounds (SW8260D) was outside of acceptance criteria. The reported values are estimates and qualified UJ: 302179-01 through 302179-09.

## 2.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol with the following exceptions:

| Method | Matrix | Holding Time | Preservation | Sample ID, Violation, Qualification |
|---|---|---|---|---|
| SM3500-CR B | Water | 24 hours | Cool to ≤ 6 °C | The following samples were analyzed outside the holding time and qualified UJ: MW-1S-20230511, MW-2S-20230511, MW-2SD-20230511 |

## 2.4 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum reporting limit (RL) requirements specified by the project specific QAPP with the following exceptions:

| Sample ID | Lab ID | Analyte/ Method | Dilution Factor |
|---|---|---|---|
| All samples | All samples | 2-Butanone (MEK) | 1x |
| All samples | All samples | Acetone | 1x |
| All samples | All samples | Bromomethane | 1x |
| All samples | All samples | Bromoform | 1x |
| All samples | All samples | Hexane | 1x |
| All samples | All samples | Methyl t-butyl ether (MTBE) | 1x |
| MW-3S-20230511 | 305211-04 | Nickel | 5x |
| All samples | All samples | Hexavalent Chromium | 1x |
| MW-3S-20230511 | 305211-04 | Chromium | 5x |
| MW-3S-20230511 | 305211-04 | Copper | 5x |
| MW-3S-20230511 | 305211-04 | Zinc | 5x |

## 2.5 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits.

## 2.6 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples (LCS) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits.

## 2.7 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method(s) |
|---|---|---|
| 305211-05 | 305211-05(Matrix Spike) | 1631E |
| 305211-02 | 305211-02(Matrix Spike) | 1631E |
| 305211-01 | 305211-01(Matrix Spike) | SW8260D |
| 2305259-001 | 2305259-001BMS/BMSD | SM3500 Cr |
| 2305-148-01 | SB0519W1 | SM8021B |

The MS/MSD recoveries and the relative percent difference (RPD) between the MS and MSD results were within the specified limits.

## 2.8 BLANK SAMPLE ANALYSIS

Refer to section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

## 2.9 DUPLICATE SAMPLE ANALYSIS

Refer to section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL): [

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method(s) |
|---|---|---|
| MW-1S-20230511 | 2305259-001BDUP | SM3500 Cr |
| MW-2SD-20230511 | 2305262-003ADUP | NWEPH |

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

| Primary Sample ID | Duplicate Sample ID | Method(s) |
|---|---|---|
| MW-2S-20230511 | MW-2SD-20230511 | A, B, C, D, E, F, G, H, I, J, K |

**Field Duplicate RPD Calculations:**

| Method(s): NWEPH | | | | |
|---|---|---|---|---|
| Analyte (µg/L) | Primary Sample ID | Duplicate Sample ID | % RPD | Qualification |
| | MW-2S-20230511 | MW-2SD-20230511 | | |
| Extractable Petroleum Hydrocarbons (C21-C34) Aliphatic | 87.7 | 39.5 U | NA | J/UJ, Abs Diff > RL |

## 2.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. A summary of qualifiers applied to this data set is shown in Table E-13.

## 3. Precision and Accuracy [for SDG(s) above]

Refer to section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples, with the following exceptions:

## 4. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
  - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The relative percent difference (RPD) or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

# 5. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg microgram per kilogram
  - µg/L microgram per liter
  - µg/$m^3$ microgram per cubic meter
  - mg/kg milligram per kilogram
  - mg/L milligram per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - SSV Sub-slab Vapor
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

# 7. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

**Notes**
HTQ = Holding time exceedance.
SUR = Surrogate percent recovery outside the specified limits.
FDP = Field duplicate qualifier due to an exceedance of the specified limits.
EXE = Result exceeds the calibration range.
J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.
U = The compound was analyzed for but not detected.
UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on May 11, 2023 from the Kosmos 0202832-001, F&BI 305192 project. There are 39 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 11, 2023 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos, F&BI 305192 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 305192 -01 | MW-1D |
| 305192 -02 | MW-2D |
| 305192 -03 | MW-3D |
| 305192 -04 | MW-4D |
| 305192 -05 | Trip Blank |

The samples were sent to Fremont Analytical for hexavalent chromium and EPH analyses. In addition, the samples were sent to Onsite Environmental for VPH analysis. The reports are enclosed.

All quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: 305192-02 (Duplicate)

| Analyte | Reporting Units | Sample Result | Duplicate Result | RPD (Limit 20) |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 6.4 | 6.8 | 6 |

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Acceptance Criteria |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 100 | 35-146 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

May 30, 2023

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 4 sample(s) on 5/11/2023 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

**Date:** *05/30/2023*

**CLIENT:** Friedman & Bruya
**Project:** 305192
**Work Order:** 2305262

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

# Case Narrative

WO#: **2305262**

Date: **5/30/2023**

**CLIENT:** Friedman & Bruya
**Project:** 305192

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

May 18, 2023

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 4 sample(s) on 5/11/2023 for the analyses presented in the following report.

***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

# Case Narrative

WO#: **2305230**
Date: **5/18/2023**

**CLIENT:** Friedman & Bruya
**Project:**

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Re: Analytical Data for Project 305192
Laboratory Reference No. 2305-121

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on May 11, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 23, 2023
Samples Submitted: May 11, 2023
Laboratory Reference: 2305-121
Project: 305192

**Case Narrative**

Samples were collected on May 10, 2023 and received by the laboratory on May 11, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 23, 2023
Samples Submitted: May 11, 2023

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

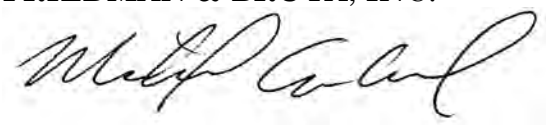
Angie Goodwin, Project Manager
Haley & Aldrich, Inc
3131 Elliott Ave, Suite 600
Seattle, WA 98121



Dear Ms Goodwin:

Included are the results from the testing of material submitted on May 12, 2023 from the Kosmos 0202832-001, F&BI 305211 project. There are 42 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 12, 2023 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 0202832-001, F&BI 305211 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 305211 -01 | MW-1S |
| 305211 -02 | MW-2S |
| 305211 -03 | MW-2SD |
| 305211 -04 | MW-3S |
| 305211 -05 | MW-4S |

The samples were sent to Fremont Analytical for hexavalent chromium and EPH analyses. In addition, the samples were sent to Onsite Environmental for VPH analysis. The reports are enclosed.

The dissolved metals were filtered at Friedman and Bruya. The data were flagged accordingly.

The 8260D calibration standard exceeded the acceptance criteria for several compounds. The compounds were not detected, therefore this does not represent an out of control condition.

