Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type:	Private
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	CORIXA CORP
Owner/operator address:	1900 9TH AVE SUITE 1100 SEATTLE, WA 98101
Owner/operator country:	US
Owner/operator telephone:	Not reported
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	08/15/1996
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No

CORIXA CORP (Continued) **1000993034**

Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 12/31/2003
Facility name: CORIXA CORP
Classification: Small Quantity Generator

Date form received by agency: 02/17/1998
Facility name: CORIXA CORP
Classification: Large Quantity Generator

Date form received by agency: 03/01/1996
Facility name: CORIXA CORP
Classification: Large Quantity Generator

Facility Has Received Notices of Violations:
Regulation violated: SR - -141(1)
Area of violation: Generators - General
Date violation determined: 03/21/2000
Date achieved compliance: 03/21/2000
Violation lead agency: State
Enforcement action: WRITTEN INFORMAL
Enforcement action date: 04/11/2000
Enf. disposition status: Not reported
Enf. disp. status date: Not reported
Enforcement lead agency: State
Proposed penalty amount: 0
Final penalty amount: 0
Paid penalty amount: 0

Regulation violated: SR - -200(1)(b) / -630(5)(a)
Area of violation: Generators - General
Date violation determined: 03/21/2000
Date achieved compliance: 03/21/2000
Violation lead agency: State
Enforcement action: WRITTEN INFORMAL
Enforcement action date: 04/11/2000
Enf. disposition status: Not reported
Enf. disp. status date: Not reported
Enforcement lead agency: State
Proposed penalty amount: 0
Final penalty amount: 0
Paid penalty amount: 0

Evaluation Action Summary:
Evaluation date: 03/21/2000
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: 03/21/2000
Evaluation lead agency: State

Registry ID: 110000829845

CORIXA CORP (Continued) **1000993034**

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:
Date form received by agency: 04/17/2008
Facility name: SWEDISH MEDICAL CENTER
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 12/31/2007
Facility name: SWEDISH MEDICAL CENTER
Classification: Not a generator, verified

Hazardous Waste Summary:
Waste code: WSQG
Waste name: A placeholder to allow BR submission to validate. In WA State, Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Violation Status: No violations found

FINDS:

Registry ID: 110012560656

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

JOE SPATES THE CLEANER (Continued) **1004793847**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: A placeholder to allow BR submission to validate. In WA State,

PUGET SOUND BLOOD CENTER MAIN BRANCH SEA (Continued) **1004793962**

Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Violation Status: No violations found

FINDS:

Registry ID: 110009511616

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Highlights: 215,000 dollars in ARRA grant funds are available to help pay for cleanup on this site. The prospective purchaser, Capital Hill Housing, is in the process of negotiating with the city of Seattle which owns the property on how the cleanup will proceeed.

Property Description: Based upon historic research of city directories and tax records, the site at 1200-06 East Jefferson was residential until 1926 when a

12TH AND JEFFERSON (Continued) **1014350854**

one-story gasoline station with a concrete floor and grease pit was built at the northeast corner of 12th Avenue annd East Jefferson Street. The address was 500 + 12th Avenue. The gas station passed through a number of private owners until the 1950s when it became primarily an auto repair facility. In the 1960s and 1970s it was used as a trailer rental office. Sometime after the early 1970s, this parcel was acquired by Seattle University for a parking lot. Seattle University sold it to the City of Seattle in 1990. In 1989, a site assessment was conducted that indicated there were underground storage tankks on the property. Available documents indicate these USTs were removed in late 1989 and the tank site was sampled, however the UST Removal Report is currently missing and data from the UST tank sites are not available. It is not known at this timee when the buildings were removed. The lot was graveled over and used by Seattle Department of Engineering for a project staging area but currently is empty.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

VIRGINIA MASON MEDICAL CENTER (Continued) **1000235502**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: P012
Waste name: ARSENIC OXIDE AS2O3

Waste code: U010
Waste name: AZIRINO[2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA,8AALPHA,8BALPHA)]-

Waste code: U150
Waste name: MELPHALAN

Waste code: U206
Waste name: GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-, D-

Waste code: WP01
Waste name: Washington State Extremely Hazardous Persistent Waste containing Halogenated Organic Compounds (HOC) at a total concentration level of Greater than 1.0%.

Waste code: WP02
Waste name: Washington State Dangerous Persistent Waste containing Halogenated Organic Compounds (HOC) at a total concentration level of 0.01% to 1.0%.

Waste code: WT01
Waste name: Washington State Extremely Hazardous Toxic Waste with a toxic constituents concentration greater than or equal to 1.0%, determined by biological testing methods or a book designation procedure.

Waste code: WT02
Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/22/2008
Facility name: BENAROYA RESEARCH INSTITUTE AT VIRGINI
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 12/31/2007
Facility name: BENAROYA RESEARCH INSTITUTE AT VIRGINI
Classification: Not a generator, verified

Registry ID: 110005395205

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington

IMMUNEX CORPORATION VM LABS (Continued) **1001969637**

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D007
Waste name: CHROMIUM

Waste code: D009
Waste name: MERCURY

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: P041
Waste name: DIETHYL-P-NITROPHENYL PHOSPHATE

Waste code: P042
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

WA UW HARBORVIEW MEDICAL CENTER (Continued) **1000231748**

Waste code: WSC2
Waste name: Washington State solid or semisolid corrosive Dangerous Waste with a pH less than or equal to 2, or greater than or equal to 12.5, based upon a specific testing method.

Waste code: WT01
Waste name: Washington State Extremely Hazardous Toxic Waste with a toxic constituents concentration greater than or equal to 1.0%, determined by biological testing methods or a book designation procedure.

Waste code: WT02
Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

WA UW HARBORVIEW MEDICAL CENTER (Continued) **1000231748**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

COURTESY TIRE MADISON (Continued) **1000696846**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

ARCO 5445 (Continued) **1004794468**

corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a

GM WESTLAKE BUICK DEALERSHIP (Continued) **1000290893**

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BARG FRENCH CLEANERS (Continued) **1000231854**

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

ALEXIS HOTEL (Continued) **1011400254**

corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011
Date Data Arrived at EDR: 07/12/2011
Date Made Active in Reports: 09/29/2011
Number of Days to Update: 79

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011

Next Scheduled EDR Contact: 01/23/2012
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/08/2011

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action
The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 10/25/2011

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Next Scheduled EDR Contact: 03/26/2012
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing
The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing
Source: Department of Social & Health Services
Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

North Map:	47122-F3 SEATTLE NORTH, WA
Most Recent Revision:	1983

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

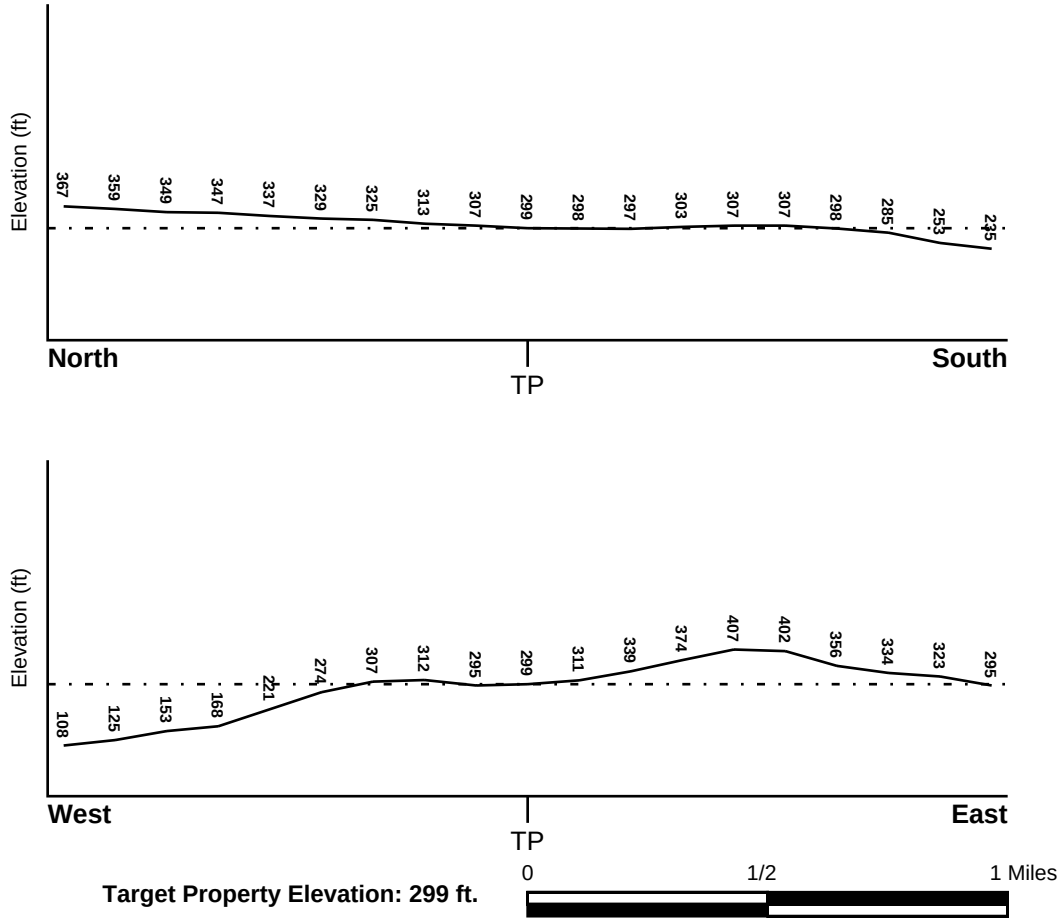
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
KING, WA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 53033C0630F - FEMA Q3 Flood data

Additional Panels in search area: 53033C0340F - FEMA Q3 Flood data
53033C0345F - FEMA Q3 Flood data
53033C0635F - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SEATTLE SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile SSE
Site Name:	METAL LAUNDRY INC
Site EPA ID Number:	WAD009272741
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	10 feet to 15 feet
Hydraulic Connection:	The uppermost aquifer is situated in glacial drift composed of sand, gravel, silt, and clays (partially unconsolidated till).
Sole Source Aquifer:	A sole source aquifer is not persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile NW	Not Reported
2	1/4 - 1/2 Mile SSE	SSE
3	1/4 - 1/2 Mile ENE	Flat
4	1/2 - 1 Mile NW	Not Reported
6	1/2 - 1 Mile WNW	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	ALDERWOOD
Soil Surface Texture:	gravelly - sandy loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
2	7 inches	35 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
3	35 inches	39 inches	cemented	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
very gravelly - sandy loam

Surficial Soil Types: silt loam
very gravelly - sandy loam

Shallow Soil Types: very gravelly - loam

Deeper Soil Types: very gravelly - coarse sand
stratified
very gravelly - loamy sand
very gravelly - sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1445
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

1-26-93

Dear Wissing

In our conversation this morning I have enclosed a letter from Baker Monks + Elliston identifying May 2, 1992 as the date of the fire which did considerable damage to the building I own.

The property at 1416 - 10th Ave. Parcel No. 600350-0065-05 is the building most seriously damaged. It is assessed at $110,500 for 1993. As I mentioned to you I am negotiating with the insurance adjuster for a cash settlement which I am sure will be completing successfully and then the building probably will be demolished.

Due to the extensive damage the value now appears to be zero which the assessment should reflect and an adjustment for 1992 from May 2, 1992 to the end of the year should be made.

Thank you for your attention to this

LeConte Ahler
1301 Spring St 281
Seattle, Wa. 98104

Please give me a call at 328-3950 or 842-3950 if I can offer you any additional information.

Blaker Monk & Elliston

Dear Mr. Gai:

We understand that a request had been made by you for a copy of the claim summary as proposed to the Interested Insurors. Enclosed, please find a copy of our Proposed Statement of Loss which outlines those items previously discussed.

We have not yet received a response from the Interested Insurors regarding their acceptance of our proposal and will advise you of their response as soon as it is received.

Please feel free to contact us should you have any questions regarding these matters.

Very truly yours,

BLAKER MONK & ELLISTON

REAL PROPERTY PETITION TO THE KING COUNTY BOARD OF EQUALIZATION

FILING INSTRUCTIONS: File two sets of petitions and attachments with the King County Board of Equalization, Room 510 King County Administration Building, Seattle, WA 98104-2310. (206) 296-3496. Petitions must be received or postmarked no later than July 1 of the assessment year unless a later date is specified on the value change notice. A copy of the value change notice must be attached if filing after July 1. Receipt of your petition will be acknowledged if you enclose a stamped, self-addressed envelope.

(For office use only)

Check here ( ) if you want the Assessor's response to your appeal prior to the Board's hearing.

I, the undersigned, do hereby petition the King County Board of Equalization to change the true and fair value of the property described below as shown on the **assessment roll for 19** 92 **for taxes payable in 19** 93 to the amount shown in Item 5 of this form.

Post'd ~~7/10/92~~ 7/10/92

ALL ITEMS MUST BE COMPLETED

1. ACCOUNT/PARCEL NUMBER 600350-0135-01
   Your ACCOUNT or PARCEL NUMBER appears on both your value change notice and your tax statement. If you are appealing multiple parcels of similar property on the same basis, such as a condominium complex or subdivision, you should request a supplemental form to simplify your filing; otherwise, **submit separate petitions for each parcel.**

2. TAXPAYER'S NAME Kun Lin Chen
   NAME OF AGENT (if applicable) Amie Jen
   MAILING ADDRESS for all correspondence relating to appeal
   Name: Kun Lin Chen
   Address: 1007 S Weller St. Seattle WA 98104
   Phone: (206) 583-0432 (Taxpayer's daytime phone) (206) 821-1295 (Agent's business phone)

3. PROPERTY DESCRIPTION:
   A. Address or location 1415 - 11th AV. Seattle WA
   B. Land area (lot size) ~~5994~~ 4864 SQ FT
   C. Zoning _____ Residential use: Yes _____ No X
   Waterfront: Yes _____ No X; Condominium: Yes _____ No _____
   Apartments of 5 or more units: Yes ✓ No _____
   Business (commercial or industrial): Yes _____ No X
   D. Brief description of buildings _____
   E. Are you contesting the value on a mobile home? Yes _____ No _____

   RECEIVED JUL 10 1992

4. ASSESSED VALUE:
   Land: 48,600.—
   Improvements (Building): 301,400.—
   TOTAL: 350,000.—
   The assessed value is on your value change notice or may be obtained from the Assessor's office, 296-7300.

5. PETITIONER'S OPINION OF VALUE: On the basis of the following facts (items 6-11), it is my opinion that the true and fair value, which is **100% of market value**, of this property should be:
   Land: 48,600.—
   Improvements (Building): X
   TOTAL: 48,600.—
   Market value is the amount of money a buyer, willing but not obligated to buy, would pay to a seller who is willing but not obligated to sell.

6. PURCHASE PRICE OF PROPERTY: (Complete this item only if sale occurred within last five years)

$_____ Date of purchase: _____

Remodeled since purchase? Yes _____ No _____ Cost $_____

7. OFFERS TO SELL THIS PROPERTY: (Complete this item only if offer occurred within last five years)

When and for how long? _____

Listed with broker? Yes _____ No V Asking price? _____

8. PROPERTY HAS BEEN APPRAISED BY OTHER THAN THE COUNTY ASSESSOR:

Yes ____ No V When? _____ By whom? _____

Purpose of appraisal? _____ Appraisal value? _____

9. APPEAL IS BASED ON THE INCOME APPROACH TO VALUING PROPERTY: Yes ___ No ___
If yes, attach a detailed, signed statement of income and expense for the past two years, the rent roll, and copies of leases or rental agreements.

10. RECENT SALES OF SIMILAR PROPERTY

	Parcel No.	Address	Land Size	Sales Price	Date of Sale
a.					
b.					
c.					

Sales of comparable properties may be obtained through personal research, local realtors, or at the public counter of the Department of Assessments, Room 708, 500 Fourth Avenue, Seattle, WA 98104. (206) 296-7300

11. REASONS WHY ASSESSOR'S VALUE IS BEING CHALLENGED. (The Assessor is, by law, presumed to be correct. You must prove by clear, cogent and convincing evidence that the Assessor's valuation is not the true and fair market value.) (RCW 84.40.0301)

The Building has been under totally remodeled and has only frame left.) However, this building has been burned down to ground due to April Fire arson. There is no building right now.

ATTACH any supporting documents such as maps, pictures, appraisals, certification of non-percability, or other documentary evidence to support your estimate of value.

12. APPEALS OF THE VALUE OF THIS PROPERTY WITHIN LAST TWO YEARS:
To the County Board of Equalization Yes ____ No V
To the State Board of Tax Appeals Yes ____ No X

13. RELATIONSHIPS TO COUNTY OFFICIALS AND EMPLOYEES (The Board is required to avoid any potential conflict of interest. State position/relationship in bottom margin if either is checked yes.):
a. Are you an elected/appointed County official or County employee? Yes __ No X
b. Are you a relative of a County official/employee? Yes __ No V

I have read the above petition and certify that it is true and correct to the best of my knowledge, and that there are good and sufficient grounds to support it. The named agent (if any) in Item 2 above has full authority to act on my behalf on all matters pertaining to this appeal.

Signed this 15th day of July 1992. X _____

COMMENTS

LAND - NO CHANGE - $125,900

THERE SEEMS TO BE NO VARIABLE THAT IS THE KEY TO THE LOW AND THE HIGH ENDS OF THE RANGE INDICATED BY THE SALES. ALL THE COMPS, EXCEPT COMP 5, ARE AVERAGE QUALITY SERVICE GARAGES OR WAREHOUSES IN THE SAME GENERAL AREA. COMP 5 IS A LOW QUALITY BUILDING IN A LESS DESIREABLE AREA. COMP 6 IS A 5 STORY LOFT BUILDING. OWNER HAS HAD TROUBLE KEEPING THE BUILDING OCCUPIED. IT IS FOR SALE; AGENT FELT OWNER WOULD PROBABLY TAKE $1,800,000.

Economic Income

1ST 9600 SF @ $3.80 = $36,480

BSMT 9600 SF @ $1.80 = 17,280

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

DEPT. OF ECOLOGY

October 10, 1993

Mr. Joe Hickey
Department of Ecology
3190 - 160th S.E.
Bellevue, WA 98008

Re: Remediation of Subject Property: 1416 - 10th East, Seattle, Washington
Commonly Known as Ruth Ashbrook Bakery Property

Dear Mr. Hickey:

Please find enclosed the information, documentation and reports describing the final cleanup to the Department of Ecology's standards; which confirms that this site is officially cleaned.

The contamination was excavated and treated on-site. By using bio-remediation and farming, the contamination was removed and cleaned in a timely manner. After reports were received from Friedman and Bruya, Inc. stating that the soil was free of contamination, the soil was replaced in the excavated hole. This remediation action is classified as an independent cleanup action as defined in the Model Toxics Control Act (70.105D, RCW Chapter 173-340 WAC).

Both soil and water samples were taken before the fact, as well as reports taken as of October 8, 1993, which indicated the cleanup was successful. The amount of room on the site; as well as the low contamination levels, aided in a speedy remediation of the soil and water.

The enclosed material is fairly self-explanatory, and again with our discussions previous to this report, I do not anticipate any problems and would appreciate your signing off on this project as quickly as possible.

Thank you in advance for your prompt attention in your review of the enclosed material. Also, I appreciated your cooperation through-out the cleanup of this project. Please do not hesitate to give me a call if any questions should arise.

Sincerely,

Nurseryman Products, Inc.

Randy B. Perkins

RBP:amv

EXECUTIVE SUMMARY

RUTH ASHBROOK BAKERY PROPERTY

In October of 1990, a 6,000 gallon diesel underground storage tank was removed from the subject site. At that time, 100 cubic yards of contaminated soil was removed and disposed of by O'Sullivan Construction. The excavation was backfilled prior to confirmation of over-excavation. Soil samples were analyzed for petroleum hydrocarbon concentrations, based upon the contents of the former UST. Analytical results indicated excessive Total Petroleum Hydrocarbon (TPH) concentrations, as well as excessive Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) concentrations. TPH concentrations were found to be in excess of the Department of Ecology (DOE) limits.

In March of 1993, soil samples were obtained from three borings, strategically placed around the former UST location, by Pacific Testing Laboratories. They mobilized a Simco 4000 drill rig to the subject site to perform the sampling. Boring A was placed near the west perimeter of the excavation, defined by the presence of asphalt patch. Boring B was placed near the east perimeter and boring C was placed near the northeast perimeter of the excavation. Each boring was to ten (10) feet below grade, with the exception of boring A, which stopped at seven and one half fee below grade, due to glacial tills. Ground water was encountered in borings B and C, at approximately seven and one half feet below grade.

Soil samples were obtained with the use of a split spoon sampler, which was driven into the matrix by a 140 pound hammer, free falling 30 inches. Prior to obtaining each sample, the split spoon sampler was decontaminated to prevent cross contamination. Soil samples were obtained at 2.5, 5, 7.5, and 10 feet below grade, except boring A, which was terminated at 7.5 fee below grade. Each soil sample was placed into the appropriate, previously labeled glass sampling jar.

The analytical results of the soil testing showed that at B-2.5/B-5 the total Petroleum Hydrocarbons was 311 ppm and at C-2.5/C-5 355 ppm, indicating TPH concentrations in excess of DOE limits.

Based upon results of previous analysis, each composite sample was analyzed utilizing Washington Total Petroleum Hydrocarbon Identification (WTPH-HCID) method. Because analysis of all 6 composites soil samples produced results indicating petroleum hydrocarbons in the diesel range, further analysis utilizing WTPH-D was performed per DOE protocol.

In August of 1993, excavation began to treat the contamination on-site. By using bio-remediation and farming, the contamination was removed and cleaned in a timely manner. After reports were received from Friedman & Bruya, Inc. stating that the soil was free of contamination, the soil was replaced in the excavated hole. This remediation action is classified as an independent cleanup action as defined in the Model Toxics Control Act (70.105D, RCW Chapter 173-340 WAC).

At the time of excavation, the groundwater was determined to be contaminated by diesel fuel and small levels of Tetrachloroethylene were indicated. The soil was removed and treated by bio-remediation. The water was treated by using carbon filter tank.

Contamination was found underneath the building to the south of the subject site (the Davis Hoffman Building); however, it was mutually agreed upon by DOE, the Owners, and the Contractor that it was non-accessable and financially unreasonable to remove the contaminated soil. A concrete wall was placed between the subject property and the adjacent building with a plastic lining placed along the bottom to ensure no future contamination would enter the treated area. A water collection system was installed to continually treat and monitor the groundwater flowing from the adjacent building until levels fall below DOE's requirements for contamination.

SITE DESCRIPTION

RUTH ASHBROOK BAKERY PROPERTY

The subject site is located north of East Union Street between 10th Avenue and 11th Avenue in Seattle, King County Washington (Township 25 North, Range 4 East, Section 32), (see attached map). The address is 1416 - 10th Avenue East, Seattle, Washington. The mailing address is 1301 Spring Street, Unit 28-1, Seattle, Washington 98104.

The irregularly shaped subject property supports two older structures: the first, an approximate 33,500 square foot, two-story, concrete and brick constructed warehouse/commercial building which occupies the eastern portion of the property; the second, a wood-frame constructed, approximately 7,300 square foot, two-story, warehouse/light commercial/industrial building which occupies the northwest portion of the property.

