1.0 Introduction

This document presents the draft Cleanup Action Plan (dCAP) for the Troy Laundry Seattle Site located in Seattle, Washington (Figure 1). The dCAP was prepared in accordance with the requirements of the Model Toxics Control Act, Chapter 70A.305 of the Revised Code of Washington (RCW), and its implementing regulations, Chapter 173-340 of the Washington Administrative Code (WAC) (collectively, MTCA).

1.1 General Facility Information and Site/Property Definitions

Site Name: Troy Laundry Seattle

Facility Site ID No.: 19135499 **Cleanup Site ID No.:** 11690

Property Address: 300 Boren Avenue North, 399 Fairview Avenue North, 1120 John Street in Seattle, Washington

Parcel Numbers: 986200525, 869200-000 (*198620-0480 and -0515)*

Potentially Liable Persons: Touchstone SLU LLC and TB TS/RELP LLC (collectively Touchstone)

The Troy Laundry Seattle Site (Site), as defined under MTCA, is where a hazardous substance, other than a consumer product in consumer use, has been deposited, stored, disposed of, placed, or otherwise come to be located. The Site includes two parcels where hazardous substances were released or have come to be located from historical commercial and industrial operations.

The Site is located at 300 Boren Avenue North, 399 Fairview Avenue North and 1120 John Street in Seattle, Washington. The Site encompasses the following:

- The Troy Laundry property is located at 300 Boren Avenue North, 399 Fairview Avenue North (Property). The location of the Property is shown on Figure 1.
- The Onni Property is located at 1120 John Street in Seattle, Washington.[1]
- Portions of the rights-of-way (ROWs) to the north, south, and west of the Property.

1.2 Purpose and Objective

This document is a requirement of MTCA. The purpose of the dCAP is to document the selected cleanup action for the Site and to specify the cleanup standards and other requirements the cleanup action must meet.

[1]As of spring 2025, the Onni Property is being redeveloped into a residential or residential/commercial building with four levels of underground parking. The development includes a full lot line to lot line excavation.

Specific MTCA requirements for CAPs are set forth in WAC 173-340-380(5). Consistent with these requirements, this dCAP provides the following:

- A general description of the cleanup action developed in accordance with WAC 173-340- 350 through 173-340-390;
- A summary of the rationale for selecting the cleanup action;
- Cleanup standards for each hazardous substance and for each medium of concern at the Troy Laundry Seattle Site;
- The schedule for implementation of the cleanup action plan and restoration time frame;
- Institutional controls required as part of the cleanup action;
- Applicable state and federal laws for the cleanup action;
- A preliminary determination by the department that the cleanup action will comply with WAC 173-340-360;

1.3 Preliminary Determination

The Washington State Department of Ecology (Ecology) has made a preliminary determination that the cleanup action described in this dCAP will comply with the requirements specified in WAC 173-340-360. Specifically, these requirements include a cleanup action that will be protective of human health and the environment, comply with applicable state and federal laws, comply with cleanup standards, prevent or minimize present and future releases and migration of hazardous substances in the environment, provide for compliance monitoring, use permanent solutions to the maximum extent practicable, provide for a reasonable restoration time frame, and consider public concerns and tribal rights and interests.

Remedial investigations (RI) were conducted at the Site between 2010 and 2019. The RI documented and delineated the nature and extent of releases of gasoline-, diesel-, and oil-range petroleum hydrocarbons; PCE; TCE; cis-1,2-DCE; and VC to soil and groundwater on and from the Property. The RI activities included advancing 59 borings and installing 33 groundwater monitoring wells, performing a vapor intrusion assessment, and conducting groundwater monitoring and sampling events. In addition, the RI Report confirmed through two indoor air sampling events that the vapor intrusion pathway is incomplete and indoor air is not a medium of concern for the Site.

An interim remedial action (IRA) was performed between 2014 and 2017 in conjunction with the redevelopment of the Property. The redevelopment required a lot line-to-lot line excavation that extended to 70 feet below street grade. The IRA included the removal of USTs containing solvents and petroleum hydrocarbons and the mass excavation of 97,000 tons of soil

contaminated with chlorinated volatile organic compounds (CVOCs). The IRA also treated contaminated groundwater using enhanced reductive dechlorination (ERD) technology.

SoundEarth installed a network of 125 injection wells on the Property and beneath the Boren Avenue North and Thomas Street ROWs. The ERD groundwater treatment included the injection of edible oil substrate in May and June 2015 and April and May 2016, followed by bioaugmentation in June 2017.

The three cleanup action alternatives that were developed and evaluated are as follows:

- Cleanup Action Alternative 1, Monitored Natural Attenuation (MNA) and Environmental Covenants (ECs)
- Cleanup Action Alternative 2, In Situ ERD and EC with MNA
- Cleanup Action Alternative 3, In Situ Powdered Activated Carbon Adsorption and EC with MNA

Based on the results of the Final FS, Cleanup Action Alternative 1 has been selected as the preferred and recommended remedial alternative because it is technically feasible, implementable, sustainable, protective of human health and the environment, and cost-effective. Cleanup Action Alternative 1 will include compliance groundwater monitoring, data analysis to confirm that the footprint of the CVOC groundwater plume remains stable or continues to decline over time, and the recording of ECs with institutional controls for both the Property and the Onni property to the south to ensure there is no direct contact with or ingestion of contaminated groundwater. Compliance with groundwater cleanup standards will be achieved when concentrations of CVOCs are below cleanup levels in groundwater samples collected from monitoring wells (MW04, MW07, MW13, MW26, MW27, MW28, MW29R, and MW35) for four consecutive groundwater monitoring and sampling events.

This DCAP was prepared in accordance with Agreed Order No. DE 8996 (AO) between Touchstone and Ecology and the requirements of Chapters 173-340-380, 173-340-400, and 173-340-410 of the Washington Administrative Code (WAC).

This DCAP includes the following sections:

- **Section 2.0, Conceptual Site Model.** This section discusses the components of the conceptual site model (CSM) developed for the Site, which includes confirmed and suspected source areas, affected environmental media, fate and transport mechanisms, contaminants of concern (COCs), and exposure pathways and potential receptors.
- **Section 3.0, Cleanup Standards and Technical Elements.** This section describes applicable or relevant and appropriate requirements (ARARs), cleanup levels, media of concern, and points of compliance.

- **Section 4.0, Cleanup Action Alternatives and Evaluation.** This section describes the remedial action objectives (RAOs), cleanup action alternatives, and process by which the alternatives were evaluated.
- **Section 5.0, Selected Cleanup Action.** This section describes the cleanup action objectives and the cleanup action components that will be implemented at the Site.
- **Section 6.0, Contingency Actions.** This section describes the contingency actions if future concentrations of chlorinated volatile organic compounds (CVOCs) in the groundwater exceed remediation levels (RLs) for the protection of indoor air.
- **Section 7.0, Restoration Time Frame.** This section describes the restoration time for the cleanup action for the Site.
- **Section 8.0, Compliance Monitoring.** This section describes the compliance monitoring that will be performed as part of the cleanup action for the Site.
- **Section 9.0, Documentation Requirements.** This section describes the documentation to be provided as part of the cleanup action and includes a discussion of document management and compliance reports.
- **Section 10.0 Regulatory Compliance.** This section describes the actions when groundwater cleanup levels have been achieved at the Site.
- **Section 11.0, References.** This section lists the references used to prepare this document.

1.4 Site Description

The Property is composed of one consolidated tax parcel (King County Parcel No. 869200-0000) that covers approximately 108,571 square feet (2.51 acres) of land. The Site is located on a topographically low-lying area within the downtown area of the City of Seattle. Elevations range from 68 feet (northwest corner of the Property) to 105 feet (southeast corner of the Property) relative to the North American Vertical Datum of 1988 (NAVD88), with a slope toward the northwest. Lake Union is located approximately 0.4 mile to the north of the Site, and Elliot Bay is located approximately 1.5 miles to the west (Figure 1).

The Troy Block development at the Property occupies a full city block bounded by Harrison Street to the north, Fairview Avenue North to the east, Thomas Street to the south, and Boren Avenue North to the west. The development includes two office towers and a five-level underground parking garage (levels P1 through P5) with 1,120 parking stalls. The North Tower consists of 13 stories with 418,999 square feet of rentable space, and the South Tower consists of 12 stories with 392,521 square feet of rentable space. Both towers are currently leased and occupied by Amazon. The development also includes approximately 1 acre of public open space between the two towers.

According to historical records, the Property historically operated as one of the Pacific Northwest's largest laundry and dry-cleaning facilities. At least 15 underground storage tanks (USTs) containing heating oil, fuel, and dry-cleaning solvents and several aboveground storage tanks containing propane, wash water, water-softening agents, dry-cleaning solvents, and heating oil were used on the Property throughout its operation. Figure 2 shows the historical layout of the Property, and Figure 3 shows the contemporary setting of the Property and surrounding area.

Groundwater elevation data shows that the primary groundwater flows to the southeast beneath the Property. The regional groundwater flow for the Property as evidenced by groundwater elevation data is to the east-southeast and is not anticipated to change in the absence of significant construction dewatering or other groundwater withdrawals from the regional aquifer proximal to the Property.

1.5 Previous Environmental Investigations and Remedial Actions

Remedial investigations (RI) were conducted at the Site between 2010 and 2019. The RI documented and delineated the nature and extent of releases of gasoline-, diesel-, and oil-range petroleum hydrocarbons (GRPH, DRPH, and ORPH, respectively); PCE; TCE; cis-1,2-DCE; and VC on and from the Property to soil and groundwater. The RI activities included advancing 59 borings, installing 33 groundwater monitoring wells, performing a vapor intrusion assessment, and conducting groundwater monitoring and sampling events. The locations of investigation points performed at the Site are shown on Figure 4, and cross sections showing the depth of explorations are shown on Figures 5 through 8.

SoundEarth conducted an interim remedial action (IRA) at the Site between 2014 and 2017 in conjunction with the redevelopment of the Property. The redevelopment required a lot line-to-lot line excavation that extended to 70 feet below street grade. The IRA included the removal of USTs containing solvents and petroleum hydrocarbons and the mass excavation of 97,000 tons of soil containing CVOCs. The mass excavation was performed in conjunction with the redevelopment of the Property. The IRA also included treating CVOC-contaminated groundwater using enhanced reductive dechlorination (ERD) technology. The ERD groundwater treatment included the injection of edible oil substrate (EOS) in May and June 2015 and April and May 2016, followed by bioaugmentation in June 2017.

The lowest level of the underground parking garage covers the entire subsurface area of the Property, and there are no areas that could provide a pathway for direct contact with or exposure to residual soil or groundwater contamination beneath the Property or in the adjacent ROWs.

1.6 Supplemental Site Investigations

Previous investigations and the IRAs conducted at the Site by SoundEarth and others were performed in consultation with Ecology and following the AO and are summarized in Sections 3.0 through 6.0 of the Final Remedial Investigation Report (SoundEarth 2020). Since approval of the RI Report in 2020, SoundEarth has conducted supplemental Site investigation activities at the Site that have included periodic groundwater monitoring and sampling events. The locations of soil borings and monitoring wells are shown on Figure 4 and illustrated in cross sections on Figures 5 through 8.

The extent of the PCE/TCE and cis-1,2-DCE/VC concentrations above cleanup levels as of the June 2024 and December 2024 semiannual groundwater monitoring and sampling events are shown on Figures 9 through 12. Analytical results for soil are presented in Table 1, groundwater elevations are summarized in Table 2, and analytical results for groundwater and indoor air are summarized in Tables 3 through 10. A comprehensive discussion of the groundwater monitoring and sampling events and results, including a statistical analysis to evaluate the stability of the contaminated groundwater plume, are presented in the 2024 Groundwater Monitoring Report (SoundEarth 2025a).

Vulnerable Populations and Overburdened Communities.

An evaluation of potential impacts to likely vulnerable populations and overburdened communities in the vicinity of the Troy Laundry Site was conducted in accordance with Implementation Memorandum No. 25: Identifying Likely Vulnerable Populations and Overburdened Communities under the Cleanup Regulations dated January 2024, Ecology (2024) (Implementation Memorandum No. 25). The complete evaluation is presented in the RI/FS; primary findings are summarized below.

The Troy Laundry Site appears likely to be in proximity to vulnerable populations and overburdened communities due primarily to the potential for environmental exposures (e.g., heavy vehicle traffic and proximity to major roadways), and less attributed to socioeconomic or demographic factors. Vulnerable populations and overburdened communities are not more susceptible to exposure to contaminated media associated with the Troy Laundry Site than the general population. Site-specific evaluation of the interim actions, redevelopment activities, and evaluation of potential human exposure pathways presented in the RI/FS confirm that the proposed final cleanup action will be protective of human health and the environment.

Climate Change Summary

The evaluation of climatological characteristics is presented in the RI/FS. In accordance with WAC 173-340-350(6)(f), an evaluation of current and projected local and regional climatological characteristics was conducted to determine whether these characteristics could affect the migration of hazardous substances or the resilience of cleanup action alternatives for the Troy

Laundry Site.

Based on the results of the evaluation and the location of the Troy Laundry Site in a highly developed area in Seattle, current and projected local and regional changes in climate are not anticipated to affect the migration of hazardous substances or the resilience of the cleanup action at the Site.

2.0 Conceptual Site Model

A CSM has been developed to identify confirmed and suspected source areas of COCs to the media of concern, potential migration pathways, potential receptors, and exposure pathways at the Site. The CSM summary is discussed below.

2.1 Confirmed and Suspected Source Areas

The results of the RI and IRAs conducted at the Site indicate that the CVOC and petroleum hydrocarbon impacts detected in soil and groundwater beneath the Property, in a portion of the south-adjacent Thomas Street ROW, in the west-adjacent Boren Avenue ROW, in the north-adjacent Harrison Street ROW, and on the northern portion of the Onni property are primarily the result of releases from the laundry and dry cleaning facility that operated on the Property from 1927 through 1985. Historical building plans indicate that the bulk of the dry-cleaning operations after the mid-1960s were conducted on the southwestern portion of the Property.

The highest concentrations of chlorinated solvents in soil were historically located near the center of the Property in the vicinity of the former loading dock, and the highest concentrations of GRPH as Stoddard solvent were observed to the south of the three closed-in-place USTs under the former Troy Building on the southwestern portion of the Property (Figure 2). The distribution of CVOCs in soil and groundwater on the Property and in groundwater in the ROWs and on the northern portion of the Onni property indicates that the primary sources of the releases were at the loading dock and USTs on the Property, although additional smaller releases may have contributed to shallow solvent contamination elsewhere on the Property.

2.2 Contaminants and Media of Concern

Based on the findings of the RI conducted for the Site, the COCs at the Site consist of PCE, TCE, cis-1,2-DCE, and VC in groundwater located beneath the Property, portions of the adjoining ROWs, and the northern portion of the Onni Site.

Previous investigations at the Site identified GRPH, DRPH, and ORPH as COCs. Petroleum hydrocarbons previously present in soil at the Site were removed during the 2014 to 2015 construction excavation (SoundEarth 2016), except for a small area of inaccessible petroleum-contaminated soil along the northern sidewall along Harrison Street (approximately 10 feet east to west at an approximate elevation of 32 feet NAVD88). GRPH, DRPH, and ORPH detected in recent groundwater samples are attributable to the presence of EOS and its polar breakdown products. This conclusion is supported by the detection of petroleum hydrocarbons in groundwater samples being flagged by the laboratory as having a chromatographic pattern that did not match the fuel standard used for quantification. Residual petroleum contamination at or outside the Property boundary is located in the vadose zone in areas that are fully capped and contained. Therefore, the petroleum hydrocarbon source has been removed or contained, and

petroleum hydrocarbons are no longer considered COCs for the medium of concern for the Site, which is groundwater. Any residual GRPH present in groundwater is attributable to residual EOS.

All soil on the Property identified as containing CVOCs at concentrations exceeding cleanup levels was removed during the mass excavation conducted as part of the IRA, except for a small area of inaccessible CVOC-contaminated soil along the western Property boundary along Boren Avenue North (approximately 100 feet north to south at approximate elevations between 80 and 20 feet NAVD88). Soil is not a medium of concern for the Site because CVOC-contaminated soil was removed by mass excavation during redevelopment, and residual contaminated soil was capped with the lowest level of the underground parking garage. Any residual CVOC soil contamination that may be present in the ROWs outside the boundaries of the Property is capped by hardscapes (e.g., buildings, concrete, asphalt pavement). Based on analytical results of sidewall soil samples and soil samples collected from soil borings advanced during the IRA, soil contamination in the ROWs, if present, would be encountered only at depths greater than 15 feet below ground surface (bgs). Under the Washington State Model Toxics Control Act (MTCA), 15 feet bgs is the depth of soil that could be excavated under a construction scenario. Therefore, there is no longer any risk of human exposure to soil via direct contact.

The results of SoundEarth's 2018 and 2019 vapor intrusion assessment demonstrated that concentrations of COCs were less than the applicable MTCA cleanup levels for air (SoundEarth 2018a,b, 2019a,b). The 2018 and 2019 vapor intrusion assessments collected 18 indoor air samples and five indoor air samples, respectively, from the parking garage levels. One sample was collected in the elevator shaft in 2019. Based on the results from the vapor intrusion assessments, the vapor intrusion pathway is considered incomplete, and soil vapor and indoor air are not media of concern for the Site.

2.3 Exposure Pathway Assessment

This section discusses the confirmed and potential human health and ecological exposure pathways at the Site with the goals of (1) identifying those pathways requiring remediation to reduce or eliminate unacceptable risks to human health or the environment and (2) applying the findings to the development of potentially feasible remedial technologies. Pathways associated with each medium of potential concern are described below.

2.4 Exposure Pathways: Soil

The IRA and subsequent redevelopment of the Property eliminated soil as a medium of concern at the Site. At the western and northern Property boundaries, one or more CVOCs were detected at concentrations slightly exceeding applicable soil cleanup levels. However, the mechanisms for exposure to COCs in the soil have been eliminated:

- **Direct contact pathway.** Soil with residual CVOC contamination on the Property is capped by concrete located on the lowest of the five levels of underground parking,

adjacent ROWs are capped with hardscapes (e.g., concrete and asphalt pavement). Therefore, the direct contact pathway is incomplete.

- **Inhalation pathway.** Residual CVOC concentrations in soil were mitigated by engineering controls, including a vapor barrier beneath the lowest level of the underground parking garage and a continuously operating HVAC system in the parking garage. The vapor intrusion assessment conducted at the Property confirmed that the inhalation pathway for soil is incomplete.
- **Soil to groundwater leaching pathway.** The soil to groundwater leaching pathway was eliminated by mass removal of the soil during redevelopment and the capping of the soil with the underground parking garage. The paved hardscapes in the ROWs have minimized the potential for infiltration of surface water into the soil underlying other portions of the Site. Therefore, the soil to groundwater leaching pathway is incomplete.

Soil samples collected from borings advanced in the ROWs adjacent to the Property either do not contain COCs at concentrations above applicable soil cleanup levels or were collected at depths greater than 15 feet bgs. Per WAC 173-340-740(6)(d), for soil cleanup levels based on human exposure via direct contact or other exposure pathways where contact with the soil is required to complete the pathway, the point of compliance shall be established in the soils throughout the Site from the ground surface to 15 feet below the ground surface.

2.5 Exposure Pathways: Groundwater

The IRA and subsequent redevelopment of the Property eliminated exposure to potentially contaminated shallow perched groundwater and deep groundwater in the primary regional water-bearing zone.

Perched groundwater on the Property was removed during the mass excavation of soil during redevelopment. Perched groundwater containing CVOCs has not been identified in any areas outside the Property boundaries.

The primary regional water-bearing zone at the Site contains one or more CVOCs at concentrations exceeding the cleanup levels. However, the mechanisms for exposure to CVOCs in groundwater at the Site have been eliminated:

- **Direct contact pathway.** The direct contact pathway for groundwater is not complete because groundwater containing CVOCs in the primary regional water-bearing zone occurs at depths of at least 60 to 80 feet bgs. Any direct contact with groundwater during groundwater sampling events will be mitigated using personal protective equipment. Institutional controls will prohibit any future contact with or exposure to groundwater at the Site.
- **Inhalation pathway.** The inhalation pathway at the Property is not complete because of the underground parking garage cap, the presence of a vapor barrier beneath the lowest

parking level, and a continuously operating HVAC system in the parking garage. The vapor intrusion assessment conducted at the Property confirmed that the inhalation pathway for groundwater is not complete.

The inhalation pathway in the ROW is not complete for roadway excavation workers because the CVOC concentrations detected in groundwater samples collected from the ROWs do not exceed the groundwater RLs for roadway excavation workers for the inhalation pathway. The groundwater RLs for CVOCs protective of roadway excavation workers are presented in Table 3.

The inhalation pathway at the Onni Site is not complete because concentrations of CVOCs in monitoring wells MW29R and MW35 are below the groundwater RLs for the protection of indoor air as of December 2024 for both commercial and residential exposure scenarios. The current development at the Onni Site further mitigates the potential for vapor intrusion, including a lot line to lot line excavation, a ground-bearing slab concrete, and a vapor barrier. When the development is complete a continuously operating HVAC system will operate in a multilevel underground parking garage.

