Abbreviations:
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
ARI = Analytical Resource, Incorporated, Seattle, Washington
B&V = Black Veatch
bgs = below ground surface
Comp = Composite Sample
dup = duplicate
EPJ = E.PJohnson Construction Inc., and Environmental
ESC = ESC Lab Services of Mt. Juliet, Tennessee
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
OnSite = OnSite Environmental Inc., of Redmond, Washington
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.
Retec = Remediation Technologies, Inc.
Roux = Roux Associates
Urban = Urban Redevelopment LLC
WW = WW Environmental LLC

Notes:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-HCID, NWTPH-Gx, or NWTPH-Dx; or EPA Method 418.1, Method 8020, or Method 8015M.
VOCs analyzed by EPA Methods 8010, 8020, 8021B, 624/8240, or 8260B/C/D.
Well screen elevations provided below Sample Location. in parentheses when appliable.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized.
Detected results shown in **bold**.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue**.
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
B = Analyte detected in an associated method blank.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
ND = Not detected above laboratory reporting limit. Reporting limit not available.
R = The data is unusable. The sample result is rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample
T = Analyte also detected in trip blank.
U = Not detected at a concentration exceeding laboratory reporting limit
ve = Estimated value. The reported range exceeds the calibration range of the analysis.
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.

Abbreviations:
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
ARI = Analytical Resource, Incorporated, Seattle, Washington
B&V = Black Veatch
bgs = below ground surface
Comp = Composite Sample
dup = duplicate
EPJ = E.PJohnson Construction Inc., and Environmental
ESC = ESC Lab Services of Mt. Juliet, Tennessee
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
OnSite = OnSite Environmental Inc., of Redmond, Washington
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.
Retec = Remediation Technologies, Inc.
Roux = Roux Associates
Urban = Urban Redevelopment LLC
WW = WW Environmental LLC

Notes:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-HCID, NWTPH-Gx, or NWTPH-Dx; or EPA Method 418.1, Method 8020, or Method 8015M.
VOCs analyzed by EPA Methods 8010, 8020, 8021B, 624/8240, or 8260B/C/D.
Well screen elevations provided below Sample Location. in parentheses when appliable.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized.
Detected results shown in **bold**.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue**.
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
B = Analyte detected in an associated method blank.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
ND = Not detected above laboratory reporting limit. Reporting limit not available.
R = The data is unusable. The sample result is rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample
T = Analyte also detected in trip blank.
U = Not detected at a concentration exceeding laboratory reporting limit
ve = Estimated value. The reported range exceeds the calibration range of the analysis.
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized.
Detected results shown in **bold**.
Detections above the screening level in the vadose zone are shown in **bold** and **highlighted blue**.
Detections above the screening level in the saturated zone are shown in **bold** and **highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized. Detected results shown in bold.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue.**
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized. Detected results shown in bold.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue.**
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized. Detected results shown in bold.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue.**
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized. Detected results shown in bold.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue.**
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes and Abbreviations:
Petroleum Hydrocarbons (PHCs) analyzed by Ecology Methods NWTPH-Gx and NWTPH-Dx.
VOCs analyzed by EPA Method 8260 C/D.
PCUL = Preliminary Cleanup Level from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021. PCULs based on the practical quantitation limits (PQLs) italicized. Detected results shown in bold.
Detections above the screening level in the vadose zone are shown in **bold and highlighted blue.**
Detections above the screening level in the saturated zone are shown in **bold and highlighted gray.**
– = Not available or results not analyzed.
J = The reported concentration is an estimate based on detectable results between the method detection limit and reporting limit, laboratory QA/QC, or data validation review.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
U = Not detected at a concentration exceeding laboratory reporting limit
z = Gasoline/petroleum detection result is likely elevated due to high detections of CVOCs.
AAL = Alden Analytical Laboratories, Inc., of Seattle, Washington
bgs = below ground surface
dup = duplicate
F&BI = Friedman & Bruya, Inc.
HC = Hart Crowser, Inc.
Pace = Pace Analytical of Mt. Juliet, Tennessee (formerly ESC)
PES = PES Environmental, Inc.

