VOCs	Volatile organic compounds
WAC	Washington Administrative Code

1.0 INTRODUCTION

On behalf of Onni John Street (Land) LLC (Onni), TRC Environmental Corporation (TRC) is pleased to submit this *Agency Review Draft Interim Action Remedial Action Report* (IRAR) for the property Onni owns located at 1120 John Street in Seattle, Washington (Property). TRC and Onni conducted the activities documented in this IRAR to support Onni's planned redevelopment of the Seattle Times Site.

The Property was formerly owned and operated by The Seattle Times. The Seattle Times' operations resulted in the release of hazardous substances in certain areas within the boundaries of the Property. As such, the "Seattle Times Site" or "Site" is defined by the "Areas of Potential Concern" (AOPCs) identified in the *Revised Remedial Investigation Report* (RRIR) that are contained within the boundaries of the Property. The location of the Property is depicted on **Figure 1**. The Property and the APOCs comprising the Seattle Times Site are depicted on **Figure 2**.

This IRAR has been prepared in compliance with the requirements of Agreed Order Number DE 20468 (AO) between the Washington State Department of Ecology (Ecology) and Onni, and the requirements of the Model Toxics Control Act (MTCA; Chapter 70.105D Revised Code of Washington [RCW]) and its implementing regulations (Chapter 173-340 of the Washington Administrative Code [WAC]), collectively "MTCA."

Several phases of assessment were completed at the Site prior to the effective date of the AO. Those assessments characterized the nature and extent of chemicals of concern (COCs), identified the AOPCs, and were documented in the RRIR dated October 18, 2021. The RRIR was also prepared in accordance with the requirements of the AO. The RRIR was submitted to Ecology on November 22, 2021.

The Seattle Times Site has the following Ecology identifiers:

- Facility Site Identification Number 4377754
- Cleanup Site Identification Number 14495

This IRAR describes the remedial actions implemented during the redevelopment excavation of the Property. The excavation included all soils within the Property boundaries (including all of the Seattle Times Site AOPCs) to an elevation of approximately 45 to 50 feet above mean sea level (amsl) as referenced to the North American Vertical Datum of 1988 (NAVD 88)—or approximately 55 to 60 feet below ground surface (bgs). The activities documented in this IRAR were performed in accordance with the *Interim Action Work Plan* (IAWP), dated May 5, 2022, approved by Ecology on September 14, 2022. The redevelopment excavation removed all impacted soils and very limited quantities of perched groundwater associated with the Seattle Times Site.

1.1 General Site Information

The Site is situated within the approximate 2.54-acre Property, which is identified as King County Parcel Number 1986200525 on **Figure 2**. Adjacent properties consist of commercial office space, parking areas, a restaurant, and light commercial facilities.

The Property was historically developed with four buildings constructed between 1930 and 1969. The four on-Property buildings had approximately 316,000 square feet of floor space and were used by the Seattle Times Company for offices, paper storage, vehicle maintenance garage, and the main printing press and production area. Paved areas for vehicle parking were located on the north and west portions of the Property adjacent to the former buildings.

Onni acquired the Property in November 2013 from the Seattle Times. Onni obtained land use entitlements and permits from the city of Seattle to redevelop the Property with a commercial office building with subgrade parking extending to an approximate finished concrete slab elevation of 50 feet amsl (55 feet bgs on average across the Property).

The north-adjacent property, King County Parcel Number 8692000000, is the source property for the Troy Laundry Site (Ecology Cleanup Site ID No. 11690). Groundwater contamination from the Troy Laundry Site was documented to extend beneath the Property in the deep regional aquifer at a depth of approximately 90 feet bgs. The AOPCs and associated contamination from the Seattle Times Site did not extend deeper than approximately 45 feet bgs. As such, the Troy Laundry Site contamination overlapped laterally on the Property with the Seattle Times Site AOPCs, but the areas were vertically separated by a horizon of unimpacted soil approximately 40 to 45 feet thick.

1.2 Site Contact Information

Contact information for the pertinent entities associated with the Seattle Times Site is presented below.

Ecology Site Manager:

Contact: Ms. Sunny Becker – Toxics Cleanup Program

Phone: (425) 457-3842

Property Owner:

Contact: Mr. Tim Hamann
Onni John Street (Land) LLC
ONNI Group
112 Boren Avenue N
Seattle, Washington 98109

2.0 NATURAL CONDITIONS

Site characterization data and data evaluations from historical and more recent environmental investigations have been reviewed and compiled into summaries by media in the following sections. Additional information was observed and gathered while performing the Interim Remedial Action (IRA) in accordance with the IAWP.

2.1 Topography

The Property ranges from an approximate elevation of 126 feet MSL along John Street to an elevation of approximately 101 feet MSL along Thomas Street. Observations made during on-Site environmental investigations indicate that the land surrounding the Property generally slopes to the north. The United States Geological Survey (USGS) topographic map for Seattle South, dated 1983 indicates that topography surrounding the Property slopes to the west (toward Elliott Bay) and north (toward Lake Union).

2.2 Geology

The Puget Sound region is primarily underlain by sequences of advancing and retreating glacial sediment deposition episodes of Pleistocene Age. The regional sediments consist primarily of interlayered or sequential deposits of alluvial sands, silts, and clays. Sand units have varying amounts of finer materials depending on the energy level of the depositional environment. Except for the shallower, more recent deposits, the glacial outwash sediments have been over-consolidated by later overriding ice sheets, which greatly increased their density, forming glacial till. The underlying dense glacial till has a low permeability, which limited the downward vertical migration of contaminants and is evidenced by Standard Penetration Test results (i.e., high blow counts) and refusal during drilling at many boring locations at the Site.

Geologic logs from many of the borings completed through concrete floor slabs indicate varying thicknesses of imported structural fill sub-base material immediately beneath the floor slabs (**Attachment A**). A maximum of approximately 10 feet of pea gravel were encountered beneath the concrete slab in one location; however, imported structural sub-base was not encountered beneath the concrete floor slab at other locations on the Property.

During monitoring well installation, native soils generally consisted of silt alternating with layers of silty sand and gravelly silt with varying amounts of finer materials transitioning to poorly-graded sand near the bottom of borings (**Attachment A**).

2.3 Groundwater

Groundwater was encountered at the Property in two general hydrostratigraphic units termed the Perched Aquifer and Deeper Regional Aquifer. Those units are described as follows:

- **Perched Aquifer:** A very limited amount of perched groundwater was encountered within laterally discontinuous lenses of more permeable soil within a denser glacial till soil matrix. Previous soil borings and shallow groundwater monitoring wells at the Property have not always intercepted perched lenses of groundwater at the Property. Redevelopment of the

Property included the excavation to 55 to 60 feet below the average Property grade, which generally corresponds to an elevation of approximately 45 to 50 feet amsl. Discontinuous, small quantities of perched groundwater were encountered during IRA excavation activities. The quantity of perched water encountered during excavation was extremely limited and was not separated from excavated soils. The soils were disposed at an off-Site facility.

- **Deeper Regional Aquifer:** Deeper regional groundwater occurs at depths of about 90 and 97 feet bgs or approximately at an elevation of approximately 10 to 12 feet amsl at the Property. Groundwater elevations in wells completed within the deeper regional aquifer in the vicinity of the Property indicate a southerly to southeasterly groundwater flow direction. The Deeper Regional Aquifer in the northern portion of the Property is known to be a part of the Troy Laundry Site. Redevelopment excavations did not intersect the Deeper Regional Aquifer.

3.0 SITE CHARACTERIZATION SUMMARY

The Seattle Times Site was characterized during the following iterative environmental investigations:

- Phase I Environmental Site Assessment – Farallon Consulting, LLC, January 8, 2010;
- Limited Subsurface Investigation Report – Environmental Partners Inc. (EPI), August 16, 2013;
- Supplemental Investigation – EPI, 2018 to 2019; and
- Data Gap Investigation – TRC, 2020.

A summary and full description of the investigations and characterization of the Site are included in the RRIR submitted to Ecology on May 5, 2022. The conceptual site model (CSM) for the Property is based on soil and groundwater data collected during the remedial investigation documented in the RRIR and confirmed during visual observations during the IRA. **Figure 3** presents the sample locations from prior investigations.

3.1 Chemicals of Concern

COCs identified at the Site are presented below along with their respective cleanup levels (CULs) established in the IAWP.

COC	Soil CUL (mg/kg)	Reference for Soil CUL ^a	Ground-water (µg/L)	Reference for Groundwater CUL ^a
Benzene	0.03	MTCA Method A	5.0	MTCA Method A
Chloroform	32	MTCA Method B	1.41	MTCA Method B
Naphthalene	4.5	CLARC Protective of Groundwater ^b	160	MTCA Method B
Tetrachloroethene	0.05	CLARC Protective of Groundwater ^b	5.0	MTCA Method A

COC	Soil CUL (mg/kg)	Reference for Soil CUL ^a	Ground-water (µg/L)	Reference for Groundwater CUL ^a
Trichloroethene	0.025	CLARC Protective of Groundwater ^b	1.4	CLARC Protective of Soil Vapor Intrusion to Indoor Air
1,2,4-Trimethylbenzene	1.3	CLARC Protective of Groundwater ^b	80	MTCA Method B
1,3,5-Trimethylbenzene	1.3	CLARC Protective of Groundwater ^b	80	MTCA Method B
Vinyl Chloride	0.67	MTCA Method B	0.2	MTCA Method A
Gasoline-Range Organics	30	MTCA Method A	800	MTCA Method A
Diesel-Range Organics	2,000	MTCA Method A	500	MTCA Method A
Oil-Range Organics	2,000	MTCA Method A	500	MTCA Method A
Aroclor® 1254 (polychlorinated biphenyl)	0.5	MTCA Method B	0.044	MTCA Method B

Notes:

mg/kg Milligrams per kilogram.

µg/L Micrograms per liter.

^a The lower of the two MTCA Method B CULs (Non-Cancer versus Cancer values).

^b MTCA Equation 747-1 product as presented in MTCA's Cleanup Levels and Risk Calculation (CLARC) tables (February 2021).

In addition to the Site COCs, additional compounds migrating in the Troy Laundry Site groundwater plume could off-gas and potentially affect indoor air at the Onni redevelopment project. The Troy Laundry Site COCs and their respective soil gas screening levels are presented below:

COC	Soil Gas Screening Level (µg/m ³)
Tetrachloroethene	320
Trichloroethene	11
Vinyl Chloride	9.4

Note:

µg/m³ Micrograms per cubic meter.

Please note that not all COCs were detected in soil and groundwater in all AOPCs.

3.2 Extent of Impacts

Impacts to soil and groundwater were characterized by AOPCs where COCs could have been released. The RRIR provides a full description of each AOPC investigated, but a summary of the extents of soil and groundwater impacts is provided in the following subsections and depicted on the following figures:

- **Figure 4** Extent of Chlorinated VOC Impacts to Soil, Plan View
- **Figure 5** Extent of Petroleum Compound Impacts to Soil, Plan View
- **Figure 6** Extent of Impacts to Soil, Cross-Section A-A'

- **Figure 7** Extent of Impacts to Soil, Cross-Section B-B'
- **Figure 8** Extent of Petroleum Impacts in Groundwater
- **Figure 9** Extent of Chlorinated VOC Impacts in Groundwater

3.2.1 Soil

The following sections describe the COCs detected at concentrations greater than a soil CUL and the corresponding AOPC in which they were detected. COCs were detected at concentrations exceeding CULs in the five areas described below prior to the IRA. The AOPCs described below, and their anticipated lateral extents prior to removal, are indicated on **Figure 3**.

