The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-856044 recovered above the upper control limit for Perfluorotridecanoic acid (PFTrDA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following samples in analytical batch 320-855265 was made outside this time period: JTA-005-N-S025-01162025 (320-118375-28).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633 Shake: The following sample was prepared outside of preparation holding time due to activation past holding time: JTA-005-N-S025-01162025 (320-118375-28).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

LCMS

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
*3	ISTD response or retention time outside acceptable limits.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

Job Narrative

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: JTA-005-N-S017-01162025 (320-118375-27). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-845716 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 1633: The laboratory control sample duplicate (LCSD) for preparation batch 320-845125 and analytical batch 320-845716 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.(LCSD 320-845125/4-A)

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-845125 and analytical batch 320-845716 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: Results for sample JTA-005-N-S017-01162025 (320-118375-27) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. Hello Afsaneh,

So sorry to change our fifth sample analysis request again, can we modify so that *all samples* listed in the sheet I sent are extracted but on hold for 1633 analysis?

Best,

Subject: Spokane International Airport - Fifth Round Analysis & Sample Extraction

Hello Afsaneh,

Please see the attached list of the next samples to run for the fifth round of analysis or those to be extracted to extend the hold time for PFAS.
While we're still waiting on a couple of results from the fourth round of analysis, I wanted to make sure we get the extraction done before the hold time expires for samples still under consideration for analysis.
Let me know if you have any questions.

Best,

Emily K. Stashak

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The following samples in analytical batch 320-841906 were prepared and analyzed outside this time period because the request for the analysis came after 28 days had passed : JTA-005-N-S015-01162025 (320-118375-26).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118375-3

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
Method 1633: Results for samples JTA-005-N-S010-01162025 (320-118375-25) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The request for the analysis of the following samples in analytical batch 320-838822 occurred outside of this time period : JTA-003-N-S010-01162025 (320-118375-7), JTA-004-N-S010-01162025 (320-118375-16), JTA-005-N-S010-01162025 (320-118375-25) and JTA-006-N-S010-01162025 (320-118375-34).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118375-2

Receipt
The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: JTA-004-N-S000-01162025 (320-118375-11). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: Results for samples JTA-005-N-S000-01162025 (320-118375-20) and JTA-005-N-S006-01162025 (320-118375-24) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-834905 were prepared and analyzed outside this time period : JTA-003-N-S000-01162025 (320-118375-3), JTA-003-N-S006-01162025 (320-118375-6), JTA-004-N-S000-01162025 (320-118375-11), JTA-004-N-S006-01162025 (320-118375-15), JTA-005-N-S000-01162025 (320-118375-20), JTA-005-N-S006-01162025 (320-118375-24), JTA-006-N-S000-01162025 (320-118375-29) and JTA-006-N-S006-01162025 (320-118375-33).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118375-1

Revised report on 2-20-2025 for sample id.

Receipt

The samples were received on 1/18/2025 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

LCMS

Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: JTA-004-N-S001-01162025 (320-118375-12), JTA-005-FD-S003-01162025 (320-118375-23) and JTA-006-N-S001-01162025 (320-118375-30). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (MB 320-828651/1-A). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analyte has been flagged: JTA-006-N-S001-01162025 (320-118375-30).

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-828462 and analytical batch 320-829454 recovered outside control limits for the following analytes: 9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS) and 11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS).

Method 1633: The continuing calibration verification (CCV) associated with batch 320-829454 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 6:2 FTS. The associated target analytes, 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS), were within control limits in the CCV; therefore, the data is reported: EB-01162025 (320-118375-38), FB-01162025 (320-118375-39) and (CCV 320-829454/18).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-829454 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 PFDoA. The associated target analytes, Perfluorododecanoic acid (PFDoA) and Perfluorotridecanoic acid (PFTrDA), were within control limits in the CCV; therefore, the data is reported: EB-01162025 (320-118375-38), FB-01162025 (320-118375-39) and (CCVL 320-829454/4).