Notes:

Gasoline Range Organics Analyzed by NWTPH-Gx.

Diesel Range Organics and Heavy Oil analyzed by NWTPH-Dx.

VOCs analyzed by EPA Method 8260C or 8260D.

Results shown in micrograms per liter (µg/L).

PCULs and Screening Levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.

All groundwater sampling performed by PES Environmental, Inc. unless otherwise indicated.

a = Results provided by Hart Crowser.

b = Results provided by Farallon Consulting.

c = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.

(split) = Split samples collected consecutively.

(dup) = Field duplicate sample.

– = Not analyzed, results not available, or information not applicable.

Detected results shown in **bold.**

Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**

Shallow Zone detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**

Shallow Zone detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**

U = Not detected at or above the laboratory method detection limit (MDL); detections above the MDL but below the laboratory reported detection limit (RDL) are qualified with a "J."

J = The identification of the analyte is acceptable; the reported value is an estimate.

J+ = The result is an estimated quantity, but the result may be biased high.

J- = The result is an estimated quantity, but the result may be biased low.

z = Elevated chlorinated VOCs detected within the GRO elution range. No discernible petroleum pattern present. Project level qualifier assigned per laboratory review.

GRO results above the screening level and qualified with "z" are not considered in the Maximum Detection and are not included in the Number of Detections Above SL.

Notes:

Gasoline Range Organics Analyzed by NWTPH-Gx.
Diesel Range Organics and Heavy Oil analyzed by NWTPH-Dx.
VOCs analyzed by EPA Method 8260C or 8260D.
Results shown in micrograms per liter (µg/L).
PCULs and Screening Levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.
All groundwater sampling performed by PES Environmental, Inc. unless otherwise indicated.
a = Results provided by Hart Crowser.
b = Results provided by Farallon Consulting.
c = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.
(split) = Split samples collected consecutively.
(dup) = Field duplicate sample.
– = Not analyzed, results not available, or information not applicable.
Detected results shown in **bold.**
Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**
Shallow Zone detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**
Shallow Zone detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**
U = Not detected at or above the laboratory method detection limit (MDL); detections above the MDL but below the laboratory reported detection limit (RDL) are qualified with a "J."
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
z = Elevated chlorinated VOCs detected within the GRO elution range. No discernible petroleum pattern present. Project level qualifier assigned per laboratory review.
GRO results above the screening level and qualified with "z" are not considered in the Maximum Detection and are not included in the Number of Detections Above SL.

Notes:

Gasoline Range Organics Analyzed by NWTPH-Gx.
Diesel Range Organics and Heavy Oil analyzed by NWTPH-Dx.
VOCs analyzed by EPA Method 8260C or 8260D.
Results shown in micrograms per liter (µg/L).
PCULs and Screening Levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.
All groundwater sampling performed by PES Environmental, Inc. unless otherwise indicated.
a = Results provided by Hart Crowser.
b = Results provided by Farallon Consulting.
c = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.
(split) = Split samples collected consecutively.
(dup) = Field duplicate sample.
– = Not analyzed, results not available, or information not applicable.
Detected results shown in **bold.**
Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**
Shallow Zone detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**
Shallow Zone detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**
U = Not detected at or above the laboratory method detection limit (MDL); detections above the MDL but below the laboratory reported detection limit (RDL) are qualified with a "J."
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
z = Elevated chlorinated VOCs detected within the GRO elution range. No discernible petroleum pattern present. Project level qualifier assigned per laboratory review.
GRO results above the screening level and qualified with "z" are not considered in the Maximum Detection and are not included in the Number of Detections Above SL.

