EXECUTIVE SUMMARY

Introduction

MWH Americas, Inc. was retained by GE Aviation (GE) to perform a Phase II Environmental Site Assessment (ESA) of the adjacent active GE manufacturing and repair facilities located at 2720, 2804-2806, and 2808 West Washington Avenue, Yakima, Washington (the Site). Initial fieldwork was conducted from March 10 through March 13, 2011. Additional well redevelopment fieldwork was conducted from June 1 through June 3, 2011 and August 1 through August 8, 2011.

The objective of the Phase II ESA was to investigate the potential for environmental impacts to groundwater and soil media from activities at the Site. The work was performed by appropriately trained and experienced personnel in accordance with industry standards, applicable laws and regulations, and GE requirements.

On January 11, 2012, representatives from GE and MWH met with Ecology to discuss the results of the Phase I and Phase II ESAs for the Site. Based on the results of the Phase I and Phase II ESAs and the discussions with Ecology, follow-up actions were agreed and two supplemental investigations were conducted at the Site: 1) additional soil sampling was conducted to investigate detected concentration of PCBs in a groundwater sample collected from a groundwater monitoring well; and, 2) soil and groundwater sampling was conducted in the vicinity of an historical underground storage tank (UST) to confirm closure of the UST. The results of the supplemental investigations have been presented to Ecology under separate covers.

Site Description

The Site consists of approximately 15 acres and, according to the City of Yakima, is zoned for light industrial use. The Site is comprised of three separate addresses:

- A 10.96-acre parcel owned by GE (Main Facility at 2720 W. Washington Ave.) with a two-story structure of approximately 90,000 square-feet (sf) and an approximate 10,000-sf outdoor storage area located on the west side of the building. The outdoor storage area is secured with perimeter fencing; the southern half of the outdoor storage area is covered. The Main Facility includes an approximate 1-acre grass-landscaped area on the north side of the building and an asphalt-paved parking area on the south side of the building.
- Approximately 10,000 sf on the western side of a 25,000-sf partial two-story building (Leased Facility at 2808 W. Washington Ave.) leased from Noland Decoto and located adjacent and West of the Main Facility across South 28th Avenue.
- Approximately 9,700 sf on the eastern side of the same 25,000-sf partial two-story building (Lease Expansion Area at 2804-2806 W. Washington Ave.), leased from Mr. Brad Goodspeed.

The Site is bounded to the north by West Washington Avenue. Wide Hollow Creek and a residential area are north of West Washington Avenue. The Site is bounded to the east and south by Yakima Air Terminal – McAllister Field. The Site is bounded to the west by Noland Decoto Flying Services, Inc., which is comprised of sheet metal hangars and asphalt paved areas contiguous to the Yakima Airport.

Scope of Work

The scope of work for the field assessment activities described below was developed to provide adequate coverage of the Site for evaluating potential areas of concern identified during two Phase I ESAs of the Site conducted by MWH in 2009 (MWH, 2009) and 2010 (MWH, 2010).

- Drilling of 18 soil borings (SB1 to SB18) to a maximum depth of 10.0 to 15.0 feet (ft) below ground surface (bgs).
- Drilling and installation of seven groundwater monitoring wells (MW-1 to MW-7), each with a total depth of 15.0 ft bgs.
- Collection of two soil samples from each soil boring (except soil borings SB-10 and SB-12) and groundwater monitoring well boring from the near surface, and boring terminus (or above first encountered groundwater) for a total of 53 soil samples, including five duplicate samples. One sample was collected from SB-10 and SB-12 at the near surface due to drill head refusal encountered at 2 ft bgs at each location as a result of difficult drilling conditions beneath the Main Facility.
- Collection of one groundwater sample from each new and two existing (EW-A and EW-B) groundwater monitoring wells and an on-site irrigation well (from approximately 84 ft bgs) for a total of eleven samples, including one duplicate sample.
- Collection of one rinse blank sample of decontaminated non-disposable sampling equipment.
- Collection of three laboratory prepared trip blank samples transported with the samples to the laboratory for volatile organic compounds (VOC) analysis.
- Collection of one composite sample each of liquid and solid (soil cuttings) investigative derived waste (IDW) generated during the Phase II ESA for waste characterization purposes.

The collected samples were analyzed according to the following analytical methods:

- Fifteen Priority Pollutant Metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, silver, tin, and zinc) by US Environmental Protection Agency (USEPA) method 6020/7470A;
- Volatile organic compounds (VOCs) by USEPA method 8260B;
- Semi-volatile organic compounds (SVOCs) by USEPA method 8270C; and,
- Polychlorinated biphenyls (PCBs) by USEPA method 8082.

IDW soil and water composite samples were analyzed for the following analytical methods:

- Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals (arsenic, cadmium, chromium, iron, lead, mercury, nickel, and silver) by USEPA method 1311/6020/7471A;
- TCLP VOCs by USEPA method 1311/8260B;
- TCLP SVOCs by USEPA method 1311/8270C;
- PCBs by USEPA method 8082;
- Total cyanide; and,
- Total sulfides.
- The liquid composite sample was additionally analyzed for pH.

Due to detected concentrations of analytes in groundwater samples collected during the initial groundwater sampling event and the observation of significantly elevated turbidity in the samples, well redevelopment and sampling was conducted to

confirm if analyte detections were associated with solids present in the groundwater samples. The groundwater monitoring well redevelopment and sampling event was conducted in June 2011. Redevelopment activities included:

- Redevelopment of three groundwater monitoring wells (two newly installed groundwater monitoring wells [MW-5 and MW-7] and one existing groundwater monitoring well [EW-B]) by hand surging with a surge block then bailing and pumping.
- Collection of one groundwater sample from each redeveloped groundwater monitoring well for a total of four groundwater samples, including one duplicate sample.
- Collection of one laboratory-prepared trip blank sample transported with the samples to the laboratory for VOC analysis.
- Collection of one rinse blank sample of decontaminated, non-disposable sampling equipment.

Groundwater sample results from the first round of groundwater monitoring well redevelopment and sampling indicated that the analyte detections from the original sampling event were associated with solids present within the turbid samples as the analyte concentrations detected in groundwater samples from MW-5 and MW-7 following redevelopment were either non-detect or significantly less than those previously detected. A second groundwater monitoring well redevelopment and sampling event was conducted in August 2011 to reconfirm the results of the first groundwater monitoring well redevelopment and sampling event. Redevelopment activities included:

- Redevelopment of six groundwater monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-6 and EW-A) by hand-surging with a surge block then bailing and pumping.
- Collection of one groundwater sample from each of the groundwater monitoring wells (MW-1 to MW-7, EW-A and EW-B) for a total of ten groundwater samples, including one duplicate sample.
- Collection of two laboratory-prepared trip blank samples transported with the samples to the laboratory for VOC analysis.
- Collection of one rinse blank sample of decontaminated non-disposable sampling equipment.

All groundwater monitoring well redevelopment samples collected in both June and August 2011 were analyzed for metals and VOCs to confirm detections of those analytes in samples collected during the initial Phase II fieldwork. The samples were analyzed according to the following analytical methods:

- Fifteen Priority Pollutant Metals (as described above) by USEPA method 6020/7470A.
- VOCs by USEPA method 8260B.
- Hexavalent chromium by SM 3500 CR.

Local Geologic and Hydrogeologic Conditions

In general, the subsurface at the Site consists of approximately 10 ft of silt with lenses of silty sand, poorly graded sand, and high plasticity clay. The building foundation is underlain with non-native silty gravel fill material extending from 1 ft to 4 ft bgs. One water-bearing zone was encountered during drilling at approximately 4 to 7 ft bgs located generally above the silty clay layer. The groundwater flow direction for the water-bearing zone is to the east-southeast at a gradient of approximately 0.8 percent.

Field Sampling Data

Groundwater

During initial groundwater monitoring well development and sampling, all groundwater monitoring wells were observed to be turbid. After development, all groundwater monitoring wells were still visually turbid with the exception of monitoring well MW-1. Measureable sediment was observed in groundwater monitoring wells MW-4, MW-5, and MW-7 during development and in MW-7 after development. No odors were observed. Purged groundwater and samples collected following development were turbid from all wells.

During the first groundwater monitoring well redevelopment and sampling event in June 2011, approximately 2 ft of sediment was removed from monitoring wells MW-5 and MW-7. Existing groundwater monitoring well EW-B was repeatedly purged dry during development and had a slow recovery rate. None of the groundwater monitoring wells exhibited turbid groundwater during sampling (all less than 10 Nephelometric Turbidity Units [NTUs]). No odors were identified.

During the second groundwater monitoring well redevelopment and sampling event in August 2011, all groundwater monitoring wells that were redeveloped initially exhibited turbid brown colored water. Following redevelopment, groundwater samples from all groundwater monitoring wells were clear (less than 10 NTUs) and free of visible turbidity. No odors were identified.

Soil

Recovered soil samples were screened for organic vapor levels using a photoionization detector (PID). PID readings ranged from 0 to 5.3 parts per million (ppm) during drilling activities. No odor was observed in samples collected from the soil borings or monitoring wells.

Analytical Results

Following receipt of the laboratory analytical results, the data were compared to the following screening criteria:

- Ground Water – Washington Department of Ecology (Ecology) Model Toxic Control Act (MTCA) Method A Table Values (Method A) and MTCA Method B Standard Formula Values (Method B). Detected concentrations were screened using MTCA Method B carcinogen and non-carcinogen values, whichever was lower. If no MTCA Method B value was available, detected concentrations were compared to MTCA Method A. All detected results were also compared to Washington Department of Health (WADOH) Maximum Contaminant Levels (MCLs).
- Soil – MTCA Method A Standard Formula Values for Industrial Use and Unrestricted Land Use (Method A) and MTCA Method B Standard Formula Values (Method B). Detected concentrations were compared to MTCA Method B carcinogen and non-carcinogen values, whichever was lowest. If no MTCA Method B value was available, detected concentrations were compared to MTCA Method A values for unrestricted land use. Metals were also screened against Yakima Basin background concentrations as defined in *Natural Background Soil Metals Concentrations in Washington* State (Ecology, 1994).

Groundwater Samples

Initial Groundwater Sampling Event

During the initial sampling event, 10 groundwater samples (including one duplicate) collected from existing and new groundwater monitoring wells and one irrigation well sample were analyzed for 15 metals, VOCs, SVOCs, and PCBs. Detections above standards are discussed below.

- Concentrations of arsenic (seven samples, up to 0.084 milligrams per liter [mg/L]), barium, (two samples, up to 17 mg/L), beryllium (two samples, up to 0.048 mg/L), copper (two samples, up to 1.9 mg/L), and nickel (two samples, up to 1.1 mg/L) exceed MTCA Method B criteria (0.0048 mg/L, 3.2 mg/L, 0.032 mg/L, 0.64 mg/L, and 0.32 mg/L, respectively). Concentrations of chromium (four samples, up to 1.6 mg/L) and lead (three samples, up to 0.47 mg/L) exceed the MTCA Method A criteria (0.05 mg/L and 0.015 mg/L respectively).
- Concentrations of tetrachloroethene were detected in one sample (YK-MW-5 at 0.11 micrograms per liter [µg/L]) that exceeds the MTCA Method B criteria (0.081µg/L).
- Concentrations of PCBs (Aroclor 1260) were detected in one sample (YK-MW-7) at 0.27 µg/L that exceeds the MTCA Method B criteria (0.04375 µg/L).

First Groundwater Monitoring Well Redevelopment and Sampling Event

During the first groundwater monitoring well redevelopment and sampling event in June 2011, a total of four groundwater samples (including one duplicate) were collected from monitoring wells MW-5, MW-7 and existing well EW-B. The groundwater samples were analyzed for metals, hexavalent chromium, and VOCs. Arsenic concentrations in all samples (up to 0.0017 mg/L) exceed the MTCA Method B carcinogen criteria (0.00005833 mg/L). No other detected concentrations exceed Ecology MTCA or WADOH screening criteria (where available).

Second Groundwater Monitoring Well Redevelopment and Sampling Event

During the second groundwater monitoring well redevelopment and sampling in August 2011, 10 groundwater samples (including one duplicate) collected from two historical wells (EW-A and EW-B) and the seven monitoring wells installed during the Phase II (MW-1 through MW-7) were analyzed for metals, hexavalent chromium, and VOCs.

No detected concentrations exceed Ecology MTCA or WADOH screening criteria (where available) from samples collected during the second groundwater monitoring well redevelopment and sampling event. This included monitoring wells MW-5, MW-7 and existing well EW-B that previously had arsenic results above MTCA Method B carcinogen criteria.

