Qualifiers

LCMS

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

Receipt
The samples were received on 1/23/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 5.9º C.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-843420 recovered above the upper control limit for Perfluoropentanoic acid (PFPeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FIT-002-N-S015-01212025 (320-118511-6), SRA-003-N-S012-01212025 (320-118511-35) and (CCVL 320-843420/2).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (CCB 320-843420/1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The transition mass ratio was outside of the established ratio limit for Perfluoropentanoic acid (PFPeA) and Perfluorooctanesulfonamide (PFOSA) in (CCVL 320-843420/2) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the low level continuing calibration verification (CCVL), there is no adverse impact to the data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The following samples in analytical batch 320-841927 were prepared and analyzed outside this time period : FIT-002-N-S015-01212025 (320-118511-6) and SRA-003-N-S012-01212025 (320-118511-35).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative

Receipt
The samples were received on 1/23/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 5.9º C.

LCMS
Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: FIT-002-N-S000-01212025 (320-118511-1), FIT-001-N-S005-01212025 (320-118511-11) and SRA-003-N-S000-01212025 (320-118511-30).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: FIT-007-N-S000-01212025 (320-118511-18) and SRA-004B-N-S000-01212025 (320-118511-41). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The continuing calibration verification (CCV) associated with batch 320-835755 recovered above the upper control limit for the isotope dilution compound 13C2 PFTeDA. The associated target analytes Perfluorotridecanoic acid (PFTrDA) and Perfluorotetradecanoic acid (PFTeDA) are within control limits. The samples associated with this CCV were non-detects for the affected target analytes; therefore, the data have been reported. The associated samples are impacted: FIT-007-N-S000-01212025 (320-118511-18), FIT-008-N-S000-01212025 (320-118511-19), FIT-006-N-S000-01212025 (320-118511-20), FIT-005-N-S000-01212025 (320-118511-21), FIT-004-N-S000-01212025 (320-118511-22), SRA-003-N-S000-01212025 (320-118511-30) and (CCV 320-835755/28).

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-835793 and analytical batch 320-836090 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: Results for samples SRA-004B-N-S000-01212025 (320-118511-41) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples prepared and analyzed outside this time period : FIT-002-N-S000-01212025 (320-118511-1), FIT-002-N-S006-01212025 (320-118511-4), FIT-001-N-S000-01212025 (320-118511-7), FIT-001-N-S005-01212025 (320-118511-11), FIT-003-N-S000-01212025 (320-118511-12), FIT-007-N-S000-01212025 (320-118511-18) and FIT-008-N-S000-01212025 (320-118511-19), FIT-006-N-S000-01212025 (320-118511-20), FIT-005-N-S000-01212025 (320-118511-21), FIT-004-N-S000-01212025 (320-118511-22), SRA-003-N-S000-01212025 (320-118511-30), SRA-003-N-S006-01212025 (320-118511-33), SRA-004A-N-S000-01212025 (320-118511-36), SRA-004A-N-S006-01212025 (320-118511-40), SRA-004B-N-S000-01212025 (320-118511-41), SRA-007A-N-S006-01212025 (320-118511-42), SRA-007B-N-S000-01212025 (320-118511-43) and SRA-006-N-S000-01212025 (320-118511-44).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following sample was yellow in color after extraction/final volume: SRA-004B-N-S000-01212025 (320-118511-41).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
320-118511-1

Revised report on 2-20-2025 for sample Id's.

Receipt

The samples were received on 1/23/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 5.9º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): FIT-003-N-S003-01212025 (320-118511-14). COC lists 1 container but recieved 2.

The following sample was listed on the Chain of Custody (COC); however, no sample was received: Sample 17. FIT-003-N-S011-01212025 (320-118511-17).

LCMS

Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following laboratory control sample (LCS) is below the method recommended limit: (LCS 320-829538/3-A). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the LCS.

Method 1633: The low-level continuing calibration verification (CCVL) associated with batch 320-829903 recovered above the upper control limit for 9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS) and 11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS). The sample(s) associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: EB-01212025 (320-118511-47), FB-01212025 (320-118511-48) and (CCVL 320-829903/2).

Method 1633: The transition mass ratio was outside the established ratio limit for 1H,1H,2H,2H-Perfluorohexane sulfonic acid (4:2 FTS) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the continuing calibration verification (CCV), there is no adverse impact to the data.(CCV 320-830987/1).

Method 1633: The continuing calibration verification low level (CCVL) associated with batch 320-830993 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVL 320-830993/4).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-830993 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Method 1633: The transition mass ratio was outside the established ratio limit for 1H,1H,2H,2H-Perfluorohexane sulfonic acid (4:2 FTS) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the CCV, there is no adverse impact to the data.(CCV 320-831414/19)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative

Receipt
The samples were received on 1/23/2025 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.3º C.