- **Ingestion pathway.** The ingestion pathway for groundwater is not complete because groundwater at the Site is not a source of drinking water. Groundwater at the Site is not currently and is unlikely to become a source of drinking water, as outlined in Section 3.8, Regional Aquifer Determination, in the Final Feasibility Study Report (Final FS; SoundEarth 2025b). Environmental covenants (ECs) will be recorded on the Property and for the new development at the Onni property Site preventing any withdrawal, direct contact, or use of groundwater.

2.6 Exposure Pathway: Soil Vapor

In March 2018 and February 2019, SoundEarth conducted a soil vapor intrusion assessment and supplemental vapor intrusion assessment for indoor air in the Property building and for ambient outdoor air (SoundEarth 2018a,b and 2019a,b). The results of the indoor and outdoor air sampling demonstrated that COCs were in compliance with indoor air cleanup levels. In a letter dated July 8, 2019, Ecology confirmed that further assessment of indoor air quality at the Site is not required based on the results of the vapor intrusion assessments (Ecology 2019).

3.0 Cleanup Standards and Technical Elements

This section summarizes the cleanup standards and technical elements developed for the cleanup action at the Site.

3.1 Applicable or Relevant and Appropriate Requirements

Under WAC 173-340-350 and 173-340-710, ARARs include regulatory cleanup standards, standards of control, and other environmental requirements, criteria, or limitations established under municipal, state, or federal law that specifically address a contaminant, remedial action, location, or other circumstances at a site. Exhibit 3-1 summarizes the preliminary ARARs for the Site.

3.2 Groundwater Cleanup and Remediation Levels

The selected cleanup levels and RLs for the Site must comply with the MTCA cleanup regulations specified in WAC 173-340 and other applicable state and federal laws. Cleanup levels are based on the protection of human health and the environment from all applicable exposure pathways and receptors, considering the most beneficial use of groundwater in the regional aquifer beneath the Site. The groundwater RLs are based on the protection of the inhalation pathway for commercial workers at the Property, the Onni property Site, and roadway excavation workers in the ROWs.

The following pathways were considered for the establishment of groundwater cleanup levels and RLs at the Site:

- **Protection of drinking water.** The default assumption under MTCA is that the most beneficial use of groundwater is for human consumption. Groundwater in the regional aquifer beneath the Site is not currently and is unlikely to become a source of drinking water for the City of Seattle, as discussed in Section 3.8 of the Final FS. Because there is no ingestion pathway for groundwater beneath the Site, groundwater cleanup levels under WAC 173-340-720(3) and (4) for this exposure pathway are not applicable.
- **Protection of indoor air.** A vapor intrusion assessment was conducted at the Property in 2018 and 2019. Results of that assessment indicated that CVOCs were detected at concentrations below MTCA residential indoor air cleanup levels and indoor RLs for commercial workers in indoor air (SoundEarth 2018a,b and 2019a,b). In addition, CVOCs were detected at concentrations below the RLs in groundwater samples collected from the ROWs, which is protective of the inhalation pathway for roadway excavation workers in the ROWs. Based on a review of the indoor air

results, Ecology has confirmed that the analytical results demonstrated that the COCs comply with MTCA and that no further assessments are necessary (Ecology 2019). As of the fourth quarter of 2024, the concentrations of CVOCs in the groundwater at the Onni property Site are below the groundwater screening levels for the protection of indoor air for commercial and residential exposure scenarios.

- **Protection of surface water resources.** At the Site, the regional aquifer flows to the south and southeast before turning toward Elliott Bay, approximately south of Denny Way (SoundEarth 2017). The southern boundary of the CVOC groundwater plume was defined by former monitoring wells ONNI-MW-4 and ONNI-MW-5 (Figure 34 of the Final FS) and is currently defined by existing groundwater monitoring wells MW29R and MW35. Based on the current downgradient extent of the plume, which is located on the Onni property proximal to the Thomas Street ROW and the fact that Elliot Bay is located 1.5 miles from the Site, surface water resources are protected for human health (via the consumption of aquatic organisms) and ecological receptors.
- **Protection of sediment quality.** Given the stability of the CVOC plume at the Site and the Site's distance from Elliott Bay, CVOC-contaminated groundwater originating at the Site would not impact sediment quality. Also, CVOCs are not regulated under the Sediment Management Standards (WAC 173-204) due to chemical properties that prevent CVOCs from partitioning into sediments.

3.3 Potential Promulgated Standard For the Site

Because groundwater beneath the Site will not be used for domestic consumption and the overall footprint of the CVOC groundwater plume is stable, the following ARARs were used to identify COC concentrations that may serve as groundwater cleanup levels for the Site:

- Surface Water Cleanup Standards, MTCA: WAC 173-340-730(3)
- Washington State Surface Water Quality Standards: WAC Chapter 173-201A
- Washington State Group A Public Water Supplies: WAC Chapter 246-290
- MTCA Regulation: WAC 173-340-355
- MTCA Groundwater Cleanup Standards Regulation: WAC 173-340-720 (3)(4)
- Federal Clean Water Act: 33 U.S.C. § 1314 (FWPCA § 304)

3.4 Groundwater Cleanup and Remediation Levels

Because groundwater is the only medium of concern at the Site, groundwater cleanup levels and RLs have been established to demonstrate that COCs comply with MTCA cleanup standards. Groundwater cleanup levels will be applied to CVOCs comprising the COCs at a conditional point of compliance (CPOC) for the Site, as discussed in Section 4.5. Groundwater RLs will apply to

commercial workers at the Property and roadway excavation workers in the ROWs and are based on the protection of workers from potential exposure through the inhalation pathway.

Although groundwater in the regional aquifer beneath the Site is not currently, and is unlikely to become, a source of drinking water for the City of Seattle, as discussed in Section 3.8 of the Final FS, groundwater clean levels for the Site at the CPOC will be based on the default assumption that the most beneficial use of groundwater is for human consumption as discussed under Section 4.2. Groundwater cleanup levels and RLs for the Site are presented in Exhibit 3-2 and Exhibit 3-3, respectively.

Exhibit 3-2: Groundwater Cleanup Levels

Contaminant of Concern	**Cleanup Level** (µg/L)	**Regulations**

3.5 Point of Compliance

The point of compliance is the location where the cleanup levels that are set for a medium of concern following WAC 173-340 will be measured and cannot be exceeded. Once the cleanup levels have been attained at the points of compliance, the Site is in compliance and the impacts present beneath the Site, if any, will no longer be considered a threat to human health or the environment.

A CPOC is necessary for the Site because it has been demonstrated that it is not practicable to meet the cleanup levels throughout the Site in a reasonable restoration time frame, and/or it is not technically possible to design, construct, and implement a reliable and cost-effective remedy to clean up groundwater across the entire Site.

The conditional point of compliance for the Site shall not exceed property boundary, since the site is not abutting or near surface water, and is not in an area-wide groundwater contamination. The groundwater monitoring wells MW04, MW07, MW13, MW26, MW27, and MW28, located in the middle of the street and at the property boundary, are considered as conditional point of compliance monitoring wells. Monitoring well MW29R and MW35, located at the Onni property, are not CPOC monitoring wells. (Figure 13).

4.0 Cleanup Action Alternatives and Evaluation

This section summarizes the cleanup action alternatives and the process through which cleanup action alternatives were evaluated as part of the Final FS submitted to Ecology in March 2025 (SoundEarth 2025b).

4.1 Cleanup Action Alternatives

Three cleanup action alternatives were evaluated for the final cleanup action at the Site. A detailed discussion of each cleanup action alternative and its cost/benefit is presented in the Final FS. A summary of cleanup action alternatives is presented below.

4.1.1 Cleanup Action Alternative 1: Monitored Natural Attenuation and Environmental Covenants

Cleanup Action Alternative 1 relies on monitored natural attenuation (MNA) processes for the continued degradation of CVOCs at the Site to attain compliance with cleanup levels. Source control has been performed to the maximum extent practicable because the bulk of the CVOC-contaminated soil has been removed through mass soil excavation completed as part of the IRA and Property redevelopment. In addition, the implementation of ERD at the Site has enhanced the degradation of PCE and its degradation products.

Groundwater monitoring would be performed to ensure that natural attenuation processes are occurring and confirm that COC concentrations are below groundwater cleanup levels at the CPOC monitoring wells and below RLs for the Property.

Institutional controls would be implemented under this alternative, including the recording of ECs for the Property and the Onni property Site to ensure no direct contact with contaminated groundwater under alternative land use scenarios.

4.1.2 Cleanup Action Alternative 2: In Situ Enhanced Reductive Dechlorination and Environmental Covenant with Monitored Natural Attenuation

Cleanup Action Alternative 2 includes the injection of EOS to provide a substrate for the native microbial population (i.e., biostimulation) and to promote the bioremediation of CVOCs present in saturated zone soil and groundwater via the anaerobic reductive dechlorination pathway. The EOS solution would be delivered to existing or newly installed vertical injection wells in the Thomas Street ROW and existing vertical and angled injection wells on the southwestern portion of the Property and in the Boren Avenue North and Thomas Street intersection.

This cleanup action alternative would also include the injection of microbial consortium (i.e., for bioaugmentation) into the subsurface consisting of *Dehalococcoides* genus bacteria to promote complete reductive dechlorination to ethene/ethane, which would prevent cis-1,2-DCE and VC

stall or accumulation. Natural attenuation processes would be relied upon for continued degradation of CVOCs (i.e., predominately biological degradation of cis-1,2-DCE and VC under anaerobic or aerobic conditions) in groundwater beneath the Property and following active treatment in the Boren Avenue North and Thomas Street ROWs.

Institutional controls would be implemented under this alternative, including the recording of ECs for the Property and the Onni property Site to ensure no direct contact with contaminated groundwater under alternative land use scenarios.

4.1.3 Cleanup Action Alternative 3: In Situ Powdered Activated Carbon Adsorption and Environmental Covenant with Monitored Natural Attenuation

Cleanup Action Alternative 3 includes the injection of powdered activated carbon (PAC) to adsorb and immobilize CVOCs present in saturated zone soil and groundwater. This adsorption process reduces CVOC concentrations in groundwater through a mass transfer process. The PAC would be delivered to existing and newly installed vertical injection wells in the Thomas Street ROW and existing vertical and angled injection wells located on the southwestern portion of the Property and in the Boren Avenue North and Thomas Street intersection.

Natural attenuation processes would be relied upon for continued degradation of CVOCs (i.e., predominately biological degradation of cis-1,2-DCE and VC under anaerobic or aerobic conditions) in groundwater beneath the Property and following active treatment in the Boren Avenue North and Thomas Street ROWs.

Institutional controls would be implemented under this alternative, including the recording of ECs for the Property and the Onni Property to ensure no direct contact with contaminated groundwater under alternative land use scenarios.

4.2 Evaluation of Alternatives

The alternatives were evaluated according to the MTCA evaluation criteria (WAC 173-340-360[3][f]), which include the following:

- Protectiveness
- Permanence
- Effectiveness over the long term
- Management of short-term risks
- Technical and administrative implementability
- Consideration of public concern
- Cultural Resource Protection

- Vulnerable Resources Protection

A summary of the evaluation for each alternative using the MTCA screening criteria is presented in Table 11. Based on the analysis and ranking of cleanup action alternatives following MTCA, Cleanup Action Alternative 1 is the most feasible, practicable, implementable, and cost-effective remedy. Cleanup Action Alternative 1 is the recommended alternative for the Site because it achieves the RAOs, meets the requirements outlined in WAC 173-340-360 and WAC 173-340-370, and is favorable for the established evaluation and ranking criteria. Finally, Cleanup Action Alternative 1 exhibits the lowest cost-to-benefit ratio compared to the other cleanup action alternatives.

5.0 Selected Cleanup Action

Ecology selected Cleanup Action Alternative 1, MNA and ICs, as the preferred cleanup action for the Site. The components of Cleanup Action Alternative 1, including the compliance groundwater monitoring network, are shown on Figure 13. A total net present value cost of $1,272,000 was estimated for this alternative (Table 12). This estimate includes costs for the implementation of institutional controls and long-term compliance groundwater monitoring to demonstrate compliance with cleanup standards. A discussion of the contingency action is included in Section 7.0 below.

5.1 Cleanup Action Objectives

The cleanup action objectives under Cleanup Action Alternative 1 include the following:

- Achieve compliance with the groundwater cleanup levels at the CPOC monitoring wells and with RLs for the Property. This will be evaluated through groundwater monitoring.
- Prevent screening level exceedances for indoor air quality. This will be accomplished by implementing engineering and institutional controls at the Property and at the Onni Property.

5.2 Description of the Cleanup Action

The following sections outline the detailed components of the selected cleanup action.

5.2.1 Groundwater Monitoring

Touchstone will perform groundwater monitoring events semiannually for the first 2 years (2025 and 2026). If the plume under the Property, the ROWs, and Onni property is stable or decreasing based on statistical trend analyses, the frequency of monitoring may be reduced to annual (alternating between June [second quarter] and December [fourth quarter]) for the third, fourth, fifth, sixth, and seventh years. Long-term groundwater monitoring and statistical evaluation will be performed in consultation with Ecology.

Regulatory compliance with MTCA groundwater cleanup standards at the Site will be achieved when CVOCs are detected at concentrations below cleanup levels (Exhibit 3-2) in groundwater samples collected from the CPOCs wells (MW04, MW07, MW13, MW26, MW27, and MW28) for four consecutive groundwater monitoring events. At that time, Touchstone will consult with Ecology regarding the necessity for ongoing compliance groundwater monitoring and sampling as part of the periodic review process.

Groundwater compliance for protection of the inhalation pathway for commercial workers at the Property and the roadway excavation workers in the ROWs is achieved when CVOCs are

detected at concentrations below the proposed RLs in samples collected during groundwater monitoring events (Exhibit 3-3).

The compliance groundwater monitoring well network is shown on Figure 13 and includes the following 19 monitoring and injection wells:

- On the Property: MW18, MW19, MW21, MW22, MW23, MW24, MW25, IW04, IW50, and IW61
- Onni Property: MW29R and MW35
- Harrison Street ROW: MW26
- Boren Avenue North ROW: MW04, MW07, MW13, and MW27
- Thomas Street ROW: MW28
- Terry Avenue North: MW34

The groundwater samples will be collected using the low flow purge method according to the US Environmental Protection Agency's (EPA's) April 1996 guidance document (Puls and Barcelona 1996) and will be submitted for analysis of CVOCs, including PCE, TCE, cis-1,2-DCE, trans, 1,2-DCE, and VC, by EPA Method 8260D. Select groundwater samples will be analyzed for one or more of the following geochemical parameters:

- Sulfate and nitrate by EPA Method 300.0
- Total iron and manganese by EPA Method 200.8
- Ferrous iron by EPA Method SM3500-Fe B
- Methane by EPA Method RSK 175

The groundwater monitoring and sampling program is presented in Table 13.

5.2.2 Engineering Controls

Engineering controls are in place at the Property and the Harrison Street, Boren Avenue North, and Thomas Street ROWs. In addition, engineering controls have been established at the Onni property.

5.2.2.1 On the Property

On the Property, engineering controls include the concrete floor slab and foundation walls of the on-Property underground parking structure, a vapor barrier beneath the P5 level of the underground parking structure, and a continuously operating HVAC system in the parking garage. Continued implementation of engineering controls on the Property will prevent the direct contact, inhalation, and ingestion pathways and minimize the potential for infiltration of surface water into the underlying soil. The vapor intrusion assessment conducted at the Property confirmed that the inhalation pathway is not complete.

5.2.2.2 Harrison Street, Boren Avenue North, and Thomas Street ROWs

The direct contact/ingestion pathway for soil is incomplete because adjacent ROWs are capped with hardscapes (e.g., concrete and asphalt pavement). The asphalt- and concrete-paved surfaces in the ROWs also minimize the potential for surface water infiltration into the underlying soil.

5.2.2.3 Onni Property

As of spring 2025, the Onni property is being redeveloped into a residential or residential/commercial building with four levels of underground parking (Onni Development). The building will cover much of the property surface. The building design incorporates engineering controls, including installation of a vapor barrier beneath the entire footprint of the building foundation and a continuously operating HVAC system in the parking garage.

5.2.3 Institutional Control

Touchstone will implement institutional controls, including the recording of ECs against the Property and the Onni Development in accordance with WAC 173-340-440. At the Property and the Onni property, the EC would require compliance groundwater monitoring and periodic inspection and maintenance of the protective cap, as described in Sections 6.2.1 and 6.2.4, respectively. Periodic reviews will be performed to confirm the terms of the EC are satisfied. A draft EC will be prepared for Ecology's review and approval as part of finalizing the CAP.

5.2.3.1 Site Inspections and Maintenance

The concrete floor slab, vapor barrier, and foundation walls of the Troy Block development building and the exterior asphalt and concrete surface at the Property serve as a protective cap that prevents direct contact with soils and groundwater and vapor intrusion, and minimizes surface water infiltration.

As part of the institutional controls, Touchstone will perform site inspections annually during the winter months to evaluate the integrity of the building's concrete floor slab and foundation walls. The site inspections will be performed to evaluate for evidence of cracking, settlement, seepage, or any other potential damage or other conditions that may compromise the integrity of the building's concrete floor slab and foundation walls. Inspections and maintenance will be conducted following the Engineering Checklist for Site Inspections that will be provided by Ecology. The site inspections will initially be performed annually and re-evaluated after Ecology's 5-year review period.

5.2.5 Waste Profiling

Groundwater analytical test results will be used to update an existing waste profile (F002-listed dangerous waste) for acceptance of CVOC-impacted groundwater at a licensed disposal facility.

5.2.6 Monitoring and Injection Well Decommissioning

When Ecology determines that groundwater compliance is attained, Touchstone may decommission the monitoring and injection wells in accordance with the Ecology Water Well Construction Act of 1971, RCW 18.104, WAC 173-160-460, and WAC 173-160-381. The wells will be decommissioned in place using bentonite clay.

6.0 Contingency Actions

The projected restoration time for the Site based on the preferred remedial action (natural attenuation remedy with ECs) is 30 years. In this time frame, the CVOC concentrations in the groundwater at the Site are anticipated to reach compliance with groundwater cleanup levels at the CPOC wells.

On the Property, compliance will be achieved when CVOC concentrations in the groundwater are less than RLs for the protection of indoor air for a commercial exposure scenario. On the Onni Property, compliance will be achieved when CVOC concentrations are less than groundwater cleanup levels.

CVOC concentrations in the groundwater are expected to fluctuate and decrease over time due to a variety of factors, including: (1) a potential ongoing unresolved source of TCE in the groundwater in areas upgradient of the Boren Avenue ROW, (2) sampling and analytical variability, (3) seasonal fluctuations in the groundwater elevations, and (4) desorption of CVOCs from soil to the groundwater where it can degrade in the dissolved phase.

Touchstone is prepared to implement contingency actions if concentrations of CVOCs in the groundwater indicate there is potential for vapor intrusion of CVOCs at the Troy Property and Seattle Time Property (Onni Development). These contingency actions include mitigation measures, if deemed necessary and appropriate, to protect indoor air quality. The potential contingency actions and their triggers are described below.

6.1 Troy Property

The chemistry of the groundwater beneath the Property is expected to change over time from anaerobic to aerobic due to the continuing decline of anthropogenic carbon substrate injected in 2015 to 2016 to the groundwater. Under aerobic conditions, VC in the groundwater will mineralize to nontoxic end products.

However, since VC concentrations are increasing with time and currently exceed the commercial groundwater RL (Exhibit 3-3) for the protection of indoor air, a contingency plan will be implemented if there is a statistically significant increase (SSI) in the VC concentrations in the groundwater. To be declared an SSI, the change in VC concentrations must be significant after accounting for anticipated variability in the sample data due to the factors outlined previously.

To determine if an SSI has occurred for VC results, Touchstone will follow guidance presented in EPA's *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities* (EPA 2009), and perform analysis for SSI testing using ProUCL version 5.2.00. The SSI test will assess variability over time in groundwater beneath the Property. The results from the SSI test will be more

representative of the overall stability of the plume than changes in VC concentrations at individual wells and will, therefore, be the trigger for any contingent actions.

Analytical results at groundwater monitoring wells with VC concentrations exceeding the groundwater RL or showing an increasing statistical trend as of June 2024 will act as the baseline to determine if SSI has occurred in the future. Baseline results will be compared to groundwater analytical results for samples collected after June 2024. As with the baseline results, concentrations of VC that exceed the groundwater RL or show an increasing statistical trend at monitoring wells at the Property will be used to determine if SSI has occurred. No SSI will have occurred if the mean of the VC baseline is greater than or equal to the future VC sample results at the 95 percent level of significance (baseline VC mean >= future VC result). An SSI will occur if the mean of the baseline is less than the future VC sample results at the 95 percent level of significance (baseline VC mean < future VC result) over two consecutive groundwater sample events. If an SSI is verified, Touchstone will implement a contingency action(s) as described below.

The first stage of the contingency action will include two semiannual indoor air sampling events at the Property. Touchstone will perform indoor air sampling following procedures presented in SoundEarth's Vapor Intrusion Assessment Work Plan, dated January 25, 2018, and SoundEarth's Supplemental Vapor Intrusion Assessment Work Plan, dated February 12, 2019 (SoundEarth 2018a, 2019a).

If results from the two indoor air sampling events indicate VC concentrations are below indoor air cleanup levels for protection of commercial workers, no mitigation measures are required.

