DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-34

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: Oily Water

Generation Process: Pump out of UST-34

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 3,000 gal.

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☒ N/A ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☒ Not Detected [non TSCA or State Regulated] ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm [Potentially TSCA Regulated or State Regulated PCB Waste-WPCB] ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	Total Metals ☐ mg/kg ☐ ug/kg ☐ mg/L ☒ ug/L <table border="1"><tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr><tr><td>Barium:</td><td>68</td><td>☐ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td>17</td><td>☐ ND</td></tr><tr><td>Lead:</td><td>260</td><td>☒ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td>7.2</td><td>☐ ND</td></tr><tr><td>Nickel:</td><td>89</td><td>☐ ND</td></tr><tr><td>Zinc:</td><td>1200</td><td>☐ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:		☒ ND	Barium:	68	☐ ND	Cadmium:		☒ ND	Chromium:	17	☐ ND	Lead:	260	☒ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:	7.2	☐ ND	Nickel:	89	☐ ND	Zinc:	1200	☐ ND	Comments:

Comments:																																							

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
Liquid	95-100
Misc. solids	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Sand

Star Forge, Former Jorgenson Forge Property, UST-26-Sand

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: soil

Generation Process: clean out of UST-26

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 75 cubic yards (15,000 gal.)

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State:

- ☒ Solid (pass paint filter)
☐ Solid w/freestanding or absorbed liquid
☐ Liquid (If liquid, indicate if the liquid is:
☒ Single Layer
☐ Multi-layer

pH:

- ☐ < 2 [D002]
☐ > 2 but < 12.5
☒ N/A ☐ > 12.5 [D002]

Flashpoint:

- ☒ N/A ☐ < 140 °F [D001]
☐ > 140 °F but < 200 °F
☐ > 200 °F

Characteristic	PCB Content	TCLP Metals	Total Metals
			☒ mg/kg ☐ ug/kg ☐ mg/L ☐ ug/L
☐ Ignitable [D001]	☒ Not Detected	☐ Arsenic ≥ 5.0 mg/L [D004]	Arsenic: ☐ ND
☐ Corrosive [D002]	[non TSCA or State Regulated]	☐ Barium ≥ 100.0 mg/L [D005]	Barium: 43 ☐ ND
☐ Reactive [D003]	☐ Not Sampled	☐ Cadmium ≥ 1.0 mg/L [D006]	Cadmium: ☒ ND
☐ Toxic [D004 – D043]	☐ ≥ 2 ppm and < 50 ppm	☐ Chromium ≥ 5.0 mg/L [D007]	Chromium: 11 ☐ ND
List Here:	[Potentially TSCA Regulated or State Regulated PCB Waste-WPCB]	☐ Lead ≥ 5.0 mg/L [D008]	Lead: ☒ ND
	☐ ≥ 50 ppm [TSCA Regulated]	☐ Mercury ≥ 0.2 mg/L [D009]	Mercury: ☒ ND
	☐ < 1 ppm	☐ Selenium ≥ 1.0 mg/L [D010]	Selenium: ☒ ND
	Note:	☐ Silver ≥ 5.0 mg/L [D011]	Silver: ☒ ND
	IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	Check if: ☐ Assumed	Copper: 11 ☐ ND
		☐ TCLP Conducted	Nickel: 15 ☐ ND
		☒ TCLP Not Conducted	Zinc: 21 ☐ ND
		Comments:	Comments:

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
Soil	95-100
Misc. debris	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-27

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: oily water

Generation Process: clean out of UST-27

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 3,000 gal.

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☒ N/A ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☒ Not Detected [non TSCA or State Regulated] ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm [Potentially TSCA Regulated or State Regulated PCB Waste-WPCB] ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	Total Metals □mg/kg □ug/kg □mg/L ☒ug/L <table border="1"><tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr><tr><td>Barium:</td><td>60</td><td>☐ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td>17</td><td>☐ ND</td></tr><tr><td>Lead:</td><td>280</td><td>☐ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td></td><td>☒ ND</td></tr><tr><td>Nickel:</td><td>79</td><td>☐ ND</td></tr><tr><td>Zinc:</td><td>240</td><td>☐ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:		☒ ND	Barium:	60	☐ ND	Cadmium:		☒ ND	Chromium:	17	☐ ND	Lead:	280	☐ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:		☒ ND	Nickel:	79	☐ ND	Zinc:	240	☐ ND	Comments:

Comments:																																							

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
liquid	95-100
Misc. solids	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-29

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: oily water

Generation Process: clean out of UST-29

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 3,000 gal.

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☒ N/A ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☒ Not Detected <u>[non TSCA or State Regulated]</u> ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm <u>[Potentially TSCA Regulated or State Regulated PCB Waste-WPCB]</u> ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	Total Metals ☐ mg/kg ☐ ug/kg ☐ mg/L ☒ ug/L <table border="1"><tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr><tr><td>Barium:</td><td>170</td><td>☐ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td></td><td>☒ ND</td></tr><tr><td>Lead:</td><td>100</td><td>☐ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td></td><td>☒ ND</td></tr><tr><td>Nickel:</td><td>79</td><td>☐ ND</td></tr><tr><td>Zinc:</td><td>89</td><td>☐ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:		☒ ND	Barium:	170	☐ ND	Cadmium:		☒ ND	Chromium:		☒ ND	Lead:	100	☐ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:		☒ ND	Nickel:	79	☐ ND	Zinc:	89	☐ ND	Comments:

Comments:																																							

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
liquid	95-100
Misc. solids	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-30

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: oily water

Generation Process: clean out of UST-30

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 3,000 gal.

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☒ N/A ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☒ Not Detected <u>[non TSCA or State Regulated]</u> ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm <u>[Potentially TSCA Regulated or State Regulated PCB Waste-WPCB]</u> ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	Total Metals ☐ mg/kg ☐ ug/kg ☐ mg/L ☒ ug/L <table><tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr><tr><td>Barium:</td><td></td><td>☒ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td></td><td>☒ ND</td></tr><tr><td>Lead:</td><td></td><td>☒ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td></td><td>☒ ND</td></tr><tr><td>Nickel:</td><td></td><td>☒ ND</td></tr><tr><td>Zinc:</td><td></td><td>☒ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:		☒ ND	Barium:		☒ ND	Cadmium:		☒ ND	Chromium:		☒ ND	Lead:		☒ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:		☒ ND	Nickel:		☒ ND	Zinc:		☒ ND	Comments:

Comments:																																							

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
liquid	95-100
Misc. solids	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Sand

Star Forge, Former Jorgenson Forge Property, UST-31-Sand

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: soil

Generation Process: clean out of UST-31

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 75 cubic yards (15,000 gal.)

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☒ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☐ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☒ N/A ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☒ Not Detected <u>[non TSCA or State Regulated]</u> ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm <u>[Potentially TSCA Regulated or State Regulated PCB Waste-WPCB]</u> ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	Total Metals ☒ mg/kg ☐ ug/kg ☐ mg/L ☐ ug/L <table><tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr><tr><td>Barium:</td><td>85</td><td>☐ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td>10</td><td>☐ ND</td></tr><tr><td>Lead:</td><td></td><td>☒ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td>17</td><td>☐ ND</td></tr><tr><td>Nickel:</td><td>13</td><td>☐ ND</td></tr><tr><td>Zinc:</td><td>22</td><td>☐ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:		☒ ND	Barium:	85	☐ ND	Cadmium:		☒ ND	Chromium:	10	☐ ND	Lead:		☒ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:	17	☐ ND	Nickel:	13	☐ ND	Zinc:	22	☐ ND	Comments:

Comments:																																							

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
Soil	95-100
Misc. debris	0-5

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-32

A. WASTE STREAM NAME AND GENERATION INFORMATION																																							
Waste Stream Name: oily water																																							
Generation Process: clean out of UST-32																																							
RCRA ID Number that waste will be managed under:		Total Quantity and/or Estimated Generation rate:																																					
Star Forge LLC, DBA Jorgenson Forge: WAD000602813		Approximately 3,000 gal.																																					
Other Descriptions (i.e. Shop, Project, Etc.):																																							
B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:																																							
Physical State:		pH:																																					
☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint:																																					
		☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☒ N/A ☐ > 200 °F																																					
Characteristic	PCB Content	TCLP Metals	Total Metals																																				
☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	☒ Not Detected [non TSCA or State Regulated] ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm [Potentially TSCA Regulated or State Regulated PCB Waste-WPCB] ☐ ≥ 50 ppm [TSCA Regulated] ☐ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☐ TCLP Conducted ☒ TCLP Not Conducted Comments:	☐ mg/kg ☐ ug/kg ☐ mg/L ☒ ug/L <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Arsenic:</td><td></td><td>☒ ND</td></tr> <tr><td>Barium:</td><td></td><td>☒ ND</td></tr> <tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr> <tr><td>Chromium:</td><td></td><td>☒ ND</td></tr> <tr><td>Lead:</td><td></td><td>☒ ND</td></tr> <tr><td>Mercury:</td><td></td><td>☒ ND</td></tr> <tr><td>Selenium:</td><td></td><td>☒ ND</td></tr> <tr><td>Silver:</td><td></td><td>☒ ND</td></tr> <tr><td>Copper:</td><td></td><td>☒ ND</td></tr> <tr><td>Nickel:</td><td></td><td>☒ ND</td></tr> <tr><td>Zinc:</td><td></td><td>☒ ND</td></tr> <tr><td colspan="3">Comments:</td></tr> </table>	Arsenic:		☒ ND	Barium:		☒ ND	Cadmium:		☒ ND	Chromium:		☒ ND	Lead:		☒ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:		☒ ND	Nickel:		☒ ND	Zinc:		☒ ND	Comments:

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Oily Water

Star Forge, Former Jorgenson Forge Property, UST-33

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: oily water

Generation Process: clean out of UST-33

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 3,000 gal.

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☒ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer	pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]
	Flashpoint: ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☒ N/A ☐ > 200 °F

Characteristic	PCB Content	TCLP Metals	Total Metals																																				
			☐ mg/kg ☐ ug/kg ☐ mg/L ☒ ug/L

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0 % [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0 % [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0 % [NOT APPLICABLE] ☐ > 1.0 % [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value of less than 0.001%, this waste stream is therefore designated as non-dangerous waste.

DANGEROUS WASTE DESIGNATION FORM – Slag

Star Forge, Former Jorgenson Forge Property, N. Tanks Slag

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: Slag

Generation Process: Excavation

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Total Quantity and/or Estimated Generation rate:

Approximately 1,200 tons

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☒ Solid (pass paint filter) ☐ Solid w/freestanding or absorbed liquid ☐ Liquid (If liquid, indicate if the liquid is: ☒ Single Layer ☐ Multi-layer		pH: ☐ < 2 [D002] ☐ > 2 but < 12.5 ☒ N/A ☐ > 12.5 [D002]																																					
		Flashpoint: ☒ N/A ☐ < 140 °F [D001] ☐ > 140 °F but < 200 °F ☐ > 200 °F																																					
Characteristic ☐ Ignitable [D001] ☐ Corrosive [D002] ☐ Reactive [D003] ☐ Toxic [D004 – D043] List Here:	PCB Content ☐ Not Detected ☐ [non TSCA or State Regulated] ☐ Not Sampled ☐ ≥ 2 ppm and < 50 ppm ☐ [Potentially TSCA Regulated or State Regulated PCB Waste-WPCB] ☐ ≥ 50 ppm [TSCA Regulated] ☒ < 1 ppm Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	TCLP Metals ☐ Arsenic ≥ 5.0 mg/L [D004] ☐ Barium ≥ 100.0 mg/L [D005] ☐ Cadmium ≥ 1.0 mg/L [D006] ☐ Chromium ≥ 5.0 mg/L [D007] ☐ Lead ≥ 5.0 mg/L [D008] ☐ Mercury ≥ 0.2 mg/L [D009] ☐ Selenium ≥ 1.0 mg/L [D010] ☐ Silver ≥ 5.0 mg/L [D011] Check if: ☐ Assumed ☒ TCLP Conducted ☐ TCLP Not Conducted Comments: <u>Chromium only</u>	Total Metals ☒ mg/kg ☐ ug/kg ☐ mg/L ☐ ug/L <table><tr><td>Arsenic:</td><td>79</td><td>☐ ND</td></tr><tr><td>Barium:</td><td>31</td><td>☐ ND</td></tr><tr><td>Cadmium:</td><td></td><td>☒ ND</td></tr><tr><td>Chromium:</td><td>3900</td><td>☐ ND</td></tr><tr><td>Lead:</td><td>70</td><td>☐ ND</td></tr><tr><td>Mercury:</td><td></td><td>☒ ND</td></tr><tr><td>Selenium:</td><td></td><td>☒ ND</td></tr><tr><td>Silver:</td><td></td><td>☒ ND</td></tr><tr><td>Copper:</td><td>1200</td><td>☐ ND</td></tr><tr><td>Nickel:</td><td>7900</td><td>☐ ND</td></tr><tr><td>Zinc:</td><td>170</td><td>☐ ND</td></tr><tr><td colspan="3">Comments:</td></tr></table>	Arsenic:	79	☐ ND	Barium:	31	☐ ND	Cadmium:		☒ ND	Chromium:	3900	☐ ND	Lead:	70	☐ ND	Mercury:		☒ ND	Selenium:		☒ ND	Silver:		☒ ND	Copper:	1200	☐ ND	Nickel:	7900	☐ ND	Zinc:	170	☐ ND	Comments:

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
slag	100

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☐ < 0.001 % [not a Toxic Criteria DW]	☒ < 0.01 % [NOT APPLICABLE]	☒ < 1.0% [NOT APPLICABLE]
☒ 0.001 ≥ 1.0 % [WT02 – DW]	☐ 0.01 to 1.0% [WP02 – DW]	☐ > 1.0% [WP03 – EHW]
☐ ≥ 1.0% [WT01 – EHW]	☐ > 1.0 % [WP01 – EHW]	

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value which would designate as Toxic, WT-02. This book designation was refuted by a follow-up fish bioassay in accordance with WAC 173-303-110(3)(b), *Biological Testing Methods for the Designation of Dangerous Waste Method 80-12*. The fish bioassay demonstrated zero fish mortality and this waste stream is therefore designated as non-dangerous waste.

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☐ < 0.001 % [not a Toxic Criteria DW]	☒ < 0.01 % [NOT APPLICABLE]	☒ < 1.0% [NOT APPLICABLE]
☒ 0.001 ≥ 1.0 % [WT02 – DW]	☐ 0.01 to 1.0% [WP02 – DW]	☐ > 1.0% [WP03 – EHW]
☐ ≥ 1.0% [WT01 – EHW]	☐ > 1.0 % [WP01 – EHW]	

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, resulting in a calculated equivalent concentration value which would designate as Toxic, WT-02. This book designation was refuted by a follow-up fish bioassay in accordance with WAC 173-303-110(3)(b), *Biological Testing Methods for the Designation of Dangerous Waste Method 80-12*. The fish bioassay demonstrated zero fish mortality and this waste stream is therefore designated as non-dangerous waste.

Re: Analytical Data for Project Star Forge UST Waste Designation
Laboratory Reference No. 2004-139

Dear Dave:

Enclosed are the analytical results and associated quality control data for samples submitted on April 22, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: April 29, 2020
Samples Submitted: April 22, 2020
Laboratory Reference: 2004-139
Project: Star Forge UST Waste Designation

Case Narrative

Samples were collected on April 21 and 22, 2020 and received by the laboratory on April 22, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D (water) Analysis

Samples UST-34, UST-33, UST-32, UST-30, UST-29 and UST-27 were analyzed at a dilution due to the presence of product in the samples.

Semivolatiles EPA 8270E/SIM (water) Analysis

Sample UST-27 had one surrogate recovery out of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

PCBs EPA 8082A (water) Analysis

Sample UST-33 (40%) had DCB surrogate below quality control limits 50-153% due to a high product concentration, resulting in heavy emulsion and an elevated final volume in the extraction process. No further action was performed.

Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge UST Waste Designation
Laboratory Reference No. 2004-139B

Dear Dave:

Enclosed are the analytical results and associated quality control data for samples submitted on April 22, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DeB" followed by a stylized flourish.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 5, 2020
Samples Submitted: April 22, 2020
Laboratory Reference: 2004-139B
Project: Star Forge UST Waste Designation

Case Narrative

Samples were collected on April 21 and 22, 2020 and received by the laboratory on April 22, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Lead	9.42	9.51	10.0	10.0	ND	94	95	75-125	1	20

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 22, 2020
Samples Submitted: April 22, 2020
Laboratory Reference: 2004-139C
Project: Star Forge UST Waste Designation

Case Narrative

Samples were collected on April 21 and 22, 2020 and received by the laboratory on April 22, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

The client requested the analysis of samples N. Tanks Slag, and S. Tanks Slag after the holding time had expired.

Semivolatiles EPA 8270E/SIM Analysis

The client requested the analysis of samples N. Tanks Slag, and S. Tanks Slag after the holding time had expired.

Samples N. Tanks Slag, and S. Tanks Slag each had one surrogate recovery out of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

Total Metals EPA 6010D/7471B Analysis

The duplicate RPD for Chromium is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

The Matrix Spike/ Matrix Spike Duplicate recoveries for Barium and Chromium are outside control limits due to matrix inhomogeneity. The samples were re-extracted and re-analyzed with similar results. The Spike Blank recovery was 98.3% for Barium and 100% for Chromium.

The Matrix Spike/Matrix Spike Duplicate RPD for Chromium is outside control limits due to matrix inhomogeneity. The samples were re-extracted and re-analyzed with similar results.

Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge UST Waste Designation
Laboratory Reference No. 2004-139D

Dear Dave:

Enclosed are the analytical results and associated quality control data for samples submitted on April 22, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

Project: Star Forge UST Waste Designation

Case Narrative

Samples were collected on April 21 and 22, 2020 and received by the laboratory on April 22, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Dangerous Waste Characterization

Sample ID: N. Tanks Slag; S. Tanks Slag

Report date: June 8, 2020

Submitted to:

OnSite Environmental
14648 NE 95th Street
Redmond, WA 98052

Rainier Environmental
5013 Pacific Hwy East
Suite 20
Tacoma, WA 98424

1.0 INTRODUCTION

A dangerous waste characterization using the test organism *Oncorhynchus mykiss* (rainbow trout) was conducted on two samples submitted by Onsite Environmental to Rainier Environmental. Testing was conducted following the Washington State Department of Ecology Publication 80-12.

2.0 METHODS

The samples, identified as N. Tanks Slag and S. Tanks Slag were received in the laboratory on June 2, 2020. Upon arrival at the laboratory the samples were inspected and contents verified against information provided on the chain-of-custody form. The samples were stored at 4°C in the dark until use. The test procedure is outlined in Table 1.

Table 1. Summary of Dangerous Waste Characterization Test Conditions

Parameter	Standard Fish Toxicity Test
Test numbers	2006-001; 2006-002
Sample ID's	N. Tanks Slag; S. Tanks Slag
Test initiation date; time	6/4/2020; 0900h
Test termination date; time	6/8/2020; 0945h
Endpoint	Mortality at 96-hours
Test chamber	7.5 L Plastic tank
Test temperature	12 ± 1°C
Dilution water	Moderately hard synthetic water
Test solution volume	6 L
Test concentrations (mg/L)	100, 10, 0
Number of organisms/chamber	10
Number of replicates	3
Test organism	<i>Oncorhynchus mykiss</i> (rainbow trout)
Feeding	No feeding during test
Photoperiod	16 hours light/ 8 hours dark
Extraction	Rotary agitation (30 +/- 2 rpm) for 18 hours
Reference Toxicant	Copper sulfate
Deviations	None

The test organisms used in the test are outlined in Table 2. The samples were tested using fish received on April 22, 2020.

Table 2. Test organisms (*Oncorhynchus mykiss*)

Test organism age	46 days post swim-up (hatch date 4/1/2020)
Mean weight	0.33 g
Mean length	33 mm
Ratio of longest to shortest	1.2
Loading	0.55 g/L
Test organism source	Trout Lodge; Sumner, WA

3.0 RESULTS

A summary of results for the dangerous waste characterization conducted on samples N. Tanks Slag and S. Tanks Slag are contained in Table 3. There was no mortality during the tests. Based on these results, the samples do not designate as either a dangerous or extremely hazardous waste. Copies of the laboratory bench sheets, statistical summaries of reference toxicant tests, and chain-of-custody form are provided in Appendices A through C.

Table 3. Summary of Results

Sample ID	Concentration (mg/L)	Survival (# fish, N=30)	Percent Mortality	Dangerous Waste Designation
Control	0	30	0	NA
N. Tanks Slag	10	30	0	None
	100	30	0	
S. Tanks Slag	10	30	0	None
	100	30	0	

4.0 QUALITY ASSURANCE

The most recently completed reference toxicant test was initiated June 4, 2020. The LC₅₀ of 138 µg/L copper fell within the acceptable range of mean ± two standard deviations of historical test results indicating that the test organisms were of an appropriate degree of sensitivity. The coefficient of variation (CV) for the last 20 tests was 29.8 percent, which is considered excellent by the Biomonitoring Science Advisory Board.

Corey League, Project Manager
SoundEarth Strategies
2811 Fairview Ave. East, Suite 2000
Seattle, WA 98102

Dear Mr League:

Included are the results from the testing of material submitted on October 25, 2019 from the SOU_0995-002_20191025, F&BI 910502 project. There are 3 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 25, 2019 by Friedman & Bruya, Inc. from the SoundEarth Strategies SOU_ 0995-002_ 20191025, F&BI 910502 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>SoundEarth Strategies</u>
910502 -01	UST-15-20191024
910502 -02	UST-16-20191024
910502 -03	UST-17-20191024
910502 -04	UST-18-20191024
910502 -05	UST-19-20191024
910502 -06	UST-20-20191024
910502 -07	UST-21-20191024
910502 -08	UST-22-20191024

The samples were sent to Fremont Analytical for flashpoint analysis. The report will be forwarded upon receipt.

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

Date of Report: 10/29/19

Date Received: 10/25/19

Project: SOU_ 0995-002_ 20191025, F&BI 910502

Date Extracted: 10/25/19

Date Analyzed: 10/25/19

**RESULTS FROM THE ANALYSIS OF SOIL SAMPLES
FOR GASOLINE, DIESEL AND HEAVY OIL BY NWTPH-HCID**

Results Reported on a Dry Weight Basis

Results Reported as Not Detected (ND) or Detected (D)

THE DATA PROVIDED BELOW WAS PERFORMED PER THE GUIDELINES ESTABLISHED BY THE
WASHINGTON DEPARTMENT OF ECOLOGY AND WERE NOT DESIGNED TO PROVIDE INFORMATION
WITH REGARDS TO THE ACTUAL IDENTIFICATION OF ANY MATERIAL PRESENT

<u>Sample ID</u> Laboratory ID	<u>Gasoline</u>	<u>Diesel</u>	<u>Heavy Oil</u>	<u>Surrogate</u> <u>(% Recovery)</u> (Limit 56-165)
UST-15-20191024 910502-01 1/1,000	ND	D	ND	143
UST-16-20191024 910502-02 1/1,000	ND	D	ND	163
UST-17-20191024 910502-03 1/1,000	ND	D	ND	150
UST-18-20191024 910502-04 1/1,000	ND	D	ND	137
UST-19-20191024 910502-05 1/1,000	ND	D	ND	143
UST-20-20191024 910502-06 1/1,000	ND	D	ND	68
UST-21-20191024 910502-07 1/1,000	ND	D	ND	143
UST-22-20191024 910502-08 1/1,000	ND	D	ND	155
Method Blank 09-2647 MB	ND	ND	ND	94

ND - Material not detected at or above 20,000 mg/kg gas, 50,000 mg/kg diesel and 250,000 mg/kg heavy oil.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 910502
Work Order Number: 1910463

October 29, 2019

Attention Michael Erdahl:

Fremont Analytical, Inc. received 8 sample(s) on 10/25/2019 for the analyses presented in the following report.

Flashpoint by EPA 1010/ASTM D93

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes ☒ No ☐ Not Present ☐
 2. How was the sample delivered? FedEx

Log In

3. Coolers are present? Yes ☒ No ☐ NA ☐
 4. Shipping container/cooler in good condition? Yes ☒ No ☐
 5. Custody Seals present on shipping container/cooler?
 (Refer to comments for Custody Seals not intact) Yes ☐ No ☒ Not Required ☐
 6. Was an attempt made to cool the samples? Yes ☒ No ☐ NA ☐
 7. Were all items received at a temperature of >0°C to 10.0°C * Yes ☒ No ☐ NA ☐
 8. Sample(s) in proper container(s)? Yes ☒ No ☐
 9. Sufficient sample volume for indicated test(s)? Yes ☒ No ☐
 10. Are samples properly preserved? Yes ☒ No ☐
 11. Was preservative added to bottles? Yes ☐ No ☒ NA ☐
 12. Is there headspace in the VOA vials? Yes ☐ No ☐ NA ☒
 13. Did all samples containers arrive in good condition(unbroken)? Yes ☒ No ☐
 14. Does paperwork match bottle labels? Yes ☒ No ☐
 15. Are matrices correctly identified on Chain of Custody? Yes ☒ No ☐
 16. Is it clear what analyses were requested? Yes ☒ No ☐
 17. Were all holding times able to be met? Yes ☒ No ☐

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☒

Corey League, Project Manager
SoundEarth Strategies
2811 Fairview Ave. East, Suite 2000
Seattle, WA 98102

Dear Mr League:

Included are the results from the testing of material submitted on October 25, 2019 from the SOU_0995-002_ 20191025, F&BI 910503 project. There are 3 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 25, 2019 by Friedman & Bruya, Inc. from the SoundEarth Strategies SOU_0995-002_ 20191025, F&BI 910503 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>SoundEarth Strategies</u>
910503 -01	UST-27-20191024
910503 -02	UST-28-20191024
910503 -03	UST-29-20191024
910503 -04	UST-31-20191024
910503 -05	UST-32-20191024
910503 -06	UST-33-20191024
910503 -07	UST-34-20191024

All quality control requirements were acceptable.