LCMS
Method 1633: The continuing calibration verification (CCV) associated with batch 320-835755 recovered above the upper/outside control limit for 13C5 PFPeA. The associated target analytes Perfluoropentanoic acid (PFPeA), Perfluoro-3-methoxypropanoic acid (PFMPA), Perfluoro-4-methoxybutanoic acid (PFMBA) and 3-Perfluoropropylpropanoic acid (3:3 FTCA) are within control limits. The samples associated with this CCV were non-detects for the affected target analytes; therefore, the data have been reported. The associated samples are impacted: RTA-002-N-S000-01202025 (320-118499-1), RTA-002-N-S006-01202025 (320-118499-4), PDW-002-N-S000-01202025 (320-118499-14), PDW-002-N-S006-01202025 (320-118499-17), PDW-001-N-S006-01202025 (320-118499-27) and (CCV 320-835755/1).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: PDW-002-N-S000-01202025 (320-118499-14).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-834661 were prepared and analyzed outside this time period : RTA-002-N-S000-01202025 (320-118499-1), RTA-002-N-S006-01202025 (320-118499-4), PDW-002-N-S000-01202025 (320-118499-14), PDW-002-N-S006-01202025 (320-118499-17) and PDW-001-N-S006-01202025 (320-118499-27).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118424-5

Revised on 6/3/2025 to add sample JTA-009-N-S030-01172025 .

Receipt
The samples were received on 1/21/2025 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.8º C.

LCMS
Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-845047 and analytical batch 320-846428 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: The low level laboratory control sample (LLCS), the laboratory control sample (LCS) and The laboratory control sample duplicate (LCSD) for preparation batch 320-845047 and analytical batch 320-846428 recovered outside control limits for the following analytes: 3-Perfluoropropylpropanoic acid (3:3 FTCA). The associated samples were re-prepared outside holding time. Both sets of data are reported.JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22), (LCS 320-845047/3-A), (LCSD 320-845047/4-A) and (LLCS 320-845047/2-A).

Method 1633: Results for sample JTA-008-N-S017-01172025 (320-118424-14) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following samples in analytical batch 320-844782 occurred outside this time period: JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22) and JTA-009-N-S030-01172025 (320-118424-23).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following samples were re-prepared outside of preparation holding time due to low 3:3 FTCA in QCs: JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22) and JTA-009-N-S030-01172025 (320-118424-23).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method 1633: The low level laboratory control sample (LLCS), the laboratory control sample (LCS) and The laboratory control sample duplicate (LCSD) for preparation batch 320-845047 and analytical batch 320-846428 recovered outside control limits for the following analytes: 3-Perfluoropropylpropanoic acid (3:3 FTCA). The associated samples were re-prepared outside holding time. Both sets of data are reported.JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22), (LCS 320-845047/3-A), (LCSD 320-845047/4-A) and (LLCS 320-845047/2-A).

Method 1633: Results for sample JTA-008-N-S017-01172025 (320-118424-14) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following samples in analytical batch 320-844782 occurred outside this time period: JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22) and JTA-009-N-S030-01172025 (320-118424-23).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following samples were re-prepared outside of preparation holding time due to low 3:3 FTCA in QCs: JTA-008-N-S017-01172025 (320-118424-14), JTA-009-N-S020-01172025 (320-118424-22) and JTA-009-N-S030-01172025 (320-118424-23).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Hello Afsaneh,

After reviewing the files your re-transmitted this morning can we update job 320-118424-5?
I originally requested the extraction for all three samples but would like to update to run 1633 for two of those samples and hold the extraction for one sample.
See the table below for details.

Lab Sample #	Client Sample ID	1633_Final

Job Narrative
320-118424-4

Receipt
The samples were received on 1/21/2025 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.8º C.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-843420 recovered above the upper control limit for Perfluoropentanoic acid (PFPeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: JTA-009-N-S015-01172025 (320-118424-21) and (CCVL 320-843420/2).

Method 1633: The transition mass ratio was outside of the established ratio limit for Perfluoropentanoic acid (PFPeA) and Perfluorooctanesulfonamide (PFOSA) in (CCVL 320-843420/2) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the low level continuing calibration verification (CCVL), there is no adverse impact to the data.

Method 1633: Internal standard (ISTD) response for the following sample was outside control limits: JTA-007-N-S013-01172025 (320-118424-7). The sample(s) was re-analyzed and ISTD response was outside control limits.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: JTA-007-N-S013-01172025 (320-118424-7). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: Results for sample JTA-007-N-S013-01172025 (320-118424-7) and JTA-008-N-S015-01172025 (320-118424-13) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The following samples in analytical batch 320-841927 were prepared and analyzed outside this time period : JTA-007-N-S013-01172025 (320-118424-7), JTA-008-N-S015-01172025 (320-118424-13) and JTA-009-N-S015-01172025 (320-118424-21).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118424-2

Receipt
The samples were received on 1/21/2025 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.8º C.