Soil Samples

Fifty-three soil samples (including five duplicate samples) from 18 soil borings and 7 monitoring well installations were analyzed for metals, VOCs, SVOCs, and PCBs. Arsenic exceeds the background concentration (5.0 mg/kg) and MTCA Method B screening criteria (0.7 mg/kg) in four samples collected from three boring locations (SB-08, SB-10, and SB-11) at concentrations ranging from 5.2 mg/kg to 57 mg/kg. The detected concentration in SB-08 was from a sample collected beneath an asphalt-paved parking area. The detected concentrations in soil borings SB-10 and SB-11 were from samples collected beneath the concrete floor of the Main Facility.

Lead was detected in one sample (SB-11) at a concentration (260 mg/kg) that exceeds the MTCA Method A screening criteria (250 mg/kg); there is no prescribed MTCA Method B screening criteria for lead. This was the only soil sample collected during the Phase II that exceeds the screening criteria for lead. The sample was collected from between 3 to 4 ft bgs beneath the concrete slab of the Main Facility. The sample above this sample in the same boring contained concentrations of lead significantly lower than MTCA Method A unrestricted land use criteria.

It should be noted that background concentrations of lead and arsenic in soil in the Yakima area are higher than those in the rest of the State due to the extensive use of pesticides in orchards within the Yakima basin (DOE, 1994 and Area-Wide Soil Contamination Task Force, 2003). Lead and arsenic have been detected at concentrations exceeding cleanup levels at the Apple Valley Elementary School Voluntary Cleanup Program (VCP) site located less than 5 miles northeast of the Site due to

historical use of pesticides in the area. Thirty-eight out of 40 samples collected from the Apple Valley Elementary School playfield in August 2005 exceeded cleanup levels for arsenic and 23 exceeded for lead. The average arsenic concentration was 54.4 mg/kg and the maximum concentration detected was 124.2 mg/kg. The average concentration for lead was 322.4 mg/kg and the maximum concentration was 1,082.9 mg/kg (DOE, 2012). The concentrations of arsenic and lead detected at the Site are significantly less than these detected at the Apple Valley Elementary School site.

Investigative Derived Waste

Two composite grab samples (one liquid and one solid) collected from Investigative Derived Waste (IDW) drums during the initial field event were analyzed for metals, VOCs, SVOCs, PCBs, total cyanide, total sulfides, and pH (liquid sample only). Based on the results, the waste was non-hazardous. Analytical results from the IDW analysis and groundwater well redevelopment field events were provided to the Site and GE handled the disposal of the waste generated during the Phase II ESA investigations.

1. INTRODUCTION

On behalf of GE Aviation (GE), MWH Americas, Inc. (MWH) conducted a Phase II Environmental Site Assessment (ESA) at the active GE manufacturing and repair facilities located at 2720, 2804-2806, and 2808 West Washington Avenue, Yakima, WA (the Site). The location of the Site is shown on Figure 1.

1.1. Project Objectives and Scope of Work

The objective of the Phase II ESA was to investigate the potential for environmental impacts to groundwater and soil media from activities at the Site. The work was performed by appropriately trained and experienced personnel in accordance with industry standards, applicable laws and regulations, and GE requirements. The Phase II scope included:

- Drilling of 18 soil borings (SB1 to SB18) to a maximum depth of 10.0 to 15.0 feet (ft) below ground surface (bgs).
- Drilling and installation of seven groundwater monitoring wells (MW-1 to MW-7) each with a total depth of 15 ft bgs.
- Collection of two soil samples from each soil boring (except soil borings SB-10 and SB-12) and monitoring well boring from the near surface, and boring terminus (or above first encountered groundwater) for a total of 53 soil samples, including five duplicate samples. One sample was collected from SB-10 and SB-12 at the near surface due to drill head refusal encountered at 2 ft bgs at each location as a result of difficult drilling conditions beneath the Main Facility.
- Collection of one groundwater sample from each new and two existing wells (EW-A and EW-B), and an on-site irrigation well (from approximately 84 ft. bgs) for a total of eleven groundwater samples, including one duplicate sample.
- Collection of one rinse blank sample of decontaminated non-disposable sampling equipment.
- Collection of three laboratory prepared trip blank samples transported with the samples to the laboratory for volatile organic compounds (VOC) analysis.
- Collection of one composite sample each of liquid and solid (soil cuttings) investigative derived waste (IDW) generated during the Phase II ESA for waste characterization purposes.

The collected samples were analyzed according to the following analytical methods:

- Fifteen Priority Pollutant Metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, silver, tin, and zinc) by US Environmental Protection Agency (USEPA) method 6020/7470A;
- Volatile organic compounds (VOCs) by USEPA method 8260B;
- Semi-volatile organic compounds (SVOCs) by USEPA method 8270C; and,
- Polychlorinated biphenyls (PCBs) by USEPA method 8082.

IDW soil and water composite samples were analyzed for the following analytical methods:

- Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals (arsenic, cadmium, chromium, iron, lead, mercury, nickel, and silver) by USEPA method 1311/6020/7471A;

- TCLP VOCs by USEPA method 1311/8260B;
- TCLP SVOCs by USEPA method 1311/8270C;
- PCBs by USEPA method 8082;
- Total cyanide; and,
- Total sulfides.
- The liquid composite sample was additionally analyzed for pH.

Due to detected concentrations of analytes in groundwater samples collected during the initial groundwater sampling event and the observation of significantly elevated turbidity in the samples, well redevelopment and sampling was conducted to confirm if analyte detections were associated with solids present in the groundwater samples. The first groundwater monitoring well redevelopment and sampling event was conducted in June 2011. Redevelopment activities included:

- Redevelopment of three groundwater monitoring wells (two newly installed groundwater monitoring wells [MW-5 and MW-7] and one existing groundwater monitoring well [EW-B]) by hand surging with a surge block then bailing and pumping.
- Collection of one groundwater sample from each redeveloped groundwater monitoring well for a total of four groundwater samples, including one duplicate sample.
- Collection of one laboratory-prepared trip blank sample transported with the samples to the laboratory for VOC analysis.
- Collection of one rinse blank sample of decontaminated, non-disposable sampling equipment.

Groundwater sample results from the first round of groundwater monitoring well redevelopment and sampling indicated that the analyte detections from the original sampling event were associated with solids present within the turbid samples as the analyte concentrations detected in groundwater samples from MW-5 and MW-7 following redevelopment were either non-detect or significantly less than those previously detected. A second groundwater monitoring well redevelopment and sampling event was conducted in August 2011 to reconfirm the results of the first groundwater monitoring well redevelopment and sampling event. Redevelopment activities included:

- Redevelopment of six groundwater monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-6 and EW-A) by hand-surging with a surge block then bailing and pumping.
- Collection of one groundwater sample from each of the groundwater monitoring wells (MW-1 to MW-7, EW-A and EW-B) for a total of ten groundwater samples, including one duplicate sample.
- Collection of two laboratory-prepared trip blank samples transported with the samples to the laboratory for VOC analysis.
- Collection of one rinse blank sample of decontaminated non-disposable sampling equipment.

All groundwater monitoring well redevelopment samples collected in both June and August 2011 were analyzed for metals and VOCs to confirm detections of those analytes in samples collected during the initial Phase II fieldwork. . The samples were analyzed according to the following analytical methods:

- Fifteen Priority Pollutant Metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, silver, tin, and zinc) (as described above) by USEPA method 6020/7470A.
- VOCs by USEPA method 8260B.
- Hexavalent chromium by SM 3500 CR.

1.2. Report Organization

The presentation of this report is organized as follows.

Section 1	Introduction, including project objectives, scope of work, summary of previous assessments/findings, and report organization
Section 2	Site background, including site description and adjoining properties, site operations, and the physical setting
Section 3	Site assessment program, including preliminary field and health and safety activities, field sampling activities, laboratory analysis, site restoration, site survey, and investigation derived waste management
Section 4	Results of the site assessment program, including local geologic and hydrogeologic conditions, data quality review, screening criteria, and the analytical results
Section 5	Summary of the site assessment program
Section 6	List of references cited
Section 7	Limitations to this report

This page is intentionally blank

2. SITE BACKGROUND

2.1. Site Description and Adjoining Properties

The Site is located at 2720, 2804-2806, and 2808 W. Washington Ave. in Yakima, WA (Figure 1). The Site consists of approximately 15 acres and, according to the City of Yakima, is zoned for light industrial use. The Site is comprised of three separate addresses:

- A 10.96-acre parcel owned by GE (Main Facility at 2720 W. Washington Ave.) with a two-story structure of approximately 90,000 square-feet (sf) and an approximate 10,000-sf outdoor storage area located on the west side of the building. The outdoor storage area is secured with perimeter fencing; the southern half of the outdoor storage area is covered. The Main Facility includes an approximate 1-acre grass-landscaped area on the north side of the building and an asphalt-paved parking area on the south side of the building.
- Approximately 10,000 sf on the western side of a 25,000-sf partial two-story building (Leased Facility at 2808 W. Washington Ave.) leased from Noland Decoto and located adjacent and west of the Main Facility across South 28th Avenue.
- Approximately 9,700 sf on the eastern side of the same 25,000-sf partial two-story building (Lease Expansion Area at 2804-2806 W. Washington Ave.), leased from Mr. Brad Goodspeed.

The main entrance to the Site is via South 28th Avenue. The Main Facility is on the east side of South 28th Avenue and the Leased Facilities are to the west. The Main Facility is surrounded by asphalt-paved parking areas to the south and east and a grassy landscaped area to the north. The Leased Facilities are surrounded by asphalt-paved parking areas and access roads. The Site layout is shown on Figure 2. The Site is bounded to the north by West Washington Avenue. Wide Hollow Creek and a residential area lie beyond West Washington Avenue further to the north. The Site is bounded to the east and south by Yakima Air Terminal – McAllister Field, and to the west by Nolan Decoto Flying Services, Inc., which is comprised of sheet metal hangars and asphalt paved areas contiguous to the Yakima Airport.

2.2. Site Operations

The Site was historically used for agricultural activities and a farmhouse was located on the Site, north of the Main Facility in the present day grassy landscaped area. The farmhouse was not visible on historical aerial photographs of the Site; however, a structure is identified on historical topographic maps in the location identified by Site contacts as the location of the historical farmhouse. According to information obtained from the Yakima County Assessor, the Main Facility was reportedly constructed in 1968. The Main Facility has been used for the manufacturing of aerospace parts including hydraulic actuators, since its construction.

Operations at the Leased Facility consist of repair of current and discontinued hydraulic actuators and high pressure testing of actuators. The Leased Facility contains two chiller units on the western portion of the building, one power unit, and one associated water well. GE moved into the Lease Expansion Area in 2010/2011. The area was formerly operated by Accurate Metallurgical (25% of the leased space) and Proflaps (75% of the leased space). Accurate Metallurgical performed heat treating of small metal parts (e.g., sprockets) using high temperature ovens. Proflaps operations consisted of cutting, shaping,

and minor painting of the plastic and metal used in the production of mud flaps (MWH, 2010). The Lease Expansion area is used for storage; however, MWH did not visit this area during the course of the Phase II ESA field activities.

The Site designs, manufactures, assembles, tests, and ships hydraulic actuators for commercial and military uses. Operations include receiving of raw materials, machining, parts cleaning, painting, assembly of parts into units, testing of units, and shipping units off-site for delivery. Process areas and equipment are identified in Figure 2. A bulk chemical storage area is located outdoors adjacent to the northwestern corner of the Main Facility. The hazardous waste storage area is located adjacent to the south end of the bulk chemical storage area. A dye penetrant test area and a closed-loop parts washing system are located in the southern portion of the building. A paint room, hydraulic oil coolant room, Skydrol oil pump room, mill oil pump room, and fuse test area are located in the southeastern portion of the building. A water evaporative system and degreasing system are located just north of the paint room. Trichloroethylene (TCE) was used in the degreaser until January 2010, when TCE was replaced with HFE-72DE, a proprietary solvent manufactured by 3M Company primarily comprised of trans-1,2-dichloroethylene (68 – 72% by weight).

A 1,200 gallon concrete underground storage tank (UST) was formerly located in the southern portion of the bulk storage area. The historical UST stored oil-water immersions used for cooling machining operations (PLSA, 2008). A small leak from a deteriorating 1 ½-inch pipeline was discovered by GE in November 2007 and reported to Washington Department of Ecology (Ecology). Following the Ecology investigation, a volume measuring approximately 10 ft wide, 20 ft long, and 9 ft deep was excavated to remove the UST and impacted soil.

2.3. Physical Setting

2.3.1. Site Vicinity Topography and Hydrology

The City of Yakima is located in south-central Washington within the Yakima River Basin. Elevations in the Yakima River Basin range from an elevation of over 8,000 ft above mean sea level (amsl) in the Cascade Range west of Yakima, where the Yakima River originates, to about 340 ft amsl at the convergence of the Yakima and Columbia rivers southeast of Yakima. The Site is located at approximately 1,080 ft amsl. The basin includes approximately 1,900 river miles of perennial streams and drains an area of approximately 6,155 square-miles (Geo-ecology Research Group, 2005). The nearest major surface water feature to the Site is Wide Hollow Creek, a tributary to the Yakima River, located approximately 0.03 miles to the north.