Notes:

Gasoline Range Organics Analyzed by NWTPH-Gx.
Diesel Range Organics and Heavy Oil analyzed by NWTPH-Dx.
VOCs analyzed by EPA Method 8260C or 8260D.
Results shown in micrograms per liter (µg/L).
PCULs and Screening Levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.
All groundwater sampling performed by PES Environmental, Inc. unless otherwise indicated.
a = Results provided by Hart Crowser.
b = Results provided by Farallon Consulting.
c = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.
(split) = Split samples collected consecutively.
(dup) = Field duplicate sample.
– = Not analyzed, results not available, or information not applicable.
Detected results shown in **bold.**
Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**
Shallow Zone detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**
Shallow Zone detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**
U = Not detected at or above the laboratory method detection limit (MDL); detections above the MDL but below the laboratory reported detection limit (RDL) are qualified with a "J."
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
z = Elevated chlorinated VOCs detected within the GRO elution range. No discernible petroleum pattern present. Project level qualifier assigned per laboratory review.
GRO results above the screening level and qualified with "z" are not considered in the Maximum Detection and are not included in the Number of Detections Above SL.

Notes:

Gasoline Range Organics Analyzed by NWTPH-Gx.
Diesel Range Organics and Heavy Oil analyzed by NWTPH-Dx.
VOCs analyzed by EPA Method 8260C or 8260D.
Results shown in micrograms per liter (µg/L).
PCULs and Screening Levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.
All groundwater sampling performed by PES Environmental, Inc. unless otherwise indicated.
a = Results provided by Hart Crowser.
b = Results provided by Farallon Consulting.
c = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.
(split) = Split samples collected consecutively.
(dup) = Field duplicate sample.
– = Not analyzed, results not available, or information not applicable.
Detected results shown in **bold.**
Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**
Shallow Zone detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**
Shallow Zone detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**
U = Not detected at or above the laboratory method detection limit (MDL); detections above the MDL but below the laboratory reported detection limit (RDL) are qualified with a "J."
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
z = Elevated chlorinated VOCs detected within the GRO elution range. No discernible petroleum pattern present. Project level qualifier assigned per laboratory review.
GRO results above the screening level and qualified with "z" are not considered in the Maximum Detection and are not included in the Number of Detections Above SL.

Notes:

PCULs and screening levels from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.

Detected results are shown in **bold.**

Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**

Detections above the groundwater screening level for soil vapor are shown in **bold and highlighted in orange.**

Detections above the groundwater PCUL and screening level for soil vapor are shown in **bold highlighted in grayish-orange.**

cDCE = cis-1,2-Dichloroethene.

DOF = Dalton, Olmsted & Fuglevand, Inc.

DRO = Diesel-range organics.

(duplicate) = field duplicate.

EPJ = EP Johnson Construction Inc. and Environmental

GeoE = GeoEngineers, Inc.

GRO = Gasoline-range organics.

HC = Hart Crowser.

ORO = Oil-range organics.

PCE = Perchloroethylene (tetrachloroethene).

Retec = Remediation Technologies, Inc.

Roux = Roux Associates.

ROW = Right of way.

SES = SoundEarth Strategies, Inc.

TCE = Trichloroethene.

tDCE = trans-1,2-Dichloroethene.

Urban = Urban Redevelopment LLC.

VC = Vinyl chloride.

Well screen elevations indicated below Sample Location in parentheses.

(--) = Well screen elevation unknown.

a = Select sample results for MW-210 incorrectly identified with location SMW-3 on lab reports and sampling forms.

Laboratory and Results Notes:

Petroleum hydrocarbons analyzed by EPA Method 418.1, NWTPH-HCID, NWTPH-Gx, NWTPH-Dx, or 8015-M.

VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.

– = Not analyzed or results not available.

B = The same analyte is found in the associated blank.

c = Reported as total 1,2,-DCE (sum of cis,-1,2- and trans,1-2-DCE isomers).