3.2.1.1 AOPC 1 – Printing Press Areas (Formerly AOPC 2 – Interior Ink Tanks)

Oil-range organics (ORO) and naphthalene were reported in samples collected from this AOPC but the source of these impacts is unclear. ORO and naphthalene concentrations are greater than the proposed CUL, which required special handling and off-site disposal. The area requiring special handling and disposal measures approximately 15 feet by 15 feet at depths ranging from 8 to 12 feet bgs centered on boring MW-8 during previous investigations.

3.2.1.2 AOPC 4 – Compressor Room

Aroclor® 1254, a polychlorinated biphenyl (PCB), was detected in AOPC 4 at concentrations exceeding the CUL. The most likely source is historical releases of PCB-containing oils in air compressors associated with the former Seattle Times printing presses. Aroclor® 1254 at concentrations greater than the proposed CUL was present in an area measuring approximately 10 feet by 20 feet at depths ranging from 1 foot to 12 feet bgs centered on locations C-2 and C-12 as determined during previous investigations.

3.2.1.3 AOPC 5 – Northern Underground Storage Tank Complex and Fuel Dispenser

Benzene, naphthalene, gasoline-range organics (GRO), and diesel-range organics (DRO) were detected in AOPC 5 at concentrations exceeding CULs. These compounds were predominately collocated in the area surrounding the current underground storage tanks (USTs), which were temporarily decommissioned prior to this IRA.

Benzene concentrations greater than the proposed CUL were identified in an area measuring approximately 30 feet by 15 feet at depths ranging from 13 to 17 feet bgs and centered around borings U-11 and U-12.

Naphthalene concentrations greater than the proposed CUL were identified in an area measuring approximately 10 feet by 10 feet at depths ranging from 17 to 22 feet bgs and centered around boring U-12.

GRO and DRO concentrations greater than the proposed CUL were identified in an area measuring approximately 10 feet by 10 feet at depths ranging from 17 to 22 feet bgs and centered around boring U-12.

3.2.1.4 AOPC 8 – Heating Oil USTs

DRO and ORO were detected in AOPC 8 at concentrations exceeding the CUL. The apparent sources of those impacts are releases related to the historical USTs. DRO and ORO concentrations greater than the proposed CUL were identified in an area measuring approximately 30 feet by 20 feet at depth ranging from 5 to 10 feet bgs and centered around borings A-1 and A-3.

3.2.1.5 Troy Laundry Site – Dry Cleaning Compounds

Soil impacted with trichloroethene (TCE) was identified at locations MW-9, MW-10, MW-29, and MW-30. The source of those impacts has not been determined.

TCE CUL exceedances were identified at depths from 20 to 50 feet bgs in the general area indicated on **Figure 4**. In order to facilitate appropriate handling and disposal, the lateral and vertical extent of these impacts was further characterized in support of requesting a Contained-In Determination (CID) from the Hazardous Waste/Toxics Reduction (HWTR) section of Ecology.

The entire Property was excavated for redevelopment to an elevation of approximately 50 feet amsl. While the IRA addressed impacts exceeding a CUL, other soils with detectable COCs at concentrations less than the CUL were encountered and transported off-Property for disposal and described below. Such soils were appropriately handled and disposed in accordance with applicable regulations.

3.2.2 Groundwater

The following sections describe the COCs detected at concentrations greater than a groundwater CUL and the corresponding AOPC or area in which they were detected. COCs were detected at concentrations exceeding CULs in the areas described below prior to the IRA. The locations of groundwater samples with COC concentrations exceeding a CUL are presented on **Figures 8 and 9**.

3.2.2.1 AOPC 1 – Printing Press Areas (Shallow Perched Groundwater)

Groundwater was encountered in boring locations T-9 and U-15 in AOPC 1. Reconnaissance groundwater samples were collected from these borings and submitted for laboratory analysis.

DRO and ORO concentrations in groundwater exceeded the MTCA Method A Groundwater CUL (Method A GW CUL) at boring locations T-9 and U-15. These groundwater samples were also analyzed for VOCs. The concentrations of TCE and vinyl chloride exceeded the Method A GW CUL.

3.2.2.2 AOPC 2 – Interior Ink Tanks (Shallow Perched Groundwater)

Groundwater was encountered in boring locations T-4 through T-7 in AOPC 2. Reconnaissance groundwater samples were collected from these borings and submitted for laboratory analysis.

DRO and ORO concentrations in groundwater exceeded the Method A GW CUL at boring locations T-4 and T-5.

3.2.2.3 AOPC 5 – Northern UST Complex and Fuel Dispenser (Shallow Perched Groundwater)

Groundwater was encountered in boring locations U-6, and U-10 through U-14 in AOPC 5. Reconnaissance groundwater samples were collected from these borings and submitted for laboratory analysis. The COC exceedances are presented below:

- GRO concentrations in groundwater exceeded the Method A GW CUL at boring locations U-11 and U-12.
- DRO concentrations in groundwater exceeded the Method A GW CUL at boring locations U-10, U-11, and U-12.
- ORO concentrations in groundwater exceeded the Method A GW CUL at boring locations U-10 and U-11.
- Chloroform concentrations in groundwater exceeded the Method A GW CUL at boring locations U-6, U-11, and U-12.
- The naphthalene concentration in groundwater exceeded the Method A GW CUL at boring location U-12.
- TCE concentrations in groundwater exceeded the MTCA Screening Level for groundwater for the potential vapor intrusion pathway at boring locations U-6 and U-13.
- 1,2,4-Trimethylbenzene and 1,3,5-trimethylbenzene concentrations in groundwater exceeded the MTCA Method B Groundwater CUL at boring locations U-11 and U-12.
- The total xylenes concentration in groundwater exceeded the Method A GW CUL at boring location U-12.

3.2.2.4 AOPC 10 – Sumps (Shallow Perched Groundwater)

Groundwater was encountered in boring locations S-2, S-4, and S-5 in AOPC 10. Reconnaissance groundwater samples were collected from temporary wells and submitted for laboratory analysis.

The DRO concentration in groundwater exceeded the Method A GW CUL at boring location S-5. ORO concentrations in groundwater exceeded the Method A GW CUL at boring locations S-4 and S-5.

3.2.2.5 Potential Off-Site Sources (Regional Deeper Groundwater)

Groundwater samples were collected from monitoring wells MW-1 through MW-8 that were advanced to the regional deeper groundwater at the Site. The PCE, TCE, vinyl chloride, and lead concentrations exceeded the associated Method A GW CULs in the sample from MW-2. All other analytical results from the remaining wells were less than the applicable CULs.

The PCE, TCE, and vinyl chloride concentrations that exceeded the Method A GW CULs in the sample from MW-2 are attributable to the north-adjacent, and hydraulically upgradient Troy Laundry Site.

4.0 CLEANUP STANDARDS

Cleanup standards consist of two components: CULs and points of compliance (POCs) where CULs are to be achieved for the COCs identified during Site characterization. As required by MTCA, the CULs approved in the IAWP are protective of human health and the environment based upon the potential exposure pathways that will remain after the completed excavation and foundation placement for the Property redevelopment.

4.1 Soil Cleanup Levels

The CULs approved in the IAWP for the soil COCs for the Site are summarized in the table below.

Cleanup Levels for Soil COCs (mg/kg)

Soil COC	MTCA Method A (unrestricted land use)	MTCA Method B (direct contact)	MTCA Method B (protect GW at 13° C)	MTCA Method C	Proposed CUL
GRO	30 ^a	NVE	NVE	NVE	30 ^a
DRO	2,000	NVE	NVE	NVE	2,000
ORO	2,000	NVE	NVE	NVE	2,000
Benzene	0.03	18.2	0.027	2,390	0.03
Naphthalene	5.0	1,600	4.45	70,000	5.0
TCE	0.03	12	0.025	1,800 ^b	0.03
Total PCBs	1.0	0.5	NVE	65.6	1.0

Notes:

- a GRO cleanup level with detected benzene.
- b Non-cancer value, carcinogenic value is 2,900 mg/kg
- GW Groundwater.
- NVE No value established.

The standard POC for these soil CULs is all soil within 15 feet of the ground surface. This POC is protective of all potential human, terrestrial, and ecological exposures at the Site (WAC 173-340-740 (6)(d)).

4.2 Groundwater Cleanup Levels

The CULs approved in the IAWP for the groundwater COCs at the Site are summarized in the table below.

Cleanup Levels for Groundwater COCs (µg/L)

Groundwater COC	MTCA Method A	MTCA Method B	MTCA Method C	Screening Level for Groundwater Protective of Vapor Intrusion (SL _{gw})	EPA or Washington State Maximum Contaminant Level	Proposed CUL
GRO	800 ^a	NVE	NVE	NVE	NVE	800 ^a
DRO	500	NVE	NVE	NVE	NVE	500
ORO	500	NVE	NVE	NVE	NVE	500
Chloroform	NVE	1.41	14.1	1.2	80	1.41
Naphthalene	160	160	350	8.9	NVE	160
Total Xylenes	1,000	1,600	3,500	25	10,000	1,000
PCE	5	21	110	320	5	5
TCE	5.0	0.54	9.51	1.4	5.0	1.4 ^b
1,2,4-TMB	NVE	80	180	240	NVE	80
1,3,5-TMB	NVE	80	180	170	NVE	80
Vinyl Chloride	0.2	0.029	0.29	0.33	2.0	0.2

Notes:

- a GRO cleanup level with detectable benzene in groundwater.
- b Value provided by Ecology based on CULs for Troy Laundry Site.
- EPA U.S. Environmental Protection Agency.
- TMB Trimethylbenzene.

The POC for these groundwater CULs is within the thin discontinuous occurrences of shallow perched groundwater at the Site.

Impacted groundwater in the deeper regional aquifer is attributable to off-Site impacts from the north-adjacent Troy Laundry Site. These impacts are related to historical dry-cleaning operations and are characterized by chlorinated volatile organic compounds (cVOCs), notably the dry-cleaning solvent trichloroethene (PCE) and its less chlorinated breakdown products. As noted above, those impacts are separate and distinct from the Site. The impacts associated with the Troy Laundry Site are being addressed by the potentially liable parties (PLPs) for that Site under an Agreed Order. Onni is cooperating with the PLPs in their assessment of volatile organic compound (VOC) impacts to groundwater beneath the northern portion of the Property.

4.3 Terrestrial Ecological Evaluation

The potential terrestrial exposures at the Site were evaluated using the Terrestrial Ecological Evaluation (TEE) procedures in WAC 173-340-7493. The Site qualified for an exclusion from

performance of a TEE based on the fact at the completion of redevelopment, all areas of the Site will be covered with buildings or associated impervious surfaces such as concrete and asphalt (WAC 173-340-7491 (1)(b)).

5.0 INTERIM REMEDIAL ACTION METHODOLOGY

Excavation and off-Property disposal of impacted soils was the selected remedial approach under the AO and IAWP. The following sections describe the IRA completed at the Seattle Times Site.

5.1 Permitting

This IRA was performed as part of the redevelopment plan for the Property. This redevelopment project was permitted by the city of Seattle and was subject to a Washington State Environmental Policy Act (SEPA) review. Ecology issued a Determination of Non-Significance for the previously submitted SEPA Checklist on June 6, 2022.

With the exception of a CID (see **Section 6.2**), off-site disposal of soils did not require permits beyond those held by the accepting facility. In accordance with the CID request approved by Ecology on September 7, 2022, excavated soils impacted with TCE were disposed at Waste Management's Columbia Ridge Landfill.