Pyrene was detected in the 8270D method blank at a level greater than one tenth the concentration detected in the samples. The data were flagged accordingly.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR SEMIVOLATILES BY EPA METHOD 8270E

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Percent Recovery LCSD | Acceptance Criteria | RPD (Limit 20) |
|---|---|---|---|---|---|---|
| Naphthalene | ug/L (ppb) | 5 | 73 | 74 | 50-104 | 1 |
| 2-Methylnaphthalene | ug/L (ppb) | 5 | 86 | 87 | 52-113 | 1 |
| 1-Methylnaphthalene | ug/L (ppb) | 5 | 90 | 91 | 51-115 | 1 |
| Acenaphthylene | ug/L (ppb) | 5 | 88 | 89 | 60-114 | 1 |
| Acenaphthene | ug/L (ppb) | 5 | 88 | 89 | 57-110 | 1 |
| Fluorene | ug/L (ppb) | 5 | 95 | 96 | 61-115 | 1 |
| Phenanthrene | ug/L (ppb) | 5 | 92 | 93 | 63-113 | 1 |
| Anthracene | ug/L (ppb) | 5 | 95 | 95 | 65-117 | 0 |
| Fluoranthene | ug/L (ppb) | 5 | 99 | 98 | 68-121 | 1 |
| Pyrene | ug/L (ppb) | 5 | 100 | 98 | 62-133 | 2 |
| Benz(a)anthracene | ug/L (ppb) | 5 | 100 | 98 | 66-131 | 2 |
| Chrysene | ug/L (ppb) | 5 | 108 | 108 | 66-129 | 0 |
| Benzo(a)pyrene | ug/L (ppb) | 5 | 99 | 100 | 66-129 | 1 |
| Benzo(b)fluoranthene | ug/L (ppb) | 5 | 104 | 92 | 55-144 | 12 |
| Benzo(k)fluoranthene | ug/L (ppb) | 5 | 101 | 104 | 58-139 | 3 |
| Indeno(1,2,3-cd)pyrene | ug/L (ppb) | 5 | 92 | 95 | 62-136 | 3 |
| Dibenz(a,h)anthracene | ug/L (ppb) | 5 | 99 | 98 | 55-146 | 1 |
| Benzo(g,h,i)perylene | ug/L (ppb) | 5 | 98 | 96 | 58-137 | 2 |

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: 305192-02 (Duplicate)

| Analyte | Reporting Units | Sample Result | Duplicate Result | RPD (Limit 20) |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 6.4 | 6.8 | 6 |

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Acceptance Criteria |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 100 | 35-146 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**RE: 305211**
**Work Order Number: 2305259**

May 30, 2023

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 5 sample(s) on 5/12/2023 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Revision v1

# Case Narrative

WO#: **2305259**
Date: **5/30/2023**

**CLIENT:** Friedman & Bruya
**Project:** 305211

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Rev 1: Data for CrVI is expressed to the MDL, and report ID has been updated per client request.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Re: Analytical Data for Project 305211
Laboratory Reference No. 2305-148

Dear Michael:

Enclosed are the analytical results and associated quality control data for samples submitted on May 12, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 23, 2023
Samples Submitted: May 12, 2023
Laboratory Reference: 2305-148
Project: 305211

**Case Narrative**

Samples were collected on May 11, 2023 and received by the laboratory on May 12, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 23, 2023

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Data Usability Summary Report

**Project Name: Kosmos Mill**

**Project Description: Groundwater Samples**

**Sample Dates: 15 August 2023**

**Analytical Laboratory: Friedman & Bruya – Seattle, WA**

**Fremont Analytical – Seattle, WA**

**Validation Performed by: Kirkland Broadwell**

**Validation Reviewed by: Katherine Miller**

**Validation Date: 8 September 2023**

---

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Number 308252**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

**References**

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- The project-specific Quality Assurance Project Plan (QAPP), herein referred to as the specified limits (see references section).

Data reported in this sampling event were reported to the laboratory reporting limit (RL).

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

# 1. Sample Delivery Group Number 308252

## 1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number:

- 308252, dated 31 August 2023.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols.

- Samples for extractable petroleum hydrocarbons (EPH), volatile petroleum hydrocarbons (VPH), and hexavalent chromium analysis were subcontracted to Freemont Analytical – Seattle, WA (Laboratory IDs 2308213-001 through 2308213-005)

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used when samples were transported between subcontracted laboratories.

Analyses were performed on the following samples:

| Sample ID | Sample Type | Lab ID | Sample Date | Matrix | Methods |
|---|---|---|---|---|---|
| MW-1D-20230815 | N | 30852-01 | 08/15/2023 | WG | A, B, C, D, E, F, G |
| MW-2D-20230815 | N | 30852-02 | 08/15/2023 | WG | A, B, C, D, E, F, G |
| MW-3D-20230815 | N | 30852-03 | 08/15/2023 | WG | A, B, C, D, E, F, G |
| MW-4-20230815 | N | 30852-04 | 08/15/2023 | WG | A, B, C, D, E, F, G |
| MW-3DD-20230815 | FD | 30852-05 | 08/15/2023 | WG | A, B, C, D, E, F, G |
| MW-1D-20230815 | N | 2308213-001 | 08/15/2023 | WG | H, I, J |
| MW-2D-20230815 | N | 2308213-002 | 08/15/2023 | WG | H, I, J |
| MW-3D-20230815 | N | 2308213-003 | 08/15/2023 | WG | H, I, J |
| MW-4D-20230815 | N | 2308213-004 | 08/15/2023 | WG | H, I, J |
| MW-3DD-20230815 | FD | 2308213-005 | 08/15/2023 | WG | H, I, J |

| Method Holding Times | | | |
|---|---|---|---|
| A. | E1631E | Mercury | 28 days preserved; 48 hours unpreserved |
| B. | NWTPH-DX | TPH – Total Diesel | 14 days for liquid; preserved 7 days for liquid unpreserved |
| C. | NWTPH-GX | TPH – Total Diesel | 14 days for liquid; preserved 7 days for liquid unpreserved |
| D. | SM2540D | Total Suspended Solids (TSS) | 7 days |
| E. | SW6020B | Metals | 180 days for liquid |
| F. | SW8260D | Volatile Organic Compounds (VOCs) | 14 days for liquid; preserved 7 days for liquid unpreserved |
| G. | SW8270E | Polycyclic Aromatic Hydrocarbons (PAHs) | 7 days extraction; 40 days analysis for liquid |
| H. | NWEPH | EPH Fractions | 14 days preserved; 7 days unpreserved |

| Method Holding Times | | | |
|---|---|---|---|
| I. | NWTPH-VPH | VPH Fractions | 14 days preserved; 7 days unpreserved |
| J. | SM3500-CR B | Hexavalent Chromium | 24 hours |

## 1.2 CASE NARRATIVE

The laboratory report case narratives included the following issues:

- SDG 308252: The 8260D acetone calibration standard exceeded the acceptance criteria. The compound was not detected; therefore, no data qualification was necessary.