2.3.2. Regional Geology and Hydrogeology

The Columbia Plateau is divided into three physiographic sub-provinces. The western margin is composed of the Yakima Fold Belt, which includes the Yakima River Basin. The Yakima Fold Belt is a highly folded and faulted area and is underlain by various consolidated rocks of Precambrian to Quaternary age, and unconsolidated materials and volcanic rocks of Quaternary age. In the Yakima River Basin, the headwater areas in the Cascade Range include metamorphic, sedimentary, and intrusive and extrusive igneous rocks. The central, eastern, and southwestern areas of the basin are composed of basalt lava flows from the Columbia River Basalt Group (CRBG) with discontinuous and weakly consolidated sediments. The lowlands are underlain by unconsolidated and weakly consolidated valley-fill composed of glacial, glacio-fluvial, lacustrine, and alluvium deposits that exceeded 1,000 ft in thickness. Wind-blown deposits, called loess, occur along the lower valley (United States Geologic Survey [USGS], 2006).

The CRBG is an important aquifer system. The overlying alluvial aquifers are highly permeable and are heterogeneous due to their deposition within the fluvial environment where the processes of cut and fill alluviation by the Yakima River and tributaries

occurred. The Cascade Range rocks store and transmit little water via aquifer systems, and the majority of runoff flows at the surface (Geo-ecology Research Group, 2005).

3. SITE ASSESSMENT PROGRAM

3.1. Summary

The site assessment program was designed to provide adequate coverage of the Site for evaluating areas of potential environmental concerns identified by GE based on previous Phase I ESAs conducted at the Site (MWH, 2009; MWH, 2010). The site assessment program included analysis of groundwater and soil media. Initial fieldwork was conducted from March 10 through March 13, 2011. Well redevelopment fieldwork was conducted from June 1 through June 3, 2011 and August 1 through August 8, 2011. Fieldwork was performed by appropriately trained and experienced personnel in accordance with industry standards and applicable laws and regulations. The Site layout with sampling locations is shown on Figure 2. Daily field reports with representative photographs of the field activities are presented in Appendix A.

3.2. Preliminary Field and Health and Safety Activities

3.2.1. Preparatory Field Activities

Prior to conducting fieldwork, the scope of work was reviewed by the field team and a preliminary site walk was conducted by GE and MWH to discuss the site assessment program. On the first day of fieldwork, the field team comprising MWH, Utilities Plus (utility locator), and the drillers walked the Site to review all planned soil boring and monitoring well locations against facility drawings of subsurface utilities and pipelines. A few soil borings were slightly offset to avoid encountering subsurface utilities, blocking vehicle traffic, and hindering facility activities. No locations were offset more than 10 ft from the planned locations.

Equipment mobilization included transportation of drilling equipment (for the initial field event), shipments of sampling equipment and supplies, staging of decontamination equipment, and drum storage. A drum staging location was located near the southwest exterior of the Main Facility during the drilling event and within the Site's waste storage area during the subsequent field events.

3.2.2. Preparatory and Ongoing Health and Safety Activities

A project-specific health and safety plan (HSP) was prepared and utilized by MWH field personnel for this project. The HSP identified roles and responsibilities of key personnel; hazard analyses for anticipated chemical, physical, and physiochemical hazards; personnel protection plan; site safety procedures; decontamination plan; and, an emergency response/contingency plan. The MWH field personnel conformed to the Occupational Safety and Health Administration (OSHA) requirements for training and certifications for this type of work, including 40-hour and 8-hour refresher Hazardous Waste Operations and Emergency Response (HAZWOPER) training.

A preliminary health and safety meeting was performed before the commencement of field activities and a brief tailgate health and safety meeting was conducted prior to each fieldwork day. Potentially hazardous conditions during field activities were continuously evaluated to protect the field team and Site personnel. MWH supplied personal protective equipment (PPE), including hard hats, safety glasses, hearing protection, gloves and steel-toe boots for MWH personnel; MWH's subcontractors supplied appropriate PPE for their own field personnel.

3.3. Field Sampling Activities

3.3.1. Soil Boring Sampling

Eighteen soil borings (SB01 through SB18) and seven borings for monitoring well installations (MW-1 through MW-7) were drilled at the Site, as shown on Figure 2. During drilling activities, a qualified geologist supervised the drilling subcontractor, logged the boring lithology and subsurface materials encountered, collected samples, and described subsurface conditions in accordance with the Unified Soil Classification System (USCS). Organic vapor levels of ambient air and the headspace of recovered soil samples were measured using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp during drilling activities. Calibration of the PID was performed in accordance with the manufacturer's instructions prior to each day's use.

Drilling was performed by Cascade Drilling using one truck-mounted direct-push rig and one small hand-operated direct-push rig during the course of the fieldwork to meet the project schedule. In general, soil borings were drilled to a depth of 10.0 to 15.0 ft bgs, with exception of three soil borings (SB10, SB11, and SB12) drilled using a small hand-operated direct-push rig to 4.0 ft bgs as the locations were within the Main Facility.

The initial designed maximum depth for monitoring well borings was approximately 80 ft bgs, based on the anticipated depth to water in the area provided by local drillers. Based on preliminary depth to water readings collected from existing monitoring wells MW-A and MW-B, the revised maximum depth for monitoring well borings was set at approximately 10 to 15 ft bgs due to the presence of shallow groundwater.

The subsurface lithology was continuously logged from each 5-ft long, 2-inch diameter acetate-lined barrel sample collected using a direct-push hydraulic probe. A disposable acetate liner was used for each 5-ft sample interval. Boring logs are presented as Appendix B.

In general, two primary soil samples were collected from each boring from the near surface (0 to 0.5 ft bgs) and above first encountered groundwater or the boring terminus using a direct-push rig and an acetate liner. Only one sample from the near surface interval was collected from borings SB10 and SB12 due to difficult subsurface conditions encountered with the hand-operated drill rig beneath the concrete slab of the Main Facility. Soil samples were transferred directly from the acetate sample liners into laboratory-supplied containers with the use of a Terra Core soil sampler, and each sample container was labeled with unique sample identification, sample collection time and date, and requested analyses. As appropriate, each sample container was placed in a self-sealing polyethylene bag to prevent any melted ice water from compromising sample integrity.

3.3.2. Monitoring Well Installation, Development and Groundwater Sampling

Seven groundwater monitoring wells (MW-1 through MW-7) were installed at the Site, as shown on Figure 2. Monitoring well bore holes were drilled using a hollow-stem auger instead of an air-rotary drill as proposed due to the presence of shallow groundwater. The groundwater monitoring wells ranged in depth from 14.2 to 15.0 ft bgs. Monitoring well construction materials consisted of 2-inch schedule 40 PVC blank casing and 10-ft-long, 0.010-inch slotted PVC screens. The filter pack, consisting of coarse sand with fine gravel, was installed up to approximately 1.5 ft above the screen followed by approximately 3 ft of bentonite seal to 1 ft bgs. The wells were capped with concrete and flush-grade well monuments. Well completion forms are presented on the boring logs (Appendix B).

Groundwater monitoring well development was conducted following well installation. Well development consisted of surging water with a surge block and purging the sediment-laden groundwater. Field forms are included in Appendix A.

Groundwater sampling was conducted at least 24 hours after completing well development, and consisted of purging water using a submersible pump and collecting geochemical data at regular intervals until parameters stabilized. One primary groundwater sample was collected from each well using low-flow sampling techniques. In general, the sample water from monitoring wells MW-1, MW-2, and MW-4 through MW-7 was turbid (800 to 1,000+ Nephelometric Turbidity Units [NTUs]) compared to sample water collected from MW-3, MW-A, and MW-B (140 to 231 NTU).

Groundwater levels were measured using an electronic water level meter a minimum of 24 hours after development of the new wells. Measurements were recorded to the nearest 0.01 inch.

The groundwater sample collected from the on-site irrigation well was collected directly from a tap at the well head after purging the well for approximately 5 minutes. Well records indicate that the irrigation well is equipped with a 3 horsepower submersible pump set at approximately 84 ft. bgs. The total depth of the well is approximately 160 ft bgs.

3.3.3. Monitoring Well Redevelopment and Groundwater Sampling

MWH conducted a second field effort in June 2011 to redevelop and sample groundwater monitoring wells which exhibited high turbidity and unexpected detections of analytes to evaluate if reduced turbidity would reduce or eliminate these detections. Three monitoring wells (MW-5, MW-7, and EW-B) were selected for redevelopment in an effort to reduce turbidity observed during initial sampling. Monitoring wells MW-5 and MW-7 were selected due to high turbidity readings during development and sampling (up to 1,000 NTUs) and elevated metal, VOC, and PCB concentrations compared to other monitoring wells. Existing Well B, which is up-gradient and off-site, was selected for comparison. Prior to beginning well development, it was observed that approximately 2 feet of sediment had accumulated in monitoring wells MW-5 and MW-7. Wells were redeveloped by hand with a surge block and sediment-laden groundwater was removed with a stainless steel bailer. Once the visible turbidity of the groundwater had cleared, a submersible pump was used to complete the redevelopment.

A second round of groundwater monitoring well redevelopment and sampling that included the two historical wells and all seven Phase II wells was conducted in August 2011 as a result of the success from the first round of groundwater monitoring well redevelopment and sampling in demonstrating that the original detections were associated with solids present in the groundwater samples. Wells were redeveloped by hand with a surge block and sediment-laden groundwater was removed using a stainless steel bailer. A submersible pump was used to complete the redevelopment.

Groundwater sampling for both redevelopment events was conducted at least 24 hours after completing well redevelopment. Sampling consisted of using low-flow sampling techniques by purging water using a submersible pump and collecting geochemical data at regular intervals until parameters stabilized. One primary groundwater sample was collected from each well using the low-flow pump. Collected groundwater samples from all wells were clear and had turbidity measurements less than 10 NTU.

Groundwater levels for both redevelopment events were measured using an electronic water level meter a minimum of 24 hours after redevelopment. Measurements were recorded to the nearest 0.01 inch.

3.3.4. Sample Identification and Handling

Following sample collection, each sample container was labeled with the following: Site name; unique sample identification (ID) number; the sample collection time and date; and, the requested analysis. Sample containers were checked for integrity and lid closure to prevent leakage, and sample labels were checked for completeness. Batches of sample containers were packaged into coolers packed with ice and fill materials to reduce the likelihood of accidental bottle breakage during transport to the contracted laboratory. Chain-of-custody (COC) procedures were followed for tracking the possession and handling of samples from the time of field collection through laboratory receipt. The COC record was completed and signed by the sampler after sample collection.

3.3.5. Quality Assurance/Quality Control Sampling (QA/QC)

The following QA/QC samples were collected and analyzed to provide information on precision, accuracy, representativeness, comparability, and completeness of the data generated:

- Three equipment rinse blank samples (one per sampling event) were collected by pouring deionized water over decontaminated non-disposable sampling equipment into laboratory-supplied containers. The equipment rinse blank samples were analyzed for all analytical methods requested for the primary soil samples collected.
- Five duplicate soil samples and three duplicate groundwater samples were collected at the same time and location, to the extent possible, using the same sampling techniques as the parent samples. The field duplicate sample identifications for groundwater and soil samples were blind to the laboratory. Duplicates were analyzed for all analytical methods requested for the parent samples.
- Laboratory-prepared trip blank samples were carried into the field and stored with water samples for VOC analysis. A total of five trip blank samples were transported with the samples to the laboratory.

3.4. Laboratory Analysis

The samples were shipped by air courier to Test America located in Seattle, Washington. The analytical reports are presented as Appendix C. Samples were analyzed for the following analytical methods:

- Fifteen Priority Pollutant Metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, silver, tin, and zinc) by USEPA method 6020/7470A;
- Hexavalent chromium by USEPA method 3500 CR;
- VOCs by USEPA method 8260B;
- SVOCs by USEPA method 8270C; and,
- PCBs by USEPA method 8082.
- IDW soil and liquid composite samples were analyzed for the following analytical methods for waste characterization purposes:
  - Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals (arsenic, cadmium, chromium, iron, lead, mercury, nickel, and silver) by USEPA method 1311/6020/7471A;
  - TCLP VOCs by USEPA method 1311/8260B;

  - TCLP SVOCs by USEPA method 1311/8270C;
  - PCBs by USEPA method 8082;
  - Total cyanide; and,
  - Total sulfides.
- The IDW liquid composite sample was additionally analyzed for pH.

3.5. Site Restoration

All soil borings not intended for monitoring well installation were immediately backfilled upon completion of soil logging and sampling activities. Borings SB10, SB11, and SB12 were backfilled with cement due to the shallow depth. All other borings were backfilled with hydrated 3/8-inch bentonite chips. The surface completions for all borings were matched to the surrounding grade (i.e., gravel, concrete, cold-patch asphalt, or grass turf). Installed monitoring wells were completed with cast iron and PVC well monuments set in a concrete collar. All borings and work areas were swept of debris and cleaned up.