If results from the two indoor air sampling events indicate VC concentrations exceed indoor air cleanup standards, Touchstone will confer with Ecology to determine if a second stage contingency action must be implemented to alleviate potential risk to human health. If Ecology determines a second stage contingency action must be implemented, it may require Touchstone to implement any of the following mitigation measures:

- Modifying or upgrading the parking garage ventilation system.
- Installing and maintaining a sub-slab depressurization system (e.g., extracting soil gas from select existing injection wells).
- Implementing in situ groundwater remediation, such as: (a) carbon substrate addition and bioaugmentation (i.e., anaerobic reductive dechlorination), or (b) oxygen enhancement of aerobic oxidation.

At 6 and 12 months after implementation of a mitigation measure, Touchstone will perform two indoor air sampling events to confirm the efficacy of mitigation measures on indoor air quality. If the results of these air sampling events demonstrate that VC concentrations are below

screening levels, no further mitigation will be required if indoor air results are below screening levels. If exceedances persist, Touchstone will propose additional mitigation measures will be proposed for Ecology review and approval and, after Ecology approval, Touchstone will implement additional mitigation measure(s).

6.2 Onni Property

A trend analysis performed at the end of the fourth quarter of 2024, which combined groundwater results for MW29 and MW29R (a total of 10 sampling events) on the Onni Property, showed no statistically determinable trend in the concentration of PCE. As of the fourth quarter of 2024, concentrations of TCE, cis-1,2-DCE and VC did not exceed groundwater cleanup levels presented in Exhibit 3-2.

Currently, in MW29R, the PCE concentration is less than the groundwater screening level (25 µg/L) for the protection of indoor air for a residential exposure scenario and also less than the groundwater RL for the protection of indoor air for a commercial exposure scenario (120 ug/L), but exceeds the groundwater cleanup level (5 µg/L) and out of compliance in meeting MTCA cleanup level.

If monitoring well MW29R and MW35 do not meet the groundwater cleanup levels presented in Exhibit 3-2 before 2035, Touchstone will propose for Ecology review and approval groundwater treatment options, such as in-situ bioremediation. If Ecology approves of a groundwater treatment option, Touchstone will implement Ecology's chosen option.

After the Onni Development is completed, Ecology will require Touchstone to conduct or arrange for the conducting of 2 years of semiannual indoor air monitoring on the Onni property portion of the Site. If 2 years of indoor air sampling demonstrate that concentrations of CVOCs in indoor air are below the residential indoor air cleanup levels shown in Exhibit 6-1, no further additional indoor air monitoring will be performed. However, concentrations of CVOCs in the indoor air exceed cleanup levels presented in Exhibit 6.1, Touchstone will implement a contingency action to mitigate the potential impacts to indoor air quality in the parking garage at the Onni Development.

Exhibit 6-1: Indoor Air Cleanup Levels — Onni Development

Contaminant of Concern	Unrestricted Use Indoor Air Cleanup Level (µg/m^3)	Regulations
PCE	9.62	Table values in CLARC database 2024
TCE	0.334	
cis-1,2-DCE	18.3	
VC	0.284	

If a contingency action is implemented, Touchstone will perform two semiannual indoor air sampling events at the Onni property based upon a work plan to be approved by Ecology.

- If results from the two indoor air sampling events establish that concentrations of COCs are below residential indoor air cleanup levels, no mitigation measures are required.
- If results from two semiannual events establish that concentrations of COCs exceed residential indoor air cleanup levels, then Touchstone will implement vapor mitigation measures at the Onni property portion of the Site. Ecology may require Touchstone to implement any of the measures described for the Property (*see* Section 6.1) after Ecology review and approval.

At 6 and 12 months after the implementation of the mitigation measures, Touchstone will perform two indoor air sampling events to confirm the efficacy of mitigation measures on indoor air quality. No further mitigation will be required if indoor air results are below the residential indoor air cleanup levels. If exceedances persist, Touchstone will propose additional mitigation measures for Ecology review and approval. After Ecology approval, Touchstone will implement those additional mitigation measures.

6.3 Rights-Of-Way

CVOC concentrations in groundwater within the ROWs are below Roadway Excavation Groundwater RLs that are protective of the inhalation pathway for excavation workers. This compliant condition has been present in the groundwater beneath the ROWs for several years.

Given the decrease in CVOC concentrations in the groundwater in the ROWs demonstrated over time and the absence of current risk to excavation workers, no contingency action plan is needed for the ROWs. The City of Seattle, through the Seattle Department of Transportation, will receive a notice letter regarding the presence of groundwater contamination beneath the ROWs and the potential of vapor exposure during roadway excavation as part of the process of finalizing ECs for the Property and for the Onni Property.

7.0 Restoration Time Frame

The selected Cleanup Action Alternative relies on MNA processes for continued degradation of CVOCs at the Site to attain compliance with cleanup levels. The restoration time frame to achieve cleanup levels and RLs at the Site is estimated to be 30 years. The restoration time is primarily affected by the rate of decay of VC in the groundwater on the Property. The current redox condition of the groundwater beneath the Property is anaerobic resulting from prior electron donor injections in 2015 and 2016. However, given the elapsed time since injection, the aquifer redox is no longer highly reducing as is conducive to degradation of VC. VC can also be degraded under aerobic conditions and the rate of VC decay will begin to accelerate when naturally aerobic conditions are reestablished in Property groundwater, which could take several decades.

7.1 Schedule for Implementation

Compliance groundwater monitoring and sampling will be performed as outlined in Section 6.2.1. Draft ECs will be prepared for Ecology's review and approval as part of finalizing the CAP.

8.0 Compliance Monitoring

Compliance monitoring will be performed in accordance with the requirements of WAC 173-340-410 and will address protection, performance, and confirmation monitoring. The compliance monitoring requirements are presented briefly in the sections below.

Three types of compliance monitoring are identified for remedial actions performed under MTCA: protection, performance, and confirmation monitoring.

- **Protection Monitoring.** Evaluate whether human health and the environment are adequately protected during construction and the operation and maintenance period of a cleanup action.
- **Performance Monitoring.** Document that the cleanup action has attained cleanup standards. Determine if the remedy is achieving its goals, identify potential problems or challenges with the cleanup action, and inform decisions about modifying or discontinuing the remediation.
- **Confirmation Monitoring.** Evaluate the long-term effectiveness of the cleanup action once cleanup standards or other performance standards have been attained, demonstrate successful remediation and compliance, support decisions to terminate further remedial action, and document the effectiveness of the completed cleanup action.

Additional details regarding procedures for sample collection, handling, and quality assurance are included in the Sampling and Analysis Plan (SAP)/Quality Assurance Project Plan and the Site-Specific Health and Safety Plan (HASP) attached to this DCAP as Appendices A and B, respectively.

8.1 Protection Monitoring

A HASP has been prepared for the cleanup action that meets the minimum requirements for such a plan identified in federal regulations (29 CFR 1910.120 and 1926) and state regulations (WAC Chapter 296-843). The HASP identifies known physical, chemical, and biological hazards; hazard monitoring protocols; and administrative and engineering controls required to mitigate the identified hazards (Appendix B).

8.2 Groundwater Performance Monitoring

Touchstone will perform groundwater monitoring and sampling at monitoring and injection wells as described in Section 5.2.1 of this Cleanup Action Plan. Groundwater performance monitoring and sampling will be performed semiannually, alternating between June (second quarter event) and December (fourth quarter event). Groundwater monitoring and sampling

will be discontinued at a given monitoring or injection well when concentrations of CVOCs are below cleanup levels for four consecutive groundwater monitoring and sampling events.

8.3 Groundwater Confirmation Monitoring

After groundwater performance monitoring is completed, Touchstone will perform four semi-annual groundwater confirmation monitoring events alternating between June (second quarter event) and December (fourth quarter event). Groundwater monitoring and sampling will be performed at monitoring and injection wells as described in Section 5.2.1 of this Cleanup Action Plan unless groundwater monitoring or injection wells were removed from the monitoring well network during performance groundwater sampling.

9.0 Documentation Requirements

Documentation of the cleanup action is necessary to meet MTCA requirements. Touchstone will submit the applicable and relevant documentation generated for the cleanup action to Ecology for review and approval.

9.1 Documentation Management

An established document control system to be implemented during the cleanup action includes file retention of the following elements, as appropriate: field report forms, sample summary forms, groundwater purge and sample forms, sample chain-of-custody forms, waste inventory documentation, waste management labels, and sample labels. Touchstone will maintain copies of disposal manifests for the waste generated during the cleanup action and will submit these copies with project documentation at Ecology's request.

9.2 Waste Disposal Tracking

Specific documentation requirements will be met for transportation and disposal of the contaminated groundwater generated during groundwater monitoring and sampling activities to ensure compliance with state and federal regulations. The waste disposal tracking documentation including analytical data, waste profiles, waste manifests, and bills of lading, will be retained in project files.

9.3 Compliance Reporting

Touchstone will prepare an annual groundwater monitoring report each year and submit the report to Ecology. The report will summarize the groundwater monitoring and sampling activities for the year. At a minimum, the annual groundwater monitoring report will include the following:

- A summary of groundwater monitoring and sampling activities.
- A figure depicting the location of the compliance groundwater monitoring wells and CVOC analytical results.
- A groundwater elevation contour map.
- Summary tables presenting groundwater elevations and analytical results.
- A statistically significant test for the Property VC plume.
- Laboratory analytical reports and documentation of waste disposal tracking for water generated.

- Conclusions pertaining to the cleanup action following the establishment of engineering and institutional controls and four consecutive events of compliant groundwater monitoring.

All groundwater sampling data will be uploaded to Ecology's Environmental Information Management system.

10.0 Regulatory Compliance

When confirmation groundwater monitoring demonstrates that groundwater cleanup levels have been achieved at the CPOC and the concentrations of CVOCs are less than the RLs at the Property groundwater monitoring and injection wells, and vapor intrusion studies have demonstrated the absence of an inhalation exposure pathway at the Site, Touchstone may request a written Certificate of Completion from Ecology that the requirements of the CAP have been satisfactorily completed. Upon Touchstone's receipt of written notification, Touchstone may then request to have the Site removed from the Contaminated Sites List, according to WAC 173-340-330(7).

	DECOMMISSIONED/DESTROYED MONITORING WELL
IW96	INJECTION WELL
	APPROXIMATE EXTENTS OF POST-TREATMENT PCE, TCE, AND DCE PLUME ABOVE CLEANUP LEVELS ORIGINATING FROM THE TROY PROPERTY (Q2 2022 AND Q4 2022)
	MONITORING WELLS TO BE SAMPLED
	CPOC MONITORING WELLS
CPOC	CONDITIONAL POINT OF COMPLIANCE
DCE	DICHLOROETHENE
PCE	TETRACHLOROETHENE
TCE	TRICHLOROETHENE

NOTE:
MONITORING WELLS WILL BE INSTALLED TO REPLACE ABANDONED MONITORING WELLS MW29 AND MW30

NOTES:

Red denotes concentration exceeds MTCA Soil cleanup level.

[1]Analyzed by NWTPH Method NWTPH-Gx.

[2]Analyzed by NWTPH Method NWTPH-Dx.

[3]Analyzed by EPA Method 8260C or 8021B.

[4]Analyzed by SW8260/TCLP ZHE.

[5]Analyzed by EPA Method 8270C.

[6]Bis(2-ethylhexyl) phthalate was the only SVOC detected, the concentrations of which are well below the MTCA Method B cleanup level of 71 mg/kg. The reported results are the highest laboratory detection limit for all SVOCs analyzed or the concentration of (2-bis(2-ethylhexyl) phthalate, if detected in the sample.

[a]100 mg/kg when benzene is not present and 30 mg/kg when benzene is present.

[d]Protection of Environment, Title 40 Part 261.24 of CFR, Table 1 - Maximum Concentration of Contaminants for the Toxicity Characteristic.

Laboratory Note:

[x]The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

-- = not analyzed, measured, or calculated
< = analytical result does not exceed laboratory reporting limit
AECOM = AECOM Technology Corporation
AESI = Associated Earth Sciences, Inc.
CFR = Code of Federal Regulations
CLARC = cleanup levels and risk calculations
DCE = dichloroethene
DRPH = diesel-range petroleum hydrocarbons
EDC = 1,2-dichloroethane (ethylene dichloride)
EPA = US Environmental Protection Agency
GRPH = gasoline-range petroleum hydrocarbons
mg/kg = milligrams per kilogram
mg/L = milligrams per liter
MTCA = Washington State Model Toxics Control Act
NAVD88 = North American Vertical Datum 1988
ND = not detected above the laboratory reporting limit
NE = not established
NR = not reported
NWTPH = northwest total petroleum hydrocarbon
ORPH = oil-range petroleum hydrocarbons
PCE = tetrachloroethene
SoundEarth = SoundEarth Strategies, Inc.
SVOC = semivolatile organic compound
TCE = trichloroethene
TCLP = Toxicity Characteristic Leaching Procedure
WAC = Washington Administrative Code

NOTES:

[1]TOC elevations surveyed relative to NAVD88.

[2]Groundwater elevation data compiled from reports on file at the Washington State Department of Ecology.

-- = not analyzed, measured, or calculated

NAVD88 = North American Vertical Datum of 1988

TOC = top of casing

MTCA Cleanup Level				**5[3]**	**5[3]**	**16[4]**	**160[4]**	**0.2[3]**

NOTES:

Red denotes concentrations exceeding the applicable MTCA cleanup level for groundwater.

Blue shading indicates concentrations exceeding the Commercial Worker Groundwater remediation level at the Property.

Yellow shading indicates concentrations exceeding the Roadway Excavation Worker Groundwater Remediation Level in ROWs.

[1]Analyzed by EPA Method 8260C, 8021B, or 8240.

[2]Table values in CLARC, Ecology's Guidance for Evaluating Vapor Intrusion in Washington State: Investigation and Remedial Action dated 2009, revised 2022 , and Ecology's South Lake Union Group Memorandum, dated December 14, 2022.

[3]MTCA Method A Cleanup Levels, Table 720-1 of WAC 173-340-900.

[4]MTCA Cleanup Regulation, Chapter 173-340 of WAC, CLARC, Groundwater, Method B, Non-Carcinogen, Standard Formula Value, CLARC Website <https://fortress.wa.gov/ecy/clarc/CLARCHome.aspx>.

[5]Sample data compiled from reports on file at the Washington State Department of Ecology.

Laboratory Notes:

[cv]The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

[d]The sample was centrifuged prior to analysis.

[ve]Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

[*]The sample was collected with a passive diffusion bag.

< = not detected at a concentration exceeding laboratory reporting limit
µg/L = micrograms per liter
CLARC = Cleanup Levels and Risk Calculations
CVOC = chlorinated volatile organic compound
DCE = dichloroethene
EPA = US Environmental Protection Agency
MTCA = Washington State Model Toxics Control Act
PCE = tetrachloroethene
SoundEarth = SoundEarth Strategies, Inc.
TCE = trichloroethene
WAC = Washington Administrative Code

NOTES:

Red denotes concentrations exceeding the MTCA Method cleanup level for groundwater.

[1]Analyzed by Method NWTPH-Dx. The supply well samples collected in August 2010 were passed through a silica gel column prior to analysis to remove organic interference.

[2]Analyzed by EPA Method 418.1 or Method NWTPH-Gx.

[3]Analyzed by EPA Method 8260C, 8021B, or 8240.

[4]MTCA Method A Cleanup Levels, Table 720-1 of WAC 173-340-900.

[5]1,000 µg/L when benzene is not present and 800 µg/L when benzene is present.

[6]Sample data compiled from reports on file at the Washington State Department of Ecology.

Laboratory Notes:

[d]The sample was centrifuged prior to analysis.

[ip]Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

[ve]The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

[x]The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

-- = not analyzed, measured, or calculated

< = not detected at a concentration exceeding laboratory reporting limit

µg/L = micrograms per liter

DRPH = diesel-range petroleum hydrocarbons

EPA = US Environmental Protection Agency

GRPH = gasoline-range petroleum hydrocarbons

MTCA = Washington State Model Toxics Control Act

NWTPH = Northwest Total Petroleum Hydrocarbon

ORPH = heavy oil-range petroleum hydrocarbons

SoundEarth = SoundEarth Strategies, Inc.

WAC = Washington Administrative Code

NOTES:

Analyses performed by Friedman & Bruya, Inc. or Fremont Analytical Inc. of Seattle, Washington.

[1]Parameter is measured in the field using water quality meter with flow-through cell. The reported value is the last reading prior to sampling groundwater.

[2]Analyzed by EPA Method 300.0.

[3]Analyzed by EPA Method 200.8.

[4]Analyzed by Standard Method 3500-Fe B.

[5]Ferric iron concentration = total iron concentration – ferrous iron concentration.

[6]Analyzed by Method RSK-175.

Laboratory Notes:

[B]Indicates a detection in the ICB or CCB.

[D]Dilution was required.

[H]Holding times for preparation or analysis exceeded.

[J]Analyte detected below Reporting Limit.

[jl] The analyte result in the laboratory control sample is out of control limits. The reported concentrations is an estimate.

[RA] Indicates reanalysis with background correction for turbidity.

[ve] The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

* Flagged value is not within established control limits.

* Anomalous reading, attributed to meter error.

-- = not measured/ not applicable

< = not detected at a concentration exceeding the laboratory reporting limit

µg/L = micrograms per liter

CCB = Continued Calibration Blank

EPA = US Environmental Protection Agency

ICB = Initial Calibration Blank

mg/L = milligrams per liter

NOTES:

Analyses performed by Friedman & Bruya, Inc., Fremont Analytical Inc., or Aquatic Research Inc., of Seattle, Washington; or Amtest Inc. of Kirkland, Washington.

[1]Parameter is measured in the field using water quality meter with flow-through cell. The reported value is the last reading prior to sampling groundwater.

[2]Analyzed by SM 2320B.

[3]Analyzed by SM 5310C.

[4]Elevated turbidity measurement as groundwater was purged from the base of the well.

Laboratory Notes:

[D]Dilution was required.

[B]Analyte detected in the associated Method Blank.

[H]Holding times for preparation or analysis exceeded.

*Anomalous reading, attributed to meter error.

-- = not measured/ not applicable

< = not detected at a concentration exceeding the laboratory reporting limit

°C = degrees Celius

$CaCO_3$ = calcium carbonate

mg/L = milligrams per liter

mS/cm = milliSiemen per centimeter

mV = millivolts

NTU = nephelometric turbidity unit

ORP = oxidation-reduction potential

SM = Standard Method

SoundEarth Strategies

NOTES:

[1]Analyzed by Ion Chromatography.

[2]Analyzed by EPA Method 300.0.

[3]Analyzed by EPA Method 300.0 modified.

[4]Analyzed by SM 5310C or EPA Method 300.0 modified.

Laboratory Notes:

[D]The reported value is from a dilution.

[X]Acetic and proprionic acids co-eluted. Results are quantitated at acetic acid.

[J]The associated value is an estimated result between the QL and the RL.

-- = not measured/ not applicable

< = not detected at a concentration exceeding the laboratory reporting limit

EPA = US Environmental Protection Agency

mg/L = milligrams per liter

SM = Standard Method

QL = quantitation limit

RL = reporting Limit

Cleanup Action Alternatives Screening Summary
Troy Laundry Seattle Site
300 Boren Avenue North, 399 Fairview Avenue North, and 1120 John Street
Seattle, Washington

Cleanup Action Alternatives	Remedial Details	Cost	Washington State Department of Ecology Evaluation Criteria/Relative Ranking (1 = Low; 10 = High)						Ranking Score[1]
			Weighting Factors for Evaluation Criteria						
			20%	20%	20%	20%	20%		
			Protectiveness	Permanence	Effectiveness over the Long Term	Management of Short-Term Risks	Technical and Administrative Implementability	Consideration of Public Concerns	
1. Monitored Natural Attenuation and Environmental Covenant	Reliance on natural attenuation processes to attain compliance with the proposed groundwater cleanup levels.	$1,272,000	9	9	9	9	9	9	**9.0**
2. In Situ Reductive Dechlorination and Environmental Covenant	Injection of emulsified oil to provide a substrate for the native microbial population (i.e., biostimulation) and to promote the bioremediation of chlorinated volatile organic compounds present in the saturated zone soil and groundwater via the anaerobic reductive dichlorination pathway.	$2,715,000	9	9	5	7	5	6	**7.0**
3. In Situ Powdered Activated Carbon Adsoption and Environmental Covenant	Injection of powdered activated carbon to adsorb and immobilize chlorinated volatile organic compounds in the saturated zone soil and groundwater.	$2,625,000	9	9	9	7	5	7	**7.8**

NOTES:

[1]The ranking score for each alternative is the average of the weighted score for five of the six evaluation criteria. Consideration of Public Concerns is not included in the ranking score.

1.0 INTRODUCTION

SoundEarth Strategies, Inc. (SoundEarth) has prepared this Compliance Monitoring Plan (CMP) for Touchstone SLU LLC and TB TS/RELP LLC (collectively Touchstone) for the Troy Laundry Seattle Site located at 300 Boren Avenue North and 399 Fairview Avenue North in Seattle, Washington (Property; Figure A-1). Troy Laundry Seattle Site at 300 Boren Avenue North and 399 Fairview Avenue North, which encompasses the Property; portions of the rights-of-way (ROWs) to the north, south, and west of the Property; and the northern portion of the Onni property located to the south across the Thomas Street ROW where groundwater contaminated with tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and/or vinyl chloride originating from the Property has come to be located.