Method 1633: Results for samples JTA-005-N-S001-01162025 (320-118375-21) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 1633 Shake: The following samples in preparation batch 320-828651 was colored yellow following extraction: JTA-005-N-S001-01162025 (320-118375-21)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative

Receipt
The samples were received on 1/17/2025 10:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9º C.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (CCB 320-828767/3). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-828457 and analytical batch 320-828767 recovered outside control limits for the following analyte: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: EA-MW-8B-N-01142025 (320-118344-1) and GDF-MW-10R-N-01142025 (320-118344-8).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-828767 recovered above the upper control limit for 11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS). The samples and method blank (MB) associated with this CCV were non-detect, low level laboratory control sample, laboratory control sample, and laboratory control sample duplicate (LLCS/LCS/LCSD) were in control limit for the affected analyte; therefore, the data have been reported: GDF-GR-5-N-01142025 (320-118344-2), GCF-MW-11A-N-01142025 (320-118344-3), GCF-MW-12A-N-01142025 (320-118344-4), GCF-MW-12A-FD-01142025 (320-118344-5), GCF-MW-12B-N-01142025 (320-118344-6), GDF-MW-10A-N-01142025 (320-118344-7), GDF-MW-10R-N-01142025 (320-118344-8), EB-01142025 (320-118344-9), FB-01142025 (320-118344-10), GDF-GR-2-N-01152025 (320-118344-11), GDF-GR-2-FD-01152025 (320-118344-12), GDF-GR-3-N-01152025 (320-118344-13), GDF-GR-4-N-01152025 (320-118344-14), EB-01152025 (320-118344-15), FB-01152025 (320-118344-16) and (CCVL 320-828767/4).

Method 1633: The continuing calibration verification (CCV) associated with batch 320-828810 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 PFDoA. The associated target analytes, Perfluorododecanoic acid (PFDoA) and Perfluorotridecanoic acid (PFTrDA), are within control limits. The samples associated with this CCV were non-detects for the affected target analytes; therefore, the data have been reported. The associated samples are impacted: GDF-GR-5-N-01142025 (320-118344-2), GCF-MW-11A-N-01142025 (320-118344-3), GCF-MW-12A-N-01142025 (320-118344-4), GCF-MW-12A-FD-01142025 (320-118344-5), GCF-MW-12B-N-01142025 (320-118344-6), GDF-MW-10A-N-01142025 (320-118344-7), GDF-MW-10R-N-01142025 (320-118344-8), EB-01142025 (320-118344-9), FB-01142025 (320-118344-10), GDF-GR-2-N-01152025 (320-118344-11), GDF-GR-2-FD-01152025 (320-118344-12), GDF-GR-3-N-01152025 (320-118344-13), GDF-GR-4-N-01152025 (320-118344-14), EB-01152025 (320-118344-15), FB-01152025 (320-118344-16) and (CCV 320-828810/8)

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-829593 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples and method blank associated with this CCV were non-detects, LLCS/LCS/LCSD in control for the affected analytes; therefore, the data have been reported. The associated samples are impacted: EA-MW-8B-N-01142025 (320-118344-1), (CCVL 320-829593/10), (LCS 320-829259/3-A), (LCSD 320-829259/4-A), (LLCS 320-829259/2-A) and (MB 320-829259/1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: The following samples in preparation batch 320-828457 were observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction: GCF-MW-11A-N-01142025 (320-118344-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
320-118263-1

Receipt
The samples were received on 1/15/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.5º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): FB-01132025 (320-118263-10). Sample 10, recieved 1 container not 3.

LCMS
Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: GCF-MW-13-N-01132025 (320-118263-3), GCF-MW-5-N-01132025 (320-118263-4), GCF-MW-11-N-01132025 (320-118263-6), GCF-MW-7-N-01132025 (320-118263-7) and (CCB 320-828189/2).