Date of Report: 10/29/19

Date Received: 10/25/19

Project: SOU_0995-002_ 20191025, F&BI 910503

Date Extracted: 10/25/19

Date Analyzed: 10/25/19

**RESULTS FROM THE ANALYSIS OF WATER SAMPLES
FOR GASOLINE, DIESEL AND HEAVY OIL BY NWTPH-HCID
Results Reported as Not Detected (ND) or Detected (D)**

THE DATA PROVIDED BELOW WAS PERFORMED PER THE GUIDELINES ESTABLISHED BY THE
WASHINGTON DEPARTMENT OF ECOLOGY AND WERE NOT DESIGNED TO PROVIDE INFORMATION
WITH REGARDS TO THE ACTUAL IDENTIFICATION OF ANY MATERIAL PRESENT

<u>Sample ID</u> Laboratory ID	<u>Corrected ID</u>	<u>Gasoline</u>	<u>Diesel</u>	<u>Heavy Oil</u>	Surrogate (% Recovery) (Limit 47-140)
UST-27-20191024 910503-01	UST-34	ND	D	ND	94
UST-28-20191024 910503-02	UST-33	ND	D	ND	ip
UST-29-20191024 910503-03	UST-32	ND	ND	D	95
UST-31-20191024 910503-04	UST-30	ND	D	ND	67
UST-32-20191024 910503-05	UST-29	ND	D	ND	90
UST-33-20191024 910503-06	UST-28	ND	D	ND	81
UST-34-20191024 910503-07	UST-27	ND	D	ND	94
Method Blank 09-2653 MB		ND	ND	ND	96

ND - Material not detected at or above 0.2 mg/L gas, 0.5 mg/L diesel and 0.5 mg/L heavy oil.

UST-26 through UST-35 were named incorrectly at the time of sampling.
The corrected tank IDs are listed here, based on the letter dated
Mar. 2, 2020 from Mr. Marten (Marten Law) to Mr. Imke (Ecology)

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

DANGEROUS WASTE DESIGNATION FORM

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: **Area-Wide Dust**

Generation Process: This material is a mixture of dust, fine particulates, soil "track-in" and exposed soil that accumulated throughout the facility over many years of operation. The material is not a waste stream that was generated from any one process or unit operation.

RCRA ID Number that waste will be managed under:

Star Forge LLC, DBA Jorgenson Forge:
WAD000602813

Other Descriptions (i.e. Shop, Project, Etc.):

Total Quantity and/or Estimated Generation rate:

Estimated 1-2 tons remaining on-site primarily on the floor of the main structure.

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State:

- ☒ Solid (pass paint filter)
☐ Solid w/freestanding or absorbed liquid
☐ Liquid (If liquid, indicate if the liquid is:
☐ Single Layer
☐ Multi-layer

pH:

- ☐ < 2 [D002]
☐ > 2 but < 12.5
☒ N/A ☐ > 12.5 [D002]

Flashpoint:

- ☒ N/A ☐ < 140 °F [D001]
☐ > 140 °F but < 200 °F
☐ > 200 °F

Characteristic	PCB Content	TCLP Metals	Total Metals
			☒ mg/kg ☐ ug/kg ☐ mg/L ☐ ug/L
☐ Ignitable [D001]	☐ Not Detected	☐ Arsenic ≥ 5.0 mg/L [D004]	Arsenic: 110 ☐ ND
☐ Corrosive [D002]	[non TSCA or State Regulated]	☐ Barium ≥ 100.0 mg/L [D005]	Barium: 1900 ☐ ND
☐ Reactive [D003]	☐ Not Sampled	☐ Cadmium ≥ 1.0 mg/L [D006]	Cadmium: 46 ☐ ND
☐ Toxic [D004 – D043]	≥ 2 ppm and < 50 ppm	☐ Chromium ≥ 5.0 mg/L [D007]	Chromium: 70000 ☐ ND
List Here: None	[Potentially TSCA Regulated or State Regulated PCB Waste-WPCB]	☐ Lead ≥ 5.0 mg/L [D008]	Lead: 4200 ☐ ND
	≥ 50 ppm [TSCA Regulated]	☐ Mercury ≥ 0.2 mg/L [D009]	Mercury: 0.58 ☐ ND
	☒ < 1 ppm	☐ Selenium ≥ 1.0 mg/L [D010]	Selenium: 27 ☐ ND
	Note: IF WASTE STREAM IS BEING MANAGED AS TSCA WASTE, DO NOT USE WPCB STATE CODE PER WAC 173-303-071(3)(k)	☐ Silver ≥ 5.0 mg/L [D011]	Silver: ND ☐ ND
		Check if: ☐ Assumed ☒ TCLP Conducted ☐ TCLP Not Conducted	Copper: 3200 ☐ ND
		Comments: TCLP conducted on all RCRA Metals. All samples passed TCLP.	Nickel: 13000 ☐ ND
			Zinc: 8500 ☐ ND
			Comments: Total metals data represents the highest metals concentration across all 22 samples.

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
Dust	80-98
Soil	1-10
Fine Particles (metal, concrete, wood, plastic, etc.)	1-10

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☐ < 0.001 % [not a Toxic Criteria DW] ☒ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

The interior of the main structure comprises the former melt shop, forge shop, and the heat treat area. Star Forge conducted extensive removal of dust, fine particles, and exposed soil (henceforth “area wide dust”) from the floor, trusses, and other structural surfaces during 2019 to early 2020. The area wide dust has been referred to as process waste in previous documents and correspondence. This material is a mixture of dust, fine particulates, soil “track-in” and exposed soil that accumulated throughout the facility over many years of operation. The material is not a waste stream that was generated from any one process or unit operation.

Previous designation of this material is based on total metals, TCLP metals and total PCBs. This waste stream previously “passed” TCLP for RCRA 8 metals. However, the total metals content caused the area-wide dust to “book designate” as a Toxic Criteria Dangerous Waste and was assigned WA State Dangerous Waste number WT02. A fish bioassay was not conducted to refute the book designation; therefore, the WT02 designation was assumed and approximately 2,500,000 lbs of the area wide dust was removed and disposed of as WA State Toxic Criteria waste during 2019 and early 2020.

Although most of the area wide dust has been removed from the facility interior, some of this material remains on the floor of the facility and has possibly comingled with areas of exposed soil. Therefore, an area wide statistical analysis of the dust, fine particles, and exposed soil was conducted to designate the remaining material so that it can be properly managed during the forthcoming demolition of the structures.

The statistical evaluation of the area wide dust was conducted using Visual Sample Plan (VSP); a statistical software package developed by the Pacific Northwest National Laboratory. VSP integrates data quality objectives into a defensible sampling design and conducts the required calculations for sample size and sample location. The required sample size estimated by VSP is based on several variables including the constituent estimated concentration standard deviation, regulatory threshold, and desired confidence level.

The sample design for the area wide sampling incorporated 22 sample locations chosen randomly on a grid generated by VSP. All samples were analyzed for volatiles by EPA Method 8260, PCBs by EPA Method 8082A, Total RCRA Metals + Copper, Nickel, and Zinc, and TCLP RCRA 8 metals.

Based on the statistical analysis, the mean TCLP concentration of all RCRA 8 metals were below their respective thresholds for the toxicity characteristic. In addition, the mean PCB concentration of the area wide dust and fine particles was shown to be 0.83 mg/kg. Analysis did identify low level trace VOCs listed in 40 CFR 261.31 (and WAC 173-303-9904), Wastes from Non-Specific Sources. The concentration of VOCs did not approach TCLP volatiles characteristic levels and none of the original processes generating any of the trace constituents in question are known therefore RCRA F Series is not applicable.

After the laboratory results were received, A Washington State Toxic Criteria book designation calculation was performed for each of the 22 samples taken throughout the facility. All samples had an Equivalent Concentration (EC) between 0.001% and 1.0%, resulting in a book designation of Toxic, WT02. This book designation was refuted by a follow-up fish bioassay in accordance with WAC 173-303-110(3)(b). The two area wide samples with the highest EC calculation were selected for fish bioassay analysis by Ecology Method 80-1, Biological Testing Methods for the Designation of Dangerous Waste. The fish bioassays resulted in zero fish mortality and therefore the WT02 designation was refuted.

Based on the statistical analysis of total metals, TCLP metals, PCBs and VOCs, the area wide dust has been designed as Non-Dangerous Solid Waste. Further details about the sampling plan design are included in the SAP. In addition, the designation package for the area wide dust is included in Attachment X. This designation is meant to apply to dust, fine particles, and above ground exposed soil remaining in the forge Shop, melt shop, and heat treat shop areas in the main facility structure. During the course of demolition and site stabilization, this media may need to be removed and disposed of off-site for several reasons including stormwater pollutant source control, dust control, and surface preparation for asphalt application to stabilize areas of exposed soil.

File Name:
FR_Area Wide_06012020

Project:
Star Forge Area-Wide Waste Designation Sampling

Date:
6/1/2020

Owner:
Star Forge

Time of Arrival:
0600

Report Number:
1

Prepared by:
Nathan Moxley

Location:
8531 E. Marginal Way

Time of Departure:
1130

Page:
Page 1 of 2

Purpose of Site Visit:
Waste Designation Sampling

Weather:
Indoors

Travel/Prep. Time:
3 hr

Project/Contract Number:
Work Order 03 – Clean Closure

Upon arrival to the site I assessed personal safety hazards: ☒ Yes or ☒ Referred to Site Safety Plan and Safety Tailgate if applicable
Safety Hazards Were Addressed by: ☒ Performing tool box safety meeting ☒ Donning PPE, and observing safety standards

Site Visit Purpose and Details:

To collect samples across the former Melt Shop, Forge Shop, and southern portions of the Heat Treat Area. Samples are being collected in accordance with the Area-Wide sampling plan, and VSP sample design guidance for random sampling of dust throughout the facility.

Summary of Field Activities:

Nathan Moxley and Brian Johnson of DH Environmental arrived onsite at approximately 0600. Upon arrival we conducted a health and safety tailgate meeting and unloaded sampling equipment. Sampling locations were pre-determined by VSP. Using a measuring wheel, we started locating the sample stations based on the proximity to known site features and using the coordinates of each sample, as provided by VSP.

Adequate dust and/or mixed soil and debris were present at all stations within a few feet of the planned sample location, with the following exceptions:

- Station AW-17 was incorrectly plotted outside of the building footprint in the VSP sample design, approximately 41-feet west of the building. The station was moved approximately 51-feet east from the planned location to fall within the building footprint, and located near a small pile of dust and debris approximately 10-feet east of the western wall of the building.
- Station AW-5 was shifted south against the edge of the building to target a pile of loose metal-like dust.
- Station AW-15 was shifted north against the north edge of the building to target a pile of dust that had accumulated in the corner against a column footing and drain pipe.
- Station AW-16 was shifted ~10-ft west of the planned location to target dust that had accumulated in a recessed trackway in the concrete floor

Following the collection of each sample, the sample location was marked and labeled with marking paint, and a photo taken. Photos are provided in attached photo log.

*Concentration assumed from highest possible value from all samples

Random sampling locations for comparing a median with a fixed threshold (nonparametric - MARSSIM)

Summary

This report summarizes the sampling design used, associated statistical assumptions, as well as general guidelines for conducting post-sampling data analysis. Sampling plan components presented here include how many sampling locations to choose and where within the sampling area to collect those samples. The type of medium to sample (i.e., soil, groundwater, etc.) and how to analyze the samples (in-situ, fixed laboratory, etc.) are addressed in other sections of the sampling plan.

The following table summarizes the sampling design developed. A figure that shows sampling locations in the field and a table that lists sampling location coordinates are also provided below.

SUMMARY OF SAMPLING DESIGN	
Primary Objective of Design	Compare a site mean or median to a fixed threshold
Type of Sampling Design	Nonparametric
Sample Placement (Location) in the Field	Simple random sampling
Working (Null) Hypothesis	The median(mean) value at the site exceeds the threshold
Formula for calculating number of sampling locations	Sign Test - MARSSIM version
Calculated number of samples	18
Number of samples adjusted for EMC	18
Number of samples with MARSSIM Overage	22
Number of samples on map ^a	22
Number of selected sample areas ^b	1
Specified sampling area ^c	159472.83 ft ²

^a This number may differ from the calculated number because of 1) grid edge effects, 2) adding judgment samples, or 3) selecting or unselecting sample areas.

^b The number of selected sample areas is the number of colored areas on the map of the site. These sample areas contain the locations where samples are collected.

^c The sampling area is the total surface area of the selected colored sample areas on the map of the site.

Area: melt/forge shops

Primary Sampling Objective

The primary purpose of sampling at this site is to compare a site median or mean value with a fixed threshold. The working hypothesis (or 'null' hypothesis) is that the median(mean) value at the site is equal to or exceeds the threshold. The alternative hypothesis is that the median(mean) value is less than the threshold. VSP calculates the number of samples required to reject the null hypothesis in favor of the alternative one, given a selected sampling approach and inputs to the associated equation.

Selected Sampling Approach

A nonparametric random sampling approach was used to determine the number of samples and to specify sampling locations. A nonparametric formula was chosen because the conceptual model and historical information (e.g., historical data from this site or a very similar site) indicate that typical parametric assumptions may not be true.

Both parametric and non-parametric equations rely on assumptions about the population. Typically, however, non-parametric equations require fewer assumptions and allow for more uncertainty about the statistical distribution of values at the site. The trade-off is that if the parametric assumptions are valid, the required number of samples is usually less than if a non-parametric equation was used.

VSP offers many options to determine the locations at which measurements are made or samples are collected and subsequently measured. For this design, simple random point sampling was chosen. Locating the sample points randomly provides data that are separated by varying distances, providing good information about the spatial structure of the potential contamination. Knowledge of the spatial structure is useful for geostatistical analysis. However, it may not ensure that all portions of the site are equally represented.

Number of Total Samples: Calculation Equation and Inputs

The equation used to calculate the number of samples is based on a Sign test (see PNNL 13450 for discussion). For this

site, the null hypothesis is rejected in favor of the alternative one if the median(mean) is sufficiently smaller than the threshold. The number of samples to collect is calculated so that if the inputs to the equation are true, the calculated number of samples will cause the null hypothesis to be rejected.

The formula used to calculate the number of samples is:

$$n = \frac{(Z_{1-\alpha} + Z_{1-\beta})^2}{4(\text{SignP} - 0.5)^2}$$

where

$$\text{SignP} = \Phi\left(\frac{\Delta}{S_{total}}\right)$$

$\Phi(z)$ is the cumulative standard normal distribution on $(-\infty, z)$ (see PNNL-13450 for details),

n is the number of samples,

S_{total} is the estimated standard deviation of the measured values including analytical error,

Δ is the width of the gray region,

α is the acceptable probability of incorrectly concluding the site median(mean) is less than the threshold,

β is the acceptable probability of incorrectly concluding the site median(mean) exceeds the threshold,

$Z_{1-\alpha}$ is the value of the standard normal distribution such that the proportion of the distribution less than $Z_{1-\alpha}$ is $1-\alpha$,

$Z_{1-\beta}$ is the value of the standard normal distribution such that the proportion of the distribution less than $Z_{1-\beta}$ is $1-\beta$.

Note: MARSSIM suggests that the number of samples should be increased by at least 20% to account for missing or unusable data and uncertainty in the calculated value of n . VSP allows a user-supplied percent overage as discussed in MARSSIM (EPA 2000, p. 5-33).

For each nuclide in the table, the values of these inputs that result in the calculated number of sampling locations are:

Nuclide	n^a	n^b	n^c	Parameter					
				S_{total}	Δ	α	β	$Z_{1-\alpha}^d$	$Z_{1-\beta}^e$
PCB	0	0	0		5	0.05	0.05	1.64485	1.64485
Barium	0	0	0		10	0.05	0.05	1.64485	1.64485
Cadmium	0	0	0		0.2	0.05	0.05	1.64485	1.64485
Chromium	0	0	0		1	0.05	0.05	1.64485	1.64485
Lead	18	18	22	0.8	1	0.05	0.05	1.64485	1.64485

^a The number of samples calculated by the formula.

^b The number of samples increased by EMC calculations.

^c The final number of samples increased by the MARSSIM Overage of 20%.

^d This value is automatically calculated by VSP based upon the user defined value of α .

^e This value is automatically calculated by VSP based upon the user defined value of β .

Performance

The following figure is a performance goal diagram, described in EPA's QA/G-4 guidance (EPA, 2000). It shows the probability of concluding the sample area is dirty on the vertical axis versus a range of possible true median(mean) values for the site on the horizontal axis. This graph contains all of the inputs to the number of samples equation and pictorially represents the calculation.

The red vertical line is shown at the threshold (action limit) on the horizontal axis. The width of the gray shaded area is equal to Δ ; the upper horizontal dashed blue line is positioned at $1-\alpha$ on the vertical axis; the lower horizontal dashed blue line is positioned at β on the vertical axis. The vertical green line is positioned at one standard deviation below the threshold. The shape of the red curve corresponds to the estimates of variability. The calculated number of samples results in the curve that passes through the lower bound of Δ at β and the upper bound of Δ at $1-\alpha$. If any of the inputs change, the number of samples that result in the correct curve changes.

MARSSIM Sign Test

Calculated n=18, alpha=5%, beta=5%, std.dev.=0.8

Statistical Assumptions

The assumptions associated with the formulas for computing the number of samples are:

1. the computed sign test statistic is normally distributed,
2. the variance estimate, S^2 , is reasonable and representative of the population being sampled,
3. the population values are not spatially or temporally correlated, and
4. the sampling locations will be selected randomly.

The first three assumptions will be assessed in a post data collection analysis. The last assumption is valid because the sample locations were selected using a random process.

Sensitivity Analysis

The sensitivity of the calculation of number of samples was explored by varying the standard deviation, lower bound of gray region (% of action level), beta (%), probability of mistakenly concluding that $\mu >$ action level and alpha (%), probability of mistakenly concluding that $\mu <$ action level. The following table shows the results of this analysis.

Number of Samples							
AL=50		$\alpha=5$		$\alpha=10$		$\alpha=15$	
		s=1.6	s=0.8	s=1.6	s=0.8	s=1.6	s=0.8
LBGR=90	$\beta=5$	216	60	172	48	144	40
	$\beta=10$	172	48	132	36	108	30
	$\beta=15$	144	40	108	30	87	24
LBGR=80	$\beta=5$	60	22	48	17	40	15
	$\beta=10$	48	17	36	14	30	11
	$\beta=15$	40	15	30	11	24	9
LBGR=70	$\beta=5$	32	16	26	12	21	11
	$\beta=10$	26	12	20	10	16	9
	$\beta=15$	21	11	16	9	14	6

s = Standard Deviation
 LBGR = Lower Bound of Gray Region (% of Action Level)
 β = Beta (%), Probability of mistakenly concluding that $\mu >$ action level
 α = Alpha (%), Probability of mistakenly concluding that $\mu <$ action level
 AL = Action Level (Threshold)

Note: Values in table are not adjusted for EMC.

Data Analysis for PCB

Data Plots

Three graphical displays of the data are shown below: the Histogram, the Box and Whiskers plot, and the Quantile-Quantile (Q-Q) plot.

The Histogram is a plot of the fraction of the n observed data that fall within specified data "bins." A histogram is generated by dividing the x axis (range of the observed data values) into "bins" and displaying the number of data in each bin as the height of a bar for the bin. The area of the bar is the fraction of the n data values that lie within the bin. The sum of the fractions for all bins equals one. A histogram is used to assess how the n data are distributed (spread) over their range of values. If the histogram is more or less symmetric and bell shaped, then the data may be normally distributed.

The Box and Whiskers plot is composed of a central box divided by a line, and with two lines extending out from the box, called the "whiskers". The line through the box is drawn at the median of the n data observed. The two ends of the box represent the 25th and 75th percentiles of the n data values, which are also called the lower and upper quartiles, respectively, of the data set. The sample mean (mean of the n data) is shown as a "+" sign. The upper whisker extends

to the largest data value that is less than the upper quartile plus 1.5 times the interquartile range (upper quartile minus the lower quartile). The lower whisker extends to the smallest data value that is greater than the lower quartile minus 1.5 times the interquartile range. Extreme data values (greater or smaller than the ends of the whiskers) are plotted individually. A Box and Whiskers plot is used to assess the symmetry of the distribution of the data set. If the distribution is symmetrical, the box is divided into two equal halves by the median, the whiskers will be the same length, and the number of extreme data points will be distributed equally on either end of the plot.

The Q-Q plot graphs the quantiles of a set of n data against the quantiles of a specific distribution. We show here only the Q-Q plot for an assumed normal distribution. The p^{th} quantile of a distribution of data is the data value, x_n , for which a fraction p of the distribution is less than x_n . If the data plotted on the normal distribution Q-Q plot closely follow a straight line, even at the ends of the line, then the data may be assumed to be normally distributed. If the data points deviate substantially from a linear line, then the data are not normally distributed.

For more information on these three plots consult Guidance for Data Quality Assessment, EPA QA/G-9, pgs 2.3-1 through 2.3-12. (<http://www.epa.gov/quality/qa-docs.html>).

Tests for PCB

Summary of Statistical Tests

The following table summarizes the data analysis results and is comparable to MARSSIM Table 8.2. This analysis applies to the discrete sample results (see MARSSIM 8.2.5).

All Measurements < DCGL _W	Average > DCGL _W	Sign Test Result	EMC Result	Conclusion
---	--------------------------------	------------------	------------	------------

Yes	No	N/A	All results <= the Investigation Level of 50 mg/kg	Survey Unit meets release criterion
-----	----	-----	--	--

MARSSIM Sign Test

The Sign test was performed in accordance with the guidance given in section 8.3.2 of MARSSIM. Each measurement (X_i) was subtracted from the action level to obtain n differences: $d_i = AL - X_i$. Any differences of zero were discarded from consideration and the sample size was reduced accordingly. The test statistic S^+ was calculated by counting the positive differences. S^+ was then compared with the critical value k , which was obtained from Table I.3 in Appendix I of MARSSIM.

If $S^+ > k$, then the null hypothesis is rejected.

MARSSIM SIGN TEST		
Test Statistic S^+	95% Critical Value	Null Hypothesis
22	15	Reject

The test rejected the null hypothesis that the mean value at the site exceeds the threshold, so conclude the site is clean.

Data Plots

Three graphical displays of the data are shown below: the Histogram, the Box and Whiskers plot, and the Quantile-Quantile (Q-Q) plot.

The Histogram is a plot of the fraction of the n observed data that fall within specified data "bins." A histogram is generated by dividing the x axis (range of the observed data values) into "bins" and displaying the number of data in each bin as the height of a bar for the bin. The area of the bar is the fraction of the n data values that lie within the bin. The sum of the fractions for all bins equals one. A histogram is used to assess how the n data are distributed (spread) over their range of values. If the histogram is more or less symmetric and bell shaped, then the data may be normally distributed.

The Box and Whiskers plot is composed of a central box divided by a line, and with two lines extending out from the box, called the "whiskers". The line through the box is drawn at the median of the n data observed. The two ends of the box represent the 25th and 75th percentiles of the n data values, which are also called the lower and upper quartiles, respectively, of the data set. The sample mean (mean of the n data) is shown as a "+" sign. The upper whisker extends to the largest data value that is less than the upper quartile plus 1.5 times the interquartile range (upper quartile minus the lower quartile). The lower whisker extends to the smallest data value that is greater than the lower quartile minus 1.5 times the interquartile range. Extreme data values (greater or smaller than the ends of the whiskers) are plotted individually. A Box and Whiskers plot is used to assess the symmetry of the distribution of the data set. If the distribution is symmetrical, the box is divided into two equal halves by the median, the whiskers will be the same length, and the number of extreme data points will be distributed equally on either end of the plot.

The Q-Q plot graphs the quantiles of a set of n data against the quantiles of a specific distribution. We show here only the Q-Q plot for an assumed normal distribution. The p^{th} quantile of a distribution of data is the data value, x_n , for which a fraction p of the distribution is less than x_n . If the data plotted on the normal distribution Q-Q plot closely follow a straight line, even at the ends of the line, then the data may be assumed to be normally distributed. If the data points deviate substantially from a linear line, then the data are not normally distributed.

For more information on these three plots consult Guidance for Data Quality Assessment, EPA QA/G-9, pgs 2.3-1 through 2.3-12. (<http://www.epa.gov/quality/qa-docs.html>).

Tests for Chromium

Summary of Statistical Tests

The following table summarizes the data analysis results and is comparable to MARSSIM Table 8.2. This analysis applies to the discrete sample results (see MARSSIM 8.2.5).

All Measurements < $DCGL_W$	Average > $DCGL_W$	Sign Test Result	EMC Result	Conclusion
Yes	No	N/A	Investigation Level (IL) Not Specified	Survey Unit meets release criterion

MARSSIM Sign Test

The Sign test was performed in accordance with the guidance given in section 8.3.2 of MARSSIM. Each measurement (X_i) was subtracted from the action level to obtain n differences: $d_i = AL - X_i$. Any differences of zero were discarded from consideration and the sample size was reduced accordingly. The test statistic S^+ was calculated by counting the positive differences. S^+ was then compared with the critical value k , which was obtained from Table I.3 in Appendix I of MARSSIM.

If $S^+ > k$, then the null hypothesis is rejected.

MARSSIM SIGN TEST

Test Statistic S+	95% Critical Value	Null Hypothesis
22	15	Reject

The test rejected the null hypothesis that the mean value at the site exceeds the threshold, so conclude the site is clean.