The larger warehouse structure, reportedly built in 1920, was formerly the Ruth Ashbrook Bakery warehouse and, prior to that, was the site of an automobile sales and repair business. The majority of the lower floor and portions of the upper floor are being used by the Salvation Army to store donated furniture, canned goods, and other miscellaneous items. A boiler room located on the east central portion of the basement, and an elevator and other equipment items are along the northern portion of the lower floor. The upper floor, including mezzanine areas, is vacant except for some assorted office furniture, appliances, and additional stockpiles of donated goods on the eastern portion of the building. A portion of the eastern wall of the bakery is shared by an automobile repair facility. The remainder of the eastern side of the warehouse is the site of a loading dock.

The smaller building at 1416 - 10th Avenue is also a two-story structure. It was reportedly built in 1913. According to historical records, past uses have included use by the Ruth Ashbrook Bakery; and an industrial automotive business which performed automotive repair, parts manufacturing, blacksmithing, and forging activities. The lower floor has evidence of fire damage throughout which reportedly occurred in 1992. There are also debris piles in the eastern portions of the lower level. Parts of the upper floor are being used for storage (western portion) while other areas appear to be in a state of repair (eastern portion). According to the owner, Mr. Stiles, the upper floor was remodeled in about 1977 and electric baseboards are now used to heat this portion of the facility.

There is a slight downward slope from north to south along 10th and 11th Avenues and from east to west along East Union Street, there being an approximate 4 to 5 foot difference in elevation difference at street grade from north to south as well as east to west perimeters of the subject property.

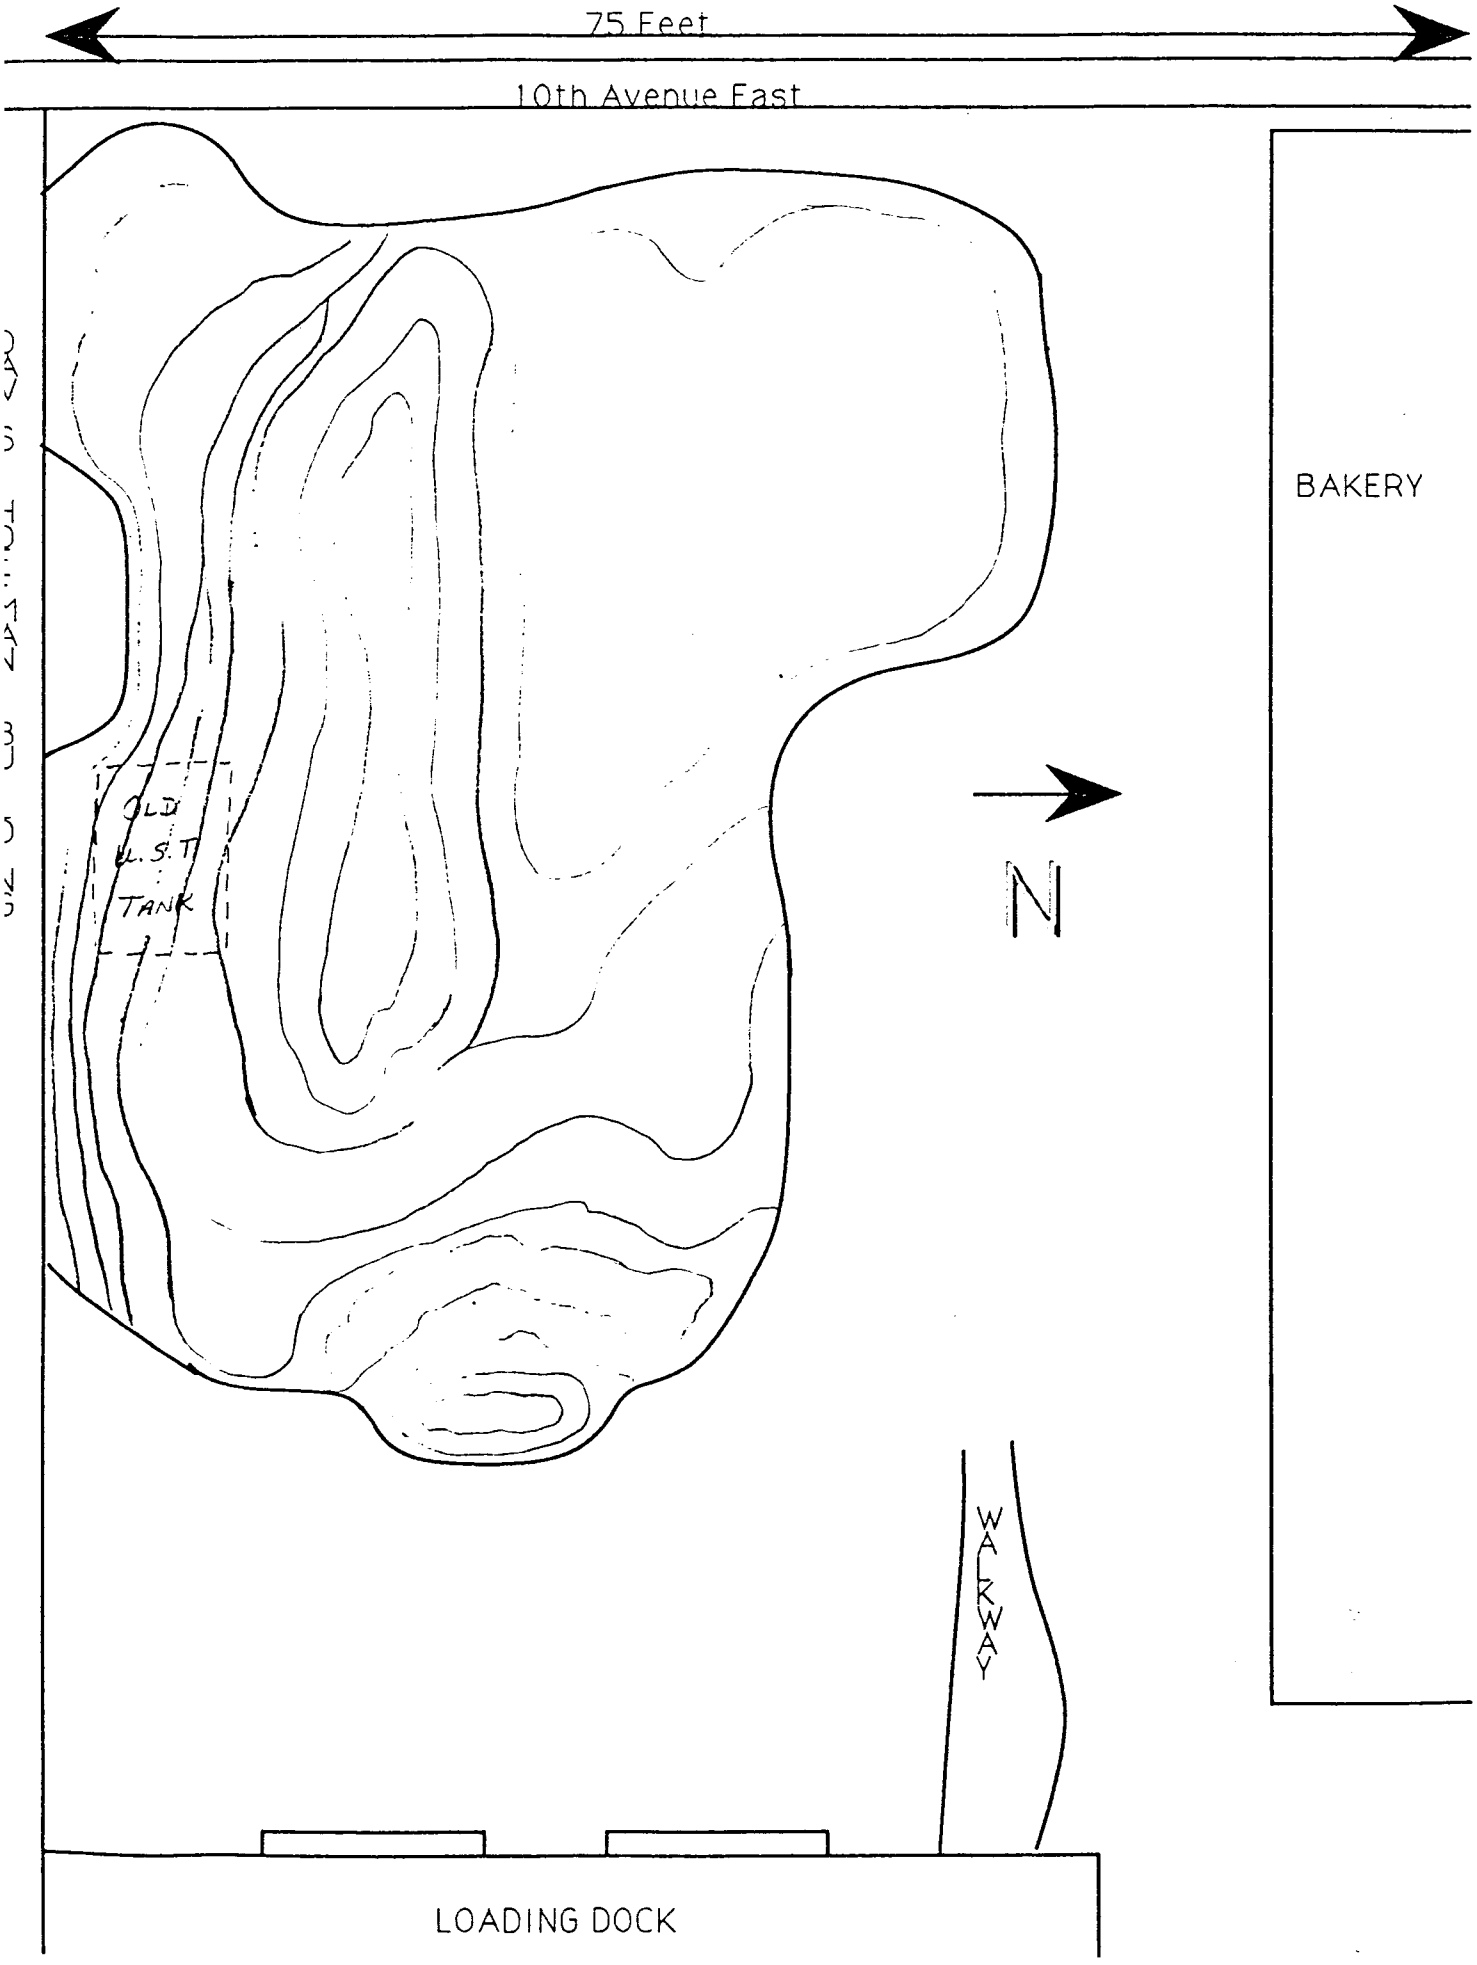
The western portion of the subject property is bounded to the north by a paved parking area beyond which is a mixture of commercial properties and apartments. The eastern portion of the subject property is bounded on the north by a vacant parcel of land which was used to process the contaminated soil.

The subject property is bounded to the east by 11th Avenue beyond which is a vacant , multi-story brick building which appears to be undergoing maintenance; to the south across East Union Street by commercial properties including a paint business, an auto parts ales store, an automobile battery repair business, and an auto repair facility. Another auto repair facility is located northeast of the intersection of 10th Avenue ad East Union Street. This facility is adjacent to the subject property immediately south of the excavation and west of the warehouse. Beyond 10th Avenue, to the west of the subject property, are other commercial facilities including additional auto repair business.

A 6,000 gallon Underground Storage Tank (UST) containing diesel was removed from the subject site in October of 1990. In March of 1993, three borings were placed around the location of the former UST. Boring A was placed near the west perimeter of the excavation, defined by the presence of asphalt patch. Boring B was placed near the east perimeter and boring C was placed near the northeast perimeter of the excavation. Each boring was to ten (10) feet below grade, with the exception of boring A, which stopped at seven and one half fee below grade, due to glacial tills. Ground water was encountered in borings B and C, at approximately seven and one half feet below grade.

The southwestern portion of the property was excavated as part of an ongoing leaking underground storage tank remediation project being performed independently by the current owner. The excavated area is estimated to be 120 feet in length from east to west. It varies in width from approximately 18 feet to 40 feet at the eastern and western portions of the excavation, respectively. The excavation is near the southwestern portion of the property immediately adjacent to an auto repair facility. Soils from the excavation were being stockpiled and treated in the area immediately between the excavation and wood-frame building on 10th Avenue. The soil was being landfarmed on an adjacent property immediately north of the warehouse facility. Groundwater appears to be flowing southeast across the property.

According to the USGS "Preliminary Geologic Map of Seattle and Vicinity, Washington" (1962), the geologic units underlying the site and surrounding area are identified as Vashon Till. Vashon Till is described as a "compact, concrete-like mixture of silt, sand, gravel and clay." The thickness of Vashon Till is usually less than 50 feet, but can be up to 150 feet. The upper two to five feet of this layer generally consists of a loose, silty sand and gravel.



75 Feet
10th Avenue East
BAKERY
OLD U.S.T. TANK
N
WALKWAY
LOADING DOCK

Ecology investigated the site in February and March of 1992 and visually confirmed petroleum contamination of the soil. The file does not indicate further characterization or remediation of the facility has occurred. Based on the review Ecology file, it does not appear contaminant concerns at this facility have adversely affected the subject site.

OLYMPIAN APARTMENT BUILDING at 1605 EAST MADISON STREET is location approximately three-eighths of a mile northeast of the subject site on a hilltop. JEFFERSON STREET BUS BARN at 1398 EAST JEFFERSON STREET is located an estimated one-half mile south of the subject site. METAL LAUNDRY INCORPORATED at 614 - 12th is located an estimated three-eighths mile south of the subject site. MELROSE APARTMENTS PROPERTY at 1520 MELROSE AVENUE is located an estimated three-eighths of a mile west-northwest of the subject site. Considering the topography, near-surface groundwater flows at these sites are inferred to be in directions that are non-tributary to the subject site. Based on the separation distances and the inferred, near-surface groundwater directional flows, it is unlikely contaminants at these facilities have adversely affected the subject site.

The RCRA report is a list of regulated generators, handlers, transporters and disposers of hazardous materials. Listing on the RCRA report does not indicate a facility has been adversely affected by a hazardous material, but merely the facility is required to monitor and document hazardous waste activities to EPA or Ecology. The reviewed RCRA report (dated 11 January 1993) lists over 150 RCRA facilities located within approximately one mile of the subject site.

Four facilities are located adjacent to or on opposite sides of the street from the subject property. DAVIS & HOFFMAN AUTO REBUILD at 1406 - 10th AVENUE is the only facility listed as a large quantity generator and it is immediately adjacent to the subject property south of the excavation and west of the warehouse facility. AUTO BATTERY AND ELECT CO. at 1009 EAST UNION STREET immediately across the street to the south of the subject property and is listed as a small quantity generator. The remaining two facilities are listed as conditionally exempt generators: INTERNATIONAL CLINICAL LABORATORIES at 1100 EAST UNION STREET immediately across 11th Avenue to the west of the subject site, and PREMIER AUTO BODY at 1422 - 11th AVENUE across 11th Avenue and northwest of the subject site. A non-intrusive visual observation of these facilities did not reveal indications of improper hazardous wastes disposal. If these facilities handle and dispose of hazardous wastes in a proper fashion, following appropriate regulations, it is unlikely the hazardous wastes would pose an environmental threat to the subject site.

Leakage from underground storage tanks (UST's) is a potential source of environmental contamination. Ecology's report of registered UST's (dated 2 February 1993) lists all registered UST's in the State of Washington. Therefore, this list is limited to registered UST's and does not necessarily include all existing UST's. A review of this report indicated over 100 facilities with UST's within an approximate one mile radius of the site. The nearest listed UST facility is TOMLINSON, INC. at 1100 EAST UNION located to the east on the opposite side of 10th Avenue in relation to the subject property. This site is also listed on the Leaking UST list.

Ecology's leaking UST (LUST) list is limited to reported leaking UST's and may not include all leaking UST's. According to Ecology's NRO list dated 30 July 1993, there are over 60 facilities with LUST's within an approximate one mile radius of the subject site. Of these, one LUST site is on the subject property and 13 others are within an approximate one-quarter mile radius. The list indicated that limited cleanup was performed and a diesel tank was removed from the RUTH ASHBROOK BAKERY site at 1416 - 10th AVENUE and the impact to soil only is indicated.

A file for this site was reviewed at Ecology's NRO and copies of material in this file were also provided by RZA. Information from a 4 March 1993 study of the LUST site was also provided by Mr. Stiles. Ecology's file contained a letter from Northwest EnviroField Services dated 7 November 1990 stating that a 6,000 diesel tank from the site address had been received from O'Sullivan Construction. Laboratory reports in the file dated 1 November and 3 December 1990 showed levels of total petroleum hydrocarbon (TPH) contamination from the approximate area of the existing excavation which exceeded allowable levels. A 13 March 1991 initial investigation document by Ecology reported that the contractor hired to remove the UST and some contaminated soils backfilled the excavation before the laboratory results were received. At that point, the property owner reportedly decided to wait before initiating further cleanup efforts.

The 4 March 1993 letter provided by Mr. Stiles was prepared by Pacific Testing Laboratories. Samples were taken from various depths of three borings in locations near the former LUST site. Based on laboratory analysis of soil and groundwater, further remediation of soil and additional investigation into groundwater contaminations was recommended.

On the 13 remaining sites, the list indicates that only soil was impacted at nine sites, so it is unlikely that associated contamination from these locations have adversely impacted the subject site. The list also indicates that the groundwater and soils has been impacted at four of the fourteen LUST sites. The four groundwater impacted facilities are as follows:

> The nearest facility is UNOCAL STATION #5919 at 1100 BROADWAY located approximately 150 yards south-southwest of the site. A file concerning this facility was reviewed at Ecology's NRO. According to a report in the file dated 28 September 1992, prepared by a consultant, four UST's were removed from the facility in 1989. Sampling and analysis of the soil and groundwater revealed contaminant impacts to both media. Contaminants include gasoline, BTEX, and solvents. Seven groundwater monitoring wells have been installed at the facility. The report gives the apparent shallow groundwater flow direction to be to the northeast, which is toward the site. Depth to groundwater, as measured by the consultant in February and May of 1992, ranged from approximately 15 feet to 20 feet. Contaminants have not been detected in samples obtained and analyzed from the monitoring well nearest the subject site. The report indicates the facility is currently in a monitoring phase. It appears, based on the information in the Ecology file, contaminants at this facility have not impacted the subject site.

Subject: Contamination Testing of Soil

Dear Mr. Cazort:

On October 30, 1990, the Chemistry Department of Pacific Testing Laboratories received two soil samples from your P.O. No. 22830 for Job No. 2190-056 sampled October 24, 1990. The samples were analyzed on October 31, 1990, for total petroleum hydrocarbons, EPA Method 418.1, using a Perkin Elmer 1600 Series FTIR (S/N 135991). Results are presented in ppm per dry weight. Benzene, toluene, ethyl-benzene, and xylenes (BTEX) content were determined by EPA Method 3810 (Headspace Method), using a Hewlett-Packard 5890A gas chromatograph (2429 A03040) results are presented in ppm total weight. Results of this analysis, in parts per million (ppm), are presented in Table 1.

Table 1. Analytical Results for Soil Samples (ppm)

Sample I.D.	% of Water	Total Petroleum Hydrocarbons	Benzene	Toluene	Ethyl Benzene	Total Xylenes
1-1	10.5	1798.2	0.13	3.4	3.3	17.7
2-1	13.8	<50.0	<0.05	<2.5	<1.0	<1.5

The EPA regulated maximum set for total petroleum hydrocarbons in soil is 0.020 weight percent (200 ppm). Based on this criteria, sample no. 1-1 was found to be in excess the limit for total petroleum hydrocarbons.

This test has been made and report prepared based upon the specific sample provided to us by the client for testing. We assume no responsibility for variations in quality of samples made by persons or under conditions over which we have no control.

This report is provided for the information of the client only. The reproduction of this report by any method and its transmittal by any means to a third party without the written permission of Pacific Testing Laboratories is prohibited.

If you have any questions, please contact us at (206) 282-0666.

Subject: Contamination Testing of Soil

Dear Mr. Cazort:

On November 28, 1990, the Chemistry Department of Pacific Testing Laboratories received two soil samples from your P.O. No. 23442 for Job No. 2190-056 sampled November 27, 1990. The samples were analyzed on November 29, 1990, for total petroleum hydrocarbons, EPA Method 418.1, using a Perkin Elmer 1600 Series FTIR (S/N 135991). Results are presented in ppm per dry weight. Results of this analysis, in parts per million (ppm), are presented in Table 1.

Table 1. Analytical Results for Soil Samples (ppm)

Sample I.D.	% of Water	Total Petroleum Hydrocarbons
1-1	14.8	413.5
2-1	12.9	60.5

The EPA regulated maximum set for total petroleum hydrocarbons in soil is 0.020 weight percent (200 ppm). Based on this criteria, sample 1-1 was found to be in escess of the limit for total petroleum hydrocarbons.

This test has been made and report prepared based upon the specific sample provided to us by the client for testing. We assume no responsibility for variations in quality of samples made by persons or under conditions over which we have no control.

This report is provided for the information of the client only. The reproduction of this report by any method and its transmittal by any means to a third party without the written permission of Pacific Testing Laboratories is prohibited.

REMEDIATION

RUTH ASHBROOK BAKERY PROPERTY

In August of 1993, excavation began on the Ruth Ashbrook Bakery Property as referenced in the enclosed reports and continued through October. Cleanup was done by bio-remediation by using nutrients and bacteria. All contaminants above 200 ppm were removed and treated on-site. A Dresser 100G and a Case 888 were utilized to perform the required cleanup. The material was laid out to a depth of 8-10 inches over the area indicated. We then proceeded to aerate and till the material until we reached the desired level of non-contamination, which was further confirmed by the lab analysis. No institutional controls were required during the clean-up process.

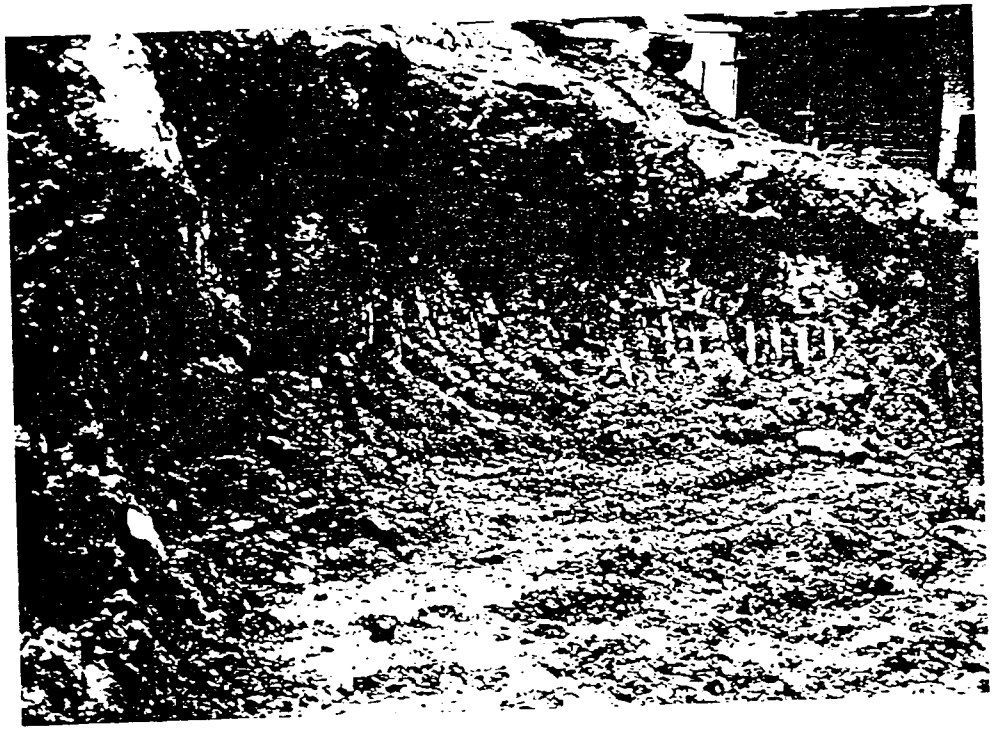
During each of these mixing processes, we added chemical nutrients to aid and accelerate the bacteria growth needed for the remediation of the soil. The contaminated soils were originally found to be at11,000 ppm's at the highest level and were reduced down to less than 10 ppm's.