LCMS
Method 1633: Results for samples JTA-007-N-S000-01172025 (320-118424-1), JTA-007-N-S006-01172025 (320-118424-5), JTA-008-N-S000-01172025 (320-118424-8) and JTA-008-N-S006-01172025 (320-118424-11) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: JTA-007-N-S006-01172025 (320-118424-5) and JTA-008-N-S000-01172025 (320-118424-8).

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-835793 and analytical batch 320-836090 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: JTA-007-N-S000-01172025 (320-118424-1) and JTA-008-N-S000-01172025 (320-118424-8). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: Internal standard (ISTD) response for the following sample was outside control limits: JTA-008-N-S000-01172025 (320-118424-8). The sample was re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-835381 were prepared and analyzed outside this time period : JTA-007-N-S000-01172025 (320-118424-1), JTA-007-N-S006-01172025 (320-118424-5), JTA-008-N-S000-01172025 (320-118424-8), JTA-008-N-S006-01172025 (320-118424-11), JTA-009-N-S000-01172025 (320-118424-15), JTA-009-N-S006-01172025 (320-118424-19), RT-003-N-S000-01172025 (320-118424-24) and RT-003-N-S006-01172025 (320-118424-28).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following sample in preparation batch 320-835793 was light yellow in color following extraction: JTA-007-N-S000-01172025 (320-118424-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
320-118424-1

Revised report on 2-20-2025 for sample Id's.

Receipt

The samples were received on 1/21/2025 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.8º C.

LCMS

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: JTA-007-N-S003-01172025 (320-118424-3). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The continuing calibration verification (CCV) associated with batch 320-829502 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 6:2 FTS. The associated target analyte, 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS), was within control limits in the CCV; therefore, the data is reported: JTA-009-N-S003-01172025 (320-118424-17), JTA-009-FD-S003-01172025 (320-118424-18), RTA-003-N-S001-01172025 (320-118424-25), RTA-003-N-S003-01172025 (320-118424-26), RTA-003-FD-S003-01172025 (320-118424-27) and (CCV 320-829502/20).

Method 1633: Results for samples JTA-007-N-S001-01172025 (320-118424-2), JTA-007-N-S003-01172025 (320-118424-3), JTA-007-FD-S003-01172025 (320-118424-4), JTA-008-N-S001-01172025 (320-118424-9) and JTA-008-N-S003-01172025 (320-118424-10) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

Method 1633: Results for sample JTA-008-N-S001-01172025 (320-118424-9) were reported from the analysis of a diluted extract due to matrix interference of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118378-6

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-856044 recovered above the upper control limit for Perfluorotridecanoic acid (PFTrDA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following samples in analytical batch 320-855265 was made outside this time period: JTA-002-N-S025-01152025 (320-118378-38).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following sample was prepared outside of preparation holding time due to activation past holding time: JTA-002-N-S025-01152025 (320-118378-38).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-845716 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 1633: The laboratory control sample duplicate (LCSD) for preparation batch 320-845125 and analytical batch 320-845716 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.(LCSD 320-845125/4-A)

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-845125 and analytical batch 320-845716 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following sample in analytical batch 320-844782 occurred outside this time period: JTA-002-N-S020-01152025 (320-118378-37).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Hello Afsaneh,

Please see the attached list of the next samples to run for the fifth round of analysis or those to be extracted to extend the hold time for PFAS.
While we're still waiting on a couple of results from the fourth round of analysis, I wanted to make sure we get the extraction done before the hold time expires for samples still under consideration for analysis.
Let me know if you have any questions.

Job Narrative

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): LTA-001-FD-S012-01152025 (320-118378-7). Sample 7, container ID ends in -011525. Sample logged in and labeled according to COC.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-843420 recovered above the upper control limit for Perfluoropentanoic acid (PFPeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVL 320-843420/2).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (CCB 320-843420/1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The transition mass ratio was outside of the established ratio limit for Perfluoropentanoic acid (PFPeA) and Perfluorooctanesulfonamide (PFOSA) in (CCVL 320-843420/2) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the low level continuing calibration verification (CCVL), there is no adverse impact to the data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The following samples in analytical batch 320-841906 were prepared and analyzed outside this time period because the request for the analysis came after 28 days had passed : JTA-002-N-S015-01152025 (320-118378-36).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

LCMS

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

Job Narrative
320-118378-2

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): LTA-001-FD-S012-01152025 (320-118378-7). Sample 7, container ID ends in -011525. Sample logged in and labeled according to COC.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: LTA-002-N-S000-01152025 (320-118378-8). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The following samples exhibited matrix interferences for Perfluorobutanesulfonic acid (PFBS) causing elevation of the reporting limit (RL): LTA-002-N-S000-01152025 (320-118378-8). The RL for the affected analyte has been raised to be equal to the matrix interference and a "G" qualifier applied.