Data Analysis for Lead

Re: Analytical Data for Project Star Forge
Laboratory Reference No. 2006-002B

Dear Dave:

Enclosed are the analytical results and associated quality control data for samples submitted on June 1, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DeB" followed by a stylized flourish.

David Baumeister
Project Manager

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody,

Dangerous Waste Characterization

Sample ID: AW-8; AW-16

Report date: June 22, 2020

Submitted to:

OnSite Environmental

14648 NE 95th Street

Redmond, WA 98052

Rainier Environmental
5013 Pacific Hwy East
Suite 20
Tacoma, WA 98424

1.0 INTRODUCTION

A dangerous waste characterization using the test organism *Oncorhynchus mykiss* (rainbow trout) was conducted on two samples submitted by Onsite Environmental to Rainier Environmental. Testing was conducted following the Washington State Department of Ecology Publication 80-12.

2.0 METHODS

The samples, identified as AW-8 and AW-16 were received in the laboratory on June 16, 2020. Upon arrival at the laboratory the samples were inspected and contents verified against information provided on the chain-of-custody form. The samples were stored at 4°C in the dark until use. The test procedure is outlined in Table 1.

Table 1. Summary of Dangerous Waste Characterization Test Conditions

Parameter	Standard Fish Toxicity Test
Test numbers	2006-024; 2006-025
Sample ID's	AW-8; AW-16
Test initiation date; time	6/18/2020; 0830h
Test termination date; time	6/22/2020; 0830h
Endpoint	Mortality at 96-hours
Test chamber	7.5 L Plastic tank
Test temperature	12 ± 1°C
Dilution water	Moderately hard synthetic water
Test solution volume	6 L
Test concentrations (mg/L)	100, 10, 0
Number of organisms/chamber	10
Number of replicates	3
Test organism	<i>Oncorhynchus mykiss</i> (rainbow trout)
Feeding	No feeding during test
Photoperiod	16 hours light/ 8 hours dark
Extraction	Rotary agitation (30 +/- 2 rpm) for 18 hours
Reference Toxicant	Copper sulfate
Deviations	None

The test organisms used in the test are outlined in Table 2. The samples were tested using fish received on April 22, 2020.

Table 2. Test organisms (*Oncorhynchus mykiss*)

Test organism age	60 days post swim-up (hatch date 4/1/2020)
Mean weight	0.36 g
Mean length	36 mm
Ratio of longest to shortest	1.2
Loading	0.60 g/L
Test organism source	Trout Lodge; Sumner, WA

3.0 RESULTS

A summary of results for the dangerous waste characterization conducted on samples AW-8 and AW-16 are contained in Table 3. There was no mortality during the tests. Based on these results, the samples do not designate as either a dangerous or extremely hazardous waste. Copies of the laboratory bench sheets, statistical summaries of reference toxicant tests, and chain-of-custody form are provided in Appendices A through C.

Table 3. Summary of Results

Sample ID	Concentration (mg/L)	Survival (# fish, N=30)	Percent Mortality	Dangerous Waste Designation
Control	0	30	0	NA
AW-8	10	30	0	None
	100	30	0	
AW-16	10	30	0	None
	100	30	0	

4.0 QUALITY ASSURANCE

The most recently completed reference toxicant test was initiated June 4, 2020. The LC₅₀ of 138 µg/L copper fell within the acceptable range of mean ± two standard deviations of historical test results indicating that the test organisms were of an appropriate degree of sensitivity. The coefficient of variation (CV) for the last 20 tests was 29.8 percent, which is considered excellent by the Biomonitoring Science Advisory Board.

Re: Analytical Data for Project Star Forge
Laboratory Reference No. 2006-002

Dear Dave:

Enclosed are the analytical results and associated quality control data for samples submitted on June 1, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: June 4, 2020
Samples Submitted: June 1, 2020
Laboratory Reference: 2006-002
Project: Star Forge

Case Narrative

Samples were collected on June 1, 2020 and received by the laboratory on June 1, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

Surrogate Standard Dibromofluoromethane is outside control limits for sample AW-14 due to sample matrix effects. The sample was re-analyzed with similar results.

Some MTCA Method A cleanup levels are non-achievable for sample AW-6 due to the foaming nature of the sample matrix.

Some MTCA Method A cleanup levels are non-achievable for sample AW-16 due to the low weight of the sample matrix.

Total Metals EPA 6010D/7471B Analysis

The duplicate RPD for Nickel is outside control limits due to sample inhomogeneity.

The duplicate RPD for Barium and Copper is outside control limits due to sample inhomogeneity.

Due to the high concentration of Barium, Chromium, Copper, Lead, Nickel and Zinc in the QC sample, the amount spiked was insufficient for meaningful MS/MSD recovery data. The Spike Blank recovery was 102% for Barium, 91% for Chromium, 107% for Copper, 94% for Lead, 102% for Nickel and 97% for Zinc.

The Matrix Spike/Matrix Spike Duplicate RPD for Barium is outside control limits due to matrix inhomogeneity.

Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Appendix A	Area-Wide VSP Sample Design Summary
------------	-------------------------------------

Section 1: INTRODUCTION

DH Environmental, Inc. (DH Environmental) has prepared this Sampling and Analysis Plan (SAP) on behalf of Star Forge, LLC (Star Forge), for documentation of Clean Closure of the Former Jorgensen Forge Facility located at 8531 E Marginal Way S., in Tukwila, Washington 98108 (Facility; Figure 1).

The purpose of this sampling effort is to demonstrate Clean Closure of the applicable Dangerous Waste Management Units (DWMUs; Figure 2) in accordance with WAC 173-303-610(2) and (5). In addition, suspect materials and areas at the facility will be sampled for the purpose of Waste Designation in accordance with WAC 173-303-070.

This SAP has been prepared to describe the specific sampling and analysis protocols to be followed during sampling efforts. These protocols are pursuant to the requirements of WAC 173-303-070, the technical requirements of EPA publication SW-846, *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, and the Washington State Department of Ecology (Ecology) Publication #97-407, revised December 2014, *Chemical Testing Methods for Designating Dangerous Waste* and Ecology Publication 94-111, *Guidance for Clean Closure of Dangerous Waste Units and Facilities* (2005).

The SAP describes the sample collection program, including the design and implementation of the proposed sampling; sample collection, handling, and analysis procedures; and quality assurance and quality control (QA/QC) requirements. The QA/QC protocols described here are necessary to achieve the site-specific objectives for sample collection and analysis. Records must be maintained documenting all sampling activities performed and data generated during implementation of this waste characterization SAP.

This SAP was developed and intended to be used for Clean Closure documentation and waste designation sampling only. Other site-specific project documents may also govern work conducted at the Site (e.g., health and safety plan, RI/FS work plans, etc.).

1.1 PROJECT ORGANIZATION

This section identifies key individuals and their responsibilities for all sampling efforts on the project.

Key personnel involved in the SAP activities and their roles and responsibilities are summarized below:

- Star Forge Project Manager: James Robertson (281.785.7875)
- DH Environmental Project Manager: David Hill, PE, CHMM, CPEA (206.293.3126)
- DH Environmental Project Geologist: Nathan Moxley, LG, LHG (509.332.9281)
- DH Environmental Health and Safety Manager: Brian Johnson, OHST, CET (206.930.4043)
- OnSite Environmental/Laboratory Project Manager: David Baumeister (425.883.3881)

OnSite Environmental, Inc. of Redmond, Washington, is a Washington State accredited environmental laboratory.

1.2 ENVIRONMENTAL CONSULTANT

The environmental consultant conducting the sampling activities will complete the following tasks:

- Communicate data quality objectives to the analytical laboratory analyzing samples collected from the Site.
- Assemble project teams, implement sample collection activities, and coordinate sample analyses.
- Ensure that the proper number, type, and quantity of sample containers, including preservation requirements, are available for field activities.
- Follow standard sampling protocols as defined in this SAP and other relevant site-specific project documents.
- Record and document all field data as specified in this SAP.
- Following applicable Standard Operating Procedures (SOPs), ensure that all samples are collected, preserved, labeled, packaged, and shipped to the contract analytical laboratory in an appropriate manner.
- Review analytical laboratory results and Quality Control (QC) data.
- Where applicable, report deficiencies in sample collection, preservation, handling, test methods, or documentation.
- Initiate and support technical audits and corrective action that may arise from deficiencies in sample collection, preservation, handling, test methods, or documentation.

1.3 ANALYTICAL LABORATORY

The analytical laboratory analyzing and reporting results for samples collected from the Site will:

- Understand and follow sampling objectives outlined in this SAP.
- Perform requested analyses using appropriate test methods specified in this SAP.
- Prepare analytical laboratory reports for the environmental consultant, including all relevant data and QC reports.
- Communicate analytical problems, issues, or concerns to the environmental consultant in a timely manner.
- Initiate corrective action when deficiencies in sample collection, preservation, handling, test methods, or documentation are identified internally by the contract analytical laboratory, or by the environmental consultant.

Section 2: PROJECT DESCRIPTION AND BACKGROUND

2.1 BACKGROUND¹

The Jorgensen Forge Site is approximately 21.6 acres, located in an industrial area along the east bank of the Lower Duwamish Waterway. The site is bordered to the north by the Boeing Plant 2 property, and to the south by the Boeing Isaacson property. It is bordered to the west by the Lower Duwamish Waterway, and to the east by East Marginal Way South and the King County Regional Airport.

The property was used from 1942-1965 for fabrication of structural steel, tractor and road equipment. Operations at the site included forging and heat-treating by Isaacson Iron Works, which operated as a U.S. naval vessel manufacturer.

The property was owned and operated by Earle M. Jorgensen Company from 1965 until 1992, when it was purchased by the plant management group and became the Jorgensen Forge Corporation. Jorgensen manufactured specialized large-scale metal parts for the aircraft and marine industries, including open die steel forgings and rolled aluminum rings. They also processed nickel, titanium, and specialized alloys.

Following a bankruptcy settlement in 2016, Star Forge purchased the facility and began Clean Closure Activities in 2018. Although Clean Closure activities are being conducted by Star Forge, Earle M. Jorgensen Company (EMJ) is under an Agreed Order with the Washington State Department of Ecology to complete a remedial investigation and feasibility study (RI/FS) and a cleanup action plan to remediate legacy contamination at the site.

Contamination at the site is primarily the result of heavy industrial use since the 1940's, and contaminated groundwater migrating onto the property from off-site sources.

Contaminants of concern at the site include:

- Polychlorinated biphenyls (PCBs)
- Volatile organic compounds (VOCs)
- Halogenated volatile organic compounds (HVOCs)
- Metals (including arsenic, cadmium, chromium, lead, nickel, copper, and zinc)

2.2 PROJECT DESCRIPTION

Star Forge intends to demolish the structures at the site as a prerequisite to selling the property. Star Forge is conducting hazardous building materials abatement and Dangerous Waste Clean Closure necessary to obtain demolition permits. The Clean Closure efforts are considered a requirement of the Dangerous Waste Regulations and are not being conducted as part of the larger legacy contamination investigation and cleanup being concurrently conducted by EMJ.

¹ Information in this section was derived from the Washington State Department of Ecology's Jorgensen Forge Corp. Site Information webpage page: <https://apps.ecology.wa.gov/gsp/Sitepage.aspx?csid=3689>

The purpose of this sampling effort is to demonstrate Clean Closure of the applicable Dangerous Waste Management Units and designate any suspect materials and areas at the facility in accordance with WAC 173-303-070.

2.3 SAMPLING TARGET AREAS AND MATERIALS

Sampling is designed to target dangerous waste management units, and additional areas/material of concern identified across the facility. Each area targeted for sampling is described below.

2.3.1 Dangerous Waste Management Units

For the purposes of Clean Closure in accordance with the Dangerous Waste Regulations, we have identified the following Dangerous Waste Management Units subject to Clean Closure. These areas have been identified by historical documents and interviews with facility staff that worked at the facility when it was operational. Figure 2 shows the locations of the Dangerous Waste Management Units.

Each of the Dangerous Waste Management Units have been emptied and cleaned. The concrete floors of each unit were then cleaned using a high-pressure steam and hot water wash. Concrete wash water was contained and captured using a vacuum truck. Any waste generated as part of the cleaning process will be designated and disposed of at a properly permitted disposal facility and the documentation will be included in the final clean closure report.

Central Accumulation Area

The Central Accumulation Area (CAA) is one of two 90/180-day Dangerous Waste accumulation areas. The CAA is an approximately 1,000 SF structure with aluminum siding, a concrete slab and an approximately 1 ft. concrete base wall that served as secondary containment. The CAA stored Dangerous Waste in drums and small containers generated from facility maintenance and operations. Based on historical documents and interviews with facility staff, the structure at one time contained a 300 gallon above ground storage tank that served diesel fuel. Subsequently, the structure was also known as the “diesel house”.

Tote Storage Central Accumulation Area

The Tote Storage Central Accumulation Area (Tote Storage Area) is the other 90/180-day Dangerous Waste accumulation area. The Tote Storage Area is located north of the west end of the main building, between the main building and the baghouse. The Tote Storage Area is an approximately 800 ft² structure with wooden siding and a concrete slab floor. The Tote Storage Area stored Dangerous Waste and used oil totes and drums generated from facility maintenance and operations. Based on historical documents and interviews with facility staff, the structure at one time was used to clean and etch product samples prior to laboratory testing. Subsequently, the structure was also known as the “Acid House” or “Etch House” before it was used as a 90/180-day Dangerous Waste accumulation area in the 1990s.

Baghouse and Baghouse Processing Area

The baghouse and baghouse processing area are located north of the west end of the main building and tote storage building. The baghouse building is approximately 4,000 ft², and housed equipment to capture and contain dust from the baghouse tunnel that conveyed air and dust from the former melt shop to the baghouse. The baghouse dust was designated as a K061 waste stream as it meets the

definition of K061 Specific Source Waste from iron and steel sources in accordance with WAC 173-303-9904.

The baghouse processing area and concrete slab is divided by a wall thereby creating two separate areas denoted as Baghouse North and Baghouse South for the purposes of cleaning and sampling.

A subsurface utility trench was also located adjacent to the Baghouse, running parallel with the building along its east side. The utility trench is approximately 2-feet wide by 2-feet deep, and lined with concrete. The trench is covered by removable steel plates, and over the years of operations, material had accumulated in the trench. This material was removed using shovels, and the trench was cleaned using a hot pressure washer and a vacuum truck. The solids were placed into supersacks for designation and disposal, and the wash water liquids were placed into a tote.

2.3.2 Targeted Areas and Materials of Concern

Several areas and materials of concern were identified across the facility during site inspections, a review of historical operations, and interviews with former employees.

Melt Shop/Forge Shop Pits

The former Melt Shop and Forge Shop areas of the facility contain numerous subsurface process pits. Three of these pits were identified and targeted for sampling because the interior of the pits contain residual slag-like material, possibly from past forging operations.

Machine Shop Concrete Stockpile

During previous site closure activities, a stockpile of broken concrete debris was placed in the Machine Shop. The source of this concrete was from the Heat Treat Area located to the south. The material was targeted for sampling in order to properly designate the waste for disposal.

Underground Storage Tanks

Star Forge has previously identified 18 USTs at the Facility potentially subject to regulation under Washington State's UST regulations, WAC 173-360A. The USTs include UST-15 through UST-22, and UST-26 through UST-35. These tanks are associated with Ecology UST identification number 6163. The USTs are grouped into a North Tank Farm area (UST-26 through -35) and a South Tank Farm area (UST-15 through -22), as shown on Figure 8.

Samples will be collected from the liquids or solids in the tanks, if present, to properly designate the waste for disposal. In addition, fragments of metal slag-like material were observed to be covering the tanks, and this material will also be sampled for designation and disposal purposes.

Area Wide Statistical Sampling

The interior of the main structure comprising the former melt shop, forge shop, and the heat treat area is shown in Figure 2. Star Forge conducted extensive removal of dust, fine particles, and exposed soil (henceforth "area wide dust") from the floor, trusses, and other structural surfaces during 2019 to early 2020. The area wide dust has been referred to as process waste in previous documents and correspondence. This material is a mixture of dust, fine particulates, soil "track-in" and exposed soil that accumulated throughout the facility over many years of operation. The material is not a waste stream that was generated from any one process or unit operation.

Previous designation of this material is based on total metals, TCLP metals and total PCBs. This waste stream previously “passed” TCLP for RCRA 8 metals. However, the total metals content caused the area-wide dust to “book designate” as a Toxic Criteria Dangerous Waste and was assigned WA State Dangerous Waste number WT02. A fish bioassay was not conducted to refute the book designation. Therefore, the WT02 designation was assumed and approximately 2,500,000 lbs. of the area wide dust were removed and disposed of as WA State Toxic Criteria WT02 waste during 2019 and early 2020.

Although most of the area wide dust has been removed from the facility interior, some of this material remains on the floor of the facility and has possibly comingled with areas of exposed soil. Therefore, an area wide statistical analysis of the dust, fine particles, and exposed soil will be conducted to designate the remaining material so that it can be properly managed during the forthcoming demolition of the structures.

Section 3: SAMPLING DESIGN

3.1 DANGEROUS WASTE MANAGEMENT UNITS

The objective of the sampling design of the dangerous waste management units is to determine if the concrete floor surfaces have been adequately cleaned, and to determine if the concrete itself designates as dangerous waste. The Dangerous Waste Management units include the former Central Accumulation Area, Tote Storage Area, and the Baghouse.

The sampling design for the Central Accumulation Area, Tote Storage Area, and the northern portion of the baghouse will consist of gridding each area into four quadrants. The southern portion of the baghouse will be gridded into six equal sized areas due to its larger size. The concrete utility trench east of the baghouse will be divided into three equally spaced intervals along the length of the trench.

A minimum of one sample will be collected from the concrete floor surface in each of the sampling grids. Each sample will be collected from areas of staining, if present. If no areas of staining are present, the sample will be collected from the center of each grid.

3.2 MELT SHOP/FORGE SHOP PITS

Three pits were observed to contain slag-like material in the former Melt Shop area. These include the AOD Pit, the Arc Furnace Pit, and the Ingot Mold Pit.

A minimum of three samples will be collected from slag-like material in the AOD Pit and Arc Furnace Pit. In addition, a white fibrous material will also be sampled from the upper portions of the south wall of the AOD Pit. A minimum of two samples of the slag-like material will be collected from the Ingot Mold Pit.

3.3 MACHINE SHOP CONCRETE STOCKPILE

A pile of concrete debris located in the Machine Shop area was previously sampled by SoundEarth Strategies, Inc. (SoundEarth). A minimum of one composite sample will be collected from the concrete pile to confirm the results of the previous sampling, and to perform additional analysis for Dangerous Waste Fish Bioassay, if necessary. The composite sample will be collected from four to six locations around the stockpile.

3.4 UNDERGROUND STORAGE TANKS

Samples will be collected from each of the USTs containing liquids or solids. Three of the USTs had previously been closed in place and were filled with sand. A minimum of one sample will be collected from each of the USTs to designate the contents for disposal.

3.5 AREA WIDE STATISTICAL SAMPLING

The Area Wide sampling has been designed as a random sampling plan in accordance with EPA Publication SW-846, *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods* (EPA SW846). Previous sampling at the facility indicated concentrations of total lead and chromium in dust/soil in the Melt and Forge shop areas ranged up to 3,830 milligrams per kilogram (mg/kg) for chromium and up to 1,270 mg/kg for lead. Additionally, this same material was previously designated with a WT02 waste code due to an equivalent concentration greater than 0.001%, primarily based on

the concentration of total metals. Therefore, the focus of this sampling design is to determine if the soil will designate as characteristic waste for any of the RCRA 8 metals (Resource Conservation and Recovery Act list of eight metals [Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, and Silver]) and be subject to Federal Land Disposal Restrictions.

The number of samples and location of sample points prescribed for this sampling plan was calculated using Visual Sampling Plan (VSP), a statistical sampling software package developed by the Pacific Northwest National Laboratory. A non-parametric random sampling plan was chosen for this site because spatial distribution of potential contamination is unknown, and due to the potential heterogeneous nature of the material.

Null Hypothesis. For this sampling design, we have chosen to assume the site is unacceptable (i.e., it will designate as RCRA Hazardous Waste) until proven otherwise. The working hypothesis (or 'null' hypothesis) is that the median concentration of leachable lead and chromium (e.g., lead and chromium concentrations in leachate after performing a Toxicity Characteristic Leaching Procedure [TCLP] test, Environmental Protection Agency [EPA] Method 1311) at the site is equal to or greater than the threshold of 5 milligrams per liter (mg/L). The alternative hypothesis is that the median TCLP lead and chromium concentrations are less than 5 mg/L.

In other words, if the data do not indicate with at least 95% confidence that the true median TCLP lead and chromium concentrations are less than 5 mg/L, the null hypothesis will not be rejected, and we will thus conclude that the soil is RCRA Hazardous Waste for Characteristic of Lead or Chromium Toxicity.

Although the design basis is lead and chromium, the results of all of the RCRA 8 metals can be evaluated statistically once the data is available. A design basis must be chosen however; and lead and chromium were chosen due to their prevalence in historical data.

The same null hypothesis will also be evaluated for the concentration of the other leachable RCRA 8 metals and total polychlorinated biphenyls (PCBs), compared with their respective regulatory levels (Maximum Concentration of Contaminants for the Toxicity Characteristic, 40 CFR 261.24(b); and 40 CFR 761.61 for PCBs). A Summary of the maximum concentrations is included in Table 1.

Table 1 - Maximum Concentration of Contaminants for VSP Analysis

Contaminant	Regulatory Level
TCLP Arsenic	5.0 mg/L
TCLP Barium	100.0 mg/L
TCLP Cadmium	1.0 mg/L
TCLP Chromium	5.0 mg/L
TCLP Lead	5.0 mg/L
TCLP Mercury	0.2 mg/L
TCLP Selenium	1.0 mg/L
TCLP Silver	5.0 mg/L
TCLP PCBs	50 mg/kg

Simple Random Sampling. In random sampling, VSP places samples within a sample area in a random arrangement using a random number generator.

Number of Samples. Using a nonparametric model and the input parameters summarized in Table 2, VSP calculated a minimum of 18 samples required to reject the null hypotheses with 95 percent confidence and ensure that soil would not be mistakenly designated as non-hazardous if it is hazardous. The total number of samples was increased by 20%, as recommended by MARSSIM (EPA,2000), to account for missing or unusable data and uncertainty in the calculated value of n . Therefore, a total of 22 samples was chosen for the sample plan to ensure convergence of statistical confidence.

Sample Locations. The X and Y coordinates for each of the randomly located samples are included in the VSP sample design summary in Appendix A. The coordinates were set based on the scale of the Site Map (Figure 2) with the origin set at the southeast corner of the building. A field copy of the VSP output map is included as Figure 3. Each sample location will be located in the field to the nearest 1-foot using a measuring wheel and the relative proximity to nearby site features. If there is not a sufficient volume of material to collect a sample at a given sample location, the location will be adjusted in the field to the nearest area with sufficient dust to collect a sample.

Table 2 below shows the VSP Parameter Inputs.

Table 2: Visual Sample Plan Inputs

Parameter	Value	Basis
Primary Objective of the Sampling Design	Compare a site mean or median to a fixed threshold	Reject the null hypothesis.
Type of Sampling Design	Non-parametric	Spatial distribution of potential contamination is unknown, and previous sampling experience suggests that parametric assumptions of the data may not be accurate.
Sample Placement	Simple Random Sampling	Random sampling is a probability-based sample design that provides an unbiased distribution over the entire sampling area. Probability-based design also allows for statistical inferences to be made about the sample population, based on the data obtained from a limited number of samples.
Standard deviation (S)	0.8	Estimated based on an expected range of concentration of 5 mg/L, and dividing that range by 6 in accordance with guidance by EPA, 1989 and EPA, 2002.
Delta (Δ)	5	This is the width of the gray region. It is a user-defined value relative to a unit action level.
Alpha (α)	5%	This is the acceptable error of deciding a dirty site is clean when the true mean is equal to the Action Level. It is a maximum error rate since dirty sites with a true mean above the Action Level will be easier to detect. A value of 5% was

		chosen as a practical balance between health risks and sampling cost.
Beta (β)	5%	This is the acceptable error of deciding a clean site is dirty when the true mean is at the lower bound of the gray region.
MARSSIM sampling overage	20%	MARSSIM suggests that the number of samples should be increased by at least 20% to account for missing or unusable data and uncertainty in the calculated value of n.

Section 4: FIELD SAMPLING AND ANALYTICAL PROCEDURES

All field sampling activities will be conducted and supervised by experienced personnel with appropriate training to conduct the sampling and work at hazardous waste sites. The sampling procedures for each of the sampling areas are described below.

Following sample collection, all samples shall be immediately labeled with the sample ID, date and time of collection, and placed on ice. Samples will be delivered to the selected analytical laboratory following standard chain of custody protocols. A field log will also be kept describing field conditions, observations, and any deviations from the sampling plan. Following sample collection, the location of each of the samples will be marked on the ground using marking paint for future reference, and a photo of the location will be taken as part of the sampling record.

4.1 SAMPLING PROCEDURES SUMMARY

4.1.1 Central Accumulation Area, Tote Storage Area, and Baghouse Areas

Sample locations from the concrete floor of the CAA, Tote Storage Area, and Baghouse areas will be determined in the field by dividing each area into its respective sampling grids and selecting the target sampling locations as described in Section 3.1. Samples will be targeted from areas of staining, if present. Samples will be collected by using a roto-hammer concrete drill and drilling into the concrete surface approximately 3- to 4-inches and extracting the drill bit. The drill cuttings will then be scraped up onto a dedicated piece of cardstock and placed into laboratory supplied sampling containers. Multiple drill holes will likely be required to obtain sufficient sample volume, in which case the drill holes will be located in close proximity to each other.