During August of 1993, we discovered a large amount of blacktop in the hole that was left by O'Sullivan Construction along with the contaminated soil. We began excavating the blacktop from the site which contained heavy levels of diesel fuel. We were unable to screen the blacktop due to the excessive amount. Plastic was discovered along with the contaminated blacktop above the water table, which was removed. We also encountered several concrete foundations and a broken storm drain pipe with heavy contamination of diesel fuel. The drain pipe was attached to the catch basin that was being used on-site. All of these materials were removed and treated.

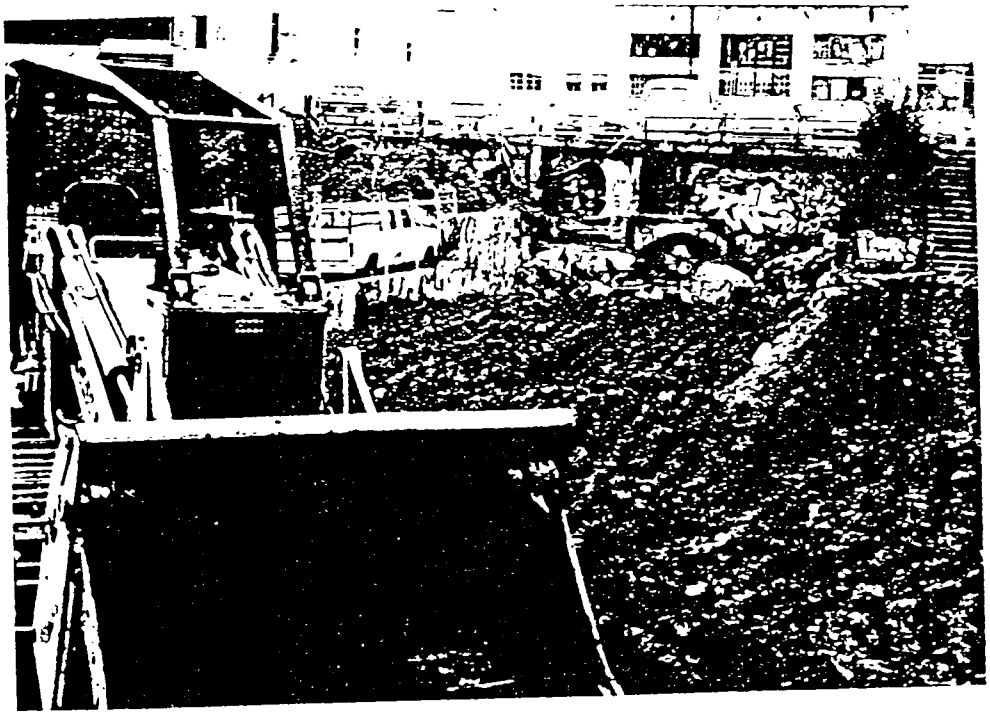
On October 8, 1993, the final soil sample was taken from the remediation site and sent to Friedman and Bruya, Inc. for analysis. These lab reports are included with the report for your reference, indicating a successful and thorough remediation program completed, which meets the Department of Ecology's standards. We obtained soil samples for each sample location, giving us a thorough sampling of the area indicated on the enclosed location photographs. In doing so, the samples and tests gave us a well rounded sampling for the final conclusions.

Groundwater was discovered at 6 feet deep. Upon review of the water samples drawn from the referenced holes, it was apparent that there was some contamination. Once the material was removed, the treatment of the water was fairly straightforward. We pumped the water from the excavation holes through a carbon filter tank and recirculated it back into the excavation site over a continuous process.

Contamination was found underneath the building to the south of the subject site (the Davis Hoffman Building); however, it was mutually agreed upon by DOE, the Owners, and the Contractor that it was non-accessable and financially unreasonable to remove the contaminated soil. A concrete wall was placed between the subject property and the adjacent building with a plastic lining placed along the bottom to ensure no future contamination would enter the treated area. A water collection system was installed to continually treat and monitor the groundwater flowing from the adjacent building until levels fall below DOE's requirements for contamination.

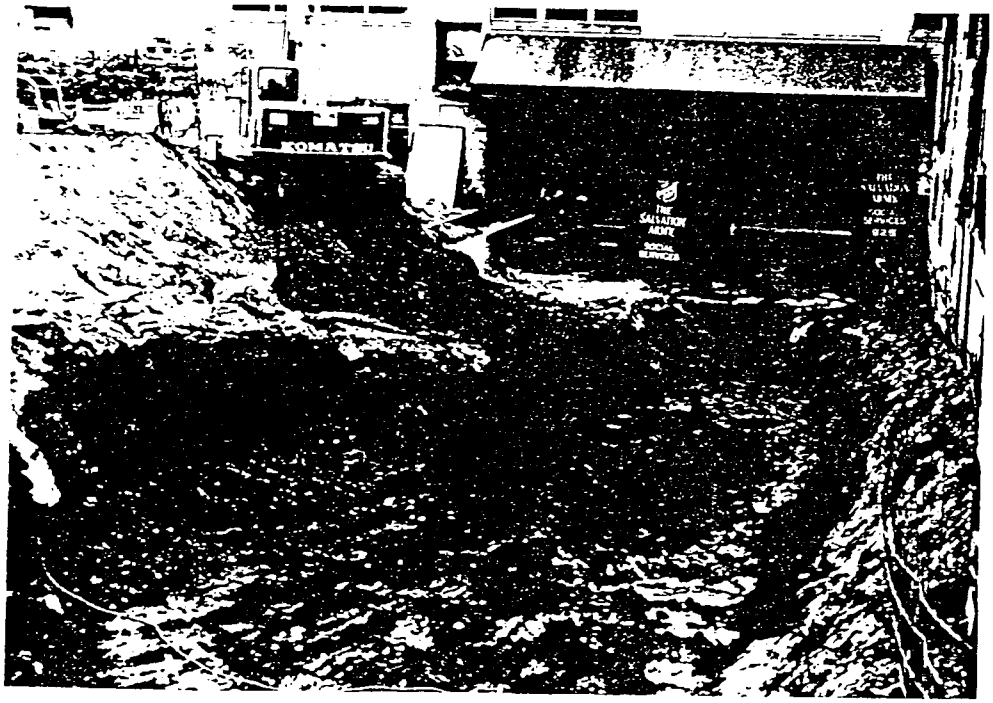


EXCAVATION HOLE



SOIL TREATMENT BY BIO-REMEDIATION

STOCKPILE OF UNTREATED SOIL



STOCKPILE OF UNTREATED SOIL

CHEMICAL ANALYSIS

RUTH ASHBROOK BAKERY PROPERTY

August 19, 1993

After excavation for hole closure, soil samples were taken from the Northwest bank, the the Southwest end, and the Northwest end. The results indicated no contamination except for the Northwest end, which was above DOE's recommendation of cleanup. The soil was removed and resampled as noted on September 13, 1993.

September 13, 1993

There are eleven samples taken from the bottom and sides of the excavation hole. The Northeast wall, the middle wall, and Northwest end wall on 10th Street, the East bottom Hole, 50 feet from East end bottom, 80 feet from East end bottom, the West end bottom, the Southeast wall, and the Northwest end wall side wall all indicated no signs of contamination. The soil contamination level for the South middle wall was at 400 ppm's and the Southwest wall was at 7,600 ppm's. We were unable to remove or treat the contaminated soil due to it being under the Davis Hoffman Building, as noted previously.

September 17, 1993

Water samples were taken at the location of the catch basin at 4 feet deep. Levels of Tetrachloroethylene were found to be at 780 ppb's, which is above DOE's recommendation of cleanup. The soil was excavated to a depth of 12 feet and treated. The water was pumped out of the excavation site and treated using a carbon filter tank.

September 20, 1993

The first sample 1A was taken from the South bank, 11 feet under the Davis Hoffman Building, 2 feet from the elevator shaft, which indicated contamination levels of 1,400 ppm's.

The second sample 1B was taken from the South bank, 13 feet under the Davis Hoffman Building, 15 feet from the elevator shaft, which indicated contamination levels of 3,800 ppm's.

The third sample 1C was taken from the South bank, 30 feet East of the elevator shaft, 13 feet underneath the building. The results showed a level of 330 ppm's, which indicated very little oil. The estimated amount of diesel fuel underneath the Davis Hoffman Building is approximately 75 yards.

September 22, 1993

Water samples were taken outside the building at the Northeast corner of the building near 11th Street, 15 feet deep. No levels of Tetrachloroethylene were found. Soil samples were taken from inside the building 2 feet deep at the floor drain. No levels of Tetrachloroethylene were found.

September 24, 1993

Sample 01 indicated the treated contaminated soil levels were at 400 ppm's.

September 27, 1993

Sample 02 indicated the treated contaminated soil levels were at 140 ppm's. These results are after three days of treatment.

September 29, 1993

Sample 03 indicated no contamination with a level of less than 10 ppm's, well below the DOE's recommendation of cleanup.

October 1, 1993

After removing contaminated soil at the catch basin, samples were taken of water entering the excavation hole from the loading dock at 8 feet deep (under catch basin). No levels of Tetrachloroethylene were found. A soil sample was also taken at 8 feet deep under the catch basin and no levels of Tetrachloroethylene were found, indicating treatment was successful.

October 4, 1993

Water sample taken from under the catch basin at the East end of the excavation site. Water sample indicated levels of 4.2 Tetrachloroethylene, which is below DOE's recommendation of cleanup.

October 8, 1993

Soil samples 04, 05, and 06 were taken from the treated soil and all indicated no contamination, showing levels of less than 10 ppm's.

October 11, 1993

Samples were taken of water entering the excavation hole from the Davis Hoffman Building. Water samples indicated no contamination of Tetrachloroethylene or Trichloroethylene.

The above analysis indicates that all contamination was removed and treated successfully and we believe this satisfies DOE's requirements for cleanup. Hopefully, all of the above information is satisfactory and will assist you in issuing a "no further action letter" at your earliest convenience. Thank you again for all of your assistance and cooperation throughout the process of treating the contamination on this project. If you have any additional questions, please do not hesitate to contact me at (206) 488-1170 (work), or (206) 885-3316 (home).

RE: Asbestos Abatement
Ruth Ashbrook Bakeries
1407 11th Ave
Seattle, WA

Dear Mr. Stiles,

This letter transmits our close out information for the asbestos abatement at the building located at 1407 11th Ave in Seattle, Washington.

The work consisted of removal of sheet flooring, VAT and pipe insulation.

Performance Abatement Services, Inc's work was performed in accordance with the following Federal, State and local codes and regulations:

* Title 29 & 40, Code of t he Federal Register (CFR) U.S.E.P.A. and U.S. Department of Labor.
* Washington Asbestos Code.
* WISHA Regional directives pertaining to asbestos removal and worker protection.
* Puget Sound Air Pollution Control Agency Regulation III, Article 4, Asbestos Control Standard.

Thank you for the opportunity to preform this services. We look forward to working with you on future projects.

Sincerely,

PERFORMANCE ABATEMENT SERVICES, INC.

ASBESTOS SURVEILLANCE REPORT

NAME: EHRMENTROUT, Robert J.

COMPANY: PERFORMANCE ABATEMENT SERVICES

DATE OF EXAM: May 18, 1993

BASELINE: _____

ANNUAL: XX 6/93

EXIT: _____

Based on the exam performed at Occupational Health Resources, including review of the asbestos questionnaire, pulmonary function screening and chest x-ray:

✓ No medical condition was detected which would place this individual at increased risk of health impairments from exposure to asbestos.

✓ No limitations are recommended on the planned duties including use of protective equipment including respirator.

✓ The employee was informed by me of the results of testing and of any medical conditions that may be due to asbestos exposure.

✓ This employee was made aware that this was a limited evaluation regarding asbestos exposure and does not replace the need for more complete regular physical examinations by a personal physician and the need to follow sound personal health practices.

Further recommendations that apply:

✓ This employee was counseled to stop smoking, even when away from asbestos exposure.

QUANTITATIVE FIT TEST RECORD

2-9-93

Name: David R. Thunstrom

Issue Date: 8/9/93

Soc. Sec.#: 534-50-6813

Expiration Date: 02/05/94

Company: Performance Abatement Services, Inc.

Test Operator: Peter Cao

Type Of Qualitative Fit Test: Irritant smoke

Quantitative Test Apparatus: T.S.I. Portacount 8010

RESPIRATOR:

Respirator Brand: North

NIOSH Approval#: TC-21C-375

Model/Size: 85780/PD onesize

Wear At Least 5 Minutes: X

+/- Pressure Fit Check: X

Inform Subject Of Test Protocol: X

All Activities Are Performed For 90 Sec.	TRIAL 1	TRIAL 2	TRIAL 3
NORMAL BREATHING (NB) - *standing in place, no talking.*	21000	110000	130000
DEEP BREATHING (DB) - *standing in place, breathe at a normal rate.*	32000	54000	110000
TURN HEAD SIDE TO SIDE (SS) - *standing in place, hold at extreme positions for 5 sec.*	34000	87000	11000
MOVE HEAD UP AND DOWN (UD) - *standing in place, hold at extreme positions for 5 sec.*	45000	43000	73000
READING (R) - *with eyes closed, repeat slowly and clearly after the test conductor the "rainbow passage".*	5200	5900	4400
GRIMACE (G) - *generally contort facial muscles by grimacing, smiling, or frowning.*	19000	35000	30000
BEND OVER AND TOUCH TOES (B) - *bend at waist, touch toes, return to upright.*	5200	9200	30000
JOGGING IN PLACE (J) - *jog in place.*	8200	44000	39000
NORMAL BREATHING (NB) - *standing in place, no talking.*	28000	77000	45000
lowest of 3 tests, two significant digits. (FF) -	12000	22000	19000

FINAL FIT- * 12,000

* A minimum fit factor of 100 for half-mask and 1000 for full-face respirator must be obtained for satisfactory fit.

PERFORMANCE ABATEMENT SERVICES, INC.

REV. 6/93

WAC RESPIRATOR PROGRAM

1. STANDARD PERMISSIBLE PRACTICE
   A. Employee exposure to airborne asbestos fibers or any other harmful airborne contaminants shall be minimized as far as possible by approved engineering control measures, work practices and respiratory protection.
   B. Appropriate respirators shall be provided by Performance Abatement Services, Inc. at no cost to the employee.
   C. Performance Abatement Services, Inc. shall ensure that appropriate respirators are worn at all times inside regulated abatement areas in accordance with this respirator program.

2. PROGRAM ADMINISTRATION
   Responsibility for program administration and supervision of this program shall be assigned to the Superintendent, Larry Helaas with review by the Branch Manager, Reid Williams.

3. MEDICAL RELEASE AND ASSIGNMENT
   An employee shall not be assigned to work within a regulated abatement area until:
   A. He has been examined by a physician (at the company's expense) who will determine if the employee is physically able to perform the anticipated work and wear the necessary respiratory equipment.
   B. The physician shall provide a statement indicating the employee's capabilities and limitations regarding the anticipated work and respiratory equipment.
   C. The physician's statement shall be maintained in the projects records.
   D. Employee's medical status shall be reviewed annually.

4. EQUIPMENT APPROVAL
   All equipment shall be marked, approved or accepted in accordance with standards established by applicable authorities.
   A. Respirators, filters and respirator systems shall be approved by MSHA and NIOSH.
   B. Breathing gas containers shall be marked in accordance with ANSI Z 48.1-1954 and WAC 296-62-07119.

5. RESPIRATOR SELECTION
   A. Respirators shall be selected on the basis of all hazards to which the employee is exposed.
   B. Selection of the appropriate respirator shall be determined by a Certified Supervisor.
   C. Table 1 of WAC 296-62-07715 shall be used in the selection of respirators due to the exposure to asbestos fibers, except in full containment operations which require supplied air pressure demand respirators per subsection (3).
   D. At the request of the employee, a powered, air purifying respirator shall be provided at not cost to the employee by Performance Abatement Services, Inc. if it will provide adequate protection.
   E. Full Face Supplied Air Respirators will be provided:
      1. In atmospheres deficient in oxygen. (with SCBA back-up)
      2. At the beginning of each new job until the airborne concentration level is established.
      3. When airborne fiber concentrations require their use.
      4. In full containment operations (except piping removal).
      5. For any dry asbestos removal.

   F. Respirators shall be approved by NIOSH and MSHA.

6. TRAINING OF RESPIRATOR WEARER
   To ensure the proper and safe use of a respirator, the minimum training of each respirator wearer shall include the following elements:
   A. The reasons for the need of respiratory protection.
   B. The nature, extent, and effects of respiratory protection.
   C. An explanation of why engineering controls are not being applied or are not adequate and of what effort is being made to reduce or eliminate the need for respirators.
   D. An explanation of why a particular type of respirator has been selected for a specific respiratory hazard.
   E. An explanation of the operation, and the capabilities and limitations, of the respirator selected.
   F. Instruction in inspecting, donning, checking the fit of, and wearing the respirator.

G. An opportunity for each respirator wearer to handle the respirator, learn how to don and wear it properly, check its seals, wear it in a safe atmosphere, and wear it in a test atmosphere.
H. An explanation of how maintenance and storage of the respirator is carried out.
I. Instructions in how to recognize and cope with emergency situations.
J. Instructions as needed for special respirator use.
K. Regulations concerning respirator use.
L. For our asbestos removal operations, non routine, emergency and rescue uses of respirators shall be analyzed on a job by job basis with appropriate respirators and training in place. No work shall be accomplished in oxygen deficient or toxic atmospheres, IDLH situations. If fire or other emergency occurs, refer to site specific emergency procedures.

7. WEARING INSTRUCTIONS AND TRAINING
Wearing instructions and training, including practice demonstrations, shall be given to each respirator wearer and shall cover:
A. Donning, wearing, and removing the respirator.
B. Adjusting the respirator so that its respiratory-inlet covering is properly fitted on the wearer and so that the respirator causes a minimum of discomfort to the wearer.
C. Allowing the respirator wearer to wear the respirator in a safe atmosphere for an adequate period of time to ensure that the wearer is familiar with the operational characteristics of the respirator.
D. Providing the respirator wearer an opportunity to wear the respirator in a test atmosphere to demonstrate that the respirator provides protection to the wearer. A test atmosphere is any atmosphere in which the wearer can carry out activities simulating work movements and respirator leakage or respirator malfunction can be detected by the wearer.

Retraining. Each respirator wearer shall be retrained as necessary to assure effective respirator use. Refresher training shall be given at least annually and shall include the provisions of (c)(vii) through (xi)(A)(III) of WAC 296-62-07115.

8. RESPIRATOR SEALING PROBLEMS
Respirators shall not be worn when conditions prevent a seal of the respirator to the wearer.
   A. A person who has hair (stubble, moustache, sideburns, beard, low hairline, bangs) which passes between the face and the sealing surface of the face-piece of the respirator shall not be permitted to wear such a respirator.
   B. A person who has hair (moustache, beard) which interferes with the function of a respirator valve(s) shall not be permitted to wear the respirator.
   C. A spectacle which has temple bars or straps which pass between the sealing surface of a respirator full face-piece and the wearer's face shall not be used.
   D. A head covering which passes between the sealing surface of a respirator face-piece and the wearer's face shall not be used.
   E. The wearing of a spectacle, a goggle, a face-shield, a welding helmet, or other eye and face protective device which interferes with the seal of a
   respirator to the wearer shall not be allowed.
   F. If scars, hollow temples, excessively protruding cheekbones, deep creases in facial skin, the absence of teeth or dentures of unusual facial configurations prevent a seal of a respirator face-piece to a wearer's face, the person shall not be permitted to wear the respirator.
   G. If missing teeth or dentures prevent a seal of a respirator mouthpiece in a person's mouth, the person shall not be allowed to wear a respirator equipped with a mouthpiece.
   H. If a person has a nose of a shape or size which prevents the closing of the nose by the nose clamp of a mouthpiece/nose-clamp type of respirator, the person shall not be permitted to wear this type of respirator.

9. RESPIRATORS SHALL BE QUALITATIVE OR QUANTITATIVE FIT TESTED
   A. One individual certified by the fit testing equipment manufacturer shall perform any required fit testing procedures. The following fit testing procedures shall be employed for 1/2 mask, air purifying, negative pressure respirators. - WAC 296-62-07739 App. C -Qualitative fit test protocol - Irritant Fume. (Subsection (1)(c.)).

B. All employees shall be fit tested before using their respirator at the beginning of each job and before entering a regulated area.
C. Fit test procedures shall be repeated at a minimum of six (6) month intervals.
D. Records of fit testing shall be maintained along with other record keeping requirements for thirty years. The following information shall be included with the records:
   1. Date of fit test.
   2. Name, address and social security number of employee.
   3. Name of individual giving test and company name.
   4. Name, type and size of respirator.
   5. Type of fit test.
   6. Results of fit test.
E. Full face Pressure Demand or Continuous Flow supplied air respirators shall be quantitatively fit tested in accordance with WAC 296-62-07739 Appendix C. Subsection (2).

10. SPECIAL PROBLEMS
Facial hair, contact lenses, and eye and face protective devices.
A. A negative pressure respirator, any self-contained breathing apparatus, or any respirator which is used in an atmosphere immediately dangerous to life or health (IDLH), equipped with a face-piece shall not be worn if facial hair comes between the sealing periphery of the face-piece and the face or if facial hair interferes with valve function.
B. The wearer of a respirator shall not be allowed to wear contact lenses if the risk of eye damage is increased by their use. If a spectacle, goggle, face shield, or welding helmet must be worn with a face-piece, it shall be worn so as not to adversely affect the seal of the face-piece to the face. (See WAC 296-62-07115(3).)

11. ISSUE OF RESPIRATORS
Because Performance Abatement Services, Inc. work is normally asbestos abatement, respirators will generally be selected from WAC 296-62-07715 Table 1. If situations arise requiring the use of other respirators, they will be selected from WAC 296-62-07113 Tables I-V.

12. RESPIRATOR INSPECTION
    A. By a Certified Supervisor at frequent random intervals.
    B. By the employee before and after each use.
    C. During the inspection the following parts shall be checked:
        1. Face Seal - is it pliable and free of defects.
        2. Valves - in place and free of cracks.
        3. Filter gaskets - in place if used.
        4. Filters - proper type and not cross threaded.
        5. Straps - not frayed or over stretched.
    D. Class "C" respirators shall be inspected daily by a Certified Supervisor to assure proper function.