E = Estimated value. The reported range exceeds the calibration range of the analysis.

f = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.

g = Estimated value. The reported range exceeds the calibration range of the analysis.

J = The identification of the analyte is acceptable; the reported value is an estimate.

J+ = The result is an estimated quantity, but the result may be biased high.

J- = The result is an estimated quantity, but the result may be biased low.

qp = Hydrocarbon result partly due to individual peak(s) in quantitation range.

U = Not detected at or above the laboratory method detection limit (MDL).

x = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

y = The GRO result in the sample is due to a pattern of peaks that is consistent with the chlorinated volatiles detected by the 8260C analysis.

z = No/low level gasoline/petroleum detection; result is likely elevated due to high detections of CVOCs.

Groundwater statistics are for data collected during the Remediation Investigation, 2017-2021.

Groundwater statistics for GRO exclude "z" qualified data.

Notes:
PCULs from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.
Detected results are shown in **bold.**
Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**
B&V = Black & Veatch.
cDCE = cis-1,2-Dichloroethene.
DOF = Dalton, Olmsted & Fuglevand, Inc.
DRO = Diesel-range organics.
(duplicate) = field duplicate.
GeoE = GeoEngineers Inc.
GRO = Gasoline-range organics.
HC = Hart Crowser.
ORO = Oil-range organics.
PCE = Perchloroethylene (Tetrachloroethene).
ROW = right-of-way.
SES = SES Strategies, Inc.
TCE = Trichloroethene.
tDCE = trans-1,2-Dichloroethene.
VC = Vinyl chloride.
WW = Windward.
Well screen elevations indicated below Sample Location in parentheses.
(--) = unknown screen elevation.

Laboratory and Results Notes:
Petroleum hydrocarbons analyzed by EPA Method 418.1, NWTPH-HCID, or NWTPH-Gx, NWTPH-Dx, or 8015-M.
VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.
– = Not analyzed or results not available.
E = Estimated value. The reported range exceeds the calibration range of the analysis.
f = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
g = Estimated value. The reported range exceeds the calibration range of the analysis.
ht = The analysis was performed outside the method the method or client-specified holding time requirement.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
ND = Not detected at a concentration exceeding laboratory reporting limit; detection limit not provided.
pr = The sample was received with incorrect preservation. The value reported should be considered an estimate.
U = Not detected at or above the laboratory method detection limit (MDL).
qp = Hydrocarbon result partly due to individual peak(s) in quantitation range.
x = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
y = The GRO result in the sample is due to a pattern of peaks that is consistent with the chlorinated volatiles detected by the 8260C analysis.
z = No/low level gasoline/petroleum detection; result is likely elevated due to high detections of CVOCs.
Groundwater statistics are for data collected during the Remediation Investigation, 2017-2021.
Groundwater statistics for GRO exclude "z" qualified data.

Notes:

PCULs from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.

Detected results are shown in **bold.**

Detections above the groundwater PCUL level are shown in **bold and highlighted in gray.**

B&V = Black & Veatch.
cDCE = cis-1,2-Dichloroethene.
DOF = Dalton, Olmsted & Fuglevand, Inc.
DRO = Diesel-range organics.
GeoE = GeoEngineers Inc.
GRO = Gasoline-range organics.
HC = Hart Crowser.
ORO = Oil-range organics.
PCE = Perchloroethylene (Tetrachloroethene).
ROW = right-of-way.
SES = SES Strategies, Inc.
TCE = Trichloroethene.
tDCE = trans-1,2-Dichloroethene.
VC = Vinyl chloride.
WW = Windward.
Well screen elevations indicated below Sample Location in parentheses.
(--) = unknown screen elevation.
a = Monitoring well was installed at a 25 degree angle from the vertical point of penetration.