The work hours and hauling periods complied with the city of Seattle permit(s) and the project complied with requirements for street cleaning, truck cleaning, or scaling (as applicable) prior to transport.

While no permits were required for worker health and safety issues, the on-site activities involving the handling of impacted soil and groundwater complied with the provisions of the Washington Industrial Safety and Health Act (WISHA) and the Code of Federal Regulations (CFR) subpart 1910.120 that governs Hazardous Waste Operations and Emergency Response (HAZWOPER). Complying with these regulations is part of Protection Monitoring discussed in Section 4.5.1 of the Interim Remedial Action Work Plan (IRAWP). Occupational exposures by on-site workers to VOC and petroleum hydrocarbon vapors were monitored as a component of on-site protection monitoring. Similarly, potential inadvertent vapor exposures to passersby were also monitored at the perimeter of the Property as an additional component of protection monitoring.

In order to discharge excavation dewatering liquids to the sanitary sewer, a Minor Discharge Authorization (MDA) from the King County Department of Industrial Waste was acquired and extended on September 20, 2021. The Department of Industrial Waste regulates discharges to King County-operated Publicly Owned Treatment Works (POTW). The MDA required for monitoring the quality and volume of discharged water and sufficient pretreatment, sampling, and analysis were performed to comply with the stipulated compliance criteria. Dewatering liquids were discharged in compliance with the Side Sewer Permit – 6859665-SS.

5.2 CID Characterization and Permit Application

Soils known to be impacted with TCE at concentrations greater than the CUL of 0.03 mg/kg were present at locations MW-9, MW-10, MW-29, and MW-30 as generally indicated on **Figure 10**. Soils with TCE concentrations greater than the CUL were present at varying depth from 20 to 50 feet bgs at these locations. Soils above and below these zones did not have detectable concentrations of TCE.

Prior to implementation of the IAWP, TRC requested a CID from Ecology for disposal of low-level TCE and other chlorinated VOC-impacted soil. TRC collected additional soil samples for laboratory analysis throughout the area of chlorinated VOC impacts. TRC prepared a formal CID request, which was approved on September 7, 2022 (**Attachment B**).

5.3 Vapor Pathway Evaluation

TRC conducted a vapor pathway evaluation to determine if a chemical vapor barrier would be necessary for the new building foundation. This evaluation was conducted due to the presence of the Troy Laundry Site solvent groundwater plume at a depth of 70 feet bgs (approximate elevation of 0 to 10 feet amsl and about 40 feet beneath the proposed parking garage). In addition, an ongoing TCE source from Boren Avenue North and its potential impact to the Site provided additional rationale to conduct the vapor pathway evaluation.

TRC collected soil gas samples from temporary borings and submitted for laboratory analysis of chlorinated volatile organic compounds (cVOCs). **Table 1** presents the analytical results of the soil gas samples. The results of this evaluation are documented in the technical memorandum *Soil Gas Assessment – Implementation of the Interim Action Work Plan* dated November 21, 2022, included in **Attachment C**.

Based on this evaluation, TRC performed oversight of the installation of a chemical vapor intrusion barrier beneath the entire footprint of the building foundation to mitigate the potential for soil vapor intrusion (see **Section 6.5.3**).

5.4 Site Preparation

Site preparation activities complied with the requirements of the city of Seattle permits and were subject to periodic inspection by city personnel. The permit required such items as protective fencing, limiting ingress and egress, and protection of catch basins from runoff. The requirements contained within the city of Seattle permits were appropriate for use during the IRA.

5.5 Excavation and Soil Handling

Excavation with off-Site disposal was the Ecology-approved selected remedial approach. TRC performed excavation oversight and soil sampling from July 2022 through June 2023. The excavation progressed in 5-foot increments, or "lifts." TRC personnel used a grid-based sampling and analysis approach to pre-characterize the distribution of impacted soils within each excavation lift. Within each 5-foot-deep lift, soil samples were collected and analyzed for

the COCs listed in **Section 3.1** from test pits oriented in a 20-foot by 20-foot rectangular grid pattern. This approach identified 20-foot by 20-foot by 5-foot-deep grids that were expected to contain contaminated soils and those that were expected to contain uncontaminated soils. Each 20-foot by 20-foot grid square within a 5-foot-deep lift represented approximately 74 cubic yards.

Excavation was primarily performed with track-mounted excavators and, when necessary as the depth of excavation progressed, soil was transported to the street level using conveyor belts and loaded directly into trucks. As the excavation progressed, retaining walls were installed at the perimeter of the excavation comprising soldier piling, lagging, and soil nailing. The walls were skinned with a shotcrete surface. These walls were constructed from the top down in 5-foot vertical increments along the perimeter of the Property. TRC collected samples of stockpiled soldier piling drilling spoils in order to support proper characterization for disposal.

5.5.1 Concrete Tank Discovery

On August 22, 2022, a concrete holding container approximately 4 feet square by 6 feet in height (the “Concrete Box”) was discovered in the east-central portion of the Property in the area northeast of AOPC 8. Initially, the Concrete Box was believed to be a footing for a previously removed structural building support. Once the Concrete Box was removed from the ground, a dark, ink-like viscous semi-liquid was present within the Concrete Box. The calculated volume of the ink-like semi-liquid was about 420 gallons. The material was sampled and submitted for laboratory analysis of Resource Conservation and Recovery Act (RCRA) 8 metals after extraction using Toxicity Characteristic Leaching Procedure (TCLP). The TCLP results identified lead as the only metal detected with a corresponding concentration of 31.3 milligrams per liter (mg/L), which is greater than the hazardous waste threshold value of 5 mg/L. Therefore, the Concrete Box, ink-like semi-liquid material, and surrounding impacted soil were disposed as a hazardous waste.

5.5.2 Underground Storage Tanks Removal

The Property reportedly had 11 USTs containing a variety of liquids including waste oil, heating oil, diesel fuel, gasoline, and petroleum- and solvent-based inks. The USTs were installed as early as the 1930s and, according to available records, at least three of the USTs had been closed in-place. All USTs and affected surrounding soil were removed from the Site during excavation.

5.5.3 Vapor Barrier Installation and Oversight

Based on the results of the vapor barrier evaluation discussed in **Section 6.3**, Onni installed a 20 millimeter (mm) Drago Wrap Vapor Intrusion Barrier beneath the available footprint of the building foundation. The remaining portion of the vapor barrier will be installed upon the building completion. TRC has provided oversight for the vapor barrier installation with periodic site visits to document the installation process. TRC documented the vapor barrier materials used during installation and installation methods including jointing, sealing and/or welding. TRC also inspected the vapor barrier and identified patch locations associated with utility piping applied in order to preserve the integrity of the barrier.

5.6 Findings

The following sections present the findings from the excavation and analytical results of samples collected during the excavation.

5.6.1 Subsurface Conditions

Soils encountered during the excavation consisted of silty sand with gravel to the maximum depth of the excavation. No groundwater was encountered during excavation activities.

5.6.2 Analytical Results

The laboratory analytical results for soil samples analyzed during the IRA activities are presented in **Tables 2** through **5**. The locations of detected compounds encountered in each lift during the excavation are presented on **Figures 10** through **22**. The laboratory analytical reports are provided in **Attachment D**.

The COCs detected at concentrations exceeding the applicable CULs include the following:

- GRO
- DRO
- ORO
- 1,2,3-Trichloropropane
- Total xylenes
- Methylene chloride
- Naphthalene
- TCE
- 1-Methylnaphthalene
- Cadmium
- Lead

All soils discovered at the limits of the excavation were less than applicable CULs. Thirty-two soil samples were collected from the bottom of the excavation to confirm that all impacted soils were removed from the Site as shown on **Figure 22**. All analytical results collected from the bottom of the excavation were less than all applicable CULs for the Site. Therefore, this IRA removed all on-Property impacted soil and there are no longer soils exceeding applicable CULs on Site.

5.6.3 Waste Disposal

Excavation was primarily performed with track-mounted excavators and soil was transported to the street level using conveyor belts and loaded directly into trucks.

Petroleum-impacted soil (PCS) was disposed in accordance with all local, state, and federal regulations. Excavation of PCS ended in January 2023 with a total of 20,751.03 tons removed. TCE-impacted soil was excavated and disposed off Property under the Ecology-approved CID. Excavation of TCE-impacted soil (CID soils) ended in June 2023 with 30,655.01 tons removed.

The summary of soil disposal volumes is presented in **Tables 6** and **7**. The waste disposal tickets are provided in **Attachment E**.

5.7 Compliance Monitoring

5.7.1 Confirmational Monitoring

The deep aquifer solvent plume from the upgradient Troy Laundry Site has migrated to the Property. Wells MW29R and MW35 were installed to monitor the migration of this solvent plume from Troy Laundry Site (**Figure 2**).

Confirmational monitoring is intended to confirm the long-term effectiveness of the remedial action (WAC 173-340-410(c)). During the IRA all source soil was excavated and there is no longer a source at the Seattle Times Site. No confirmational monitoring is required for the soil pathway.

5.7.2 Deed Restrictions

On-Site soil contamination (other than the Troy Laundry Site groundwater plume in the deep aquifer) greater than the respective CULs was removed from the Property and were properly disposed off Site.

The remaining impacts to groundwater below the Property are solely from the Troy Laundry Site. In coordination with the Troy Block Consent Decree, Onni will record deed restrictions concerning the deep groundwater plume. The Site is included in the Troy Laundry Site to the extent of the deep aquifer plume. The deed restriction recorded for the Troy Laundry Site and any deed restriction for this Site should be coordinated so that there are no inconsistency, overlap, or “dual” deed restrictions recorded against the Property.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The Property was excavated in support of redevelopment with a high-rise mixed use (commercial and residential) project that will include four floors of underground parking. The completion of redevelopment excavation at the Seattle Times Site has fully remediated the Site in accordance with the Ecology-approved IAWP and all impacted media were disposed off-Property at appropriately permitted facilities.

7.0 LIMITATIONS

To the extent that preparation of this IRAR required the application of best professional judgment and the application of scientific principles, certain results of this work were based on subjective interpretation. TRC makes no warranties, express or implied, including and without limitation warranties as to merchantability or fitness for a particular purpose. The information provided in this IRAR is not to be construed as legal advice.

This IRAR was prepared solely for Onni and the contents herein may not be used or relied upon by any other person without the express written consent and authorization of TRC.

MTCA Method A Soil Cleanup Level for Unrestricted Land Uses ^e				30/100 ^f	2,000	2,000	NA						1.0 for Total PCBs									

Notes:
All results presented in milligrams per kilogram (mg/kg).
Bold Bold result exceeds the laboratory reporting limit.
 Shaded result exceeds the cleanup level.
< Result is less than laboratory reporting limit.
-- Sample was not analyzed for this compound.
a Analyzed by NWTPH-Gx.
b Analyzed by NWTPH-Dx.
c Analyzed by NWTPH-HCID
d Analyzed by EPA Method 8082.
e Model Toxics Control Act (MTCA) Method A Soil Cleanup Levels for Unrestricted Land Uses, Table 740-1, Washington Administrative Code (WAC) 173-340-900.
f MTCA Method A Soil Cleanup Level is 30 mg/kg when benzene is present in the sample and 100 mg/kg when benzene is not detected.
AOPC Area of Potential Concern.
NA Not applicable.
UST Underground storage tank.