Samples will be identified, at a minimum, with the name of the sample area (e.g. 'CAA' for Central Accumulation Area; 'BH' for Baghouse; 'TS' for Tote Storage, etc.), followed by a directional indicator to indicate which sampling quadrant the sample was obtained from (e.g., 'NW' for northwest, 'SE' for southeast, etc.). If a clear directional indicator cannot easily identify the quadrant the sample was obtained from, such as in the baghouse utility trench, the samples will be identified by a unique numerical identifier, and the location of the samples will be recorded in a field log book.

4.1.2 Subsurface Process Pits

All sampling activities from the subsurface process pits must follow Health and Safety guidelines and procedures described in the Site-Specific Health and Safety Plan (DH Environmental, 2020). The subsurface process pits are deep and are not protected with railings, and they present a unique health and safety risk to sampling personnel. In addition, the pits are considered confined spaces, and will be treated as a permit required confined space that requires fall protection, confined space rescue equipment, and monitoring of the air space for potential atmospheric hazards.

Samples will be collected of the slag-like material observed in the AOD Pit, the Arc Furnace Pit, and the Ingot Mold Pit. In addition, a white fibrous insulation-like material will also be sampled from the AOD pit. Samples of the slag-like material will be obtained using a rock hammer, pick ax, or other sampling utensils as determined based on the conditions in the field. Some of the material appears to be friable and may be relatively easy to remove from the concrete surfaces of the pit walls and floor. Other material may be more difficult to remove.

Once the samples of the slag-like material have been separated from the concrete, they will be placed into a dedicated 1-gallon plastic bag. The samples will then be reduced in size to the extent practical by hammering the plastic bag until enough material has been reduced to fragments to fill the sampling containers. The material needs to be reduced in size to less than approximately 0.5-inches in diameter. If the material cannot be reasonably reduced in the field, it will be submitted to the laboratory in sealed plastic bags for additional processing by the laboratory.

Samples will be identified with the name of the process pit followed by a numerical identifier, and the location of the samples will be recorded in a field log book.

4.1.3 Machine Shop Concrete Pile

A minimum of one six-point composite sample will be collected from the concrete debris pile located in the Machine Shop area. The sample will be collected using a shovel and digging a minimum of 12-inches into the stockpiled material. An equal portion of material will be composited together from six locations spaced equally around the stockpile. The material will then be homogenized, and fragments larger than approximately 0.5-inches in diameter will be manually removed. The homogenized sample will then be placed into laboratory supplied sampling containers.

4.1.4 Underground Storage Tanks

A minimum of one sample will be collected from each of the USTs containing more than 1-inch of liquids or solids. The USTs will be accessed by opening the entrance hatch of each tank. USTs containing liquids will be sampled by lowering a disposable polyethylene bailer through the column of liquid. USTs that have previously been closed in place and filled with sand will be sampled by retrieving the sand from the tank using a shovel. Following retrieval, the samples will be placed directly into laboratory supplied sampling containers.

Samples from the USTs will be identified by the UST number each sample was collected from. Samples of the sand material will also be identified with the term ‘-sand’ in the sample name.

4.1.5 Area Wide Sampling

The area-wide samples will be collected by directly scraping up dust and/or soil at each sample location using a shovel or hand shovel. If insufficient material is available at a sample location to fill the laboratory supplied sampling containers, the location will be adjusted in the field to the closest possible position with sufficient material to sample. The location of any samples that have been moved will be recorded in the field log book.

Some of the samples may fall within areas of the facility that have been previously covered with visqueen to prevent infiltration of stormwater through open holes in the roof. In this case, the visqueen will be temporarily pulled back to allow access to the underlying sample location. Once the sample has been collected, the visqueen will be pulled back and secured.

Samples will be identified by the prefix ‘AW’ for ‘area-wide’ and a numerical identifier as determined by VSP.

4.2 ANALYTICAL PROCEDURES

All samples will be analyzed for total RCRA 8 metals by EPA Methods 6010D (arsenic, barium, cadmium, chromium, copper, lead, nickel, selenium, silver, and zinc) and 7471B (mercury); TCLP RCRA 8 metals

by EPA methods 1311 (extraction), 6010D (all except mercury), and 7471B (mercury); PCBs by EPA method 8082; and VOCs by EPA Method 8260. The analytical methods, bottle type, preservations, and holding times are summarized in Table 3, including for the additional analytes described in Section 4.3.

Table 3: Containers, Preservatives, and Holding Times for Media Samples

Analysis	Matrix	EPA Analytical Method	Sample Container Size/Type	Preservation	Holding Time
Total metals	solids	- EPA 6010D (all except Hg) - EPA 7471 (Hg)	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	6 months (all except Hg) 28 days (Hg)
TCLP Metals	solids	- EPA 1311 (extraction) - EPA 6010/6020 (all except Hg) - EPA 7470 (Hg)	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	6 months
PCBs	solids	EPA 8082	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	none
VOCs	Solids	EPA 8260	(3) 40-ml VOAs, (2) with a stir bar, (1) without a stir bar	None. Store on ice $\leq 6^{\circ}\text{C}$	48-hours
Fish Bioassay	solids	Method 80-12	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	45 days
PAHs	Solids	EPA 8270	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	14-days to extract, 40-days to analyze
TPH-Gx	Solids	NWTPH-Gx	(3) 40-ml VOAs, (2) with a stir bar, (1) without a stir bar	None. Store on ice $\leq 6^{\circ}\text{C}$	48-hours
TPH-Dx	Solids	NWTPH-Dx	4-oz. clear wide mouth glass jar	None. Store on ice $\leq 6^{\circ}\text{C}$	14-days to extract, 40-days to analyze

Note: some samples may be able to be combined when analyzing for multiple compounds.

4.3 ADDITIONAL ANALYSIS

Additional compounds may also need to be analyzed to make a complete waste determination for the Site, following receipt of initial sampling results. This could include a fish bioassay test per *Biological Testing Method 80-12 for the Designation of Dangerous Waste* (Ecology, 2009). If an initial book designation results in an initial designation as WT-02, a fish bioassay test will be performed on that sample. If two or more samples result in an initial designation as WT-02, then a fish bioassay test will be performed on the two samples with the highest equivalent concentrations.

Polycyclic aromatic hydrocarbons (PAHs) are not considered a contaminant of concern in the waste streams described in this SAP. However, out of an abundance of caution, PAHs will be checked in selected waste designation samples for persistent criteria screening, and TCLP Semivolatile screening. A minimum of two samples will be analyzed for PAHs from the Area Wide sampling, and a minimum of one sample will be analyzed for PAHs from each of the Arc Furnace Pit and AOD Pit slag-like material, the CAA area, and both baghouse areas (Baghouse-North and Baghouse-South). The selection of

samples for PAH analysis will be made at random by personnel in the field. Samples submitted for analysis of PAHs will be analyzed by EPA Method 8270.

The presence or absence of petroleum hydrocarbons will not affect the waste designation determination because petroleum does not meet any of the toxicity criteria under WAC 173-303-100. However, samples collected from the CAA, TSA and Baghouse areas will be analyzed for hydrocarbons to evaluate the containment for clean closure requirements. Analysis for both gasoline- and diesel-range hydrocarbons will be by Method NWTPH-Gx and -Dx, respectively.

4.4 EQUIPMENT DECONTAMINATION PROCEDURES

All non-dedicated sampling equipment (trowels, sampling spoons, etc.) will be thoroughly decontaminated using a solution of anionic soap (e.g., Liquonox®) and deionized water followed by a “clean” rinse using deionized water. Samples will be collected using dedicated sampling equipment wherever possible to reduce the generation of investigation derived waste (IDW). All liquids generated during decontamination procedures will be containerized in Department of Transportation approved containers. The characterization and disposition of IDW is described in Section 4.10.

4.5 FIELD LOGBOOKS

Field logbooks and/or pre-printed field logs will be used to document where, when, how, and from whom any vital project information was obtained. Log entries will be complete and accurate enough to allow reconstruction of field activities. All entries will be legible, written in blue or black ink, and signed by the individual making the entries. Only factual and objective language should be used.

At a minimum, the following information will be recorded during the collection of each sample:

- Sample location and description
- Site or Sampling area sketch showing sample location and measured distances
- Sampler’s name(s)
- Date and Time of each sample collection
- Designation of sample as composite or grab
- Type of sample (e.g., soil, sediment, or water)
- Type of sampling equipment used to collect each sample
- Field instrument readings and calibrations
- Field observations and details related to analysis or integrity of samples (e.g., weather conditions, noticeable odors, colors, etc.)
- Preliminary sample descriptions (e.g., for soils: clay loam, very wet; for water: clear water with strong ammonia-like odor)
- Sample preservations
- Sample identification numbers and any explanatory codes, and chain-of-custody form numbers
- Shipping arrangements (overnight air bill number)
- Name of recipient laboratories

In addition to the sampling information listed above, the following specific information will also be recorded in the field logbook for each day of sampling:

- Team members and their responsibilities

- Time of arrival/entry on site and time of site departure
- Other personnel on site
- Summary of any site meetings or discussions with contractors, agency personnel, site personnel, etc.
- Deviations from sampling plans, site safety plans, and QAPP procedures
- Changes in personnel and responsibilities with reasons for the changes
- Levels of safety protection

4.6 PHOTOGRAPHS

Photographs will be taken at all sampling locations and at other areas of interest on site. Photographs will serve to verify information entered in the field logbook, and/or to show sample areas, conditions, and individual samples. For each photograph taken, the following information will be written in the field logbook or recorded in a separate field photography log:

- Time, date, location, direction, and weather conditions
- Description of the subject photographed
- Name of person taking the photograph and name of person witnessing the photograph

4.7 LABELING

All samples collected will be labeled in a clear and precise way for proper identification in the field and for tracking in the laboratory. The samples will have preassigned, identifiable, and unique numbers. At a minimum, the sample labels will contain the following information:

- Station location
- Date of collection
- Analytical parameter(s)
- Method of preservation, if applicable

Every sample, including samples collected from a single location but going to separate laboratories, will be assigned a unique sample number.

4.8 CHAIN OF CUSTODY FORMS AND PROCEDURES

Chain-of-custody forms are used to document sample collection and shipment to laboratories for analysis. All sample shipments for analyses will be accompanied by a chain-of-custody form.

The chain-of-custody form will identify the contents of each shipment and maintain the custodial integrity of the samples. Generally, a sample is considered to be in someone's custody if it is either in someone's physical possession, in someone's view, locked up, or kept in a secured area that is restricted to authorized personnel. Until the samples are shipped or delivered to a Washington State accredited environmental laboratory, the custody of the samples will be the responsibility of DH Environmental personnel. The sampling team leader or designee will sign the chain-of-custody form in the "relinquished by" box and note date, time, and air bill number (if applicable).

The sample numbers for all rinsate samples, reference samples, laboratory QC samples, and duplicates will be documented on the chain-of-custody form. The original form is left with the laboratory analyzing the samples.

The shipping containers in which the samples are stored (e.g., usually an ice chest), will be sealed with self-adhesive custody seals any time the samples are not in someone's possession or view before shipping. All custody seals will be signed and dated.

4.9 PACKAGING

The packaging procedures that will be followed:

- When ice is used, it will be packed in double plastic bags.
- The bottom of the cooler will be lined with bubble wrap to prevent breakage.
- All sample bottles will be placed in plastic zip-lock bags or equivalent.

4.10 INVESTIGATION DERIVED WASTE

IDW generated during this investigation could include, but is not limited to, extra sample volume not retained for laboratory analysis, or decontamination liquids. All IDW will be placed in DOT approved containers and labeled with the container number, contents, date of accumulation, property owner, and contact information for the property owner or representative.

Field Copy

Random sampling locations for comparing a median with a fixed threshold (nonparametric - MARSSIM)

Summary

This report summarizes the sampling design used, associated statistical assumptions, as well as general guidelines for conducting post-sampling data analysis. Sampling plan components presented here include how many sampling locations to choose and where within the sampling area to collect those samples. The type of medium to sample (i.e., soil, groundwater, etc.) and how to analyze the samples (in-situ, fixed laboratory, etc.) are addressed in other sections of the sampling plan.

The following table summarizes the sampling design developed. A figure that shows sampling locations in the field and a table that lists sampling location coordinates are also provided below.

SUMMARY OF SAMPLING DESIGN	
Primary Objective of Design	Compare a site mean or median to a fixed threshold
Type of Sampling Design	Nonparametric
Sample Placement (Location) in the Field	Simple random sampling
Working (Null) Hypothesis	The median(mean) value at the site exceeds the threshold
Formula for calculating number of sampling locations	Sign Test - MARSSIM version
Calculated number of samples	18
Number of samples adjusted for EMC	18
Number of samples with MARSSIM Overage	22
Number of samples on map ^a	22
Number of selected sample areas ^b	1
Specified sampling area ^c	159472.83 ft ²

^a This number may differ from the calculated number because of 1) grid edge effects, 2) adding judgment samples, or 3) selecting or unselecting sample areas.

^b The number of selected sample areas is the number of colored areas on the map of the site. These sample areas contain the locations where samples are collected.

^c The sampling area is the total surface area of the selected colored sample areas on the map of the site.

Area: melt/forge shops						
X Coord	Y Coord	Label	Value	Type	Historical	Sample Area
-92.8	74.8	AW-1		Random		
-871.4	163.8	AW-2		Random		
-152.7	79.2	AW-3		Random		
-751.6	168.2	AW-4		Random		
-272.5	19.8	AW-5		Random		
-32.9	197.9	AW-6		Random		
-422.2	138.5	AW-7		Random		
-781.6	89.1	AW-8		Random		
-302.5	178.1	AW-9		Random		
-62.9	118.7	AW-10		Random		
-362.3	59.4	AW-11		Random		
-601.9	148.4	AW-12		Random		
-122.8	237.4	AW-13		Random		
-242.6	99.0	AW-14		Random		
-482.1	188.0	AW-15		Random		
-3.0	39.6	AW-16		Random		
-950.0	128.6	AW-17		Random		
-231.3	158.3	AW-18		Random		
-590.7	82.5	AW-19		Random		
-111.5	171.5	AW-20		Random		
-411.0	112.1	AW-21		Random		
-650.6	201.2	AW-22		Random		

Primary Sampling Objective

The primary purpose of sampling at this site is to compare a site median or mean value with a fixed threshold. The working hypothesis (or 'null' hypothesis) is that the median(mean) value at the site is equal to or exceeds the threshold. The alternative hypothesis is that the median(mean) value is less than the threshold. VSP calculates the number of samples required to reject the null hypothesis in favor of the alternative one, given a selected sampling approach and inputs to the associated equation.

Selected Sampling Approach

A nonparametric random sampling approach was used to determine the number of samples and to specify sampling locations. A nonparametric formula was chosen because the conceptual model and historical information (e.g., historical data from this site or a very similar site) indicate that typical parametric assumptions may not be true.

Both parametric and non-parametric equations rely on assumptions about the population. Typically, however, non-parametric equations require fewer assumptions and allow for more uncertainty about the statistical distribution of values at the site. The trade-off is that if the parametric assumptions are valid, the required number of samples is usually less than if a non-parametric equation was used.

VSP offers many options to determine the locations at which measurements are made or samples are collected and subsequently measured. For this design, simple random point sampling was chosen. Locating the sample points randomly provides data that are separated by varying distances, providing good information about the spatial structure of the potential contamination. Knowledge of the spatial structure is useful for geostatistical analysis. However, it may not ensure that all portions of the site are equally represented.

Number of Total Samples: Calculation Equation and Inputs

The equation used to calculate the number of samples is based on a Sign test (see PNNL 13450 for discussion). For this

site, the null hypothesis is rejected in favor of the alternative one if the median(mean) is sufficiently smaller than the threshold. The number of samples to collect is calculated so that if the inputs to the equation are true, the calculated number of samples will cause the null hypothesis to be rejected.

The formula used to calculate the number of samples is:

$$n = \frac{(Z_{1-\alpha} + Z_{1-\beta})^2}{4(SignP - 0.5)^2}$$

where

$$SignP = \Phi\left(\frac{\Delta}{S_{total}}\right)$$

- $\Phi(z)$ is the cumulative standard normal distribution on $(-\infty,z)$ (see PNNL-13450 for details),
- n is the number of samples,
- S_{total} is the estimated standard deviation of the measured values including analytical error,
- Δ is the width of the gray region,
- α is the acceptable probability of incorrectly concluding the site median(mean) is less than the threshold,
- β is the acceptable probability of incorrectly concluding the site median(mean) exceeds the threshold,
- $Z_{1-\alpha}$ is the value of the standard normal distribution such that the proportion of the distribution less than $Z_{1-\alpha}$ is $1-\alpha$,
- $Z_{1-\beta}$ is the value of the standard normal distribution such that the proportion of the distribution less than $Z_{1-\beta}$ is $1-\beta$.

Note: MARSSIM suggests that the number of samples should be increased by at least 20% to account for missing or unusable data and uncertainty in the calculated value of n . VSP allows a user-supplied percent overage as discussed in MARSSIM (EPA 2000, p. 5-33).

For each nuclide in the table, the values of these inputs that result in the calculated number of sampling locations are:

Nuclide	n ^a	n ^b	n ^c	Parameter					
				S_{total}	Δ	α	β	$Z_{1-\alpha}$ ^d	$Z_{1-\beta}$ ^e
PCB	0	0	0		5	0.05	0.05	1.64485	1.64485
Arsenic	0	0	0						
Barium	0	0	0						
Cadmium	0	0	0						
Chromium	0	0	0						
Lead	18	18	22	0.8	1	0.05	0.05	1.64485	1.64485
Mercury	0	0	0						
Selenium	0	0	0						
Silver	0	0	0						

- ^a The number of samples calculated by the formula.
- ^b The number of samples increased by EMC calculations.
- ^c The final number of samples increased by the MARSSIM Overage of 20%.
- ^d This value is automatically calculated by VSP based upon the user defined value of α .
- ^e This value is automatically calculated by VSP based upon the user defined value of β .

Performance

The following figure is a performance goal diagram, described in EPA's QA/G-4 guidance (EPA, 2000). It shows the probability of concluding the sample area is dirty on the vertical axis versus a range of possible true median(mean) values for the site on the horizontal axis. This graph contains all of the inputs to the number of samples equation and pictorially represents the calculation.

The red vertical line is shown at the threshold (action limit) on the horizontal axis. The width of the gray shaded area is

equal to Δ ; the upper horizontal dashed blue line is positioned at $1-\alpha$ on the vertical axis; the lower horizontal dashed blue line is positioned at β on the vertical axis. The vertical green line is positioned at one standard deviation below the threshold. The shape of the red curve corresponds to the estimates of variability. The calculated number of samples results in the curve that passes through the lower bound of Δ at β and the upper bound of Δ at $1-\alpha$. If any of the inputs change, the number of samples that result in the correct curve changes.

Statistical Assumptions

The assumptions associated with the formulas for computing the number of samples are:

1. the computed sign test statistic is normally distributed,
2. the variance estimate, S^2 , is reasonable and representative of the population being sampled,
3. the population values are not spatially or temporally correlated, and
4. the sampling locations will be selected randomly.

The first three assumptions will be assessed in a post data collection analysis. The last assumption is valid because the sample locations were selected using a random process.

Sensitivity Analysis

The sensitivity of the calculation of number of samples was explored by varying the standard deviation, lower bound of gray region (% of action level), beta (%), probability of mistakenly concluding that $\mu >$ action level and alpha (%), probability of mistakenly concluding that $\mu <$ action level. The following table shows the results of this analysis.

Number of Samples							
AL=5		$\alpha=5$		$\alpha=10$		$\alpha=15$	
		s=1.6	s=0.8	s=1.6	s=0.8	s=1.6	s=0.8
LBGR=90	$\beta=5$	216	60	172	48	144	40
	$\beta=10$	172	48	132	36	108	30
	$\beta=15$	144	40	108	30	87	24
LBGR=80	$\beta=5$	60	22	48	17	40	15
	$\beta=10$	48	17	36	14	30	11

	$\beta=15$	40	15	30	11	24	9
	$\beta=5$	32	16	26	12	21	11
LBGR=70	$\beta=10$	26	12	20	10	16	9
	$\beta=15$	21	11	16	9	14	6

s = Standard Deviation

LBGR = Lower Bound of Gray Region (% of Action Level)

β = Beta (%), Probability of mistakenly concluding that $\mu >$ action level

α = Alpha (%), Probability of mistakenly concluding that $\mu <$ action level

AL = Action Level (Threshold)

Note: Values in table are not adjusted for EMC.

Site Health and Safety Plan

PROJECT INFORMATION

Site/Project Name	<i>Star Forge – Clean Closure</i>
Location	<i>8531 E Marginal Way S, Seattle, WA 98108</i>
Plan Prepared by	<i>Brian Johnson</i>
Project Manager	<i>Scott St John</i>
Project Engineer	<i>David Hill</i>
Site Safety Officer	<i>Brian Johnson / Tony Bahnick</i>
Client Contact/Phone	<i>Wayne Turk / Matteo Sanesi</i>
Start Date	<i>04/21/2020</i>
End Date	<i>TBD</i>
Key Project Personnel/Phone	<i>Wayne Turk, Star Forge – (206-255-8177)</i> <i>Matteo Sanesi, Star Forge – (253-878-6415)</i> <i>Scott St John, DH Environmental – Project Manager (206-327-0026)</i> <i>Nathan Moxley, DH Environmental – Task Leader (509-332-9281)</i> <i>David Hill, DH Environmental - Principal Engineer (206-293-3126)</i> <i>Tony Bahnick, DH Environmental – Project Supervisor (206-445-4556)</i> <i>Brian Johnson, DH Environmental – Safety Officer (206-930-4043)</i> <i>Jacob Briere, DH Environmental – Project Lead (425-591-8223)</i>
Site Team/Crew Size	<i>5-10</i>
Will Client, Agency or Other Personnel be On Onsite?	☒ Yes ☐ No
Work Hours	<i>Work will be performed during daylight hours.</i>
<u><i>Responsibilities of the Site Safety Officer</i></u> <i>The Project Site Safety Officer (SSO), who will be on site daily, shall:</i> ▪ <i>Implement this HASP and report any observed deviations from site conditions anticipated in the plan;</i> ▪ <i>Verify that on-site personnel and visitors are working in a manner consistent with applicable environmental and H&S regulations, site work plans and this project HASP, Advise the affected individual if a deviation is noted, and follow-up as appropriate;</i> ▪ <i>Verify that required personal protective, monitoring, and emergency equipment is used as required;</i> ▪ <i>Report observed accidents/incidents or inadequate work practices to the Contract Manager and Client;</i> ▪ <i>Report all accidents/incidents and findings regarding personnel exposure and work practices to the Contract Manager and Client;</i> ▪ <i>Conduct daily or pre-entry safety briefings</i>	

FACILITY DESCRIPTION AND BACKGROUND

Type of Facility	<i>Star Forge – Former Large-scale metal fabrication plant</i>
Buildings/Structures	<i>The site is approximately 21.6 acres and has a mixture of industrial use buildings as well as office buildings.</i> <i>18 UST's/AST's of various sizes are located on site.</i>
Access	<i>Field Vehicles</i>
General Geologic and Hydraulic Setting	<i>Property located on east bank of the Duwamish Waterway. The depth to groundwater varies across the site but is approximately 10-feet below grade. Groundwater and soil are known to be, or have the potential to be, impacted with petroleum, metals, and PCBs.</i>
Site History	<i>The Jorgensen Forge Site is approximately 21.6 acres, located in an industrial area along the east bank of the Lower Duwamish Waterway. The site is bordered to the north by the Boeing Plant 2 property, and to the south by the Boeing Isaacson property. It is bordered to the west by the Lower Duwamish Waterway, and to the east by East Marginal Way South and the King County Regional Airport.</i> <i>The property was used from 1942-1965 for fabrication of structural steel, tractor and road equipment. Operations at the site included forging and heat-treating by Isaacson Iron Works, which operated as a U.S. naval vessel manufacturer.</i> <i>The property was owned and operated by Earle M. Jorgensen Company from 1965 until 1992, when it was purchased by the plant management group and became the Jorgensen Forge Corporation. Jorgensen manufactured specialized large-scale metal parts for the aircraft and marine industries, including open die steel forgings and rolled aluminum rings. They also processed nickel, titanium, and specialized alloys.</i>
Special Conditions/Comments	<i>Physical hazards such as vacant buildings, exposed pits, demolition debris, etc. are known to be present across the Site.</i>
Are Sources of Hazardous Substances Known to Have Been Stored/Spilled On Site?	☒ Yes ☐ No <u>Comments:</u>

PROJECT SCOPE OF WORK

SCOPE OF WORK

Mobilization / Site Preparation

- Mobilize all personnel, equipment, and materials as required to the site
- Inspect site prior to starting work to evaluate conditions
- Establish work perimeter via survey and staking of work area
- Establish work zones (exclusion, decontamination reduction, and support zones)
- Establish equipment, drum, and supplies management locations

Implement Monitoring and Control Measures

- Assure relevant and appropriate equipment (e.g. excavator, dump truck, air monitoring equipment, etc.) is on site and functioning prior to work activities.
- Test systems for operation and trouble shoot as necessary

Conduct Daily Safety Meeting and Periodic Safety Evaluations

- Assure all personnel are briefed on the day's tasks, known hazards, and hazard mitigation strategies.
- Encourage reporting unforeseen / unanticipated physical, equipment, and / or chemical hazards – issue STOP WORK AUTHORITY when necessary and review with all personnel – update Daily Toolbox Safety Meeting sheet

Site Orientation

- Prior to work assignment (layout, ingress; egress; emergency evacuation, phones)

Waste Characterization Sampling

- The number of samples and the location of the samples to be taken will vary throughout the facility
- Sampling in the "Metal Forge" area will require personnel to enter into trenches to collect samples of metal slag and concrete chippings. The pits that require entry vary in depth with a maximum depth of 18'. These trenches will be entered as permit required confined spaces, see attached confined space permit
- A 28' extension ladder will be used to access the trenches in the "Metal Forge" area. Personnel traveling the ladder for access or egress to the trenches will be utilizing fall protection, and will be secured to a 5,000lb anchor point
- Samples that will be collected in the "Metal Forge" will require using a roto-hammer/drill. Concrete chippings and metal slag will be collected from each location and placed directly into laboratory supplied sampling containers
- Samples that will be collected throughout the rest of the facility will be collected from each location and placed directly into laboratory supplied sampling containers

SCOPE OF WORK

Transportation and Disposal

- Assure proper waste characterization (waste profiling), acceptance by the proposed receiving facility, and transportation documentation prior to off site management (for each waste stream).
- Assure transport vehicles loaded with waste are within the legal weight limit.