In accordance with the Washington State Model Toxics Control Act (MTCA) Cleanup Regulations, this CMP was developed to supplement the requirements of the Draft Cleanup Action Plan (DCAP) and to meet the requirements of a Sampling and Analysis Plan (SAP)/Quality Assurance Project Plan (QAPP), as defined by MTCA (Chapter 173-340-820 of the Washington Administrative Code [WAC Chapter 173-340-820]) and the guidance provided in the US Environmental Protection Agency's (EPA's) *Guidance Document for Quality Assurance Project Plans* (EPA 2002b).

1.1 PURPOSE AND OBJECTIVES

The purpose of the CMP is to describe the sample collection, frequency, handling, and analysis procedures to be implemented during the selected cleanup action in accordance with WAC 173-340-820. The selected cleanup action includes implementing engineering and/or institutional controls, and performance and confirmation groundwater monitoring and sampling.

This CMP outlines specific sampling and analysis protocols, the project schedule, and organizational structure and responsibilities. It also provides detailed information regarding the sampling and data quality objectives, sample location and frequency, equipment, and procedures to be used during the cleanup action, as well as sample handling and analysis procedures, procedures for managing waste, quality assurance protocols for field activities and laboratory analysis, and reporting requirements. A detailed SAP is presented in Appendix A of CMP. A Health and Safety Plan for the CMP is presented in Appendix B of CMP.

1.2 SAMPLING AND ANALYSIS PLAN ORGANIZATION

The SAP/QAPP is organized into the following sections:

- **Section 2.0, Project Organization and Management.** This section presents the project team, including field personnel and management.
- **Section 3.0, Troy Seattle Site Remedial Action.** This section presents the cleanup action objectives, field activity summary, and project schedule.
- **Section 4.0, Conceptual Site Model Summary.** This section provides a summary of the Conceptual Site Model for the Troy Laundry Seattle Site.
- **Section 5.0, Groundwater Monitoring and Points of Compliance.** This section describes the monitoring network and points of compliance for the Troy Laundry Seattle Time Site.
- **Section 6.0, Performance Monitoring Schedule.** This section describes the schedule for performance monitoring at the Troy Laundry Seattle Time Site.

- **Section 7.0, Limitations.** This section details limitations specific to this document.
- **Section 8.0, References.** This section provides a list of the source material used in the preparation of this document.

2.0 PROJECT ORGANIZATION AND MANAGEMENT

The cleanup action is being conducted by SoundEarth on behalf of Touchstone. This section describes the overall project management strategy for implementing the cleanup action.

To ensure efficient decision-making for field sampling and laboratory analysis, key data collection decisions, decision criteria, processes for decision-making, quality assurance/quality control (QA/QC) procedures, and responsibilities are described below. These decisions and communication plans will be followed by field personnel under the direction of the field coordinator (FC) and task manager. Quality control measures to ensure proper communication and adherence to this SAP/QAPP are discussed in Section 9.0, Data Collection.

The following key project roles have been identified for the project:

- **Regulatory Agency.** The Washington State Department of Ecology (Ecology) is the lead regulatory agency for the cleanup action, as promulgated in the MTCA Cleanup Regulation.
- **Property Owner.** The Property owner is the main property contact for access to the parcels.
- **Project Principal.** The project principal from SoundEarth provides oversight of all project activities and reviews all data and deliverables before their submittal to the project contact or regulatory agency.
- **Project Manager.** The SoundEarth project manager has overall responsibility for developing the SAP/QAPP, monitoring the quality of the technical and managerial aspects of the cleanup action, and implementing the SAP/QAPP and corresponding corrective measures, where necessary.
- **Laboratory Project Manager.** The laboratory project manager will provide analytical support and will be responsible for providing certified, precleaned sample containers and sample preservatives (as appropriate) and for ensuring that all chemical analyses meet the project quality specifications detailed in this SAP/QAPP.
- **Project QA/QC Officer.** The project QA/QC officer has the responsibility to monitor and verify that the work is performed in accordance with the SAP/QAPP and other applicable procedures. The project QA/QC officer has the responsibility to assess the effectiveness of the QA/QC program and to recommend modifications to the program when applicable. The project QA/QC officer is responsible for assuring that the personnel assigned to the project are trained relative to the requirements of the QA/QC program and for reviewing and verifying the disposition of nonconformance and corrective action reports.
- **Field Coordinator.** The FC will supervise field collection of all samples. The FC will ensure proper recording of sample locations, depths, and identification; sampling and handling requirements, including field decontamination procedures; physical evaluation and logging of samples; and completing the chain-of-custody forms. The FC will ensure that all field staff follow the SAP/QAPP and that standardized methods for sample acceptability and physical description of samples be followed. The FC will ensure that field staff maintains records of field sampling events using the forms included as Attachment A of this SAP/QAPP. The FC will be responsible for proper completion and storage of field forms.

- **Field Staff.** Members of the field staff must understand and implement the QA/QC program, coordinate and participate in the field sampling activities, coordinate sample deliveries to the laboratory, and report any deviations from project plans as they relate to the cleanup action objectives as presented in the SAP/QAPP. Major deviations from the SAP/QAPP, such as the inability to collect a sample from a specific sampling location, obtaining an insufficient sample volume for the required analyses, or a change in sampling method, must be reported to the project manager.
- **Subcontractors.** All subcontractors will follow the protocols outlined in this SAP/QAPP and will be overseen and directed by SoundEarth. Subcontractors are to be determined.

The project contact for the Property is:

Dirk P. D. Mosis III
Corsair Interests LLC
14603 Huebner Road, Building #3
San Antonio, Texas 78230
210-204-0352

3.0 TROY LAUNDRY SEATTLE SITE REMEDIAL ACTIONS

An interim remedial action (IRA) was conducted at the Troy Laundry Seattle Site between 2014 and 2017 in conjunction with the redevelopment of the Property. The redevelopment required a lot line–to–lot line excavation that extended to approximately 70 feet below street grade. The IRA included the removal of underground storage tanks containing solvents and petroleum hydrocarbons and 97,000 tons of

chlorinated solvent-contaminated soil as part of the Property development mass excavation. The IRA also included treating groundwater containing chlorinated volatile organic compounds (CVOCs) using enhanced reductive dechlorination technology that included the injection of edible oil substrate into groundwater in May and June 2015 and in April and May 2016, followed by bioaugmentation in June 2017.

The Troy Laundry Seattle Site Remedial Investigation Report (RI Report; SoundEarth 2020) defined the extent of CVOC-contaminated groundwater at the Site after implementation of the IRA. In addition, the RI Report documented through two indoor air sampling events that the vapor intrusion pathway is incomplete and indoor air is not a medium of concern for the Site. The final cleanup action for the Troy Laundry Seattle Site, designated as Cleanup Action Alternative 1 in the DCAP, includes continued groundwater monitoring and sampling, data analysis to confirm that the footprint of the CVOC groundwater plume remains stable or continues to decline over time. The recording of an environmental covenant with institutional control to ensure there is no direct contact with or ingestion of contaminated groundwater.

4.0 CONCEPTUAL SITE MODEL SUMMARY

The results of the RI and IRAs conducted at the Troy Laundry Seattle Site indicate that the CVOC and petroleum hydrocarbon impacts detected in soil and groundwater beneath the Property, in a portion of the south-adjacent Thomas Street ROW, in the west-adjacent Boren Avenue ROW, in the north-adjacent Harrison Street ROW, and on the northern portion of the Onni property are primarily the result of releases from the laundry and dry cleaning facility that operated on the Property from 1927 through 1985. Historical building plans indicate that the bulk of the dry-cleaning operations after the mid-1960s were conducted on the southwestern portion of the Property.

The highest concentrations of chlorinated solvents in soil were historically located near the center of the Property in the vicinity of the former loading dock, and the highest concentrations of GRPH as Stoddard solvent were observed to the south of the three closed-in-place underground storage tanks under the former Troy Building on the southwestern portion of the Property. The distribution of CVOCs in soil and groundwater on the Property and in groundwater in the ROWs and on the northern portion of the Onni property indicates that the primary sources of the releases were at the loading dock and underground storage tanks on the Property, although additional smaller releases may have contributed to shallow solvent contamination elsewhere on the Property.

Based on the findings of the RI, the contaminants of concern at the Troy Laundry Seattle Site consist of tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and VC in groundwater located beneath the Property, portions of the adjoining ROWs, and the northern portion of the Onni Site. The primary regional water-bearing zone at the Troy Laundry Seattle Site contains one or more CVOCs at concentrations exceeding the cleanup levels. However, the mechanisms for exposure to CVOCs in groundwater have been eliminated, including direct contact, ingestion, and inhalation pathways. A detailed discussion of the Conceptual Site Model for the Troy Laundry Seattle Site is presented in 3.3 of the Final Feasibility Study Report (SoundEarth 2020).

5.0 GROUNDWATER MONITORING NETWORK AND POINTS OF COMPLIANCE

The following section describes the groundwater monitoring and points of compliance for the Troy Seattle Site Cleanup Action. The SAP activities for the Troy Laundry Seattle Site is presented in Appendix A. The

QAPP for Site is presented in Appendix B. The schedule for performance monitoring is presented below in Exhibit A.

5.1 GROUNDWATER MONITORING

Touchstone will perform groundwater monitoring events semiannually for the first 2 years (2025 and 2026). If the plume under the Property, the ROWs, and the Onni property is stable or decreasing based on statistical trend analyses for the Onni Property and ROWs and statistically significance increase testing on the Property, the frequency of monitoring may be reduced to annual (alternating between June [second quarter] and December [fourth quarter]) for the third, fourth, fifth, sixth, and seventh years. Long-term groundwater monitoring and statistical evaluation will be performed in consultation with Ecology.

The compliance groundwater monitoring well network is shown on Figure 2 of the DCAP and includes the following 19 monitoring and injection wells:

- On the Property: MW18, MW19, MW21, MW22, MW23, MW24, MW25, IW04, IW50, and IW61
- Onni Property: MW29R and MW35
- Harrison Street ROW: MW26
- Boren Avenue North ROW: MW04, MW07, MW13, and MW27
- Thomas Street ROW: MW28
- Terry Avenue North: MW34

5.2 POINTS OF COMPLIANCE

Regulatory compliance with MTCA groundwater cleanup standards at the Troy Laundry Seattle Site will be achieved when CVOCs are detected at concentrations below cleanup levels (Exhibit 3-2 of the DCAP) in groundwater samples collected from the conditional point of compliance wells (MW04, MW07, MW13, MW26, MW27, and MW28) for four consecutive groundwater monitoring events. At that time, Touchstone will consult with Ecology regarding the necessity for ongoing compliance groundwater monitoring and sampling as part of the periodic review process.

Groundwater compliance for protection of the inhalation pathway for commercial workers at the Property and the roadway excavation workers in the ROWs is achieved when CVOCs are detected at concentrations below the proposed RLs in samples collected during groundwater monitoring events (Exhibit 3-3 of the DCAP).

Currently, in MW29R, the PCE concentration is less than the groundwater screening level (25 µg/L) for the protection of indoor air for a residential exposure scenario and also less than the groundwater RL for the protection of indoor air for a commercial exposure scenario (120 ug/L) but exceeds the groundwater cleanup level (5 µg/L) and is out of compliance with the MTCA cleanup level.

If monitoring wells MW29R and MW35 do not meet the groundwater cleanup levels presented in Exhibit 3-2 before 2035, Touchstone will propose for Ecology review and approval of groundwater treatment options, such as in-situ bioremediation. If Ecology approves a groundwater treatment option, Touchstone will implement Ecology's chosen option.

6.0 PERFORMANCE MONITORING SCHEDULE

Touchstone will perform groundwater monitoring events semiannually for the first 2 years (2025 and 2026). If the plume under the Property, the ROWs, and the Onni property is stable or decreasing based on statistical trend analyses for the Onni Property and ROWs and statistically significance increase testing on the Property, the frequency of monitoring may be reduced to annual (alternating between June [second quarter] and December [fourth quarter]) for the third, fourth, fifth, sixth, and seventh years. Long-term groundwater monitoring and statistical evaluation will be performed in consultation with Ecology.

Exhibit A. Performance Monitoring Schedule

Scope of Work[1]	Schedule [2]
Compliance groundwater monitoring and sampling	Second and fourth quarters of 2025 and 2026
Compliance Monitoring Report	Annual Report submitted 12 weeks after the fourth quarter sampling event
Compliance groundwater monitoring and sampling	Second and fourth quarters of 2027 and 2031[1]
Compliance Monitoring Report	Annual Report submitted 12 weeks after the fourth quarter sampling event

(1) The frequency of monitoring may be reduced to annual (alternating between June [second quarter] and December [fourth quarter]) for the third, fourth, fifth, sixth, and seventh years. Long-term groundwater monitoring and statistical evaluation will be performed in consultation with Ecology.

7.0 CONTINGENCY ACTIONS

The projected restoration time for the Site based on the preferred remedial action (natural attenuation remedy with ECs) is 30 years. In this time frame, the CVOC concentrations in the groundwater at the Site are anticipated to reach compliance with groundwater cleanup levels at the CPOC wells.

On the Property, compliance will be achieved when CVOC concentrations in the groundwater are less than RLs for the protection of indoor air for a commercial exposure scenario. On the Onni Property, compliance will be achieved when CVOC concentrations are less than groundwater cleanup levels.

CVOC concentrations in the groundwater are expected to fluctuate and decrease over time due to a variety of factors, including: (1) a potential ongoing unresolved source of TCE in the groundwater in areas upgradient of the Boren Avenue ROW, (2) sampling and analytical variability, (3) seasonal fluctuations in the groundwater elevations, and (4) desorption of CVOCs from soil to the groundwater where it can degrade in the dissolved phase.

Touchstone is prepared to implement contingency actions if concentrations of CVOCs in the groundwater indicate there is potential for vapor intrusion of CVOCs at the Troy Property and Seattle Time Property (Onni Development). These contingency actions include mitigation measures, if deemed necessary and appropriate, to protect indoor air quality. The potential contingency actions and their triggers are described below.

7.1 6.1 TROY PROPERTY

The chemistry of the groundwater beneath the Property is expected to change over time from anaerobic to aerobic due to the continuing decline of anthropogenic carbon substrate injected in 2015 to 2016 to the groundwater. Under aerobic conditions, VC in the groundwater will mineralize to nontoxic end products.

However, since VC concentrations are increasing with time and currently exceed the commercial groundwater RL (Exhibit 3-3) for the protection of indoor air, a contingency plan will be implemented if there is a statistically significant increase (SSI) in the VC concentrations in the groundwater. To be declared an SSI, the change in VC concentrations must be significant after accounting for anticipated variability in the sample data due to the factors outlined previously.

To determine if an SSI has occurred for VC results, Touchstone will follow guidance presented in EPA's *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities* (EPA 2009), and perform analysis for SSI testing using ProUCL version 5.2.00. The SSI test will assess variability over time in groundwater beneath the Property. The results from the SSI test will be more representative of the overall stability of the plume than changes in VC concentrations at individual wells and will, therefore, be the trigger for any contingent actions.

Analytical results at groundwater monitoring wells with VC concentrations exceeding the groundwater RL or showing an increasing statistical trend as of June 2024 will act as the baseline to determine if SSI has occurred in the future. Baseline results will be compared to groundwater analytical results for samples collected after June 2024. As with the baseline results, concentrations of VC that exceed the groundwater RL or show an increasing statistical trend at monitoring wells at the Property will be used to determine if SSI has occurred. No SSI will have occurred if the mean of the VC baseline is greater than or equal to the future VC sample results at the 95 percent level of significance (baseline VC mean >= future VC result). An SSI will occur if the mean of the baseline is less than the future VC sample results at the 95 percent level of significance (baseline VC mean < future VC result) over two consecutive groundwater sample events. If an SSI is verified, Touchstone will implement a contingency action(s) as described below.

The first stage of the contingency action will include two semiannual indoor air sampling events at the Property. Touchstone will perform indoor air sampling following procedures presented in SoundEarth's Vapor Intrusion Assessment Work Plan, dated January 25, 2018, and SoundEarth's Supplemental Vapor Intrusion Assessment Work Plan, dated February 12, 2019 (SoundEarth 2018a, 2019a).

If results from the two indoor air sampling events indicate VC concentrations are below indoor air cleanup levels for protection of commercial workers, no mitigation measures are required.

If results from the two indoor air sampling events indicate VC concentrations exceed indoor air cleanup standards, Touchstone will confer with Ecology to determine if a second stage contingency action must be implemented to alleviate potential risk to human health. If Ecology determines a

second stage contingency action must be implemented, it may require Touchstone to implement any of the following mitigation measures:

- Modifying or upgrading the parking garage ventilation system.
- Installing and maintaining a sub-slab depressurization system (e.g., extracting soil gas from select existing injection wells).
- Implementing in situ groundwater remediation, such as: (a) carbon substrate addition and bioaugmentation (i.e., anaerobic reductive dechlorination), or (b) oxygen enhancement of aerobic oxidation.

At 6 and 12 months after implementation of a mitigation measure, Touchstone will perform two indoor air sampling events to confirm the efficacy of mitigation measures on indoor air quality. If the results of these air sampling events demonstrate that VC concentrations are below screening levels, no further mitigation will be required if indoor air results are below screening levels. If exceedances persist, Touchstone will propose additional mitigation measures will be proposed for Ecology review and approval and, after Ecology approval, Touchstone will implement additional mitigation measure(s).

7.2 ONNI PROPERTY

After the Onni Development is completed, Ecology will require Touchstone to conduct or arrange for the conduction of 2 years of semiannual indoor air monitoring on the Onni property portion of the Site. If 2 years of indoor air sampling demonstrate that concentrations of CVOCs in indoor air are below the residential indoor air cleanup levels shown in Exhibit B, no further additional indoor air monitoring will be performed. However, if concentrations of CVOCs in the indoor air exceed cleanup levels presented in Exhibit B, Touchstone will implement a contingency action to mitigate the potential impacts to indoor air quality in the parking garage at the Onni Development.

1.0 INTRODUCTION

SoundEarth Strategies, Inc. (SoundEarth) has prepared this Site-Specific Health and Safety Plan (HASP) for Touchstone SLU LLC and TB/TS RELP LLC (collectively, Touchstone) Troy Laundry Property, located at 300 Boren Avenue North and 399 Fairview Avenue North in Seattle, Washington (the Property). This HASP was written in general accordance with the Washington State Model Toxics Control Act (MTCA) as promulgated in Chapter 173-340-350 of the Washington Administrative Code.

For the purposes of this HASP, the "site" is defined as those areas where field activities related to the scope of the investigation are performed.

This HASP was written for the use of SoundEarth and its employees. The health and safety and emergency response protocols outlined in this plan are designed to ensure compliance with state and federal regulations governing worker safety on hazardous waste sites. The US Department of Labor has published final rules (Part 1910.120 of Title 29 of the Code of Federal Regulations) that amend the existing Occupational Safety and Health Administration standards for hazardous waste operations and emergency response. In Washington State, these requirements are addressed in WAC 296-843, Hazardous Waste Operations. These regulations apply to the activities to be performed at this site as a site remediation, or cleanup, under the Federal Resource Conservation and Recovery Act of 1976 and/or MTCA.

Subcontractors to SoundEarth and other contractors performing work within the exclusion zone of the site are required to prepare and effectively implement their own HASP based on their unique scope of work and professional expertise. Each contractor's HASP must comply with all applicable federal, state, and local regulations. The contractor's HASP should employ appropriate best practices to protect all personnel working on the site, as well as the public, and to prevent negative impacts to the project or site.

The responsibilities of SoundEarth for safety on this site are limited to the following:

- **Implementation** of the provisions of this HASP for the protection of its employees and visitors on the site to the extent that the site and its hazards are under the control of SoundEarth.
- **Protection of the site**, other personnel, and the public from damage, injury, or illness as a result of the activities of SoundEarth and its employees while on the site.
- **Provision** of additional safety-related advice and/or management as contractually determined between the parties.

This plan is active for this site until SoundEarth implements a scope of work change not covered by this HASP, after which time it must be reviewed and extended.

2.0 FIELD ACTIVITIES

The following field activities are covered under this HASP:

- Groundwater sampling and monitoring
- Well drilling and installation

3.0 PROPERTY AND PROJECT INFORMATION

Property Name	Troy Laundry Property
Property Address	300 Boren Avenue North and 399 Fairview Avenue North
Property Owner	Touchstone SLU LLC and TB TS/RELP LLC
Property Tenant	Amazon, Inc.
Historical and Current Activities at the Property	Historical operation of a laundry and dry cleaning facility with at least 15 underground storage tanks containing oil, fuel, and solvents. Currently the Troy Block development includes two office towers and a 5-level underground parking garage.

Figure 1 shows the site location. Figure 2 shows the site exploration plan.

4.0 PROJECT RESPONSIBILITIES

Site personnel shall acknowledge that they have reviewed a copy of the HASP for this project, that they understand it, and that they agree to comply with all of its provisions by signing and dating the Acknowledgement and Agreement Form at the beginning of this document.

A daily health and safety tailgate meeting shall take place at the start of every day in the field. Persons attending this meeting are to print and sign their name on the Daily Health and Safety Tailgate Meeting Form presented in Attachment B.