Qualifiers:
D Dilution was required
E Value above quantitation range
x The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Compounds:
DRO Diesel-range organics
GRO Gasoline-range organics
ORO Oil-range organics
PCB Polychlorinated biphenyl

MTCA Method A or B Soil Cleanup Level for Unrestricted Land Uses				71 ^d	NVE	8,000 ^d	800 ^d	3,200 ^d	3,200 ^d	5 ^c	NVE	2,400 ^d

Notes:
All results presented in milligrams per kilogram (mg/kg).
Bold Bold result exceeds the laboratory reporting limit.
 Shaded result exceeds the cleanup level.
< Result is less than laboratory reporting limit.
-- Sample was not analyzed for this compound.
^a Analyzed by EPA Method 8270.
^b Toxicity Equivalency Factors (TEFs) calculated under WAC 173-340-708(e) in accordance with Table 708-2 (in WAC 173-340-900).
^c Model Toxics Control Act (MTCA) Method A Soil Cleanup Levels for Unrestricted Land Uses, Table 740-1, Washington Administrative Code (WAC) 173-340-900, July 2021.
^d MTCA Method B Soil Cleanup Levels (from Cleanup Levels and Risk Calculations [CLARC] spreadsheet). Where cleanup levels based on carcinogenic and non-carcinogenic risk were available, the lower value is listed.
ND None of the analyzed compounds were detected at a concentration exceeding the laboratory reporting limit.
NVE No value established.

Qualifiers:
D Dilution was required

The diagram illustrates a soil boring log with the following components and labels:

- SOIL BORING OR MONITORING WELL**: The main vertical structure.
- SM**: Lithology designations.
- SOIL SAMPLE LOCATION**: Indicated by a blue arrow pointing to a specific depth.
- SCREEN INTERVAL**: Indicated by a blue arrow pointing to a specific depth.
- WATER LEVEL INDICATOR (NOVEMBER 2020)**: Indicated by a blue arrow pointing to a specific depth.
- TOTAL DEPTH (TD)**: Indicated by a blue arrow pointing to the bottom of the well.
- (10-3°F)**: Temperature scale.
- AMS**: Above Mean Sea Level.
- ML**: MUD.
- MH**: MUDY SILT.
- SC**: SANDY SILT.
- SM**: SANDY SILT.
- SP**: SANDY GRADED SAND.
- SP/SM**: SANDY GRADED SAND TO SILTY SAND.
- SW**: WELL GRADED SAND.
- SW/SC**: WELL GRADED SAND TO CLAYEY SAND.
- GW**: WELL GRADED GRAVEL.
- DISTANCE AND DIRECTION FROM CROSS-SECTION TO ACTUAL BORING/MDL LOCATION**: Indicated by a blue arrow pointing to the right.
- INDICATES SAMPLE HAD NO ANALYZED COMPOUNDS ABOVE DETECTION LIMITS**: Indicated by a green circle.
- ONE OR MORE CONCENTRATION EXCEEDED A CLEAN LEVEL**: Indicated by a red circle.
- CONCENTRATIONS IN SOIL IN MILLIGRAMS PER KILOGRAM (mg/kg)**: Indicated by a blue arrow pointing to the right.
- APPROXIMATE EXTENT OF IMPACTS TO SOIL**: Indicated by a red hatched rectangle.
- REDEVELOPMENT EXCAVATION AREA**: Indicated by a red dashed rectangle.

31			End of Boring							
32										

The diagram illustrates the well completion details for Boring MW-1. It shows a vertical cross-section of the well from the ground surface down to 32 feet. The casing is made of concrete at the top and Sch 40 PVC for the rest. A traffic-rated monument is located at the surface. A bentonite seal is placed around the casing at approximately 10.8 feet. A #2/12 silica sand filter pack is installed around the PVC screen from 12 feet to 27 feet. The water level (W.L.) is indicated at 14.09 feet below ground surface (bgs) ATD. The screen interval is from 12 to 27 feet. The casing size is 2 inches. The screen size is 0.010 inches. The screen type is Sch 40 PVC machine. The filter pack is #2/12.

Attachment B
Contained-In Determination Request

1180 NW Maple St., Suite 310
Issaquah, WA 98027

T 425.395.0010
TRCcompanies.com

July 8, 2022

Mr. Paul Bianco, P.E.
Hazardous Waste and Toxic Reduction
Washington State Department of Ecology, Northwest Regional Office
3190 160th Avenue Southeast
Bellevue, Washington 98008-5452

Re: Contained-In Determination Request
Seattle Times Site
1120 John Street
Seattle, Washington
Agreed Order No. DE20468

TRC Project Number: 483101

Dear Mr. Bianco:

On behalf of Onni John Street (Land) LLC (Onni), TRC Environmental Corporation (TRC) prepared this *Contained-In Determination Request* (CID) for disposal of chlorinated solvent contaminated soil that will be generated as a result of a planned remedial effort at the Seattle Times Site (Site) that is located at 1120 John Steet in Seattle, Washington (subject property) with King County Parcel Number 766620-4391. The remedial actions are being performed pursuant to the requirements of Agreed Order No. DE 20468 (AO). The subject property location is depicted on Figure 1. Contact information for the subject property owner and TRC is provided below:

Property Owner

Onni John Street (Land) LLC
112 Boren Avenue N
Seattle, Washington 98109
Contact: Amirreza Gharoon
(206) 347-8544
agharoon@onni.com

Environmental Consultant

TRC Environmental Corporation
1180 Northwest Maple Street, Suite 310
Issaquah, Washington 98027
Contact: Jerry Boyd, L.G.
(425) 395-0089
jboyd@trccompanies.com

The subject property was formerly the main facility for the Seattle Times newspaper and included offices, printing facilities, and a vehicle fueling/servicing facility. Onni purchased the subject property in 2013 from Seattle Times. Onni is conducting remediation of Site simultaneously with redevelopment of the subject property under the AO to bring the Site into compliance with Model Toxics Control Act (MTCA; 70.105D RCW). The Seattle Times Site has the following Ecology identifiers:

- Facility Site Identification Number 4377754

- Cleanup Site Identification Number 14495

In addition, the Site has the following U.S. Environmental Protection Agency (EPA) identification number:

- U.S. EPA Id No. WAD009244831

A representation of the subject property and surrounding properties is depicted on Figure 2. Onni is redeveloping the subject property into a mixed-use commercial/residential complex with about 5 floors of underground parking. Mass excavation will extend property line to property line to approximately elevation 55 feet above mean sea level (AMSL) referenced to the vertical datum NAVD88. This equates to an average depth of excavation of about 50 feet below current street grade.

BACKGROUND

As referenced in the Revised Remedial Investigation Report (RRI) for the site, the source for the chlorinated solvents in soil has not been determined. Potential sources include an off-property release of dry cleaning fluids at the adjacent Troy Laundry Site to the north and potentially with the historical on-site activities of Seattle Times. Onni purchased the property in 2013 for redevelopment as a multi-story mixed use (commercial/residential) building. Historical subject property assessments and AO-required environmental documents prepared for the Site include:

- Phase I Environmental Site Assessment – Farallon Consulting, LLC, January 8, 2010;
- Limited Subsurface Investigation Report – Environmental Partners, Inc (EPI), August 16, 2013;
- Supplemental Investigation – EPI, 2018-2019;
- Data Gap Investigation – TRC, 2020;
- Revised Remedial Investigation Report (RRIR) - TRC, May 5, 2022;
- Interim Action Work Plan (IAWP) – TRC, May 5, 2022;
- Contained-In Determination Request Sampling and Analysis – April through June 2022. documented herein.

The RRI and IAWP are currently within the public comment period, with full approval of those documents expected in early July.

The analytical results for the soil samples collected from the various investigations are summarized in Table 1 and boring locations are depicted on Figure 3. Copies of all laboratory analytical reports are provided in Attachment A.

Other than Trichloroethene (TCE), no other chlorinated solvent chemical has been detected in soil. However, concentrations of petroleum compounds (gasoline, diesel, and oil range organics [respectively GRO, DRO, and ORO], benzene, naphthalene) and polychlorinated biphenyls (PCBs) have also been detected in several areas of the Site. The ranges of detected concentrations and depths for these compounds are summarized below:

- GRO - 5.8 to 940 milligrams/kilogram (mg/kg), near-surface (0 to 15 ft bgs) near the former fueling operations in the northwestern portion of subject property;
- DRO – 120 to 2,100 mg/kg, near-surface (0 to 15 ft bgs) near former fueling operations in the northwestern portion of subject property;
- ORO – 360 to 5,000 mg/kg, near-surface (0 to 20 ft bgs) in the vicinity of former fueling operations in the northwestern portion of subject property and near former floor hoists;
- Benzene – 0.15 and 0.33 mg/kg, near-surface (0-15 ft bgs) and only two detections in the vicinity of former fueling operations;
- Naphthalene - 0.13 to 6.5 mg/kg, associated with DRO detections described above;
- PCBs – 0.055 to 2.3 mg/kg, near-surface (0-10 ft bgs) in the vicinity of former air compressor and associated compressed air outlet in the former printing area. This area does not overlap with identified TCE impacted soils.

Summaries of detected chemicals in soil are presented in Tables 1 and 2.

To date, a total of 260 soil samples have been collected at the site of which 240 have been analyzed for chlorinated volatile organic compounds (VOCs). The only chlorinated VOC detected in soil is TCE. The detected concentrations of TCE are all relatively low and range from 0.021 mg/kg to 0.16 mg/kg. The currently known and estimated horizontal extent of TCE at detectable concentrations is depicted on Figure 4. The vertical extent of TCE at detectable concentrations is depicted on cross-sections on Figures 5 and 6.

It is currently estimated that approximately 13,800 cubic yards (cy), or about 23,460 tons at 1.7 tons per cy, of CID soil at the Site. Depths of CID requested soil range from approximately 20 feet to 50 feet below current ground surface. None of the detected concentrations exceed the maximum threshold for a CID, as described below.

PLANNED REMEDIAL ACTIONS

The remedial action will remove all impacted soil from the Site to about elevation 55 AMSL and from property line to property line. If performance and confirmational sample analysis at the terminal limits of the redevelopment mass excavation indicate the presence of residual concentrations of TCE or a breakdown chemical (i.e., 1,2-cis- or 1,2-trans-dichloroethylene, vinyl chloride) above their individual clean up level (CUL), an institutional control will be used to prevent exposure from impacted soils deeper than the limit of the interim action excavation. This approach will incorporate the use of an engineering control such as a vapor intrusion barrier beneath the completed building and an Environmental Covenant (EC) for the area of remaining residual impacts. The approximate extent of the planned excavation is shown on Figures 4 through 6.

During redevelopment-related activities, remedial action for the TCE-impacted soils will be conducted by direct loading into approved containers (e.g., roll-off or bin) and transported to Waste Management's transfer facility in south Seattle where it will be loaded onto rail cars for transportation to the disposal facility in accordance with the requirements of the CID. Under the requested CID it is currently anticipated that the excavated soil will be disposed at the Waste Management Subtitle D landfill located near Arlington, Oregon. If it is decided that it would be more cost-effective to dispose the soil at Republic Services' Roosevelt, Washington facility, then the soil will be managed in a similar fashion. All transportation would be in conformance with the requirements of the approved CID.

The remedial action will incorporate the necessary compliance monitoring required under MTCA (Washington Administrative Code [WAC] 173-340-410), and as approved in the IAWP under the AO. Compliance monitoring will include soil sampling and analysis to determine compliance with cleanup standards and the terminal limits of the excavation. All excavated material with detectable concentrations of TCE or other related compounds will be transported off-site for disposal under the CID. Remedial actions are expected to occur between July and October 2022.