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-835793 and analytical batch 320-836090 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: JTA-002-N-S006-01152025 (320-118378-34).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-834661 were prepared and analyzed outside this time period : LTA-001-N-S000-01152025 (320-118378-1), LTA-002-N-S000-01152025 (320-118378-8), LTA-002-N-S006-01152025 (320-118378-11), LTA-003-N-S000-01152025 (320-118378-13), JTA-001-N-S000-01152025 (320-118378-21), JTA-002-N-S000-01152025 (320-118378-30) and JTA-002-N-S006-01152025 (320-118378-34).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): LTA-001-FD-S012-01152025 (320-118378-7). Sample 7, container ID ends in -011525. Sample logged in and labeled according to COC.

LCMS
Method 1633: The continuing calibration verification (CCV) associated with batch 320-829312 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 6:2 FTS. The associated target analyte, 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS), is within control limits. The samples associated with this CCV were non-detects for the affected target analyte; therefore, the data have been reported. The associated samples are impacted: JTA-001-N-S003-01152025 (320-118378-23), JTA-002-N-S001-01152025 (320-118378-31), JTA-002-N-S003-01152025 (320-118378-32), JTA-002-FD-S003-01152025 (320-118378-33), (CCV 320-829312/33) and (CCV 320-829312/8)

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-829312 recovered above the upper control limit for 11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. LTA-001-N-S001-01152025 (320-118378-2), LTA-001-N-S003-01152025 (320-118378-3), LTA-002-N-S001-01152025 (320-118378-9), LTA-002-N-S003-01152025 (320-118378-10), LTA-003-N-S001-01152025 (320-118378-14), LTA-003-N-S003-01152025 (320-118378-15), LTA-003-FD-S001-01152025 (320-118378-20), JTA-001-N-S001-01152025 (320-118378-22), JTA-001-N-S003-01152025 (320-118378-23), JTA-002-N-S001-01152025 (320-118378-31), JTA-002-N-S003-01152025 (320-118378-32), JTA-002-FD-S003-01152025 (320-118378-33) and (CCVL 320-829312/4)

Method 1633: Results for samples JTA-002-N-S003-01152025 (320-118378-32) and JTA-002-FD-S003-01152025 (320-118378-33) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 1633: The following samples in preparation batch 320-828744 were observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction: EB-01152025 (320-118378-40) and HDW01152025 (320-118378-41).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: EA-MW-7B-N-01172025 (320-118376-5) and (CCB 320-829454/31). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-828462 and analytical batch 320-829454 recovered outside control limits for the following analytes: 9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS) and 11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS).

Method 1633: The continuing calibration verification (CCV) associated with batch 320-829454 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 6:2 FTS. The associated target analytes, 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS), were within control limits in the CCV; therefore, the data is reported: FB-01172025 (320-118376-1), GCF-MW-8-N-01172025 (320-118376-2), GCF-MW-8-FD-01172025 (320-118376-3), EB-01172025 (320-118376-4), EA-MW-7B-N-01172025 (320-118376-5), EA-MW-7A-N-01172025 (320-118376-6), GCF-MW-10-N-01172025 (320-118376-7) and (CCV 320-829454/18).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-829454 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 PFDoA. The associated target analytes, Perfluorododecanoic acid (PFDoA) and Perfluorotridecanoic acid (PFTrDA), were within control limits in the CCV; therefore, the data is reported: FB-01172025 (320-118376-1), GCF-MW-8-N-01172025 (320-118376-2), GCF-MW-8-FD-01172025 (320-118376-3), EB-01172025 (320-118376-4), EA-MW-7B-N-01172025 (320-118376-5), EA-MW-7A-N-01172025 (320-118376-6), GCF-MW-10-N-01172025 (320-118376-7) and (CCVL 320-829454/4).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: GCF-MW-8-N-01172025 (320-118376-2) and GCF-MW-8-FD-01172025 (320-118376-3).

Method 1633: Results for sample EA-MW-7B-N-01172025 (320-118376-5) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: The following samples in preparation batch 320-828462 were observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction: GCF-MW-8-N-01172025 (320-118376-2) and GCF-MW-8-FD-01172025 (320-118376-3).

Method 1633: The following sample in preparation batch 320-828462 was light yellow in color following extraction: GCF-MW-10-N-01172025 (320-118376-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