3.6. Sample Location Survey

On March 13, 2011, elevations of final sample locations were surveyed by Gray Surveying and Engineering, Inc., which is licensed for such work in the State of Washington. A copy of the survey report is included in Appendix B. Horizontal coordinates (northings and eastings) are State Plane Coordinate System, Washington State South Zone, North American Datum 1983 (NAD83). Coordinates were determined from static global positioning system (GPS) network observations constrained to National Geodetic Survey Monuments. Elevations are referenced to North American Vertical Datum of 1988 (NAVD88). The ground surface was surveyed for all completed soil borings, and the elevation at ground level and top of casing were surveyed for all installed monitoring wells and existing wells MW-A and MW-B.

3.7. Investigative Derived Waste

Waste generated during conduct of the field sampling activities included soil cuttings, purged groundwater, decontamination liquids, PPE, disposable sampling equipment, and other miscellaneous solid waste. Waste, including PPE and miscellaneous waste, was placed into 55-gallon drums segregated by media type. The drums were labeled accordingly and staged along the southwestern exterior of the Main Facility within a secured area during the drilling event and inside the Site's waste storage area during subsequent redevelopment/sampling events. MWH provided GE with an electronic version of the laboratory analytical results on March 28, 2011, June 23, 2011, and August 25, 2011 in order for GE to properly profile and dispose of the IDW.

4. RESULTS OF SITE ASSESSMENT PROGRAM

4.1. Local Geological and Hydrogeological Conditions

Geologic cross-sections along two transects are shown on Figures 3 and 4. In general, the subsurface of the Site consists of approximately 10 ft of silt with lenses of silty sand, poorly graded sand, and high plasticity clay. The building foundation is underlain with non-native silty gravel fill material extending from 1 ft to 4 ft bgs.

One water-bearing zone was encountered during drilling at approximately 4 ft to 7 ft bgs located generally above the silty clay layer. The groundwater flow direction for the water-bearing zone is to the east-southeast at a gradient of approximately 0.8 percent, as depicted on Figures 5A and 5B. Groundwater elevation data for all new and existing wells are summarized in Table 1.

4.2. Data Quality Review

A data quality review of the analytical results was performed by MWH to evaluate the usability of the reported data. QC samples were collected and used in conjunction with laboratory QC samples to evaluate the precision, accuracy, representativeness, completeness, and comparability. In general, the results indicate that the dataset is acceptable and usable for the purposes of this Phase II ESA. Copies of the data validation reports are included with the laboratory analytical reports in Appendix C.

Field duplicates of soil and groundwater were used to evaluate the precision of the overall sample collection and analysis process through the calculation of the relative percent difference (RPD) for duplicate pairs. Because precision is affected by several variables including sample heterogeneity, collection procedures, preparation, and analysis, the results of field duplicate analysis were used as additional evidence to support data quality rather than as a basis for accepting or rejecting data.

Trip blank samples are used to determine if samples potentially have been cross-contaminated during sample collection and transportation to the laboratory. Laboratory-prepared trip blank samples were carried into the field and stored with soil and water samples for VOC analysis. A total of four laboratory prepared trip blank samples were transported with the samples to the laboratory for VOC analysis. No VOCs were detected in the samples.

Equipment rinse blank samples are used to determine if samples may have been cross-contaminated from inadequately decontaminated sampling equipment or by source water (tap water and deionized water) used in equipment decontamination. Three rinse blank samples were collected (one for each field event) and analyzed for the same analytes as the primary samples.

Based on the results of the data validation, all data for this Phase II ESA are considered complete and valid as qualified.

- Percent recovery or percent difference issues were noted in several surrogates, laboratory control samples (LCSs), matrix spike/matrix spike duplicates (MS/MSDs), and continuing calibrations across all analyses. Numerous "J" qualifiers (estimated results) were issued as a result, but these do not affect the usability of the data.
- Several method blanks associated with the VOC, SVOC, and metals analysis indicated detections of various analytes. Samples were qualified "B" (indicating blank contamination) if they exhibited detections of these analytes

at concentrations less than 10 times the method blank concentrations. There was no evidence of gross contamination.

- Three samples for hexavalent chromium were analyzed considerably outside of the method-prescribed hold-time. These samples were qualified "R" indicating that they are rejected as unusable.

4.3. Screening Criteria

The analytical results were screened against Ecology Model Toxics Control Act (MTCA), Ecology published background concentrations (metals only), and/or Washington Department of Health (WADOH) screening criteria when applicable and available.

- Ground Water – Ecology MTCA Method A Table Values (Method A) and MTCA Method B Standard Formula Values (Method B). Detected concentrations were screened using MTCA B carcinogen and non-carcinogen values, whichever was lower. If no Method B value was available, detected concentrations were compared to Method A. All detected results were also compared to WADOH Maximum Contaminant Levels (MCLs).
- Soil – MTCA Method A Standard Formula Values for Unrestricted Land Use (Method A) and MTCA Method B Standard Formula Values (Method B). Detected concentrations were compared to MTCA Method B carcinogen and non-carcinogen values, whichever was lowest. If no MTCA Method B value was available, detected concentrations were compared to MTCA Method A values for unrestricted land use. Metals were also screened against Yakima Basin background concentrations as defined in Natural Background Soil Metals Concentrations in Washington State (Ecology, 1994). For purposes of the data discussion below, criteria exceedences were only considered where both the background concentration (where available) and the MTCA Method B carcinogen criteria were exceeded.

4.4. Analytical Results

4.4.1. Groundwater

The groundwater analytical results are presented in Table 2 and depicted on Figure 6.

Initial Groundwater Sampling Event

During the initial sampling event, 10 groundwater samples (including one duplicate) collected from existing and new groundwater monitoring wells and one irrigation well sample were analyzed for metals, VOCs, SVOCs, and PCBs. Detections above standards are discussed below.

- All fifteen Priority Pollutant Metals were detected in at least one of the groundwater samples collected. Concentrations of arsenic (seven samples, up to 0.084 mg/L), barium, (two samples, up to 17 mg/L), beryllium (two samples, up to 0.048 mg/L), copper (two samples, up to 1.9 mg/L), and nickel (two samples, up to 1.1 mg/L) detected in groundwater samples exceed MTCA Method B criteria (0.0048 mg/L, 3.2 mg/L, 0.032 mg/L, 0.64 mg/L, and 0.32 mg/L, respectively). Concentrations of chromium (four samples, up to 1.6 mg/L) and lead (three samples, up to 0.47 mg/L) exceed the MTCA Method A criteria (0.05 mg/L and 0.015 mg/L respectively).
- Concentrations of benzene (one sample at 0.11 µg/L), chlorodibromomethane (one sample at 0.049 µg/L), chloroform (10 samples ranging from 0.061 µg/L to 6.7 µg/L), dichlorobromomethane (two samples at 0.035 µg/L and 0.5 µg/L), dichlorodifluoromethane (irrigation well sample at 1.7 µg/L), ethylbenzene (one sample at 0.031 µg/L),

methyl tert-butyl ether [MTBE] (one sample at 0.025 µg/L), m-xylene & p-xylene (one sample at 0.059 µg/L), tetrachloroethene (nine samples ranging from 0.028 µg/L to 0.11 µg/L), toluene (eight samples ranging from 0.025 µg/L to 1.2 µg/L), and trichloroethene [TCE] (one sample at 0.027 µg/L) were detected below screening criteria. One of the detected VOC concentrations (tetrachloroethene [MW-5 at 0.11 µg/L]) exceeds the MTCA Method B criteria (0.081µg/L).

- Concentrations of benzoic acid (one sample at 3.6 µg/L), diethyl phthalate (one sample at 0.5 µg/L), and di-n-butyl phthalate (six samples ranging from 0.67 µg/L to 0.92 µg/L) were detected. None of the detected SVOC concentrations exceed MTCA Method B criteria.
- PCBs (Aroclor 1260) were detected in one groundwater sample, MW-7, at a concentration of 0.27 µg/L, which exceeds the MTCA Method B criteria (0.04375 µg/L).

First Groundwater Monitoring Well Redevelopment and Sampling Event

Due to detected concentrations of analytes in groundwater samples collected during the initial groundwater sampling event and the observation of significantly elevated turbidity in the samples, well redevelopment and sampling was conducted to confirm if analyte detections were associated with solids present in the groundwater samples. During this first groundwater monitoring well redevelopment and sampling event in June 2011, four groundwater samples (including one duplicate) were collected from one historical well (EW-B) and two groundwater monitoring wells (MW-5 and MW-7) installed during the Phase II. The samples were analyzed for metals and VOCs to confirm detections of those analytes in groundwater samples collected during the initial fieldwork. Hexavalent chromium was also analyzed. Results from the first redevelopment event included:

- Concentrations of ten metals (arsenic, barium, chromium, copper, molybdenum, nickel, selenium, silver, tin, and zinc) were detected in at least one of the groundwater samples collected. Arsenic concentrations in three samples (up to 0.0017 mg/L) exceed the MTCA Method B carcinogen criteria (0.00005833 mg/L). No other metals exceeded a screening criteria.
- Hexavalent chromium was not detected in the samples.
- Concentrations of one VOC (chloroform) were detected in samples collected from existing well EW-B and monitoring well MW-5. The detected chloroform concentrations did not exceed MTCA Method B criteria or WDOH MCLs. VOCs were not detected in the sample collected from MW-7.

Second Groundwater Monitoring Well Redevelopment and Sampling Event

Groundwater sample results from the first groundwater monitoring well redevelopment and sampling event indicated that the analyte detections from the initial groundwater sampling event were associated with solids present within the turbid samples as the analyte concentrations detected in groundwater samples from MW-5 and MW-7 following redevelopment were either non-detect or significantly less than those previously detected. A second round of groundwater well redevelopment and sampling was conducted in August 2011 to reconfirm the results of the first round of groundwater monitoring well redevelopment and sampling. During the second groundwater monitoring well redevelopment effort in August 2011, 10 groundwater samples (including one duplicate) collected from two historical wells (EW-A and EW-B) and the seven monitoring wells installed during the Phase II (MW-1 through MW-7) were analyzed for metals and VOCs to confirm detections of those analytes in groundwater samples collected during the initial fieldwork. Hexavalent chromium was also analyzed. No detected concentrations exceed screening criteria. Results from the second groundwater monitoring well redevelopment and sampling event included:

- Concentrations of seven metals (barium, chromium, copper, molybdenum, silver, tin, and zinc) were detected in all of the samples. Arsenic and lead were not detected in any of the samples.
- Hexavalent chromium was not detected in any of the samples.
- Concentrations of one VOC (chloroform) were detected in samples collected from MW-3 (0.25 µg/L) and MW-4 (0.17 µg/L). No other VOCs were detected in the samples.

4.4.2. Soil

Fifty-three soil samples (including five duplicate samples) from 18 soil borings and 7 monitoring well installations were analyzed for metals, VOCs, SVOCs, and PCBs. The screened analytical results are presented in Table 3.

- Concentrations of all metals (with exception to selenium) were detected in all of the soil samples collected. Arsenic concentrations exceed both published background (5.0 mg/kg) and MTCA Method B screening criteria (0.7 mg/kg) in four samples (SB-08 [0 to 1 ft. bgs], SB-10 [0 to 1 ft. bgs], SB-11 [0 to 1 ft. bgs], and SB-11 [3 to 4 ft. bgs]) at concentrations ranging from 5.2 mg/kg to 57 mg/kg. Lead was detected in SB-11 (3 to 4 ft. bgs) at a concentration (260 mg/kg) that exceeds the MTCA Method A Unrestricted Land Use criteria (250 mg/kg). No other metals exceed screening criteria.
- Concentrations of six VOCs were detected. Chlorobenzene was detected in two samples at concentrations of 0.011 mg/kg and 0.018 mg/kg; chloroform was detected in four samples at concentrations ranging from 0.011 mg/kg to 0.014 mg/kg; methylene chloride was detected in two samples at concentrations of 0.041 mg/kg and 0.046 mg/kg; tetrachloroethene was detected in three samples at concentrations ranging from 0.0052 mg/kg to 0.0085 mg/kg; trans-1,2-dichloroethene was detected in two samples at concentrations of 0.0063 mg/kg and 0.008 mg/kg; and, trichloroethene was detected in four samples at concentrations ranging from 0.0027 mg/kg to 0.016 mg/kg. The detected VOC concentrations did not exceed MTCA Method A or Method B criteria.
- Concentrations of 14 SVOCs were detected. 1-methylnaphthalene was detected in three samples at concentrations ranging from 0.0095 mg/kg to 0.014 mg/kg; 2-methylnaphthalene was detected in four samples at concentrations ranging from 0.0077 mg/kg to 0.023 mg/kg; benzo[a]anthracene was detected in four samples at concentrations ranging from 0.0079 mg/kg to 0.025 mg/kg; benzo[a]pyrene was detected in four samples at concentrations ranging from 0.0069 mg/kg to 0.018 mg/kg, benzo[b]fluoranthene was detected in three samples at concentrations ranging from 0.011 mg/kg to 0.020 mg/kg; benzo[g,h,i]perylene was detected in four samples at concentrations ranging from 0.010 mg/kg to 0.016 mg/kg; benzo[k]fluoranthene was detected in two samples at concentrations of 0.0094 mg/kg and 0.0098 mg/kg; chrysene was detected in four samples at concentrations ranging from 0.0084 mg/kg to 0.042 mg/kg; diethyl phthalate was detected in three samples at concentrations ranging from 0.020 mg/kg to 0.057 mg/kg; fluoranthene was detected in five samples at concentrations ranging from 0.0061 mg/kg to 0.034 mg/kg; indeno[1,2,3-cd]pyrene was detected in one sample at a concentration of 0.0081 mg/kg, phenanthrene was detected in four samples at concentrations ranging from 0.0068 mg/kg to 0.024 mg/kg; phenol was detected in one sample at a concentration of 0.069 mg/kg; and, pyrene was detected in three samples at concentrations ranging from 0.0083 mg/kg to 0.043 mg/kg. The detected SVOC concentrations did not exceed MTCA Method A or Method B criteria (where available).
- Concentrations of PCBs (Aroclor 1254 and Aroclor 1260) were detected in two soil samples (at 0.029 mg/kg and 0.026 mg/kg, respectively). The detected PCB concentrations did not exceed MTCA Method B criteria.