Project Manager	**Levi Fernandes**
Field Lead/Health and Safety Officer	Linnea Coleman
Principal in Charge	Thomas Cammarata

5.0 SITE HAZARD ANALYSIS

This section is used to determine the project's potential health and safety hazards specifically as they relate to the site where the work will occur. Activity-related hazards are summarized in Section 6.1, Site-Specific Activity Hazard Analysis.

5.1 SITE HAZARD ANALYSIS—CHEMICAL

This section describes and identifies potential and known chemical hazards that may be encountered at the Site.

5.1.1 Summary of Potential Chemicals of Concern

Known or suspected chemicals of concern (COCs) have been identified at the site and in the media listed below. Information about these COCs are listed in Attachment C, Site-Specific COC Quick References.

- Tetrachloroethene (PCE) is soil, groundwater, and soil vapor
- Trichloroethene (TCE) in soil, groundwater, and soil vapor
- Cis-1,2-dichloroethene (cis-1,2-DCE) in groundwater and soil vapor
- Vinyl chloride (VC) in groundwater
- Gasoline-range petroleum hydrocarbons (GRPH) as Stoddard solvents in soil, groundwater, and soil vapor
- Diesel-range petroleum hydrocarbons (DRPH) in soil and groundwater
- Oil-range petroleum hydrocarbons (ORPH) in soil and groundwater

5.1.2 Chemicals on Site

The following chemicals are expected to be used during field activities. Safety Data Sheets for the chemicals are included as Attachment D.

- Alconox
- Hydrochloric acid
- Nitric acid
- Sulfuric acid

5.1.3 Past Opportunities for Contamination

The Property was used as a retail and industrial laundry and dry-cleaner. Both chlorinated- and petroleum-based dry-cleaning solvents were used and stored at the Property. Petroleum hydrocarbons also were used and stored on the Property.

5.1.4 Reports that Provide Chemical Data

The following report(s) containing analytical data for COCs were provided to SoundEarth or prepared for the site:

- 2022 Groundwater Monitoring Report, Troy Laundry Seattle Site, 300 Boren Avenue North and 399 Fairview Avenue North, Seattle, Washington, prepared by SoundEarth, dated February 21, 2023
- 2020 Final Remedial Investigation Report, Troy Laundry Seattle Site, 300 Boren Avenue North and 399 Fairview Avenue North, Seattle, Washington, prepared by SoundEarth, dated August 20, 2020
- 2013-2024 Groundwater Monitoring Reports, Troy Laundry Seattle Site, prepared by SoundEarth, various dates

Chemical analytical results can be found as attachments to the report(s) noted above.

5.1.5 Opportunities for Unknown or Unidentified Chemical Contamination

No sources of unknown or unidentified chemical contamination at the site have been identified at this time.

5.2 SITE HAZARD ANALYSIS—PHYSICAL

This section addresses known and potential physical hazards specific to the site. Site documents provided by the client, owner, or tenant such as non-SoundEarth HASPs, traffic control plans, and operation and maintenance plans can be helpful to identify site-specific hazards.

5.2.1 Site-Specific Physical Hazards

Described below are physical hazards that may be encountered while on the site:

- COVID-19
- Ergonomic hazards
- Excavation and trenching/excavation collapse
- Heavy equipment/moving machinery
- Mechanical failures
- Noise exposure
- Overhead utilities and features
- Pressurized air
- Pressurized liquid
- Unstable ground; slips, trips, falls, and cuts
- Spills
- Struck by or struck against heavy machinery or similar and pinch points
- Traffic and moving equipment
- Unsecure/uncontrolled site
- Weather exposure: temperature, wind, lightning, rain, ice, and/or snow

5.2.2 Utility Hazards

Described below are utility hazards that may be present at the site. In order to locate utilities, the Utilities Underground Location Center should be called at 800-424-5555, a private locate should be scheduled (as appropriate), side sewer cards should be reviewed, owner or tenant documents should be reviewed, and the site should be visually inspected.

5.2.2.1 Underground Utilities

The following underground utilities are likely located on site or in the surrounding right of way: sanitary sewer lines, water mains, gas lines, electrical lines, telephone lines, electrical conduits, and storm drains. Other underground utilities may present as well.

5.2.2.2 Overhead Utilities

Based on field observations at the time of this report the following overhead utilities have been identified. Additional overhead utilities may be present, and the site should be visually inspected prior to conducting work.

- Overhead power and telephone lines are present above the sidewalks that run north-south along Boren Avenue North, east-west along Harrison Street, and east-west along Thomas Street.
- Bus wires are present above the southern lane of Harrison Street.
- Guy poles are present in the north and south sidewalks of Harrison Street. Guy wires cross Harrison Street and connect to the poles.

6.0 TASK-RELATED SITE HAZARD ANALYSIS

This section outlines the health and safety hazards that may be present on the site as a result of the tasks to be performed by SoundEarth or subcontractors as they relate to the chemical and physical hazards identified in Sections 5.1 and 5.2 above. A summary of the controls specific to the site is presented in Section 7.0, Task-Related Site Hazard Controls.

6.1 SITE-SPECIFIC ACTIVITY HAZARD ANALYSIS

The site-specific activity hazard analyses (AHAs) listed below are included in Attachment E. The AHAs contain detailed information and instructions for protecting SoundEarth employees from chemical and physical hazards applicable to this HASP.

- Mobilization/Demobilization
- Drilling Observation and Sampling
- Groundwater Monitoring

7.0 TASK-RELATED SITE HAZARD CONTROLS

7.1 EXISTING CONTROLS IN PLACE

The following existing controls are present at the site:

- Most of the site is capped by asphalt and concrete, which prevents direct contact with and ingestion of contaminated soil and/or groundwater.

7.2 CONTROLS FOR PERSONNEL

The following controls are required for SoundEarth employees while performing work on the site:

- Wear Level D PPE, which includes hard hats, steel-toed boots, safety glasses, nitrile gloves, and a reflective safety vest.
- Wear clothing appropriate for cold or wet conditions, layered under appropriate PPE.
- Use delineators and caution tape for traffic control, supplemented by vehicle barricades, as necessary.

The following COVID-19 mitigation hazard control is also recommended for SoundEarth employees while performing work on the site:

- Maintain a minimum physical distance of 6 feet from other workers and contractors, wear nitrile gloves, and wear a mask as needed. Equipment and tools should not be shared.

SITE EXPLORATION PLAN

ATTACHMENT A

Hospital Route

6 min (1.0 mile)

via Boren Ave

Fastest route, lighter traffic than usual

Troy Block

300 Boren Ave N, Seattle, WA 98109

- Head south toward Thomas St

  112 ft
- Turn left at the 1st cross street onto Thomas St

  374 ft
- Turn right at the 1st cross street onto Fairview Ave N

  0.2 mi
- Use any lane to turn left onto Boren Ave

  0.6 mi
- Turn right onto Seneca St

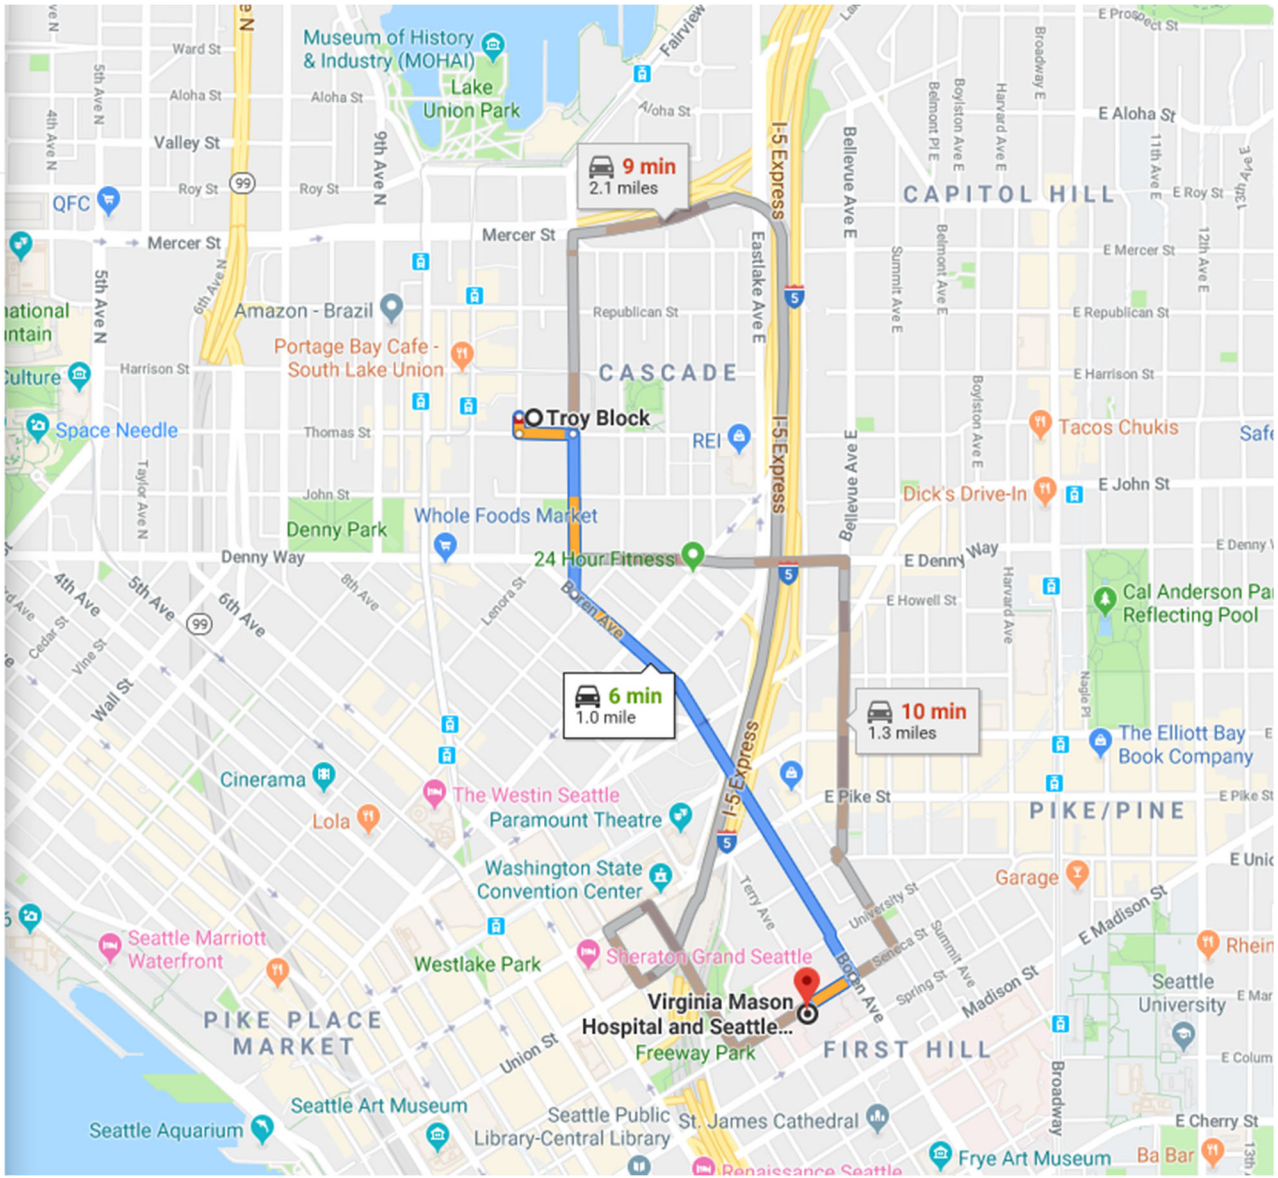
  Destination will be on the left

  322 ft

Virginia Mason Hospital and Seattle Medical Center

1100 9th Ave, Seattle, WA 98101

These directions are for planning purposes only. You may find that construction projects, traffic, weather, or other events may cause conditions to differ from the map results, and you should plan your route accordingly. You must obey all signs or notices regarding your route.



10 min (2.5 miles)

via I-5 S

Heavy traffic, as usual

Troy Block

300 Boren Ave N, Seattle, WA 98109

- Take Thomas St to Fairview Ave N
  54 s (486 ft)
- Take I-5 S and Exit 165A to Jefferson St
  7 min (2.3 mi)
- Continue on Jefferson St. Drive to 8th Ave
  1 min (0.1 mi)

Harborview Medical Center

325 9th Ave, Seattle, WA 98104

These directions are for planning purposes only. You may find that construction projects, traffic, weather, or other events may cause conditions to differ from the map results, and you should plan your route accordingly. You must obey all signs or notices regarding your route.

DAILY HEALTH AND SAFETY TAILGATE MEETING FORM

Project Number:	Date:
Site Safety Officer:	Time:
Project Address:	

Scope of Work:

Subjects Discussed:

☐	Slips, trips and falls	☐	Excavation/trenching safety
☐	PPE	☐	Overhead and underground utilities
☐	COCs	☐	Ladder safety
☐	Site control and visitors	☐	Hand tool safety
☐	Weather exposure, hydration	☐	Emergency meeting locations
☐	Traffic and moving equipment	☐	Hospital location and 911
☐	Heavy equipment	☐	Eyewash/fire extinguisher locations
☐	Lifting techniques	☐	Spill kit location
☐	Air quality	☐	First aid kit locations
☐	Noise	☐	General contractor-specific safety items
☐	COVID-19 Risk Level and Mitigation	☐	Other:

Additional Notes:

Attendees:

Print Name	

ATTACHMENT C

Site-Specific COC Quick References

1,2-DICHLOROETHENE

Chemical or Class (Synonyms or Isomers): 1,2-Dichloroethene, 1,2-DCE; includes cis- or trans-isomers

Properties

- Slightly acidic, chloroform-like odor

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Silver Shield/composite gloves	If PEL is exceeded: minimum SA continuous flow or PAPR OV cartridge

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	Soap wash promptly	▪ Central nervous system ▪ Eyes ▪ Respiratory system
Eye contact	Irrigate immediately	
Inhalation	Respiratory support	
Ingestion	Medical attention immediately	

Exposure Symptoms

- Central nervous system depression
- Eye and respiratory system irritation

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - Detector tube(s)
  - 10.2 or 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	200 ppm TWA 250 ppm STEL
NIOSH REL	200 ppm TWA
IDLH	1,000 ppm
FP	36-39°F
LEL	5.6%

DIESEL-RANGE PETROLEUM HYDROCARBONS

Chemical or Class (Synonyms or Isomers): Diesel-range petroleum hydrocarbons, DRPH (as Diesel Fuel #2 and petroleum distillates)

Properties

- Gasoline or kerosene-like odor
- Floats on water
- Clear, yellow-brown liquid

Special Characteristics

- Carcinogen
- Combustible liquid

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Nitrile or neoprene gloves	If PEL is exceeded: any SA respirator

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	Remove contaminated clothing and shoes. Wash contaminated areas thoroughly with soap and water. Obtain medical attention if irritation or redness develops.	▪ Central nervous system ▪ Eyes ▪ Kidneys ▪ Respiratory system ▪ Skin
Eye contact	Flush with clean, low-pressure water for at least 15 minutes	
Inhalation	Respiratory support	
Ingestion	Aspiration hazard. Do not induce vomiting or give liquids. Obtain immediate medical attention.	

Exposure Symptoms

- Dermatitis, Dry cracked skin
- Dizziness, Drowsiness
- Headache
- Inflammation of lungs
- Irritation of eyes, noses, and throat
- Nausea
- Skin reddening

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - 10.2 or 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	100 ppm TWA 150 ppm STEL
OSHA PEL	500 ppm
NIOSH REL	86 ppm TWA 444 ppm STEL
ACGIH TLV	100 mg/m^3 TWA
IDLH	1,100 ppm
FP	-40 to -86^{o}F
LEL	1.1%

GASOLINE-RANGE PETROLEUM HYDROCARBONS

Chemical or Class (Synonyms or Isomers): Gasoline-range petroleum hydrocarbons, GRPH (motor fuel, motor spirits, gasoline, TPH)

Properties

- Characteristic odor
- Rainbow sheen

Special Characteristics

- Carcinogen

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Nitrile gloves	If PEL is exceeded: minimum full-face SA respirator in PP/PD mode

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	Soap wash promptly	▪ Central nervous system ▪ Eyes ▪ Kidneys ▪ Liver ▪ Respiratory system ▪ Skin
Eye contact	Irrigate immediately	
Inhalation	Respiratory support	
Ingestion	Medical attention immediately	

Exposure Symptoms

- Blurred vision
- Confusion
- Convulsions
- Dizziness, slurred speech
- Exhaustion
- Headache
- Inflammation of skin and lungs
- Irritation of eyes, skin, and mucous membranes
- Possible liver and kidney damage
- Weakness
- (Potential occupational carcinogen)

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - Detector tube(s)
  - 10.2 and 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	300 ppm TWA 500 ppm STEL
ACGIH TLV	300 ppm TWA 500 ppm STEL
FP	-45°F
LEL	1.4%

TETRACHLOROETHYLENE

Chemical or Class (Synonyms or Isomers): PCE, tetrachlorethylene, perchloroethylene, perchlorethylene

Properties

- Mild, chloroform-like odor

Special Characteristics

- Carcinogen

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Nitrile or neoprene gloves	If PEL is exceeded: any full-face SA respirator in PP/PD mode

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	Soap wash promptly	▪ Central nervous system ▪ Eyes ▪ Kidneys ▪ Liver ▪ Respiratory system ▪ Skin
Eye contact	Irrigate immediately	
Inhalation	Respiratory support	
Ingestion	Medical attention immediately	

Exposure Symptoms

- Dizziness, incoordination
- Flushed face, neck
- Headache, drowsiness
- Irritations of eyes, skin, nose, throat, respiratory system
- Liver damage
- Nausea
- Skin erythema (skin redness)
- (Potential occupational carcinogen)

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - 10.2 or 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	25 ppm TWA 38 ppm STEL
OSHA PEL	100 ppm TWA 200 ppm C (5 minutes in 3-hour period) 300 ppm (5-min maximum peak)
ACGIH TLV	25 ppm TWA 100 ppm STEL
IDLH	150 ppm

TRICHLOROETHENE

Chemical or Class (Synonyms or Isomers): Trichloroethene, TCE, trichloroethylene, ethylene trichloride

Properties

- Chloroform-like odor

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Nitrile gloves	If PEL is exceeded: minimum full-face SA respirator in PP/PD mode

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	Soap wash promptly	▪ Central nervous system ▪ Eyes ▪ Heart ▪ Kidneys ▪ Liver ▪ Respiratory system ▪ Skin
Eye contact	Irrigate immediately	
Inhalation	Respiratory support	
Ingestion	Medical attention immediately	

Exposure Symptoms

- Cardiac arrhythmias
- Dizziness, drowsiness, or nausea
- Exhaustion or weakness
- Headache
- Irritation of eyes and skin
- Liver injury
- Tingling, pricking, and inflammation of skin
- Tremor
- Visual disturbance
- Vomiting
- (Potential occupational carcinogen)

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - 10.2 or 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	50 ppm TWA 200 ppm STEL
OSHA PEL	100 ppm TWA 200 ppm C 300 ppm peak (5 minutes)
IDLH	1,000 ppm
LEL	8%

VINYL CHLORIDE

Chemical or Class (Synonyms or Isomers): Vinyl chloride (chloroethylene)

Properties

- Pleasant odor at high concentrations

Special Characteristics

- Carcinogen
- Attacks iron and steel in the presence of moisture
- Polymerizes in air and sunlight
- Flammable gas at standard temperature and pressure

Protection

Recommended PPE	Respiratory Protection
▪ Impermeable, chemical-resistant, disposable clothing ▪ Silver Shield/composite gloves	If PEL is exceeded: any SA respirator in PP/PD mode

First Aid

Routes of Exposure	Treatment Action	Target Organs
Skin contact	If frostbite has occurred, seek medical attention immediately; if tissue is not frozen, immediately flush with water for a minimum of 15 minutes.	▪ Blood ▪ Central nervous system ▪ Liver ▪ Lymphatic system ▪ Respiratory system
Eye contact		
Inhalation	Respiratory support	
Ingestion	Not a likely exposure route	

Exposure Symptoms

- Abdominal pain, gastrointestinal bleeding
- Enlarged liver
- Frostbite (liquid)
- Lassitude (weakness, exhaustion)
- Pallor or cyanosis of extremities
- (Potential occupational carcinogen)

Recommended Monitoring (if potential for exposure exists)

- Initiate personal air monitoring; perform additional monitoring if necessary based on initial results.
- Verify method with laboratory prior to ordering media and equipment.
- Real time monitoring equipment should include:
  - 10.2 or 10.6 eV PID

Limits

Permissible Exposure Limits, Action Limits, and Other Limits	
DOSH PEL	1 ppm TWA 5 ppm STEL
OSHA PEL	0.5 ppm AL
LEL	3.6%

ATTACHMENT D

Chemical Safety Data Sheets

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

1 Identification of the substance/mixture and of the supplier

1.1 Product identifier

Trade Name: Alconox
Synonyms:
Product number: Alconox

1.2 Application of the substance / the mixture : Cleaning material/Detergent

1.3 Details of the supplier of the Safety Data Sheet

Manufacturer	Supplier
Alconox, Inc. 30 Glenn Street White Plains, NY 10603 1-914-948-4040	Not Applicable

Emergency telephone number:
ChemTel Inc
North America: 1-800-255-3924
International: 01-813-248-0585

2 Hazards identification

2.1 Classification of the substance or mixture:

In compliance with EC regulation No. 1272/2008, 29CFR1910/1200 and GHS Rev. 3 and amendments.