Method 1633: The continuing calibration verification (CCV) associated with batch 320-828189 recovered above the upper control limit for isotope dilution analyte (IDA) d3-NMeFOSAA, The associated target analyte, N-methylperfluorooctanesulfonamidoacetic acid (NMeFOSAA), was within control limits in the CCV. The samples associated with this CCV were non-detect(s) for the affected target analyte; therefore, the data have been reported. The associated samples are impacted: GCF-MW-5D-N-01132025 (320-118263-1), EA-MW-5B-N-01132025 (320-118263-2), GCF-MW-13-N-01132025 (320-118263-3), GCF-MW-5-N-01132025 (320-118263-4), GCF-MW-5-FD-01132025 (320-118263-5) and (CCV 320-828189/1).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: GCF-MW-5D-N-01132025 (320-118263-1) and FB-01132025 (320-118263-10). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-828188 recovered above the upper control limit for Perfluorobutanesulfonic acid (PFBS). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: EA-MW-5B-N-01132025 (320-118263-2), EB-01132025 (320-118263-9), FB-01132025 (320-118263-10) and (CCVL 320-828188/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: The following sample in preparation batch 320-827982 were light yellow in color following extraction. GCF-MW-11-N-01132025 (320-118263-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/15/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

LCMS
Method 1633: The continuing calibration verification (CCV) associated with batch 320-828192 recovered above the upper control limit for isotope dilution analyte (IDA) 13C2 PFTeDA, The associated target analytes, Perfluorotetradecanoic acid (PFTeDA) and Perfluorotridecanoic acid (PFTrDA) were within control limits in the CCV, therefore the data is reported: SWN-MW-7-N-01092025 (320-118256-1), SWN-MW-7-FD-01092025 (320-118256-2), SWN-MW-14-N-01092025 (320-118256-5), SWN-MW-13-N-01092025 (320-118256-6), FGF-MW-18-N-01092025 (320-118256-7) and (CCV 320-828192/4).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: GDF-GR-8-N-01102025 (320-118256-17) and GDF-GR-7S-N-01102025 (320-118256-19).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: (CCVL 320-828092/5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: SWN-MW-4-N-01092025 (320-118256-3) and SWN-MW-3-N-01092025 (320-118256-10). A 2x dilution was made on the sample, then fortified with Isotope Dilution Analyte (IDA) and extracted. The reporting limits (RLs) have been adjusted proportionately.

Method 1633: The following samples in preparation batch 320-828247 were light brown in color observed to have a thin layer of sediment present in the bottom of the bottle prior to extraction: SWN-MW-4-N-01092025 (320-118256-3) and SWN-MW-3-N-01092025 (320-118256-10).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method 1633: Results for samples EA-MW-13B-N-01082025 (320-118205-2) and SWN-MW-321-N-01082025 (320-118205-4) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method 1633: Due to screen results, the following sample EA-MW-13B-N-01082025 (320-118205-2) in preparation batch 320-827655 deviated from the standard procedure. A 10x dilution was made on the sample, then fortified with Isotope Dilution Analyte (IDA) and extracted. The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method 1633: Results for samples EA-MW-14A-N-01072025 (320-118162-3) and EA-MW-14B-N-01072025 (320-118162-4) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: EA-MW-14B-N-01072025 (320-118162-4). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: The following sample in preparation batch 320-827034 was light yellow in color following concentration. FB-01072025 (320-118162-1).

Method 1633: The following samples in preparation batch 320-827034 were observed to have floating particulates present in the sample bottle. W-MW-15-N-01072025 (320-118162-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
320-118123-1

Receipt
The samples were received on 1/8/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

LCMS
Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: FB-01062025 (320-118123-8). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

Method 1633: The RPD of the laboratory control sample (LCS) and the laboratory control sample duplicate (LCSD) for preparation batch 320-826873 and analytical batch 320-827113 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated analytes have been flagged: LA-MW-12-N-01062025 (320-118123-5).

Method 1633: The method blank for preparation batch 320-826873 and analytical batch 320-827113 contained Perfluorobutanesulfonic acid (PFBS) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction of samples was not performed.

Method 1633: The transition mass ratio was outside of the established ratio limit for 1H,1H,2H,2H-Perfluorohexane sulfonic acid (4:2 FTS) in LA-MW-8-N-01062025 (320-118123-1), LA-MW-10-N-01062025 (320-118123-2), LA-MW-10-FD-01062025 (320-118123-3), LA-MW-9-N-01062025 (320-118123-4), LA-MW-12-N-01062025 (320-118123-5), LA-MW-11-N-01062025 (320-118123-6), W-MW-17-N-01062025 (320-118123-7), FB-01062025 (320-118123-8), EB-01062025 (320-118123-9) and (CCV 320-827113/16) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the continuing calibration verification (CCV), there is no adverse impact to the data.