4.4.3. Investigation Derived Waste

Two composite grab samples (one liquid and one solid) collected from Investigative Derived Waste (IDW) drums during the initial field event were analyzed for metals, VOCs, SVOCs, PCBs, total cyanide, total sulfides, and pH (liquid sample only). Based on the results, the waste was non-hazardous. Analytical results from the IDW analysis and groundwater well redevelopment field events were provided to the Site and GE handled the disposal of the waste generated during the Phase II ESA investigations.

5. SUMMARY OF FINDINGS

Local Geologic and Hydrogeologic Conditions

In general, the subsurface at the Site consists of approximately 10 ft of silt with lenses of silty sand, poorly graded sand, and high plasticity clay. The building foundation is underlain with non-native silty gravel fill material extending from 1 ft to 4 ft bgs. One water-bearing zone was encountered during drilling at approximately 4 to 7 ft bgs located generally above the silty clay layer. The groundwater flow direction for the water-bearing zone is to the east-southeast at a gradient of approximately 0.8 percent.

Field Sampling Data

Groundwater

During initial groundwater monitoring well development and sampling, all groundwater monitoring wells were observed to be turbid. After development, all groundwater monitoring wells were still visually turbid with the exception of monitoring well MW-1. Measureable sediment was observed in groundwater monitoring wells MW-4, MW-5, and MW-7 during development and in MW-7 after development. No odors were observed. Purged groundwater and samples collected following development were turbid from all wells.

During the first groundwater monitoring well redevelopment and sampling event in June 2011, approximately 2 ft of sediment was removed from monitoring wells MW-5 and MW-7. Existing groundwater monitoring well EW-B was repeatedly purged dry during development and had a slow recovery rate. None of the groundwater monitoring wells exhibited turbid groundwater during sampling (all less than 10 Nephelometric Turbidity Units [NTUs]). No odors were identified.

During the second groundwater monitoring well redevelopment and sampling event in August 2011, groundwater samples from all groundwater monitoring wells were clear (less than 10 NTUs) and free of visible turbidity. No odors were identified.

Soil

Recovered soil samples were screened for organic vapor levels using a photoionization detector (PID) during drilling activities. PID readings ranged from 0 to 5.3 parts per million (ppm) during drilling activities. No odor was observed in samples collected from the soil borings or monitoring wells.

Analytical Results

Groundwater Samples

<u>Initial Groundwater Sampling Event</u>

During the initial groundwater sampling event, 10 groundwater samples (including one duplicate) collected from existing and new groundwater monitoring wells and one irrigation well sample were analyzed for 15 metals, VOCs, SVOCs, and PCBs. Detections above standards are discussed below.

- Concentrations of arsenic (seven samples, up to 0.084 milligrams per liter [mg/L]), barium, (two samples, up to 17 mg/L), beryllium (two samples, up to 0.048 mg/L), copper (two samples, up to 1.9 mg/L), and nickel (two samples, up to 1.1 mg/L) exceed MTCA Method B criteria (0.0048 mg/L, 3.2 mg/L, 0.032 mg/L, 0.64 mg/L, and 0.32 mg/L, respectively). Concentrations of chromium (four samples, up to 1.6 mg/L) and lead (three samples, up to 0.47 mg/L) exceed the MTCA Method A criteria (0.05 mg/L and 0.015 mg/L respectively).

- Concentrations of tetrachloroethene were detected in one sample (YK-MW-5 at 0.11 micrograms per liter [µg/L]) that exceeds the MTCA Method B criteria (0.081µg/L).
- Concentrations of PCBs (Aroclor 1260) were detected in one sample (YK-MW-7) at 0.27 µg/L that exceeds the MTCA Method B criteria (0.04375 µg/L).

First Groundwater Monitoring Well Redevelopment and Sampling Event

Due to detected concentrations of analytes in groundwater samples collected during the initial groundwater sampling event and the observation of significantly elevated turbidity in the samples, well redevelopment and sampling was conducted to confirm if analyte detections were associated with solids present in the groundwater samples. During this first groundwater monitoring well redevelopment and sampling event in June 2011, four groundwater samples (including one duplicate) were collected from one historical well (EW-B) and two groundwater monitoring wells (MW-5 and MW-7) installed during the Phase II. The samples were analyzed for metals and VOCs to confirm detections of those analytes in groundwater samples collected during the initial fieldwork.

Arsenic concentrations in all samples (up to 0.0017 mg/L) exceed the MTCA Method B carcinogen criteria (0.00005833 mg/L). No other detected concentrations exceed Ecology MTCA or WADOH screening criteria (where available).

Second Groundwater Monitoring Well Redevelopment and Sampling Event

Groundwater sample results from the first groundwater monitoring well redevelopment and sampling event indicated that the analyte detections from the initial groundwater sampling event were associated with solids present within the turbid samples as the analyte concentrations detected in groundwater samples from MW-5 and MW-7 following redevelopment were either non-detect or significantly less than those previously detected. A second round of groundwater well redevelopment and sampling was conducted in August 2011 to reconfirm the results of the first round of redevelopment. During the second groundwater monitoring well redevelopment and sampling event in August 2011, 10 groundwater samples (including one duplicate) collected from two historical wells (EW-A and EW-B) and seven monitoring wells (MW-1 through MW-7) installed during the Phase II were analyzed for metals and VOCs to confirm detections of those analytes in groundwater samples collected during the initial fieldwork.

No detected concentrations exceed Ecology MTCA or WADOH screening criteria (where available).

Soil Samples

Fifty-three soil samples (including five duplicate samples) from 18 soil borings and 7 monitoring well installations were analyzed for metals, VOCs, SVOCs, and PCBs. Arsenic exceeds the background concentration (5.0 mg/kg) and MTCA Method B screening criteria (0.7 mg/kg) in four samples collected from three boring locations (SB-08, SB-10, and SB-11) at concentrations ranging from 5.2 mg/kg to 57 mg/kg. The detected arsenic concentration in SB-08 was from a sample collected beneath an asphalt-paved parking area. The detected arsenic concentrations in soil borings SB-10 and SB-11 were from samples collected beneath the concrete floor of the Main Facility.

Lead was detected in one sample (SB-11) at a concentration (260 mg/kg) that exceeds the MTCA Method A screening criteria (250 mg/kg); there is no prescribed MTCA Method B screening criteria for lead. This was the only soil sample collected during the Phase II that exceeds the screening criteria for lead. The sample was collected from between 3 to 4 ft bgs beneath the concrete slab of the Main Facility. The sample above this sample in the same boring contained concentrations of lead significantly lower than MTCA Method A unrestricted land use criteria.

Investigative Derived Waste

Two composite grab samples (one liquid and one solid) collected from Investigative Derived Waste (IDW) drums during the initial field event were analyzed for metals, VOCs, SVOCs, PCBs, total cyanide, total sulfides, and pH (liquid sample only). Based on the results, the waste was non-hazardous. Analytical results from the IDW analysis and groundwater well redevelopment field events were provided to the Site and GE handled the disposal of the waste generated during the Phase II ESA investigations.

Overall Summary

GE completed a Phase II ESA of the property located at 2720, 2804-2806, and 2808 West Washington Avenue, Yakima, Washington. The primary objective of the Phase II ESA was to provide adequate coverage to investigate the potential for environmental impacts to groundwater and soil media at the Site.

VOCs, SVOCs, and PCBs were not identified above MTCA standards (where standards exist in soil). A very limited and sporadic number of metal exceedances were identified in soil with no discernible source area, including:

- Arsenic concentrations exceed both published background (5.0 mg/kg) and MTCA Method B screening criteria (0.7 mg/kg) in four samples (SB-08 [0 to 1 ft. bgs], SB-10 [0 to 1 ft. bgs], SB-11 [0 to 1 ft. bgs], and SB-11 [3 to 4 ft. bgs]) at concentrations ranging from 5.2 mg/kg to 57 mg/kg.
- Lead was detected in SB-11 (3 to 4 ft. bgs) at a concentration (260 mg/kg) that exceeds the MTCA Method A Unrestricted Land Use criteria (250 mg/kg).

The detected arsenic concentration in SB-08 was from a sample collected beneath an asphalt-paved parking area. The detected arsenic concentrations in soil borings SB-10 and SB-11 were from samples collected beneath the concrete floor of the Main Facility. SB-11 was the only soil boring location with a sample that exceeds the screening criteria for lead. The sample was collected from between 3 to 4 ft bgs beneath the concrete slab of the Main Facility. The sample above this sample in the same boring contained concentrations of lead significantly lower than MTCA Method A unrestricted land use criteria.

It should also be noted that background concentrations of lead and arsenic in soil in the Yakima area are higher than those in most other areas of the State due to the extensive use of pesticides in orchards within the Yakima basin (DOE, 1994 and Area-Wide Soil Contamination Task Force, 2003). Lead and arsenic have been detected at concentrations exceeding cleanup levels at the Apple Valley Elementary School Voluntary Cleanup Program (VCP) site located less than 5 miles northeast of the Site due to historical use of pesticides in the area. Thirty-eight out of 40 samples collected from the Apple Valley Elementary School playfield in August 2005 exceeded cleanup levels for arsenic and 23 exceeded for lead. The average arsenic concentration was 54.4 mg/kg and the maximum concentration detected was 124.2 mg/kg. The average concentration for lead was 322.4 mg/kg and the maximum concentration was 1,082.9 mg/kg (DOE, 2012). The concentrations of arsenic and lead detected at the Site are significantly less than the maximum concentrations detected at the Apple Valley Elementary School site.

Three rounds of groundwater sampling were conducted during the investigation. Due to unexpected detected concentrations of analytes in groundwater samples collected during the initial groundwater sampling event and the observation of significantly elevated turbidity in the samples, two rounds of groundwater monitoring well redevelopment and sampling confirmed that the initial detected concentrations were associated with solids present within the samples. The only unconfirmed detection following the groundwater monitoring well redevelopment and sampling events consisted of concentrations of PCBs (Aroclor 1260) detected in one sample (MW-7) at 0.27 µg/L that exceeds the MTCA Method B criteria (0.04375 µg/L).

On January 11, 2012, representatives from GE and MWH met with Ecology to discuss the results of the Phase I and Phase II ESAs for the Site. Based on the results of the Phase I and Phase II ESAs and the discussions with Ecology, follow-up actions were agreed and two supplemental investigations were conducted at the Site: 1) additional soil sampling was conducted in the vicinity of MW-7 to investigate the detected concentration of PCBs in a groundwater sample collected from that well; and, 2) soil and groundwater sampling was conducted in the vicinity of an historical underground storage tank (UST) to confirm closure of the UST. The results of the supplemental investigations have been presented to Ecology under separate covers.

7. LIMITATIONS

This Phase II ESA was conducted by MWH for the benefit of MWH's client. It is based upon a specific scope agreed on between MWH and MWH's client and, therefore, may have limitations, assumptions, and/or rely on information/data which are not obvious on the face of it. Reliance should, therefore, not be made upon this report without further consultation with MWH. The Phase II ESA was limited to the areas of concern identified during the Phase I ESA and/or the locations identified by MWH's client to establish baseline conditions. The information contained in this report reflects MWH's best judgment based on the information available at the time of report preparation, and in part on the interpretation of data from discrete sampling locations that may not represent conditions at unsampled locations. This Phase II ESA was a limited inquiry and additional work would be necessary to identify all potential environmental issues at the Site.