Hazard-determining components of labeling:
Tetrasodium Pyrophosphate
Sodium tripolyphosphate
Sodium Alkylbenzene Sulfonate

2.2 Label elements:

Skin irritation, category 2.
Eye irritation, category 2A.

Hazard pictograms:

Signal word: Warning

Hazard statements:
H315 Causes skin irritation.
H319 Causes serious eye irritation.

Precautionary statements:
P264 Wash skin thoroughly after handling.
P280 Wear protective gloves/protective clothing/eye protection/face protection.
P302+P352 If on skin: Wash with soap and water.
P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
P321 Specific treatment (see supplemental first aid instructions on this label).
P332+P313 If skin irritation occurs: Get medical advice/attention.
P362 Take off contaminated clothing and wash before reuse.
P501 Dispose of contents and container as instructed in Section 13.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

Additional information: None.

Hazard description

Hazards Not Otherwise Classified (HNOC): None

Information concerning particular hazards for humans and environment:

The product has to be labelled due to the calculation procedure of the "General Classification guideline for preparations of the EU" in the latest valid version.

Classification system:

The classification is according to EC regulation No. 1272/2008, 29CFR1910/1200 and GHS Rev. 3 and amendments, and extended by company and literature data. The classification is in accordance with the latest editions of international substances lists, and is supplemented by information from technical literature and by information provided by the company.

3 Composition/information on ingredients

3.1 Chemical characterization : None

3.2 Description : None

3.3 Hazardous components (percentages by weight)

Identification	Chemical Name	Classification	Wt. %
CAS number: 7758-29-4	Sodium tripolyphosphate	Skin Irrit. 2 ; H315 Eye Irrit. 2; H319	12-28
CAS number: 68081-81-2	Sodium Alkylbenzene Sulfonate	Acute Tox. 4; H303 Skin Irrit. 2 ; H315 Eye Irrit. 2; H319	8-22
CAS number: 7722-88-5	Tetrasodium Pyrophosphate	Skin Irrit. 2 ; H315 Eye Irrit. 2; H319	2-16

3.4 Additional Information : None.

4 First aid measures

4.1 Description of first aid measures

General information: None.

After inhalation:

Maintain an unobstructed airway.

Loosen clothing as necessary and position individual in a comfortable position.

After skin contact:

Wash affected area with soap and water.

Seek medical attention if symptoms develop or persist.

After eye contact:

Rinse/flush exposed eye(s) gently using water for 15-20 minutes.

Remove contact lens(es) if able to do so during rinsing.

Seek medical attention if irritation persists or if concerned.

After swallowing:

Rinse mouth thoroughly.

Seek medical attention if irritation, discomfort, or vomiting persists.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

4.2 Most important symptoms and effects, both acute and delayed

None

4.3 Indication of any immediate medical attention and special treatment needed:

No additional information.

5 Firefighting measures

5.1 Extinguishing media

Suitable extinguishing agents:

Use appropriate fire suppression agents for adjacent combustible materials or sources of ignition.

For safety reasons unsuitable extinguishing agents : None

5.2 Special hazards arising from the substance or mixture :

Thermal decomposition can lead to release of irritating gases and vapors.

5.3 Advice for firefighters

Protective equipment:

Wear protective eye wear, gloves and clothing.
Refer to Section 8.

5.4 Additional information :

Avoid inhaling gases, fumes, dust, mist, vapor and aerosols.
Avoid contact with skin, eyes and clothing.

6 Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures :

Ensure adequate ventilation.
Ensure air handling systems are operational.

6.2 Environmental precautions :

Should not be released into the environment.
Prevent from reaching drains, sewer or waterway.

6.3 Methods and material for containment and cleaning up :

Wear protective eye wear, gloves and clothing.

6.4 Reference to other sections : None

7 Handling and storage

7.1 Precautions for safe handling :

Avoid breathing mist or vapor.
Do not eat, drink, smoke or use personal products when handling chemical substances.

7.2 Conditions for safe storage, including any incompatibilities :

Store in a cool, well-ventilated area.

7.3 Specific end use(s):

No additional information.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

8 Exposure controls/personal protection

8.1 Control parameters :

7722-88-5, Tetrasodium Pyrophosphate, OSHA TWA 5 mg/m3.

8.2 Exposure controls

Appropriate engineering controls:

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of use or handling.

Respiratory protection:

Not needed under normal conditions.

Protection of skin:

Select glove material impermeable and resistant to the substance.

Eye protection:

Safety goggles or glasses, or appropriate eye protection.

General hygienic measures:

Wash hands before breaks and at the end of work.
Avoid contact with skin, eyes and clothing.

9 Physical and chemical properties

Appearance (physical state, color):	White and cream colored flakes - powder	**Explosion limit lower**: **Explosion limit upper**:	Not determined or not available. Not determined or not available.
Odor:	Not determined or not available.	**Vapor pressure at 20°C**:	Not determined or not available.
Odor threshold:	Not determined or not available.	**Vapor density**:	Not determined or not available.
pH-value:	9.5 (aqueous solution)	**Relative density**:	Not determined or not available.
Melting/Freezing point:	Not determined or not available.	**Solubilities**:	Not determined or not available.
Boiling point/Boiling range:	Not determined or not available.	**Partition coefficient (n-octanol/water)**:	Not determined or not available.
Flash point (closed cup):	Not determined or not available.	**Auto/Self-ignition temperature**:	Not determined or not available.
Evaporation rate:	Not determined or not available.	**Decomposition temperature**:	Not determined or not available.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

Flammability (solid, gaseous):	Not determined or not available.	**Viscosity**:	a. Kinematic: Not determined or not available. b. Dynamic: Not determined or not available.
Density at 20°C:	Not determined or not available.		

10 Stability and reactivity

10.1 Reactivity : None

10.2 Chemical stability : None

10.3 Possibility hazardous reactions : None

10.4 Conditions to avoid : None

10.5 Incompatible materials : None

10.6 Hazardous decomposition products : None

11 Toxicological information

11.1 Information on toxicological effects :

Acute Toxicity:

Oral:

: LD50 > 5000 mg/kg oral rat - Product .

Chronic Toxicity: No additional information.

Skin corrosion/irritation:

Sodium Alkylbenzene Sulfonate: Causes skin irritation. .

Serious eye damage/irritation:

Sodium Alkylbenzene Sulfonate: Causes serious eye irritation .

Tetrasodium Pyrophosphate: Rabbit - Risk of serious damage to eyes .

Respiratory or skin sensitization: No additional information.

Carcinogenicity: No additional information.

IARC (International Agency for Research on Cancer): None of the ingredients are listed.

NTP (National Toxicology Program): None of the ingredients are listed.

Germ cell mutagenicity: No additional information.

Reproductive toxicity: No additional information.

STOT-single and repeated exposure: No additional information.

Additional toxicological information: No additional information.

12 Ecological information

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

12.1 Toxicity:

Sodium Alkylbenzene Sulfonate: Fish, LC50 1.67 mg/l, 96 hours.
Sodium Alkylbenzene Sulfonate: Aquatic invertebrates, EC50 Daphnia 2.4 mg/l, 48 hours.
Sodium Alkylbenzene Sulfonate: Aquatic Plants, EC50 Algae 29 mg/l, 96 hours.
Tetrasodium Pyrophosphate: Fish, LC50 - other fish - 1,380 mg/l - 96 h.
Tetrasodium Pyrophosphate: Aquatic invertebrates, EC50 - Daphnia magna (Water flea) - 391 mg/l - 48 h.

12.2 Persistence and degradability: No additional information.

12.3 Bioaccumulative potential: No additional information.

12.4 Mobility in soil: No additional information.

General notes: No additional information.

12.5 Results of PBT and vPvB assessment:

PBT: No additional information.

vPvB: No additional information.

12.6 Other adverse effects: No additional information.

13 Disposal considerations

13.1 Waste treatment methods (consult local, regional and national authorities for proper disposal)

Relevant Information:

It is the responsibility of the waste generator to properly characterize all waste materials according to applicable regulatory entities. (US 40CFR262.11).

14 Transport information

14.1 UN Number: None
ADR, ADN, DOT, IMDG, IATA

14.2 UN Proper shipping name: None
ADR, ADN, DOT, IMDG, IATA

14.3 Transport hazard classes:
ADR, ADN, DOT, IMDG, IATA

Class: None
Label: None
LTD. QTY: None

US DOT
Limited Quantity Exception: None

Bulk:
RQ (if applicable): None
Proper shipping Name: None
Hazard Class: None
Packing Group: None
Marine Pollutant (if applicable): No additional information.

Non Bulk:
RQ (if applicable): None
Proper shipping Name: None
Hazard Class: None
Packing Group: None
Marine Pollutant (if applicable): No additional information.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

	Comments: None	**Comments:** None
14.4	**Packing group:** ADR, ADN, DOT, IMDG, IATA	None
14.5	**Environmental hazards** :	None
14.6	**Special precautions for user:**	None
	Danger code (Kemler):	None
	EMS number:	None
	Segregation groups:	None
14.7	**Transport in bulk according to Annex II of MARPOL73/78 and the IBC Code:**	Not applicable.
14.8	**Transport/Additional information:**	
	Transport category:	None
	Tunnel restriction code:	None
	UN "Model Regulation":	None

15 Regulatory information

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture.

North American

SARA

Section 313 (specific toxic chemical listings): None of the ingredients are listed.
Section 302 (extremely hazardous substances): None of the ingredients are listed.

CERCLA (Comprehensive Environmental Response, Clean up and Liability Act) Reportable

Spill Quantity: None of the ingredients are listed.

TSCA (Toxic Substances Control Act):

Inventory: All ingredients are listed.
Rules and Orders: Not applicable.

Proposition 65 (California):

Chemicals known to cause cancer: None of the ingredients are listed.

Chemicals known to cause reproductive toxicity for females: None of the ingredients are listed.

Chemicals known to cause reproductive toxicity for males: None of the ingredients are listed.

Chemicals known to cause developmental toxicity: None of the ingredients are listed.

Canadian

Canadian Domestic Substances List (DSL):
All ingredients are listed.

EU

REACH Article 57 (SVHC): None of the ingredients are listed.

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

Germany MAK: Not classified.

Asia Pacific

Australia

Australian Inventory of Chemical Substances (AICS): All ingredients are listed.

China

Inventory of Existing Chemical Substances in China (IECSC): All ingredients are listed.

Japan

Inventory of Existing and New Chemical Substances (ENCS): All ingredients are listed.

Korea

Existing Chemicals List (ECL): All ingredients are listed.

New Zealand

New Zealand Inventory of Chemicals (NZOIC): All ingredients are listed.

Philippines

Philippine Inventory of Chemicals and Chemical Substances (PICCS): All ingredients are listed.

Taiwan

Taiwan Chemical Substance Inventory (TSCI): All ingredients are listed.

16 Other information

Abbreviations and Acronyms: None

Summary of Phrases

Hazard statements:

H315 Causes skin irritation.
H319 Causes serious eye irritation.

Precautionary statements:

P264 Wash skin thoroughly after handling.
P280 Wear protective gloves/protective clothing/eye protection/face protection.
P302+P352 If on skin: Wash with soap and water.
P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
P321 Specific treatment (see supplemental first aid instructions on this label).
P332+P313 If skin irritation occurs: Get medical advice/attention.
P362 Take off contaminated clothing and wash before reuse.
P501 Dispose of contents and container as instructed in Section 13.

Manufacturer Statement:

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

NFPA: 1-0-0

Safety Data Sheet

according to 1907/2006/EC (REACH), 1272/2008/EC (CLP), 29CFR1910/1200 and GHS Rev. 3

Effective date: 12.08.2015 **Revision** : 12.10.2015

Trade Name: Alconox

HMIS: 1-0-0

SAFETY DATA SHEET

Version 6.9
Revision Date 03/18/2023
Print Date 04/22/2023

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifiers

Product name : Hydrochloric acid

Product Number : H1758
Brand : Sigma
Index-No. : 017-002-01-X
CAS-No. : 7647-01-0

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich Inc.
3050 SPRUCE ST
ST. LOUIS MO 63103
UNITED STATES

Telephone : +1 314 771-5765
Fax : +1 800 325-5052

1.4 Emergency telephone

Emergency Phone # : 800-424-9300 CHEMTREC (USA) +1-703-527-3887 CHEMTREC (International) 24 Hours/day; 7 Days/week

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)

Corrosive to Metals (Category 1), H290
Skin corrosion (Category 1B), H314
Serious eye damage (Category 1), H318
Specific target organ toxicity - single exposure (Category 3), Respiratory system, H335

For the full text of the H-Statements mentioned in this Section, see Section 16.

2.2 GHS Label elements, including precautionary statements

Pictogram

Signal Word Danger

Hazard statement(s)	
H290	May be corrosive to metals.
H314	Causes severe skin burns and eye damage.
H335	May cause respiratory irritation.

Precautionary statement(s)	
P234	Keep only in original container.
P261	Avoid breathing mist or vapors.
P264	Wash skin thoroughly after handling.
P271	Use only outdoors or in a well-ventilated area.
P280	Wear protective gloves/ protective clothing/ eye protection/ face protection.
P301 + P330 + P331	IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303 + P361 + P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/ shower.
P304 + P340 + P310	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/ doctor.
P305 + P351 + P338 + P310	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/ doctor.
P363	Wash contaminated clothing before reuse.
P390	Absorb spillage to prevent material damage.
P403 + P233	Store in a well-ventilated place. Keep container tightly closed.
P405	Store locked up.
P406	Store in corrosive resistant container with a resistant inner liner.
P501	Dispose of contents/ container to an approved waste disposal plant.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

SECTION 3: Composition/information on ingredients

3.2 Mixtures

Component		Classification	Concentration
Hydrochloric Acid			
CAS-No. EC-No. Index-No. Registration number	7647-01-0 231-595-7 017-002-01-X 01-2119484862-27-XXXX	Met. Corr. 1; Skin Corr. 1B; Eye Dam. 1; STOT SE 3; H290, H314, H318, H335 Concentration limits: >= 0.1 %: Met. Corr. 1, H290; >= 25 %: Skin Corr. 1B, H314; 10 - < 25 %: Skin Irrit. 2, H315; 10 - < 25 %: Eye Irrit. 2, H319; >= 10 %: STOT SE 3, H335;	>= 30 - < 50 %

For the full text of the H-Statements mentioned in this Section, see Section 16.

SECTION 4: First aid measures

4.1 Description of first-aid measures

General advice
First aiders need to protect themselves. Show this material safety data sheet to the doctor in attendance.

If inhaled
After inhalation: fresh air. Call in physician.

In case of skin contact
In case of skin contact: Take off immediately all contaminated clothing. Rinse skin with water/ shower. Call a physician immediately.

In case of eye contact
After eye contact: rinse out with plenty of water. Immediately call in ophthalmologist. Remove contact lenses.

If swallowed
After swallowing: make victim drink water (two glasses at most), avoid vomiting (risk of perforation). Call a physician immediately. Do not attempt to neutralise.

4.2 Most important symptoms and effects, both acute and delayed
The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed
No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

Unsuitable extinguishing media
For this substance/mixture no limitations of extinguishing agents are given.

5.2 Special hazards arising from the substance or mixture
Hydrogen chloride gas
Hydrogen chloride gas
Not combustible.
Ambient fire may liberate hazardous vapours.

5.3 Advice for firefighters
Stay in danger area only with self-contained breathing apparatus. Prevent skin contact by keeping a safe distance or by wearing suitable protective clothing.

5.4 Further information
Suppress (knock down) gases/vapors/mists with a water spray jet. Prevent fire extinguishing water from contaminating surface water or the ground water system.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures

Advice for non-emergency personnel: Do not breathe vapors, aerosols. Avoid substance contact. Ensure adequate ventilation. Evacuate the danger area, observe emergency procedures, consult an expert.
For personal protection see section 8.

6.2 Environmental precautions

Do not let product enter drains.

6.3 Methods and materials for containment and cleaning up

Cover drains. Collect, bind, and pump off spills. Observe possible material restrictions (see sections 7 and 10). Take up with liquid-absorbent and neutralising material (e.g. Chemizorb® H^+, Merck Art. No. 101595). Dispose of properly. Clean up affected area.

6.4 Reference to other sections

For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Storage conditions
No metal containers.
Tightly closed.

Storage class
Storage class (TRGS 510): 8B: Non-combustible, corrosive hazardous materials

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Ingredients with workplace control parameters

Component	CAS-No.	Value	Control parameters	Basis
Hydrochloric Acid	7647-01-0	C	2 ppm	USA. ACGIH Threshold Limit Values (TLV)
	Remarks	Not classifiable as a human carcinogen		

		C	5 ppm 7 mg/m3	USA. NIOSH Recommended Exposure Limits
		C	5 ppm 7 mg/m3	USA. Occupational Exposure Limits (OSHA) - Table Z-1 Limits for Air Contaminants
		PEL	0.3 ppm 0.45 mg/m3	California permissible exposure limits for chemical contaminants (Title 8, Article 107)
		C	2 ppm	California permissible exposure limits for chemical contaminants (Title 8, Article 107)

8.2 Exposure controls

Appropriate engineering controls
Immediately change contaminated clothing. Apply preventive skin protection. Wash hands and face after working with substance.

Personal protective equipment

Eye/face protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU). Tightly fitting safety goggles

Skin protection
This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN374 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de).
Full contact
Material: Nitrile rubber
Minimum layer thickness: 0.11 mm
Break through time: 480 min
Material tested:KCL 741 Dermatril® L

This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN374 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de).
Splash contact
Material: Latex gloves
Minimum layer thickness: 0.6 mm
Break through time: 120 min
Material tested:Lapren® (KCL 706 / Aldrich Z677558, Size M)

Body Protection
Acid-resistant protective clothing

Respiratory protection
required when vapours/aerosols are generated.
Our recommendations on filtering respiratory protection are based on the following standards: DIN EN 143, DIN 14387 and other accompanying standards relating to the used respiratory protection system.

Control of environmental exposure
Do not let product enter drains.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: liquid Color: light yellow
b)	Odor	pungent
c)	Odor Threshold	No data available
d)	pH	< 1 at 20 °C (68 °F)
e)	Melting point/freezing point	-30 °C (-22 °F)
f)	Initial boiling point and boiling range	> 100 °C > 212 °F - lit.
g)	Flash point	()Not applicable
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapor pressure	227 hPa at 21.1 °C (70.0 °F) 547 hPa at 37.7 °C(99.9 °F)
l)	Vapor density	No data available
m)	Density	1.2 g/cm3 at 25 °C (77 °F) - lit.
	Relative density	No data available
n)	Water solubility	soluble
o)	Partition coefficient: n-octanol/water	No data available
p)	Autoignition temperature	Not applicable
q)	Decomposition temperature	No data available
r)	Viscosity	No data available
s)	Explosive properties	Not classified as explosive.
t)	Oxidizing properties	none

9.2 Other safety information
No data available

SECTION 10: Stability and reactivity

10.1 Reactivity
No data available

10.2 Chemical stability
The product is chemically stable under standard ambient conditions (room temperature) .

10.3 Possibility of hazardous reactions
No data available

10.4 Conditions to avoid
no information available

10.5 Incompatible materials
Bases, Amines, Alkali metals, Metals, permanganates, for example potassium permanganate, Fluorine, metal acetylides, hexalithium disilicideMetals

10.6 Hazardous decomposition products
In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Mixture

Acute toxicity
Symptoms: If ingested, severe burns of the mouth and throat, as well as a danger of perforation of the esophagus and the stomach.
Symptoms: mucosal irritations, Cough, Shortness of breath, Possible damages:, damage of respiratory tract
Dermal: No data available

Skin corrosion/irritation
Remarks: Mixture causes burns.

Serious eye damage/eye irritation
Remarks: Mixture causes serious eye damage.
Risk of blindness!

Respiratory or skin sensitization
No data available

Germ cell mutagenicity
No data available

Carcinogenicity

IARC: No ingredient of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

NTP: No ingredient of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.

Reproductive toxicity
No data available

Specific target organ toxicity - single exposure
Mixture may cause respiratory irritation.

Specific target organ toxicity - repeated exposure
No data available

Aspiration hazard
No data available

11.2 Additional Information

RTECS: MW4025000
Other dangerous properties can not be excluded.

Handle in accordance with good industrial hygiene and safety practice.

Components

Hydrochloric Acid

Acute toxicity
Oral: No data available
Inhalation: Cough Difficulty in breathing
Inhalation: absorption
Inhalation: Corrosive to respiratory system.
Symptoms: mucosal irritations, Cough, Shortness of breath, Inhalation may lead to the formation of oedemas in the respiratory tract., Possible damages:, damage of respiratory tract, tissue damage
Dermal: No data available

Skin corrosion/irritation
Skin - reconstructed human epidermis (RhE)
Result: Corrosive
(OECD Test Guideline 431)

Serious eye damage/eye irritation
Eyes - Bovine cornea
Result: Corrosive
(OECD Test Guideline 437)

Respiratory or skin sensitization
Maximization Test - Guinea pig
Result: negative
(OECD Test Guideline 406)

Germ cell mutagenicity
Test Type: Chromosome aberration test in vitro
Test system: Chinese hamster ovary cells
Result: Conflicting results have been seen in different studies.