Laboratory and Results Notes:

Petroleum hydrocarbons analyzed by EPA Method 418.1, NWTPH-HCID, or NWTPH-Gx, NWTPH-Dx, or 8015-M.
VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.
– = Not analyzed or results not available.
E = Estimated value. The reported range exceeds the calibration range of the analysis.
f = Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
g = Estimated value. The reported range exceeds the calibration range of the analysis.
ht = The analysis was performed outside the method the method or client-specified holding time requirement.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
ND = Not detected at a concentration exceeding laboratory reporting limit; detection limit not provided.
pr = The sample was received with incorrect preservation. The value reported should be considered an estimate.
U = Not detected at or above the laboratory method detection limit (MDL).
qp = Hydrocarbon result partly due to individual peak(s) in quantitation range.
x = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
y = The GRO result in the sample is due to a pattern of peaks that is consistent with the chlorinated volatiles detected by the 8260C analysis.
z = No/low level gasoline/petroleum detection; result is likely elevated due to high detections of CVOCs.
Groundwater statistics are for data collected during the Remediation Investigation, 2017-2021.
Groundwater statistics for GRO exclude "z" qualified data.

Notes:

PCULs from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.

Detected results shown in **bold.**

Detections above the groundwater PCUL are shown in **bold and highlighted in gray.**

Petroleum hydrocarbons analyzed by EPA Method 418.1, NWTPH-HCID, or NWTPH-Gx, NWTPH-Dx, or 8015-M.

VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.

cDCE = cis-1,2-Dichloroethene.

DRO = Diesel-range organics.

GRO = Gasoline-range organics.

HC = Hart Crowser.

ORO = Oil-range organics.

PCE = Perchloroethylene (Tetrachloroethene).

ROW = right-of-way.

SES = SES Strategies, Inc.

TCE = Trichloroethene.

tDCE = trans-1,2-Dichloroethene.

VC = Vinyl chloride.

Well screen elevations indicated below Sample Location in parentheses.

(--) = unknown screen elevation.

Laboratory and Results Notes:

Petroleum hydrocarbons analyzed by EPA Method 418.1, NWTPH-HCID, or NWTPH-Gx, NWTPH-Dx, or 8015-M.

VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.

– = Not analyzed or results not available.

i = The presence of the analyte indicated may be due to carryover from previous sample injections.

J = The identification of the analyte is acceptable; the reported value is an estimate.

J+ = The result is an estimated quantity, but the result may be biased high.

J- = The result is an estimated quantity, but the result may be biased low.

ND = Not detected at a concentration exceeding laboratory reporting limit; detection limit not provided.

U = Not detected at or above the laboratory method detection limit (MDL).

z = No/low level gasoline/petroleum detection; result is likely elevated due to high detections of CVOCs.

Groundwater statistics are for data collected during the Remediation Investigation, 2017-2021.

Groundwater statistics for GRO exclude "z" qualified data.

Notes:

PCULs from Washington State Department of Ecology, Memorandum from P. Tomlinson to TCP File for American Linen Supply Co. Dexter Ave. (FSID 3573, CSID 12004) re: Development of site-specific preliminary cleanup levels, December 14, 2021.

B&V = Black & Veatch.
cDCE = cis-1,2-Dichloroethene.
CH2M = CH2M HILL.
EPJ = E.P. Johnson Construction Inc., and Environmental.
DRO = Diesel-range organics.
FTBTOC = feet below top of casing.
Farallon = Farallon Consulting, LLC.
GRO = Gasoline-range organics.
HC = Hart Crowser, Inc..
ORO = Oil-range organics.
PCE = Perchloroethylene (Tetrachloroethene).
Retec = Remediation Technologies, Inc.
ROW = right-of-way.
SES = SoundEarth Strategies, Inc.
TCE = Trichloroethene.
tDCE = trans-1,2-Dichloroethene.
Urban = Urban Redevelopment.
VC = Vinyl chloride.