Any interpretations and recommendations given in this report represent the opinions of MWH in accordance with a specific brief and as such does not necessarily address all aspects which may surround the subject area. MWH's liability under this report is limited to the agreement with its client. No liability or duty of care is accepted by MWH with respect to use of this report by any other person. Any reliance placed upon any matters upon which MWH has reported by any person other than MWH's client is done so entirely at their own risk and without recourse to MWH or any of its employees or agents for any loss, damage or expense of whatsoever nature which may be caused by any use they choose to make of this report.

Notes

1.23 Detected concentration

1.23 Detected concentration exceeds WADOE MTCA Method B Standard Formula Value and Yakima Basin Background Concentration

1.23 Detected concentration exceeds WADOE MTCA Method A and Yakima Basin Background Concentration (No MTCA Method B values for this analyte)

1.23 Detected concentration exceeds Yakima Basin Background Concentration only

[1] WADOE MCTA Method A Standard Formula Values for Soil

[2] WADOE MTCA Method B Standard Formula Value for Soil, Direct Contact (ingestion only), Unrestricted Land Use

[3] Source: Natural Background Soil Metals Concentrations in Washington State, October 1994, Charles San Juan

[4] YK-MW-31 (0-1) is a duplicate for YK-MW-3 (0-1)

EPH Extractable petroleum hydrocarbons

mg/kg milligrams per kilogram

µg/kg micrograms per kilogram

U Constituent not detected at or above the associated method detection limit (MDL)

J Sample concentration detected between the associated MDL and reporting limit (RL)

B Analyte detected in associated laboratory blank.

Y Fuel compound is a complex hydrocarbon mixture.

* Laboratory control spike (LCS) or LCS duplicate associated with the primary sample exceeded the laboratory established control limit

^ Instrument QC related to the primary sample was outside laboratory established control limits

- No screening level for this analyte

TABLE 3: SUMMARY OF SOIL ANALYTICAL RESULTS
Phase II Environmental Site Assessment
GE Aviation - Yakima, WA

Key:

1.23 Detected concentration

1.23 Detected concendtation exceeds WADOE MTCA Method B Standard Formula Value and Yakima Basin Background Con

1.23 Detected concendtation exceeds WADOE MTCA Method A and Yakima Basin Background Concentration (No MTCA Met

1.23 Detected concentration exceeds Yakima Basin Background Concentration only

Analyte (by Group)	Unit	WADOE MTCA				Background	YK-SB-14 (4-5)	YK-SB-15 (0-1)	YK-SB-15 (4-5)	YK-SB-16 (0-1)	YK-SB-16 (3-4)	YK-SB-17 (0-1)	YK-SB-17 (0-1)D	YK-SB-17 (3-4)	YK-SB-18 (0-1)	YK-SB-18 (3-4)

DAILY FIELD REPORT NO. 01

GE Aviation
Yakima, WA Phase II ESA
Yakima, Wa

DATE: 3/10/2011
WEATHER: Sunny, windy, 50ºF
PROJECT NO.: 1010884.010102

TOTAL HOURS WORKED: 44.0
Everyone Safely Off Site: YES

ON-SITE PERSONNEL (name, affiliation, project title, hours on site)

Steve Wiskes, MWH, FTL, 11 hrs
Justin Peterson, MWH, Geologist, 11 hrs
Melissa Sabga, MWH, Geologist, 11 hrs
Simon Bluestone, MWH, PM, 11 hrs

OTHER SUBCONTRACTORS (name, affiliation, purpose of visit, hours on site)

Rich Jessen, Utilities Plus, locate onsite utilities, 8.5 hrs
Brook King, Cascade Drilling, driller, 10 hrs
Todd Mecham, Cascade Drilling, driller, 10 hrs
Chris Baker, Cascade Drilling, driller, 6.5 hrs
Zane Shadrick, Cascade Drilling, driller, 6.5 hrs
Joe Stalock, Cascade Drilling, driller, 6.5 hrs

EQUIPMENT & SUPPLIES (type, usage)

25 acetate liners for hydraulic probe
150 lbs of bentonite for well abandonment
Mini Rae 3000 for soil screening and health and safety screening
Water level indicator

DESCRIPTION OF TASKS PERFORMED

1 Marked 26 boring locations
2 26 boring locations cleared by utility clearance
3 Collect 15 soil samples for VOC, SVOC, PCBs, and metals and overnight to Test America for 1 day TAT
4 Abandon and patch 6 soil boring locations
5 Measure water levels and total depths in two existing wells on airport property

PROJECT NOTES (health and safety, problems encountered/corrective actions, etc.)

1 Hydraulic probe too big for inside borings, drillers will bring a smaller one onsite
2 Water is shallow at site, wells will be installed at 15 ft maximum
3 Only two soil samples to be collected from soil borings due to shallow groundwater

IDW TRACKING (ID, container size and type, contents, labels, remaining capacity (%))

1 55-gal drum of soils (1/8 full) from MW-1, MW-2, MW-3, MW-4, SB05, SB06, SB08, SB09, SB14, and SB15

NEXT DAY'S PLANNED ACTIVITIES

Joseph Rock, MWH, On-Site Representative, 12 hrs

OTHER SUBCONTRACTORS (name, affiliation, purpose of visit, hours on site)

None

EQUIPMENT & SUPPLIES (type, usage)

PVC pipe, surge block, submersible Grundfos pump, 2-stage pump, steel bailer, Horiba water quality meter, water level indicator, PID, Hanna turbidity meter

DESCRIPTION OF TASKS PERFORMED

1. Held brief safety meeting to discuss safety concerns and scope of work
2. Developed Existing Well B (EW-B) using surge block and steel bailer. ~ 5 gal water bailed, well went dry
3. Developed MW-05 using surge block and steel bailer; ~35 gal bailed; sediment laden water
4. Developed MW-07 using surge block and steel bailer; ~35 gal bailed; sediment laden water
5. Continued development of MW07 using 2-stage pump; ~ 20 gal removed; geochemical parameters collected
6. Continued development of MW05 using 2-stage pump; ~30 gal removed; geochemical parameters collected

PROJECT NOTES (health and safety, problems encountered/corrective actions, etc.)

1. ~ 2 feet of sediment was recorded in MW05 and MW07 prior to development
2. EW-B bailed dry; access restricted to well during remainder of day
3. Accumulated sediment in MW05 and MW07 removed, solid well bottom observed; geochemical parameters including turbidity collected; purge water cleared at end of pumping in MW05 and MW07

IDW TRACKING (ID, container size and type, contents, remaining capacity (%))

IDW-1, 55 gal drum, purge water/decontamination fluids, 0%
IDW-2, 55 gal drum, purge water/decontamination fluids, 0%
IDW-3, 55 gal drum, purge water/decontamination fluids, 30%
IDW-4, 55 gal drum, PPE/debris, 50%

NEXT DAY'S PLANNED ACTIVITIES

Complete groundwater sampling at EW-B, MW05, MW07

PREPARED BY: Joseph Rock, MWH

REVIEWED BY: Mike Cira, MWH

DAILY FIELD REPORT LOG

Report No.	Date	Activity	Description
01	6/1/2011	Well Development	Well development of EW-B, MW05, MW-07

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 1 **Survey Date:** 01 Jun 2011 **Photo Location:** Existing Well B **Direction:** East **Observation:** Well development at Existing Well B (EW-B) consisted of surging with PVC pipe/surge block for 30 minutes and bailing well dry.	
Photograph ID: 2 **Survey Date:** 01 Jun 2011 **Photo Location:** Existing Well B **Direction:** East **Observation:** View of PVC pipe used for surging.	

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 3 **Survey Date:** 01 Jun 2011 **Photo Location:** Existing Well B **Direction:** Downward **Observation:** View of surge block used for surging during well development.	
Photograph ID: 4 **Survey Date:** 01 Jun 2011 **Photo Location:** Existing Well B **Direction:** Downward **Observation:** A steel bailer was used to remove sediment laden water following surging with the surge block. EW-B went dry after bailing 5 gal.	

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 5 **Survey Date:** 01 Jun 2011 **Photo Location:** Existing Well B **Direction:** Downward **Observation:** Bailed water from EW-B was turbid; however not as turbid as MW05 and MW07. No sediment was observed at bottom of well casing in EW-B.	
Photograph ID: 6 **Survey Date:** 01 Jun 2011 **Photo Location:** MW05 **Direction:** North **Observation:** View of the well development set-up at MW05.	

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 7 **Survey Date:** 01 Jun 2011 **Photo Location:** MW07 **Direction:** Downward **Observation:** Decontamination procedures during well development consisted of an alconox rinse and triple deionized water rinse of equipment.	
Photograph ID: 8 **Survey Date:** 01 Jun 2011 **Photo Location:** MW05 **Direction:** North **Observation:** Depth to groundwater and total depth were measured in all site wells prior to development of EW-B, MW05, and MW07. Approximately 2 feet of sediment was observed in MW05 and MW07.	

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 9

Survey Date:
01 Jun 2011

Photo Location:
MW05

Direction:
West

Observation:
View of well development set-up at MW05. Purge water was contained in buckets and transferred to 55-gallon drums, which were transferred to the hazardous waste storage area at the end of the day.

Photograph ID: 10

Survey Date:
01 Jun 2011

Photo Location:
MW05

Direction:
Downward

Observation:
A 2-stage pump was used to develop MW05 and MW07 after surging with the surge block. The pump speed was approximately 1.5 gal/min. Drawdown was observed in MW05 at t his rate, but not in MW07.

Client:	**GE Aviation**	**Site Location:**	**Yakima, WA**
Project:	**Phase II Follow-up Investigation**	**Assessor:**	**Joe Rock, Chris Nancarrow**

Photograph ID: 11 **Survey Date:** 01 Jun 2011 **Photo Location:** MW05 **Direction:** West **Observation:** Final depth to water and total depth measurements were collected at MW05 and MW07. Access to EW-B was restricted. Solid well bottoms were observed in MW05 and MW07 following development. Geochemical parameters were collected during pumping. Purge water became clear in MW05 and MW07.	
Photograph ID: 12 **Survey Date:** 01 Jun 2011 **Photo Location:** MW07 **Direction:** Downward **Observation:** Decontamination of equipment was conducted before and between each well.

TOTAL DAILY HOURS WORKED: 26.0
TOTAL CUMULATIVE HOURS WORKED: 90.0
Everyone Safely Off Site: YES

ON-SITE PERSONNEL (name, affiliation, project title, hours on site)

Christine Nancarrow, MWH, On-Site Representative, 13 hrs
Suzanne Anderson, MWH, On-Site Representative, 13 hrs

OTHER SUBCONTRACTORS (name, affiliation, purpose of visit, hours on site)

None

EQUIPMENT & SUPPLIES (type, usage)

PVC pipe, surge block, geo-squirt pump, steel bailer, YSI water quality meter, water level indicator, PID, Hanna Turbidity Meter
GED Low-flow pump, air compressor, generator

DESCRIPTION OF TASKS PERFORMED

1 Held brief safety meeting to discuss safety concerns and scope of work
2 Decontaminated equipment and collected equipment blank EB-01-080411.
3 Set up on MW-4 for groundwater sampling
4 Began groundwater sampling on MW-4 until compressor motor malfunctioned; troubleshooting.
5 Replaced air compressor
6 Collected groundwater sample from MW-4 (MW-04-080411)
7 Developed Existing Well-A using surge block and stainless steel bailer; ~ 15 gallons bailed; sediment laden water
8 Continued development of Existing Well-A using geo-squirt pump; ~ 30 gal removed; geochemical parameters collected
9 IDW Management

PROJECT NOTES (health and safety, problems encountered/corrective actions, etc.)

1 Low turbidity measurements (<10 ntu) observed at Existing Well-A during geo-squirt pump development
2 Access was granted to airport property from 11:00 to 3:30.
3 At the time of completion for development of MW-1, no sampling could be done and shipped to meet the 24 hour hold time for Cr VI.

IDW TRACKING (ID, container size and type, contents, remaining capacity (%))

YK-SB13 (0-1)	1410	3/11/11
YK-SB13 (7-8)	1430	3/11/11
		3/11/11

Samples listed above were shipped to Test America via Fed Ex at approximately 1600.

Sample ID	Time	Date
YK-SB11 (0-1)	1730	3/11/11
YK-SB11 (3-4)	1750	3/11/11
YK-SB12 (0-1)	1755	3/11/11
YK-SB10 (0-1)	1817	3/11/11

Note:
Indoor samples were difficult to drill. Refusal sample

1830 MWH & Cascade left site safely

1010884 GE AVIATION, YAKIMA WA 3/12/11

0700 MWH & Cascade Drilling on-site safety Tailgate Safety meeting

0745 Cascade Drilling began to patch holes inside the facility (SB10, SB11, SB12) and began installing and developing monitoring wells.