13. MONITORING RESPIRATOR USE
    A Certified Supervisor shall supervise, inspect and evaluate regularly the work conditions, work practices and employee exposure to hazardous conditions to determine:
    A. If protection measures are adequate.
    B. If respirators are properly selected, used, cleaned and maintained.
    C. The overall effectiveness of the respirator program.
    D. Respirators shall be assigned to individual employees for their use during the duration of the project.
    E. Employees shall be required to wear their respirator at all times while inside a regulated area.
    F. Employees who wear respirators shall be allowed to leave the regulated area to wash their faces or face pieces whenever necessary to prevent skin irritation.
    G. Respirator HEPA filters shall be discarded when the respirator is cleaned during the decontamination procedure.
    H. Respirator HEPA filters shall be replaced whenever there is an increase in breathing resistance or when the filter causes the flow rate of powered, air-purifying respirators to fall below 4 CFM per minute.

14. HAZARD EVALUATION
    A Certified Supervisor shall supervise, inspect and evaluate regularly the work conditions, work practices and employee exposure to hazardous conditions to determine:
    A. If protection measures are adequate.

B. If respirators are properly selected, used, cleaned and maintained.
C. The overall effectiveness of the respirator program.

15. MEDICAL SURVEILLANCE
For Performance Abatement Services, Inc. operations the annual physical offer shall determine respirator adequacy for asbestos exposures. (Along with fit testing, air monitoring, etc.) See WAC 296-62-07725.

16. RESPIRATOR MAINTENANCE AND STORAGE
A. Respirators shall be cleaned by the user after each day's use while showering.
B. Respirators shall be disinfected regularly.
C. Performance Abatement Services, Inc. shall provide adequate storage space for respirators.
D. Plastic bags shall be provided for employees to store respirators after cleaning.
E. Storage space provided shall protect respirators from dust, excessive sunlight, heat, cold, moisture, damaging chemical, and physical abuse.

17. PROGRAM EVALUATION
An appraisal of the effectiveness of the Respirator Program shall be carried out at least annually by the Superintendent with program responsibility and Branch Manager review. Action shall be taken to correct defects found in the program.

Seattle, WA 98109

RE: Asbestos Analysis; PAI *Lab* # 93 - 2306

Dear Ms. Jacobsen:

Enclosed please find test results for the bulk samples submitted to our laboratory for analysis. Examination of these samples was conducted for the presence of identifiable asbestos fibers using polarized light microscopy (PLM) with dispersion staining in accordance with **U.S. EPA method 600/M4-82-020** as specified in 40 CFR Ch. I (1-1-87 edition) Pt 763, Subpt. F App. A, pages 293-299.

For samples containing more than one separable layer of materials, the report will include findings for each layer (labeled L-1 for layer one and L-2 for layer two, etc.) and a total percentage for the entire sample. The asbestos concentration in the sample is determined by visual estimation.

For those samples with asbestos concentrations between 1 and 10 percent based on visual estimation, the EPA recommends a procedure known as point counting (NESHAPS, 40 CFR Part 61). Point counting is a statistically more accurate means of quantification for samples with low concentrations of asbestos. If you would like us to further refine the concentration estimates of asbestos in these samples using point counting, please let me know.

This report is considered highly confidential and will not be released without your approval. Samples are archived for two weeks following analysis. Samples that are not retrieved by the client are discarded after two weeks.

It has been a pleasure to be of service to you. Please feel free to call if there is anything further we can assist you with.

Sincerely,

Munaf A. Khan
Laboratory Director

August 13, 1993

RE: LIMITED BULK SAMPLING REPORT
CAPITOL HILL BAKERY
SEATTLE, WASHINGTON
PROJECT NO. 9100.0101

Mr. Stiles:

At the request of Lee Stiles, ATC/Diagnostic Environmental Inc. (DEI) performed a Limited Bulk Sampling at the above-referenced site on August 7, 1993. The scope of work was limited to sampling of suspect flue insulation in the basement boiler room and flooring materials in the southern portion of the first floor bakery.

LIMITED BULK SAMPLING REPORT

I. FIELD INVESTIGATION

Jane Rowcliffe of DEI collected bulk samples of suspect asbestos-containing flue insulation and flooring materials identified by Lee Stiles.

II. BULK SAMPLING PROCEDURES AND ANALYSIS

A total of three bulk samples were collected and analyzed by Polarized Light Microscopy (PLM) according to EPA Interim Method of Asbestos in Bulk Samples as defined in 40 CFR 763, Appendix A to Subpart F. The bulk samples were analyzed by PLM at Hygeia/ProScience Laboratories, located in Sierra Madre, California. Hygeia/ProScience holds a NIST/NVLAP Accreditation No. 1011.04. The laboratory results of the materials sampled during the field investigation are included in the Bulk Sample Logs. N/D denotes no asbestos detected during analysis. Materials containing greater than one percent (>1%) concentrations of asbestos are regulated in varying degrees and in various circumstances by federal, state and local statutes.

III. FINDINGS AND RECOMMENDATIONS

Resilient floor tile (12" x 12") located in the southeast portion of the first floor bakery was sampled and found to contain regulated level of asbestos fibers. This nonfriable material was observed to be in fair condition, and does not pose a risk of contamination unless damaged in such a way that airborne asbestos fibers are released. Inspect these materials annually for signs of wear or damage. In the interim, prohibit any disturbance to this material which may generate airborne asbestos fibers such as sanding, chipping or the use of corrosive cleaning chemicals. Removal of these materials must be performed by a licensed asbestos abatement contractor.

Materials sampled and found not to contain regulated levels of asbestos fibers include flue insulation in the boiler room and cementitious flooring at a former oven location in the southwest portion of the first floor bakery.

IV. LIMITATIONS OF LIMITED BULK SAMPLING REPORT

DEI has prepared this Limited Bulk Sampling Report using reasonable efforts in each phase of its work to estimate the liabilities associated with asbestos-containing materials (ACM) in the project area. The report reflects and specifically defines the analytical results of bulk samples collected in the project area. This report does not provide a complete definition of asbestos-containing materials located in the Capitol Hill Bakery. This report is intended to be used in planning for construction or demolition. This report is not intended to be a construction document.

If you have any questions concerning this report, please call this office.

Sincerely,

Jane P. Rowcliffe
Director of Operations

Attention: Mr. Mark C. Jacobsen

Subject: Phase I Environmental Site Assessment
Salvation Army Commercial Property
1401 11th Avenue East
Seattle, Washington

Dear Mr. Jacobsen:

In accordance with your request, RZA AGRA, Inc. (RZA AGRA) is pleased to present the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was based on our understanding of local geology and hydrogeology; interviews with various governmental agency personnel; previous work performed in the subject area and on the subject property; and visits to the site. The collection and analysis of soil and groundwater samples were beyond the scope of work for this project.

RZA AGRA appreciates the opportunity to be of service to you on this important project and would be pleased to continue our role as a consultant for future projects. Should you have any questions concerning this report, or if you feel we can assist you in any way, please feel free to contact us.

Respectfully submitted,

RZA AGRA, Inc.

11-09084-00

1.0 SUMMARY

RZA AGRA, Inc. (RZA AGRA) performed a Phase I Environmental Site Assessment on the subject site which is located north of East Union Street between 10th Avenue and 11th Avenue in Seattle, Washington. The purpose of the Phase I study was to evaluate the potential for soils or groundwater contamination to exist on the subject site. It should be noted that this document is current as of the time of our most recent visit to the subject site (8 September 1993). The discussion, conclusions, and recommendations contained in this report may require review and modification to reflect changes which have occurred since that time. The following summary presents the key findings and conclusions of this report:

- The subject property includes a former bakery warehouse on the eastern portion of the property; a second building on the northwest portion of the property; and, excavation, soil stockpile, and treatment areas on the southwestern portions of the property;
- The southwest portion of the subject property, located at 1416 10th Avenue, is listed on the Washington State Department of Ecology (Ecology) Leaking Underground Storage Tank list. This was the site of a leaking, 6000-gallon diesel underground storage tank (UST). Remedial activities were in progress during our site visits. Soil stockpiles and soil treatment activities were observed on the subject property and on the adjacent property immediately north of the bakery warehouse during site visits;
- During our 8 September 1993 site reconnaissance, we observed a sheen on ponded water in the excavation and noted associated areas of discolored soils in the eastern portion of the excavation pit. Mr. Perkins of Nurseryman Products collected surface water samples from the discolored soils of the pit area and concentrations of tetrachloroethylene (PCE) and trichlorethylene (TCE) exhibited by these samples were reported to be above the Model Toxics Control Act (MTCA) Method A cleanup levels. Mr. Perkins also reported seeing sheens on ponded water while performing remedial activities;
- Ecology issued a letter dated 22 October 1993 requiring no further action (NFA) on known petroleum hydrocarbon-affected soils in the area of the excavation, which are capped and contained. The NFA letter pertains to the southwestern portion of the subject property, and was issued based on the following: a review of a final cleanup report prepared by Mr. Perkins on the subject site, other documentation on file for this site, and communication with parties performing the remedial actions. Although comment by RZA AGRA on the final cleanup report is not provided in this assessment, the NFA letter may limit possible future cleanup requirements related to impact from the former leaking UST. If property transfers or other actions necessitate the quantification of the possible contamination without disturbance to the on-site structure, a subsurface evaluation of the site could be performed by obtaining soil and

groundwater samples via coring through the structure's concrete slab or in other areas of the site;

- A copy of a Limited Asbestos Bulk Sampling Report for the "Capitol Hill Bakery" showed that "suspect flue insulation in the basement boiler room and flooring materials in the southern portion of the first floor bakery" were sampled. Additional suspect asbestos-containing building materials (ACBMs) were observed in both the bakery and the building on the northwest portion of the subject property. According to Mark Jacobsen of the Me Two Company, asbestos abatement activities were performed in September 1993 to remove confirmed ACBMs, as well as other suspected ACBMs. It would be prudent to obtain and review documentation of the abatement activities to ensure that all suspect ACBMs on the subject property have been appropriately addressed;
- The former 35,000 square foot bakery warehouse was reportedly built in 1920. During our visits to the site, the majority of the lower floor and portions of the upper floor were being used by the Salvation Army for storage. Historic records show that an automotive business (sales, service, and repair) occupied portions of the building prior to its use as a bakery. Based on this information, it is possible that potentially hazardous substances were used on the subject property. The potential for the soil and/or groundwater underlying the bakery warehouse to have been adversely affected by activities related to automotive repair and service would be considered low to moderate;
- The building on the northwestern portion of the property is a two-story structure of approximately 7300 square feet which was reportedly built in 1913. Evidence of fire damage is visible throughout the lower floor which contains debris near the eastern portion of the building. Debris observed in the eastern portion of the storage building included paint cans and various other types of containers which were not readily identifiable. There is a potential for contaminants to be associated with this debris and it may be prudent to have it analyzed and disposed of in accordance with applicable State and Federal guidelines. Removal of containers and other debris observed near the basement entrance would also be prudent;
- Historical documents show that prior use of the building on the northwestern portion of the subject property included an auto springs manufacturer. There is a potential for activities related to this type of business to include the use of hazardous materials. Review of historical and current use of the surrounding area by business activities which use potentially hazardous substances indicates there is a low to moderate possibility that the soil and/or groundwater on the subject property have been adversely affected;
- Fluorescent light ballasts which may contain polychlorinated biphenyls (PCBs) were observed in both buildings on the subject property. It would be prudent to have the fluorescent light ballasts removed and disposed of in accordance with State and Federal guidelines;

- There are a number of other facilities in the immediate area that appear on the reviewed agency listings including adjacent or nearby facilities with USTs, facilities with leaking USTs, and facilities which generate hazardous waste. With the exception of the groundwater and soil discoloration in the east end of the excavation on the subject property discussed above, there are no readily apparent visible indications the site has been adversely environmentally impacted by off-site sources;
- The subject site and surrounding area obtain their public potable water supplies from the City of Seattle, which obtains its drinking water from reservoirs on the Cedar and Tolt Rivers in southeast and northeast King County, respectively. Based on the separation distance, these drinking water supplies would not be influenced by the subject site;
- Based on the following, it is our opinion that there is a low to moderate potential for soil and groundwater on the subject site to be affected by substances other than those addressed in the NFA letter:
  1) Review of Ecology's NFA letter which addresses remaining petroleum-impacted soil associated with the former leaking UST on the subject site;
  2) Reported levels of PCE and TCE in ponded water samples collected on the subject property, apparently exceeding MTCA criteria;
  3) The land use history of facilities on the subject property, which typically generate hazardous substances; and
  4) The past and present land use history of facilities in the immediate area, which typically generate hazardous substances.

  Possible future cleanup related specifically to the leaking UST removed from the subject site may be limited by the NFA letter, however, Ecology does not address other possible releases or conditions on the subject property which may include the presence of PCE and TCE. It would be prudent to sample and analyze the site soils and groundwater for possible contaminants not covered by the Ecology NFA letter.

This summary is intended for introductory purposes only and should be used in conjunction with the full text of this report. The project description, site conditions, and results of our assessment are presented in the text of this report.

2.0 INTRODUCTION

The purpose of this Phase I Environmental Site Assessment was to evaluate the subject site and vicinity for indications of environmental contamination due to previous or on-going activities. The scope of work for this study consisted predominantly of gathering readily available information. Based on these findings, this report

presents RZA AGRA's opinion concerning environmental conditions at the site which may have resulted from both past or current on-site and off-site activities. The assessment of the site included:

- A site reconnaissance for the purpose of assessing existing conditions and evaluating, if possible, any reported or observed environmental concerns at the site;
- A reconnaissance of the immediate site vicinity for the purpose of evaluating land use and making relevant observations regarding the potential for environmental concerns to exist in the subject vicinity;
- A review of a limited asbestos bulk sampling report performed on the warehouse facility on the subject property by ATC/Diagnostic Environmental, Inc., dated 13 August 1993;
- A review of regulatory agency files and data base lists for the purpose of documenting reported environmental concerns in the vicinity of the subject site;
- A survey of geologic and topographic maps as well as reported water wells of the subject area to evaluate the possibility of contaminant migration on and around the subject property;
- A review of tax assessment records, Department of Construction and Land Use permits, historical business directories, and aerial photographs for the purpose of noting past and present land use at the subject site and in the vicinity of the subject site for the purpose of documenting, if possible, businesses which potentially generate, use, or store hazardous substances;
- Personal interviews with knowledgeable individuals for the purpose of obtaining relevant anecdotal information regarding past and current uses of the subject site and adjacent sites;
- Preparation of this Phase I Environmental Site Assessment Report documenting the findings of the study.

All work was performed in general accordance with ASTM Standard E 1527-93. A chain-of-title review was not performed for this study. Environmental impairment of property as a result of activities such as illicit or unreported dumping or spilling of hazardous or deleterious materials may not be readily apparent. With the exception of the letter of no further action prepared for the subject property, the opinions and conclusions presented in this report are based on information readily available at the time of our visits to the site on 16 and 26 August and on 1 and 8 September 1993.

This report has been prepared in accordance with generally accepted environmental assessment practices, for the exclusive use of the Me Two Company and its agents for specific application to the project site. No other warranty, express or implied, is made. In the event any changes occur at the site or on adjacent properties, this report should be reviewed by RZA AGRA and amended as necessary.

3.0 SITE DESCRIPTION

The subject site is located north of East Union Street between 10th Avenue and 11th Avenue in Seattle, King County, Washington (Township 25 North, Range 4 East, Section 32) (see Figure 1). The irregularly shaped subject property supports two older structures: the first, an approximate 33,500 square foot, two-story, concrete and brick constructed warehouse/commercial building which occupies the eastern portion of the property; the second, a wood-frame constructed, approximately 7300 square foot, two-story, warehouse/light commercial/industrial building which occupies the northwest portion of the property. At the time of our site visits, the southwestern portion of the property was being excavated as part of an ongoing leaking underground storage tank remediation project being performed independently. The excavated area was estimated to be 120 feet in length from east to west. The excavation varied in depth from approximately 18 feet at the west end to 6 feet at the east end. Excavation width varied from approximately 18 feet to 40 feet at the eastern and western portions of the excavation, respectively. We observed possible perched groundwater seepage entering the excavation on 8 September 1993 from the east portion of the pit. This seepage contained a dark brown waxy/oily, odorless, unknown substance which migrated toward water ponded on the west end of the excavation pit. Excavation sidewalls, especially on the south and west sides appeared to exceed approved cut slope guidelines. The excavation was near the southwestern portion of the property immediately adjacent to the Davis-Hoffman auto repair facility. Soils from the excavation were being stockpiled and treated in the area immediately between the excavation and the wood-frame building located on 10th Avenue. The soils were being landfarmed on an adjacent property immediately north of the warehouse facility (see Figure 2).

The larger warehouse structure, reportedly built in 1920, was formerly the Ruth Ashbrook Bakery warehouse and, prior to that, was the site of an automobile sales and repair business. During our site visits, the majority of the lower floor and portions of the upper floor were being used by the Salvation Army to store donated furniture, canned goods, and other miscellaneous items. Due to the presence of these items, an estimated 35 percent of the basement floor could not be viewed. A boiler room is located on the east central portion of the basement. An elevator and other equipment items were observed along the northern portion of the lower floor. The upper floor, including mezzanine areas, is vacant except for some assorted office furniture, appliances, and additional stockpiles of donated goods in the eastern portion of the building. A portion of the eastern wall of the bakery is adjacent to an automobile repair facility. The warehouse is accessible from east along 11th Avenue East, and from a loading dock on the western portion of the warehouse.

The smaller building at 1416 10th Avenue is also a two-story structure, reportedly built in 1913. According to historical records, past uses have included use by the Ruth Ashbrook Bakery and an industrial automotive business which performed automotive repair, parts manufacturing, blacksmithing, and forging activities. The lower floor has evidence of fire damage throughout which reportedly occurred in 1992. There are also debris piles in the eastern portions of the lower level. Parts of the upper floor are being used for storage (western

DRAFT

portion) while other areas appear to be in a state of repair (eastern portion). According to the owner, Mr. Stiles, the upper floor was remodeled in about 1977 and electric baseboards are now used to heat this portion of the facility.

According to the United States Geological Survey (USGS) topographic map "Seattle South Quadrangle," the subject site is at an elevation of approximately 275 to 300 feet above sea level. The site is situated on a saddle between Capitol Hill and First Hill. Higher ground elevations are generally to the northeast and southwest towards the crests of Capitol Hill and First Hill, respectively. Lower elevations are generally to the northwest and southeast. There is a slight downward slope from north to south along 10th and 11th Avenues and from east to west along East Union Street, there being an approximate one- to three-foot difference in elevation difference at street grade from north to south as well as east to west perimeters of the subject property. Surface water runoff for the surrounding area is accommodated by storm drains located on the adjacent streets and in a parking area north of the subject property. The soil stockpile and treatment area may have prevented our observation of other items on the surface of the subject property.

The western portion of the subject property is bound on the north by a paved parking area beyond which is a mixture of commercial properties and apartments. The eastern portion of the subject property is bound on the north by a vacant parcel on which an estimated three- to four-foot layer of contaminated soils was being treated. A concrete slab was reportedly underneath the soil. The subject property is bordered on the east by 11th Avenue beyond which is a vacant, multi-story brick building which appears to be undergoing maintenance; to the south across East Union Street by commercial/light industrial properties including a paint business, an auto parts sales store, an automobile battery repair business, and an auto repair facility. Another auto repair facility is located northeast of the intersection of 10th Avenue and East Union Street. This facility is adjacent to the subject property immediately south of the excavation and west of the warehouse. Beyond 10th Avenue, to the west of the subject property, are located other commercial facilities including additional auto repair businesses.

4.0 PHYSICAL ENVIRONMENT

4.1 Geology and Soils

According to the USGS "Preliminary Geologic Map of Seattle and Vicinity, Washington" (1962), the geologic units underlying the site and surrounding area are identified as Vashon Till. Vashon Till is described as a "compact, concrete-like mixture of silt, sand, gravel and clay." The thickness of Vashon Till is usually less than 50 feet, but can be up to 150 feet. The upper two to five feet of this layer generally consists of a loose, silty sand and gravel.

Moist, brown and gray, silty, gravelly sands were observed in the open excavation on the subject site. These soils may be imported fill or naturally occurring soils used to backfill the area.

The United States Department of Agriculture Soil Conservation Service's *Soil Survey of King County Area, Washington* was consulted for information concerning soils at the site and surrounding area. The *Survey*, however, does not include soil classifications or descriptions for areas within the Seattle city limits.

4.2 Hydrogeology, Water Wells, and Public Water Supply

The subject site and surrounding area obtain their public potable water supplies from the City of Seattle, which, in turn, obtains its drinking water supply from reservoirs on the Cedar and Tolt Rivers in southeast and northeast portions of King County, respectively. Based on the separation distance, these drinking water supplies would not be influenced by the subject site.

Possible perched groundwater was observed to be ponded in the excavation on the southwestern portion of the subject property. Seepage appeared to be entering the excavation near its eastern portion where soils had been excavated to approximately 6 feet below the ground surface. This seepage appeared to be flowing to the western part of the excavation pit.

Water and monitoring well records on file with the Washington State Department of Ecology (Ecology) were reviewed. No drinking water wells on file were located within an approximate one mile radius of the subject site, but records for other types of wells were reviewed. Soils reported in one well log approximately one-half mile south of the subject property reported brown clay from the surface to a depth of 10 feet, brown sandy clay from 10 to 22 feet, and sandy coarse gravel from 22 to 50 feet. The surface elevation of this well was reported to be 278 feet above seal level and the static level for groundwater was approximately 51 feet below the surface. A second water well report for a site approximately one-quarter mile southwest of the subject property reported brown sand (fill) from the surface to a depth of 16 feet; brown sand, gravel, sandy gravel, and silt from 16 to 48.5 feet; gray to brown saturated sand, silt, coarse sand and gravel from 48.5 to 74 feet; and gray-brown saturated sand, and silt from 74 to 76 feet. Although surface elevation was not reported, groundwater was encountered at a depth of 22 feet. A monitoring well drilled approximately one-quarter mile southeast of the subject property reported fill and surface covering from the surface to a depth of 4 feet; moist, greenish blue silty sand from 4 to 15 feet; and wet greenish blue silty sand with some gravel from 15 to 20 feet. Groundwater was reported at 12 feet below the ground surface.

A leaking underground storage tank (LUST) file for at site at 1100 East Union (immediately east of the subject property) was reviewed by RZA AGRA at Ecology's Northwest Regional Office (NRO) (see Section 5.4.5 for further discussion of this LUST site.) The following information on subsurface conditions was reported: Fill

material consisting of silty sand with clay from the surface to a depth of 4 feet underlain by gray silty sand (assumed native soil). Groundwater was said to have filled the excavation to a level approximately 4.5 feet below the existing grade.

5.0 RESULTS OF RESEARCH

5.1 Site Reconnaissance

Representatives of RZA AGRA conducted a reconnaissance of the subject site on 16 and 26 August and on 1 and 8 September 1993. The purpose of these site visits was to observe current conditions at the site and to look for indications of potential environmental impacts. Representatives from the Me Two Company were present on site during the 26 August, 1 September, and 8 September visits. The property owner, Mr. Stiles, was present during the 26 August 1993 visit and acted as an escort for a walk-through of the upper floor of the storage facility at 1416 10th Avenue.