## 1.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

## 1.4 REPORTING LIMITS AND SAMPLE DILUTIONS

The RLs for the samples within this SDG met or were below the minimum RL requirements specified by the project-specific QAPP, with the following exceptions:

| Sample ID | Lab ID | Analyte/ Method | Dilution Factor |
|---|---|---|---|
| All samples | All samples | hexavalent chromium | 1x |
| All samples | All samples | 2-butanone | 1x |
| All samples | All samples | acetone | 1x |
| All samples | All samples | bromomethane | 1x |
| All samples | All samples | bromoform | 1x |
| All samples | All samples | hexane | 1x |
| All samples | All samples | trans-1,3-dichloropropene | 1x |

## 1.5 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory-specified quality control (QC) limits, with the following exceptions:

| Method | Sample ID | Batch ID | Surrogate | Dilution | %R | Qualification |
|---|---|---|---|---|---|---|
| NWEPH | MW-1D-20230815 | 41169 | 1-chlorooctadecane | 1x | 28.7% | J-/UJ target compounds* |
| NWEPH | MW-3D-20230815 | 41169 | 1-chlorooctadecane | 1x | 41.3% | J-/UJ target compounds* |
| NWEPH | MW-4D-20230815 | 41169 | 1-chlorooctadecane | 1x | 19.9% | J-/UJ target compounds* |
| NWEPH | MW-3DD-20230815 | 41169 | 1-chlorooctadecane | 1x | 19.0% | J-/UJ target compounds* |

** Compounds targeted by 1-chlorooctadecane: all aliphatic compounds*

## 1.6 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits.

## 1.7 MATRIX SPIKE SAMPLES

Refer to Section E 1.4. The samples below were used for matrix spike/matrix spike duplicate (MS/MSD):

| Lab Sample Number | Matrix Spike/Matrix Spike Duplicate Sample Client ID | Method |
|---|---|---|
| 30852-01 | MW-1D-20230815 | SW6020B |
| 30852-02 | MW-2D-20230815 | 1631E |
| 2308213-001 | MW-1D-20230815 | SM3500-CR B |

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits.

## 1.8 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

## 1.9 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. The following sample was used for laboratory duplicate analysis, and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL):

| Lab Sample Number | Laboratory Duplicate Sample Client ID | Method |
|---|---|---|
| 2308213-004 | MW-4D-20230815 | SM3500-CR B |

The following samples were used for field duplicate analysis. RPDs were all below 35 percent. Any exceptions are noted below and qualified.

| Primary Sample ID | Duplicate Sample ID | Methods |
|---|---|---|
| MW-3D-20230815 | MW-3DD-20230815 | A, B, C, D, E, F, G, H, I, J |

**Field Duplicate RPD Calculations:**

| Method: SM2540D | | | | |
|---|---|---|---|---|
| Analyte (µg/L) | Primary Sample ID MW-3D-20230815 | Duplicate Sample ID MW-3DD-20230815 | % RPD | Qualification |
| TSS | 33 | 91 | 94% | J/UJ, RPD>35 |

## 1.10 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

## 1.11 CALCULATION ACCURACY

Total (non-filtered) metals were greater than dissolved (filtered) metals, and total chromium was greater than hexavalent chromium, with the following exceptions:

| Sample ID | Analyte | Total (µg/L) | Dissolved (µg/L) | %RPD | Action |
|---|---|---|---|---|---|
| MW-1D-20230815 | Zinc | 14.9 | 18.8 | 23% | None, RPD < 100% |

*µg/L = micrograms per liter*

## 1.12 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, as no data was rejected. The qualifiers applied to this data set are summarized in the table below.

| Sample ID | Analyte | Reported Result | Validated Result | Reason for Qualifier |
|---|---|---|---|---|
| MW-3D-20230815 | TSS | 33 | 33 J | Field duplicate calculations |
| MW-3DD-20230815 | TSS | 91 | 91 J | Field duplicate calculations |
| MW-1D-20230815 | EPH (C10-C12) Aliphatic | U | UJ | Surrogate recovery low |
| MW-1D-20230815 | EPH (C12-C16) Aliphatic | U | UJ | Surrogate recovery low |
| MW-1D-20230815 | EPH (C16-C21) Aliphatic | U | UJ | Surrogate recovery low |
| MW-1D-20230815 | EPH (C21-C34) Aliphatic | U | UJ | Surrogate recovery low |
| MW-1D-20230815 | EPH (C8-C10) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3D-20230815 | EPH (C10-C12) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3D-20230815 | EPH (C12-C16) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3D-20230815 | EPH (C16-C21) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3D-20230815 | EPH (C21-C34) Aliphatic | U | UJ | Surrogate recovery low |

| Sample ID | Analyte | Reported Result | Validated Result | Reason for Qualifier |
|---|---|---|---|---|
| MW-3D-20230815 | EPH (C8-C10) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3DD-20230815 | EPH (C10-C12) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3DD-20230815 | EPH (C12-C16) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3DD-20230815 | EPH (C16-C21) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3DD-20230815 | EPH (C21-C34) Aliphatic | U | UJ | Surrogate recovery low |
| MW-3DD-20230815 | EPH (C8-C10) Aliphatic | U | UJ | Surrogate recovery low |
| MW-4D-20230815 | EPH (C10-C12) Aliphatic | U | UJ | Surrogate recovery low |
| MW-4D-20230815 | EPH (C12-C16) Aliphatic | U | UJ | Surrogate recovery low |
| MW-4D-20230815 | EPH (C16-C21) Aliphatic | U | UJ | Surrogate recovery low |
| MW-4D-20230815 | EPH (C21-C34) Aliphatic | U | UJ | Surrogate recovery low |
| MW-4D-20230815 | EPH (C8-C10) Aliphatic | U | UJ | Surrogate recovery low |

## 2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

# 3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/$m^3$ micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - SSV Sub-slab Vapor
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

- Fractions:
  - N Normal (method cannot be filtered)
  - D Dissolved (filtered)
  - T Total (unfiltered)

# 5. Qualifiers

The qualifiers below are from the USEPA NFG and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Seattle, WA 98121

Dear Ms Goodwin:

Included are the results from the testing of material submitted on August 15, 2023 from the Kosmos 0202832-001, F&BI 308252 project. There are 41 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on August 15, 2023 by Friedman & Bruya, Inc. from the Haley & Aldrich, Inc Kosmos 0202832-001, F&BI 308252 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Haley & Aldrich, Inc |
|---|---|
| 308252 -01 | MW-1D |
| 308252 -02 | MW-2D |
| 308252 -03 | MW-3D |
| 308252 -04 | MW-4D |
| 308252 -05 | MW-3DD |
| 308252 -06 | Trip Blank |

Samples MW-1D, MW-2D, MW-3D, MW-4D, and MW-3DD were sent to Fremont Analytical for EPH, VPH, and hexavalent chromium analyses. The report is enclosed.