REQUEST FOR CONTAINED-IN DETERMINATION

The TCE-impacted soil at the site would normally carry a Resource Conservation and Recovery Act (RCRA) F001 waste code. TRC is requesting that Ecology grant a CID for the TCE-impacted soils at the Site, which would exempt the generated waste from the F001 waste code. As noted previously, the highest TCE concentration in soil detected to date is 0.16 mg/kg. The Universal Treatment Standard (UTS) for TCE in soil is 6 mg/kg, indicating that the soil will meet the EPA Land Disposal Requirements (LDRs). The TCE concentration for all 240 samples analyzed for the Site were considerably less than the UTS concentration of 6 mg/kg.

The lateral and vertical extent of TCE impacts is generally well characterized. However, some uncertainty remains regarding the maximum lateral extent of impacts to the east and west in the central portion of the CID area. This uncertainty will be addressed through sampling and analysis during remedial excavation. This CID request is based upon the currently available data and reasonable estimates of the extent of impacts. If sampling and analysis during excavation indicate that additional impacted soil will require disposal in excess of the volume requested herein, Onni and TRC will request an additional CID in advance of export and disposal of those additional soils. TRC discussed this option with Ecology during a meeting on June 23, 2022, and this document memorializes the conceptual plan.

The soils at the site do not designate as a characteristic hazardous waste under WAC 173-303-090. Relative to the toxicity characteristic, a Toxicity Characteristic Leaching Procedure (TCLP) test was not required based on the maximum TCE concentration. The TCLP test uses a 20:1 mass-to-mass sample dilution. A sample must have at least 20 times the toxicity characteristic threshold value for the TCLP to produce a result exceeding the threshold. For TCE the toxicity characteristic threshold is 0.5 milligrams per liter (mg/L). A minimum TCE concentration of 10 mg/kg would be required to generate that value if all TCE in soil were transferred to leachate. At a maximum concentration of 0.16 mg/kg the maximum concentration that could possibly be present in the TCLP leachate is 0.008 mg/L, which is considerably less than the hazardous waste threshold.

Additionally, there is no reason to suspect that these excavated soils would be designated as a hazardous waste based on the other characteristics. At the maximum concentration observed, the presence of TCE in soil would have no noticeable effect on soil property relative to native and natural soils. TCE is not ignitable (TCE is non-flammable), corrosive (TCE does not have a low or high pH in an aqueous solution) or reactive (TCE is generally inert).

The soil also does not designate as Washington State special waste under WAC 173-303-100. The maximum TCE concentration is 0.16 mg/kg or 0.000016 percent. Without adjusting for Toxic Category, the 0.000016 percent value is already lower than the adjusted 0.001 percent threshold for designation at a WT02 Special Waste. TCE has a Toxic Category of D based on the Rat Inhalation LC₅₀ of 26 mg/L. After adjusting for the Toxic Category, the adjusted concentration is 1×10^{-8} percent.

Based on the above information, there is sufficient data to show that the waste characteristics of the soils to be excavation neither designate as a Characteristic Waste under WAC 173-303-090 nor as a Dangerous Waste under WAC 173-303-100 and should be granted a CID.

If at any time during the remedial action *in situ* TCE soil concentrations are found during the performance and compliance sampling during excavation to be greater than 6 mg/kg, those soils will be segregated and disposed as hazardous waste at a Subtitle C landfill carrying the F001 waste code. The TCE-impacted soils are expected to be excavated starting in mid-July 2022 and continuing through October 2021; however, the actual starting date will be dependent on the final approval of the Interim Action Work Plan by Ecology.

Your attention to this matter would be greatly appreciated. If you have any questions or comments, please contact either of us at your earliest convenience at (425) 395-0010.

Sincerely,

JERRY L. BOYD

MTCA Method A Soil Cleanup Level for Unrestricted Land Uses ^b				0.03	6	NVE	8,000 ^c	5	8,000 ^c	NVE	8,000 ^c	0.05	8,000 ^c	7	0.03	800 ^c	800 ^c	9	0.67 ^c

Notes:
All results presented in milligrams per kilogram (mg/kg).
Bold Compound was detected.
 Detected at a concentration greater than the cleanup level.
< Less than laboratory reporting limit.
-- Not sampled, not analyzed, or data not available
AOPC Area of Potential Concern.
NVE No value established.
UST Underground storage tank.
a Analyzed by EPA Method 8021 or 8260.
b Model Toxics Control Act (MTCA) Method A Soil Cleanup Levels for Unrestricted Land Uses, Table 740-1, Washington Administrative Code (WAC) 173-340-900, July 2021.
c When no MTCA Method A established, MTCA Method B Soil Cleanup Levels (from Cleanup Levels and Risk Calculations [CLARC] spreadsheet) used. Where cleanup levels based on carcinogenic and non-carcinogenic risk were available, the lower value is listed.

RE: Mill Creek

Dear Mr. Koltes:

Included are the results from the testing of material submitted on July 20, 2012 from the Mill Creek, F&BI 207273 project. There are 31 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 20, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek, F&BI 207273 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
207273-01	P1:0
207273-02	P1:3
207273-03	P2:0
207273-04	P2:3
207273-05	P3:0
207273-06	P3:3
207273-07	P4:0
207273-08	P4:3
207273-09	P5:0
207273-10	P5:3
207273-11	P6:0
207273-12	P6:3
207273-13	P7:0
207273-14	P7:3
207273-15	T1:4

Several 8260C compounds failed below the acceptance criteria in the matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek 63801.0

Dear Mr. Koltes:

Included are the results from the testing of material submitted on July 20, 2012 from the Mill Creek 63801.0, F&BI 207294 project. There are 28 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

CASE NARRATIVE

This case narrative encompasses samples received on July 20, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek 63801.0, F&BI 207294 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
207294-01	U-1:15
207294-02	U-2:15
207294-03	U-3:8
207294-04	I-1:.5
207294-05	I-1:3
207294-06	I-2:.5
207294-07	I-2:3
207294-08	I-3:.5
207294-09	I-3:3
207294-10	I-4:.5
207294-11	I-4:3
207294-12	T-1A:4
207294-13	T-1A:7
207294-14	P-8:1
207294-15	P-8:3

The 8260C calibration standard failed the acceptance criteria for dichlorofluoromethane. The data were flagged accordingly.

Several 8260C compounds failed below the acceptance criteria in the matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

Several compounds in the 8260C laboratory control sample and laboratory control sample duplicate exceeded the acceptance criteria. The analytes were not detected in the sample, therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Date of Report: 08/01/12

Date Received: 07/20/12

Project: Mill Creek 63801.0, F&BI 207294

**QUALITY ASSURANCE RESULTS
FOR THE ANALYSIS OF SOIL SAMPLES FOR
POLYCHLORINATED BIPHENYLS AS
AROCOR 1016/1260 BY EPA METHOD 8082A**

Laboratory Code: 207294-12 (Duplicate)

Analyte	Reporting Units	Sample Result	Duplicate Result	RPD (Limit 20)
Aroclor 1016	mg/kg (ppm)	<0.1	<0.1	nm
Aroclor 1260	mg/kg (ppm)	<0.1	<0.1	nm

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	% Recovery LCS	% Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	mg/kg (ppm)	1.6	96	88	60-142	9
Aroclor 1260	mg/kg (ppm)	0.8	102	96	63-144	6

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek Trust, PO 63801.0

Dear Mr. Koltes:

Included are the results from the testing of material submitted on July 24, 2012 from the Mill Creek Trust, PO 63801.0, F&BI 207338 project. There are 50 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 24, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek Trust, PO 63801.0, F&BI 207338 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
207338-01	T-2:1.75
207338-02	T-2:4.5
207338-03	T-3:2
207338-04	T-3:5.5
207338-05	P-9:1.5
207338-06	P-9:4
207338-07	P-10:1.5
207338-08	P-10:4
207338-09	C-1:0.75
207338-10	C-2:0.75
207338-11	C-3:0.75
207338-12	C-7
207338-13	C-8
207338-14	C-9
207338-15	C-4
207338-16	C-5
207338-17	C-6
207338-18	P-11
207338-19	P-12
207338-20	P-13
207338-21	P-14

For the PCB analysis of the wipe samples the 1016 and 1260 aroclor failed below the laboratory control sample acceptance criteria. The data were flagged accordingly.

Dichlorofluoromethane failed below the acceptance criteria in the matrix spike sample. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

The 8260C laboratory control sample and laboratory control sample duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 - More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr - The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek, Job 63801.0

Dear Mr. Koltes:

Included are the results from the testing of material submitted on July 26, 2012 from the Mill Creek Trust, Job 63801.0, F&BI 207392 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 26, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek Trust, Job 63801.0, F&BI 207392 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
207392-01	U-6:10
207392-02	U-6:15
207392-03	U-6:GW
207392-04	U-6:20
207392-05	U-7:10
207392-06	U-7:15
207392-07	U-7:20
207392-08	U-8:10
207392-09	U-8:15
207392-10	U-8:20
207392-11	U-9:10
207392-12	U-9:15
207392-13	U-9:20

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 - More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr - The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 1120 John Street

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 5, 2012 from the 1120 John Street, F&BI 209029 project. There are 26 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 5, 2012 by Friedman & Bruya, Inc. from the Environmental Partners 1120 John Street, F&BI 209029 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
209029-01	MW2-10
209029-02	MW2-15
209029-03	MW2-20
209029-04	W1-10
209029-05	W1-15
209029-06	MW2-85

An 8270D internal standard failed the acceptance criteria for sample W1-10 due to matrix interferences. The data were flagged accordingly.

Several 8260C compounds failed below the acceptance criteria in the matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

An 8260C direct sparge internal standard failed the acceptance criteria for sample W1-10 due to matrix interferences. The data were flagged accordingly.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 63801.1, F&BI 209033

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 5, 2012 from the 63801.1, F&BI 209033 project. There are 48 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 5, 2012 by Friedman & Bruya, Inc. from the Environmental Partners 63801.1, F&BI 209033 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
209033-01	P-15:1.5
209033-02	P-15:4
209033-03	P-16:3
209033-04	S-1:7
209033-05	H-1:7
209033-06	H-2:4
209033-07	H-3:7
209033-08	H-4:7
209033-09	P-17:1.5
209033-10	P-17:4
209033-11	P-18:1.5
209033-12	P-18:4
209033-13	P-19:1.5
209033-14	P-19:4
209033-15	P-20:1.5
209033-16	P-20:4

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek / Seattle Times

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 7, 2012 from the Mill Creek / Seattle Times, F&BI 209072 project. There are 47 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 7, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek / Seattle Times, F&BI 209072 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
209072-01	MW1-10
209072-02	MW1-30
209072-03	W2-10
209072-04	W2-15
209072-05	MW1-0912
209072-06	MW2-0912

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek 63801.1

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 7, 2012 from the Mill Creek 63801.1, F&BI 209073 project. There are 29 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

295 NE Gilman Blvd., Suite 201
Issaquah, WA 98027

RE: Mill Creek

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 7, 2012 from the Mill Creek, F&BI 209093 project. There are 29 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 7, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek, F&BI 209093 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
209093-01	C-13
209093-02	C-14
209093-03	C-15
209093-04	P-21
209093-05	P-22
209093-06	P-23
209093-07	P-24
209093-08	P-25
209093-09	P-26
209093-10	P-27
209093-11	P-28
209093-12	P-29
209093-13	P-30
209093-14	P-31
209093-15	P-32
209093-16	P-33
209093-17	P-34
209093-18	P-35
209093-19	P-36
209093-20	P-37
209093-21	P-38
209093-22	P-39
209093-23	P-40

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek, F&BI 209071

Dear Mr. Koltes:

Included are the results from the testing of material submitted on September 7, 2012 from the Mill Creek, F&BI 209071 project. There are 12 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on September 7, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek, F&BI 209071 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
209071-01	S-2:Water
209071-02	S-5:Water
209071-03	S-4:Water

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 - More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr - The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 65601.1, F&BI 305018

Dear Mr. Koltes:

Included are the results from the testing of material submitted on May 1, 2013 from the 65601.1, F&BI 305018 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 1, 2013 by Friedman & Bruya, Inc. from the Environmental Partners 65601.1, F&BI 305018 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
305018-01	MW-3:20
305018-02	MW-3:30
305018-03	MW-3:50
305018-04	MW-3:70
305018-05	MW-3:80
305018-06	MW-3:85
305018-07	MW-3:90
305018-08	MW-3:100
305018-09	MW-3:20:GW
305018-10	MW-3:GW

Bromomethane in the 8260C laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

The 8260C vinyl chloride concentrations were flagged due to hydrochloric acid preservation per EPA SW-846 table 4-1.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Seattle Times 65602.0, F&BI 305352

Dear Mr. Koltes:

Included are the results from the testing of material submitted on May 17, 2013 from the Seattle Times 65602.0, F&BI 305352 project. There are 6 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 63803.1, F&BI 402141

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 12, 2014 from the 63803.1, F&BI 402141 project. There are 68 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 63803, F&BI 412313

Dear Mr. Koltes:

Included are the results from the testing of material submitted on December 18, 2014 from the 63803, F&BI 412313 project. There are 5 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Pit Lot, F&BI 501240

Dear Mr. Koltes:

Included are the results from the testing of material submitted on January 19, 2015 from the Pit Lot, F&BI 501240 project. There are 6 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Date Received: 01/28/15

Project: 63803.1, F&BI 501384

**QUALITY ASSURANCE RESULTS
FOR THE ANALYSIS OF SOIL SAMPLES
FOR TOTAL METALS USING EPA METHOD 200.8**

Laboratory Code: 501384-11 (Matrix Spike)

Analyte	Reporting Units	Spike Level	Sample Result (Wet wt)	Percent Recovery MS	Percent Recovery MSD	Acceptance Criteria	RPD (Limit 20)
Cadmium	mg/kg (ppm)	10	<1	105	105	83-116	0
Lead	mg/kg (ppm)	50	1.13	102	101	59-148	1

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Cadmium	mg/kg (ppm)	10	107	54-114
Lead	mg/kg (ppm)	50	104	80-120

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 63803.1, F&BI 501444

Dear Mr. Koltes:

Included are the results from the testing of material submitted on January 30, 2015 from the 63803.1, F&BI 501444 project. There are 19 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on January 30, 2015 by Friedman & Bruya, Inc. from the Environmental Partners 63803.1, F&BI 501444 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
501444-01	TP-1:4
501444-02	TP-2:2
501444-03	TP-2:4
501444-04	TP-3:2
501444-05	TP-3:4
501444-06	TP-4:2
501444-07	TP-4:4
501444-08	TP-5:2
501444-09	TP-5:4
501444-10	TP-6:2
501444-11	TP-6:4
501444-12	TP-7:2
501444-13	TP-7:4
501444-14	TP-8:1.5
501444-15	TP-9:1.5
501444-16	TP-10:2
501444-17	TP-11:1.5
501444-18	TP-12:1.5
501444-19	TP-13:1.5

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Pit Lot 63803, F&BI 502047

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 4, 2015 from the Pit Lot 63803, F&BI 502047 project. There are 6 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Pit Lot Property

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 13, 2015 from the Pit Lot Property, F&BI 502213 project. There are 12 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 63803.1, F&BI 502228

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 16, 2015 from the 63803.1, F&BI 502228 project. There are 8 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Pit Lot 63803, F&BI 502251

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 17, 2015 from the Pit Lot 63803, F&BI 502251 project. There are 5 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Pit Lot/63803, F&BI 502422

Dear Mr. Koltes:

Included are the results from the testing of material submitted on February 26, 2015 from the Pit Lot/63803, F&BI 502422 project. There are 8 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Attention: MICHAEL ERDAHL

Dear MICHAEL ERDAHL:

Enclosed please find the analytical data for your 508040 project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
SumpWater-080415	Water	15-A012202	MIN
SumpScale-080415	Soil	15-A012203	Alk-Carb-S, CONV, MIN, MET

Your samples were received on Tuesday, August 4, 2015. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Laboratory Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 65602, F&BI 805087

Dear Mr Koltes:

Included are the results from the testing of material submitted on May 4, 2018 from the 65602, F&BI 805087 project. There are 24 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 4, 2018 by Friedman & Bruya, Inc. from the Environmental Partners 65602, F&BI 805087 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
805087 -01	T-5:5
805087 -02	T-5:10
805087 -03	T-5:15
805087 -04	T-6:5
805087 -05	T-6:10
805087 -06	T-6:15
805087 -07	T-7:5
805087 -08	T-7:10
805087 -09	T-7:15
805087 -10	T-4:5
805087 -11	T-4:10
805087 -12	T-4:15
805087 -13	U-13:5
805087 -14	U-13:10
805087 -15	U-13:15
805087 -16	U-13:20
805087 -17	U-14:5
805087 -18	U-14:10
805087 -19	U-14:15
805087 -20	U-14:20
805087 -21	T-5:GW
805087 -22	T-6:GW
805087 -23	T-7:GW
805087 -24	T-4:GW
805087 -25	U-13:GW
805087 -26	U-14:GW
805087 -27	MW-5:GW

Acetone in the 8260C laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. In addition, acetone was detected in the 8260C method blank. The data were flagged accordingly.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 65602, F&BI 805233

Dear Mr Koltes:

Included are the results from the testing of material submitted on May 14, 2018 from the 65602, F&BI 805233 project. There are 28 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 14, 2018 by Friedman & Bruya, Inc. from the Environmental Partners 65602, F&BI 805233 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
805233 -01	MW-4:10
805233 -02	MW-4:15
805233 -03	MW-4:20
805233 -04	MW-4:25
805233 -05	MW-4:30
805233 -06	MW-4:35
805233 -07	MW-4:40
805233 -08	MW-4:45
805233 -09	MW-4:50
805233 -10	MW-4:55
805233 -11	MW-4:60
805233 -12	MW-4:65
805233 -13	MW-4:70
805233 -14	MW-4:75
805233 -15	MW-4:80
805233 -16	MW-4:85
805233 -17	MW-4:90
805233 -18	MW-4:95
805233 -19	MW-4:100
805233 -20	U-10:5
805233 -21	U-10:10
805233 -22	U-10:20
805233 -23	U-11:10
805233 -24	U-11:15
805233 -25	U-11:20
805233 -26	U-11:25
805233 -27	U-12:10
805233 -28	U-12:15
805233 -29	U-12:20
805233 -30	U-12:25
805233 -31	U-10:GW
805233 -32	U-11:GW
805233 -33	U-12:GW

Acetone was detected in the 8260C analysis of sample U-10:GW. The data were as likely due to laboratory contamination.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: ONNI 65602, F&BI 805354

Dear Mr Koltes:

Included are the results from the testing of material submitted on May 21, 2018 from the ONNI 65602, F&BI 805354 project. There are 11 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 21, 2018 by Friedman & Bruya, Inc. from the Environmental Partners ONNI 65602, F&BI 805354 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
805354 -01	U-15
805354 -02	MW-4

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: ONNI 65602, F&BI 805355

Dear Mr Koltes:

Included are the results from the testing of material submitted on May 21, 2018 from the ONNI 65602, F&BI 805355 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 65602-Seattle Times, F&BI 810529

Dear Mr Koltes:

Included are the results from the testing of material submitted on October 29, 2018 from the 65602-Seattle Times, F&BI 810529 project. There are 21 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE

This case narrative encompasses samples received on October 29, 2018 by Friedman & Bruya, Inc. from the Environmental Partners 65602-Seattle Times, F&BI 810529 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
810529 -01	T-9:15.5
810529 -02	T-9:20
810529 -03	T-9:25
810529 -04	T-9:GW
810529 -05	T-10:10
810529 -06	T-10:15
810529 -07	T-10:20
810529 -08	T-10:30
810529 -09	T-10:35

Acetone was detected in the 8260C analysis of sample T-9:GW. The data were flagged as due to laboratory contamination.

Several 8260C soil compounds failed the acceptance criteria in the matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 65602-Seattle Times, F&BI 903313

Dear Mr Koltes:

Included are the results from the testing of material submitted on March 18, 2019 from the 65602-Seattle Times, F&BI 903313 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE

This case narrative encompasses samples received on March 18, 2019 by Friedman & Bruya, Inc. from the Environmental Partners 65602-Seattle Times, F&BI 903313 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
903313 -01	MW-6:5
903313 -02	MW-6:10
903313 -03	MW-6:15
903313 -04	MW-6:20
903313 -05	MW-6:25
903313 -06	MW-6:30
903313 -07	MW-6:35
903313 -08	MW-7:5
903313 -09	MW-7:10
903313 -10	MW-7:15
903313 -11	MW-7:20
903313 -12	MW-7:25
903313 -13	MW-7:30
903313 -14	MW-7:35
903313 -15	MW-8:5
903313 -16	MW-8:10

The 8260C matrix spike sample and matrix spike duplicate failed the relative percent difference for acetone. The analyte was not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365.0009-Seattle Times-Onni, F&BI 010489

Dear Mr Koltes:

Included are the results from the testing of material submitted on October 27, 2020 from the 015365.0009-Seattle Times-Onni, F&BI 010489 project. There are 15 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 27, 2020 by Friedman & Bruya, Inc. from the TRC Environmental 015365.0009-Seattle Times-Onni, F&BI 010489 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
010489-01	TRC-B1:5
010489-02	TRC-B1:10
010489-03	TRC-B1:15
010489-04	TRC-B1:20
010489-05	TRC-B1:25
010489-06	TRC-B1:30
010489-07	TRC-B1:35
010489-08	TRC-B1:40
010489-09	TRC-B1:45
010489-10	TRC-B1:50
010489-11	TRC-B2:5
010489-12	TRC-B2:10
010489-13	TRC-B2:15
010489-14	TRC-B2:20
010489-15	TRC-B2:25
010489-16	TRC-B2:30
010489-17	TRC-B2:35

Methylene chloride exceeded the acceptance criteria in the 8260D matrix spike samples. The laboratory control sample met the acceptance criteria, therefore the data were likely due to sample matrix effect.