5.1.1 On-Site Excavation, Soil Stockpile and Soil Treatment Area

An excavation and excavated soils were observed on the southwestern portions of the subject property (see Section 3.0 for dimensions and locations). Soils reported to be from the excavation were also observed on the adjacent property north of the warehouse facility (See Figure 2). Mr. Randy Perkins of Nurseryman Products, Inc. was observed performing soil treatment activities in the area of a leaking UST which was removed from the southwestern portion of the subject property in 1990. According to a 16 August 1993 conversation with Mr. Perkins, diesel-range total petroleum hydrocarbons (WTPH-D) were found in the soil which exceeded the Model Toxics Control Act (MTCA) Method A cleanup criteria of 200 parts per million (ppm). One sample was reported to have a concentration of 355 ppm and a second sample had 311 ppm. Mr. Perkins stated that he had noticed a sheen on groundwater in the excavation, but no free product was observed. Mr. Perkins also stated that he had contacted Mr. Hickey of Ecology's NRO and state cleanup guidelines for leaking underground storage tanks were being followed. Based on reported levels of petroleum hydrocarbons, it may be prudent to sample soil from the area underlying soil treated on the adjacent property north of the bakery warehouse.

During site visits on 26 August and on 1 and 8 September 1993, a petroleum odor was noted in soils stockpiled and spread over portions of the subject property. Soils spread out over the adjacent parcel immediately north of the warehouse facility exhibited a similar odor. Pooled water was observed in the excavation, but no sheen or discoloration was noted during site visits prior to 8 September 1993. During the 8 September visit, water seepage into the pit exhibited an unknown, dark brown, odorless, waxy/oily substance. This free phase substance appeared to be seeping from approximately 6 feet below ground surface from the east end of the excavation and had migrated approximately 60 feet along the bottom of the excavation toward its west end. No odors associated with the affected groundwater or soil were noted. Mr. Perkins reported collecting water samples from the discolored area which contained concentrations of 780 parts per billion (ppb) of

tetrachloroethylene (PCE) and 67 ppb of trichlorethylene (TCE). These concentrations are above MTCA Method A cleanup levels of levels of 5 ppb for both constituents in surface or groundwater.

This site is further addressed in our discussion of leaking USTs (Section 5.4.5), and in our review of the no further action letter prepared by the Department of Ecology (Section 5.5.1).

5.1.2 Warehouse Boiler Room

The warehouse facility contains a boiler room measuring approximately 20 feet by 20 feet located in the east central portion of the lower floor. In addition to mechanical equipment, eight filled or partially filled chemical containers were observed in this room: a 55-gallon drum of "BREX Concentrate," an acidic cleaner; a 55-gallon drum of "CHEM-AQUA," a descalar; a 55-gallon drum of CHEM-AQUA 100, a boiler treatment compound; two 55-gallon drums of "CHEM-AQUA 900," a water treatment compound (one container appeared to be in use); a 55-gallon drum of "ALKALINE LIQUID," a corrosive; a container estimated to be 25 to 30 gallons with a "NATIONAL CHEMICAL" label (no other printed information was legible); and a 1-gallon container of "MORTAR" was observed. A ninth unlabeled container (approximately 20 to 30 gallons in size) was in the room, but it was empty.

Portions of the floor and walls appeared stained and/or damaged. Stains of varying size covered approximately 50 to 75 per cent of the floor area. White chalky stains and reddish stains appeared to be associated with the chemical containers. Dark gray and black stains were observed beneath and near the boiler equipment and other mechanical equipment in the room. Similarly colored stains were observed on the north wall and on the walls in the southwest corner of the room. A floor drain, approximately four inches in diameter, was observed near the southwestern portion of the boiler room. Pitting, cracks, and seems were visible in areas of the floor. The brick walls in the southwest portion of the boiler room were chalky and the surface crumbled easily. The floor drain, cracks, and other inconsistencies in the floor are possible pathways for contaminant migration.

5.1.3 Warehouse Basement

During our site visits, large portions of the warehouse basement were being used to store goods for the Salvation Army (i.e., furniture, canned goods). It should be noted that approximately 35 percent of the basement floor could not be viewed as a result of the presence of these stored goods.

Two floor drains and a sink were noted in the concrete floor of the warehouse basement (in addition to the floor drain noted in the boiler room). One drain is immediately west of the boiler room and the other drain and sink are near the north central portion of the building. Hand soap and floor cleaning equipment were near the drain west of the boiler room. Stains were observed on the floor near both floor drains, and evidence of pitting and floor repairs was observed near the northern floor drain. The base and walls of the sink had been stained.

DRAFT

Although no unusual odors from the drains or sink during our site visits, these fixtures as well as other inconsistencies in the basement floor could have acted as pathways for contaminant migration.

A cardboard box (approximately 4 feet by 4 feet by 4 feet) with an estimated four or five dozen containers of cleaning compounds and other chemicals (i.e., Drano, high gloss floor finish, etc.) was observed near the northwestern area of the basement. A stained area of about 30 square feet was observed near the box. According to a Salvation Army worker on site, Mr. Perry Ryals, some floor cleaner had spilled recently causing the stain. He also reported that the compounds would be taken out of the box and relocated. A green 55-gallon drum was also observed in the northern portion of the basement. It appeared to be about one-quarter full of a grease-like substance, and some of the contents had either leaked or was spilled. Stains, pitting, and evidence of floor repair were noted below equipment items along the northern portion of the of the basement, and piping in the same general vicinity appeared to be leaking. No unusual odors related to these items were noted during our visits, and it is our opinion that adverse affects to the soil or groundwater resulting from these noted items would be unlikely.

An estimated 25 square foot area immediately north of the boiler room was covered with a viscous substance. It appeared to be dripping from a pipe directly overhead. We were not able to determine the source of this substance. However, based on the condition of the concrete floor in the affected area, and the limited surface area, it is unlikely that this substance presents a significant environmental concern to the subject property.

5.1.4 Storage Facility Basement

Fire damage was observed throughout the basement of the storage facility at 1416 10th Avenue. Other observations included debris in the eastern portion of this floor, metal containers, and equipment items. Debris covered an estimated 20 foot by 20 foot area and up to three feet in height in some areas. Most of the debris had sustained fire damage, and many items were not easily recognized. Paint cans and other types of containers, a conveyor (or similar) apparatus, machine parts, and four lockers (approximately one foot by one foot by five feet) and other types of containers were observed. According to historical records, this building is the former site of auto repair, forging, and auto parts manufacturing activities. Based on the types of debris observed (paint cans, miscellaneous containers, etc.) and the past use of the facility, portions of this debris may have special disposal requirements.

A full 55-gallon drum and a partially full 5-gallon container were observed near the south entrance to the basement of the storage facility. These items may also have special disposal requirements.

DRAFT

A pipe was observed leading into a room directly north of the basement entry area. This pipe may indicate a past oil burning heat source for the building. No above ground indications of underground storage tanks were noted.

5.1.5 Fluorescent Light Ballasts

Fluorescent light ballasts of varying size were observed throughout both buildings on the subject property. Fluorescent light ballasts manufactured prior to 1979 often contained PCBs (polychlorinated biphenyls). Many of the fixture ballasts in the buildings were visible and observed, while others in areas upstairs portion of the storage building were not. No non-PCB labels were seen on the exposed ballasts. Ballasts not labeled "no-PCBs" should be assumed to contain PCBs. In the event of future repair work, remodeling, or demolition, certain regulations concerning the disposal of the ballasts must be followed. The EPA's Region 10 has established a policy that the disposal of five or more PCB-containing ballasts from a site per year or any leaking PCB-containing ballast must be disposed of in a chemical waste landfill or in a high temperature incinerator. If a site has less than five PCB ballasts, they may be disposed of at a municipal landfill. It may be prudent to arrange for the removal of the fluorescent light ballasts in accordance with applicable requirements.

5.1.6 Vent Pipes

Vent pipes were observed in two locations on the outside of the warehouse building. A pair of vent pipes were observed on the outside wall near the east central portion of the building which appeared to be exiting the building near the area of the basement boiler room. A heating specialist was reportedly hired by the Me Two Company to observe the equipment in the warehouse facility. According to conversations with Mark Jacobsen of the Me Two Company, the heating specialist was of the opinion that an above ground oil tank was likely to have been used on the property in an area immediately north of the boiler room. We agree with this opinion, and believe an underground storage tank associated with the vent pipes would be unlikely.

Vent pipes were also observed on the west side of the warehouse approximately 10 to 20 feet south of the loading dock area. These vent pipes to lead a natural gas meter and other pipes labeled with "WASHINGTON NATURAL GAS CO." stickers. Pipes appeared to lead from the gas meter to the upper floor of the warehouse. It is our opinion that it is unlikely that underground storage tanks are associated with these piping systems.

5.1.7 Other

The presence of possible asbestos-containing building materials is addressed in our discussion of an asbestos survey performed on the bakery warehouse facility (Section 5.5.2).

Four containers were observed on the roof of the warehouse building. They ranged in size from approximately two to five gallons. They appeared to be roof repair materials and were located in covered equipment sheds

DRAFT

and in the open along the south side of an east-west trending wall on the roof. It may be prudent to have these materials disposed of in accordance with applicable state and federal guidelines.

A stain was observed on the base of the loading dock wall on the west side of the warehouse facility. The stain is approximately one to two feet high and extends the length of the loading dock wall (estimated to be 30 feet long). The stain appeared to be confined to the wall, except for an estimated four foot by four foot area of the concrete surface near the southern portion of the loading dock wall. It is unlikely that this stain is an indication of significant adverse environmental impacts to the subject property.

The site reconnaissance did not reveal the presence of the following on the subject property: underground storage tanks, lagoons, landfills, pipelines, sumps, ponds, groundwater monitoring wells, or water supply wells.

5.2 Surrounding Area Reconnaissance

An RZA AGRA representative also conducted a reconnaissance of the area immediately surrounding the subject site on 26 August and 1 September 1993. The purpose of this reconnaissance was to observe land use in the site vicinity and to note the potential for nearby businesses to generate, use, or store hazardous substances that may affect the subject site.

The area surrounding the subject property is primarily commercial, although some residential properties were observed. Automotive repair facilities were observed adjacent to the subject site to the southwest as well as across the streets to the east, south, and west. An automotive battery/electrical shop and a commercial paint store were noted across East Union Street south of the subject property. The building northeast of the intersection of 11th Avenue and East Union Street appeared to be vacant and undergoing maintenance or renovation. This building displayed signs indicating it was the location of a commercial laboratory. There were no readily apparent indications that these properties had adversely affected the subject property.

Four telephone poles with a total of seven transformers were observed in the sidewalks around the subject property. Blue stickers were observed on each transformer which, according to a representative from Seattle City Light, indicates a concentration of less than 50 ppm of polychlorinated biphenyls (PCBs). In addition, no sheen or evidence of leaking was observed on the transformers. A tar-like substance was observed emanating from the base of the telephone pole near the southwestern corner of the warehouse building. It covers an estimated two square foot area and extends to the curb of East Union Street. It is our opinion that this substance is not related to the transformers and it is not likely to pose a significant environmental threat to the subject property.

Other types of properties and businesses were noted within a one-mile radius of the subject property and pertinent information is discussed in Sections 5.3 and 5.4.

5.3 Site History

The land use history of the subject site was reviewed utilizing archived tax assessment records, business directories, historical aerial photographs, Department of Construction and Land Use permits, and other information sources.

5.3.1 Tax Assessment Records

Tax records for the subject property were obtained from the King County Department of Assessments and the Washington State Archives office. The subject property consists of five regularly shaped parcels. The warehouse facility corresponds to two different parcels: one at 1401 11th Avenue, the other at 1405 11th Avenue. The square footage of building space reported for 1401 11th Avenue is 14,080 and the square footage for the portion of the facility at 1405 11th Avenue is 19,450 giving a total area of 33,530 square feet. Both parcels report construction in 1920. Suspended heating equipment is the reported heat source for the southern portion of the warehouse, and other documentation indicates a steam heat source for the portion of the facility corresponding to the northern part of the facility. A hydraulic elevator with a concrete shaft was reportedly installed in the warehouse in about 1950. Archived photographs indicate that a portion of the building at 1401 11th Avenue was an automobile sales and service business, and the 1405-13 11th Avenue address corresponded to a garage facility. An archived photographs dated 1959 of 1401 and 1405-13 indicate use by the Ruth Ashbrook Bakery.

The building at 1416 10th Avenue was reportedly built in 1913 and has 7,320 square feet of area. Suspended heating equipment and stove heat sources are reported for this address. An archived photograph indicates that 1416 10th Avenue was a blacksmithing and forging business and a building at 1418 10th Avenue, which appears to adjoin the northern wall of 1416 10th Avenue, was an automobile repair business.

The parcels corresponding to 1408, 1410, and 1414 10th Avenue in Washington State archives are listed at 1400 10th Avenue on King County assessment records. The reported land use of this portion of the subject property is for parking, and data for the combined land area of these parcels shows a total of 8,960 square feet. The parcel adjacent to the subject property immediately north of the bakery warehouse (where soil stockpiling and landfarming activities are taking place) appears to correspond to 1414 10th Avenue. This address was reportedly the site of a three-story, multi-family dwelling built in 1904 with a fireplace and pipeless furnace heat sources.

The excavation site appears to correspond to 1408 and 1410 10th Avenue. A record for 1408 10th Avenue shows the property to be paved and the site of a 6000-gallon underground tank. A document for 1410 10th Avenue shows this address to be the site of a machine shop business constructed in 1905 with stove heating.

5.3.2 Business Directories

In an effort to document past uses of the site and surrounding area, available historical business directories were reviewed. The directories were reviewed to help establish a history of occupancy for the host site and to locate businesses in the immediate area which may have used or stored hazardous materials. *Polk's Seattle City Directory* from the years 1939, 1948/49, 1957, 1964, 1971/2, 1978, 1985, and 1989/90 were reviewed.

Addresses in the business directories corresponding to the warehouse facility include 1401, 1403, and 1407 11th Avenue. A used car dealer is listed at 1401 11th Avenue in 1939, but there is no listing for this address in the directories reviewed after that time. In 1957 a listing for 1403 11th Avenue shows a vacancy, and the Ruth Ashbrook Bakery is listed at 1407 11th Avenue. The bakery appears in each of the following directories reviewed until 1985 at which time it shown to be vacant and it is not listed in the 1989/90 directory.

An auto springs manufacturer is listed at 1416 10th Avenue in the directories reviewed from 1939 to 1971/72 at which time it is listed as being vacant. In the 1978 directory an automotive repair business is listed at this address, and in the 1985 and 1989/90 directories it is listed as the Ruth Ashbrook Bakery facility. An auto repair business is listed at 1418 10th Avenue in 1939. In 1948/49, a printing company was listed at this address and it is listed as being vacant in 1957. There is no listing for 1418 10th Avenue in the directories reviewed until 1989/90 where it appears as the Ruth Ashbrook Bakery facility.

Addresses in the reviewed directories corresponding to the approximate locations of the excavation and soil stockpile and treatment areas include 1408, and 1414 10th Avenue. A listing for 1408 10th Avenue first appears in 1948/49 as an auto repair facility, and a machining business in 1957. No listing for this address was given in the directories reviewed after that time. The 1414 address is listed as a residential or apartment building from 1939 through 1964. It is shown to be vacant in 1971/72 and does not appear in the more recent directories reviewed.

The directories indicate that the use of the immediately surrounding area has been primarily for commercial uses although some residential use was noted. Residences and apartments were north of the site and to the south across Union Street. Within an approximate two block radius of the site, listed businesses which present potential environmental concerns included service stations, machine shops, plating businesses, a radiator repair shop, automobile businesses (i.e., repair shops, paint shops), dry cleaners, automobile dealerships, a medical

laboratory, and photography businesses. An example of such a property is immediately south of the excavation site at 1406 10th Avenue. This is listed as the Davis-Hoffman auto repair business in each directory reviewed.

5.3.3 Aerial Photographs

Aerial photographs from the years 1946, 1956, 1960, 1969, 1974, 1980, and 1985 were reviewed. The photographs ranged in scale from approximately 1:1000 feet to 1:2000 feet. In the review of the aerial photographs, observations are interpretative and limited to the area within approximately 2,500 feet of the subject site. The height from which the photographs were taken did not provide a clear image of specific site characteristics. However, the absence and presence of structures on the site as well as developmental trends in the area were noted. All of the photographs reveal the site to be occupied by the bakery warehouse and the storage facility at 1416 10th Avenue. All photos also show a buildings immediately north and immediately west of the warehouse structure. The surrounding area is urban. The replacement of buildings and redevelopment of properties is apparent in the surrounding area.

The 1946 and 1956 photographs show a building across the street from the southeast portion of the subject property which resembles a service station. A commercial structure has replaced the service station facility in the more recent photos reviewed. The 1946, 1956, and 1960 photographs show two structures on the subject property between the buildings now present at 1406 and 1416 10th Avenue. Neither of the structures appear in the more recent photographs. In the 1969, 1974, 1980, and 1985 photographs this area appears to be used for large vehicle access or parking.

5.3.4 Department of Construction and Land Use Permits

Permits on file with the Seattle Department of Construction and Land Use (DCLU) were reviewed for information on the subject property. Permit numbers 383291 (not dated) and 418895 (dated in 1953) were obtained to construct a paint spray booth for the auto repair garage corresponding to the warehouse now located at 1401 11th Avenue. Permit number 487188 (dated 1960) was obtained to demolish the building at 1408 10th Avenue, and permit number 487309 (dated 1960) was obtained to install a 6000-gallon gasoline tank at the same address.

5.3.5 Other Information Sources

According to information provided by the Me Two Company, O'Sullivan Construction, Inc., removed a 6000-gallon diesel UST and approximately 100 cubic yards of soil from the southwestern portion of the subject property in October and November 1990. Laboratory reports dated 1 November and 3 December showed soil samples corresponding to locations at the bottom of the UST excavation with total petroleum hydrocarbon (TPH) concentrations of 1798 ppm. This exceeds the MTCA Method A cleanup standard for TPH of 200 ppm.

According to Mr. Perkins, further excavations showed that soil beyond the limits of the original excavation had also been impacted by petroleum hydrocarbons (this is further discussed in Section 5.5.1).

Sanborne Fire Insurance Maps for the site and surrounding area updated as of 1950 and 1961 were reviewed. The 1950 map shows an auto body shop and painting warehouse at 1401 and 1403 11th Avenue. An automotive business is also shown at 1407 and 1411 11th Avenue. An auto springs manufacturing and electric motor business is shown at 1416 10th Avenue with apartments and a machine shop at 1414 and 1408 10th Avenue, respectively. A printing business and residential properties are adjacent to the north of the subject property; and auto repair, auto painting, and a plating business are immediately to the south and southwest. A "gas & oils" facility is shown directly across East Union Street from the existing warehouse location. The map updated as of 1961 shows the same structures except for the following noted changes: the warehouse is no longer shown to be an automotive business but shows where wrapping and dish cleaning operations occur, and the "gas & oil" facility has been moved one parcel further south to a location northwest of the intersection of East Madison Street and 11th Avenue.

Persons who may have information concerning environmental conditions at and surrounding the site were interviewed. Pertinent information obtained during the interviews appears in the appropriate sections of this report.

5.4 Regulatory Agency Data Review

Readily available regulatory agency reports generated from data bases were reviewed with respect to the proposed communications facilities sites and surrounding properties. The reports, obtained from Federal, State, and Local government agencies, were reviewed in an effort to document any reported environmental problems or concerns which have occurred at the site or in the surrounding area. Sites or facilities appearing on the reviewed reports, within a certain distance or radius of the subject site, are discussed below. The search radii RZA AGRA utilizes for its standard Phase I reports meet or exceed those specified in the American Society for Testing and Materials (ASTM) Standard E 1527-93. The following agency databases were reviewed (RZA AGRA's standard search radius for each report is listed in parentheses):

- U.S. Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) report (one mile);
- Washington State Department of Ecology's (Ecology) Confirmed and Suspected Contaminated Sites (CSCS) report (one mile);
- EPA Resource Conservation and Recovery Act (RCRA) report (adjacent properties);
- Ecology's Underground Storage Tank (UST) registration list (adjacent properties);
- Ecology's Leaking UST (LUST) list (one-half mile); and
- Landfills (one-half mile); and

DRAFT

5.4.1 CERCLIS

The CERCLIS data base is used by EPA to track activity conducted under the Superfund Program. Three types of sites are listed on this inventory including sites which may be hazardous and require a preliminary investigation; sites for which no further remedial action is planned (NFA); and sites which represent a long-term threat and are classified on the National Priorities List (NPL). An NFA designation indicates the site has been evaluated and, based upon the findings, no further investigation or remedial actions are planned under the Federal Superfund program. Listing of a site on the CERCLIS report does not necessarily mean it is contaminated, and the absence of a site on the inventory or the NFA designation does not necessarily mean it is contaminant free. The reviewed CERCLIS list (dated 28 January 1993) lists three sites within an approximate one-mile radius of the subject site, all of which are designated NFA. The three sites are as follows:

METAL LAUNDRY INC at 614 12TH is located an estimated three-eighths mile south of the subject site. This site also appears on the State AMC report and is discussed further in Section 5.4.2.

ABC METAL FINISHING INC. at 528 PONTIUS N and **MASTERCRAFT METAL FINISHING** at 1175 HARRISON ST are both located approximately one mile northwest of the subject site. Both sites are topographically downgradient of the subject site approximately 200 to 250 feet.

Based on the separation distances and their downgradient location relative to the subject site, it is unlikely contaminants at these three facilities have adversely affected the subject site.

5.4.2 CSCS

Ecology's CSCS report lists suspected or confirmed hazardous substance sites in the State of Washington. The reviewed CSCS report (dated 13 October 1993) lists eight facilities within an approximate one mile radius of the subject site. The eight facilities include **METAL LAUNDRY INC, ABC METAL FINISHING INC.** and **MASTERCRAFT METAL FINISHING** which were discussed in the CERCLIS section (Section 5.4.1). The remaining five facilities are discussed below:

The nearest facility is **A1 BRAKE** at 1520 10TH AVE. located approximately one block north of the subject site. According to the report, this site has confirmed petroleum contamination of its soil due to improper handling. The site has a potential for surface water, groundwater and air contamination. A file concerning this facility was reviewed at Ecology's NRO. According to information in that file, Ecology received a call from a neighbor of the A1 Brake facility in August 1991 complaining about facility personnel dumping "some kind of oil sludge" out the back door and onto the soil. Ecology investigated the site in February and March of 1992 and visually confirmed petroleum contamination of the soil. The file does not indicate further characterization or remediation at the facility has occurred.

Based on the review Ecology file, it does not appear contaminant concerns at this facility have adversely affected the subject site.

OLYMPIAN APARTMENT BUILDING at 1605 E. MADISON ST. is located approximately three-eighths of a mile northeast of the subject site on a hilltop. **JEFFERSON ST. BUS BARN** at 1398 E. JEFFERSON ST., is located an estimated one-half mile south of the subject site. **METAL LAUNDRY INCORPORATED** at 614 12TH is located an estimated three-eights of a mile south of the subject site. **MELROSE APARTMENTS PROPERTY** at 1520 MELROSE AVE. is located an estimated three-eighths of a mile west-northwest of the subject site. Considering the topography, near-surface groundwater flows at these sites are inferred to be in directions that are non-tributary to the subject site. Based on the separation distances and the inferred, near-surface groundwater directional flows, it is unlikely contaminants at these facilities have adversely affected the subject site.