The 8260D acetone calibration standard exceeded the acceptance criteria. The compound was not detected, therefore this did not represent an out of control condition.

Silver in the 6020B matrix spike and matrix spike duplicate exceeded the acceptance criteria. Silver was not detected, therefore the results were acceptable.

All other quality control requirements were acceptable.

## QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR TOTAL SUSPENDED SOLIDS BY METHOD 2540D

Laboratory Code: 308252-02 (Duplicate)

| Analyte | Reporting Units | Sample Result | Duplicate Result | RPD (Limit 20) |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 7.0 | 6.0 | 15 |

Laboratory Code: Laboratory Control Sample

| Analyte | Reporting Units | Spike Level | Percent Recovery LCS | Acceptance Criteria |
|---|---|---|---|---|
| TSS | mg/L (ppm) | 20 | 106 | 35-146 |

# Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

k – The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**Work Order Number: 2308213**

August 30, 2023

**Attention Michael Erdahl:**

Fremont Analytical, Inc. received 6 sample(s) on 8/16/2023 for the analyses presented in the following report.

***Extractable Petroleum Hydrocarbons by NWEPH***
***Hexavalent Chromium by SM 3500 Cr B***
***Volatile Petroleum Hydrocarbons by NWVPH***

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Original

# Case Narrative

WO#: **2308213**
Date: **8/30/2023**

**CLIENT:** Friedman & Bruya
**Project:** 308252

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

# Sample Log-In Check List

| | | | |
|---|---|---|---|
| Client Name: | FB | Work Order Number: | 2308213 |
| Logged by: | Clare Griggs | Date Received: | 8/16/2023 8:30:00 AM |

## Chain of Custody

| | | | | |
|---|---|---|---|---|
| 1. | Is Chain of Custody complete? | Yes ☑ | No ☐ | Not Present ☐ |
| 2. | How was the sample delivered? | Client | | |

## Log In

| | | | | |
|---|---|---|---|---|
| 3. | Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact) | Yes ☐ | No ☐ | Not Present ☑ |
| 4. | Was an attempt made to cool the samples? | Yes ☑ | No ☐ | NA ☐ |
| 5. | Were all items received at a temperature of >2°C to 6°C * | Yes ☑ | No ☐ | NA ☐ |
| 6. | Sample(s) in proper container(s)? | Yes ☑ | No ☐ | |
| 7. | Sufficient sample volume for indicated test(s)? | Yes ☑ | No ☐ | |
| 8. | Are samples properly preserved? | Yes ☑ | No ☐ | |
| 9. | Was preservative added to bottles? | Yes ☐ | No ☑ | NA ☐ |
| 10. | Is there headspace in the VOA vials? | Yes ☐ | No ☑ | NA ☐ |
| 11. | Did all samples containers arrive in good condition(unbroken)? | Yes ☑ | No ☐ | |
| 12. | Does paperwork match bottle labels? | Yes ☑ | No ☐ | |
| 13. | Are matrices correctly identified on Chain of Custody? | Yes ☑ | No ☐ | |
| 14. | Is it clear what analyses were requested? | Yes ☑ | No ☐ | |
| 15. | Were all holding times able to be met? | Yes ☑ | No ☐ | |

## Special Handling (if applicable)

16. Was client notified of all discrepancies with this order? Yes ☑ No ☐ NA ☐

| | | | |
|---|---|---|---|
| Person Notified: | Michael Erdahl | Date: | 8/16/2023 |
| By Whom: | Clare Griggs | Via: | ☑ eMail ☐ Phone ☐ Fax ☐ In Person |
| Regarding: | Did not receive sample that matches COC sample MW-5D at 16:00. Did receive MW-3DD | | |
| Client Instructions: | | | |

17. Additional remarks:

Item Information

| Item # | Temp ºC |
|---|---|
| Sample | 2.0 |

* Note: DoD/ELAP and TNI require items to be received at 4°C +/- 2°C

# APPENDIX G
# MTCA TPH Calculations

**A4 Soil Cleanup Levels: Summary of Results. Refer to WAC 173-340-720, 740, 745, 747**

**Date:** 04/16/24
**Site Name:** Kosmos
**Sample Name:** TP-24-S1
**Measured Soil TPH Concentration, mg/kg:** 3,229.87

## Summary of Calculation Results

| Exposure Pathway | Method/Goal | Protective TPH Conc (mg/kg) | With Measured Soil Conc | |
|---|---|---|---|---|
| | | | HI or Risk | Pass or Fail |
| *Soil Direct Contact* Protection of Soil Incidental Ingestion and Dermal Contact: Human Health | **Method B: Unrestricted Land Use** | | | |
| | TPH Soil Cleanup Level (@ HI =1) | 2,200 | 1.5E+00 | **Fail** |
| | Cancer Risk (1) | | 1.1E-06 | **Fail** |
| | **Method C: Industrial Land Use** | | | |
| | TPH Soil Cleanup Level (@ HI = 1) | 39,000 | 8.3E-02 | Pass |
| | Cancer Risk (1) | | 5.1E-08 | Pass |
| *Soil Leaching* Protection of Groundwater Quality | **Soil Concentration Protective of Target TPH Groundwater Concentration** | | | |
| | *Protective TPH Soil Concentration, mg/kg =* | *Use Residual Saturation Conc* | --- | Note 2 |
| | | | *Soil Leaching is not a critical pathway.* | |
| | 100% NAPL TPH concentration (mg/kg) is: | 77,000.0 | | |
| | *Target TPH Groundwater Concentration (µg/L)* | | | |
| | 500 Method A Potable Groundwater | | | |
| Remark: | *Concentrations of "weathered" deisel range organics provided in the Ecology Memorandum No. 23 that are protective for Freshwater are higher than the more restrictive default Method A value of 500 µg/L. As a result, the Method A default potable groundwater cleanup level of 500 µg/L is selected as the target groundwater concentration to develop a TPH concentration in soil that is protective of potable groundwater.* | | | |

**Notes:**

**(1) Known or suspected carcinogenic chemicals** that contribute to unacceptable cancer risk within the petroleum mixture are evaluated separately and must meet compliance with soil cleanup standards both on an individual basis and and when accounting for cumulative risk from multiple chemicals and pathways at the site. *See Worksheets: A2.1B and A3.1B (Soil Direct Contact); B2.1B (Potable Water Ingestion).*

**(2) Warning: Check Residual Saturation (WAC 340-747(10))**

# APPENDIX H
# Terrestrial Ecological Evaluation

# APPENDIX H

# Terrestrial Ecological Evaluation

The terrestrial ecological evaluation (TEE) process is required at all Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) sites where there has been a release or threatened release of a hazardous substance that may pose a threat to human health or the environment. The purpose of the TEE is to systematically organize and evaluate data, assumptions, and uncertainties to help understand and characterize potential risks to terrestrial biota that may be exposed to site-related constituents in a manner that supports decision-making. Haley & Aldrich, Inc. (Haley & Aldrich) completed an area of interest-specific TEEs for the former Kosmos mill (Site) and were conducted in general accordance with the methodologies and values provided in MTCA.