Laboratory and Results Notes:

Petroleum hydrocarbons analyzed by EPA Method 418.1 or 8015-M, NWTPH-HCID, or NWTPH-Gx, NWTPH-Dx.
VOCs analyzed by EPA Method 601, 8010S, 8015, 8020, 8021B, 8240, 8260B, 8260C, or 8260D, or by Purge and Trap Gas Chromatogram/Mass Spectrometry.
Detected results are shown in **bold**.
Detected results above the groundwater PCUL are shown in **bold and highlighted in gray.**
– = Not analyzed or not measured.
a = Sample extremely turbid; held at lab.
b = Insufficient groundwater volume for laboratory analysis; ColorTec test run instead.
i = The presence of the analyte indicated may be due to carryover from previous sample injections.
J = Estimated concentration.
ND = not detected at a concentration exceeding laboratory reporting limit; detection limit not provided.
U = Not detected at a concentration exceeding laboratory reporting limit.
ve = Estimated value. The reported range exceeds the calibration range of the analysis.
z = No/low level gasoline/petroleum detection; result is likely elevated due to high detections of CVOCs.

Notes:
Laboratory analyses conducted by Air Toxics Ltd. of Folsom, CA (2013 samples) and Pace Analytical of Mount Juliet, TN (2018-2021 samples).
Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15 or Modified TO-15 Low Level Analysis.
Analytical results in micrograms per cubic meter (µg/m3).
Screening levels based on CLARC, July 2021, Vapor Intrusion Method B table, Sub-Slab Soil Gas Screening Levels. See Appendix K for complete Screening Level evaluation.
Screening level for m&p-xylenes and o-xylenes is applicable to total xylenes.
Probe screen elevations indicated below sample probe in parentheses.
– = Screening level not established or results not available
U = Not detected at a concentration exceeding laboratory reporting limit.
Detected results shown in **bold.**
Detections exceeding the screening level are shown in **bold and highlighted in gray.**
J = The identification of the analyte is acceptable; the reported value is an estimate.
J = The identification of the analyte is acceptable; the reported value is an estimate and likely biased high.
(duplicate) = Field duplicate. Samples collected concurrently.
Samples collected by SoundEarth Strategies in 2013 were only analyzed for PCE, TCE, cDCE, tDCE, and VC

Notes:
Laboratory analyses conducted by Air Toxics Ltd. of Folsom, CA (2013 samples) and Pace Analytical of Mount Juliet, TN (2018-2021 samples).
Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15 or Modified TO-15 Low Level Analysis.
Analytical results in micrograms per cubic meter (µg/m3).
Screening levels based on CLARC, July 2021, Vapor Intrusion Method B table, Sub-Slab Soil Gas Screening Levels. See Appendix K for complete Screening Level evaluation.
Screening level for m&p-xylenes and o-xylenes is applicable to total xylenes.
Probe screen elevations indicated below sample probe in parentheses.
– = Screening level not established or results not available
U = Not detected at a concentration exceeding laboratory reporting limit.
Detected results shown in **bold.**
Detections exceeding the screening level are shown in **bold and highlighted in gray.**
J = The identification of the analyte is acceptable; the reported value is an estimate.
J = The identification of the analyte is acceptable; the reported value is an estimate and likely biased high.
(duplicate) = Field duplicate. Samples collected concurrently.
Samples collected by SoundEarth Strategies in 2013 were only analyzed for PCE, TCE, cDCE, tDCE, and VC

Notes:

1. Kozeny-Carman Equation:

$$k = [\Theta^3/(1-\Theta)^2]*(1.99 \times 10^4)/\{(\Sigma[f_i/(d_{li}^{0.404} \times d_{si}^{0.595})])^2 * SF^2\}$$

where Θ = total porosity

1.99×10^4 = constant incorporating unit weight and viscosity of water and the empirical Kozeny-Carman coefficient (1/cm-sec)

f_i = fraction of particles retained on the smaller sieve of adjacent sieve pairs (dimensionless)

d_{li} = diameter of larger sieve in pair (cm)

d_{si} = diameter of smaller sieve in pair (cm)

SF = grain shape factor (dimensionless)