Decontamination – Personnel

- All personnel will proceed through decontamination (dry and wet methods may be used) and exit through an established Contamination Reduction Zone.
- An emergency eye wash & sanitation stations that will have soap and water will be available onsite.
- Containerize wash water and other materials generated during decontamination into DOT shippable containers.
- Characterize waste generated from personnel decontamination.
- Properly dispose of waste following State and Federal regulations.

Equipment Decontamination

- Decontaminate all equipment prior to leaving the site.
- Complete decontamination in controlled areas, ensure all waste generated is controlled and contained on site.
- Containerize wash water and other materials generated during decontamination into DOT shippable containers.
- Characterize waste generated from equipment decontamination.
- Properly dispose of waste following State and Federal regulations.

Demobilize Equipment

- De-Mobilize all personnel, equipment, materials and washing facilities from the site.
- Inspect site prior to conclusion of work to evaluate conditions and ensure client concurs with completion of the project.

CHEMICALS OF CONCERN

CHEMICAL / CAS	CHEMICAL PROPERTIES	EXPOSURE LIMITS	ROUTES OF ENTRY	SYMPTOMS
Barium Sulfate 7727-43-7	- Flash Point: NA - Odor: Odorless - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 10 mg/m ³ IDLH: N.D.	- Inhalation - Ingestion - Skin contact - Absorption	Irritates eyes, nose, upper respiratory system; benign pneumoconiosis (baritosis).
Mercury 7439-97-6	- Flash Point: NA - Odor: Odorless liquid - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 0.05 mg/m ³ IDLH: 10 mg/m ³	- Inhalation - Ingestion - Skin absorption - Skin and/or eye contact	Irritates eyes, skin; cough, chest pain, dyspnea (breathing difficulty), bronchitis, pneumonitis; tremor, insomnia, irritability, indecision, headache, lassitude (weakness, exhaustion); stomatitis, salivation; gastrointestinal disturbance, anorexia, weight loss; proteinuria.
Selenium 7782-49-2	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 0.2 mg/m ³ IDLH: 1 mg/m ³	- Inhalation - Ingestion - Skin and/or eye contact	Irritates eyes, skin, nose, throat; visual disturbance; headache; chills, fever; dyspnea (breathing difficulty), bronchitis; metallic taste, garlic breath, gastrointestinal disturbance; dermatitis; eye, skin burns; In Animals: anemia; liver necrosis, cirrhosis; kidney, spleen damage
Silver 7440-22-4	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL-TWA: 0.01 mg/m ³ IDLH: 10 mg/m ³	- Inhalation - Ingestion - Skin and/or eye contact	Blue-gray eyes, nasal septum, throat, skin; irritation, ulceration skin; gastrointestinal disturbance.

CHEMICAL / CAS	CHEMICAL PROPERTIES	EXPOSURE LIMITS	ROUTES OF ENTRY	SYMPTOMS
Copper 7440-50-8	- Vapor Density: NA (Air =1) - Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 1 mg/m ³ IDLH: 100 mg/m ³	- Inhalation - Ingestion - Skin and/or eye contact	Irritates eyes, nose, pharynx; nasal septum perforation; metallic taste; dermatitis; In Animals: lung, liver, kidney damage; anemia.
Nickel 7440-02-0	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 0.015 mg/m ³ IDLH: Ca 1 mg/m ³	- Inhalation - Ingestion - Skin and/or eye contact	Sensitization dermatitis, allergic asthma, pneumonitis; [potential occupational carcinogen].
Zinc 1314-13-2	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA - Vapor Density: NA (Air =1)	PEL-TWA: 5 mg/m ³ IDLH: 500 mg/m ³	Inhalation	Metal fume fever: chills, muscle ache, nausea, fever, dry throat, cough; lassitude (weakness, exhaustion); metallic taste; headache; blurred vision; low back pain; vomiting; malaise (vague feeling of discomfort); chest tightness; dyspnea (breathing difficulty), rales, decreased pulmonary function.
Arsenic 7440-38-2	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.010 mg/m ³ REL: C 0.002 mg/m ³ IDLH: Ca (5 mg/m ³)	- Inhalation - Ingestion - Skin contact - Absorption	Ulceration of nasal septum, GI disturbances, respirator irritation, peripheral neuropathy, dermatitis, hyperpigmentation of skin.
Cadmium 7440-43-9	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.005 mg/m ³ REL: Ca	- Inhalation - Ingestion	Pulmonary edema, breathing difficulty, cough, chest tightness, substernal pain,

CHEMICAL / CAS	CHEMICAL PROPERTIES	EXPOSURE LIMITS	ROUTES OF ENTRY	SYMPTOMS
		IDLH: Ca (9 mg/m ³)		headache, chills, muscle aches, nausea, vomiting, diarrhea, loss of sense of smell, emphysema, proteinuria, mild anemia.
Chromium 7440-47-3	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.5 mg/m ³ REL: 0.5 mg/m ³ IDLH: 250 mg/m ³	- Inhalation - Ingestion - Skin contact	Irritation eyes, skin; lung fibrosis (histologic).
Lead 7439-92-1	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.050 mg/m ³ REL (8-hour): 0.050 mg/m ³ IDLH: 100 mg/m ³	- Inhalation - Ingestion - Skin contact	Lassitude (weakness, exhaustion), insomnia; facial pallor; anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; paralysis wrist, ankles; encephalopathy; kidney disease; irritation eyes; hypertension.
Poly Chlorinated Biphenyl 53469-21-9	- Flash Point: NA - Odor: Mild hydrocarbon odor - LEL = NA - UEL = NA	PEL: 1 mg/m ³ (skin) TWA: 0.001 mg/m ³ IDLH: Ca (5 mg/m ³)	- Inhalation - Ingestion - Skin contact - Absorption	Irritates eyes, chloracne, liver damage, reproductive effects.

PERSONNEL PROTECTIVE EQUIPMENT BY TASK

TASK	Level	MASK /CARTRIDGE /AIR	ADDITIONAL PPE
Establish support area / prepare	D	N/A	Hardhats, safety glasses, gloves, steel toe boots, high visible traffic vests.
Waste designation sampling	C/D	GME P-100 Cartridge	Hardhats, safety glasses, gloves, steel toe boots, high visible traffic vests, respirator if needed, and fall protection as needed.
Decontaminate equipment	C/D	GME P-100 Cartridge	Hardhats, polycoated tyvek suit, nitrile inner gloves, neoprene outer gloves, leather gloves as appropriate, PVC or boot covered steel toe boots.
Mobilize Equipment to area / establish management waste systems or locations	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, leather gloves (as needed), steel toe boots
Conduct daily safety meeting (before shift & after shift)	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek, hi-visibility safety vest, steel toe boots (each as appropriate)
Site Preparation / site security / site postings and notifications	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, leather gloves (as needed), steel toe boots
Inspect appropriate equipment each day / monitor perimeter	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, leather gloves (as needed), steel toe boots
Install erosion control measures	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, leather gloves (as needed), steel toe boots
Disposal and transportation	C/D	Full / Face P100/ OVA	Hardhats, polycoated tyvek suit, nitrile inner gloves, neoprene outer gloves, leather gloves as appropriate, PVC or boot covered steel toe boots
Site reclamation	D	N/A	Hardhats, safety glasses, white tyvek coveralls, hi-visibility safety vest, nitrile inner gloves, leather gloves (as needed), steel toe boots
De-mobilize	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, leather gloves (as needed), steel toe boots

SAFETY EQUIPMENT AND PROCEDURES

Initial Level of Protection	<i>Based off our evaluation of the work site, and the tasks that are to be completed, we have determined Level D PPE to be adequate.</i> <i>If nuisance dust becomes a factor during sampling, then Level C PPE will be donned.</i>
Training Requirements for Site Workers	<i>HAZWOPER 40, Current 8 Hour Refresher, First Aid /CPR, HAZWOPER Supervisor</i>
Decontamination Procedures	<i>Boots and hands will be decontaminated with soap and water as necessary.</i>

HAZARD EVALUATION

ITEM	HAZARD	PREVENTION
Ambient weather / PPE load	Heat stress Dehydration	• Must follow WAC 296-62-095 regulation for heat illness prevention • Implement heat stress plan for personnel for any of the following temperature ○ 52° - Nonbreathing clothes including vapor barrier clothing or PPE such as chemical resistant suits ○ 77° - Double-layer woven clothes including coveralls, jackets and sweatshirts ○ 89° - All other clothing • Provide shaded rest area for personnel • Shall provide one quart of water per employee per hour for drinking for the entire shift • Supervisor to track site temperature conditions to monitor for weather
Mobilization to site	Site Security Slips, Trips, Falls Traffic Overhead Hazards	• Clear & Mark off drop off area with barrier tape (if required) • Visual barriers will be in place during work hours, and when site is unattended. • Limit all walking and access to designated paths / destinations
Air monitoring	Inhalation Over exposure	• Ensure current calibration of equipment • Fresh air calibration • Monitor work zone area • Monitor work area perimeter
General work area	Slip / trip / fall	• Designated pathways • Maintain pathways cleared of debris • Enforce good construction housekeeping
General work area – lifting	Lifting	• Plan and stage to minimize long distance carrying • Split heavy loads into smaller loads • Use mechanical lifting aids (i.e. forklift or excavator bucket) where possible and can be done safely • Use assistant for heavy (>30 lbs.) or awkward load • Use proper lifting techniques with good footing

ITEM	HAZARD	PREVENTION
General work area – traffic	Struck by	- Set up visible barricades on access roads; - Wear high visibility safety vests (except in exclusion zone)
Traffic	Struck by	- Set up visible barricades - Wear high visibility safety vests - Only authorized personnel in work zones
Break time	Ingestion	Thoroughly wash hands before eating, drinking, smoking
Delivery of site equipment & supplies	Back Strains, Hand Injuries	- Verify before lifting that all hoses are bundled and secured in roll. - Do not throw equipment from truck, - Lift any object over 30lbs with assistance. If in doubt of the weight ask for HELP first. - Lift properly with legs and maintain footing.
Loading, moving, and transportation activities (on-site)	Struck by Noise	- PPE on page 5 - Hearing protection - Back up alarms or rotating beacons - Keep unauthorized personnel out of operating areas - Train personnel on working safely around equipment - Wear Reflective Vests - Make eye to eye contact between operator/driver; - Signal or communicate movements - Equipment operator controls movement of personnel in and out of swing zone or equipment travel area - Stay clear of swing zone of equipment
Use of hand tools	Pinch points Strain-sprain Difficult- positions Cut-hazards	- Use proper holding and supporting techniques when turning wrenches, screw-drivers, and other torque-enhancing tools - Ensure proper direction and grip on plumbing fixtures prior to use of full body weight for counterbalance – use proper footing stance - Verify correct pipelines prior to disassembly
Confined space entry	Illness Death	See attached confined space permit
Falling	Bodily injury Death	- Fall protection will be used while accessing and egressing the trenches. - A 50' self will be secured to an anchor point of at least 5,000lbs. - Only authorized personnel will be allowed in fenced areas where fall hazards exist.

ITEM	HAZARD	PREVENTION
Excavation, loading, Compacting, and transportation activities	Struck by Noise Metals Falls	• PPE on page 5 • Personnel will remain 4' or more from excavation leading edge. • Hearing protection • Back up alarms or rotating beacons • Keep unauthorized personnel out of operating areas • Train personnel on working safely around equipment • Wear Reflective Vests • Make eye to eye contact between operator/driver; signal or communicate movements • Equipment operator controls movement of personnel in and out of swing zone or equipment travel area • Stay clear of swing zone of equipment
Heavy Machinery	Equipment failure Slips, trips, falls Overhead hazards Not in use	• Conduct pre-operation inspection of all parts including connections. • Ensure grease and spare parts are available in case of failure • Inspect fire extinguishers on equipment • Never operate machinery outside of manufacturer's specifications • Never alter equipment • Board machinery use handrails & maintain three contact points at all times. • Ensure surfaces and boots are dry and free form debris • Power lines and other structures on site may interfere with operation of equipment. Where these hazards cannot be removed or controlled, the operator will only proceed with approval and direction from the Safety Officer. • When equipment is not in use, ensure parking brake is set & equipment is staged on level ground, not blocking entry /exit paths.
Dust Mitigation (if required)	Dust levels visible	• Water will be sprayed periodically over exposed work area
Debris Removal /Material Handling	Struck by Overhead Skin irritation	• Establish visual contact with operator prior to any movement of excavator bucket • Ground personnel to wear high visibility vest • Avoid skin contact with poison ivy /oak

ACCIDENT/EXPOSURE PROCEDURES

TYPE CONTACT	FIRST AID
Eyes	• Flush each eyes continuously for 15 minutes • Tilt head to side to ensure liquid runs onto floor not in the other eye • Refer to EMT for evaluation
Skin	• Remove contaminated clothing immediately • Wash skin continuously for 15 minutes • Refer to physician if redness, swelling, or pain persists after washing
Not Breathing	• Call 911 • Remove to fresh air immediately if respiratory distress develops; • Begin CPR until EMT arrives
Ingestion	• Aspiration hazard • Do not induce vomiting • Do not give anything by mouth
Emergency Contact Information	City of Seattle - • Fire/Ambulance: (911) • Police: (911) • Hospital: Swedish Cherry Hill (206-320-2000)
Accident Reporting	• Employees immediately report all accidents or incidents to the Site Project Manager / Safety Officer • Project Manager / Safety Officer will relay information to Contract Manager • Determination will be made regarding need for post-accident drug testing • Notify Client immediately in the event of any incident

EMERGENCY RESOURCES AND PROCEDURES

ELEMENT	LOCATION, SPECIFICATION OR REASON FOR USE
NEAREST HOSPITAL	Hospital: Swedish Cherry Hill Campus 500 17 th Ave, Seattle, WA 98122 (See Figure 2 for directions) 206-320-2000
NEAREST PHONE	Supervisor cell phone
FIRST AID KIT	DH Environmental pickup truck
FIRE EXTINGUISHER	DH Environmental pickup truck
EYEWASH STATION AND EMERGENCY SHOWER	Locate facility emergency eyewash during H&S meeting
EVACUATION ROUTE / MEETING POINT	Determine after arrival at site Draw on site map Discuss with crew before start of project
SPILL CONTAINMENT	Work involving liquids shall be performed to the extent possible on sheet plastic and or secondary containment. In the event of a spill, absorbent shall be applied and the absorbed waste shall be immediately transferred to container.

SIGNATURE PAGE

I have read and understand the attached Site Health and Safety Plan and the DH Environmental, Inc. health and safety policies and agree to comply with the requirements described within.

Site Health and Safety Plan

PROJECT INFORMATION

Site/Project Name	Star Forge UST Sampling and Tank Decommission
Location	8531 E Marginal Way S, Seattle, WA 98108
Plan Prepared by	Brian Johnson
Project Manager	Scott St John
Project Engineer	David Hill
Site Safety Officer	Brian Johnson / Tony Bahnick
Client Contact/Phone	Wayne Turk / Matteo Sanesi
Start Date	04/21/2020
End Date	TBD
Key Project Personnel/Phone	Wayne Turk, Star Forge – (206-255-8177) Matteo Sanesi, Star Forge – (253-878-6415) Scott St John, DH Environmental – Project Manager (206-327-0026) Nathan Moxley, DH Environmental – Task Leader (509-332-9281) David Hill, DH Environmental - Principal Engineer (206-293-3126) Tony Bahnick, DH Environmental – Project Supervisor (206-445-4556) Brian Johnson, DH Environmental – Safety Officer (206-930-4043) Jacob Briere, DH Environmental – Project Lead (425-591-8223)
Site Team/Crew Size	5-10
Will Client, Agency or Other Personnel be On Onsite?	☒ Yes ☐ No
Work Hours	Work will be performed during daylight hours.

Responsibilities of the Site Safety Officer

The Project Site Safety Officer (SSO), who will be on site daily, shall:

- Implement this HASP and report any observed deviations from site conditions anticipated in the plan;
- Verify that on-site personnel and visitors are working in a manner consistent with applicable environmental and H&S regulations, site work plans and this project HASP, Advise the affected individual if a deviation is noted, and follow-up as appropriate;
- Verify that required personal protective, monitoring, and emergency equipment is used as required;
- Report observed accidents/incidents or inadequate work practices to the Contract Manager and Client;
- Report all accidents/incidents and findings regarding personnel exposure and work practices to the Contract Manager and Client;
- Conduct daily or pre-entry safety briefings

FACILITY DESCRIPTION AND BACKGROUND

Type of Facility	<i>Star Forge – Former Large-scale metal fabrication plant</i>
Buildings/Structures	<i>The site is approximately 21.6 acres and has a mixture if industrial use buildings as well as office buildings.</i> <i>18 UST's/AST's of various sizes are located on site.</i>
Access	<i>Field Vehicles</i>
General Geologic and Hydraulic Setting	<i>Property located on east bank of the Duwamish Waterway. The depth to groundwater varies across the site but is approximately 10-feet below grade. Groundwater and soil are known to be, or have the potential to be, impacted with petroleum, metals, and PCBs.</i>
Site History	<i>The Jorgensen Forge Site is approximately 21.6 acres, located in an industrial area along the east bank of the Lower Duwamish Waterway. The site is bordered to the north by the Boeing Plant 2 property, and to the south by the Boeing Isaacson property. It is bordered to the west by the Lower Duwamish Waterway, and to the east by East Marginal Way South and the King County Regional Airport.</i> <i>The property was used from 1942-1965 for fabrication of structural steel, tractor and road equipment. Operations at the site included forging and heat-treating by Isaacson Iron Works, which operated as a U.S. naval vessel manufacturer.</i> <i>The property was owned and operated by Earle M. Jorgensen Company from 1965 until 1992, when it was purchased by the plant management group and became the Jorgensen Forge Corporation. Jorgensen manufactured specialized large-scale metal parts for the aircraft and marine industries, including open die steel forgings and rolled aluminum rings. They also processed nickel, titanium, and specialized alloys.</i>
Special Conditions/Comments	<i>Physical hazards such as vacant buildings, exposed pits, demolition debris, etc. are known to be present across the Site.</i>
Are Sources of Hazardous Substances Known to Have Been Stored/Spilled On Site?	☒ Yes ☐ No <u>Comments:</u>

PROJECT SCOPE OF WORK

SCOPE OF WORK

Mobilization / Site Preparation

- Mobilize all personnel, equipment, and materials as required to the site
- Inspect site prior to starting work to evaluate conditions
- Establish work perimeter via survey and staking of work area
- Establish work zones (exclusion, decontamination reduction, and support zones)
- Establish equipment, drum, and supplies management locations

Implement Monitoring and Control Measures

- Assure relevant and appropriate equipment (e.g. excavator, dump truck, air monitoring equipment, etc.) is on site and functioning prior to work activities.
- Test systems for operation and trouble shoot as necessary.

Conduct Daily Safety Meeting and Periodic Safety Evaluations

- Assure all personnel are briefed on the day's tasks, known hazards, and hazard mitigation strategies.
- Encourage reporting unforeseen / unanticipated physical, equipment, and / or chemical hazards – issue STOP WORK AUTHORITY when necessary and review with all personnel – update Daily Toolbox Safety Meeting sheet.

Site Orientation

- Prior to work assignment (layout, ingress; egress; emergency evacuation, phones)

Lockout

- DH Environmental and Facilities manager will ensure lock out / tagout /block /bleed of all energized systems that are part of the project scope of work

Tank Set-Up

- Calibrate 4-gas/PID monitor prior to the start of the project
- Conduct air monitoring with 4-gas/PID monitor

Tank Sampling

- Sample the contents of 18 UST's/AST's
- Prepare and deliver samples to an accredited lab for analysis
- Sample slag material that has been used as surface covering and fill around the UST's
- Create waste designation packages for the contents of the tanks using lab data

Tank Decommission and Disposal

SCOPE OF WORK

- Remove fuel from USTs with vacuum truck, personnel with vacuum lines will remain outside USTs
- Triple rinse UST, collect rinsate/sludge and transport for disposal
- Disconnect and cap all remaining piping connections to each UST
- Inert all USTs with compressed Carbon Dioxide or Nitrogen (conducted by Marine Chemist)
- Document tank atmosphere readings and inert conditions
- All collected waste will be disposed of offsite at a properly permitted disposal facility

Soil Excavation

- Remove slag that has been used as fill around the tanks
- Limited excavation of contaminated soil
- Field screening methods will be utilized to verify that impacted soil has been removed

Soil Transportation and Disposal

- Assure proper waste characterization (waste profiling), acceptance by the proposed receiving facility, and transportation documentation prior to off site management
- Load excavated soil into dump trucks
- Assure transport vehicles loaded with waste are within the legal weight limit
- Assure transport vehicles are equipped with the correct DOT paperwork for the waste material they are hauling

Decontamination and Demobilization

- Decontaminate all personnel and equipment
- Demobilize from facility
- Provide re-certification of inert tank status at a later date using Marine Chemist

CHEMICALS OF CONCERN

CHEMICAL / CAS	CHEMICAL PROPERTIES	EXPOSURE LIMITS	ROUTES OF ENTRY	SYMPTOMS
Diesel Fuel 68476-34-6	- Flash Point: >100.0 °F - Odor: Oily liquid with a strong characteristic odor - LEL = 0.4% - UEL = 8% - Vapor Density: 3 (Air =1)	PEL-TWA: 100 mg/m3 IDLH: N.D.	- Inhalation - Ingestion - Skin contact - Absorption	Irritation of nose and throat, irritation of eyes and mucous membranes, skin irritation, unconsciousness, corneal damage, narcosis, decrease in motor functions, behavioral changes, edema, liver enlargement, jaundice, conjunctivitis, proteinuria, defatting of the skin, rash.
Bunker Fuel	- Flash Point: >141.8 °F - Odor: Petroleum - LEL = 0.9% - UEL = 8% - Vapor Density: >5 (Air =1)	- Clarified oils: PEL 5 mg/m3 - Fuel Oil No. 6 PEL: 5 mg/m3 - Fuel Oil PEL: 5 mg/m3 - Naphthalene PEL: 50 mg/m3 IDLH: N.D.	- Inhalation - Ingestion - Skin contact - Absorption	Irritation of nose and throat, irritation of eyes and mucous membranes, skin irritation, unconsciousness, corneal damage, narcosis, decrease in motor functions, behavioral changes, edema, liver enlargement, jaundice, conjunctivitis, proteinuria, defatting of the skin, rash.
Poly Chlorinated Biphenyl 53469-21-9	- Flash Point: NA - Odor: Mild hydrocarbon odor - LEL = NA - UEL = NA	PEL: 1 mg/m3 (skin) TWA: 0.001 mg/m3 IDLH: Ca (5 mg/m3)	- Inhalation - Ingestion - Skin contact - Absorption	Irritates eyes, chloracne, liver damage, reproductive effects.

CHEMICAL / CAS	CHEMICAL PROPERTIES	EXPOSURE LIMITS	ROUTES OF ENTRY	SYMPTOMS
Arsenic 7440-38-2	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.010 mg/m ³ REL: C 0.002 mg/m ³ IDLH: Ca (5 mg/m ³)	- Inhalation - Ingestion - Skin contact - Absorption	Ulceration of nasal septum, GI disturbances, respirator irritation, peripheral neuropathy, dermatitis, hyperpigmentation of skin.
Cadmium 7440-43-9	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.005 mg/m ³ REL: Ca IDLH: Ca (9 mg/m ³)	- Inhalation - Ingestion	Pulmonary edema, breathing difficulty, cough, chest tightness, substernal pain, headache, chills, muscle aches, nausea, vomiting, diarrhea, loss of sense of smell, emphysema, proteinuria, mild anemia.
Chromium 7440-47-3	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.5 mg/m ³ REL: 0.5 mg/m ³ IDLH: 250 mg/m ³	- Inhalation - Ingestion - Skin contact	Irritation eyes, skin; lung fibrosis (histologic).
Lead 7439-92-1	- Flash Point: NA - Odor: Odorless solid - LEL = NA - UEL = NA	PEL/TWA: 0.050 mg/m ³ REL (8-hour): 0.050 mg/m ³ IDLH: 100 mg/m ³	- Inhalation - Ingestion - Skin contact	Lassitude (weakness, exhaustion), insomnia; facial pallor; anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; paralysis wrist, ankles; encephalopathy; kidney disease; irritation eyes; hypertension.