The Site does not qualify for a TEE exclusion based on Washington Administrative Code (WAC) 173-340-7491 and a full site-specific TEE is required.

## TEE Approach

An initial step in the TEE process is to determine whether a site qualifies for a TEE exclusion. If a site meets at least one of the four exclusionary criteria described in WAC 173-340-7491, then no further evaluation of ecological risk is necessary. The four exclusionary criteria are:

1. *Exclusion 1: Contamination below the point of compliance*. This means all soil contamination shall be below the standard point of compliance of 15 feet below ground surface (bgs), or below the conditional point of compliance of 6 feet bgs. The conditional point of compliance may only be used in conjunction with institutional controls which would prevent excavation of deeper soils.
2. *Exclusion 2: Incomplete exposure pathway*. The primary pathway to soil for ecological receptors would be direct contact and ingestion. The pathway could be considered incomplete if there were barriers for plants or animals to contact soils (e.g., pavement, buildings, or protective cap).
3. *Exclusion 3: Type of contamination and proximity to ecological receptors*. For sites contaminated with hazardous substances other than those specified in WAC 173-340-7491, there must be less than 1.5 acres of contiguous undeveloped land on the site or within 500 feet of any area located on the site.
4. *Exclusion 4: Concentrations below background levels*. For certain naturally occurring contaminants, or for contaminated sites found in urban areas, there may be contamination that is not directly attributable to the site.

### EVALUATION OF EXCLUSIONS

1. Exclusion 1 does not apply to the Site. Total petroleum hydrocarbons (TPH) and other constituents were detected between 0 and 15 feet bgs.
2. Exclusion 2 does not apply to the Site. While there are some former foundations, concrete slabs associated with the former lumber mill, and the newer protective cap, the physical barriers are discontinuous. Large areas of undeveloped lands are located at the Site.

3. Exclusion 3 does not apply to the Site. There is undeveloped land within 500 feet of the Site and the undeveloped land is greater than 1.5 acres.
4. Exclusion 4 does not apply to the Site. Some of the contaminants found in soils at the Site are not naturally occurring and are unlikely to be present from other sources.

The Site evaluated under this remedial investigation (RI) Report does not qualify for the exclusions under WAC 173-340. Once it has been established that none of the exclusionary criteria apply, either a Simplified or site-specific TEE is required. Chapter 173-340-7492 of the MTCA specifically refers to the process of determining the type of evaluation that is required (simplified or site-specific) as "Applicability of a Simplified Terrestrial Ecological Evaluation."

### APPLICABILITY OF A SIMPLIFIED TEE

WAC 173-340-7492 lists out criteria that are to be used to determine whether a simplified TEE can be used. If any of the below criteria apply, then a site-specific TEE is necessary. Those criteria are as follows:

1. *Natural area.* The site is located on, or directly adjacent to, an area where management or land use plans will maintain or restore native or semi-native vegetation.
2. *Vulnerable species.* The site is used by a threated or endangered species; a wildlife species classified by the Washington Department of Fish and Wildlife (WDFW) as a "priority species" or "species of concern" under Title 77 Revised Code of Washington (RCW); or a plant species classified by the Washington State Department of Natural Resources natural heritage program as "endangered," "threatened," or "sensitive" under Title 79 RCW. For plants, "used" means that a plant species grows at the site or has been found growing at the site. For animals, "used" means that individuals of a species have been observed to live, feed, or breed at the site.
3. *Extensive habitat.* The site is located on a property that contains at least ten acres of native vegetation within 500 feet of the site, not including vegetation beyond the property boundaries.
4. *Risk to significant wildlife populations.* The department determines that the site may present a risk to significant wildlife populations.

A simplified TEE is not appropriate for the Site since the Site is vegetated and there is an identified species of concern for the uplands. Trees and understory vegetation are likely comprised of plants native to Washington state. Haley & Aldrich is not aware of any planned changes for future uses of the Kosmos Flats Area. Given that the Site is in a natural area that provides extensive habitat, a site-specific TEE is required.

## Site-Specific TEE

The site-specific TEE process is designed to assess ecological risk at any site and to provide the basis for a cleanup level protective of terrestrial ecological receptors at the site, including sites with protected status species. Under WAC 173-340-7493, a site-specific TEE shall include the following steps:

- Problem formulation;
- Selection of appropriate evaluation method(s);
- Conducting the evaluation; and
- Establish ecologically protective soil concentration.

## PROBLEM FORMULATION

### Chemicals of Ecological Concern

Historical investigations and investigations conducted by Haley & Aldrich indicate the presence of TPH in the gasoline, diesel, and oil ranges (TPH-G, TPH-D, and TPH-O, respectively) and carcinogenic polycyclic aromatic hydrocarbons (cPAHs) in soil and/or shallow groundwater above MTCA Method A cleanup levels (CULs). The highest concentrations of contaminants of concern (COCs) in soil and groundwater are located in the upper 10 to 15 feet of soil in the upland area of the Site. Additionally, TPH-D, TPH-O, and cPAHs were found in soil above CULs at the toe of the bank (sample Creekbed 1) and on the creek bank underneath the protective cap (sample LB-2).

As described in the RI Report, constituents were not detected in surface water at concentrations above Tacoma Power's Water Quality Protection Plan's (WQPP) indicator levels, and constituents were not detected in sediment at concentrations above Sediment Cleanup Objectives (SCOs) for freshwater sediment.

The contaminants of ecological concern (CEC) were determined by comparing soil analytical data for the Site that is representative of current conditions (i.e., excludes data for soil that was removed from the Site) to ecological screening levels (SLs) presented in Table 749-3 of the MTCA regulation. Table 5.1, included in the Ecology's Draft Terrestrial Ecological Evaluation guidance document (Ecology, 2017), provides SL values for plants, soil biota, and wildlife for a group of selected analytes. In accordance with WAC 173-340-7493, for constituents that do not have a value published in Table 749-3, values from the literature should be obtained. Therefore, screening levels for soil biota, plants, and wildlife were obtained from the U.S. Environmental Protection Agency (EPA) Region 4 ecological soil screening level table (EPA, 2018). The Region 4 values are based on EPA Ecological Soil Screening Levels (EcoSSLs) and Department of Energy Laboratories (Los Alamos National Laboratory and Oak Ridge National Laboratory). MTCA specifically identifies the Oak Ridge National Laboratory values as values to be considered in the identification of screening levels.