The 8260D calibration standard failed the acceptance criteria for acetone. The data were flagged accordingly.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365-Onni Seattle Times, F&BI 010557

Dear Mr Koltes:

Included are the results from the testing of material submitted on October 29, 2020 from the 015365-Onni Seattle Times, F&BI 010557 project. There are 22 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365.0009-Onni Seattle Times, F&BI 010584

Dear Mr Koltes:

Included are the results from the testing of material submitted on October 30, 2020 from the 015365.0009-Onni Seattle Times, F&BI 010584 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365-Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011054

Dear Mr Koltes:

Included are the results from the testing of material submitted on November 3, 2020 from the 015365-Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011054 project. There are 31 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365- Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011112

Dear Mr Koltes:

Included are the results from the testing of material submitted on November 5, 2020 from the 015365- Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011112 project. There are 16 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

011112-25	MW-10:96
011112-26	MW-10:100
011112-27	MW-10:105

Vinyl chloride in the 8260D matrix spike samples failed below the acceptance criteria. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect. In addition, the matrix spike and matrix spike duplicate failed the relative percent difference for trichloroethene. The analyte was not detected in the samples therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 015365-Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011158

Dear Mr Koltes:

Included are the results from the testing of material submitted on November 9, 2020 from the 015365-Onni Seattle Times PO 015365.0009 Phase 1, F&BI 011158 project. There are 8 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101, F&BI 205034

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 3, 2022 from the Onni Seattle Times 483101, F&BI 205034 project. There are 25 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on May 4, 2022 from the Onni Seattle Times 483101, F&BI 205062 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101, F&BI 205062

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 4, 2022 from the Onni Seattle Times 483101, F&BI 205062 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on May 5, 2022 from the Onni Seattle Times 483101, F&BI 205091 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 5, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 483101, F&BI 205091 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
205091 -01	CSB-35:25
205091 -02	CSB-35:26
205091 -03	CSB-35:30
205091 -04	CSB-35:35
205091 -05	CSB-35:40
205091 -06	CSB-35:45
205091 -07	CSB-35:50
205091 -08	CSB-36:5
205091 -09	CSB-36:8
205091 -10	CSB-36:10
205091 -11	CSB-36:15
205091 -12	CSB-36:20
205091 -13	CSB-36:25
205091 -14	CSB-36:30
205091 -15	CSB-36:35
205091 -16	CSB-36:40
205091 -17	CSB-36:45
205091 -18	CSB-36:50
205091 -19	CSB-36:55
205091 -20	CSB-36:60

The 8260D matrix spike and matrix spike duplicate failed the relative percent difference for chloroethane. The analyte was not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101, F&BI 205091

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 5, 2022 from the Onni Seattle Times 483101, F&BI 205091 project. There are 10 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 5, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 483101, F&BI 205091 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
205091 -01	CSB-35:25
205091 -02	CSB-35:26
205091 -03	CSB-35:30
205091 -04	CSB-35:35
205091 -05	CSB-35:40
205091 -06	CSB-35:45
205091 -07	CSB-35:50
205091 -08	CSB-36:5
205091 -09	CSB-36:8
205091 -10	CSB-36:10
205091 -11	CSB-36:15
205091 -12	CSB-36:20
205091 -13	CSB-36:25
205091 -14	CSB-36:30
205091 -15	CSB-36:35
205091 -16	CSB-36:40
205091 -17	CSB-36:45
205091 -18	CSB-36:50
205091 -19	CSB-36:55
205091 -20	CSB-36:60

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni 182124, F&BI 205116

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 6, 2022 from the Onni 483101 182124, F&BI 205116 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni 483101 182124, F&BI 205117

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 6, 2022 from the Onni 483101 182124, F&BI 205117 project. There are 7 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on June 1, 2022 from the Onni Seattle Times 182124, F&BI 206024 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

CASE NARRATIVE

This case narrative encompasses samples received on June 1, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206024 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206024 -01	CSB-38:6.5
206024 -02	CSB-38:10
206024 -03	CSB-38:15
206024 -04	CSB-38:20
206024 -05	CSB-38:25
206024 -06	CSB-38:30
206024 -07	CSB-38:35
206024 -08	CSB-38:40
206024 -09	CSB-38:45
206024 -10	CSB-38:50
206024 -11	CSB-38:57.5
206024 -12	CSB-38:60
206024 -13	CSB-39:5
206024 -14	CSB-39:10
206024 -15	CSB-39:15
206024 -16	CSB-39:20
206024 -17	CSB-39:25
206024 -18	CSB-39:30
206024 -19	CSB-39:35

The 8260D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206024

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 1, 2022 from the Onni Seattle Times 182124, F&BI 206024 project. There are 9 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206058

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on June 3, 2022 from the Onni Seattle Times 182124, F&BI 206058 project. There are 12 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 3, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206058 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206058 -01	CSB-39:40
206058 -02	CSB-39:45
206058 -03	CSB-39:50
206058 -04	CSB-39:55
206058 -05	CSB-39:60
206058 -06	CSB-40:5
206058 -07	CSB-40:10
206058 -08	CSB-40:15
206058 -09	CSB-40:20
206058 -10	CSB-40:25
206058 -11	CSB-40:30
206058 -12	CSB-40:35
206058 -13	CSB-40:40
206058 -14	CSB-40:45
206058 -15	CSB-40:50
206058 -16	CSB-40:55
206058 -17	CSB-40:60
206058 -18	CSB-41:5
206058 -19	CSB-41:10

The 8260D vinyl chloride matrix spike and duplicate recovery was below control limits. The laboratory control sample was within limits, therefore the data were reported.

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 2, 2022 from the Onni Seattle Times 182124, F&BI 206058 project. There are 11 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 2, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206058 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206058 -01	CSB-39:40
206058 -02	CSB-39:45
206058 -03	CSB-39:50
206058 -04	CSB-39:55
206058 -05	CSB-39:60
206058 -06	CSB-40:5
206058 -07	CSB-40:10
206058 -08	CSB-40:15
206058 -09	CSB-40:20
206058 -10	CSB-40:25
206058 -11	CSB-40:30
206058 -12	CSB-40:35
206058 -13	CSB-40:40
206058 -14	CSB-40:45
206058 -15	CSB-40:50
206058 -16	CSB-40:55
206058 -17	CSB-40:60
206058 -18	CSB-41:5
206058 -19	CSB-41:10

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206085

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 3, 2022 from the Onni Seattle Times 182124, F&BI 206085 project. There are 9 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 6, 2022 from the Onni Seattle Times 182124, F&BI 206098 project. There are 12 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 6, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206098 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206098 -01	CSB-44:5
206098 -02	CSB-44:10
206098 -03	CSB-44:15
206098 -04	CSB-44:20
206098 -05	CSB-44:25
206098 -06	CSB-44:30
206098 -07	CSB-44:35
206098 -08	CSB-44:40
206098 -09	CSB-44:45
206098 -10	CSB-44:50
206098 -11	CSB-43:15
206098 -12	CSB-43:20
206098 -13	CSB-43:25
206098 -14	CSB-43:30
206098 -15	CSB-43:35
206098 -16	CSB-43:40
206098 -17	CSB-43:45
206098 -18	CSB-43:50

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Soil Gas Assessment – Implementation of the Interim Action Work Plan
Seattle Times Site
1120 John Street
Seattle, Washington
Agreed Order No. DE 20468

TRC Project Number: 483101

THOMAS C. MORIN

JERRY L. BOYD

JOSEPH SHERROD

INTRODUCTION

On behalf of Onni John Street (Land) LLC (Onni) and in support of its requirements under Agreed Order (AO) No. DE 20468, TRC Environmental Corporation (TRC) has prepared this technical memorandum to document the collection of soil gas samples at the Seattle Times Site (Site) located at 1120 John Street, Seattle, Washington (Property). The Property boundary and recent soil borings are depicted on Figure 1.

As outlined in Section 4.5.3 of the *Revised Interim Action Work Plan* (IAWP), the analysis of soil gas samples collected from elevations below the planned development's lowest floor will be used to assess the potential for vapor intrusion into the structure to be constructed at the Property. Impacted soil gas at the Property is related to the presence of halogenated volatile organic compounds (hVOCs) in groundwater migrating onto the Property from the Troy Laundry Site. As noted in the IAWP, the results of the soil gas investigation are to be used to evaluate the potential inclusion of a vapor intrusion barrier beneath the building.

In accordance with IAWP, TRC conducted the planned soil gas sampling activities at the Property on May 5 and 6, 2022 and June 2, 2022. This technical memorandum presents the results of the soil gas investigation and based on the results, the determination to install a vapor intrusion barrier as part of the building construction.

METHODOLOGY

Soil gas samples were collected from temporary monitoring probes within soil borings at depths approximately 60 feet below the pre-development ground surface (bgs) or approximately 45 to 50 feet above mean sea level (amsl; referenced to vertical datum NAVD88). These elevations correspond to approximately 5 to 10 feet below the concrete slab of the bottom floor of the planned redevelopment. The lower four levels of the building comprise the parking garage serving the development.

Soil gas samples were collected from temporary borings CSB-36 and CSB-37 on May 5 and 6, 2022, respectively. Two additional soil gas samples were collected from temporary soil borings, CSB-40 and CSB-42 on June 2 and 3, 2022, respectively (Figure 1). An insufficient volume of soil gas was collected from temporary boring CSB-42; therefore, the sample was not analyzed by the analytical laboratory.

Barometric conditions were generally stable throughout the sampling period. During the May 2022 soil gas collection the barometric pressure was about 29.39 inches of mercury (in. Hg) on May 5 and 29.37 in. Hg on May 6. The June 2022 soil gas collection event noted average daily barometric pressure of 29.5 in. Hg on June 2 and 29.37 in. Hg on June 3. Precipitation was not recorded in significant amounts during any of the soil gas sampling events.

Soil Gas Sampling

Each soil gas sample was collected from approximately 60 feet bgs or an elevation of 45 to 50 feet amsl. Each temporary boring was advanced to 60 feet where a single use 12-inch stainless steel vapor screen was installed from 59 to 60 feet bgs. Washed, 10-20 silica sand was then used to fill the well annulus from 60 feet bgs to approximately 57 feet bgs. Drill tooling (sonic drill rods or hollow-stem augers) were pulled upwards approximately 3.5 feet from the bottom of the boring, connecting the temporary vapor point and filter pack material to the native formation. Approximately 2 to 3 feet of hydrated bentonite powder was placed in the well annulus creating a seal.

Small diameter polyethylene tubing (0.25-inch) was secured to the upper portion of the temporary screen. Collectively, the stainless-steel vapor screen and polyethylene tubing is referred to as the sample collection train.

Approximately 0.5 liter of soil gas was purged from the sample collection train using an electric vacuum pump. This was done to remove ambient air entrained in the sample collection train prior to construction. At the completion of purging activities, extracted soil gas was screened with a photoionization detector (PID). PID values are presented in parts per million (ppm) below:

- CSB-36, 0.0 ppm;
- CSG-37, 0.0 ppm; and
- CSG-40, 9.8 ppm.

Soil gas samples were collected in 1-liter decontaminated SUMMA® canisters coupled with a low-flow grab sample regulator provided by analytical laboratory Friedman and Bruya, Inc. (FBI) in Seattle, Washington. Prior to sampling, the on-Site TRC geologist assembled the surface sampling manifold provided by FBI and securely fastened all compression and push connections.

A shut-in test was then performed to determine if any surface leaks existed within the sampling manifold or sample regulator. The shut-in test is performed by closing all manifold and sample train valves, opening the regulator briefly to induce a vacuum on the surface manifold. A successful shut-in test holds a consistent vacuum above 10 inches of mercury for no less than 3 minutes. Each soil gas sample successfully passed shut-in test procedures.

To commence sampling, the regulator valve was opened, and initial vacuum recorded. Each SUMMA® canister collected volume for approximately 5 minutes until negative 2 to 3 inches of mercury registered on the regulator. The canister at boring location CSB-36:SG drew a sample over approximately 32 minutes and was stopped before drawing the full volume; however, a sample was still able to be analyzed from this canister and meet the necessary screening criteria. After each sample was collected, the canister regulator was closed, the final vacuum recorded, and the canister resecured for transportation to FBI.

Ambient Air Sampling

Ambient or background air samples were collected up wind of the soil gas sample locations during each of the sampling events. One-liter decontaminated SUMMA® canisters coupled with a grab sample regulator were provided by FBI and used for sample collection.