PERSONNEL PROTECTIVE EQUIPMENT BY TASK

TASK	Level	MASK /CARTRIDGE /AIR	ADDITIONAL PPE
Establish support area / prepare	D	N/A	Hardhats, safety glasses, Nomex coveralls, leather gloves, steel toe boots, high visible traffic vests.
Sample contents of tanks	D	N/A	Hardhats, safety glasses, Nomex coveralls, leather gloves, steel toe boots, high visible traffic vests.
Establish support area / prepare	D	N/A	Hardhats, safety glasses, Nomex coveralls, leather gloves, steel toe boots, high visible traffic vests.
Purge fuel from dispensers and lines into USTs	C	GME P-100 Cartridge	Hardhat, FR Coveralls, Nitrile inner and outer gloves, steel toe boots or boot covers.
Drain Tank with vacuum truck (No CSE)	C/D	GME P-100 Cartridge	Hardhat, FR Coveralls, Nitrile inner and outer gloves, steel toe boots or boot covers.
Operator – Vac truck	D	N/A	Hardhats, safety glasses, hearing protection, coveralls, canvas/leather outer gloves, leather steel toe boots, high visible traffic vests
Pressure Wash Tank Interior	C	GME P-100 Cartridge	Hardhat, FR Coveralls, Nitrile inner and outer gloves, steel toe neoprene boots or boot covers, full three point harness with rescue line
Slag excavation	C/D	GME P-100 Cartridge	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, gloves (as needed), steel toe boots.
Triple rinse USTs from outside space, cap remaining lines and inert tanks.	C	GME P-100 Cartridge	Hardhat, FR Coveralls, Nitrile inner and outer gloves, steel toe neoprene boots or boot covers.
Remove and dispose of tanks	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, gloves (as needed), steel toe boots.
Soil excavation	C/D	GME P-100 Cartridge	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, gloves (as needed), steel toe boots.
Soil transport and disposal	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, gloves (as needed), steel toe boots.
Confirmation sampling	D	N/A	Hardhats, safety glasses, cotton coveralls or tyvek (as needed), hi-visibility safety vest, gloves (as needed), steel toe boots.

Decontaminate equipment	D	N/A	Hardhats, full-face shields, safety goggles, Polycoated coveralls, neoprene outer gloves, nitrile steel toe boots, high visible traffic vests
-------------------------	---	-----	---

SAFETY EQUIPMENT AND PROCEDURES

Initial Level of Protection	<i>During this initial survey, air monitoring will be conducted to establish the immediate threat to human health and safety and to determine the appropriate level of PPE for the remainder of the work. After the initial entry and evaluation, the exclusion zone will be modified as necessary.</i>
Training Requirements for Site Workers	<i>HAZWOPER 40, Current 8 Hour Refresher, First Aid /CPR, HAZWOPER Supervisor</i>
Decontamination Procedures	<i>Boots and hands will be decontaminated with soap and water as necessary.</i> <i>Chemical suits will be disposed of as necessary.</i>

COVID-19 Response Plan

Project Name: Star Forge

Project Address: 8531 E Marginal Way S, Seattle, WA 98108

Date Produced: 04/17/2020

Revision Date: 6/10/2020

Purpose and Scope

This COVID-19 Response Plan sets forth the requirements and expectations that DH Environmental, Trade Partners, and vendors shall comply with during the COVID-19 pandemic. This plan is designed to meet the guidance requirements of The Centers for Disease Control (CDC) and other applicable regulatory requirements. You should check back frequently with the CDC and other local regulatory agencies for requirements and updates.

This plan shall be distributed to all Trade Partners and others working on site. All contractors working on site shall be required to incorporate CDC recommendations to prevent COVID-19 transmission into all activity hazard analysis (AHA's) and pre-task safety planning for all aspects of work. Additionally, COVID-19 symptoms, precautionary hygiene, and employee expectations will be covered in the Site-Specific Safety Orientation.

How COVID-19 Spreads

Although the first human cases of COVID-19 likely resulted from exposure to infected animals, infected people can spread SARS-CoV-2 to other people.

The virus is thought to spread mainly from person-to-person, including:

- Between people who are in close contact with one another (within about 6 feet).
- Through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.

It may be possible that a person can get COVID-19 by touching a surface or object that has SARS-CoV-2 on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the primary way the virus spreads.

People are thought to be most contagious when they are most symptomatic (i.e., experiencing fever, cough, and/or shortness of breath). Some spread might be possible before people show symptoms; there have been reports of this type of asymptomatic transmission with this new coronavirus, but this is also not thought to be the main way the virus spreads.

Although the United States has implemented public health measures to limit the spread of the virus, it is likely that some person-to-person transmission will continue to occur.

Recommended Strategies for Prevention

The following is a summary of the [CDC's recommendations](#) and DH Environmental's guidelines for our projects to prevent the spread of COVID-19:

1) Actively Encourage Sick Employees to Stay Home

Frequently communicate with your employees to stay home if they are feeling ill. They should seek medical care early and stay away from others. You must notify the DH Environmental Project Manager immediately if you send home any employee due to illness, or any employee calls in sick and does not come to work.

2) Employee Exhibits Symptoms / Tests Positive

Exhibits Symptoms: If an employee has a high fever and is experiencing shortness of breath but has not taken a test or has not received the results from a test, we should presume a positive for COVID – 19 until we know otherwise. The employee cannot report to work until:

- The employee receives a negative test or
- The employee is symptom free, and:
 - Fever free for 72 hours without the use of medication, and
 - At least 7 days have passed since the employee's symptoms first appeared

Always follow the guidance of your health care provider and state and local health department.

You must notify the DH Environmental Project Manager immediately if you send home any employee, or they call in sick from work, because they are experiencing COVID – 19 symptoms. You must also keep your DH Environmental Project Manager updated on the condition of any such employee and notify the Project Manager prior to such employee returning to work. Cleaning procedures outlined in the Sanitation and Cleanliness procedure of this document must immediately be followed.

Positive Test: If any jobsite personnel (employee, trade partner employee, etc.) has tested positive for COVID – 19 or has been in close contact with someone who has tested positive for COVID – 19 or has a family member that lives with them that has tested positive for COVID -19 must self-quarantine for at least 14 days.

If it is determined that an infected employee spent prolonged time on the project or in the office, a third-party cleaning company specializing in biohazard cleanup shall perform appropriate deep cleaning of the applicable area and tools or equipment. However, in the event those options are not available standard cleaning crews are acceptable provided they utilize proper PPE, cleaning products as recommended by the CDC, and shut down the project for 72 hours. The areas impacted must be closed and secured until cleaned and as recommended by the cleaning company.

3) Travel and Access to Our Sites

Employees at your company who have been to a Level 3 country listed on the [CDC Alert List](#) within the past 14 days will not be permitted to return to the project site for at least 14 days after returning from a Level 3 country, and only after they have been symptom free for at least 14 days from the date they returned to the United States. If an employee at your company had close contact with an individual that has traveled to a Level 3 country within the past 14 days, these individuals will not be permitted to return to the project site until they have been symptom free for at least 14 days from the date they came in contact with the traveler that returned from the Level 3 country.

If an employee had close contact with an individual who has a confirmed positive test result for COVID-19, they are not allowed at the project site until they have been symptom free for 14 days from the date of contact.

4) Social Distancing

All employees on site shall be trained on the following social distancing techniques. Social distancing requirements include the following:

Modified: 06-10-2020

- Limit physical contact with others. Do not shake hands, hug, fist-bump, or high five.
- Direct employees to increase personal space to at least 6 feet where possible. This includes tailgate meetings, lunch areas, project meetings, common areas including personnel hoists and elevators.
- Attendance at safety meetings shall be communicated verbally and the foreman will sign in each attendee. Contractors should not pass around a sign-in sheet or mobile device to confirm attendance.
- Keep group sizes under ten people and maintain proper social distancing of six feet or more.
- When possible, conduct meetings by teleconference.
- Employees shall be instructed to take breaks and lunch in shifts to reduce the size of the group in the break/lunch area at any one time to less than 10 people.
- If an employee can perform their job duties while working remotely, they should do so and not come to the project or any of the project offices. This applies primarily to DH Environmental and Trade Partner supervisory staff.
- Efforts should be made to designate crews to remain together to minimize intermixing of crew members.

If there is a task that must be completed and there are no alternative measures to perform the work while maintaining social distance, a risk assessment and control plan will be prepared by the Trade Partner performing the work. Workers must be trained on this risk assessment and control plan. This plan must be attached to the SSHP and posted in the area. All PPE and controls must be provided by the employer.

5) Risk Levels

The following guidance has been provided by the Washington State Department of Labor and Industries.

www.Lni.wa.gov/agency/outreach/novel-coronavirus-outbreak-covid-19-resources

Negligible Risk

Cloth face covering may be required in some circumstances when the risk for transmission is “negligible” (very low).

For example, you do not need to wear a face covering if you work or drive alone. However, a cloth face covering is required if you work outdoors or in a building while around, but separate, from several other people, and only need to pass within six feet of them once or a twice a day.

Examples of negligible-risk jobs:

- Telecommuters who are the sole occupant in an office with a door.
- Small landscaping crews of three or four workers who drive alone and work outdoors apart from each other all day.
- A crane operator isolated in an enclosed cab.
- Delivery drivers who have no face-to-face interaction with others when they pick up or drop off packages.

Low Risk

A reusable cloth face covering is required when risk from transmission is low.

COVID-19 RESPONSE PLAN

Risk for transmission is low when you work around or travel with others and you stay at least six feet apart, except for briefly passing by others up to several times a day.

Risk is also considered low when one or two workers provide personal services to health clients who also wear a cloth face covering.

Examples of low-risk workplaces and jobs with low-risk activities:

- Light manufacturing facilities that are set up to keep workers separated while they operate machinery and perform other tasks.
- Custodial staff who work after hours and do not clean up after known COVID-19 cases.
- One or two healthy workers in a room providing haircuts or other personal services to clients who also wear a face covering.
- Waiters at restaurants and cafes with curbside pick-up services only.
- Mechanics working on vehicles at repair shops.

Medium Risk

Disposable masks are required when risk for transmission is medium. Examples of disposable masks include dust mask used for hobbies, but not approved by the National Institute for Occupational Safety and Health (NIOSH); surgical-style masks not approved by the FDA; and masks such as KN90s or KN95s approved in other countries. Risk for transmission is considered medium when you stay at least six feet away from others except for several times throughout the day when the six-foot distance is broken for several minutes and prevention measures such as physical barriers aren't feasible. Risk is also considered medium when three to six people work in a room providing personal services to healthy clients who wear a cloth face covering.

Examples of medium-risk jobs and medium-risk activities:

- Commercial fishing crews.
- Field workers being transported to a nearby planting site.
- Grocery-store-produce stockers who work during store hours around customers.
- Manicurists working with clients wearing cloth face coverings.
- Kitchen workers in restaurants.
- Ride-service drivers who only pick up masked passengers.
- Transit operators.

High Risk

Respirators are required when risk for transmission is high. Respirators for high-risk activities must be approved by NIOSH (or by an equivalent approval body from outside the United States). Examples include elastomeric (rubber-like) half-or full-facepiece respirators with cartridges, tight or loose-fitting powered-air purifying respirators (PAPRs) with particulate cartridges, and filtering facepiece N-, R-, or P-95s to P100s (when supplies allow).

Risk for transmission is considered high when you work or travel within three feet of others for more than 10 minutes an hour, many times a day and other prevention measures aren't feasible.

Risk is also considered high when you:

- Clean and sanitize areas recently occupied by a person with known COVID-19 illness.
- Provide services in residences of clients with known COVID-19 illness.
- Perform procedures that aerosolize saliva, mucous, or secretions from eyes; or that cause increased or forced breathing, coughs, sneezes, or yawning.

6) Face Coverings

All employees on the site should cover their mouth and nose with a cloth face cover when around others. If someone has trouble breathing or has a medical reason why they can't wear a face covering, they should

Modified: 06-10-2020

COVID-19 RESPONSE PLAN

notify their supervisor. The CDC has issued [guidance on facial coverings](#):

- Continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Avoid touching your face and face cloth at all times.
- A clean facial covering should be worn each day and be able to be laundered and machine dried without damage or change to shape.
- Wash your hands before putting your covering on and immediately after taking it off. Individuals should be careful not to touch their eyes, nose, and mouth when removing their face covering.
- Cloth face coverings should fit snugly but comfortably against the side of the face and allow for breathing without restriction.

Protection such as N95 respirators should only be worn if the task requires their use and if the employer is following applicable OSHA regulations and has a written program.

Examples of high-risk activities:

- Working with multiple people in a small room, confined space, vehicle or other small space where saliva particles can accumulate in the air.
- Using an ultrasonic scaler or air and water syringe on clients in a dentist office.
- Administering medication via nebulizers.
- Performing spirometry or coaching clients on deep or forced breathing exercises.
- Providing in-home maintenance or pet euthanasia services to a masked client with known or potential COVID-19 illness.

Examples of high-risk jobs:

- Custodial staff who clean up after known COVID-19 cases.
- Dentists and dental hygienists.
- Mortuary services.
- Veterinarians who provide in-home pet euthanasia.

Currently DH Environmental falls under the “Negligible and Low Risk” categories when performing our routine job functions. If a project or a portion of project falls in the “Medium or High risk category than the DH Environmental Health and Safety Manager should be notified before work in those categories take place.

7) Sanitization and Cleanliness

- Conduct daily cleaning measures of all frequently touched surfaces (for example: tables, doorknobs, light switches, tools, gang boxes, desks, toilets / out houses, faucets, sinks) with household cleaners or disinfectants that are appropriate for the surface. Labels contain instructions for safe and effective use of the cleaning product including precautions you must take. Verify you have the Safety Data Sheets for these chemicals and that employees are trained in their use.
- Practice best practices for respiratory etiquette including cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow. Used tissues should be immediately discarded in the garbage can.

COVID-19 RESPONSE PLAN

- Promote frequent and thorough hand washing with soap and water for at least 20 seconds. All workers should wash their hands often, especially before eating, smoking, drinking, or after blowing your nose, coughing or sneezing. Workers should refrain from touching their face. If soap and water is not available, alcohol-based hand sanitizers that contains at least 60% alcohol shall be utilized.
- DH Environmental will provide handwashing stations around the jobsite and at each portable toilet location.

8) Communications

If an employee tests positive for COVID-19, the employer should interview the infected or presumptively infected employee to determine the tools that they were using, where they were working on the job site and the people with which they have been in close and prolonged contact within the past 5 days. You should speak with each person on that list and if they agree that they have been in close and prolonged contact with the infected or presumptively infected employee, they should be sent home and self-quarantine for 14 days, or until a confirmed negative test result is reported.

Employers should inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain personally identifiable information confidential. Additional considerations for communication include the following:

- Method of transmission is unknown
- Detail what we are doing to ensure the health of employees
- Deep cleaning of affected areas
- Daily cleaning of common areas
- Remind employees to self-monitor for any illness and report all symptoms to their supervisor immediately

9) Work Stoppage

In the event of a stop work or shut down directed in writing from the Owner, Owner's Representative, or other Government agency, DH Environmental will communicate this information to our trade partners, vendors, design partners, staff and craft. A communication plan will be put into place to relay information related to the project to each respected representative. Prior to closing the project our priority will be to safe off the project with the following measures:

- Cover, enclose or otherwise protect the work in place that is reasonably completed within the 48-hour period from damage and environmental conditions.
- Include any signage that is helpful to secure the site such as "NO ACCESS – RESTRICTED AREA".
- Secure access to the project and any high-risk areas such as tower cranes.
- After the 48-hour period, all personnel should be off the site, except for any necessary security personnel that are part of the make-safe plan.
- Areas with active abatement activities will require direction from the owner and DH Environmental. Additional considerations and protection must be taken for any hazardous materials that may be impacted by weather.
- Secure and protect all equipment and stored materials.

10) Additional information and Resources:

- <https://www.cdc.gov>
- <https://www.osha.gov/>
- www.lni.wa.gov/agency/outreach/novel-coronavirus-outbreak-covid-19-resources

associated with Ecology UST identification number 6163 and were grouped into a North Tank Vault (UST-26 through -35) and a South Tank Vault (UST-15 through -22), as shown in Figures 2 through 4.

To be consistent with previous naming conventions, the names of all tanks referenced in this report follow the naming convention presented by Shannon & Wilson in 2019 (Shannon & Wilson, 2019). A copy of Shannon and Wilson's 2019 figure and naming convention is provided for reference in Appendix A.

The USTs in each tank-bed were buried below grade but within concrete vault structures that extended above grade. Both tank nests were constructed within the basement of former buildings. Once the former buildings were demolished, the voids around the tanks were filled with sand and slag that was available from forging operations on-site. The North Tank Vault included a concrete base that was approximately 5-feet below the surrounding grade. The concrete walls of the South Tank Vault extended slightly deeper and did not contain a concrete bottom.

DH Environmental collected samples from the tank contents and surrounding fill-slag for waste designation purposes in 2020. The contents of the USTs and surrounding fill material was designated as non-hazardous waste (DH Environmental, 2020; DH Environmental, 2020b; DH Environmental 2020c).

1.3 LOCAL GEOLOGY AND HYDROGEOLOGY

The Property is located within the Duwamish/Cedar River valley, part of the Puget Lowland, a regional low-lying trough between the Cascade Range to the east and the Olympic Mountains to the west. The Puget Lowland has largely been filled with sediment deposits left behind by glaciers that advanced and retreated multiple times through the Puget Lowland within the last 2 million years. Sediment within the Duwamish Valley primarily consists of sand and silt which has washed down from Mt. Rainier. This material is often interbedded with layers of silt, clay, and organic soils from localized deposits associated with lakes and ponds that formed along the river valley, or mudflats that formed along Puget Sound. Fill materials were also placed throughout the River Valley since the early 20th century, including in portions of the Property when the Duwamish Waterway was straightened, dredged, and historical channels and embayments were filled.

Shallow subsurface soils at the Property generally consist of a mixture of sand, silty sand, and gravel, to depths up to 24 feet below grade. Fill materials tend to be thickest at the western end of the property along the LDW (Shannon & Wilson, 2022). Soils below the North Tank Vault primarily consisted of brown to gray, fine to medium sand with trace gravel. Shallow soils at the South Tank Vault were similar, while soils below the base of the excavation contained higher amounts of silt and organics, and appeared to be native soils.

Groundwater in the vicinity of the tank vaults, as measured in nearby monitoring wells MW-11, MW-14, and MW-15, has ranged from approximately 10.5- to 12-feet below grade (Shannon & Wilson, 2022). Groundwater flow at the Property generally moves west, but varies depending on the season and proximity to the LDW (Shannon & Wilson, 2022). Groundwater was not encountered during the UST decommissioning activities.

Section 2: UNDERGROUND STORAGE TANK DECOMMISSIONING

This section describes the UST decommissioning activities for the 18 USTs on the Property. The tanks and piping inside the concrete vaults were decommissioned and removed between August 9 and August 17, 2023. The piping outside of the North Tank Vault was removed on August 21 and October 11, 2023. The piping outside of the South Tank Vault was removed on October 11 and 12, 2023.

UST decommissioning activities were overseen by Mr. Brad Reilly with ECI Environmental Services (ECI), under subcontract to the demolition contractor for the project, Construction Group International, of Woodinville, Washington (CGI). Mr. Reilly is certified by the International Code Council for UST Decommissioning. A DH Environmental licensed hydrogeologist was also on site to observe the decommissioning and to perform site assessment activities.

2.1 PRELIMINARY ACTIVITIES

2.1.1 Ecology 30-day Notice

Prior to decommissioning the USTs, Star Forge submitted a 30-Day Notice of Intent to Decommission USTs form to Ecology, as required by WAC 173-360A-0810. A copy of the 30-Day Notice is included in Appendix B.

2.1.2 City of Tukwila Fire Department Permit

The City of Tukwila requires a permit for the permanent closure of USTs. Prior to decommissioning the USTs, Star Forge obtained a Fire Permit for Tank Removal from the City of Tukwila. A copy of Fire Permit F23-0135 is included in Appendix C.

2.1.3 Underground Storage Tank Cleaning

Prior to removal of the USTs, the tanks were cleaned and triple-rinsed by Marine Vacuum Services of Seattle, Washington (MarVac). Rinse certificates are provided in Appendix D.

2.2 UNDERGROUND STORAGE TANK REMOVAL

CGI removed the USTs in both tank vaults between August 9 and August 18, 2023. Once the tanks had been cleaned, the above-ground concrete vault structure and fill materials overlying the tanks were removed. Three USTs in the North Tank Vault, UST-26, -28, and -31, were previously filled with sand. The top of these three tanks were cut open and the sand was removed with an excavator. Residual sand was removed by tilting the tanks on end and dumping the loose sand out. Once the sand had been removed, the empty tanks were removed in the

same manner as the others, by lifting the tanks out of the ground using an excavator. Once removed from the ground, the tanks were scraped and brushed clean to remove any loose soil or debris prior to transport. They were then loaded onto trucks and shipped for recycling as described in Section 2.3. Removal and disposal of the concrete vault structures and backfill materials are also described in Section 2.3.

USTs -26 through -35, in the North Tank Vault, generally appeared in good condition at the time of removal. They were well protected with numerous sacrificial anodes surrounding each tank. The paint on the tank walls was still intact, and no holes or areas of significant corrosion were visible.

USTs -15 through -22, in the South Tank Vault, generally appeared in much worse condition than the tanks from the North Tank Vault. No sacrificial anodes were present on the South Tanks, and significant corrosion and pitting was visible on each tank. In some instances, corrosion holes were visible completely through the tank walls.

Photos of the tank removal work are included in a photo log in Appendix E. Decommissioning certificates are included in Appendix F.

Piping within the concrete vaults of each tank area was removed concurrently with the tanks. The piping was disconnected at each tank prior to the tanks being removed. ECI had a vacuum trailer on site for all piping removal work in the event liquids were present in the piping. No liquids were observed in any of the piping during removal. Removal of the product piping outside of the concrete vaults is described in Sections 2.2.1 and 2.2.2. Site assessment sampling activities are described in Section 3.

2.2.1 Piping Removal – North Tanks

At the North Tank Vault, a 4-inch diameter product pipe extended from the southeast corner of the concrete vault, due south towards the Aluminum Heat Treat Building (Aluminum Building), as shown on Figure 3. This is consistent with as-built drawings for the North Tank Vault. The pipe was exposed and removed on August 21, 2023. The pipe appeared to be a single length pipe without couplers. The pipe ran underneath the north foundation wall of the Aluminum Building where it was cut flush with the foundation wall. No liquids were observed in the pipe when it was cut. Soil from the piping trench was temporarily stockpiled for offsite disposal.

On October 11, 2023, after the Aluminum Building had been demolished, the remaining section of piping was removed. The piping was discovered to have been previously cut and capped approximately 1-foot north of the northern foundation wall of the Aluminum Building. The pipe was bent to form a 90-degree elbow and it had been cut and capped just past the elbow. Based on an interview with a former employee, this pipe had been removed to make room for the installation of the Aluminum Heat Treat Furnace Pit in the mid-1970s. At that time the building

use transitioned from the Powerhouse into use as the Aluminum Heat Treat Building. The product pipe is shown in Photo 7 in the Photo Log in Appendix E.

Soil generated during removal of the last segment of piping was added to the temporary soil stockpile, where it was covered until the product piping had been removed from the South Tank Vault. Disposal of the soil is described in Section 2.3.

2.2.2 Piping Removal – South Tanks

At the South Tank Vault, a single 2-inch diameter product pipe was observed to extend from inside the tank vault, west beneath the Aluminum Building. After the Aluminum Building had been demolished, the piping beneath the slab was exposed and removed on October 11 and 12, 2023. The product piping alignment is shown in Figure 4, and it appears to have been installed so that it was routed around the former Aluminum Heat Treat Furnace Pit.

Consistent with historical drawings of the area, a second pipe, believed to be a fuel return line, was visible in the same trench as the product pipe. A third pipe, believed to be a steam line, was also present. The second and third pipes appeared to have been previously cut approximately 15-feet south of where the first pipe entered the tank vault. A small electrical conduit was also present in the same trench, and all three pipes and the electrical conduit ran west underneath the former Aluminum Building. At the west edge of the Aluminum Building, the piping turned and ran north approximately 15-feet, where it entered a utilidor. The utilidor continued approximately 25-feet north, where it turned and ran west underneath the former drive lane between the main shop building and the aluminum building.

The top of the utilidor was constructed with a concrete slab approximately 12-inches thick. The portion of the slab underneath the drive lane was also covered with a layer of asphalt paving. The concrete lid was broken apart using a hydraulic hammer to expose the product piping in the utilidor. Once exposed, the product lines from the tank vault were observed to enter the utilidor where at least some of them appeared to have been cut and capped. Other lines of unknown purpose were also present in the utilidor, including portions of lines that had been cut or broken at some point prior to the utilidor being exposed. Most of the lines in the utilidor were not labeled, or the labeling was not legible. Some of the lines were still present where the utilidor entered the main shop building, and labeling on the shop ends of the pipes indicated at least two pipes labeled as “fuel oil”, one pipe labeled as “fuel oil return”, one pipe labeled “propane”, and another pipe labeled “compressed air”. More pipe segments were visible in the utilidor than were visible inside the shop building, and the original purpose or contents of these lines are unknown. Photos of the piping removal, including piping in the utilidor, are included in the Photo Log in Appendix E.

CGI cut the rebar from the top of the utilidor to allow access to the underlying piping. ECI had a vacuum trailer on site for the piping removal work in the event liquids were present in the piping. The piping was lifted out of the utilidor using an excavator to slope the piping away from portions that had to be cut with a demolition saw. No liquids were observed in any of the piping

during removal. After the rebar and piping had been cut and removed, the utilidor was emptied of debris in preparation for sampling and backfill.

Rainwater was observed to have accumulated in the utilidor prior to breaking open the concrete lid. The water was confirmed during an inspection of the utilidor by CGI on October 10, 2023, prior to demolition of the utilidor top. Additional rainwater may have also entered during rain events on October 11, 2023, when 0.39 inches of precipitation fell (NOAA, 2024). A slight sheen was present on the water along with a petroleum type odor. A sample of the water was collected using a disposable bailer on October 12, 2023, for waste designation purposes, and the water was removed from the utilidor by ECI using a vacuum trailer. Approximately 275-gallons of water was removed and temporarily stored in a Department of Transportation (DOT) rated shipping tote. Once the water had been removed, CGI crews removed the remaining pieces of concrete debris in preparation for soil sampling and backfilling.