Table H-1 presents the analytical data for soil from 0 to 15 feet bgs and identifies individual concentrations that exceed the lowest screening level. Table H-2 provides a comparison of maximum detected concentrations of constituents in soil 0 to 15 feet bgs to the screening levels. Constituents detected at maximum concentrations above the SLs are retained as CECs. The full soil data set is reported in Table 4 of the RI Report and Tables 2 through 4 of Haley & Aldrich's Data Summary Report (Haley & Aldrich, 2021).

As indicated in Table H-2, CECs include ten volatile organic compounds (VOCs), three polycyclic aromatic hydrocarbons (PAHs), TPH-G, TPH-D, and eight metals. Naphthalene was detected in more samples and at a higher concentration in analysis as a semi-VOC (sVOC) than in analysis as a VOC and was, therefore, not retained as a VOC CEC. Methylene chloride was not retained as a CEC because its presence is most likely due to laboratory contamination and is not associated with the petroleum release at the Site.

### Exposure Pathways

Complete and significant exposure pathways warranting assessment in this TEE are identified below:

- Terrestrial plants: direct contact with and uptake of soil CECs;
- Terrestrial soil-swelling invertebrates: direct contact with and ingestion of soil CECs;

- Small and large mammals: incidental ingestion of soil and food chain uptake of soil COCs;
- Birds: incidental ingestion of soil and food chain uptake of soil COCs;

Groundwater has been characterized at the Site. Based on data collected during the remedial investigation, the TPH contamination in groundwater is limited to the upland area and does not extend to Rainey Creek, as COCs were not detected above the WQPP indicator levels in any of the surface water samples analyzed.

There are no complete exposure pathways to surface water and sediment because constituents were detected below the WQPP's indicator levels and freshwater SCOs.

### Terrestrial Ecological Receptors of Concern

The Site is currently vacant, but accessible by the public as a recreational wildlife area. The current Site uses are expected to continue into the foreseeable future. The Site supports vegetation including grasses, shrubs, and trees, and is located adjacent to Rainey Creek. The Site, therefore, provides habitat for plants and soil dwelling invertebrates, as well as foraging habitat for birds and mammals.

#### *Rare, Threatened, or Endangered Species*

The WDFW publishes a Priority Habitats and Species (PHS) list. The PHS list is a catalog of habitats and species considered to be priorities for conservation and management. Priority species require protective measures for their survival because of their population status; sensitivity to habitat alteration; and recreational, commercial, or tribal importance. Priority species include State Endangered, Threatened, Sensitive, and Candidate species; animal aggregations (e.g., bat colonies) considered vulnerable; and species of recreational, commercial, or tribal importance that are vulnerable. Priority habitats are habitat types or elements with unique or significant value to a diverse assemblage of species. WDFW's online database was also reviewed for PHS information. According to the online database, the Site is mapped as habitat for one priority species, the northern spotted owl (*Strix occidentalis)*. The Site does not contain a priority habitat.

### Toxicological Assessment

The toxicological assessment identifies the significant adverse effects in the receptors of concern that may result from exposure to CECs. The identification of adverse effects is conducted through identification of assessment endpoints (AEs) and measurement endpoints (MEs). Endpoints are used in the TEE to define the ecological attributes to be protected (AEs) and to define measurable effects (MEs) of those attributes that can be used to gauge the degree of impact that may occur.

A typical AE is an ecological attribute that, if found to be significantly affected, would indicate a need for remediation. AEs most often relate to attributes of biological populations or communities (e.g., abundance, richness, and productivity). Individual-based AEs typically are relevant only if endangered species are present. The primary AE identified for this TEE is the protection and maintenance of growth, development, reproduction, and survival of future populations of the representative receptors at the Site. The following are appropriate AEs for the Site.

- Assessment Endpoint # 1: Protection of the plant communities from changes in structure and function due to exposure to CECs. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment to plant communities?*

- Assessment Endpoint # 2: Maintenance of the soil invertebrate communities using Site-related resourses. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment to invertebrate communities?*
- Assessment Endpoint # 3: Maintenance of terrestrial herbivorous wildlife populations using Site-related resources. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment in populations of terrestrial herbivorous wildlife?*
- Assessment Endpoint # 4: Maintenance of terrestrial omnivorous wildlife populations using Site-related resources. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment in populations of terrestrial omnivorous wildlife?*
- Assessment Endpoint # 5: Maintenance of terrestrial invertivorous wildlife populations using Site-related resources. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment in populations of terrestrial invertivorous wildlife?*
- Assessment Endpoint # 6: Maintenance of terrestrial carnivorous wildlife populations using Site-related resources. *Are levels of CECs sufficient to cause survival, growth, or reproductive impairment in populations of terrestrial carnivorous wildlife?*

MEs are chosen to link the existing Site conditions to the goals established by the AEs. The MEs are quantitative expressions of observed or measured biological responses to contamination relevant to the selected AEs. The valued ecological characteristics of MEs can be represented by, or the biological effects can be measured by, endpoints such as mortality, reproduction, or growth (EPA, 1997).

Therefore, the risk question identified above for each AE is assessed using MEs. The general type of ME used in the assessment was the comparison of estimated or measured exposure levels of chemicals of potential ecological concern with levels that may potentially cause adverse effects.

The ME used for all AEs in this TEE is comparison of the estimated exposure with plant, soil biota, and wildlife screening levels.

## SELECTION OF APPROPRIATE TERRESTRIAL ECOLOGICAL EVALUATION METHODS

As indicated in WAC 173-340-7493, the soil concentrations listed in MTCA Table 749-3 and Ecology TEE Guidance Table 5.1 (Ecology, 2017) may be used as cleanup levels in lieu of using literature surveys, bioassays, wildlife exposure models, biomarkers, or field studies. Consequently, the soil concentrations provided in Table 749-3 are used as MEs. Soil concentrations that are greater than the ME are inferred to pose a potential risk to terrestrial receptors. The MEs are then adopted as preliminary soil cleanup levels for evaluation in the feasibility study.

In accordance with the MTCA regulation, statistical methods may be used for evaluating CEC compliance with the cleanup levels. Comparison of analytical data for the CECs to the Table 749-3 values is conducted using the 95-percent upper confidence limit (UCL) on the true mean, in accordance with the following guidelines specified in MTCA.

- The data set cannot contain any concentrations that are more than two-times the cleanup level.
- No more than 10 percent of the detected concentrations in the data set can exceed the cleanup level.
- Data that is not demonstrated to be normally distributed should be assumed to be lognormally distributed, and the UCL for lognormally distributed data should be based on Land's H-Statistic.

When the 95 percent UCL does not exceed the lowest applicable cleanup level in accordance with these guidelines, the CEC is concluded to be in compliance with the cleanup level. 95 percent UCLs were calculated using EPA ProUCL version 2.0 software (EPA, 2022).