In general, each ambient air sample was placed in the approximate breathing zone (5 feet above ground surface) to capture surface conditions during each sampling event. Ambient air sample AA-1 was collected on May 6, 2022. Based on the prevailing wind direction (north-northwest) the sampling canister was located near AOPC 6 in the surface parking lot. Ambient air sample AA-2 was collected on June 2, 2022. Based on the prevailing wind direction (south-southwest) the sample canister was located along the northern property boundary near AOPC 9.

To initiate sample collection, the regulator valve was opened, and initial vacuum pressure recorded. Each sample was collected over an approximately 5-minute interval until negative 2 to 3 in. Hg remained in the sample canister. The canister regulator was then closed, the final vacuum pressure recorded, and the canister was secured for transportation to FBI.

Samples were recorded on the chain-of-custody, transported to FBI, and analyzed for hVOCs using U.S. Environmental Protection Agency (EPA) Method TO-15 under standard turnaround time.

RESULTS

Soil gas sample results are summarized in Table 1 along with Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) Method B Sub-Slab Soil Gas Screening Levels (SL_{sg}) and Ecology's recently published South Lake Union Group (SLUG) remediation levels (RELs) for soil gas. The SLUG RELs correspond to the MTCA Screening Levels in the Cleanup Levels and Risk Calculations (CLARC) for the "Vapor Intrusion Worker" scenario. Analytical reports are included as Attachment A.

Ecology communication indicated that the SLUG RELs will be the applicable standard to evaluate the need for placement of a vapor barrier beneath the proposed building. Ecology also indicated that soil gas concentrations exceeding an REL at any point within the footprint of the proposed building would generally require placement of a vapor intrusion barrier beneath the entire footprint of the building.

Trichloroethene (TCE), 1,2-dichloroethane (EDC), and cis-1,2-dichloroethene (cDCE) were the only hVOCs detected at a concentration exceeding a method detection limit (MDL).

TCE was detected in three samples at concentrations ranging from 78 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) to 1,900 $\mu\text{g}/\text{m}^3$. The TCE concentrations at CSB-37:SG (280 $\mu\text{g}/\text{m}^3$) and CSB-40:SG (1,900 $\mu\text{g}/\text{m}^3$) exceeded the SLUG REL of 95 $\mu\text{g}/\text{m}^3$.

EDC was detected in three soil gas samples at concentrations ranging from 1.3 $\mu\text{g}/\text{m}^3$ at sample location CSB-37 to 4.8 $\mu\text{g}/\text{m}^3$ at CSB-40. A SLUG REL has not been established for EDC. The EDC concentration detected at CSB-40:SG exceeded the SL_{sg} of 3.2 $\mu\text{g}/\text{m}^3$.

cDCE was detected in one soil gas sample (CSB-36:SG) at a concentration of 33 $\mu\text{g}/\text{m}^3$. Neither a SLUG REL nor an SL_{sg} have been established for cDCE.

No analytes were detected in either ambient air sample at a concentration exceeding the MDL.

CONCLUSIONS

Based on the reported TCE concentrations greater than the SLUG REL and Ecology's directions, a chemical vapor intrusion barrier will be installed beneath the entire footprint of the proposed building to minimize the potential for soil vapor intrusion.

PLANNED ACTIONS

The IAWP contemplated continued soil gas sampling as excavation proceeded across the Property. Based upon the findings of the initial soil gas assessment, Ecology's statements, and the consequent determination to install a vapor intrusion barrier across the entire footprint of the building, Onni will not be collecting additional soil gas samples during further excavations.

Onni is currently evaluating vapor barrier products appropriate for this application. Upon selection of the product, the specifications and installation details will be provided to Ecology.

RE: Onni Seattle Times 483101, F&BI 205092

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 5, 2022 from the Onni Seattle Times 483101, F&BI 205092 project. There are 5 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101, F&BI 205034

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 3, 2022 from the Onni Seattle Times 483101, F&BI 205034 project. There are 25 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on May 4, 2022 from the Onni Seattle Times 483101, F&BI 205062 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 4, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 483101, F&BI 205062 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
205062 -01	CSB-33:25
205062 -02	CSB-33:30
205062 -03	CSB-33:35
205062 -04	CSB-33:40
205062 -05	CSB-33:45
205062 -06	CSB-33:50
205062 -07	CSB-34:7
205062 -08	CSB-34:10
205062 -09	CSB-34:15
205062 -10	CSB-34:20
205062 -11	CSB-34:25
205062 -12	CSB-34:30
205062 -13	CSB-34:35
205062 -14	CSB-34:40
205062 -15	CSB-34:45
205062 -16	CSB-34:50
205062 -17	CSB-35:5
205062 -18	CSB-35:10
205062 -19	CSB-35:15
205062 -20	CSB-35:20

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101, F&BI 205062

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 4, 2022 from the Onni Seattle Times 483101, F&BI 205062 project. There are 14 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 4, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 483101, F&BI 205062 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
205062 -01	CSB-33:25
205062 -02	CSB-33:30
205062 -03	CSB-33:35
205062 -04	CSB-33:40
205062 -05	CSB-33:45
205062 -06	CSB-33:50
205062 -07	CSB-34:7
205062 -08	CSB-34:10
205062 -09	CSB-34:15
205062 -10	CSB-34:20
205062 -11	CSB-34:25
205062 -12	CSB-34:30
205062 -13	CSB-34:35
205062 -14	CSB-34:40
205062 -15	CSB-34:45
205062 -16	CSB-34:50
205062 -17	CSB-35:5
205062 -18	CSB-35:10
205062 -19	CSB-35:15
205062 -20	CSB-35:20

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 483101

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on May 5, 2022 from the Onni Seattle Times 483101, F&BI 205091 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 5, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 483101, F&BI 205091 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
205091 -01	CSB-35:25
205091 -02	CSB-35:26
205091 -03	CSB-35:30
205091 -04	CSB-35:35
205091 -05	CSB-35:40
205091 -06	CSB-35:45
205091 -07	CSB-35:50
205091 -08	CSB-36:5
205091 -09	CSB-36:8
205091 -10	CSB-36:10
205091 -11	CSB-36:15
205091 -12	CSB-36:20
205091 -13	CSB-36:25
205091 -14	CSB-36:30
205091 -15	CSB-36:35
205091 -16	CSB-36:40
205091 -17	CSB-36:45
205091 -18	CSB-36:50
205091 -19	CSB-36:55
205091 -20	CSB-36:60

The 8260D matrix spike and matrix spike duplicate failed the relative percent difference for chloroethane. The analyte was not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

RE: Onni Seattle Times 483101, F&BI 205091

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 5, 2022 from the Onni Seattle Times 483101, F&BI 205091 project. There are 10 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni 182124, F&BI 205116

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 6, 2022 from the Onni 483101 182124, F&BI 205116 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni 483101 182124, F&BI 205117

Dear Mr Boyd:

Included are the results from the testing of material submitted on May 6, 2022 from the Onni 483101 182124, F&BI 205117 project. There are 7 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on June 1, 2022 from the Onni Seattle Times 182124, F&BI 206024 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 1, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206024 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206024 -01	CSB-38:6.5
206024 -02	CSB-38:10
206024 -03	CSB-38:15
206024 -04	CSB-38:20
206024 -05	CSB-38:25
206024 -06	CSB-38:30
206024 -07	CSB-38:35
206024 -08	CSB-38:40
206024 -09	CSB-38:45
206024 -10	CSB-38:50
206024 -11	CSB-38:57.5
206024 -12	CSB-38:60
206024 -13	CSB-39:5
206024 -14	CSB-39:10
206024 -15	CSB-39:15
206024 -16	CSB-39:20
206024 -17	CSB-39:25
206024 -18	CSB-39:30
206024 -19	CSB-39:35

The 8260D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206024

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 1, 2022 from the Onni Seattle Times 182124, F&BI 206024 project. There are 9 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206057

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 2, 2022 from the Onni Seattle Times 182124, F&BI 206057 project. There are 6 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the additional results from the testing of material submitted on June 3, 2022 from the Onni Seattle Times 182124, F&BI 206085 project. There are 8 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 3, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206085 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206085 -01	CSB-42:5
206085 -02	CSB-42:10
206085 -03	CSB-42:15
206085 -04	CSB-42:20
206085 -05	CSB-42:25
206085 -06	CSB-42:30
206085 -07	CSB-42:35
206085 -08	CSB-42:40
206085 -09	CSB-42:45
206085 -10	CSB-42:50
206085 -11	CSB-42:55
206085 -12	CSB-42:60
206085 -13	CSB-43:5
206085 -14	CSB-43:10

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124, F&BI 206085

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 3, 2022 from the Onni Seattle Times 182124, F&BI 206085 project. There are 9 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on June 3, 2022 by Friedman & Bruya, Inc. from the TRC Environmental Onni Seattle Times 182124, F&BI 206085 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
206085 -01	CSB-42:5
206085 -02	CSB-42:10
206085 -03	CSB-42:15
206085 -04	CSB-42:20
206085 -05	CSB-42:25
206085 -06	CSB-42:30
206085 -07	CSB-42:35
206085 -08	CSB-42:40
206085 -09	CSB-42:45
206085 -10	CSB-42:50
206085 -11	CSB-42:55
206085 -12	CSB-42:60
206085 -13	CSB-43:5
206085 -14	CSB-43:10

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Onni Seattle Times 182124

Dear Mr Boyd:

Included are the results from the testing of material submitted on June 6, 2022 from the Onni Seattle Times 182124, F&BI 206098 project. There are 12 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 483101 Onni-Seattle Times 185571, F&BI 207215

Dear Mr Boyd:

Included are the results from the testing of material submitted on July 14, 2022 from the 483101 Onni-Seattle Times 185571, F&BI 207215 project. There are 6 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE

This case narrative encompasses samples received on July 19, 2022 by Friedman & Bruya, Inc. from the TRC Environmental 483101-Onni Seattle Times, F&BI 207307 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>TRC Environmental</u>
207307-01	20220719-Soil-1
207307-02	20220719-Soil-2
207307-03	20220719-Soil-3
207307-04	202207-CharacterizationSample

Methylene chloride was detected in the 8260D analysis. The data were flagged as due to laboratory contamination.

The 8260D calibration standard failed the acceptance criteria for chloroform. The data were flagged accordingly.

Methylene chloride exceeded the acceptance criteria in the matrix spike samples. The result is likely due to the ambient lab contamination of the compound.

All other quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: Mill Creek Trust, PO 63801.0

Dear Mr. Koltes:

Included are the results from the testing of material submitted on July 24, 2012 from the Mill Creek Trust, PO 63801.0, F&BI 207338 project. There are 50 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 24, 2012 by Friedman & Bruya, Inc. from the Environmental Partners Mill Creek Trust, PO 63801.0, F&BI 207338 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Partners</u>
207338-01	T-2:1.75
207338-02	T-2:4.5
207338-03	T-3:2
207338-04	T-3:5.5
207338-05	P-9:1.5
207338-06	P-9:4
207338-07	P-10:1.5
207338-08	P-10:4
207338-09	C-1:0.75
207338-10	C-2:0.75
207338-11	C-3:0.75
207338-12	C-7
207338-13	C-8
207338-14	C-9
207338-15	C-4
207338-16	C-5
207338-17	C-6
207338-18	P-11
207338-19	P-12
207338-20	P-13
207338-21	P-14

For the PCB analysis of the wipe samples the 1016 and 1260 aroclor failed below the laboratory control sample acceptance criteria. The data were flagged accordingly.

Dichlorofluoromethane failed below the acceptance criteria in the matrix spike sample. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

The 8260C laboratory control sample and laboratory control sample duplicate failed the relative percent difference for several compounds. The analytes were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.