Prior to the utilidor being backfilled, a soil sample was collected beneath the utilidor on October 13, 2023 as part of site assessment activities, as described in Section 3.2. Disposal of the soil, concrete and water generated during piping removal activities are described in Section 2.3

2.3 WASTE DISPOSAL

2.3.1 Underground Storage Tank and Product Piping Disposal

Each of the 18 USTs were loaded onto trucks for transportation to a metal recycling facility. Product piping was combined with rebar from the concrete vault structure and other recyclable materials generated from demolition activities. All scrap metal from the project was disposed of to Sutter Metals in Tacoma, Washington, or Seattle Iron and Metals Corporation, in Seattle, Washington.

2.3.2 Concrete and Soil Disposal

On August 14, 2023, the concrete vault structures were sampled for waste designation purposes. Sampling was conducted to confirm that petroleum or metals that may have leached into the concrete would not designate as hazardous or dangerous waste. The concrete was determined to be non-hazardous waste suitable for disposal to a subtitle D landfill. A copy of the waste designation package is included in Appendix G.

The backfill material consisting of slag, sand, and gravel surrounding the tanks was previously sampled and designated as non-hazardous waste (DH Environmental, 2020). As a result, no further sampling was conducted of the tank backfill, and it was loaded into trucks for offsite disposal. Because the South Tank Vault did not contain a concrete bottom, backfill materials were removed to the depth of the base of the tanks, approximately 8-feet below grade.

Once the tank backfill materials were removed, the concrete vault structures were also removed.

The concrete from the vault structures was processed within the footprint of the respective excavation areas to remove rebar and facilitate loading onto trucks. The rebar was segregated for recycling and the concrete was loaded into trucks for offsite disposal.

Soil and concrete generated during the product piping removal was temporarily stockpiled until all piping removal activities were complete. The soil was sampled for waste designation purposes and determined to be non-hazardous waste, suitable for disposal to a subtitle D landfill. A copy of the piping soil designation package is included in Appendix H.

A total of 4,082.59-tons of soil and concrete were transported for disposal to Roosevelt Regional Landfill, in Roosevelt, Washington. The Roosevelt Landfill is a permitted Subtitle D Landfill operated by Republic Services. A copy of the soil and concrete disposal records is included in Appendix I.

2.3.3 Water Disposal

Analytical results for the tote of water pumped from the South Tank Vault piping utilidor resulted in a waste designation determination that the water was non-hazardous waste. A copy of the waste designation package is included in Appendix J. The water was temporarily stored in a DOT-rated 275-gallon shipping tote until it was pumped out via vacuum truck by DH Environmental on December 4, 2023. Due to the small volume of water, it was combined with water generated during cleaning of several subsurface vaults on the property, unrelated to the UST decommissioning activities. This water was temporarily stored in a 20,000-gallon frac tank, before being disposed of to MarVac in Seattle, Washington in December 2023.

2.4 BACKFILL AND RESTORATION

Following the collection of site assessment samples, described in Section 3, the North and South Tank Vault excavations were backfilled between September 6 and 15, 2023. The base and sidewalls of the excavation were lined with plastic sheeting prior to backfilling. The backfill was placed in lifts and compacted to 95% compaction. Compaction testing was conducted by Krazan and Associates under subcontract to CGI.

Backfill of the product piping trenches and piping utilidor was conducted on October 13, 2023.

Backfill material consisted of 1-1/4" crushed rock sourced from the ICON Materials quarry in Auburn, Washington. Prior to being imported into the Site, all import backfill was tested at the quarry to confirm it met backfill requirements, as specified in the Interim Action Work Plan. Analytical results for the import backfill are reported under separate cover as part of the Interim Action Completion Report.

Paving of the excavation areas and piping trenches was conducted as part of final site restoration in March, 2024.

Section 3: SITE ASSESSMENT SAMPLING

Following removal of the USTs and product piping, site assessment soil samples were collected as described in the following sections. Sample locations are shown in Figures 3 and 4. All confirmation soil samples from the UST vaults were collected from the excavator bucket, with care taken to ensure the sample was not collected from soil in direct contact with the bucket. All soil samples were collected in general accordance with the Ecology-approved Interim Action Work Plan (IAWP; DH Environmental, 2023). Groundwater was not encountered during the tank removal or site assessment sampling activities.

3.1 NORTH TANK VAULT

Site assessment soil samples from the North Tank Vault and associated product piping were collected between August 21 – 30, 2023. Soil samples were collected from the base and sidewalls of the excavation following removal of the concrete vault surrounding the former USTs.

Soil samples from the base of the excavation were collected from an approximate depth of 6.5-feet below grade. This depth was approximately 0.5-feet below the base of the former concrete slab, at the interface with native soil. Soil samples from the sidewall of the excavation were collected from an approximate depth of 5-feet below grade, near the base of the sidewall.

A total of 27 soil samples were collected from the base and sidewalls of the North Tank Vault, including one duplicate sample. A total of three soil samples were collected beneath the piping run from the North Tank Vault. Piping samples were collected by hand, directly from the base of the piping trench following removal of the piping.

The majority of soil samples from the base of the North Tank Vault excavation were collected along the east side of the excavation, beneath the former fill ports of the tanks where releases were most likely to have occurred. One bottom sample, NT-SS-35, beneath the former tank UST-35, was moved to sample soil where a former sump was observed in the concrete vault. This sump was believed to be a feature associated with the former basement structure of the building that the tanks were installed in following building demolition.

Sidewall samples from the North Tank Vault were generally distributed equally around the perimeter of the excavation. Sidewall samples NT-SS-13, NT-SS-14, NT-SS-17, and NT-SS-18, were adjusted to focus on areas where staining was observed. Sidewall sample NT-SS-14 and bottom sample NT-SS-31 were collected near the former fill port for the USTs.

3.2 SOUTH TANK VAULT

Prior to collecting site assessment samples in the South Tank Vault, two test pits were advanced at the north and south ends of the South Tank Vault to investigate for the presence of a concrete

slab. Each test pit was advanced to a depth of 4-feet below the base of the tanks. The test pits confirmed that concrete was not present, which is consistent with as-built records for the South Tank Vault.

Site assessment soil samples from the South Tank Vault and associated product piping were collected between August 22 and October 13, 2023. Soil samples were collected from the base and sidewalls of the excavation following removal of the concrete vault surrounding the former USTs.

Soil samples from the base of the excavation were collected from an approximate depth of 8.5-feet below grade. This depth was approximately 0.5-feet below the base of the former tanks, at the interface with native soil. Soil samples from the sidewall of the excavation were collected from an approximate depth of 6.5-feet below grade, near the base of the sidewall.

A total of 23 soil samples were collected from the base and sidewalls of the South Tank Vault, including one duplicate sample. A total of three soil samples were collected beneath the piping run from the South Tank Vault. Piping samples ST-piping-SS-21 and ST-piping-SS-22 were collected by hand, directly from the base of the piping trench following removal of the piping. Piping sample ST-piping-SS-20 was collected from an excavator bucket, from a depth of 6.5-feet below grade, beneath a utilidor.

All of the soil samples from the base of the South Tank Vault excavation were collected along the west side of the excavation, beneath the former fill ports of the tanks where releases were most likely to have occurred. Sidewall samples from the South Tank Vault were generally distributed equally around the perimeter of the excavation. Sidewall sample ST-SS-15 was collected from stained soil near the former fill port for the USTs.

3.3 SAMPLE LOCATIONS

Site assessment soil sampling locations are shown on Figures 3 and 4. Sample locations were recorded using a mapping grade GPS unit capable of sub-meter accuracy (Trimble GeoXH or Trimble DA2). Where it was not safe to enter an excavation, the sample locations were recorded by surveying the corresponding northing or easting that lined up with each sample.

3.4 SITE ASSESSMENT ANALYTICAL RESULTS

All Site Assessment soil samples were analyzed for diesel-range organics (DRO) by Method NWTPH-Dx and gasoline-range organics (GRO) by Method NWTPH-Gx.

In accordance with the IAWP, and in consultation with Ecology, multiple soil samples were selected for follow-up analysis for the following compounds:

- ☐ 1-2, dibromoethane (EDB), 1-2, Dichloroethane (EDC), methyl tertiary-butyl ether (MTBE), benzene, toluene, ethylbenzene and xylenes (BTEX) and halogenated VOCs (HVOCs) by EPA Method 8260D,
- ☐ Polychlorinated biphenyls (PCBs) by EPA Method 8082, and,
- ☐ Carcinogenic Polyaromatic Hydrocarbons (cPAHs) and naphthalenes by EPA Method 8270E/Selected Ion Monitoring (SIM);
- ☐ Total RCRA 8 metals plus copper, nickel, and zinc, by EPA Methods 6010D (arsenic, barium, cadmium, chromium, lead, selenium, and silver) and 7471B (mercury).

The samples selected for follow-up analysis were chosen in consultation with Ecology, following review of the initial DRO and GRO data. Of the 15 samples selected for follow-up analysis, MTBE, EDB, EDC, and benzene were not reported in any of the soil samples at a concentration greater than or equal to the practical quantitation limit (PQL). Mercury, selenium and silver were also not reported in any of the soil samples at a concentration greater than or equal to the PQL. PCBs were reported in four samples at a concentration greater than or equal to the PQL, all at a total concentration of less than 1 milligram per kilogram (mg/kg). Naphthalene was reported in most follow-up samples at low concentrations, with the highest concentration reported at 2.9 mg/kg. A discussion of the results for select compounds is described in Sections 3.4.1 through 3.4.5.

The analytical results for DRO, GRO, Toluene, Ethylbenzene, and Xylenes, cPAHs, total metals, and PCBs are summarized in Tables 1 through 6. In each table, a compound was only listed if it was reported in at least one sample at a concentration greater than or equal to the PQL. A copy of the laboratory analytical reports is included in Appendix K.

3.4.1 Diesel- and Gasoline-Range Hydrocarbons

GRO and DRO were reported in soil samples from both the North and South Tank Vaults at elevated concentration.

GRO was reported at a maximum concentration of 480 mg/kg in the North Tank Vault, in sample NT-SS-17-5.0, which was collected along the south sidewall of the excavation. The highest concentration of DRO in the North Tank Vault was reported in the same sample at a concentration of 225,000 mg/kg.

GRO was reported at a maximum concentration of 1,300 mg/kg in the South Tank Vault, in sample ST-SS-8-8.5, which was collected from the base of the excavation at the south end. The highest concentration of DRO in the South Tank Vault was reported at a concentration of 18,000 mg/kg in sample ST-SS-17-6.5, located along the middle of the west sidewall of the excavation. The results for DRO and GRO for the North and South Tank vaults are summarized in Tables 1 and 2, respectively.

3.4.2 Toluene, Ethylbenzene, and Xylenes

Benzene was not reported in any of the site assessment samples at a concentration greater than the PQL. Toluene, ethylbenzene, and xylenes were reported at low concentrations in several samples. The results for Toluene, Ethylbenzene, and Xylenes are summarized in Table 3.

3.4.3 cPAHs

Each of the seven cPAH compounds was reported in one or more of the soil samples selected for follow-up analysis. Soil sample ST-piping-SS-22 contained the highest toxic equivalent concentration (TEC) of benzo(a)pyrene at 0.830 mg/kg. The results for cPAHs are summarized in Table 4.

3.4.4 Metals

Cadmium was only reported in one sample at a concentration greater than the PQL, sample ST-piping-SS-20-6.5, at a concentration of 0.85 mg/kg. This sample was collected beneath the product piping utilidor between the former Aluminum Building and the main shop building.

Arsenic was reported in three samples at a concentration greater than the PQL. The highest concentration of arsenic was reported in sample NT-SS-31-6.5, which was collected from the base of the North Tank Vault, near the midpoint along the east side, at a concentration of 39 mg/kg.

Nickel was elevated in one sample, NT-piping-SS-24, at a concentration of 910 mg/kg. This sample was collected beneath the northernmost product piping sample from the North Tank Vault. The results for total metals are summarized in Table 5.

3.4.5 PCBs

PCBs were reported in four of the follow-up soil samples at a concentration greater than the PQL. The highest concentration was reported in sample NT-piping-SS-24-2.0 at a concentration of 0.52 mg/kg. The results for PCBs are summarized in Table 6.

Section 4: CONCLUSIONS

The purpose of a UST site assessment is to determine if there has been a release of a regulated substance from a UST system. Confirmed and suspected releases have been reported from both former UST vaults as early as 1990 when Dames & Moore first identified elevated levels of petroleum in soil west of the former Aluminum Heat Treat Building (Dames & Moore, 1990). Later findings by SEACOR in 1991 supported this when they reported that three USTs in the North Tank Vault failed tightness testing. An additional investigation conducted in 1991 by SEACOR also identified light non-aqueous phase liquid (LNAPL) west of the former South Tank Vault (SEACOR, 1993 and 1993b). LNAPL was again identified west of the former North Tank Vault in 1995, along with high concentrations of DRO in soil west of the former South Tank Vault (Dames & Moore, 1999). More recent investigations by Shannon & Wilson also identified likely releases from both former UST vaults, including the presence of a significant LNAPL plume on groundwater west of the South Tank Vault (Shannon & Wilson, 2020).

As described above, multiple investigations conducted over a 30-year period have identified likely releases from the former North and South Tank vaults at the Jorgensen Site. The site assessment activities described in this report were conducted pursuant to Agreed Order No. DE 21034 following UST decommissioning by removal. In accordance with the requirements of WAC 173-360A-0730(8)(g)(iii), the results of this site assessment conclude there has been a release of a regulated substance from both the former North and South UST systems at the former Jorgensen Forge Site.

We recommend this information be considered by Ecology and EMJ during the remedial investigation and final cleanup of the Site.

Notes

1. Analytes are only shown if they were reported in at least one soil sample at a concentration greater than or equal to the laboratory practical quantitation limit (PQL).
2. "U" denotes analyte not reported at a concentration greater than or equal to the given laboratory PQL.
3. "J" denotes the reported concentration is an estimate
4. "--" indicates a TEC value was not calculated, because none of the individual cPAH compounds were reported at a concentration greater than or equal to the PQL.

Abbreviations

cPAHs = Carcinogenic Polyaromatic Hydrocarbons
 mg/kg = milligrams per kilogram
 TEF = Toxic Equivalent Factor, (WAC 173-340-708)
 TEC = Toxic Equivalent Concentration of benzo(a)pyrene

Analytical Methods

cPAHs by EPA 8270E/SIM
 Analyzed at Onsite Environmental, Redmond, Washington

30-DAY NOTICE

FOR UNDERGROUND STORAGE TANK SYSTEMS

This form provides Ecology 30-days' advanced notice for projects, as required by Chapter 173-360A WAC. Instructions are on the back page.

NWRO
UST ID #: 60163
COUNTY: King
Date: JUN 01 2023

Washington State Department of Ecology
UST Cleanup Program

Please ✓ the appropriate box: ☐ Intent to Install

☒ Intent to Close

☐ Change-in-Service

I. SITE INFORMATION			II. OWNER/OPERATOR INFORMATION		
Tag or UBI # (if applicable): 604 027 650			Owner/Operator Name: Star Forge		
UST ID # (if applicable): 6163			Business Name: Star Forge		
Site Name: Former Jorgensen Forge			Mailing Address: 8531 E. Marginal Way S.		
Site Address: 8531 E. Marginal Way S.			City: Tukwila State: WA Zip: 98108		
City: Tukwila, WA			Phone: Wayne Turk; 206-255-8177		
Phone: Wayne Turk; 206-255-8177			Email: wturk@jorgensenforge.com		
III. CERTIFIED SERVICE PROVIDER(S)					
Check the appropriate boxes. If more than one service provider is required for this project, fill out both sections.					
Note: Individuals performing UST services MUST be ICC-certified or have passed another qualifying exam approved by the Department of Ecology.					
1) ☐ Installer ☒ Decommissioner ☐ Site Assessor					
Company Name: Construction Group International			Certification Type: UST Decommissioner		
Service Provider Name: Brad Reilly			Cert. No.: 8289423 Exp. Date: 3/4/2024		
Provider Phone: 425-487-2618			Provider Email: markm@cgius.net		
2) ☐ Installer ☐ Decommissioner ☒ Site Assessor (Mark Marcell, CGI Project Mgr)					
Company Name: DH Environmental, Inc.			Certification Type: WA State Site Assessor		
Service Provider Name: Nathan Moxley			Cert. No.: WA LHG 3024 Exp. Date: 6/7/2024		
Provider Phone: 509-332-9281			Provider Email: nathan.moxley@dhenviro.com		
IV. TANK AND/OR PIPING INFORMATION					
TANK ID	TANK CAPACITY	SUBSTANCE STORED	PIPING INSTALLATION OR REPLACEMENT ONLY (Y/N)	DATE PROJECT IS EXPECTED TO BEGIN	COMMENTS
					18 USTs identified on pg 3-6 of attached UST Addendum form. Tanks are empty, and work is approved by Ecology Agreed Order No. DE 21034. Expected start date pending permits from City of Tukwila. Start date will be confirmed 3-days before starting as required by WAC 173-360A-0810(1), and we will keep your office apprised of any scheduling updates.

30-DAY NOTICE

FOR UNDERGROUND STORAGE TANK SYSTEMS

GENERAL INSTRUCTIONS

Under WAC 173-360A-0300, 173-360A-0810 and 173-360A-0820, owners and/or operators are required to notify the Department of Ecology (Ecology) **at least 30 days prior** to beginning underground storage tank (UST) and/or piping installation, decommissioning, or change-in-service projects by mailing this notice to the address below. A separate form must be used for each project type (e.g. install, removal). Once this form is received by Ecology, it is date-stamped and returned to the owner/operator listed on the form. Installation and decommissioning projects cannot begin within the first 30 days after the date stamped on this form unless the wait-period has been waived by a regional Ecology UST inspector. If a project cannot meet the deadlines described below, an additional 30-Day Notice may be required.

Department of Ecology
Underground Storage Tank Section
PO Box 47655
Olympia, WA 98504-7655

SITE AND OWNER/OPERATOR INFORMATION

Fill in the site/owner information completely. The contact person listed on this form must confirm the exact date an installation or decommissioning project will begin by contacting the regional UST inspector **at least 3 business days** before proceeding.

INSTALLATION/REPLACEMENT OF TANK AND/OR PIPING

Installation projects must begin within 90 days of the date stamped on this notice. Complete the Tank Information section by assigning Tank ID numbers that have not previously been used at the facility. Once processed, this form allows a one-time drop of product for UST system testing purposes only. The fuel drop is not required to occur within the 90-day period. Once your tank(s) store more than one inch of product, leak detection equipment and monitoring must be in place.

To receive additional deliveries and operate the new tanks/piping, you must submit the Business License application, UST Addendum, and the tank/piping Manufacturer's Installation Checklists to the Department of Revenue (DOR) **within 30 days** of completing the installation. This activates the mailing of your Business License with tank endorsement(s) from DOR and the facility compliance tag from Ecology.

If only piping is being installed or replaced piping, the ICC-certified installer must certify the installation by completing the Retrofit/Repair Checklist with the Manufacturer's Installation Checklist and submitting it to the owner/operator. The form packet must be submitted by the owner/operator to Ecology **within 30 days** of completing the piping installation.

PERMANENT CLOSURE OF TANK AND/OR PIPING

Decommissioning projects must be completed within 90 days after the date stamped on this returned notice. Complete the Tank Information section using Tank ID numbers listed on the Business License. Use the Comments box to include additional information, such as the date when product was removed from both the piping and the tank to less than one inch.

Contact your local fire marshal and planning department prior to tank closure to procure any permits required by county or other local jurisdictions. Compliance with the State Environmental Policy Act (SEPA) Rules, Chapter 197-11 WAC may also apply.

A site assessment is required at the time of closure. If contamination is not discovered, a site assessment report must be submitted to the above address **within 30 days**. If contamination is discovered or confirmed, it must be reported to the appropriate Ecology regional office **within 24 hours** and a site characterization report must be submitted to the above address **within 90 days**.

The following are some examples of tanks that are exempt from the UST regulations.

- ❖ Farm or residential tanks, 1,100 gallons or less, used to store motor fuel for personal or farm use only. The fuel must be used for farm purposes and cannot be for resale.
- ❖ Tanks used for storing heating oil that is used solely for the purpose of heating the premises.
- ❖ Tanks with a capacity of 110 gallons or less.
- ❖ Emergency overflow tanks, catch basins, or sumps.

If you need this document in a format for the visually impaired, call Toxics Cleanup Program at (360) 407-7170. Persons with hearing loss can call 711 for Washington Relay Service. Persons with speech disability, call (877) 833-6341.

All provisions of law and ordinances governing this work will be complied with, whether specified herein or not.

The granting of this permit does not presume to give authority to violate or cancel the provisions of any other state or local laws regulating construction or the performance of work.

This permit shall become null and void if the work is not commenced within 180 days for the date of issuance, or if the work is suspended or abandoned for a period of 180 days from the last inspection.

PERMIT CONDITIONS:

1: FIRE CONDITIONS

- A site investigation/assessment is required prior to taking a tank permanently out of service.
- TANKS MAY BE REMOVED ONLY AFTER FIRE DEPARTMENT INSPECTION.
- Two (2) 20 BC portable fire extinguishers are to be on site within 50 ft. of the operation.
- Work area shall be cordoned off or be enclosed in a fenced yard.
- "No Smoking" signs must be posted in readily visible locations.
- Remove all flammable or combustible liquids from tank and from connecting lines.
- Tanks shall be inerted and must be certified gas free by a Marine Chemist or Petroleum Industry Safety Engineer regularly engaged in that business, prior to removal.
- All exterior above-grade fill and vent piping shall be permanently removed.
- Tanks shall be disposed of in accordance with federal, state and local regulations.
- Call twenty-four (24) hours prior to removal to arrange the required fire department inspections.

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100. The calculated equivalent concentration value was greater than 0.001%, resulting in an initial criteria waste designation of WT02. A follow-up fish bioassay was performed in accordance with WAC 173-303-110(3)(b), *Biological Testing Methods for the Designation of Dangerous Waste Method 80-12*, which resulted in zero mortality, which refutes the initial WT02 designation. **This waste stream is therefore designated as non-dangerous waste.**

Re: Analytical Data for Project Star Forge WO-1
Laboratory Reference No. 2308-161

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 15, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 17, 2023
Samples Submitted: August 15, 2023
Laboratory Reference: 2308-161
Project: Star Forge WO-1

Case Narrative

Samples were collected on August 14 and 15, 2023 and received by the laboratory on August 15, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D (Solid) Analysis

Method 5035A VOA vials were not provided for sample N. Tanks Concrete. The sample was therefore extracted from a 4-ounce jar. Some loss of volatiles may have occurred.

The percent recovery for surrogate Dibromofluoromethane is outside of the control limits for sample N. Tanks Concrete due to sample matrix effects. The sample was reanalyzed with similar results.

The percent recovery for Methylene Chloride is outside the control limits in the Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Total Metals EPA 6010D/7471B Analysis

The sample result is reported on a wet weight basis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge WO-1
Laboratory Reference No. 2308-161B

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 15, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DeB" followed by a stylized flourish.

David Baumeister

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Dangerous Waste Characterization

Sample ID: N. Tanks Concrete

Report date: August 28, 2023

Submitted to:

OnSite Environmental

14648 NE 95th Street

Redmond, WA 98052

1.0 INTRODUCTION

A dangerous waste characterization using the test organism *Oncorhynchus mykiss* (rainbow trout) was conducted on one sample submitted by OnSite Environmental to Rainier Environmental. Testing was conducted following the Washington State Department of Ecology Publication 80-12.

2.0 METHODS

The sample, N. Tanks Concrete, was received in the laboratory on August 23, 2023. Upon arrival at the laboratory the sample was inspected and contents verified against information provided on the chain-of-custody form. The sample was stored at 4°C in the dark until use. The test procedure is outlined in Table 1.

Table 1. Summary of Dangerous Waste Characterization Test Conditions

Parameter	Standard Fish Toxicity Test
Test number	2308-038
Sample ID	N. Tanks Concrete
Test initiation date; time	8/23/2023; 0945h
Test termination date; time	8/27/2023; 0945h
Endpoint	Mortality at 96-hours
Test chamber	7.5 L Plastic tank
Test temperature	12 ± 1°C
Dilution water	Moderately hard synthetic water
Test solution volume	6 L
Test concentrations (mg/L)	100, 10, 0
Number of organisms/chamber	10
Number of replicates	3
Test organism	<i>Oncorhynchus mykiss</i> (rainbow trout)
Feeding	No feeding during test
Photoperiod	16 hours light/ 8 hours dark
Extraction	Rotary agitation (30 +/- 2 rpm) for 18 hours
Reference Toxicant	Copper sulfate
Deviations	None

The test organisms used in the test are outlined in Table 2. The sample was tested using fish received on July 12, 2023.

Table 2. Test organisms (*Oncorhynchus mykiss*)

Test organism age	62 days post swim-up (hatch date 5/31/2023)
Mean weight	0.41 g
Mean length	41 mm
Ratio of longest to shortest	1.2
Loading	0.68 g/L
Test organism source	Trout Lodge; Sumner, WA

3.0 RESULTS

A summary of results for the dangerous waste characterization conducted on N. Tanks Concrete is contained in Table 3. There was no mortality during the test. Based on these results, the sample does not designate as either a dangerous or extremely hazardous waste. Copies of the laboratory bench sheets, statistical summaries of reference toxicant tests, and chain-of-custody form are provided in Appendices A through C.