For each CEC, scenarios were evaluated using the 0 to 15 feet bgs and 0 to 6 feet bgs points of compliance to identify concentrations that would need to be removed from the soil data set to enable the 95 percent UCL to comply with the lowest cleanup levels. Table H-3 provides a summary of the evaluation. ProUCL input files and output sheets are provided at the end of this appendix. The results of the evaluation are summarized as follows:

- Arsenic, chromium, mercury, nickel, benzene, and anthracene: The UCLs for soil 0 to 15 feet bgs comply with the criteria for using the UCL to demonstrate compliance. No samples require removal to address these CECs.
- TPH-G: Removal of all samples with concentrations greater than two-times the lowest screening level (2 x 100 milligrams per kilogram [mg/kg] = 200 mg/kg) in the exposure point selected (soil 0 to 15 feet bgs, soil 0 to 10 feet bgs, or soil 0 to 6 feet bgs) enables the UCL comply with the criteria for using the UCL to demonstrate compliance.
- TPH-D: Removal of all samples with concentrations greater than two-times the lowest screening level (2 x 200 mg/kg = 400 mg/kg) in the exposure point selected (soil 0 to 15 feet bgs, soil 0 to 10 feet bgs, or soil 0 to 6 feet bgs) enables the UCL comply with the criteria for using the UCL to demonstrate compliance.
- Barium, lead, zinc: Removal of isolated samples, generally from the top 3 feet of ground surface, enables the UCL comply with the criteria for using the UCL to demonstrate compliance.
- Copper: Copper was detected in approximately half of the samples at concentrations above Ecology's (Ecology, 1994) and the Site-specific natural background level of 52.85 and 52.03 mg/kg, respectively, but in only two samples at concentrations more than 104 mg/kg (one in shallow soil and one soil deeper than 6 feet bgs). However, copper is not considered a Site COC since copper is not associated with the petroleum release and has not been previously used in historical operations.
- Ethylbenzene and m,p-xylenes: Removal of the sample associated with TP-49 enables the UCL comply with the criteria for using the UCL to demonstrate compliance.
- Naphthalene, 2-methylnaphthalene, and o-xylene: Removal of all samples with concentrations two-times the lowest screening levels in the exposure point selected (soil 0 to 15 feet bgs, soil 0 to 10 feet bgs, or soil 0 to 6 feet bgs) enables the UCL comply with the criteria for using the UCL to demonstrate compliance.
- 1,2,4-Trimethylbenzene, 1,3,5-trimethylbenzene, acetone, cymene, hexane, and isopropylbenzene: Due to analytical detection limits that are generally equal to or higher than the screening levels, the majority of samples with detections of these constituents require removal to enable the UCLs to comply with the criteria for using the UCL to demonstrate compliance. However, these CECs were detected at low frequency (generally one to seven out of 107 samples) and low concentrations. Despite having low screening levels for soil biota, these constituents are not considered to be significant ecological risk drivers. Moreover, these constituents will biodegrade over time.

## Summary and Conclusions

Based on the TEE process in WAC 173-340-7490 and WSDOE guidance (Ecology, 2017) the Site does not qualify for an exemption or a simplified TEE. Therefore, a site-specific TEE was performed. The TEE evaluated potential risks to plants, soil biota, and terrestrial wildlife by comparing maximum detected concentrations of constituents in soil to screening levels provided in MTCA Table 749-3 and values obtained from other sources as recommended by WAC 173-340-7490. Constituents with maximum detected concentrations that exceeded the screening levels were retained as CECs. The screening levels used in the selection of CEC were retained as cleanup levels. Compliance with cleanup levels was evaluated using the criteria for applying the 95 percent UCL values in accordance with Ecology (2017) for points of compliance that included 0 to 6 feet bgs, 0 to 10 feet bgs, and 0 to 15 feet bgs.

The results of the TEE indicate that:

- TPH-G and TPH-D require the largest number of samples to be mitigated to enable the UCL to comply with the criteria for using the UCL to demonstrate compliance.
- 1,2,4-Trimethylbenzene, 1,3,5-trimethylbenzene, acetone, cymene, hexane, and isopropylbenzene, ethylbenzene, xylene detections are co-located with TPH-G detections that require mitigation. Therefore, mitigating TPH-G will also address the compliance for these CECs.
- Barium, lead, zinc, 2-methylnaphthalene, and naphthalene require mitigation of isolated samples to enable the UCL to comply with the criteria for using the UCL to demonstrate compliance.
- Arsenic, chromium, mercury, nickel, benzene, and anthracene comply with the criteria for using the UCL to demonstrate compliance without mitigation of any samples.

The Feasibility Study (FS) will use the results of the TEE to evaluate various options for mitigating potential ecological risks.

|---|---|---|---|
| nu hat (MLE) | 36.77 | nu star (bias corrected) | 35.54 |
| Mean (detects) | 402.2 | | |

**Gamma ROS Statistics using Imputed Non-Detects**

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

DL/2 is not a recommended method, provided for comparisons and historical reasons

**Nonparametric Distribution Free UCL Statistics**

Detected Data appear Approximate Lognormal Distributed at 10% Significance Level

**Suggested UCL to Use**

| | | | |
|---|---|---|---|
| KM H-UCL | 54.57 | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**Nonparametric Distribution Free UCL Statistics**

Detected Data appear Lognormal Distributed at 10% Significance Level

| Suggested UCL to Use | | | |
|---|---|---|---|
| KM H-UCL | 82.09 | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**Suggested UCL to Use**

Recommendation cannot be provided

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

1,3,5-Trimethylbenzene_1

**General Statistics**

| | | | |
|---|---|---|---|
| Total Number of Observations | 3 | Number of Distinct Observations | 3 |
| | | Number of Missing Observations | 213 |
| Minimum | 0.25 | Mean | 1.357 |
| Maximum | 3.4 | Median | 0.42 |
| SD | 1.772 | Std. Error of Mean | 1.023 |
| Coefficient of Variation | 1.306 | Skewness | 1.714 |

Note: Sample size is small (e.g., <10), if data are collected using incremental sampling methodology (ISM) approach,
refer also to ITRC Tech Reg Guide on ISM (ITRC 2020 and ITRC 2012) for additional guidance,
but note that ITRC may recommend the t-UCL or the Chebyshev UCL for small sample sizes (n < 7).
The Chebyshev UCL often results in gross overestimates of the mean.
Refer to the ProUCL 5.2 Technical Guide for a discussion of the Chebyshev UCL.