0745 Justin Peterson (MWH) left for Tacoma to drop samples off at Test America

0830 Cascade Drilling completed fill of indoor boring holes (used cement only due to the shallowness of hole)

Sample ID	Time	Date
Irrigation Well	1330	3/12/11

Drillers completed well installation at 1330.
Drillers completed well development at 1600.
Drillers left site safely at 1630.

Sample ID	Notes	Time	Date
YK-MW-8A	(Adj. Property near ent.)	1540	3/12/11
YK-MW-8B	(Adj. Property mid property)	1700	3/12/11
Trip Blank			3/12/11

MWH left site safely 1730

1010884 GE AVIATION, YAKIMA WA 3/13/11

37°F Overcast, no wind

730am MWH arrived on-site safety

740am Tailgate Health and safety meeting

WELL/DRILLHOLE/BOREHOLE ABANDONMENT

MWH

Project Name: GE Aviation Phase II | Well No.: SB17
Location: Yakima, WA | Project No.: 1010884.010102
Supervised By: Justin Peterson | Checked By: Steve Wiskes

(1) GENERAL INFORMATION

Well/Drillhole/Borehole Location
County: Yakima

___ 1/4 of ___ 1/4 of Sec. ___ ; T ___ N; R. ___ ☐ E ☐ W

(If applicable)
___ Gov't Lot ___ Grid Number

Grid Location
___ ft ☐ N ☐ S, ___ ft. ☐ E ☐ W

Civil Town Name

Street Address of Well
2720 West Washington Avenue

City, Village
Yakima, WA

(2) FACILITY NAME

Original Well Owner (If Known)

Present Well Owner
GE Aviation

Street or Route
2720 W Wshington Avenue

City, State, Zip Code
Yakima, WA 98903

Facility Well No. and/or Name (If Applicable)
SB17

Reason for Abandonment
soil sampling completed

Date of Abandonment
March 11, 2011

WELL/DRILLHOLE/BOREHOLE INFORMATION

(3) Original Well/Drillhole/Borehole Construction Completed on

(Date) 3/11/2011

☐ Monitoring Well
☐ Water Well
☐ Drillhole
■ Borehole

Construction Report Available?
☐ Yes ■ No

Construction Type:
☐ Drilled ☐ Driven (Sandpoint) ☐ Dug
■ Other (Specify) hydraulic probe

Formation Type:
■ Unconsolidated Formation ☐ Bedrock

Total Well Depth (ft.) 10 Casing Diameter (ins.) 2
(From groundsurface)

Casing Depth (ft.) Not applicable

Was Well Annular Space Grouted? ☐ Yes ☐ No ☐ Unknown
If Yes, To What Depth? ___ Feet

(4) Depth to Water (Feet) ___

Pump & Piping Removed? ☐ Yes ☐ No ■ Not Applicable
Liner(s) Removed? ☐ Yes ☐ No ■ Not Applicable
Screen Removed? ☐ Yes ☐ No ■ Not Applicable
Casing Left in Place? ☐ Yes ■ No
If No, Explain soil boring - no casing used

Was Casing Cut Off Below Surface? ☐ Yes ☐ No
Did Sealing Material Rise to Surface? ■ Yes ☐ No
Did Material Settle After 24 Hours? ☐ Yes ■ No
If Yes, Was Hole Retopped? ☐ Yes ☐ No

(5) Required Method of Placing Sealing Material
■ Conductor Pipe-Gravity ☐ Conductor Pipe-Pumped
☐ Dump Bailer ☐ Other (Explain)

(6) Sealing Materials

☐ Neat Cement Grout
☐ Sand-Cement (Concrete) Grout
☐ Concrete
☐ Clay-Sand Slurry
☐ Bentonite-Sand Slurry
■ Chipped Bentonite

For monitoring wells and monitoring well boreholes only
☐ Bentonite Pellets
☐ Granular Bentonite
☐ Bentonite-Cement Grout

(7) Sealing Material Used	From (Ft.)	To (Ft.)	No. Yards, Sacks Sealant or Volume	Mix Ratio or Mud Weight
3/8 inch bentonite chips	Surface	10	25 lbs	

(8) Comments:

(9) Name of Person or Firm Doing Sealing Work
Brook King

Signature of Person Doing Work | Date Signed

Street or Route
13600 Southeast Ambler Road

Telephone Number
(503) 775-4118

City, State, Zip Code
Clackamas, Oregon 97015

TAILGATE SAFETY MEETING FORM

Date: 3/10/11 Time: 10:30 Job Number: 1010884

Client: GG - Aviation

Site Specific Location: Yakima, WA

Safety Topics Presented

Protective Clothing/Equipment: hard hat, steel toe, safety glasses

Chemical Hazards: – solvents

Physical Hazards: slip, trip, fall, Rotating equip

Special Equipment: hydraulic probe, drill rig

Other (IIPP):

Emergency Procedures:

Hospital: Yakima Memorial Phone: (509) 575-6000 Ambulance Phone: 911

Hospital Address and Route: left on W. Washington, Right on S 40th Ave, Right on Nelson Dr

MONITORING WELL DEVELOPMENT SUMMARY

MWH

Project Name	GE Aviation Phase II	Well No.	MW-7
Location	Yakima, WA	Project No.	1010884.0101020
Developed By	Tyler Day/Cascade Drilling	Checked By	Steve Wiskes

1. Can this well be purged dry? ☐ Yes ■ No

2. Well development method

- surged with bailer and bailed ☐
- surged with bailer and pumped ☐
- surged with block and bailed ☐
- surged with block and pumped ■
- surged with block, bailed and pumped ☐
- compressed air ☐
- bailed only ☐
- pumped only ☐
- pumped slowly ☐
- Other ☐

3. Time spent developing well: 30 min.

4. Total well depth (TOC) (From well construction summary): 14.7 ft.

Measured well depth (Before): 14.7 ft.

Measured well depth (After): 14.7 ft.

5. Inside diameter of well: 2 in.

6. Volume of water in filter pack and well casing: 1.6 gal.

7. Volume of water removed from well: 15.0 gal.

Relative recovery rate: Unknown ft. per. _____ min.

8. Volume of water added (if any): 0. gal.

9. Source of water added: _____

	Before Development	After Development
10 Depth to Water (from top of well casing) a.	6.69 ft.	8.39 ft.
Date: b.	3 / 12 / 11 (mm dd yy)	3 / 12 / 11 (mm dd yy)
Time: c.	11 : 50 ■ a.m. ☐ p.m.	13 : 20 ■ a.m. ☐ p.m.
11 Sediment in well bottom:	12.0 inches	2.0 inches
12 Water Observations:	Clear ☐ Turbid ■ (Describe)	Clear ☐ Turbid ■ (Describe)
Color	brown	brown
Odor	none	none
Turbidity	very turbid	very
HNu		

Filter Pack Vol. (gallons) $0.057(R^2 - r^2)ls$ = 0.4

	OTHER (SPECIFY):	DTB	14.92	15.07		

REMARKS/COMMENTS [8/2/11] 1126 Arrive at MW-3. Setup location. [1137] Begin surging 3' intervals for 5 min each. [1149-1158] Bailed 5 gallons. [1206] Surge entire screen. [1219] Bail 5 gallons. [1234] Surge bottom half/top half. [1247] Bail 5 gallons. Set up drums and gw equipment after a lunch break. The distance between the well and the drums is too long for standard setup and a two-pump set up is created. [1547] - Begin purging well from the bottom. [1553] - malfunction with second pump, troubleshooting required. Pump restarted @ 1657 @ bottom. Middle purged [1701 - 1713]. Top purged [1716 - 1722]. @1730 breakdown site.

NOTE:
Horizontal Coordinates (Northings and Eastings) are Washington State Plane Coordinates, Zone South, North American Datum 1983 (NAD83). Coordinates were determined from static GPS network observations constrained to National Geodetic Survey Monuments: DJ6123, DG7408, DK4105, DK4088, DG9893 and DF4068. Multiply all distances shown by 0.99988661 to obtain ground level distances.

Elevations are referenced to North American Vertical Datum of 1988 (NAVD88).

WASHINGTON STATE DEPARTMENT OF ECOLOGY

STATE OF WASHINGTON
CERTIFICATE OF WATER RIGHT

Document Title: Certificate of Water Right

Agency: Department of Ecology
Central Regional Office
15 West Yakima Avenue, Suite 200
Yakima, WA 98902-3401

Applicant: Smiths Aerospace Inc
2720 W Washington Avenue
Yakima WA 98903

Reference Number:

PRIORITY DATE	APPLICATION NUMBER	PERMIT NUMBER	CERTIFICATE NUMBER
August 13, 1986	G4-29043	G4-29043P	G4-29043C

This is to certify that the herein named applicant has made proof to the satisfaction of the Department of Ecology of a right to the use of the public waters of the State of Washington as herein defined, and under and specifically subject to the provisions contained in the Permit issued by the Department of Ecology, and that said right to the use of said waters has been perfected in accordance with the laws of the State of Washington, and is hereby confirmed by the Department of Ecology and entered of record as shown, but is limited to an amount actually beneficially used.

PUBLIC WATERS TO BE APPROPRIATED

CONTINUED LEGAL DESCRIPTION FOR LOCATION OF DIVERSION/WITHDRAWAL

475 feet north and 1425 feet east of the west quarter corner of Section 35.

CONTINUED LEGAL DESCRIPTION FOR PROPERTY ON WHICH WATER IS TO BE USED

That part of the W½SE¼NW¼ of Section 35, T. 13 N., R. 18 E.W.M., lying S of west Washington Avenue and lying N of a line beginning at a point on the west line of said subdivision 181.05 feet N of the SW corner thereof; thence southeasterly to a point on the South line of said subdivision 499.98 feet E of the W corner thereof:

EXCEPT the south 30 feet for City Street; AND EXCEPT those portions conveyed to the City of Yakima by Deeds recorded under Auditor's File No. 2139460 (Washington Avenue Relocation), and 2216444 (South 28th Avenue).

PROVISIONS

All conditions and requirements contained in reports of examination or permits previously issued apply to this certificate unless specifically noted below.

This authorization to use public waters of the state is classified as a FAMILY FARM PERMIT in accordance with Chapter 90.66 RCW (Initiative Measure No. 59). This means the land being irrigated under this authorization shall comply with the following definition: Family Farm - a geographic area including not more than 6,000 acres of irrigated agricultural lands, whether contiguous or noncontiguous, the controlling interest in which is held by a person having a controlling interest in no more than 6,000 acres of irrigated agricultural lands in the State of Washington which are irrigated under water rights acquired after December 8, 1977. Furthermore, the land being irrigated under this authorization must continue to conform to the definition of a family farm.

A suitable measuring device approved by the Department of Ecology shall be installed and maintained in accordance with WAC 173-173.

The right to use of the water aforesaid hereby confirmed is restricted to the lands or place of use herein described, except as provided in RCW 90.03.380, 90.03.390, and 90.44.100.

This certificate of water right is specifically subject to relinquishment for non-use of water as provided in RCW 90.14.

Given under my hand and the seal of this office at Yakima, Washington.
this 13th day of July 2004.

WATER WELL REPORT
STATE OF WASHINGTON

Application No. G4-29043
Permit No.

(1) OWNER: Name Decoto Aircraft, Inc. Address 2801 West Washington Yakima

(2) LOCATION OF WELL: County Yakima SE ¼ NW ¼ Sec 25 T. 13 N., R. 18 W.M.
Bearing and distance from section or subdivision corner Parcel #181335-24031

(3) PROPOSED USE: Domestic ☐ Industrial ☐ Municipal ☐ Irrigation ☒ Test Well ☐ Other ☐

(4) TYPE OF WORK: Owner's number of well (if more than one)
New well ☒ Method: Dug ☐ Bored ☐
Deepened ☐ Cable ☐ Driven ☒
Reconditioned ☐ Rotary ☒ Jetted ☐

(5) DIMENSIONS: Diameter of well 6 inches.
Drilled 160 ft. Depth of completed well 160 ft.

(6) CONSTRUCTION DETAILS:
Casing installed: 6 " Diam. from 0 ft. to 109 ft.
Threaded ☐ " Diam. from ft. to ft.
Welded ☒ " Diam. from ft. to ft.

Perforations: Yes ☐ No ☒
Type of perforator used
SIZE of perforations in. by in.
perforations from ft. to ft.
perforations from ft. to ft.
perforations from ft. to ft.

Screens: Yes ☐ No ☒
Manufacturer's Name
Type Model No
Diam. Slot size from ft. to ft.
Diam. Slot size from ft. to ft.

Gravel packed: Yes ☐ No ☒ Size of gravel:
Gravel placed from ft. to ft.