Method 1633: The following sample was re-analyzed because the sample is field blank (FB) but has been detected more than RL: FB-01062025 (320-118123-8) The re-analysis confirmed. There is insufficient volume for another extraction; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1633: The following sample in preparation batch 320-826873 was light green in color prior to extraction. LA-MW-9-N-01062025 (320-118123-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
320-118635-4

Receipt
The samples were received on 1/30/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 1.7º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): FMB-002-N-S013-01242028 (320-118635-14).

Sample #14 container label lists the following ID: FMB-002-N-S013-01252025.

The samples were logged in and labeled according to the COC.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-843420 recovered above the upper control limit for Perfluoropentanoic acid (PFPeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FMB-002-N-S013-01242025 (320-118635-14) and (CCVL 320-843420/2).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: (CCB 320-843420/1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: The transition mass ratio was outside of the established ratio limit for Perfluoropentanoic acid (PFPeA) and Perfluorooctanesulfonamide (PFOSA) in (CCVL 320-843420/2) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the low level continuing calibration verification (CCVL), there is no adverse impact to the data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 28 days. The following samples in analytical batch 320-841906 were prepared and analyzed outside this time period because the request for the analysis came after 28 days had passed : FMB-002-N-S013-01242025 (320-118635-14).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
320-118635-2

Receipt
The samples were received on 1/30/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 1.7º C.

Receipt Exceptions

The following sample was listed on the Chain of Custody (COC); however, no sample was received: CFH-005-N-S006-01242025 (320-118635-25).

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-835510 recovered above the upper control limit for Perfluorododecanesulfonic acid (PFDoS). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported:(CCVL 320-835510/2).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 320-836600 recovered above the upper control limit for isotope dilution analytes (IDA) 13C2 6:2 FTS, 13C2 8:2 FTS and d3-NMeFOSAA, The associated target analytes, 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS), 1H,1H,2H,2H-Perfluorodecane sulfonic acid (8:2 FTS) and N-methylperfluorooctanesulfonamidoacetic acid (NMeFOSAA), were within control limits in the CCV, therefore the data is reported: (CCVL 320-836600/2).

Method 1633: Results for samples CFH-006-N-S000-01242025 (320-118635-19) ,CFH-005-N-S000-01242025 (320-118635-21) , CFH-004-N-S000-01242025 (320-118635-26) and CFH-004-N-S006-01242025 (320-118635-29) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following samples are below the method recommended limit: CFH-006-N-S000-01242025 (320-118635-19), CFH-005-N-S000-01242025 (320-118635-21) , CFH-004-N-S000-01242025 (320-118635-26), CFH-003-N-S000-01242025 (320-118635-33), CFH-003-N-S006-01242025 (320-118635-36) and CFH-002-N-S000-01242025 (320-118635-39). . Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method 1633: The continuing calibration verification (CCV) associated with batch 320-836644 recovered above the upper control limit for isotope dilution analytes (IDA) 13C2 4:2 FTS and 13C2 8:2 FTS. The associated target analytes, 1H,1H,2H,2H-Perfluorohexane sulfonic acid (4:2 FTS) and 1H,1H,2H,2H-Perfluorodecane sulfonic acid (8:2 FTS) were within control limits in the CCV, therefore the data is reported: (CCV 320-836644/1).