2. Frac retained = fraction (by weight) retained on screen

3. Estimated shape factors:

Rounded	6.1
Median	6.25
Worn	6.4

4. Estimated porosities:

Maximum	0.40
Median	0.33
Minimum	0.25

Notes:

1. Kozeny-Carman Equation:

$$k = [\Theta^3/(1-\Theta)^2]*(1.99 \times 10^4)/\{(\Sigma[f_i/(d_{li}^{0.404} \times d_{si}^{0.595})])^2 * SF^2\}$$

where Θ = total porosity

1.99×10^4 = constant incorporating unit weight and viscosity of water and the empirical Kozeny-Carman coefficient (1/cm-sec)

f_i = fraction of particles retained on the smaller sieve of adjacent sieve pairs (dimensionless)

d_{li} = diameter of larger sieve in pair (cm)

d_{si} = diameter of smaller sieve in pair (cm)

SF = grain shape factor (dimensionless)

2. Frac retained = fraction (by weight) retained on screen

3. Estimated shape factors:

Rounded	6.1
Median	6.25
Worn	6.4

4. Estimated porosities:

Maximum	0.40
Median	0.33
Minimum	0.25

Notes:

1. Kozeny-Carman Equation:

$$k = [\Theta^3/(1-\Theta)^2]*(1.99 \times 10^4)/\{(\Sigma[f_i/(d_{li}^{0.404} \times d_{si}^{0.595})])^2 * SF^2\}$$

where Θ = total porosity

1.99×10^4 = constant incorporating unit weight and viscosity of water and the empirical Kozeny-Carmon coefficient (1/cm-sec)

f_i = fraction of particles retained on the smaller sieve of adjacent sieve pairs (dimensionless)

d_{li} = diameter of larger sieve in pair (cm)

d_{si} = diameter of smaller sieve in pair (cm)

SF = grain shape factor (dimensionless)

3. Estimated shape factors:

Rounded	6.1
Median	6.25
Worn	6.4

4. Estimated porosities:

Maximum	0.40
Median	0.33
Minimum	0.25

Notes:

1. Kozeny-Carman Equation:

$$k = [\Theta^3/(1-\Theta)^2]*(1.99 \times 10^4)/\{(\Sigma[f_i/(d_{li}^{0.404} \times d_{si}^{0.595})])^2 * SF^2\}$$

where Θ = total porosity

1.99×10^4 = constant incorporating unit weight and viscosity of water and the empirical Kozeny-Carmon coefficient (1/cm-sec)

f_i = fraction of particles retained on the smaller sieve of adjacent sieve pairs (dimensionless)

d_{li} = diameter of larger sieve in pair (cm)

d_{si} = diameter of smaller sieve in pair (cm)

SF = grain shape factor (dimensionless)

2. Frac retained = fraction (by weight) retained on screen

3. Estimated shape factors:

Rounded	6.1
Median	6.25
Worn	6.4

4. Estimated porosities:

Maximum	0.40
Median	0.33
Minimum	0.25

Notes:

1. Kozeny-Carman Equation:

$$k = [\Theta^3/(1-\Theta)^2]*(1.99 \times 10^4)/\{(\Sigma[f_i/(d_{li}^{0.404} \times d_{si}^{0.595})])^2 * SF^2\}$$

where Θ = total porosity

1.99×10^4 = constant incorporating unit weight and viscosity of water and the empirical Kozeny-Carmon coefficient (1/cm-sec)

f_i = fraction of particles retained on the smaller sieve of adjacent sieve pairs (dimensionless)

d_{li} = diameter of larger sieve in pair (cm)

d_{si} = diameter of smaller sieve in pair (cm)

SF = grain shape factor (dimensionless)

2. Frac retained = fraction (by weight) retained on screen

3. Estimated shape factors:

Rounded	6.1
Median	6.25
Worn	6.4

4. Estimated porosities:

Maximum	0.40
Median	0.33
Minimum	0.25