5.4.3 RCRA

The RCRA report is a list of regulated generators, handlers, transporters, and disposers of hazardous materials. Listing on the RCRA report does not indicate a facility has been adversely affected by a hazardous material, but merely the facility is required to monitor and document hazardous waste activities to EPA or Ecology. The reviewed RCRA report (dated 11 January 1993) lists over 150 RCRA facilities located within approximately one mile of the subject site.

Four facilities are located adjacent to or on opposite sides of the street from the subject property. **DAVIS & HOFFMAN AUTO REBUILD** at 1406 10 AVE is the only facility listed as a large quantity generator and it is immediately adjacent to the subject property south of the excavation and west of the warehouse facility. **AUTO BATTERY & ELECT CO** at 1009 E UNION ST immediately across the street to the south of the subject property and is listed as a small quantity generator. The remaining two facilities are listed as conditionally exempt generators: **INTERNATIONAL CLINICAL LABORATORIES** at 1100 E UNION ST immediately across 11th Avenue to the west of the subject site, and **PREMIER AUTO BODY** at 1422 11TH AVE across 11th Avenue and northwest of the subject site. A non-intrusive visual observation of these facilities did not reveal indications of improper hazardous wastes disposal. If these facilities handle and dispose of hazardous wastes in a proper fashion, following appropriate regulations, it is unlikely the hazardous wastes would pose an environmental threat to the subject site.

5.4.4 UST

Leakage from underground storage tanks (USTs) is a potential source of environmental contamination. Ecology's report of registered USTs (dated 2 February 1993) lists all registered USTs in the State of Washington. Therefore, this list is limited to registered USTs and does not necessarily include all existing USTs. A review

of this report indicated over 100 facilities with USTs within an approximate one mile radius of the site. The nearest listed UST facility is **TOMLINSON INC** at 1100 E UNION located to the east on the opposite side of 10th Avenue in relation to the subject property. This site is also listed on the Leaking UST list (see Section 5.4.5).

5.4.5 LUST

Ecology's leaking UST (LUST) list is limited to reported leaking USTs and may not include all leaking USTs. According to Ecology's NRO list dated 30 July 1993, there are over 60 facilities with LUSTs within an approximate one mile radius of the subject site. Of these, one LUST site is on the subject property and 13 others are within an approximate one-quarter mile radius. The list indicates that limited cleanup was performed and a diesel tank was removed from the **RUTH ASHBROOK BAKERY** site at 1416 10TH AVE, and the impact to soil only is indicated.

A file for this site was reviewed at Ecology's NRO and copies of material in this file were also provided by the Me Two Company. Information from a 4 March 1993 study of the LUST site was also provided by Mr. Stiles, the current property owner. Ecology's file contained a letter from Northwest EnviroField Services dated 7 November 1990 stating that a 6000-gallon diesel tank from the site address had been received from O'Sullivan Construction. Laboratory reports in the file showed levels of total petroleum hydrocarbon (TPH) contamination from the approximate area of the existing excavation which exceeded allowable levels. The 1 November report showed one sample with a concentration of 1798.2 ppm for TPH and the 3 December 1990 report indicated a sample containing 413.5 ppm for TPH. The MTCA Method A cleanup standard for TPH in soil is 200 ppm. A 13 March 1991 initial investigation document by Ecology reported that the contractor hired to remove the UST and approximately 100 cubic yards of contaminated soils backfilled the excavation before the laboratory results were received. At that point, the property owner reportedly decided to wait before initiating further cleanup efforts.

The 4 March 1993 letter report provided by Mr. Stiles was prepared by Pacific Testing Laboratories. Samples were taken from various depths of three borings in locations near the former leaking UST site. Soil samples from the borings were analyzed for diesel-range petroleum hydrocarbons by Ecology Method WTPH-D. The maximum allowable concentration is 200 ppm and soil from two borings were above this level (355 ppm and 311 ppm). Based on laboratory analysis of soil and groundwater, further remediation and investigation was undertaken.

Of the 13 remaining sites leaking UST sites within one-half mile of the subject property, the list indicates that only soil was impacted at nine sites, so it is unlikely that associated contamination from these locations have

adversely impacted the subject site. The list also indicates that groundwater and soils have been impacted at four LUST sites. The four groundwater-impacted facilities are as follows:

The nearest facility is **UNOCAL STATION # 5919** at 1100 BROADWAY located approximately 150 yards south-southwest of the site. A file concerning this facility was reviewed at Ecology's NRO. According to a report in the file dated 28 September 1992, prepared by a consultant, four USTs were removed from the facility in 1989. Sampling and analysis of the soil and groundwater revealed contaminant impacts to both media. Contaminants include gasoline, BTEX, and solvents. Seven groundwater monitoring wells have been installed at the facility. The report gives the apparent shallow groundwater flow direction to be to the northeast, which is toward the site. Depth to groundwater, as measured by the consultant in February and May of 1992, ranged from approximately 15 feet to 20 feet. Contaminants have not been detected in samples obtained and analyzed from the monitoring well nearest the subject site. The report indicates the facility is currently in a monitoring phase. It appears, based on the information in the Ecology file, that it would not be likely for contaminants from this facility to have impacted the subject site. However, until the subsurface problems at this facility are remediated, it should be considered a potential source of impact to the subject site.

SEATTLE UNIVERSITY ATHLETIC FL at BROADWAY AND E MADISON is located an estimated one-quarter mile south of the subject site. A file concerning this LUST site was reviewed at Ecology's NRO. According to the file, the address given on the listing is the general location of Seattle University. The actual location of the LUSTs however are at the southeast corner of 13th Avenue and East Cherry Street, approximately three-eights to one-half mile southeast of the site. The file indicates groundwater has been impacted but the flow is toward the southwest, away from the subject property. Based on the groundwater flow and the separation distance, it is unlikely contaminants at this facility have adversely affected the site.

Two Shepard Ambulance facilities are listed as LUST sites: **SHEPARD AMBULANCE** at 932 12TH AVE and **SHEPARD AMBULANCE** at 1140 12TH AVE. These facilities are located approximately three blocks southeast and two blocks east of the subject site, respectively. Considering the topography, near-surface groundwater flow at these facilities is assumed to be towards the south-southwest, which is away from the subject site. Based on this, it is unlikely the subject site would be adversely affected by contaminants at these facilities.

Although the LUST list shows only soil was impacted, a file on the TOMLINSON INC site at 1100 E UNION was also reviewed at Ecology's NRO because of its proximity to the subject property (approximately 100 feet east). A 500 gallon gas tank and at least 50 cubic yards of soil were reportedly removed from the site in 1991.

Petroleum hydrocarbon and lead contamination were identified, and during the performance of remediation efforts, groundwater later seeped into the excavated area. Following cleanup, water and soil samples were analyzed for contaminants and all concentrations were reported to be below allowable levels. Based on the reported contaminant levels and documented cleanup efforts, it is unlikely that this LUST site has adversely affected the subject property.

5.4.6 Landfills

A review of abandoned landfill studies in the City of Seattle and King County, revealed no landfills within one-half-mile of the site.

5.5 Review of Other Environmental Documentation

5.5.1 Leaking UST No Further Action Letter

Mr. Joe Hickey of Ecology's NRO issued a letter requiring no further action (NFA) dated 22 October 1993 regarding the portion of the subject property at 1416 10th Avenue East (Appendix C). The letter was based in part on a final cleanup report submitted to Mr. Hickey by Mr. Randy Perkins of Nurseryman Products, Inc. as well as other documentation on previously on file with Ecology. According to a telephone conversation between RZA AGRA and Mr. Hickey, the NFA letter was also based on other communication and coordination with Mr. Stiles and Mr. Perkins. The NFA letter recognizes that limited petroleum-affected soil remains south of the cleanup site, but notes that it is capped and contained, and "it is not anticipated to pose a problem." The NFA letter pertains only to areas affected by the release addressed in the final cleanup report. Although this letter may be helpful in limiting possible future cleanup requirements related to the former leaking UST, it does not apply to other potential releases or conditions existing on the site.

No comment is provided by RZA AGRA on the final cleanup report prepared for the subject site.

5.5.2 Asbestos Survey and Abatement

A formal survey and analytical screen of suspect asbestos-containing materials on the subject property was beyond the scope of work for this Phase I Environmental Site Assessment. However, a limited asbestos survey report was made available for our review, and comments are provided regarding asbestos and asbestos-containing building materials (ACBMs).

Asbestos was widely used in building materials until the EPA banned its use in the mid-1970s. ACBM, which is defined as any material that contains more than one percent asbestos by volume, is more hazardous if it is in a friable condition. Friable ACBMs are those which crumble or can be reduced to powder using hand pressure. Friable ACBMs are considered more hazardous because of their potential to release asbestos fibers into the ambient air.

DRAFT

A limited asbestos report was completed by ATC/Diagnostic Environmental, Inc. (ATC) on the warehouse facility on the subject property. The report, dated 13 August 1993, was limited to ". . . sampling of suspect flue insulation in the basement boiler room and flooring materials in the southern portion of the first floor bakery." It should be noted that precise locations of asbestos samples were not available for the preparation of this Phase I Environmental Site Assessment. The sample locations are interpreted from the ATC report.

According to the ATC report, three samples were collected and analyzed for asbestos. Floor tile in the southeast portion of the first floor contained 3 per cent asbestos and requires special handling if it is disturbed or becomes friable. No asbestos was reported to be detected in the remaining two samples taken from the flue insulation in the boiler room and from the cementitious floor material in the upper floor.

According to Mr. Mark Jacobsen of the Me Two Company, abatement of the asbestos containing floor tile and other ACBMs (or suspected ACBMs) began on approximately 13 September 1993. Mr. Jacobsen also reported that suspect ACBMs would be treated as if it contained asbestos.

Without visiting the site and reviewing asbestos abatement documentation, it is not possible to comment on the presence or absence of asbestos on the subject property.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the site reconnaissance, the data provided to us, and the information we have been able to acquire, it appears that limited petroleum hydrocarbon-affected soil remains in the area of the former leaking UST. These materials, however, are addressed in an Ecology letter requiring no further action (NFA). The NFA letter may alleviate possible future cleanup requirements associated with this former leaking UST, but does not address other potential releases or conditions on the site such as the PCE and TCE reported in the excavation by Mr. Perkins. Based on the historic land use of the site and surrounding area, it is our opinion that the potential for adverse environmental conditions to exist on the subject property not related to the leaking UST is low to moderate. If the site building is ever demolished, it would be prudent to sample and analyze the site soils and groundwater for possible contaminants. If property transfers or other actions necessitate the quantification of the possible contamination while the building remains standing, a limited subsurface evaluation of the site could be performed by obtaining soil samples via cores in the concrete slab and other areas of the site. Also, due to the remediation activities observed on the adjacent property north of the bakery warehouse, it may be prudent to sample and analyze soil underlying the soil treatment area for petroleum hydrocarbon impacts related to the leaking UST cleanup.

Although a limited asbestos survey was performed, and abatement was reported to have been performed, it would be prudent to perform a more thorough survey of the facilities on the subject property for possible asbestos containing materials.

It would be prudent to arrange for the proper handling and/or disposal of the following items noted on the subject property: debris, and containers in the basement of the building at 1416 10th Avenue East, the box of miscellaneous chemicals (i.e., cleaning compounds) and the 55-gallon drum containing a grease-like substance in the basement of the bakery warehouse, fluorescent light ballasts observed throughout both buildings on the subject property, and roofing repair material on the roof of the warehouse building.

Material safety data sheets (MSDSs) were provided to RZA AGRA by the Me Two Company. The MSDSs were reported to be for materials used by a publishing company which may occupy the basement of the warehouse facility. These materials were compared with compounds identified in groundwater samples collected from the eastern portion of the tank excavation. Results of this review are reported in a separate letter provided to the Me Two Company, dated 10 November 1993. It would be prudent to conduct similar reviews of other MSDSs prior to use of materials on the subject property.

We appreciate this opportunity to be of service to you on this project. Should you have any questions regarding this assessment, please call do not hesitate to contact us.

Respectfully submitted,
RZA AGRA, Inc.

STATE OF WASHINGTON

DEPARTMENT OF ECOLOGY

Northwest Regional Office, 3190 - 160th Ave S.E. • Bellevue, Washington 98008-5452 • (206) 649-7000

October 22, 1993

Mrs. Le Conie Stiles, Jr.
1301 Spring Street, Unit 28-I
Seattle, WA 98104

Dear Mrs. Stiles:

Thank you for submitting the results of your independent remedial action for the Department of Ecology's (Ecology's) review. Ecology appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA).

Ecology's Toxics Cleanup Program has reviewed the following information regarding the Ruth Ashbrook Bakery located at 1416 10th Avenue East, Seattle, Washington:

1. Independent remedial action report submitted October 13, 1993
2. Site file located in the regional office's Central Files

Based upon the above listed information Ecology has determined that, at this time, the site does not pose a threat to human health or the environment as a result of the release addressed in the independent remedial action report. Ecology recognizes the fact that a limited amount of petroleum contaminated soil remains under a building to the south of the cleanup site, but as it is capped and contained, it is not anticipated to pose a problem.

Therefore, Ecology has determined that no further action is necessary at this site under the MTCA, Chapter 70.105D Revised Code of Washington (RCW). Please note that because your remedial actions were not conducted under a consent decree with Ecology, this letter is not a settlement by the state under Ch. 70.105D.040(4) RCW.

This determination is made only with respect to the release identified in the remedial action report dated October 10, 1993. This no further action determination applies only to the area of the property at 1416 10th Avenue East affected by the release identified in the report. It does not apply to any other release or potential release at the property, any other areas on the

DRAFT

property, nor any other properties owned or operated by Mrs. Le Conie Stiles, Jr. or the Stiles Investment Company.

Ecology does not assume any liability for any release, threatened release or other conditions at the site, or for any actions taken or omitted by any person or his/her agents or employees with regard to the release, threatened release, or other conditions at the site.

Ecology will update its database to reflect this "No Further Action" determination. The status of the cleanup of your site will appear as "Conducted" in future Leaking Underground Storage Tank Lists.

Please contact me at (206)649-7202 if you have any questions.

Sincerely,

Joseph M. Hickey
Tanks Unit Supervisor
Toxics Cleanup Program

SUBJECT: Phase I Environmental Site Assessment
1415 11th Avenue
Seattle, Washington

Dear Mr. Jacobsen:

We are pleased to present this report of our Phase I Environmental Site Assessment of the subject property. We trust the information presented in this report meets your needs at this time.

We appreciate this opportunity to provide our services to you. Should you require additional information or have any questions regarding this report, please contact us at (206) 562-4200.

Very truly yours,

KLEINFELDER, INC.

APPENDICES

APPENDIX A: Sanborn Maps
APPENDIX B: ERIIS Report
APPENDIX C: Contract Between User and Environmental Professional
APPENDIX D: Application for Authorization to Use

1.0 SUMMARY

Mr. Conrad Jacobsen (Mr. Jacobsen) requested Kleinfelder to perform a Phase I Environmental Site Assessment on the property located at 1415 11th Avenue in Seattle, Washington. The site consists of one vacant parcel. The site originally contained a small residential dwelling. In 1913 an apartment building was constructed on the site. This building burned down during the riots resulting from the Rodney King verdict in 1992.

Regarding regulatory-agency databases and information provided by Mr. Jacobsen, Kleinfelder identified 36 LUST sites within 0.5 mile (including the adjacent former Ashbrook Bakery property to the south not listed on the ERIIS report), and 8 C&SCS sites within 1.0 mile. Kleinfelder also identified 17 RCRA generators and 21 registered-tank sites within a quarter mile of the subject property. This summary is subject to the limitations presented below in Section 8.0.

2.0 INTRODUCTION

The following report is a summary of work performed using the guidelines set forth in American Society for Testing and Materials (ASTM) Standard E-1527-94, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This report also follows the ASTM Standard's suggested table of contents. Minor format modifications have been made by Kleinfelder to the suggested table of contents to assist in reading and understanding the report findings.

2.1 Purpose

Kleinfelder understands that Mr. Jacobsen is interested in identifying site historical practices or activities that may have resulted in soil and/or groundwater contamination at the subject property. At the request of Mr. Jacobsen, Kleinfelder has completed a Phase I Environmental Site Assessment of the property. Kleinfelder's work was performed in accordance with our authorized Proposal and contract number 60-YP1664, dated November 15, 1996. This report is subject to the limitations presented below in Section 8.0 of this report.

This report describes Kleinfelder's assessment procedures and the information identified. Opinions and recommendations concerning the potential for soil and/or groundwater contamination are presented in Sections 6.0 and 7.0 of this report.

2.2 Special Terms and Conditions

This report is intended for the sole use of Mr. Jacobsen. Any party other than Mr. Jacobsen who wishes to use this report to identify recognized environmental conditions in the process of making appropriate inquiry into the site or surrounding properties shall notify Kleinfelder by executing the "Application for Authorization to Use" which follows this document. Based on the intended use of the report, Kleinfelder may require that additional work be performed and

Copyright Kleinfelder, Inc. 1996

that an updated report be issued. Non-compliance with any of these requirements by Mr. Jacobsen or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

2.3 Limitations and Exceptions of Assessment

Please refer to Section 8.0 of this report.

2.4 Limiting Conditions and Methodology Used

The environmental site assessment followed the methodology set forth in ASTM Standard E-1527-94, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

3.0 SITE DESCRIPTION

The following information provides a brief description of the subject property. Plate 1 presents a site location map and Plate 2 presents a site plan. Additional site-description information was obtained during the site visit and through interviews. Please refer to the appropriate sections of the report that cover this information.

3.1 Location and Legal Descriptions

The subject property is located at 1415 11th Avenue, Seattle, Washington (Plate 1). It consists of a vacant lot surrounded by commercial businesses (Plate 2). The site is bound on the north by a parking lot, on the east by 11th Avenue East, and on the south by a greeting card outlet, a lighting accessories supplier, a paper embossing and di cutting business, and a silk screening operation. The site is bordered on the west by an espresso shop, a theater and a shortbread bakery. Davis Hoffman Auto Rebuilders lies to the southwest of the site at the corner of 10th Avenue East and Union Street.

The legal description of the property was not provided by Mr. Jacobsen.

3.1.1 Environmental Liens

No environmental liens are known to be present against the property.

4.0 RECORDS REVIEW

Public, agency, and company records are sources of information that may be helpful in evaluating activities that may have contributed to contamination of soil and/or groundwater. The following agencies, companies, and individuals were contacted for information regarding the subject property. Information obtained from these sources is presented below.

- Walker and Associates, Aerial Photographs

4.1 Standard Environmental Record Sources

The following information was obtained from regulatory-agency listings and contacted agencies and/or individuals. Listed search distances are those specified in the ASTM standard.

4.1.1 Federal

As part of a government database search completed by ERIIS, the following federal database records were searched as required by ASTM: CERCLIS, ERNS, NPL, and RCRIS. Other non-ASTM required databases also were reviewed. Appendix B contains a copy of the complete ERIIS report. Database dates are also identified in the ERIIS report.

The following summaries contain information from the ERIIS search. Listed search distances are those specified in the ASTM standard.

Federal CERCLIS List

The CERCLIS list is a database printout of sites that have come to the EPA's attention as a site with the potential to or having had releases of hazardous substances being addressed under the Superfund program. CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL). Also included are sites which are in the screening and assessment phase for possible inclusion on the NPL.

As of February 25, 1995, the CERCLIS database no longer includes sites which EPA has assessed and designated "No Further Remedial Action Planned" (NFRAP). A NFRAP decision does not necessarily mean that there is no hazard associated with a given site; it means only that based upon available information, the location is not judged to be a potential NPL site.

No CERCLIS listed facilities were identified within 0.5 mile of the subject property.

Copyright Kleinfelder, Inc. 1996

Federal NPL (National Priority Pollutant) Site List

The NPL list is a compilation of CERCLIS properties with the highest priority for cleanup pursuant to EPA's Hazard Ranking System. Kleinfelder reviewed a listing titled Superfund Sites in the Pacific Northwest EPA Region 10.

No NPL sites were identified within 1.0 mile of the subject property.

Federal RCRIS List

The RCRIS (also referred to as RCRA) list identifies facilities that have obtained identification numbers from the EPA, which designate these businesses as generators, transporters, or storers/disposers of hazardous waste. Obtaining an identification number does not mean that any hazardous materials have been improperly handled at any of these facilities. (NOTE: Other lists, such as the State of Washington's Leaking Underground Storage Tank List, identify hazardous waste problems.)

No RCRA Treatment, Storage and Disposal (TSD) facilities were identified within 1.0 mile of the subject property. Seventeen RCRA generators are located within 1/4 mile of the subject property. Of these, only two, Davis and Hoffman Auto Rebuild at 1406 10 Ave. (approximately 0.032 miles southwest of the site) and Seattle University at Broadway and E. Madison Street (approximately 0.125 miles southwest of the site) were identified as large quantity, regulated generators. A large quantity generator either generates more than 1000 kg of EPA regulated hazardous waste per month or meets other applicable requirements of RCRA. The Seattle University is listed as having one violation and two enforcement actions consisting of a State inspection and written informal administrative action. None of the small quantity generators listed have violations on record.

Federal ERNS List

The ERNS list identifies those sites which are listed under the EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR parts 302 and 355.

The subject property was not listed on the ERNS list.

4.1.2 State (Washington State Department of Ecology)

Confirmed and Suspected Contaminated Sites Report (C&SCS)

Ecology's C&SCS Report (ERIIS identifies as their HWS site list) did not identify the subject property as a known or suspected contaminated site. However, eight sites were within 1.0 mile of the subject property. These sites are summarized in Appendix B.

Copyright Kleinfelder, Inc. 1996

Leaking Underground Storage Tanks (LUST) List

A review of Ecology's Toxic Cleanup Program LUST List (identified as LRST sites in the ERIIS report) indicated that there were 36 leaking underground storage tanks reported to Ecology for the subject property. Seventeen of these leaking underground tanks were reported within 0.25 mile from the subject property. Sites determined to be "No Further Action" after review of the final cleanup report by Ecology staff will not appear on the Leaking Underground Storage Tank List. One such site, Ruth Ashbrook Bakery at 1407 11th Avenue East, directly south of the subject property, has been issued a no further action designation by Ecology. We will discuss this site in further detail in Section 5.0 of this report. A copy of LUST sites in the area surrounding the subject property is presented in the attached ERIIS Report.

Registered Underground Storage Tank (UST) List

A copy of the Washington Department of Ecology's UST list (identified as RST sites in ERRIS database) was reviewed. Twenty-one registered underground storage tanks are listed within 1/4 mile of the subject property. A copy of UST sites in the area surrounding the subject property is presented in the attached ERIIS Report.

State Landfill and/or Solid Waste Disposal Site Lists (SWF)

Ecology's State of Washington SWF List (identified as SWF sites in the ERIIS report) identified no state landfills and/or solid waste disposal sites within 0.5 mile of the subject property.

4.2 Physical Setting

The local topography is characterized by undulating uplands and generally slopes to the north. Geological subsurface conditions can be described as Vashon Drift (glacial till). Perched groundwater (contained within the till) is expected to be shallow (within 5 to 20 feet of the ground surface) with a regional flow direction to the northwest.

4.3 Historical Use Information

The following information was obtained from reviewed sources of historical information.

