Re: Status of Agreed Order No. DE 13181 and No Further Action to complete Cleanup of the following Contaminated Site:

Site name:	WA DNR Webster Nursery
Site address:	9805 Blomberg St. SW, Tumwater, Thurston County, WA 98512
Cleanup Site ID:	3380
Facility/Site ID:	8786341

Dear Amy Young:

Thank you for working with the Washington State Department of Ecology (Ecology) on WA DNR Webster Nursery (Site) under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW, and Agreed Order No. DE 13181, which became effective on August 9, 2016.

This letter provides written notification that, under MTCA and the Order, no further remedial action is necessary to clean up contamination at the Site, but further remedial action is still necessary to control and monitor the remaining contamination and periodically review conditions at the Site. This letter also describes the status of the Order and the Site.

1. Completion of Cleanup Required by Order

The remedial actions required by the Order are specified in Section VII (Work to Be Performed) and detailed in the Cleanup Action Plan (Exhibit B). The State of Washington, Department of Natural Resources (DNR) was required to implement the requirements of the Cleanup Action Plan. The cleanup action consisted of the excavation and disposal of pesticide contaminated soil within the zone of seasonal groundwater fluctuation followed by post-cleanup groundwater monitoring until cleanup standards have been met. After inspecting the Site and reviewing the supporting documentation, Ecology has determined that the cleanup required at the Site under the Order has been satisfactorily completed.

2. Post-Cleanup Remedial Actions Required by Order

Although the cleanup of contamination at the Site has been completed, further remedial action is still necessary under MTCA and required under the Order to control and monitor the remaining contamination at the Site. DNR's responsibilities are specified in Section VII (Work to Be Performed) and detailed in the Cleanup Action Plan, Cleanup Action Completion Report, Compliance Monitoring Plan, and associated Ecology correspondence.

3. Periodic Reviews of Post-Cleanup Conditions Required by Order

Ecology will conduct periodic reviews of post-cleanup conditions at the Site to ensure they remain protective of human health and the environment. This requires continued access to the Site, as provided in Section VIII.E (Access) of the Order. DNR's responsibilities are specified in Section VIII.Q (Periodic Review) of the Order. Any costs incurred by Ecology in conducting periodic reviews may be recovered from DNR.

4. Status of Order

Although the cleanup of contamination at the Site has been completed, further remedial action is still necessary under MTCA and required by the Order to control and monitor the remaining contamination and periodically review the conditions at the Site. The Order will remain in effect until the required post-cleanup remedial actions are completed or are no longer necessary under MTCA.

This letter summarizes DNR's remaining responsibilities under the Order; it does not alter or expand DNR's responsibilities under the Order.

5. No Further Action Determination

Ecology has determined that no further remedial action is necessary to clean up contamination at the Site under MTCA. However, as explained above, further remedial action is still necessary under MTCA to control and monitor the remaining contamination and periodically review the conditions at the Site.

6. Delisting of the Site

Based on the no further action determination, Ecology proposed removing the Site from the Contaminated Sites List (CSL). Ecology published notice of the proposal in the Site Register on October 2, October 16, and October 30, 2025 and provided a 33-day public comment period, from October 2 to November 3, 2025. No comments were received. After review and consideration of the comments, Ecology removed the Site from the CSL on December 19, 2025.

7. Thank You

Thank you and congratulations on your work in cleaning up the Site. We look forward to continuing to work with you to make sure your investment in the Site is protected over the long term. Should you have any questions, please do not hesitate to contact Ecology's cleanup project manager for the Site, Steve Teel, at (360) 890-0059 or steve.teel@ecy.wa.gov.

Sincerely,

Marian L. Abbett, PE
Section Manager