Method 1633: The continuing calibration verifications (CCV) associated with batch 320-836644 recovered above the upper control limit for the isotope dilution analytes (IDA) 13C2 4:2 FTS, 13C2 6:2 FTS and 13C2 8:2 FTS. The associated target analytes, 1H,1H,2H,2H-Perfluorohexane sulfonic acid (4:2 FTS), 1H,1H,2H,2H-Perfluorooctane sulfonic acid (6:2 FTS) and 1H,1H,2H,2H-Perfluorodecane sulfonic acid (8:2 FTS) were within control limits in the CCVs, therefore the data is reported: FMB-003-N-S0005-01242025 (320-118635-1), FMB-003-N-S006-01242025 (320-118635-5), FMB-003-N-S015-01242025 (320-118635-8), FMB-002-N-S0005-01242025 (320-118635-9), FMB-002-N-S006-01242026 (320-118635-12), (CCV 320-836644/13) and (CCV 320-836644/25).

Method 1633: Internal standard (ISTD) response for the following sample was outside control limits: CFH-005-N-S000-01242025 (320-118635-21). The sample was re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 1/30/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.3º C and 1.7º C.

Receipt Exceptions

The container label for the following samples did not match the information listed on the Chain-of-Custody (COC): FMB-002-N-S006-01242026 (320-118635-12), FMB-002-N-S010-01242027 (320-118635-13) and FMB-002-N-S013-01242028 (320-118635-14).

Sample #12 container label lists the following ID: FMB-002-N-S006-10242025
Sample #13 container label lists the following ID: FMB-002-N-S010-10242025
Sample #14 container label lists the following ID: FMB-002-N-S013-01252025

The samples were logged in and labeled according to the COC.

The following sample was listed on the Chain of Custody (COC); however, no sample was received: CFH-005-N-S006-01242025 (320-118635-25).

LCMS
Method 1633: The continuing calibration verification (CCV) associated with batch 320-831528 recovered above the upper control limit for Perfluorobutanesulfonic acid (PFBS). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: CFH-004-FD-S010-01242025 (320-118635-31), CFH-003-N-S001-01242025 (320-118635-34), CFH-003-N-S003-01242025 (320-118635-35) and (CCV 320-831528/1).

Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: CFH-004-N-S001-01242025 (320-118635-27). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: CFH-006-N-S001-01242025 (320-118635-20) abd CFH-006-N-S003-01242025 (320-118635-52). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 1633: Results for samples FMB-002-N-S003-01242025 (320-118635-11), CFH-006-N-S001-01242025 (320-118635-20) , CFH-005-N-S001-01242025 (320-118635-22) , CFH-004-N-S001-01242025 (320-118635-27) , CFH-004-N-S003-01242025 (320-118635-28, CFH-002-N-S003-01242025 (320-118635-42) and CFH-006-N-S003-01242025 (320-118635-52) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method 1633: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 320-831269 and analytical batch 320-831892 recovered outside control limits for the following analytes: Nonafluoro-3,6-dioxaheptanoic acid (NFDHA).

Method 1633: The "I" qualifier means the transition mass ratio for the indicated analyte was outside the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. The associated samples have been flagged: FMB-003-N-S001-01242025 (320-118635-2) , FMB-003-FD-S001-01242025 (320-118635-3) and CFH-005-FD-S003-01242025 (320-118635-24).

Method 1633: Internal standard (ISTD) response for the following sample was outside control limits: CFH-006-N-S003-01242025 (320-118635-52). The sample was re-analyzed at a dilution with improved ISTD recovery. Suppression of the ISTD is suspected due to high concentrations of native analytes and the best set of data have been reported.

Method 1633: The continuing calibration verification (CCV) associated with batch 320-832076 recovered above the upper control limit for the following isotope dilution analyte (IDA): d3-NMeFOSAA. The associated target analyte, N-methylperfluorooctanesulfonamidoacetic acid (NMeFOSAA), is within control limits The method blank (MB) and samples associated with this CCV were non-detect for the affected analyte and the low level laboratory control sample, laboratory control sample, and laboratory control sample duplicate (LLCS/LCS/LCSD) were within control limits; therefore, the data have been reported. The associated samples are impacted: FMB-003-N-S001-01242025 (320-118635-2), FMB-003-FD-S001-01242025 (320-118635-3), CFH-006-N-S003-01242025 (320-118635-52), (CCV 320-832076/13), (LCS 320-831483/3-A), (LCSD

320-831483/4-A), (LLCS 320-831483/2-A) and (MB 320-831483/1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
