5. The Ancillary Area and CBC Area have distinct and different historical operations from the areas with mill operations. The Mill acquired multiple properties as it expanded to the north and east (the Ancillary Area) including a former gas station, a former service station, and a former laundromat/dry cleaner. These buildings have been demolished. Water supply structures were constructed within the CBC Area by 1935; however, research and development activities did not begin in the CBC Area until the late 1950s/early 1960s.