Table 3. Summary of Results

Sample ID	Concentration (mg/L)	Survival (# fish, N=30)	Percent Mortality	Dangerous Waste Designation
Control	0	30	0	NA
N. Tanks	10	30	0	None
Concrete	100	30	0	

4.0 QUALITY ASSURANCE

The most recently completed reference toxicant test was initiated August 16, 2023. The LC₅₀ of 166 µg/L copper fell within the acceptable range of mean ± two standard deviations of historical test results indicating that the test organisms were of an appropriate degree of sensitivity. The coefficient of variation (CV) for the last 20 tests was 31.3 percent, which is considered excellent by the Biomonitoring Science Advisory Board.

Control Chart and Statistical Summary

Fish 96-h Acute Survival Test

Rainier Environmental Laboratory

Test Type: Survival (96h)

Organism: Oncorhynchus mykiss (Rainbow Tro

Material: Copper sulfate

Protocol: Not Applicable

Endpoint: 96h Survival Rate

Source: Reference Toxicant-REF

Mean: 126.5

Count: 20

-1s Warning Limit: 96.31

-2s Action Limit: 73.35

Sigma: NA

CV: 31.30%

+1s Warning Limit: 166.1

+2s Action Limit: 218.1

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0 % [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100, for each soil sample representative of the waste stream. Two samples had a calculated equivalent concentration (EC) value greater than 0.001%, resulting in an initial criteria waste designation of WT02. A follow-up fish bioassay was performed in accordance with WAC 173-303-110(3)(b), *Biological Testing Methods for the Designation of Dangerous Waste Method 80-12*, for the sample with the highest EC value. The fish bioassay test resulted in zero mortality, which refutes the initial WT02 designation. **This waste stream is therefore designated as non-dangerous waste.**

Re: Analytical Data for Project Star Forge Waste Designation
Laboratory Reference No. 2308-254

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 23, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read 'DB', with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 28, 2023
Samples Submitted: August 23, 2023
Laboratory Reference: 2308-254
Project: Star Forge Waste Designation

Case Narrative

Samples were collected on August 23, 2023 and received by the laboratory on August 23, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge Waste Designation
Laboratory Reference No. 2308-254B

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 23, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

Dangerous Waste Characterization

Sample ID: NT-Piping-Soil-2

Report date: September 4, 2023

Submitted to:

OnSite Environmental

14648 NE 95th Street

Redmond, WA 98052

Rainier Environmental
5013 Pacific Hwy East
Suite 20
Tacoma, WA 98424

1.0 INTRODUCTION

A dangerous waste characterization using the test organism *Oncorhynchus mykiss* (rainbow trout) was conducted on one sample submitted by OnSite Environmental to Rainier Environmental. Testing was conducted following the Washington State Department of Ecology Publication 80-12.

2.0 METHODS

The sample, NT-Piping-Soil-2, was received in the laboratory on August 30, 2023. Upon arrival at the laboratory the sample was inspected and contents verified against information provided on the chain-of-custody form. The sample was stored at 4°C in the dark until use. The test procedure is outlined in Table 1.

Table 1. Summary of Dangerous Waste Characterization Test Conditions

Parameter	Standard Fish Toxicity Test
Test number	2308-063
Sample ID	NT-Piping-Soil-2
Test initiation date; time	8/31/2023; 1200h
Test termination date; time	9/4/2023; 1200h
Endpoint	Mortality at 96-hours
Test chamber	7.5 L Plastic tank
Test temperature	12 ± 1°C
Dilution water	Moderately hard synthetic water
Test solution volume	6 L
Test concentrations (mg/L)	100, 10, 0
Number of organisms/chamber	10
Number of replicates	3
Test organism	<i>Oncorhynchus mykiss</i> (rainbow trout)
Feeding	No feeding during test
Photoperiod	16 hours light/ 8 hours dark
Extraction	Rotary agitation (30 +/- 2 rpm) for 18 hours
Reference Toxicant	Copper sulfate
Deviations	None

The test organisms used in the test are outlined in Table 2. The sample was tested using fish received on July 12, 2023.

Table 2. Test organisms (*Oncorhynchus mykiss*)

Test organism age	70 days post swim-up (hatch date 5/31/2023)
Mean weight	0.42 g
Mean length	42 mm
Ratio of longest to shortest	1.2
Loading	0.70 g/L
Test organism source	Trout Lodge; Sumner, WA

3.0 RESULTS

A summary of results for the dangerous waste characterization conducted on NT-Piping-Soil-2 is contained in Table 3. There was no mortality during the test. Based on these results, the sample does not designate as either a dangerous or extremely hazardous waste. Copies of the laboratory bench sheets, statistical summaries of reference toxicant tests, and chain-of-custody form are provided in Appendices A through C.

Table 3. Summary of Results

Sample ID	Concentration (mg/L)	Survival (# fish, N=30)	Percent Mortality	Dangerous Waste Designation
Control	0	30	0	NA
NT-Piping-Soil-2	10	30	0	None
	100	30	0	

4.0 QUALITY ASSURANCE

The most recently completed reference toxicant test was initiated August 16, 2023. The LC₅₀ of 166 µg/L copper fell within the acceptable range of mean ± two standard deviations of historical test results indicating that the test organisms were of an appropriate degree of sensitivity. The coefficient of variation (CV) for the last 20 tests was 31.3 percent, which is considered excellent by the Biomonitoring Science Advisory Board.

Project: Star Forge UST Site Assessment

Case Narrative

Samples were collected on October 13, 2023 and received by the laboratory on October 13, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below. However the soil results for the QA/QC samples are reported on a wet-weight basis.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

The percent recovery for Chloroethane, 1,2,4-Trichlorobenzene and 1,2,3-Trichlorobenzene is outside the control limits in the Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

ST-piping-SS-21-2.0	10-177-02	10	10-13-23
ST-piping-SS-22-2.0	10-177-03	9	10-13-23

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

DANGEROUS WASTE DESIGNATION FORM

Former Jorgensen Forge Site, UST Piping Utilidor Water

A. WASTE STREAM NAME AND GENERATION INFORMATION

Waste Stream Name: **Water**

Generation Process: **Pump out of UST Piping Utilidor**

RCRA ID Number that waste will be managed under:

NA

Total Quantity and/or Estimated Generation rate:

~ 275 gallons

Other Descriptions (i.e. Shop, Project, Etc.):

B. WASTE PROPERTIES, CHARACTERISTICS, and CONSTITUENTS:

Physical State: ☐ Solid (pass paint filter)
☐ Solid w/freestanding or absorbed liquid
☒ Liquid (If liquid, indicate if the liquid is:
☒ Single Layer
☐ Multi-layer

pH: ☐ < 2 **[D002]**
☒ > 2 but < 12.5
☐ N/A ☐ > 12.5 **[D002]**

Flashpoint: ☐ < 140 °F **[D001]**
☒ > 140 °F but < 200 °F
☐ > 200 °F

Characteristic	PCB Content	TCLP Metals	Total Metals

Physical Composition (list all constituents, including debris, any absorbents, liquid range, etc.).

Constituent	Volume (Range %)
water	90-100
Oils, sludge, debris	0 - 10

C. LISTED WASTE

- ☐ Discarded Listed Chemical Product (U or P List):
☐ Listed Source Waste (F or K List):
☒ Not Applicable:

D. WA STATE CRITERIA WASTE

☐ Not applicable per WAC 173-303-070(5): Further designation will not change the generator status or change the way the waste must be managed.

WA Toxic Criteria Equivalent Concentration (E.C):	WA Persistent Criteria Total HOC	WA Persistent Criteria Total PAH
☒ < 0.001 % [not a Toxic Criteria DW] ☐ 0.001 ≥ 1.0 % [WT02 – DW] ☐ ≥ 1.0% [WT01 – EHW]	☒ < 0.01 % [NOT APPLICABLE] ☐ 0.01 to 1.0% [WP02 – DW] ☐ > 1.0 % [WP01 – EHW]	☒ < 1.0% [NOT APPLICABLE] ☐ > 1.0% [WP03 – EHW]

DW: Dangerous Waste EHW: Extremely Hazardous Waste HOC: Halogenated Organic Compounds PAH: Polycyclic Aromatic Hydrocarbons

E. ADDITIONAL INFORMATION (Describe any additional information about the waste (e.g. process knowledge statement, regulatory exemptions, assumptions made, etc.)

Analysis has identified trace constituents listed in 40 CFR 261.31, *Wastes from Non-Specific Sources*. However, the original processes generating any of the trace constituents in question are unknown and therefore RCRA F Series is not applicable. This designation is consistent with USEPA interpretation of unknown F-Listed trace constituents: "Where a facility owner/operator makes a good faith effort to determine if a material is a listed hazardous waste but cannot make such a determination because documentation regarding a source of contamination, contaminant, or waste is unavailable or inconclusive, EPA has stated that one may assume the source, contaminant or waste is not listed hazardous waste." - Management of Remediation Waste Under RCRA, EPA530-F-98-026

Analysis has also identified constituents potentially exhibiting toxicity characteristics. However, in accordance with 40 CFR 261.4 (b)(10), these compounds are not considered hazardous waste, because the impacted media was removed as part of a UST Corrective Action.

A Washington State toxic criteria book designation was conducted in accordance with WAC 173-303-100. The calculated equivalent concentration value was less than 0.001%, **this waste stream is therefore designated as non-dangerous waste.**

F. WASTE DESIGNATION SUMMARY

☐ RCRA Hazardous Waste

USDOT Proper Shipping Name:

RCRA Waste Codes:

☐ TSCA Regulated Waste

TSCA Description:

☒ Non-Hazardous Solid Waste/RCRA Exempt/RCRA Excluded

Description: Non-hazardous waste, liquid

Designation Performed by: Nathan Moxley, LHG

Title: Senior Geologist

Date: 10-16-2023

Designation Reviewed by: Dave Hill, PE, CHMM

Title: Principal Engineer

Date: 10-16-2023

Book Designation: Jorgensen UST Piping Utilidor, Water Designation

Waste Stream: Water

Sample IDs: "UST Piping Utilidor"

Sample Date: 10/12/23

Book Designation Performed by: N. Moxley

Re: Analytical Data for Project Star Forge
Laboratory Reference No. 2310-156

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on October 12, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DeB" followed by a stylized flourish.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: October 13, 2023
Samples Submitted: October 12, 2023
Laboratory Reference: 2310-156
Project: Star Forge

Case Narrative

Samples were collected on October 12, 2023 and received by the laboratory on October 12, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below. However the soil results for the QA/QC samples are reported on a wet-weight basis.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

PCBs EPA 8082A Analysis

Sample matrix effects caused the percent recovery for the surrogate DCB in the sample UST Piping Utilidor (30%) to be below the quality control limits of 55-138%. All other QC associated with this sample batch was within limits. No further action was undertaken.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Jorgensen UST Site Assessment
Laboratory Reference No. 2308-250

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 22, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 31, 2023
Samples Submitted: August 22, 2023
Laboratory Reference: 2308-250
Project: Jorgensen UST Site Assessment

Case Narrative

Samples were collected on August 21 and 22, 2023 and received by the laboratory on August 22, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D (Water) Analysis

The percent recovery for 1,1,2,2-Tetrachloroethane is outside the control limits in the Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Volatiles EPA 8260D (Soil) Analysis

The percent recovery for Dibromomethane is outside the control limits in the Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

The RPD for Dibromomethane is outside the control limits for the Spike Blank/Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Jorgensen UST Site Assessment
Laboratory Reference No. 2308-250B

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 22, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 20, 2023
Samples Submitted: August 22, 2023
Laboratory Reference: 2308-250B
Project: Jorgensen UST Site Assessment

Case Narrative

Samples were collected on August 21 and 22, 2023 and received by the laboratory on August 22, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

The percent recovery for 1,1-Dichloropropene and 1,2,4-Trichlorobenzene is outside the control limits in the Spike Blank and Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

The client requested the analysis of sample NT-piping-SS-24-2.0-082123 after the holding time had expired.

PAHs EPA 8270E/SIM Analysis

Sample NT-SS-31-6.5-082223 had one surrogate recovery outside of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

The client requested the analysis of sample NT-piping-SS-24-2.0-082123 after the holding time had expired.

Total Metals EPA 6010D/7471B Analysis

The duplicate RPD for Chromium is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results

The Matrix Spike/ Matrix Spike Duplicate recoveries for Chromium are outside control limits due to matrix inhomogeneity. The samples were re-extracted and re-analyzed with similar results. The Spike Blank recovery was 99%

Due to the high concentration of Nickel in the QC sample, the amount spiked was insufficient for meaningful MS/MSD recovery data. The Spike Blank recovery was 102%.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge UST Site Assessment
Laboratory Reference No. 2308-315

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 29, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read 'DB', with a long horizontal flourish extending to the right.

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 18, 2023
Samples Submitted: August 29, 2023
Laboratory Reference: 2308-315B
Project: Star Forge UST Site Assessment

Case Narrative

Samples were collected on August 28, 2023 and received by the laboratory on August 29, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

The percent recovery for Methylene Chloride, Bromobenzene, 1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2,4-Trichlorobenzene and 1,2,3-Trichlorobenzene is outside the control limits in the Spike Blank and/or Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Some MTCA Method A cleanup levels are non-achievable for sample NT-SS-17-5.0-082823 due to the necessary dilution of the sample.

The value reported for o-Xylene in sample NT-SS-18-5.0-082823 exceeds the calibration range and is therefore an estimate. The sample was re-analyzed at the lowest possible dilution allowed by Method 5035A with non-detect results for o-Xylene.

Total Metals EPA 6010D/7471B Analysis

The Matrix Spike/ Matrix Spike Duplicate recoveries for Nickel are outside control limits due to matrix inhomogeneity. The samples were re-extracted and re-analyzed with similar results. The Spike Blank recovery was 92%.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Jorgensen UST Site Assessment
Laboratory Reference No. 2308-357

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 31, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read 'DB', with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 8, 2023
Samples Submitted: August 31, 2023
Laboratory Reference: 2308-357
Project: Jorgensen UST Site Assessment

Case Narrative

Samples were collected on August 30, 2023 and received by the laboratory on August 31, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Jorgensen UST Site Assessment
Laboratory Reference No. 2308-357B

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 31, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: September 22, 2023
Samples Submitted: August 31, 2023
Laboratory Reference: 2308-357B
Project: Jorgensen UST Site Assessment

Case Narrative

Samples were collected on August 30, 2023 and received by the laboratory on August 31, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

Some MTCA Method A cleanup levels are not achievable for samples ST-SS-15-6.5-083023 and ST-SS-17-6.5-083023 due to the necessary dilution of these samples.

PAHs EPA 8270E/SIM Analysis

Sample ST-SS-15-6.5-083023 had one surrogate recovery outside of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

PCBs EPA 8082A Analysis

Sample matrix effects caused the percent recovery for the surrogate DCB in the sample NT-SS-13-5.0-083023 (49%) to be below the quality control limits of 50-127%. All other QC associated with this sample batch was within limits. No further action was undertaken.

Total Metals EPA 6010D/7471B Analysis

The Matrix Spike/ Matrix Spike Duplicate recoveries for Chromium and Nickel are outside control limits due to matrix inhomogeneity. The Spike Blank recovery was 108% for Chromium and 111% for Nickel.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project Star Forge UST Site Assessment
Laboratory Reference No. 2310-177

Dear Nathan:

Enclosed are the analytical results and associated quality control data for samples submitted on October 13, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read 'DB', with a long horizontal line extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: October 17, 2023
Samples Submitted: October 13, 2023
Laboratory Reference: 2310-177
Project: Star Forge UST Site Assessment

Case Narrative

Samples were collected on October 13, 2023 and received by the laboratory on October 13, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below. However the soil results for the QA/QC samples are reported on a wet-weight basis.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Volatiles EPA 8260D Analysis

The percent recovery for Chloroethane, 1,2,4-Trichlorobenzene and 1,2,3-Trichlorobenzene is outside the control limits in the Spike Blank Duplicate. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

ST-piping-SS-22-2.0	10-177-03	9	10-13-23

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

SITE CHECK/SITE ASSESSMENT CHECKLIST

FOR UNDERGROUND STORAGE TANKS

UST ID #: _____

County: _____

This checklist certifies that site check or site assessment activities were performed in accordance with Chapter 173-360A WAC. Instructions are found on the last page.

I. UST FACILITY		II. OWNER/OPERATOR INFORMATION	
Facility Compliance Tag #:	604 027 650	Owner/Operator Name:	Star Forge
UST ID #:	6163	Business Name:	Star Forge
Site Name:	Former Jorgensen Forge	Address:	8531 E. Marginal Way S.
Site Address:	8531 E. Marginal Way S.	City:	Tukwila
		State:	WA
		Zip:	98108
City:	Tukwila, WA	Phone:	Wayne Turk, 206-255-8177
Phone:	Wayne Turk, 206-255-8177	Email:	wturk@jorgensenforge.com
III. CERTIFIED SITE ASSESSOR			
Service Provider Name:		Company Name:	
Nathan Moxley		DH Environmental, Inc.	
Cell Phone:	509-332-9281	Email:	nathan.moxley@dhenviro.com
Address:		1011 SW Klickitat Way, #107	
Certification #:	WA LHG, # 3024	Exp. Date:	6/7/2024
		City:	Seattle
		State:	WA
		Zip:	98134
IV. TANK INFORMATION			
TANK ID	TANK CAPACITY	LAST SUBSTANCE STORED	DATE SITE CHECK OR ASSESSMENT CONDUCTED
See attached pages for tank information			
Site assessment sampling for all tanks completed between 8/21/23 and 10/13/23			
V. REASON FOR CONDUCTING SITE CHECK/SITE ASSESSMENT (check one)			
☐ Release investigation following permanent UST system closure (i.e. tank removal or closure-in-place).			
☐ Release investigation following a failed tank and/or line tightness test.			
☐ Release investigation following discovery of contaminated soil and/or groundwater.			
☐ Release investigation directed by Ecology to determine if the UST system is the source of offsite impacts.			
☐ UST system is undergoing a "change-in-service", which is changing from storing a regulated substance (e.g. gasoline) to storing a non-regulated substance (e.g. water).			
☐ Directed by Ecology for UST system permanently closed or abandoned before 12/22/1988.			
☒ Other (describe): As required by Agreed Order No. DE 21034			

VI. CHECKLIST		
The site assessor must check each of the following items and include it in the report. Sections referenced below can be found in the Ecology publication <i>Guidance for Site Checks and Site Assessments for Underground Storage Tanks.</i>		YES NO
1. The location of the UST site is shown on a vicinity map.	☒	☐
2. A brief summary of information obtained during the site inspection is provided (Section 3.2)	☒	☐
3. A summary of UST system data is provided (Section 3.1)	☒	☐
4. The soils characteristics at the UST site are described. (Section 5.2)	☒	☐
5. Is there any apparent groundwater in the tank excavation?	☐	☒
6. A brief description of the surrounding land use is provided. (Section 3.1)	☒	☐
7. The name and address of the laboratory used to perform analyses is provided. The methods used to collect and analyze the samples, including the number and types of samples collected, are also documented in the report. The data from the laboratory is appended to the report.	☒	☐
8. The following items are provided in one or more sketches:		
• Location and ID number for all field samples collected	☒	☐
• If applicable, groundwater samples are distinguished from soil samples	☐	☐
• Location of samples collected from stockpiled excavated soil	☒	☐
• Tank and piping locations and limits of excavation pit	☒	☐
• Adjacent structures and streets	☒	☐
• Approximate locations of any on-site and nearby utilities	☒	☐
9. If sampling procedures are different from those specified in the guidance, has justification for using these alternative sampling procedures been provided? (Section 3.4)	☒	☐
10. A table is provided showing laboratory results for each sample collected including; sample ID number, constituents analyzed for and corresponding concentration, analytical method, and detection limit for that method. Any sample exceeding MTCA Method A cleanup standards are highlighted or bolded.	☒	☐
11. Any factors that may have compromised the quality of the data or validity of the results are described.	☒	☐
12. The results of this site check/site assessment indicate that a confirmed release of a regulated substance has occurred. The requirements for reporting confirmed releases can be found in WAC 173-360-372.	☒	☐
VII. REQUIRED SIGNATURES		
Signature acknowledges the Site Check or Site Assessment complies with UST regulations WAC 173-360A-0730 through 0750.		
Nathan Moxley, LHG		6/5/2024
Print or Type Name	Signature of Certified Site Assessor	Date

Notes:

1. Analytes are only shown for select compounds. See lab reports for more detail.
3. "U" denotes analyte not reported at a concentration greater than or equal to the given laboratory PQL
4. Preliminary cleanup levels cleanup levels as established in Washington State Department of Ecology Lower Duwamish Waterway Preliminary Cleanup Levels Workbook, Soil Summary page, "Preliminary Cleanup Levels for the Lower Duwamish Waterway" dated April 5, 2019
5. Total PCBs represents the sum of Aroclors 1016, 1221, 1232, 1242, 1248, 1254, 1260, 1262, and 1268. If all Aroclors are undetected, the total concentration is reported as less than the highest PQL of all Aroclors.
6. Samples analyzed by Onsite Environmental, Inc., of Redmond Washington, a Washington State accredited environmental laboratory
 - Blue shading indicates a given concentration is greater than the PCUL, but less than natural background
 - Green shading indicates a given PQL is greater than the PCUL

Analytical Methods

PAHs by EPA Method 8270E & 8270E/SIM

GRO by Method NWTPH-Gx

DRO/ORO by Method NWTPH-Dx

VOCs by Method 8260D

PCBs by Method 8082A

Total metals by 6020B (all except Hg) and 7471B (Hg)

Abbreviations:

PCUL	Preliminary Cleanup Level
mg/kg	milligrams per kilogram
PAHs	Polycyclic Aromatic Hydrocarbons
TPH	total petroleum hydrocarbons
DRO	diesel-range organics
ORO	oil-range organics
GRO	gasoline-range organics
VOCs	volatile organic compounds
PCB	polychlorinated biphenyl
TPH	total petroleum hydrocarbons
PQL	Practical Quantitation Limit

Notes:

- Analytes are only shown for select compounds. See lab reports for more d
- "U" denotes analyte not reported at a concentration greater than or equal
- Preliminary cleanup levels cleanup levels as established in Washington Stat Cleanup Levels Workbook, Soil Summary page, "Preliminary Cleanup Leve
- Total PCBs represents the sum of Aroclors 1016, 1221, 1232, 1242, 1248, 12 the total concentration is reported as less than the highest PQL of all Aroc
- Samples analyzed by Onsite Environmental, Inc., of Redmond Washington, Blue shading indicates a given concentration is greater than the PCUL Green shading indicates a given PQL is greater than the PCUL

Analytical Methods

PAHs by EPA Method 8270E & 8270E/SIM

GRO by Method NWTPH-Gx

DRO/ORO by Method NWTPH-Dx

VOCs by Method 8260D

PCBs by Method 8082A

Total metals by 6020B (all except Hg) and 7471B (Hg)

Abbreviations:

PCUL Preliminary Cleanup Level
mg/kg milligrams per kilogram
PAHs Polycyclic Aromatic Hydrocarbons
TPH total petroleum hydrocarbons
DRO diesel-range organics
ORO oil-range organics
GRO gasoline-range organics
VOCs volatile organic compounds
PCB polychlorinated biphenyl
TPH total petroleum hydrocarbons
PQL Practical Quantitation Limit

Re: Analytical Data for Project WO-01
Laboratory Reference No. 2308-251

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 22, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read 'D. Baumeister', with a stylized flourish at the end.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 30, 2023
Samples Submitted: August 22, 2023
Laboratory Reference: 2308-251
Project: WO-01

Case Narrative

Samples were collected on August 22, 2023 and received by the laboratory on August 23, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Semivolatiles EPA 8270E/SIM Analysis

The Spike Blank had one surrogate recovery outside of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
- X2 - Sample extract treated with a silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project WO-01-Fill Source Material
Laboratory Reference No. 2308-303

Dear David:

Enclosed are the analytical results and associated quality control data for samples submitted on August 25, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "D. Baumeister", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 30, 2023
Samples Submitted: August 25, 2023
Laboratory Reference: 2308-303
Project: WO-01-Fill Source Material

Case Narrative

Samples were collected on August 25, 2023 and received by the laboratory on August 25, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Semivolatiles EPA 8270E/SIM Analysis

The RPD for 4-Chloro-3-methylphenol is outside the control limits for the Spike Blank/Spike Blank Duplicate. The percent recoveries on both spike blanks are within recovery limits. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Date of Report: August 30, 2023
 Samples Submitted: August 25, 2023

Methylene Chloride	ND	0.0054	EPA 8260D	8-28-23	8-28-23	
(trans) 1,2-Dichloroethene	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Methyl t-Butyl Ether	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
1,1-Dichloroethane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Vinyl Acetate	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
2,2-Dichloropropane	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
(cis) 1,2-Dichloroethene	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
2-Butanone	ND	0.0054	EPA 8260D	8-28-23	8-28-23	
Bromochloromethane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Chloroform	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
1,1,1-Trichloroethane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Carbon Tetrachloride	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
1,1-Dichloropropene	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Benzene	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
1,2-Dichloroethane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Trichloroethene	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
1,2-Dichloropropane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Dibromomethane	ND	0.00054	EPA 8260D	8-28-23	8-28-23	
Bromodichloromethane	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
2-Chloroethyl Vinyl Ether	ND	0.0054	EPA 8260D	8-28-23	8-28-23	
(cis) 1,3-Dichloropropene	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
Methyl Isobutyl Ketone	ND	0.0011	EPA 8260D	8-28-23	8-28-23	
Toluene	ND	0.0011	EPA 8260D	8-28-23	8-28-23	

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 30, 2023
 Samples Submitted: August 25, 2023
 Laboratory Reference: 2308-303
 Project: WO-01-Fill Source Material