Polk City Directories

Polk City reverse directories that included the subject site were available from 1940 to 1994 (but not necessarily for every year). Kleinfelder reviewed reverse directories for the following years: 1940, 1948-49, 1955, 1960, 1965, 1970, 1975, 1980, 1985, 1989-90, and 1994. Occupants of the subject property and adjacent properties are listed below:

SITE PROPERTY: 1415 11th Avenue East

1940-90	Apartments
1994	No Listing

Copyright Kleinfelder, Inc. 1996

ADJACENT PROPERTIES TO NORTH: 1416-1421 11th Avenue East

1940-75	Residential
1980-85	Diamond Parking (1421 11th Avenue East)
1990-94	No Listing

ADJACENT PROPERTY TO SOUTH: 1407 11th Avenue East

1940	Grandma Baking Company
1949	No Listing
1955-80	Ashbrook Bakery
1985	Vacant
1990-94	No Listing

ADJACENT PROPERTIES TO WEST:

1406-08 10th Avenue East

1940-94	Auto Body/Repairs

1414 10th Avenue East

1940-49	Apartments
1955-65	Vacant
1970-94	No Listing

1416 10th Avenue East

1940-49	Auto Repairs
1955-65	Undifferentiated Manufacturing
1970	HVAC/Auto Body
1975-80	Auto Repairs
1985-94	Ashbrook Bakery

1418 10th Avenue East

1940	Auto Repairs
1949	Printing Company
1955	Vacant
1960-94	No Listing

1422 10th Avenue East

1940-55	Residential
1960-94	No Listing

Listings for the site are for all years researched were primarily commercial/industrial businesses with occasional residential occupancies. These businesses included numerous auto repair, machine shop, and small printing, plating, and photography businesses. A service station occupied a portion of the block between 10th and 11th Avenues, south of the subject site on Union Street, from 1940 to 1955. The same address, 1035 Union Street was not listed after 1955. DuPont Corporation, several undifferentiated manufacturing plants, a medical laboratory, and numerous auto repair businesses occupied Union Street between 11th and 12th Avenues during the time period reviewed.

Copyright Kleinfelder, Inc. 1996

Sanborn Fire Insurance Maps

Sanborn fire insurance maps for the area, dated 1905, 1949, 1950, and 1969, were reviewed. Copies of these maps are included in Appendix A.

1905 On the 1905 Sanborn map the site contains a small dwelling. Numerous other small dwellings occupy the properties surrounding the site. Most of these buildings were most likely residential dwellings.

1949 An apartment building occupies the site property. Two large buildings identified as "Auto Body Works" occupy the property immediately south of the site. Two dwellings, unchanged from the 1905 Sanborn map, are located north of the site. Apartments, upholstery storage and garment manufacturing businesses occupy the northern end of the block along East Pike Street. A machine shop, a printing operation, and several residential dwellings are located west of the site. The block to the east of the site and 11th Avenue contains buildings labeled "photo supplies" and residential dwellings. Several service stations are located on the blocks to the south of the site and East Union Street.

1950 The 1950 Sanborn map is very similar to the 1949 map.

1969 The residential dwellings and print shop north and northwest of the site property have been replaced by a parking lot. The property occupants north of the parking lot are similar to those occupants in 1949 and 1950. The building directly west of the site is labeled "manufacturing". A bakery occupies the lot south of the site, and auto repair shop exists southwest of the site. Occupants of the block to the east of the site block are similar to those in 1949 and 1950, except the photo supply business has been replaced by a library, and some of the residential dwellings have been replaced by a parking lot. Additionally, the service station that was located at the southwest corner of Union Street and 11th Avenue is no longer shown.

Kroll Atlas/Baist's Real Estate Atlas

Kroll and Baist property ownership maps for the area dated 1908, 1912 (Baist) and 1914, 1920, 1928, 1950, 1966 and 1987 (Kroll) were reviewed.

1908 On the 1908 map, the site and surrounding lots are occupied by small residential structures. A church is located on the lot currently addressed as 1407 11th Avenue East. A fuel yard and auto garage is identified on the block to the west between 10th and Broadway.

1912 On the 1912 map, the site appears vacant (small dwelling no longer present). Properties to the north and south appear similar, except a garage is located to the northwest of the site. The fuel yard is no longer present, but the block west of 10th Avenue contains many garages. A wagon works is located on the block to the south of Union Street.

Copyright Kleinfelder, Inc. 1996

1914 The 1914 map appears similar to 1912. However, a long building occupies the entire site property.

1920 The 1920 map appears similar to the 1914 map.

1928 The 1928 map appears similar to the 1914 and 1920 maps.

1950 The site block appears similar to the 1950 Sanborn fire insurance map, attached in Appendix A. Three service stations are located south of the site. One is at the southwest corner of 11th Avenue and Union Street; the second is at the southwest corner of Madison and Union; the third is at the northwest corner of 11th and Madison. A fourth service station is located north of the site on the west portion of the block adjacent 10th Avenue, north of Pike Street. Most of the buildings surrounding the site area are not marked with business identification labels.

1966 This map is very similar to the 1969 Sanborn map attached in Appendix A.

1987 This map is unchanged from the 1966 map except Bell Telephone now occupies the property at the southeast corner of 11th Avenue and Union Street. Additionally, many of the site area buildings are now labeled. The site building is labeled "apartments"; To the south of the site is the Ruth Ashbrook Bakery; to the southwest is an auto rebuilder; and to the north is parking and more apartments.

4.4 Additional Record Sources

Presented below is a summary of information identified from additional record sources.

Aerial Photograph Review

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means, or observed during a property visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage.

Aerial photographs were obtained from Walker and Associates of Seattle, Washington. The following is a tabulation of the aerial photographs reviewed:

Date	Flight #	Scale	Color	Stereo
1936	---	1" = 800'	No	Yes
1946	A-46	1" = 1000'	No	Yes
1956	S-56	1" = 1000'	No	No
1960	KC-60	1" = 1000'	No	Yes
1969	KC-69	1" = 1500'	No	Yes
1974	KC-74	1" = 1500'	No	Yes
1977	KC-77	1" = 1500'	No	Yes
1980	KC-80A	1" = 1500'	No	Yes
1985	SKP-85	1" = 1500'	No	Yes
1990	KC-90	1" = 1000'	Yes	Yes
1995	KC-95	1" = 2000'	Yes	Yes

Copyright Kleinfelder, Inc. 1996

The results of our aerial photography review are presented below:

1936 The site contains a long, narrow building oriented perpendicular to 11th Avenue East. Several small buildings exist to the north of the site building with grass and bare ground immediately west of these buildings. Two large building exist south and southwest of the site. Numerous small buildings and one long narrow building exist to the west of the site building.

1946 These photos are similar to the 1936 photos, except possible ground stains are present directly southwest of the site buildings.

1956 Only one small building appears directly north of the site building. It is surrounded by grass. Many small cylindrical objects are stacked in the lot to the east of the site and 11th Avenue. All other site area features appear similar to the 1946 photos.

1960 A paved parking lot now appears north and northwest of the site.

1969 These photographs are similar to the 1960 photographs.

1974 These photographs are similar to the 1960 and 1969 photographs. However, three relatively large (larger than a 55 gallon drums), tall cylindrical objects appear adjacent the southwest property corner near the dock doors servicing the building south of the site.

1977 These photographs are similar to the 1974 photographs. However, the tall cylindrical objects are not obvious.

1980 These photographs are similar to the 1977 photographs. However, the tall cylindrical objects appear in the same location as in the 1974 photographs.

1985 These photographs are similar to the 1980 photographs. However, the parking lot north of the site is completely empty.

1990 These photographs are similar to 1985 photographs, except the parking lot now contains several cars.

1995 The site property is vacant. However, a shadow from the building to the south of the site obscures site features. Otherwise, the photographs are similar to the 1990 photographs.

Note: Aerial photographs only provide information on indications of land use and no conclusions can be drawn from the photographs alone. However, Kleinfelder's review of the available aerial photographs did not reveal any signs of obvious dumping, spillage, leaking, storage, or other disposal of hazardous materials or wastes.

Copyright Kleinfelder, Inc. 1996

Chain-of-Title Report

A chain of title was not provided by Mr. Jacobsen and therefore was not reviewed.

5.0 INFORMATION FROM SITE RECONNAISSANCE AND INTERVIEWS

Kleinfelder's assessment activities included personal on-site and telephone interviews, and a property visit. This section summarizes the findings from the site visit, and interviews.

A property visit was conducted on December 6, 1996, by a Kleinfelder representative, Ms. Susan Harrison. The purpose of the property visit was to look for obvious visual indications of historical or current operations that may have resulted in possible soil and/or groundwater contamination. The site visit included a visual review of the property for indications of activities such as waste storage and disposal, storm drainage, underground and above-ground storage tanks, and hazardous-material storage or use areas. Observed conditions are described below.

We were accompanied during our site visit by Mr. Conrad Jacobsen, the party interested in purchasing the subject property. Mr. Jacobsen is the current owner of the properties to the south and west of the site. Mr. Jacobsen provided us with the name of the former owner of his property, Mr. Lee Stiles. Both Mr. Stiles and RZA's 1994 Phase I Draft Report provided us with information regarding the former contamination found on the Jacobsen property. Ecology issued a no further action designation for diesel contamination on this site on October 22, 1993. Therefore, the Jacobsen/Stiles property does not appear on the ERIIS report in Appendix B.

Mr. Stiles and RZA's report state that a 6,000 gallon diesel tank was removed from the parking area west of the Madison Park Greetings Building in 1990. At the time the tank was removed, the contractor filled the excavation before soil samples had been analyzed for contamination. The soil samples later indicated that diesel soil contamination was present. Diesel in the tank excavation soil samples was reported at concentrations of 1,798 and 413 parts per million (ppm). The MTCA Method "A" Clean-up level for diesel in soils in 200 ppm.

When Mr. Stiles sold the property in 1993, he arranged to have three soil borings drilled in the location of the former LUST. Soil samples from two of these borings identified diesel contamination at concentrations of 335 and 311 ppm. Mr. Stiles then arranged to have the former tank excavation re-opened to remediate the contaminated soils discovered during the tank removal. Most of the contaminated soils were removed from the excavation and stockpiled on the subject property. A limited amount of diesel contaminated soil reportedly still remains beneath the Davis Hoffman building (See Plate 2). During RZA's site visit on September 8, 1996, RZA noted a strong petroleum odor emanating from the excavation and the soils stockpiled on the subject property. They also noted an "unknown, dark brown, odorless, waxy/oily substance" seeping from the east end (closest to the subject property) of the excavation at an approximate depth of 6 feet. The contractor reportedly collected

Copyright Kleinfelder, Inc. 1996

groundwater samples of the substance. This substance contained 780 parts per billion (ppb) of tetrachloroethylene (PCE) and 67 ppb of trichlorethylene (TCE). The MTCA clean-up level for both of these substances in groundwater is 5 ppb. This contamination is not related to the aforementioned LUST site and is not addressed further in the RZA report. Additionally, the NFA letter issued by Ecology does not address this contamination, but only diesel contamination remaining on the site.

The RZA report indicates that the excavation soils were "treated in the area of the leaking UST" and "landfarmed" on the subject site. However, their report does not describe the remediation process or processes. It also does not discuss the results of the remediation, the final location where the soils were placed, or if the contaminated soils were cleaned up to levels below MTCA clean-up levels. Mr. Stiles believes the soils were "incinerated" on his property and then stockpiled on the subject property. Mr. Stiles believes that an unknown chemical, possibly a fertilizer, was then added to the soils while they were located on the subject property. Mr. Stiles also claims that confirmation samples collected from the stockpiled soils were clean, and subsequently used to backfill the excavation. Ecology has a site file containing the "Final Clean Up Report", dated October 22, 1993, by Nurseryman Products, Inc. This report was submitted to Ecology to obtain the NFA designation. Therefore, it may contain more detailed remediation information. Kleinfelder can review this report at Ecology offices if Mr. Jacobsen deems it prudent.

We interviewed Mr. Dennis Su, the current property owner's representative (architect), regarding site historical information. He indicated the city had filled the area during the turn of the century, consistent with much of down town Seattle. During the early 1900's, the site contained a residential dwelling. The apartment building was constructed in the 1910's. (Our Kroll map search indicates the apartment building was likely erected in 1913.) An 11-foot strip of land between the former apartment building and the bakery has always been used as a courtyard garden area. Mr. Su indicated that the apartment building was retrofitted with natural gas heat some time after it was constructed. He had no recollection of the year it was retrofitted, nor the type of heat it had prior to natural gas installation. The apartment building was being remodeled a second time during 1992. During this remodel, the building was stripped to its framework. While still in this state, it was burned to the ground during the riots resulting from the Rodney King verdict in 1992. Mr. Su arranged to have burn debris removed from the site after the incident. He also had the city sewer line capped.

Mr. Su has no knowledge of soils being stockpiled on site. He has no knowledge of other environmental concerns associated with the site. He is also unaware of underground storage tanks existing on the site.

5.1 Site Plan

Please refer to Plate 2 of this report.

Copyright Kleinfelder, Inc. 1996

5.2 Physical Setting Analysis

The site is currently vacant. The elevation of the ground surface is approximately 10 feet below the level of the adjacent street, 11th Avenue East. The ground surface is covered with grass and small shrubs, including an irritant weed, according to Mr. Jacobsen. Several concrete footing structures are located on the site. These footings, the east-access concrete stairwell, and the east retaining wall are all that remain from the apartment structure which burned in 1992. The current ground surface contains a two foot cut parallel to the long axis of the property. The lower "bench" of this cut occupies roughly the northern 2/3 of the property. We noted abundant ponded water at the base of this cut. No sheen was visible on the ponded water. The cut was most likely excavated during the initial foundation placement for the former apartment building.

Adjacent properties include a greeting card outlet, a lighting accessories distributor, a paper embossing and di cutting operation and a silk screen operation to the south; an auto rebuilder to the southwest; a theater, an espresso/card shop and a pastry distributor to the west; and a self-service parking lot to the north. 11th Avenue East borders the site on the east.

Mr. Jacobsen owns the properties to the south and west of the subject site. He indicated that no hazardous materials are used in any of the tenants' operations. The silk screening operation uses only non-toxic materials. Davis Hoffman to the southwest is identified on the ERIIS report as a large quantity hazardous waste generator. However, no violations are listed on the report.

5.3 Hazardous Substances in Connection with Identified Uses

Mr. Jacobsen believes that the soil piles excavated from the adjacent contaminated site to the southwest were stored on the subject property. To his knowledge, all of this soil was removed from the site. However, Mr. Su has no knowledge of the soil ever being placed on the site. Mr. Stiles confirmed that the soil was, in fact, stored on the site property with the permission of the owner.

We noted several patches of ground that did not contain grass on the southwestern portion of the site. The grass surrounding these bare areas was very healthy, and the bare areas contained a green algae (possibly indicating excess nutrients).

5.4 Hazardous Substance Containers and Unidentified Substance Containers

We noted one 55 gallon drum labeled "non-regulated waste" on the subject site. Its approximate location is noted on Plate 2. We did not observe stains surrounding the drum. We recommended to Mr. Jacobsen that he arrange to have the drum contents characterized and the drum disposed of as soon as possible.

5.5 Storage Tanks

No underground storage tanks were identified on the property. However, Mr. Su indicated that the apartment building was remodeled sometime after its construction, and natural gas

Copyright Kleinfelder, Inc. 1996

furnaces were installed. He indicated the prior source of heat could have been electricity, heating oil, or nothing at all. If heating oil was the original source of heat, an underground storage tank may still exist on the site. At the Client's request, Kleinfelder can review former apartment building plans to attempt to establish the location of potential oil tanks if heating oil was the original source of heat for the building.

5.6 Indications of PCBs

Kleinfelder observed several liquid filled transformers on or adjacent the subject property during the site visit. Although we did not observe stickers on these transformers indicating they are PCB-free, their maintenance is the responsibility of Puget Power Company.

5.7 Indications of Solid Waste Disposal

We observed dark colored sandy sludge-like material near the southwest corner of the site adjacent the dumpster, as shown on Plate 2. The source and composition of this material is unknown. We also noted an odor of paint in this area, but observed no paint debris on the subject site. Abundant metal, paper, bottles, cans, bricks, wood and furniture debris were noted on the property.

5.8 Other Conditions of Concern

No other conditions of concern, as within the scope of our performed services, were identified for the subject property.

5.9 Local Agency Interview

Kleinfelder made several attempts to contact the King County Fire Department regarding the subject property. However, they indicated they were unable to respond to our request for information.

6.0 FINDINGS AND CONCLUSIONS

The following conclusions are based on Kleinfelder's knowledge of the subject property from our site observations and information gathered during our review. These conclusions are subject to the limitations presented at the end of this report, and may change if additional information becomes available.

Kleinfelder has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 for the subject property. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report.

Copyright Kleinfelder, Inc. 1996

On-site

Kleinfelder has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of the subject property. Any exceptions to, or deletions from this practice are described in Section 2.3 of this report. With respect to possible soil or groundwater contamination, this assessment revealed the following evidence of recognized environmental conditions in connection with the property:

- Our site review identified the former or current storage of petroleum contaminated soils on the subject property. According to Mr. Stiles, this material was tested and did not contain elevated levels of petroleum products prior to its reported removal from the site. When removed, it was used to backfill the excavation on the Ashbrook property. However, we were unable to confirm these remediation activity details. Although unlikely, it is not known for certain if these practices have resulted in soil or groundwater contamination of the subject property.
- Kleinfelder's site review identified the potential presence of an underground storage tank on the property that may have been used for heating oil. Kleinfelder can review original building plans for the former apartment building to establish if and where heating oil tanks exist on the property.
- Small quantities of a dark-colored sandy sludge material were observed during the site visit on the southwest corner of the site near the dumpster. Its origin and composition are unknown. We also noted areas of distressed vegetation in the southwest corner of the site. These bare areas were covered with green algae. Additionally, we noted a 55 gallon drum of non-regulated waste on the subject property. The contents of the drum are unknown. However, we did not observe soil staining in the vicinity of the drum.

Off-site

Our record review revealed numerous potential environmental concerns resulting from off-site LUSTs, USTs, C&SCS sites, landfills, and or RCRA sites within the ASTM-required search distances. However, given the identified off-site properties cleanup status (if applicable) and their locations and distances relative to the subject property, most of these potential off-site location are not expected to cause soil or groundwater contamination on the subject property.

Kleinfelder believes that the possibility for contamination of the subject property resulting from the nearby contaminated sites listed by Ecology and identified in Section 5.0 above is likely. Groundwater contamination by PCE and TCE (dry-cleaning fluids) was confirmed during excavation activities on the adjacent property to the west during 1993. The source and status of this contamination is unknown.

Copyright Kleinfelder, Inc. 1996

7.0 RECOMMENDATIONS

Based on Kleinfelder's current understanding of site conditions, the following activities are recommended:

- If you desire additional information regarding the potential impact to soil and/or groundwater quality due to on-site spills or residual levels of potentially hazardous materials as revealed in the "Conclusions" portion of this report, Kleinfelder can perform one or more of the following activities:
  1. Ecology files can be reviewed for the Ashbrook Bakery property potentially describing the remediation activity details conducted in 1993;
  2. The building department file for the former apartment building be reviewed to identify the potential location of heating oil tanks on the property if extensive excavation at the site is planned.
  3. Soil and groundwater samples can be collected and analyzed for suspected contaminants. If extensive excavation or disturbance of soils on the subject property is planned in conjunction with building activities, Kleinfelder recommends the sampling of soil and groundwater on the subject property. Given Mr. Jacobsen's current property holdings, the primary reason to perform soil and groundwater sampling is to characterize site soils for the protection of construction crews. If further characterization of site soils and groundwater is desired, Kleinfelder recommends a work scope be prepared with the assistance and concurrence of Mr. Jacobsen upon completion of review of this report. Kleinfelder can then prepare a specific scope of work for this exploration.
- We recommend Mr. Jacobsen arrange to have the contents of the 55 gallon drum identified and the drum properly disposed of as soon as possible.

8.0 LIMITATIONS

Phase I environmental site assessments are non-comprehensive by nature and are unlikely to identify all environmental problems or eliminate all risk. This report is a qualitative assessment. Kleinfelder offers a range of investigative and engineering services to suit the needs of our clients, including more quantitative investigations. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help you understand and better manage your risks. Since such detailed services involve greater expense, we ask our clients to participate in identifying the level of service which will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

The scope of work on this project was presented in our identified proposal and subsequently approved by you as our client. Please be aware our scope of work was limited to those items specifically identified in the proposal. Environmental issues not specifically addressed in the proposal or this report were beyond the scope of our work and not included in our evaluation.

Copyright Kleinfelder, Inc. 1996

Kleinfelder performed this environmental assessment in accordance with the guidelines set forth in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (Designation E-1527-94).

Land use, site conditions (both on-site and off-site) and other factors will change over time. Since site activities and regulations beyond our control could change at any time after the completion of this report, our observations, findings and opinions can be considered valid only as of the date of the site visit. This report should not be relied upon after 180 days from the date of its issuance (ASTM Standard E-1527, Section 4.6).

The property owner is solely responsible for notifying all governmental agencies, and the public at large, of the existence, release, treatment or disposal of any hazardous materials observed at the project site. Kleinfelder assumes no responsibility or liability whatsoever for any claim, loss of property value, damage, or injury which results from pre-existing hazardous materials being encountered or present on the project site, or from the discovery of such hazardous materials.

Any party other than Mr. Jacobsen who would like to use this report shall notify Kleinfelder of such intended use by executing the "Application for Authorization to Use" contained in this document. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by Mr. Jacobsen or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

No warranty, either express or implied is made.

9.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Resumes of environmental professionals conducting this environmental site assessment are on file at the Kleinfelder office and are available upon request.

PLATE 2

APPENDIX A

SANBORN MAP LEGEND

CODING OF FIRE-RESISTIVE STRUCTURAL UNITS FOR FIREPROOF AND NON-COMBUSTIBLE BUILDINGS

FRAMING

CODE	STRUCTURAL UNIT
A.	Reinforced Concrete Frame.
B.	Reinforced Concrete Joists, Columns, Beams, Trusses, Arches, Masonry Piers.
C.	Protected Steel Frame.
D.	Individually Protected Steel Joists, Columns, Beams, Trusses, Arches.
E.	Indirectly Protected Steel Frame.
F.	Indirectly Protected Steel Joists, Columns, Beams, Trusses, Arches.
G.	Unprotected Steel Frame.
H.	Unprotected Steel Joists, Columns, Beams, Trusses, Arches.
O.	Masonry Bearing Walls only.

FLOORS

CODE	STRUCTURAL UNIT
1.	Reinforced Concrete, Reinforced Concrete with Masonry Units, Pre-cast Concrete or Gypsum Slabs or Planks.
2.	Concrete on Metal Lath, Incombustible Form Boards, Paper-backed Wire Fabric, Steel Deck, or Cellular, Ribbed or Corrugated Steel Units.
3.	Open Steel Deck or Grating.

ROOF

CODE	STRUCTURAL UNIT
a.	Reinforced Concrete, Reinforced Concrete with Masonry Units, Reinforced Gypsum Concrete, Pre-cast Concrete or Gypsum Slabs or Planks.
b.	Concrete or Gypsum on Metal Lath, Incombustible Form Boards, Paper-backed Wire Fabric, Steel Deck, or Cellular, Ribbed or Corrugated Steel Units.
c.	Incombustible Composition Boards with or without Insulation, Masonry or Metal Tiles.
d.	Steel Deck, Corrugated Metal or Asbestos Protected Metal with or without Insulation.

