RE: Disposal of Soil from Boise Cascade, Inc -
Yakima Facility

Dear Mr. Anderson:

We have reviewed the request for disposal of approximately 2,000 cubic yards of petroleum contaminated soil. The sample results provided to this office show the following maximum concentration:

Total Petroleum Hydrocarbons 11,500 parts per million

Based on the above, you may accept these materials at your site, if space is available.

You are reminded to keep detailed records of the materials you accept, store and aerate the soil in discrete, separate areas, and test the materials at a minimum of 6 month intervals (or more often if you choose), as well as comply with all other terms of your order. This information will establish the rate of treatment at this site.

Please call if you have any questions.

Sincerely,

Dave George