Surface seal: Yes ☒ No ☐ To what depth? 30 ft.
Material used in seal Bentonite
Did any strata contain unusable water? Yes ☐ No ☒
Type of water? Depth of strata
Method of sealing strata off

(7) PUMP: Manufacturer's Name Red Jacket
Type: Submersible H.P. 3

(8) WATER LEVELS: Land-surface elevation above mean sea level ft.
Static level 12 ft. below top of well Date 8-6-86
Artesian pressure lbs. per square inch Date
Artesian water is controlled by (Cap, valve, etc.)

(9) WELL TESTS: Drawdown is amount water lowered below static level
Was a pump test made? Yes ☒ No ☐ If yes, by whom?
Yield: gal/min. with ft. drawdown after hrs.
" " " " "
" " " " "
Recovery data (time taken as zero when pump turned off) (water level measured from well top to water level)

Time	Water Level	Time	Water Level	Time	Water Level

Date of test August 6, 1986
Bailer test 150 gal./min. with 40 ft. drawdown after 1 hrs.
Artesian flow g.p.m. Date
Temperature of water Was a chemical analysis made? Yes ☐ No ☒

(10) WELL LOG:
Formation: Describe by color, character, size of material and structure, and show thickness of aquifers and the kind and nature of the material in each stratum penetrated, with at least one entry for each change of formation.

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

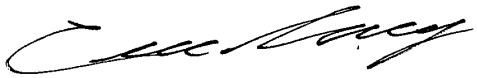
ANALYTICAL REPORT

Job Number: 580-24912-1

Job Description: Yakima, WA Phase II

For:
MWH Americas Inc
5100 SW Macadam Ave.
Ste 420
Portland, OR 97239

Attention: Mr. Joseph M Rock



Approved for release.
Curtis Armstrong
Project Manager I
3/14/2011 5:01 PM

Curtis Armstrong
Project Manager I

TestAmerica Seattle is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: MWH Americas Inc

Project: Yakima, WA Phase II

Report Number: 580-24912-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interfererences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/11/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.5 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 03/11/2011 and analyzed on 03/11/2011 and 03/13/2011.

Several analytes were detected in method blank MB 580-82103/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Surrogate recovery of Ethylbenzene-d10 for the following samples was outside the upper control limit: YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 (4-5) (580-24912-15), YK-SB09 D(0-1) (580-24912-14), YK-SB5 (0-1) (580-24912-11). These samples did not contain any target analytes; therefore, re-extraction and/or re-analysis were not performed. The affected surrogates were flagged "X."

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 03/11/2011 and analyzed on 03/13/2011 and 03/14/2011.

Several analytes failed the recovery criteria low for the MS of sample YK-SB09 (4-5)MS (580-24912-15) in batch 580-82179.

Several analytes failed the recovery criteria low for the MSD of sample YK-SB09 (4-5)MSD (580-24912-15) in batch 580-82179.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 03/13/2011 and analyzed on 03/14/2011.

Surrogate recovery for the following sample(s) was outside control limits:580-24912-6. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No other difficulties were encountered during the PCBs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICPMS)

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for total metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 03/11/2011 and analyzed on 03/14/2011.

Molybdenum was detected in method blank MB 580-82127/19-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

Antimony and Barium failed the recovery criteria low for the MS of sample YK-MW-1 (0-1)MS (580-24912-1) in batch 580-82234.

Antimony failed the recovery criteria low for the MSD of sample YK-MW-1 (0-1)MSD (580-24912-1) in batch 580-82234.

Arsenic, Chromium, Copper, Lead, Nickel and Zinc exceeded the rpd limit for the duplicate of sample YK-MW-1 (0-1)DU (580-24912-1).

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 03/11/2011 and analyzed on 03/14/2011.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples YK-MW-1 (0-1) (580-24912-1), YK-MW-1 (4-5) (580-24912-2), YK-MW-1 (4-5) Dup (580-24912-3), YK-MW-2 (0-1) (580-24912-4), YK-MW-2 (4-5) (580-24912-5), YK-MW-3 (0-1) (580-24912-6), YK-MW-31 (0-1) (580-24912-7), YK-MW-3 (4-5) (580-24912-8), YK-MW-4 (0-1) (580-24912-9), YK-MW-4 (4-5) (580-24912-10), YK-SB5 (0-1) (580-24912-11), YK-SB05 (5-6) (580-24912-12), YK-SB09 (0-1) (580-24912-13), YK-SB09 D(0-1) (580-24912-14) and YK-SB09 (4-5) (580-24912-15) were analyzed for percent solids in accordance with EPA SW846 3550C. The samples were analyzed on 03/11/2011.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: MWH Americas Inc Job Number: 580-24912-1

Lab Section	Qualifier	Description
GC/MS VOA		
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC/MS Semi VOA		
	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	X	Surrogate is outside control limits
Metals		
	B	Compound was found in the blank and sample.
	F	Duplicate RPD exceeds the control limit
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	F	MS or MSD exceeds the control limits
	W	PS: Post-digestion spike was outside control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	no
There are no discrepancies between the sample IDs on the containers and the COC.	False	Several discrep. on Sx-1 --- -5 see NCM
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

TestAmerica Seattle is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: MWH Americas Inc

Project: Yakima, WA Phase II

Report Number: 580-24938-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interfererences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/12/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.6 and 3.8 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-Methanol Blank (580-24938-9), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38), YK-SB10(0-1) (580-24938-39) and YK-Methanol Blank (580-24938-40) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 03/12/2011 and analyzed on 03/12/2011, 03/13/2011 and 03/15/2011.

The weight of samples YK-MW-5(2-3) (580-24938-16), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB01(4-5) (580-24938-27), YK-SB04(4-5) (580-24938-33), YK-SB10(0-1) (580-24938-39), YK-SB11(0-1) (580-24938-36), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35) exceeded the volume of methanol by greater than 50%.

Several analytes were detected in method blank MB 580-82175/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Hexachlorobutadiene and Tetrachloroethene were detected in method blank MB 580-82176/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Surrogate recovery of Ethylbenzene-d10 for the following samples and LCS was outside the upper control limit: (580-24938-1 MS), (580-24938-21 MS), (580-24938-21 MSD), (LCS 580-82175/2-A), (LCS 580-82176/2-A), YK-MW-6(4-5)D (580-24938-11), YK-MW-6(0-1) (580-24938-24), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB04(4-5) (580-24938-33) and YK-SB15(4-5) (580-24938-8). As all samples did not contain any

target analytes above the RL, re-extraction and/or re-analysis was not performed. The affected surrogates were flagged "X."

The recovery of Chlorobenzene in the laboratory control sample (LCS) associated with samples (580-24938-1 MS), (580-24938-1 MSD), (580-24938-21 MS), (580-24938-21 MSD), (LCS 580-82175/2-A), (LCS 580-82176/2-A), YK-Methanol Blank (580-24938-9), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB07(0-1) (580-24938-12), YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-SB17(3-4) (580-24938-21) YK-SB10(0-1) (580-24938-39), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) recovered above QC limits. There were no target analyte detections above the RL in any associated samples; therefore, the data have been reported.

Surrogate recovery of Ethylbenzene-d10 for the following sample was outside the upper control limit: YK-SB10(0-1) (580-24938-39). This sample did not contain any target analytes above 1/2 the RL, with the exception of Trichloroethene, which was below the client provided action limit of 11 mg/Kg; therefore, re-extraction and/or re-analysis was not performed. The affected surrogate was flagged "X."

Surrogate recovery of Ethylbenzene-d10 for the following samples was outside the upper control limit: YK-MW-5(2-3) (580-24938-16), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1)D (580-24938-20). This samples did not contain any target analytes above the RL, with the exception of Methylene Chloride, which were below the client specified action limit of 133.33 mg/Kg; therefore, re-extraction and/or re-analysis was not performed. The affected surrogates were flagged "X."

No other difficulties were encountered during the VOC analyses.

The recovery of CCC Ethylbenzene (20.6%) in the continuing calibration verification (CCV) for analytical batch 580-82178 was above the upper control limit (20%). As the recovery of all target analytes were either within 20%D or were biased high with no associated sample detections (flagged "^"), the data have been reported.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) and YK-SB10(0-1) (580-24938-39) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 03/12/2011 and analyzed on 03/14/2011.

Diethyl phthalate was detected in method blank MB 580-82163/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Nitrobenzene-d5 failed the surrogate recovery criteria high for YK-SB17(3-4) (580-24938-21). Terphenyl-d14 failed the surrogate recovery criteria low for YK-SB14(4-5)MSD (580-24938-4MSD).

A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 4 analytes to recover outside criteria for this method when a full list spike is utilized as long as the spike is within marginal exceedance limits. The LCS/LCSD associated with batch 82163 had 3 analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and *qualified.

2,4-Dinitrophenol and Benzoic acid failed the recovery criteria low for the MS of sample YK-SB18(0-1)MS (580-24938-22) in batch 580-82189. Several analytes failed the recovery criteria high.

Several analytes failed the recovery criteria low for the MSD of sample YK-SB18(0-1)MSD (580-24938-22) in batch 580-82189. Benzo[g,h,i]perylene exceeded the rpd limit.

Several analytes failed the recovery criteria low for the MS of sample YK-SB14(4-5)MS (580-24938-4) in batch 580-82194.

Several analytes failed the recovery criteria low for the MSD of sample YK-SB14(4-5)MSD (580-24938-4) in batch 580-82194. Several analytes exceeded the rpd limit.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) and YK-SB10(0-1) (580-24938-39) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 03/12/2011 and 03/14/2011 and analyzed on 03/13/2011, 03/14/2011 and 03/15/2011.

All samples required a sulfuric acid clean-up to reduce matrix interferences.

Surrogate recovery for the following samples was outside control limits: 580-24938-1 through 580-24938-22, 580-24938-24 through 580-24938-33 and 580-24938-37. Evidence of matrix interference is present was confirmed by re-extraction and reanalysis. Samples were qualified “XI”

Because of the limited volume of sample YK-SB12(0-1) (580-24938-38), the extraction was performed with only 5 grams of soil, not 10 grams, as specified by the SOP. Batch 82195.

No other difficulties were encountered during the PCBs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICPMS)

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) and YK-SB10(0-1) (580-24938-39) were analyzed for total metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 03/12/2011 and analyzed on 03/14/2011.

Antimony and Tin were detected in method blank MB 580-82169/23-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Barium, Tin and Zinc were detected in method blank MB 580-82170/23-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Barium failed the recovery criteria low for the MS of sample YK-SB08(0-1)MS (580-24938-1) in batch 580-82234.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1)

(580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) and YK-SB10(0-1) (580-24938-39) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 03/12/2011 and analyzed on 03/14/2011.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples YK-SB08(0-1) (580-24938-1), YK-SB08(4-5) (580-24938-2), YK-SB14(0-1) (580-24938-3), YK-SB14(4-5) (580-24938-4), YK-SB06(0-1) (580-24938-5), YK-SB06(4-5) (580-24938-6), YK-SB15(0-1) (580-24938-7), YK-SB15(4-5) (580-24938-8), YK-MW-6(4-5) (580-24938-10), YK-MW-6(4-5)D (580-24938-11), YK-SB07(0-1) (580-24938-12), YK-MW-7(0-1) (580-24938-13), YK-MW-7(4-5) (580-24938-14), YK-MW-5(0-1) (580-24938-15), YK-MW-5(2-3) (580-24938-16), YK-SB16(0-1) (580-24938-17), YK-SB16(3-4) (580-24938-18), YK-SB17(0-1) (580-24938-19), YK-SB17(0-1)D (580-24938-20), YK-SB17(3-4) (580-24938-21), YK-SB18(0-1) (580-24938-22), YK-SB18(3-4) (580-24938-23), YK-MW-6(0-1) (580-24938-24), YK-SB07(3-4) (580-24938-25), YK-SB01(0-1) (580-24938-26), YK-SB01(4-5) (580-24938-27), YK-SB02(0-1) (580-24938-28), YK-SB02(3-4) (580-24938-29), YK-SB03(0-1) (580-24938-30), YK-SB03(3-4) (580-24938-31), YK-SB04(0-1) (580-24938-32), YK-SB04(4-5) (580-24938-33), YK-SB13(0-1) (580-24938-34), YK-SB13(7-8) (580-24938-35), YK-SB11(0-1) (580-24938-36), YK-SB11(3-4) (580-24938-37), YK-SB12(0-1) (580-24938-38) and YK-SB10(0-1) (580-24938-39) were analyzed for percent solids in accordance with EPA SW846 3550C. The samples were analyzed on 03/12/2011.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

DATA REPORTING QUALIFIERS

Client: MWH Americas Inc Job Number: 580-24938-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	*	LCS or LCSD exceeds the control limits
	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	*	LCS or LCSD exceeds the control limits
	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	F	RPD of the MS and MSD exceeds the control limits
	X	Surrogate is outside control limits
GC Semi VOA		
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
	I	Indicates the presence of an interference, recovery is not calculated.
	X	Surrogate is outside control limits
