## WORKSHEET 1 SUMMARY SCORE SHEET

Site Name/Location (Street, City, County, Section/Township/Range, TCP ID Number):

Treoil Industries 4242 Aldergrove Road Ferndale WA, 98248 T39N/R01E/S08 Facility Site I.D. 2919

Site assessed/ranked for February 27, 2001 Site Register

Site Description (Include management areas, substances of concern, and quantities): Treoil Industries: A Brief Summary of Events

Treoil Industries, Inc. is located at 4242 Aldergrove Road in Ferndale, WA, and is approximately three miles east of the Strait of Georgia, in an area containing numerous wetlands.

Treoil Industries distilled tall oil, a by-product of pine trees from pulp mills. Tall oil contains various wood components, including pitch, pine oil, fatty acids, wood alcohols, resin acids and wood breakdown by-products. Four distillation fractions were pulled off the columns at various stages, and cooled as final products. Steam, the final substrate remaining, was condensed, treated using an oil/water separator and filtration, and discharged off the property via a settlement sump. The four fractions were cooled using a non-contact cooling water system (or air), and the cooling towers were drained into the settlement sump and ditch system quarterly. This cooling water reportedly contained biocides (Department of Ecology NWRO Inspection Report, 12/10/91). Boiler blowdown resulted in a third waste stream, and this stream contained unidentified descaling compounds.

Treoil experienced a spill event in October of 1991, reported to the Washington State Department of Ecology (Ecology) by an employee of ARCO, which consisted of pine oil travelling a distance of approximately .7 miles in a ditch along Aldergrove Road (southern boundary of ARCO) and 100 yards south along Gulf Road. This spill resulted in drop-in inspections by Ecology's Northwest Regional Office and a penalty for failure to report by Treoil. The inspection reports noted oil contamination of soils, oil in the settlement ditch and collection sump, drums located around the property, emulsion agents spilled onto the soil, and overall poor housekeeping. The site was added to Ecology's Confirmed and Suspected Contaminated Sites List May 9, 1994, for confirmed contamination of soil by petroleum products.

Mindy Miller of Whatcom County Health & Human Services (WCHHS) and Michael Spencer of Ecology visited Treoil on March 2, 2000, as part of a site hazard assessment (SHA)under the Model Toxics Control Act (MTCA). The site was fenced and gated on the southern side of the property (entrance), and no one was present. The property appeared abandoned, and since no responses to notices regarding the SHA had been received, the property was accessed from the northern unfenced portion. Noted at the site were numerous 55 gallon drums in the blackberry bushes north of the fence and along the railway ditch; approximately 200 drums, some full and bulging surrounded a crane on site, with soil covered with oozing and semi solid rosin like material; numerous fabric totes containing similar rosin material north of the fence line; black sand blast grit on the ground on the east side of the containment area; and suspicious looking yellow-orange crumbly pipe insulation on the ground, which was suspected to contain asbestos. Michael Spencer and

Mindy Miller left the site, called local representatives of Emergency Management and Labor & Industries to report findings, and refered the site to Ecology's Spill Response Team.

Norm Peck of Ecology's Northwest Regional Office visited the site, with Mindy Miller of WCHHS, on March 7, 2000 (see attached draft report "Inspection Summary for the Treoil Industries, Ltd. Site, Ferndale, WA", for a summary of findings). Mr. Peck listed several potential hazards including possible contribution by wastes at Treoil to elevated herring/herring egg mortality in intertidal and subtidal areas near the site. He recommended emergency interim actions for the site, and the United States Environmental Protection Agency (EPA) Region 10 and their contracted company, Ecology and the Environment responded.

EPA and Ecology and the Environment conducted a site visit and sampling at Treoil on June 6, 2000. Their observations and conclusions are summarized in the attached letter (9/14/00) to Mr. Gill from EPA's On-Scene Coordinator, Jeffry Rodin. Contamination confirmed in soil included TPH in the heavy oils and diesel range, PAHs, and metals (lead). Though some cleanup efforts have begun at the site, no final report has been received and the property will be scored and ranked under MTCA, using the Washington Ranking Method (WARM).

Special Considerations (Include limitations in site file data or data which cannot be accommodated in the model, but which are important in evaluating the risk associated with the site, or any other factor(s) over-riding a decision of no further action for the site):

	Explain basis for scoring a release to ground water:	_Source:_3_	Value: 0 (Max.=5)

#### SOURCES USED IN SCORING

- 1. Analytical Results, United States Environmental Protection Agency Region 10 June 6, 2000 Investigation (summarized in letter to Mr. Gill, 9/14/00).
- 2. Relevant Site History/Investigations/Whatcom County Health & Human Services File.
- 3. Washington State Department of Ecology, WARM Scoring Manual, April 1992
- 4. Washington State Department of Ecology, Toxicology Database for Use in Washington Ranking Method Scoring, January 1992.
- 5. Washington State University Cooperative Extension Service, Washington Climate.
- 6. Well Log, Whatcom County Health & Human Services File.
- 7. Soil Survey of Whatcom County Area, Washington, United States Department of Agriculture, Soil Conservation Service (1985).
- 8. U.S. EPA SITEINFO GIS Query for site.
- 9. Water Rights Application Tracking System, NWRO Ecology, List of Wells in Surrounding Area.
- 10. Whatcom County Planning & Development (map), <u>CAO Articles III & IV (Geohaz. & Flooding)</u> T39N R1E, 6/1/98.
- 10. Whatcom County Planning & Development (map), Fish Habitat, 3/1/99.
- 11. Whatcom County Planning & Development (map), <u>CAO Articles V & VI (Aquifer & Wetland)</u>
  T39N R1E, 6/1/98.