Carcinogenicity
Carcinogenicity - Did not show carcinogenic effects in animal experiments. (IUCLID)

Reproductive toxicity
No data available

Specific target organ toxicity - single exposure
May cause respiratory irritation.
The substance or mixture is classified as specific target organ toxicant, single exposure, category 3 with respiratory tract irritation.

Acute inhalation toxicity - mucosal irritations, Cough, Shortness of breath, Inhalation may lead to the formation of oedemas in the respiratory tract., Possible damages:, damage of respiratory tract, tissue damage

Specific target organ toxicity - repeated exposure
The substance or mixture is not classified as specific target organ toxicant, repeated exposure.

Aspiration hazard
No aspiration toxicity classification

SECTION 12: Ecological information

12.1 Toxicity

Mixture
No data available

12.2 Persistence and degradability
No data available

12.3 Bioaccumulative potential
No data available

12.4 Mobility in soil
No data available

12.5 Results of PBT and vPvB assessment
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Endocrine disrupting properties
No data available

12.7 Other adverse effects
No data available

Components

Hydrochloric Acid
No data available

Toxicity to fish	LC50 - Gambusia affinis (Mosquito fish) - 282 mg/l - 96 h Remarks: (IUCLID)

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Product
Waste material must be disposed of in accordance with the national and local regulations. Leave chemicals in original containers. No mixing with other waste. Handle uncleaned containers like the product itself. See www.retrologistik.com for processes regarding the return of chemicals and containers, or contact us there if you have further questions.

SECTION 14: Transport information

DOT (US)
UN number: 1789 Class: 8 Packing group: II
Proper shipping name: Hydrochloric acid
Reportable Quantity (RQ):
Poison Inhalation Hazard: No

IMDG
UN number: 1789 Class: 8 Packing group: II EMS-No: F-A, S-B
Proper shipping name: HYDROCHLORIC ACID

IATA
UN number: 1789 Class: 8 Packing group: II
Proper shipping name: Hydrochloric acid

SECTION 15: Regulatory information

SARA 302 Components
This material does not contain any components with a section 302 EHS TPQ.

SARA 313 Components
The following components are subject to reporting levels established by SARA Title III, Section 313:

	CAS-No.	Revision Date
Hydrochloric Acid	7647-01-0	2013-02-08

SARA 311/312 Hazards
Acute Health Hazard

Massachusetts Right To Know Components

	CAS-No.	Revision Date
water	7732-18-5	
Hydrochloric Acid	7647-01-0	2013-02-08

Pennsylvania Right To Know Components

	CAS-No.	Revision Date
Hydrochloric Acid	7647-01-0	2013-02-08

SECTION 16: Other information

Further information
The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide. The information in this document is based on the present state of our knowledge and is applicable to the product with regard to appropriate safety precautions. It does not represent any guarantee of the properties of the product. Sigma-Aldrich Corporation and its Affiliates shall not be held liable for any damage resulting from handling or from contact with the above product. See

www.sigma-aldrich.com and/or the reverse side of invoice or packing slip for additional terms and conditions of sale.

The branding on the header and/or footer of this document may temporarily not visually match the product purchased as we transition our branding. However, all of the information in the document regarding the product remains unchanged and matches the product ordered. For further information please contact mlsbranding@sial.com.

Version: 6.9 Revision Date: 03/18/2023 Print Date: 04/22/2023

SAFETY DATA SHEET

Creation Date 12-Mar-2009 **Revision Date** 24-Dec-2021 **Revision Number** 9

1. Identification

Product Name **Nitric acid (67 - 70%)**

Cat No. : **A467-1, A467-2, A467-250, A467-500**

CAS No 7697-37-2
Synonyms Azotic acid; Engraver's acid; Aqua fortis

Recommended Use Laboratory chemicals.
Uses advised against Food, drug, pesticide or biocidal product use.

Details of the supplier of the safety data sheet

Company
Fisher Scientific Company
One Reagent Lane
Fair Lawn, NJ 07410
Tel: (201) 796-7100

Emergency Telephone Number Chemtrec US: (800) 424-9300
Chemtrec EU: 001-703-527-3887

2. Hazard(s) identification

Classification
This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Oxidizing liquids	Category 3
Corrosive to metals	Category 1
Acute Inhalation Toxicity - Vapors	Category 3
Skin Corrosion/Irritation	Category 1 A
Serious Eye Damage/Eye Irritation	Category 1

Label Elements

Signal Word
Danger

Hazard Statements
May intensify fire; oxidizer
May be corrosive to metals
Causes severe skin burns and eye damage

Toxic if inhaled
Corrosive to the respiratory tract

Precautionary Statements
Prevention
Do not breathe dust/fume/gas/mist/vapors/spray
Wash face, hands and any exposed skin thoroughly after handling
Wear protective gloves/protective clothing/eye protection/face protection
Use only outdoors or in a well-ventilated area
Keep away from heat/sparks/open flames/hot surfaces. - No smoking
Keep/Store away from clothing/ other combustible materials
Take any precaution to avoid mixing with combustibles
Keep only in original container
Wear respiratory protection
Response
Immediately call a POISON CENTER or doctor/physician
Inhalation
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
Immediately call a POISON CENTER or doctor/physician
Skin
IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower
Wash contaminated clothing before reuse
Eyes
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
Ingestion
IF SWALLOWED: Rinse mouth. DO NOT induce vomiting
Fire
In case of fire: Use CO2, dry chemical, or foam for extinction
Spills
Absorb spillage to prevent material damage
Storage
Store locked up
Store in a well-ventilated place. Keep container tightly closed
Store in a dry place
Disposal
Dispose of contents/container to an approved waste disposal plant
Hazards not otherwise classified (HNOC)
Corrosive to the respiratory tract

3. Composition/Information on Ingredients

Component	CAS No	Weight %
Nitric acid …% [C ≤ 70 %]	7697-37-2	65 - 70
Water	7732-18-5	30 - 35

4. First-aid measures

General Advice Immediate medical attention is required. Show this safety data sheet to the doctor in

attendance.

Eye Contact Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Immediate medical attention is required.

Skin Contact Wash off immediately with plenty of water for at least 15 minutes. Remove and wash contaminated clothing and gloves, including the inside, before re-use. Call a physician immediately.

Inhalation If breathing is difficult, give oxygen. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Remove from exposure, lie down. Call a physician immediately.

Ingestion Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Clean mouth with water. Call a physician immediately.

Most important symptoms and effects Causes burns by all exposure routes. Ingestion causes severe swelling, severe damage to the delicate tissue and danger of perforation: Product is a corrosive material. Use of gastric lavage or emesis is contraindicated. Possible perforation of stomach or esophagus should be investigated

Notes to Physician Treat symptomatically

5. Fire-fighting measures

Suitable Extinguishing Media CO_2, dry chemical, dry sand, alcohol-resistant foam.

Unsuitable Extinguishing Media No information available

Flash Point Not applicable
Method - No information available

Autoignition Temperature No information available
Explosion Limits
Upper No data available
Lower No data available
Oxidizing Properties Oxidizer

Sensitivity to Mechanical Impact No information available
Sensitivity to Static Discharge No information available

Specific Hazards Arising from the Chemical
Thermal decomposition can lead to release of irritating gases and vapors. The product causes burns of eyes, skin and mucous membranes. Oxidizer: Contact with combustible/organic material may cause fire. May ignite combustibles (wood paper, oil, clothing, etc.).

Hazardous Combustion Products
Nitrogen oxides (NOx). Thermal decomposition can lead to release of irritating gases and vapors.
Protective Equipment and Precautions for Firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear. Thermal decomposition can lead to release of irritating gases and vapors.

NFPA

Health	Flammability	Instability	Physical hazards
4	0	0	OX

6. Accidental release measures

Personal Precautions Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Ensure adequate ventilation. Use personal protective equipment as required.

Environmental Precautions Should not be released into the environment. Do not flush into surface water or sanitary sewer system. See Section 12 for additional Ecological Information.

Methods for Containment and Clean Up Soak up with inert absorbent material. Keep in suitable, closed containers for disposal. Sweep up and shovel into suitable containers for disposal. Wear self-contained breathing apparatus and protective suit.

7. Handling and storage

Handling Use only under a chemical fume hood. Wear personal protective equipment/face protection. Do not get in eyes, on skin, or on clothing. Do not ingest. If swallowed then seek immediate medical assistance. Do not breathe mist/vapors/spray. Keep away from clothing and other combustible materials.

Storage. Keep containers tightly closed in a dry, cool and well-ventilated place. Do not store near combustible materials. Do not store in metal containers. Keep in properly labeled containers. Corrosives area. Incompatible Materials. Combustible material. Strong bases. Reducing Agent. Metals. Finely powdered metals. Organic materials. Aldehydes. Alcohols. Cyanides. Ammonia. Strong reducing agents.

8. Exposure controls / personal protection

Exposure Guidelines

Component	ACGIH TLV	OSHA PEL	NIOSH IDLH	Mexico OEL (TWA)
Nitric acid …% [C ≤ 70 %]	TWA: 2 ppm STEL: 4 ppm	(Vacated) TWA: 2 ppm (Vacated) TWA: 5 mg/m³ (Vacated) STEL: 4 ppm (Vacated) STEL: 10 mg/m³ TWA: 2 ppm TWA: 5 mg/m³	IDLH: 25 ppm TWA: 2 ppm TWA: 5 mg/m³ STEL: 4 ppm STEL: 10 mg/m³	TWA: 2 ppm STEL: 4 ppm

Legend

ACGIH - American Conference of Governmental Industrial Hygienists
OSHA - Occupational Safety and Health Administration
NIOSH IDLH: NIOSH - National Institute for Occupational Safety and Health

Engineering Measures Use only under a chemical fume hood. Ensure that eyewash stations and safety showers are close to the workstation location. Ensure adequate ventilation, especially in confined areas.

Personal Protective Equipment

Eye/face Protection Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166. Tight sealing safety goggles. Face protection shield.

Skin and body protection Wear appropriate protective gloves and clothing to prevent skin exposure.

Respiratory Protection Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

Hygiene Measures Keep away from food, drink and animal feeding stuffs. When using do not eat, drink or smoke. Contaminated work clothing should not be allowed out of the workplace. Provide regular cleaning of equipment, work area and clothing. Avoid contact with skin, eyes or clothing. Remove and wash contaminated clothing and gloves, including the inside, before re-use. Wear suitable gloves and eye/face protection.

9. Physical and chemical properties

Physical State	Liquid
Appearance	Clear Colorless, Light yellow
Odor	Strong Acrid
Odor Threshold	No information available
pH	< 1.0 (0.1M)
Melting Point/Range	-41 °C / -41.8 °F
Boiling Point/Range	Not applicable
Flash Point	Not applicable
Evaporation Rate	No information available
Flammability (solid,gas)	Not applicable
Flammability or explosive limits	
Upper	No data available
Lower	No data available
Vapor Pressure	0.94 kPa (20°C)
Vapor Density	No information available
Specific Gravity	1.40
Solubility	miscible
Partition coefficient; n-octanol/water	No data available
Autoignition Temperature	No information available
Decomposition Temperature	No information available
Viscosity	No information available
Molecular Formula	HNO3
Molecular Weight	63.01

10. Stability and reactivity

Reactive Hazard Yes

Stability Oxidizer: Contact with combustible/organic material may cause fire.

Conditions to Avoid Incompatible products. Combustible material. Excess heat. Exposure to air or moisture over prolonged periods.

Incompatible Materials Combustible material, Strong bases, Reducing Agent, Metals, Finely powdered metals, Organic materials, Aldehydes, Alcohols, Cyanides, Ammonia, Strong reducing agents

Hazardous Decomposition Products Nitrogen oxides (NOx), Thermal decomposition can lead to release of irritating gases and vapors

Hazardous Polymerization Hazardous polymerization does not occur.

Hazardous Reactions None under normal processing.

11. Toxicological information

Acute Toxicity

Product Information

Oral LD50	Based on ATE data, the classification criteria are not met. ATE > 2000 mg/kg.
Dermal LD50	Based on ATE data, the classification criteria are not met. ATE > 2000 mg/kg.
Mist LC50	Category 3. ATE = 1 - 5 mg/l. Category 4.
Vapor LC50	Based on ATE data, the classification criteria are not met. ATE > 20 mg/l.

Component Information

Component	LD50 Oral	LD50 Dermal	LC50 Inhalation
Nitric acid …% [C ≤ 70 %]	Not listed	Not listed	LC50 = 2500 ppm. (Rat) 1h
Water	-	-	-

Toxicologically Synergistic Products No information available

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Irritation Causes severe burns by all exposure routes

Sensitization No information available

Carcinogenicity The table below indicates whether each agency has listed any ingredient as a carcinogen.

Component	CAS No	IARC	NTP	ACGIH	OSHA	Mexico
Nitric acid …% [C ≤ 70 %]	7697-37-2	Not listed	Not listed	Not listed	Not listed	Not listed
Water	7732-18-5	Not listed	Not listed	Not listed	Not listed	Not listed

Mutagenic Effects No information available

Reproductive Effects No information available.

Developmental Effects No information available.

Teratogenicity No information available.

STOT - single exposure None known
STOT - repeated exposure None known

Aspiration hazard No information available

Symptoms / effects,both acute and delayed Ingestion causes severe swelling, severe damage to the delicate tissue and danger of perforation: Product is a corrosive material. Use of gastric lavage or emesis is contraindicated. Possible perforation of stomach or esophagus should be investigated

Endocrine Disruptor Information No information available

Other Adverse Effects The toxicological properties have not been fully investigated.

12. Ecological information

Ecotoxicity
Do not empty into drains. Large amounts will affect pH and harm aquatic organisms.

Persistence and Degradability Miscible with water Persistence is unlikely based on information available.

Bioaccumulation/ Accumulation No information available.

Mobility Will likely be mobile in the environment due to its water solubility.

Component	log Pow
Nitric acid …% [C ≤ 70 %]	-2.3

13. Disposal considerations

Waste Disposal Methods Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. Chemical waste generators must also consult local, regional, and national hazardous waste regulations to ensure complete and accurate classification.

14. Transport information

SAFETY DATA SHEET

Version 6.15
Revision Date 04/10/2023
Print Date 04/22/2023

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1 Product identifiers

Product name : Sulfuric acid

Product Number : 339741
Brand : Aldrich
Index-No. : 016-020-00-8
CAS-No. : 7664-93-9

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich Inc.
3050 SPRUCE ST
ST. LOUIS MO 63103
UNITED STATES

Telephone : +1 314 771-5765
Fax : +1 800 325-5052

1.4 Emergency telephone

Emergency Phone # : 800-424-9300 CHEMTREC (USA) +1-703-527-3887 CHEMTREC (International) 24 Hours/day; 7 Days/week

SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)

Corrosive to Metals (Category 1), H290
Skin corrosion (Category 1A), H314
Serious eye damage (Category 1), H318

For the full text of the H-Statements mentioned in this Section, see Section 16.

2.2 GHS Label elements, including precautionary statements

Pictogram

Signal Word Danger

Hazard statement(s)

H290	May be corrosive to metals.
H314	Causes severe skin burns and eye damage.

Precautionary statement(s)

P234	Keep only in original container.
P264	Wash skin thoroughly after handling.
P280	Wear protective gloves/ protective clothing/ eye protection/ face protection.
P301 + P330 + P331	IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303 + P361 + P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/ shower.
P304 + P340 + P310	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/ doctor.
P305 + P351 + P338 + P310	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/ doctor.
P363	Wash contaminated clothing before reuse.
P390	Absorb spillage to prevent material damage.
P405	Store locked up.
P406	Store in corrosive resistant container with a resistant inner liner.
P501	Dispose of contents/ container to an approved waste disposal plant.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

SECTION 3: Composition/information on ingredients

3.1 Substances

Formula	:	H_2O_4S
Molecular weight	:	98.08 g/mol
CAS-No.	:	7664-93-9
EC-No.	:	231-639-5
Index-No.	:	016-020-00-8

Component	Classification	Concentration
sulphuric acid		
	Met. Corr. 1; Skin Corr. 1A; Eye Dam. 1; H290, H314, H318 Concentration limits: >= 0.3 %: Met. Corr. 1, H290; >= 15 %: Skin Corr. 1A, H314; 5 - < 15 %: Skin Irrit. 2, H315; 5 - < 15 %: Eye Irrit. 2, H319;	<= 100 %

For the full text of the H-Statements mentioned in this Section, see Section 16.

SECTION 4: First aid measures

4.1 Description of first-aid measures

General advice
First aiders need to protect themselves. Show this material safety data sheet to the doctor in attendance.

If inhaled
After inhalation: fresh air. Call in physician.

In case of skin contact
In case of skin contact: Take off immediately all contaminated clothing. Rinse skin with water/ shower. Call a physician immediately.

In case of eye contact
After eye contact: rinse out with plenty of water. Immediately call in ophthalmologist. Remove contact lenses.

If swallowed
After swallowing: make victim drink water (two glasses at most), avoid vomiting (risk of perforation). Call a physician immediately. Do not attempt to neutralise.

4.2 Most important symptoms and effects, both acute and delayed
The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed
No data available

SECTION 5: Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media
Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

Unsuitable extinguishing media
For this substance/mixture no limitations of extinguishing agents are given.

5.2 Special hazards arising from the substance or mixture
Sulfur oxides
Not combustible.
Ambient fire may liberate hazardous vapours.

5.3 Advice for firefighters
Stay in danger area only with self-contained breathing apparatus. Prevent skin contact by keeping a safe distance or by wearing suitable protective clothing.

5.4 Further information
Suppress (knock down) gases/vapors/mists with a water spray jet. Prevent fire extinguishing water from contaminating surface water or the ground water system.

SECTION 6: Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures

Advice for non-emergency personnel: Do not breathe vapors, aerosols. Avoid substance contact. Ensure adequate ventilation. Evacuate the danger area, observe emergency procedures, consult an expert.
For personal protection see section 8.

6.2 Environmental precautions

Do not let product enter drains.

6.3 Methods and materials for containment and cleaning up

Cover drains. Collect, bind, and pump off spills. Observe possible material restrictions (see sections 7 and 10). Take up with liquid-absorbent and neutralising material (e.g. Chemizorb® H^+, Merck Art. No. 101595). Dispose of properly. Clean up affected area.

6.4 Reference to other sections

For disposal see section 13.

SECTION 7: Handling and storage

7.1 Precautions for safe handling

For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities

Storage conditions
No metal containers.
Tightly closed.

Storage class
Storage class (TRGS 510): 8B: Non-combustible, corrosive hazardous materials

7.3 Specific end use(s)

Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Ingredients with workplace control parameters

Component	CAS-No.	Value	Control parameters	Basis
sulphuric acid	7664-93-9	TWA	0.2 mg/m3	USA. ACGIH Threshold Limit Values (TLV)
		TWA	1 mg/m3	USA. Table Z-1-A Limits for Air Contaminants (1989 vacated values)
		TWA	1 mg/m3	USA. Occupational Exposure Limits (OSHA) - Table Z-1 Limits for Air Contaminants

8.2 Exposure controls

Appropriate engineering controls
Change contaminated clothing and immerse in water. Preventive skin protection Wash hands and face after working with substance.

Personal protective equipment

Eye/face protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU). Tightly fitting safety goggles

Skin protection
This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN374 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de).
Full contact
Material: Viton®
Minimum layer thickness: 0.7 mm
Break through time: 480 min
Material tested:Vitoject® (KCL 890 / Aldrich Z677698, Size M)

This recommendation applies only to the product stated in the safety data sheet, supplied by us and for the designated use. When dissolving in or mixing with other substances and under conditions deviating from those stated in EN374 please contact the supplier of CE-approved gloves (e.g. KCL GmbH, D-36124 Eichenzell, Internet: www.kcl.de).
Splash contact
Material: butyl-rubber
Minimum layer thickness: 0.7 mm
Break through time: 120 min
Material tested:Butoject® (KCL 898)

Body Protection
Acid-resistant protective clothing

Respiratory protection
required when vapours/aerosols are generated. Our recommendations on filtering respiratory protection are based on the following standards: DIN EN 143, DIN 14387 and other accompanying standards relating to the used respiratory protection system.

Control of environmental exposure
Do not let product enter drains.