**Suggested UCL to Use**

| | | | |
|---|---|---|---|
| 95% Student's-t UCL | 1.307 | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**Suggested UCL to Use**

| | | | |
|---|---|---|---|
| Recommendation cannot be provided | | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**Hexane_1**

**General Statistics**

| | | | |
|---|---|---|---|
| Total Number of Observations | 5 | Number of Distinct Observations | 3 |
| | | Number of Missing Observations | 211 |
| Minimum | 0.25 | Mean | 1.562 |
| Maximum | 6.4 | Median | 0.25 |
| SD | 2.71 | Std. Error of Mean | 1.212 |
| Coefficient of Variation | 1.735 | Skewness | 2.213 |

Note: Sample size is small (e.g., <10), if data are collected using incremental sampling methodology (ISM) approach,

refer also to ITRC Tech Reg Guide on ISM (ITRC 2020 and ITRC 2012) for additional guidance,

but note that ITRC may recommend the t-UCL or the Chebyshev UCL for small sample sizes (n < 7).

The Chebyshev UCL often results in gross overestimates of the mean.

Refer to the ProUCL 5.2 Technical Guide for a discussion of the Chebyshev UCL.

| Suggested UCL to Use | | | |
|---|---|---|---|
| Recommendation cannot be provided | | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

When a data set follows an approximate distribution passing only one of the GOF tests,

it is suggested to use a UCL based upon a distribution passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**General Statistics**

| | | | |
|---|---|---|---|
| Total Number of Observations | 9 | Number of Distinct Observations | 8 |
| | | Number of Missing Observations | 207 |
| Minimum | 0.011 | Mean | 0.054 |
| Maximum | 0.2 | Median | 0.024 |
| SD | 0.0599 | Std. Error of Mean | 0.02 |
| Coefficient of Variation | 1.11 | Skewness | 2.16 |

Note: Sample size is small (e.g., <10), if data are collected using incremental sampling methodology (ISM) approach,

refer also to ITRC Tech Reg Guide on ISM (ITRC 2020 and ITRC 2012) for additional guidance,

but note that ITRC may recommend the t-UCL or the Chebyshev UCL for small sample sizes (n < 7).

The Chebyshev UCL often results in gross overestimates of the mean.

Refer to the ProUCL 5.2 Technical Guide for a discussion of the Chebyshev UCL.

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

**Anthracene**

**General Statistics**

| | | | |
|---|---|---|---|
| Total Number of Observations | 1 | Number of Distinct Observations | 1 |
| | | Number of Missing Observations | 215 |
| Minimum | 0.0021 | Mean | 0.0021 |
| Maximum | 0.0021 | Median | 0.0021 |

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable Anthracene was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

**NaphthaleneTotal**

| Shapiro Wilk Test Statistic | 0.905 | **Shapiro Wilk GOF Test** |
| 1% Shapiro Wilk P Value | 8.4498E-8 | Data Not Normal at 1% Significance Level |
| Lilliefors Test Statistic | 0.118 | **Lilliefors GOF Test** |
| 1% Lilliefors Critical Value | 0.105 | Data Not Normal at 1% Significance Level |

Data Not Normal at 1% Significance Level

### Assuming Normal Distribution

| 95% Normal UCL | | 95% UCLs (Adjusted for Skewness) | |
|---|---|---|---|
| 95% Student's-t UCL | 69.94 | 95% Adjusted-CLT UCL (Chen-1995) | 70.3 |
| | | 95% Modified-t UCL (Johnson-1978) | 70 |

### Gamma GOF Test

| | | |
|---|---|---|
| A-D Test Statistic | 0.55 | **Anderson-Darling Gamma GOF Test** |
| 5% A-D Critical Value | 0.755 | Detected data appear Gamma Distributed at 5% Significance Level |
| K-S Test Statistic | 0.065 | **Kolmogorov-Smirnov Gamma GOF Test** |
| 5% K-S Critical Value | 0.0921 | Detected data appear Gamma Distributed at 5% Significance Level |

Detected data appear Gamma Distributed at 5% Significance Level

### Gamma Statistics

| | | | |
|---|---|---|---|
| k hat (MLE) | 4.497 | k star (bias corrected MLE) | 4.362 |
| Theta hat (MLE) | 14.33 | Theta star (bias corrected MLE) | 14.77 |
| nu hat (MLE) | 854.5 | nu star (bias corrected) | 828.8 |
| MLE Mean (bias corrected) | 64.45 | MLE Sd (bias corrected) | 30.86 |
| | | Approximate Chi Square Value (0.05) | 763 |
| Adjusted Level of Significance | 0.0475 | Adjusted Chi Square Value | 762.1 |

### Assuming Gamma Distribution

| | | | |
|---|---|---|---|
| 95% Approximate Gamma UCL | 70.01 | 95% Adjusted Gamma UCL | 70.09 |

| Lognormal GOF Test | | | |
|---|---|---|---|
| Shapiro Wilk Test Statistic | 0.973 | **Shapiro Wilk Lognormal GOF Test** | |
| 10% Shapiro Wilk P Value | 0.245 | Data appear Lognormal at 10% Significance Level | |
| Lilliefors Test Statistic | 0.0577 | **Lilliefors Lognormal GOF Test** | |
| 10% Lilliefors Critical Value | 0.0834 | Data appear Lognormal at 10% Significance Level | |
| Data appear Lognormal at 10% Significance Level | | | |

| Lognormal Statistics | | | |
|---|---|---|---|
| Minimum of Logged Data | 3.049 | Mean of logged Data | 4.051 |
| Maximum of Logged Data | 5.176 | SD of logged Data | 0.482 |

| Assuming Lognormal Distribution | | | |
|---|---|---|---|
| 95% H-UCL | 70.67 | 90% Chebyshev (MVUE) UCL | 74.45 |
| 95% Chebyshev (MVUE) UCL | 79 | 97.5% Chebyshev (MVUE) UCL | 85.31 |
| 99% Chebyshev (MVUE) UCL | 97.72 | | |

| Nonparametric Distribution Free UCL Statistics |
|---|
| Data appear to follow a Discernible Distribution |

| Nonparametric Distribution Free UCLs | | | |
|---|---|---|---|
| 95% CLT UCL | 69.89 | 95% BCA Bootstrap UCL | 70.33 |
| 95% Standard Bootstrap UCL | 69.85 | 95% Bootstrap-t UCL | 70.3 |
| 95% Hall's Bootstrap UCL | 70.25 | 95% Percentile Bootstrap UCL | 70.09 |
| 90% Chebyshev(Mean, Sd) UCL | 74.37 | 95% Chebyshev(Mean, Sd) UCL | 78.86 |
| 97.5% Chebyshev(Mean, Sd) UCL | 85.1 | 99% Chebyshev(Mean, Sd) UCL | 97.35 |

| Suggested UCL to Use | | | |
|---|---|---|---|
| 95% Approximate Gamma UCL | 70.01 | | |

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

| Suggested UCL to Use | | | |
|---|---|---|---|
| 95% Student's-t UCL | 100.3 | | |

The calculated UCLs are based on assumptions that the data were collected in a random and unbiased manner.

Please verify the data were collected from random locations.

If the data were collected using judgmental or other non-random methods,

then contact a statistician to correctly calculate UCLs.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness using results from simulation studies.

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.