SECTION 9: Physical and chemical properties

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: clear, liquid Color: colorless
b)	Odor	odorless
c)	Odor Threshold	Not applicable
d)	pH	1.2 at 5 g/l
e)	Melting point/freezing point	Melting point: 10.31 °C (50.56 °F)
f)	Initial boiling point and boiling range	290 °C 554 °F - lit.
g)	Flash point	()No data available
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapor pressure	1.33 hPa at 145.8 °C (294.4 °F)
l)	Vapor density	3.39 - (Air = 1.0)
m)	Density	1.84 g/cm3 at 25 °C (77 °F) - lit.
	Relative density	No data available
n)	Water solubility	soluble
o)	Partition coefficient: n-octanol/water	Not applicable for inorganic substances
p)	Autoignition temperature	No data available
q)	Decomposition temperature	No data available
r)	Viscosity	No data available
s)	Explosive properties	No data available
t)	Oxidizing properties	none

9.2 Other safety information

Surface tension	55.1 mN/m at 20 °C (68 °F)
Relative vapor density	3.39 - (Air = 1.0)

SECTION 10: Stability and reactivity

10.1 Reactivity
No data available

10.2 Chemical stability
The product is chemically stable under standard ambient conditions (room temperature) .

10.3 Possibility of hazardous reactions
A risk of explosion and/or of toxic gas formation exists with the following substances:
Water
Alkali metals
alkali compounds
Ammonia
Aldehydes
acetonitrile
Alkaline earth metals
alkalines
Acids
alkaline earth compounds
Metals
metal alloys
Oxides of phosphorus
phosphorus
hydrides
halogen-halogen compounds
oxyhalogenic compounds
permanganates
nitrates
carbides
combustible substances
organic solvent
acetylidene
Nitriles
organic nitro compounds
anilines
Peroxides
picrates
nitrides
lithium silicide
iron(III) compounds
bromates
chlorates
Amines
perchlorates
hydrogen peroxide

10.4 Conditions to avoid
no information available

10.5 Incompatible materials
animal/vegetable tissuesContact with metals liberates hydrogen gas.

10.6 Hazardous decomposition products
In the event of fire: see section 5

SECTION 11: Toxicological information

11.1 Information on toxicological effects

Acute toxicity
LD50 Oral - Rat - male and female - 2,140 mg/kg
Remarks: (ECHA)
Inhalation: Corrosive to respiratory system.
Dermal: No data available

Skin corrosion/irritation
Skin - Rabbit
Result: Extremely corrosive and destructive to tissue.
Remarks: (IUCLID)

Serious eye damage/eye irritation
Remarks: Causes serious eye damage.

Respiratory or skin sensitization
No data available

Germ cell mutagenicity
Test Type: Ames test
Test system: Salmonella typhimurium
Result: negative
Remarks: (HSDB)

Carcinogenicity
No data available

IARC: No ingredient of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

NTP: No ingredient of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.

Reproductive toxicity
No data available

Specific target organ toxicity - single exposure
No data available

Specific target organ toxicity - repeated exposure
No data available

Aspiration hazard
No data available

11.2 Additional Information

RTECS: WS5600000
Material is extremely destructive to tissue of the mucous membranes and upper respiratory tract, eyes, and skin., spasm, inflammation and edema of the larynx, spasm, inflammation and edema of the bronchi, pneumonitis, pulmonary edema, burning sensation, Cough, wheezing, laryngitis, Shortness of breath, Headache, Nausea, Vomiting, Pulmonary edema. Effects may be delayed.

To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

After inhalation of aerosols: damage to the affected mucous membranes. After skin contact: severe burns with formation of scabs. After eye contact: burns, corneal lesions. After swallowing: severe pain (risk of perforation!), nausea, vomiting and diarrhoea. After a latency period of several weeks possibly pyloric stenosis.

Other dangerous properties can not be excluded.

Handle in accordance with good industrial hygiene and safety practice.

Stomach - Irregularities - Based on Human Evidence

Stomach - Irregularities - Based on Human Evidence

SECTION 12: Ecological information

12.1 Toxicity

Toxicity to daphnia and other aquatic invertebrates	static test EC50 - Daphnia magna (Water flea) - > 100 mg/l - 48 h (OECD Test Guideline 202)
Toxicity to algae	static test ErC50 - Desmodesmus subspicatus (green algae) - > 100 mg/l - 72 h (OECD Test Guideline 201)

12.2 Persistence and degradability

The methods for determining the biological degradability are not applicable to inorganic substances.

12.3 Bioaccumulative potential

No data available

12.4 Mobility in soil

No data available

12.5 Results of PBT and vPvB assessment

PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Endocrine disrupting properties

No data available

12.7 Other adverse effects

Biological effects:
Harmful effect due to pH shift.
Caustic even in diluted form.
Does not cause biological oxygen deficit.
Endangers drinking-water supplies if allowed to enter soil and/or waters in large quantities.
Neutralisation possible in waste water treatment plants.
Discharge into the environment must be avoided.

SECTION 13: Disposal considerations

13.1 Waste treatment methods

Product
Waste material must be disposed of in accordance with the national and local regulations. Leave chemicals in original containers. No mixing with other waste. Handle uncleaned containers like the product itself. See www.retrologistik.com for processes regarding the return of chemicals and containers, or contact us there if you have further questions.

SECTION 14: Transport information

DOT (US)
UN number: 1830 Class: 8 Packing group: II
Proper shipping name: Sulfuric acid

Activity Hazard Analyses

Activity Hazard Analysis:
Drilling Observation and Sampling in Excavation

Activity/Work Task:	**Drilling Observation and Sampling**		
Project Location:	300 Boren Avenue North and 399 Fairview Avenue North		
Project Number:	0731-004		
Date Prepared:	4/23/2025	**Review Date:**	4/25/2025
Prepared by (Name, Title):	Linnea Coleman, Staff Geologist		
Reviewed by (Name, Title):	Clare Tochilin, Senior Geologist		

This AHA involves the following:
- Establishing site-specific measures.

Equipment to be used:
- Level D PPE
- Photoionization detector

Inspection requirements:
- Inspect equipment daily per manufacturer's instructions. Tag tools that are defective and remove them from service.
- Inspect all PPE prior to use.

Training requirements:	Competent/qualified personnel:
• Orientation to Site-Specific HASP • Daily Health and Safety Tailgate Meeting Form	• Linnea Coleman

Overall Risk Assessment Code for this AHA (most severe or probable hazard): **H**

Risk Assessment Code Matrix

Severity	Probability				
	Frequent	Likely	Occasional	Seldom	Unlikely
Catastrophic	E	E	H	H	M
Critical	E	H	H	M	L
Marginal	H	M	M	L	L
Negligible	M	L	L	L	L

Step 1: Review each **hazard** and its identified **safety controls** and determine its Risk Assessment Code using the matrix above. **Probability** is the likelihood the hazard may cause an incident, near miss, or accident. (Options are frequent, likely, occasional, seldom, or unlikely.) **Severity** is the outcome/degree if an incident, near miss, or accident did occur. (Options are catastrophic, critical, marginal, or negligible.)

Step 2: Identify the Risk Assessment Code (i.e., the intersection of probability and severity) as E, H, M, or L for each hazard identified in this AHA. The Risk Assessment Code for the most severe or probable hazard is considered the overall Risk Assessment Code for this AHA. Note the letter at the top of this AHA.

Risk Assessment Code Chart

- **E = Extremely High Risk**
- **H = High Risk**
- **M = Moderate Risk**
- **L = Low Risk**

Activity Hazard Analysis:
Drilling Observation and Sampling in Excavation

Job Steps	Hazards	Controls	RAC
1 Perform site walk upon arrival.	Site hazards or conditions not identifed in the HASP	Perform site walks daily or if conditions change to identify hazards. • Communicate what is found to site personnel at the tailgate safety meeting. • Correct what you can safely. • Discuss how to accomplish the corrections safely. • Call the PM if more assistance, equipment, or PPE is needed to correct any issues. • Notify the PM of all changes.	L
2 Establish work zone(s) and set up tools, equipment, and sampling containers.	Equipment failure	Perform equipment and tool checks per the mobilization/demobilization AHA and calibrate any equipment per manufacturer instructions.	H
	Site security	Utilize appropriate site control devices such as cones, vehicle tape, or caution tape per HASP or site needs to delineate the work zone. Check in with building tenant.	
	Work in a trench/excavation	Discuss appropriate excavation entrance and exits with site general contractor. If using a ladder to enter excavation, maintain 3 points of contact at all times. Minimize amount of equipment being carried down ladder – use a bucket to lower equipment or ask excavator to move equipment for you.	
	Slips, trips, and falls	Do not leave tools or equipment on the ground to prevent tripping hazards.	
	Heavy equipment strike	• Discuss the order of sampling locations with the driller and ensure you are out of the way while the driller sets up and moves between locations. • Set up in the support zone at least 15 feet away from the drill rig. When selecting the support zone location, also consider earthquake safety, exit routes, and the likely radius and direction of any drill rig equipment failure.	

Activity Hazard Analysis:
Drilling Observation and Sampling in Excavation

3 Complete boring or moitoring well drilling and collect soil or reconnaissance groundwater samples.	Slips, trips, and falls	Always watch your footing: • Slow down and use extra caution around logs, rocks, and animal holes. • Consider an alternate route around extremely steep slopes (>50 percent grade), which can be hazardous under wet or dry conditions. • Watch for morning dew on grass and weeds, which makes slopes or smooth surfaces slippery. • Take another path or use extreme caution when walking on vegetative mats use for erosion control on slopes; these are trip-and-fall hazards. • Wear laced boots with a minimum 6-inch-high upper and non-skid Vibram-type lug soles for ankle support and traction on natural surfaces. • Ensure all boring locations are backfilled or covered to protect against falls.	M
	Muscle strain or sprain	Use your legs and avoid using your back while hand augering. Switch the task to another staff member or take a break if needed.	
	Work in a trench/excavation	If using a ladder to enter excavation, maintain 3 points of contact at all times. Avoid standing near exvavation walls in case of collapse.	
	Cross contamination	Use plastic to protect the ground or table from soil that is generated and do not place sample containers or lids on the ground.	
	Utility strike	Arrange for public utility locates to be performed at least two days before borings are advanced. Use a private utility locate service for borings advanced on private property.	
	Heavy equipment strike	Discuss boring locations with the equipment operator, determine a safe spot to stand, and determine how you will approach the operator to provide requests for sampling locations. Do not approach the operator if you do not have eye contact or have not used hand signals indicating it is safe to approach.	
	Chemical action levels exceeded	Monitor the air sampling equipment, such as the photoionization detector, for action levels related to the chemicals of concern listed in the HASP.	
	Equipment leak	Ensure a spill kit is present in the exclusion zone to allow the driller and support personnel to react quickly to contain the spill after equipment shutoff.	
	Contact with chemicals	Use chemical-resistant gloves while sampling soil or groundwater or handling sampling containers, especially those that may contain an acid preservative. Level D PPE should be used at all times while on site.	
4 Demobilize from the site.	Site security	Ensure tools, equipment, and samples are put away promptly and securely per the mobilization/demobilization AHA. If there are any property fences or doors that need to be secured, check that all entry points are secured.	L
	Equipment or sample containers left on site	Check the work area before you leave to ensure conditions are safe if someone were to access the area and that equipment and samples were not left behind inadvertently. Ensure all site trash generated is properly disposed of.	

	Muscle strain or sprain	When moving equipment or sample coolers, ensure you lift with your legs, not your back, or get an assistant to help with heavy items.	

Note: This AHA is not an exhaustive summary of all hazards associated with the site. Refer to the Site-Specific Health and Safety Plan for additional requirements. Follow general site safety controls for slips, trips, and falls; biological hazards; cuts, lacerations, and pinch points; and emergency procedures.

Activity Hazard Analysis: Groundwater Monitoring

	Job Steps	Hazards	Controls	RAC
1	Perform site walk upon arrival.	Site hazards or conditions not identifed in the HASP	Perform site walks daily or if conditions change to identify hazards. • Communicate what is found to site personnel at the tailgate safety meeting. • Correct what you can safely. • Discuss how to accomplish the corrections safely. • Call the PM if more assistance, equipment, or PPE is needed to correct any issues. • Notify the PM of all changes.	L
2	Establish work zone(s) and set up tools, equipment, and sampling containers.	Equipment failure	Perform equipment and tool checks per the mobilization/demobilization AHA and calibrate any equipment per manufacturer instructions.	L
		Site security	Utilize appropriate site control devices such as cones, vehicle tape, or caution tape per HASP or site needs to delineate the work zone. Check in with building tenant.	
		Slips, trips, and falls	Do not leave tools or equipment on the ground to prevent tripping hazards.	
		Traffic	Use cones and caution tape to mark out work area. Use field vehicle as a barrier/blockade especially at MW28. Have one person as a spotter watching for cars/busses, especially at MW33.	
3	Conduct depth to water measurements.	Slips, trips, and falls	Always watch your footing. Wear laced boots with a minimum 6-inch-high upper and non-skid Vibram-type lug soles for ankle support and traction on natural surfaces.	L
		Muscle strain or sprain	Use your legs and avoid using your back while opening well lids. Use the correct tool for the job.	
		Cross contamination	Clean the water level meter between all measuring locations.	
		Heavy equipment or vehicle strike	Be aware of your surroundings and any vehicle hazards that may be present on site and ensure the work zone is adequately delineated while mobilizing to all site wells.	
4	Collect groundwater samples per the project work plan.	Site security	Be aware of your surroundings and any vehicle hazards that may be present on site and ensure the work zone is adequately delineated while mobilizing to all site wells.	M
		Traffic	Use cones and caution tape to mark out work area. Use field vehicle as a barrier/blockade especially at MW28. Have one person as a spotter watching for cars/busses, especially at MW33.	
		Equipment or sample containers left on site	Check the work area before you leave to ensure conditions are safe if someone were to access the area and that equipment and samples were not left behind inadvertently.	
		Muscle strain or sprain	Use your legs and avoid using your back while opening well lids. Use the correct tool for the job. When moving equipment or sample coolers, ensure you lift with your legs, not your back, or get an assistant to help with heavy items.	
		Cross contamination	Clean the water level meter and all sampling equipment between all well locations. Collect samples by working from cleanest to dirtiest locations, if possible.	

	Contact with chemicals	Wear chemical-resistant PPE and all Level D PPE as described in the HASP to prevent contact with contaminants in groundwater and acid preservatives in sampling containers.	
	Generator Use	Point the exhaust vent away from the work area.	
	Air Compressor Use	Stand back when depressurizing air compressor after use. Read pressure gauges on air compressor to be aware of how much pressure it is under. Empty condensation in chamber after use (after depressurizing).	
5 Demobilize from the site.	Site security	Ensure tools, equipment, and samples are put away promptly and securely per the mobilization/demobilization AHA. If there are any property fences or doors that need to be secured, check that all entry points are secured.	**L**
	Slips, trips, and falls	Check the work area before you leave to ensure conditions are safe if someone were to access the area.

This AHA involves the following:

- Establishing site-specific measures.

Equipment to be used:

- Level D PPE (hard hat, safety glasses, gloves, steel-toed work boots, high-visibility safety vest, hearing protection)
- Hand tools
- Field vehicle

Inspection requirements:

- Inspect equipment daily per manufacturer's instructions. Tag tools that are defective and remove them from service.
- Inspect all PPE prior to use.

Training requirements:	Competent/qualified personnel:
• Orientation to Site-Specific HASP • Daily Health and Safety Tailgate Meeting Form	• Linnea Coleman

Overall Risk Assessment Code for this AHA (most severe or probable hazard): **M**

Risk Assessment Code Matrix

Severity	Probability				
	Frequent	Likely	Occasional	Seldom	Unlikely
Catastrophic	E	E	H	H	M
Critical	E	H	H	M	L
Marginal	H	M	M	L	L
Negligible	M	L	L	L	L

Step 1: Review each **hazard** and its identified **safety controls** and determine its Risk Assessment Code using the matrix above. **Probability** is the likelihood the hazard may cause an incident, near miss, or accident. (Options are frequent, likely, occasional, seldom, or unlikely.) **Severity** is the outcome/degree if an incident, near miss, or accident did occur. (Options are catastrophic, critical, marginal, or negligible.)

Step 2: Identify the Risk Assessment Code (i.e., the intersection of probability and severity) as E, H, M, or L for each hazard identified in this AHA. The Risk Assessment Code for the most severe or probable hazard is considered the overall Risk Assessment Code for this AHA. Note the letter at the top of this AHA.

Risk Assessment Code Chart

- **E = Extremely High Risk**
- **H = High Risk**
- **M = Moderate Risk**
- **L = Low Risk**

Activity Hazard Analysis:
Mobilization/Demobilization and Site Preparation

Job Steps	Hazards	Controls	RAC
1 Prepare for mobilization	N/A	Prior to leaving for the site: • Obtain and review HASP prior to site visit, if possible. • Determine PPE needs and bring required PPE to the site, if items are not otherwise being provided at the site (e.g., steel-toed boots). • Determine training and medical monitoring needs and ensure all required health and safety training and medical monitoring has been received and is current. • Ensure all workers are fit for duty (i.e., alert, well rested, and mentally and physically fit to perform the work assignment). • Ensure that respirator training and fit testing has occurred within the past year if respiratory protection is required or potentially required. • Familiarize yourself with the route to the site.	L
	Vehicle defects	Use the field vehicle checklist and inspect the company-owned or -leased vehicle (if being used) for defects such as: • Flat tires • Worn or torn windshield wipers • Oil puddles under vehicle • Inoperable headlights, brake lights, and/or turn signals	
	Insufficient emergency equipment and unsecured loads	• Ensure the vehicle has a first aid kit. • Ensure the vehicle is equipped with warning flashers and/or flares that the warning flashers are operational. • Ideally bring a charged cell phone to call for help in the event of an emergency. • Properly secure all tools. • Equip the vehicle with chocks if the vehicle is to be left running unattended. • Ensure there is sufficient gasoline or diesel in the vehicle's tank.	
	Vehicle Clearance	• Ensure the vehicle used for site activities maintains a clearance lower than all clearance levels on site. • Ensure vehicle is clearly marked with this clearance and all operators of the vehicle are aware of the clearance.	

2	Operate the vehicle.	Collisions or unsafe driving conditions	Drive defensively: • Use a seat belt at all times when operating any vehicle on company business. • Drive at safe speeds for road conditions. • Maintain adequate following distances. • Pull over and stop if you have to look at a map. • Park to avoid needing to back up to leave the site. ○ If backing into a parking spot, walk around the vehicle to identify any hazards that might be present, espeically low-level hazards that may be difficult to see from inside the vehicle. Use a spotter if necessary.	**M**
3	Drive to the job site.	Dusty, winding, and/or narrow roads	• Drive confidently and defensively at all times. • Go slow around corners, occasionally clearing the windshield.	**M**

	Rocky or one-lane roads	• Stay clear of gullies and trenches, and drive slowly over rocks. • Yield the right-of-way to oncoming vehicles and find a safe place to pull over if needed.	
	Stormy weather and proximity to other motorists	• Inquire about or check weather conditions before leaving. • Be aware of oncoming storms. • Drive to avoid accidents or other situations created by mistakes of other motorists.	
	Anger or irritation before driving	Adjust your attitude, change the subject, or work out the problem before driving the vehicle. Consider letting someone else drive.	
	Turnaround on narrow roads	• Safely turn around with as much room as possible. • Know what is ahead and behind the vehicle. • Use a backer if available.	
	Sick or medicated	Let others on the work crew know you do not feel well and consider letting someone else drive.	
	Wet or slimy roads	Drive slow and safe and wear a seatbelt.	
	Animals on the road	• Drive slowly and watch for other animals nearby. • Be alert for animals darting out of wooded areas.	
	Ovehead power lines	• Use a spotter to ensure clearance when passing under overhead power lines. • Keep the spotter in clear sight in order to observe their signals at all times. • Use an atlernate route if necessary.	
	Driving in low-clearance zones (ie. parking garage)	• Be aware of vehicle height restrictions on site • Use shortest vehicle • Drive slowly in height restricted zones and listen for anything hitting top of the vehicle • Have one person outside the vehicle spotting	
4 Gain permission to enter the site.	Hostile landowner(s), livestock, or pets	• Talk to landowner and be courteous and diplomatic. • Ensure all animals on site have been secured away from the work area.	**L**

SoundEarth Strategies

Activity Hazard Analysis: Mobilization/Demobilization and Site Preparation

5	Mobilize equipment and supplies.	Struck by heavy equipment or vehicles	• Be aware of heavy equipment operations. • Do not stand directly behind heavy equipment when it is in operation. • Keep out of the swing radius of heavy equipment. • Be aware of the heavy equipment's counterweight swing and maintain an adequate buffer zone. • Be within the view of the operator when you are in the vicinity of heavy equipment. • Wear a high-visibility vest or T-shirt on site during daytime and a reflective vest on site at night.	M
		Struck by equipment or supplies	• Maintain proper space around work areas. If someone enters a work area, stop work. • When entering another worker's work area, give a verbal warning to let them know you are there.	
		Overexertion during unloading or loading of supplies	• Train workers or receive training on proper body mechanics. Do not bend or twist at the waist while exerting force or lifting. • Tightly secure all loads to truck beds to avoid loads shifting while in transit.	
		Caught in, on, or between equipment or supplies	Do not place yourself between two vehicles or between a vehicle and a fixed object.	
		Slips, trips, and falls	• Maintain three-point contact when mounting or dismounting vehicles or equipment. • Check surfaces before exiting vehicles or equipment and step down instead of jumping down. • Mark all holes and low spots in the area with banner tape and instruct personnel to avoid these areas.	
		Vehicle accident	Follow company vehicle operation policies and be aware of all stationary and mobile vehicles.	
6	Prepare the site.	Slips, trips, and falls	Mark all holes and low spots in the area with banner tape and instruct personnel to avoid these areas.	L
7	Install soil erosion and sediment controls.	Overexertion	• Train workers or receive training on the proper method of placing erosion controls. • Do not bend and twist at the wasit while lifting or exerting force.	M
		Struck by equipment or supplies	• Maintain proper space around work areas. If someone enters a work area, stop work. • When entering another worker's work area, give a verbal warning to let them know you are there.	
8	Drive back from the job site.	See hazards listed under item no. 3 above.	• Follow safe work practices under item no. 3 above.	M

Note: This AHA is not an exhaustive summary of all hazards associated with the site. Refer to the Site-Specific Health and Safety Plan for additional requirements. Follow general site safety controls for slips, trips, and falls; biological hazards; cuts, lacerations, and pinch points; and emergency procedures.