The coding to left, for framing, floor and roof structural units is used in describing the construction of fire-resistive buildings. In addition, reports for fire-resistive buildings will show the date built, wall construction other than brick, and ceilings.

FP - 1962 (CONC) A-1-a — A fireproof building built in 1962 with concrete walls and reinforced concrete frame, floors and roof.

FPX - 1962 (METAL PANELS) B-2-a (NONLOAD CEILING) — A fireproof building built in 1962 with metal panel walls, reinforced concrete columns and beams, concrete floors on metal lath and gypsum slab roof; non-combustible ceilings.

NC - 1962 (C. B.) H-2-d — A noncombustible building built in 1962 with concrete block walls, unprotected steel columns, beams and joists, concrete floors on metal lath and steel deck roof.

MASONRY CONSTRUCTION

Important interior and all exterior masonry walls of all non-residential buildings and residential buildings of five or more dwelling units are shown with weighted (——) lines.

Masonry walls of residential buildings of four dwelling units or less are shown with a standard line and the construction is noted on all buildings diagramed after July, 1963.

WALLS

- 8" Brick
- 12" Concrete
- 18" & 23" Stone
- 12" & 8" Hollow Tile Wall Thicknesses Placed Relative to Respective Floors
- Cinder, Concrete or Cement Brick
- Hollow Cinder or Concrete Blocks, Plastered
- Mixed Construction of Concrete Blocks, Brick Faced
- Mixed Construction of Concrete Blocks & Brick
- Masonry Walls, Metal Faced
- Adobe
- Hollow Cinder or Concrete Block Interior Wall Basement to Roof
- Tile Interior Wall Basement to Roof
- Cement Brick End Wall

PARTITIONS

- Frame
- Tile from Foundation to Top Ceiling only
- Concrete 1st Floor only
- Hollow Cinder or Concrete Block 1st Floor only
- Brick 2nd Floor only
- Tile 1st & 3rd Floors only

OPENINGS

(Interior)

- Wall with No Openings
- Wall with Double Standard Fire Doors 1st Floor
- Wall with Standard Fire Door Basement
- Wall with Substandard Fire Doors 1st & 3rd Floors
- Wall with Metal & Wired Glass Fire Doors all Floors
- Wall with Substandard Fire Doors 1st, 2nd & 3rd Floors & Unprotected Opening 4th Floor
- Wall with Small Unprotected Openings only
- Wall with Unprotected Openings all Floors

(Exterior)

- 1st Floor
- 1st & 2nd Floors
- 3rd Floor
- 1st & 4th Fl. with Metal Shutter 1st.
- 10th & 22nd only
- 10th to 22nd Fl.
- Glass Block
- Wired Glass in Metal Sash 2nd & 3rd Fl.

NON-MASONRY CONSTRUCTION

Non-masonry walls are shown with fine (———) lines.
(Wall construction other than wood and stucco on wood frame is noted)

- Wood & Stucco & Cement Plaster, Etc. on Wood Frame
- Brick Veneered on Wood Frame (Other Types of Veneered on Wood Frame Specifically Noted)
- Mixed Masonry & Non-Masonry (Type of Masonry Specifically Noted)
- Wood, Brick Lined, Br. Filled or Brick Nogged
- Wood Sash & Glass
- Metal Sash & Glass
- Metal Clad on Wood Frame
- Iron Building
- Iron Building with Wood Roof, (Location of Extensive Wood Areas Specifically noted)
- Asbestos Clad on Wood Frame, Noted in Non-Residential Structures only.
- Mixed Wall--9' of CB With Metal Sash Above
- Metal Panels
- Apron Walls With Wood Sash and Glass
- Stucco, Cement Plaster, Etc. on Steel Frame
- Gunite on Steel Frame
- Asphalt and/or Asbestos Protected Metal on Steel Frame
- Asphalt and/or Asbestos Protected Metal on Wood Frame
- Glass Panels

FIRE PROTECTION

- Fire Department Connection
- Automatic Sprinklers throughout contiguous sections of single risk
- Automatic Sprinklers all floors of building
- Automatic Sprinklers in part of building only (Note under Symbol indicates protected portion of building)
- Not Sprinklered
- Automatic Chemical Sprinklers
- Chemical Sprinklers in part of building only (Note under Symbol indicates protected portion of building)
- Vertical Pipe or Stand Pipe
- Automatic Fire Alarm
- Water Tank
- Outside Vertical Pipe on fire escape
- Fire Alarm Box Noted "HPFS" on High Pressure Fire Service
- Single Hydrant
- Double Hydrant
- Triple Hydrant
- Quadruple Hydrant of the High Pressure Service
- Water Pipes of the High Pressure Service
- Water Pipes of the High Pressure Service as Shown on Key Map
- Public Water Service
- Private Water Service

VERTICAL OPENINGS

- Skylight lighting top story only
- Skylight lighting 3 stories
- Skylight with Wired Glass in Metal Sash
- Open Elevator
- Frame Enclosed Elevator
- Frame Enclosed Elevator with Traps
- Frame Enclosed Elevator with Self Closing Traps
- Concrete Block Enclosed Elevator with Traps
- Tile Enclosed Elevator with Self Closing Traps
- Brick Enclosed Elevator with Wired Glass Door
- Open Hoist
- Hoist with Traps
- Open Hoist Basement to 1st
- Stairs

MISCELLANEOUS

- Number of Stories, Height in Feet, Composition Roof Covering
- Parapet 6" above Roof, Frame Cornice, Parapet 12" above Roof
- Parapet 24" above Roof, Occupied by Warehouse, Metal, Slate, Tile or Asbestos Shingle Roof Covering, Parapet 48" above Roof
- 2 Stories & Basement, 1st Floor Occupied by Store, 2 Residential Units above 1st, Auto in Basement, Drive or Passageway, Wood Shingle Roof
- Iron Chimney
- Iron Chimney (with Spark Arrestor)
- Vertical Steam Boiler
- Horizontal Steam Boiler
- Width of Street between Block Lines, not Curb Lines
- Ground Elevation
- House numbers nearest to Buildings are Official or Actually up on Buildings. Old House Numbers are Furthest from Buildings
- Brick Chimney
- Gasoline Tank
- Fire Pump
- 24 Reference to Adjoining Page
- 5 Block Number
- Fire Department as shown on Key Map
- Vac. or V. - Vacant
- Vac. & Op. or V.-O. - Vacant & Open

GLOSSARY

A - B LINES An arbitrary boundary between adjoining sheets.
A. Private garage.
ABV. Above.
A.F.A. Equipped with fire detecting devices which automatically signal a central fire department.
AIR COND. Air cooling system employing ducts through floors.
APRON WALL A masonry wall extending 5' or less above foundation.
ASSOC. RISK Risk not underwritten by Stock Fire Ins. Companies.
BASEMENT A story having its floor below ground & its ceiling at least 4' above ground.
Cook County, Ill. A floor of a building next below the first floor. Shown by the symbol B following story height. Sub-basements or sub-cellars, (stories below the 1st basement), are shown by the symbol SB following basement symbol.
CHIMNEYS (Applicable to maps in Rocky Mountain & Pacific Coast States)
BR. Brick, stone, concrete brick & concrete chimneys.
C.BR. & C. Concrete block chimney.
C.C. Non-standard concrete chimney.
T.C. Tile chimney.
P.C. Patent chimney.
IR. CH. Iron chimneys.
S.P. Stove pipe.
S.P.V. Stove pipe with patent ventilator.

RESIDENTIAL OCCUPANCY SYMBOLS
D. Single family unit or as qualified by a numeral.
F. - APTS. A multi-family residential building corresponding with local Rating Bureau definition in family units per floor, story height, & separation of entrance.
ROOM'G. A residential building normally occupied by a single family but with 10 or more rooms rented for lodging purposes.
EXCEPTIONS 8 rooms in Arizona, California, Nevada, Utah & Montana; 5 rooms in Oregon & Washington, 4 rooms in Idaho & Hawaii.

FIRE RESISTIVE CONSTRUCTION SYMBOLS
F.P. Approved masonry walls, floors & roof, interior supports of approved masonry, concrete, and/or protected steel.
F.P.X. F.P. qualifications except inferior or sub-standard walls.
N.C. Fire resistive with unprotected structural steel units.
HOLLOW WALL A bonded masonry wall having a continuous air space within.
I.P.P. Independent Electric Plant.
IMPASSABLE Not traversable due to condition of terrain.
LEDGED WALL A masonry bearing wall with extended ledges to support floors.
LOFT Tenanted by industrial occupancies.
M.L. & P. Concrete or plaster applied to metal lath on wood studdings.
M.S. & G. Metal sash & glass.
NOT OPEN Streets appearing on records but not open on ground.
O.L. Windows overlooking the roof above the corresponding floor of an adjoining building.
O.U. Open between ground and first floor.
PILAST'D. Masonry reinforcing columns in walls.
SKYTS. Skylights.
SL. CL. Slate attached to wood siding.
SM. HO. Smoke House.
STABLE Shown by crossing diagonal lines on diagram.
SUSP'D. Suspended ceilings below floor and/or roof beams.
SYST. System.
TRANSF. Transformer.
WD. Wood.

CODING OF STRUCTURAL UNITS FOR FIREPROOF AND NON-COMBUSTIBLE BUILDINGS

FRAMING

CODE	STRUCTURAL UNIT
A.	Reinforced Concrete Frame.
B.	Reinforced Concrete Joists, Columns, Beams, Trusses, Arches, Masonry Piers.
C.	Protected Steel Frame.
D.	Individually Protected Steel Joists, Columns, Beams, Trusses, Arches.
E.	Indirectly Protected Steel Frame.
F.	Indirectly Protected Steel Joists, Columns, Beams, Trusses, Arches.
G.	Unprotected Steel Frame.
H.	Unprotected Steel Joists, Columns, Beams, Trusses, Arches.
O.	Masonry Bearing Walls.

FLOORS

CODE	STRUCTURAL UNIT
1.	Reinforced Concrete. Reinforced Concrete with Masonry Units. Pre-cast Concrete or Gypsum Slabs or Planks.
2.	Concrete on Metal Lath, Incombustible Form Boards, Paper-backed Wire Fabric, Steel Deck, and Cellular, Ribbed or Corrugated Steel Units.
3.	Open Steel Deck or Grating.

LAND USE CODE APPLICABLE TO CHANGES DIAGRAMMED AT FEB 5/69

R	RESIDENTIAL	M	MANUFACTURING

C	COMMERCIAL	U	UTILITY
W	WAREHOUSE	T	TRANSPORTATION

NUMERICAL PREFIX INDICATES THE NUMBER OF ESTABLISHMENTS IN EACH CATEGORY

ROOF

CODE	STRUCTURAL UNIT
a.	Reinforced Concrete. Reinforced Concrete with Masonry Units. Reinforced Gypsum Concrete. Pre-cast Concrete or Gypsum Slabs or Planks.
b.	Concrete or Gypsum on Metal Lath, Incombustible Form Boards, Paper-backed Wire Fabric, Steel Deck, and Cellular, Ribbed or Corrugated Steel Units.
c.	Incombustible Composition Boards with or without Insulation. Masonry or Metal Tiles.
d.	Steel Deck, Corrugated Metal or Asbestos Protected Metal with or without Insulation.

The coding for framing, floor and roof structural units as shown above is used in describing the construction of fire-resistive buildings. In addition, reports for fire-resistive buildings will show the date built and wall construction when other than brick.

F P buildings have masonry floors and roof; concrete and/or directly or indirectly protected steel framing; and clay brick, stone or poured concrete walls.

F P X buildings are F P buildings with inferior walls such as concrete block, cement brick, metal or glass panels, etc.

N C buildings have unprotected steel framing and fire-resistive but non-masonry floors and roof.

FP-1962 (CONC.) A-1-a — A fire-resistive building built in 1962 with concrete walls and reinforced concrete frame, floors and roof.

FPX-1962 (METAL PANELS) E-2-b NONCOMB CEIL'G — A fire-resistive building built in 1962 with metal panel walls, indirectly protected steel frame, concrete floors and roof on metal lath, noncombustible ceilings.

NC-1962 (C. B.) H-2-d — A noncombustible building built in 1962 with concrete block walls; unprotected steel columns and beams; concrete floors on metal lath and steel deck roof.

Radon Zone Level: 3

Zone 3 has a predicted average indoor screening level < 2 pCi/L

A Radon Zone should not be used to determine if individual homes need to be tested for radon.
The EPA's Office of Radiation and Indoor Air (202/233-9320) recommends that all homes be tested for radon, regardless of geographic location or the zone designation in which the property is located.

**A property is defined as a .02 mile buffer around the site's latitude and longitude.
A blank radius count indicates that the database was not searched by this radius per client instructions.
NR in a radius count indicates that the database cannot be reported by this search criteria due to insufficient and/or inaccurate addresses reported by a federal/state agency.

NPL

Date of Data: 05/01/96
Release Date: 05/13/96
Date on System: 07/26/96
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8881

National Priorities List

The NPL Report, also known as the Superfund List, is an EPA listing of uncontrolled or abandoned hazardous waste sites. The list is primarily based upon a score which the site receives from the EPA's Hazardous Ranking System. These sites are targeted for possible long-term remedial action under the Superfund Act of 1980.

CERCLIS

Date of Data: 05/01/96
Release Date: 05/13/96
Date on System: 07/19/96
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8730

Comprehensive Environmental Response, Compensation, and Liability Information System

The CERCLIS Database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation by the U.S. EPA for the release, or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation, and ultimately placed on the National Priorities List (NPL). As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from the CERCLIS Database.

RCRIS_TS

Date of Data: 05/10/96

Resource Conservation and Recovery Information System - Treatment, Storage, And Disposal Facilities

The RCRIS_TS Report contains information pertaining to facilities which either treat, store, or dispose of EPA regulated hazardous waste. The following information is also included in the RCRIS_TS Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties
- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

RCRIS_LG

202/260-4610

Resource Conservation and Recovery Information System - Large Quantity Generators

The RCRIS_LG Report contains information pertaining to facilities which either generate more than 1000kg of EPA regulated hazardous waste per month, or meet other applicable requirements of the Resource Conservation And Recovery Act. The following information is also included in the RCRIS_LG Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties
- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

RCRIS_SG

Office of Solid Waste and Emergency Response
202/260-4610

Resource Conservation and Recovery Information System - Small Quantity Generators

The RCRIS_SG Report contains information pertaining to facilities which either generate between 100kg and 1000kg of EPA regulated hazardous waste per month, or meet other applicable requirements of the Resource Conservation And Recovery Act. On advice of the U.S. EPA, ERIIS does not report so-called "RCRA Protective Filers." Protective Filers, commonly called Conditionally Exempt Small Quantity Generators (CESQG's), are facilities that have completed RCRA notification paperwork, but are not, in fact, subject to RCRA regulation. The determination of CESQG status is made by the U.S. EPA. The following information is also included in the RCRIS_SG Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties
- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

Emergency Response Notification System

ERNS is a national computer database system that is used to store information concerning the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS Reporting System contains preliminary information on specific releases, including the spill location, the substance released, and the responsible party. Please note that the information in the ERNS Report pertains only to those releases that occured between January 1, 1996 and August 22, 1996.

LRST

Date of Data: 04/18/96

Washington Confirmed and Suspected Contaminated Sites

The Washington Confirmed and Suspected Contaminated Sites Report, formerly the affected media and contaminants report (AMC), is a comprehensive listing of all known or suspected potentially hazardous sites located within the State of Washington.

NFRAP

Date of Data: 05/01/96
Release Date: 05/13/96
Date on System: 08/02/96
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8881

No Further Remedial Action Planned Sites

The No Further Remedial Action Planned Report (NFRAP), also known as the CERCLIS Archive, contains information pertaining to sites which have been removed from the U.S. EPA's CERCLIS Database. NFRAP sites may be sites where, following an initial investigation, either no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

If a selected database does not appear on this list, it is not available for the subject property's state.

Attention: Mr. Gordon Gilbert, Jr.

Subject: **PHASE I ENVIRONMENTAL AUDIT**
Two Commercial Buildings
1416 through 1418 - 10th Avenue
1401 - 11th Avenue/1414 - 10th Avenue
Seattle, Washington 98122

Dear Mr. Gilbert:

Environmental Associates, Inc., has completed a Phase I Environmental Audit of the subject property located in Seattle, King County, Washington. This report, prepared in accordance with the terms of our proposal dated August 4, 1999, and in a manner generally consistent with the intent and methodologies of ASTM E 1527-97, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", summarizes our approach to the project along with results and conclusions.

The contents of this report are confidential and are intended solely for your use and the use of your representatives. Four (4) copies of this report are being distributed to you. No other distribution or discussion of this report will take place without your prior approval in writing. Additional copies are available for a small fee.

Relying solely upon the available information reviewed or otherwise developed in the course of our study, and within the context of the limitations of the attached report of which this letter is a part, the following conditions of potential environmental significance have been identified:

- Potential PCB-containing flourescent light ballasts.
- Presence of "suspect" asbestos-containing building materials in the form of sheet vinyl flooring, 12-inch square vinyl tile and wall/ceiling plaster.
- Historic use of heating oil associated with the former apartment building located on the northern portion of lot 10 of the subject site.

Alternative approaches to management and/or additional evaluation concerning the above-noted conditions are provided for your consideration in the Conclusions/Recommendations section of the attached report.

As discussed in appropriate sections of the attached report, soil and groundwater contamination were encountered on-site during the removal and overexcavation of a 6,000-gallon capacity diesel underground storage tank (UST) in 1990 and 1993. Impacted soil was excavated to the maximum allowable extent (contaminated soil was left-in-place along/under the building located on the adjacent property to the south, building located at 1406 - 10th Avenue) and groundwater was again sampled and found to contain levels of contamination below cleanup limits. The WDOE then issued a "no further action" status for the site on October 22, 1993. For additional discussion on remedial activities completed at the property, the reader is referred to the Previous Work section of the attached report.

We appreciate the opportunity to be of service on this assignment. If you have any questions or if we may be of additional service, please do not hesitate to contact us.

Respectfully submitted,
ENVIRONMENTAL ASSOCIATES, INC.

METHODOLOGY/SCOPE OF WORK

Our study approach consisted of completing a series of investigative tasks intended to satisfy the level of effort often referred to as "due diligence" by the "innocent purchaser" in the context of the Superfund Amendment and Reauthorization Act of 1986 (SARA), and nearly identical requirements set forth in the Model Toxics Control Act (MTCA), Chapter 70.105 D (Section 040) RCW pertaining to standards of liability. The objective of a Phase I audit is to minimize potential future liability for environmental problems by demonstrating that at the time of acquisition or refinancing, the owner, buyer, or lender had no knowledge or reason to know that any hazardous substance had been released or disposed of on, in, or at the property.

In an effort to evaluate condition and previous uses of the property in a manner consistent with good commercial and customary practice and in general accordance with methods outlined under ASTM E 1527-97, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", our scope of work for this study included:

- Review of chronology of ownership and site history using the resources of the King County Assessor's Office, Washington State Archives, business directories from several time periods, and aerial photography from several time periods as primary resources. This included an attempt to identify possible former industries or uses presenting some potential for generating waste which may have included dangerous or hazardous substances as defined by state and federal laws and regulations.

- Acquisition and review of available reports and other documentation pertaining to the subject site or nearby sites.

- Review of Washington Department of Ecology (WDOE) and Seattle/King County Department of Public Health documents regarding current and abandoned landfills.

- Review of the current EPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), the EPA National Priority List (NPL), the EPA Resource Conservation and Recovery Act (RCRA) Notifiers, RCRA Corrective Action Report (CORRACTS), and Emergency Response Notification System (ERNS) lists of sites which are potentially contaminated or which produce hazardous substances as a normal part of their commercial operation in the vicinity of the site.

- Review of the current Washington Department of Ecology (WDOE) listing of underground storage tanks (USTs) along with the WDOE's Leaking Underground Storage Tank (LUST) listing for WDOE-documented leaking USTs in the vicinity of the subject property.

- Review of the current WDOE Confirmed and Suspected Contaminated Sites (CSCS) list of potentially contaminated sites which have been the subject of hazardous waste investigation and/or cleanup activity in conjunction with the Washington Model Toxics Control Act (MTCA) Chapter 173-340 WAC.

- Risk evaluation for naturally occurring radon.

- A reconnaissance of the subject property (including buildings) and neighboring areas to look for evidence of potential contamination in the form of soil stains, odors, asbestos, lead-based paint (LBP), vegetation stress, discarded drums, discolored water, careless manufacturing or industrial practices, etc.

- Preparation of a summary report which documents the audit process and findings.

FINDINGS

PREVIOUS WORK

In October 1990, O'Sullivan Construction removed a 6,000-gallon capacity diesel fuel underground storage from the property. Referring to Plate 5, Site Plan, the tank was located on the southwestern portion of tax lot 0060 (just north of the building occupied by CHHIP located on the adjacent property to the south). Composite soil samples were collected from the sidewalls and bottom of the excavation. The composite sample collected from the bottom of the excavation contained 1,798 parts per million (ppm) diesel-range petroleum hydrocarbons (cleanup level is 200 ppm). In November 1990, O'Sullivan returned to the subject site to overexcavate the former tank basin. Approximately 100 cubic yards of contaminated soil was removed and two additional soil samples were collected from the bottom and north wall of the excavation. The soil sample collected from the bottom of the excavation contained 60.5 ppm diesel-range petroleum hydrocarbons and the soil sample obtained from the north sidewall contained 413.5 ppm diesel-range petroleum hydrocarbons

In March 1993, Pacific Testing Laboratories completed three (3) soil borings in the vicinity of the tank excavation. Soil samples were collected and found to contain 311 and 355 ppm of total petroleum hydrocarbons. In August 1993, Nurseryman Products overexcavated the former basin to the maximum allowable extent (contaminated soil along south side of excavation could not be removed due to the adjacent building). All contaminated soil that was excavated was placed on the northern portion of lot 10 for landfarming. Confirmation soil samples collected from the excavation contained levels of contamination below cleanup guidelines with the exception of the samples collected from the south sidewall. Those samples collected from the south sidewall contained 400 ppm and 7,600 ppm of diesel-range petroleum hydrocarbons. It was estimated by Nurseryman Products that approximately 75 cubic yards of contaminated soil remained under the building located on the adjacent property to the south. Groundwater was also collected from the excavation near a catchbasin that was later removed. The sampled groundwater was found to contain 780 parts per billion (ppb) of tetrachloroethylene (cleanup limit is 5 ppb) and 67 ppb of trichloroethylene (cleanup limit is 5 ppb). Contaminated soil in the vicinity of the removed catchbasin was excavated and the water was pumped out of the excavation and treated using a carbon filter tank. Water samples were again collected from various locations at the site and found to contain levels of tetrachloroethylene and trichloroethylene below cleanup limits. In October 1993, the landfarmed soil was found to contain levels of contamination below cleanup guidelines and was then backfilled into the excavation area. It was <u>not</u> noted in the Nurseryman Products report if soil located beneath the "landfarmed soil" was sampled/tested to determine if in-situ soils were free from contamination.

Since sampling of soil located beneath the "landfarmed" soil was not conducted, it would be prudent to collect several shallow (one to two feet in depth) soil samples (possibly using hand implements) supported by appropriate laboratory analysis to confirm that in-situ soils are compatible with existing soil quality criteria offered under MTCA, Chapter 173-340-740 WAC.

On October 22, 1993, the Washington Department of Ecology issued a "no further action" (NFA) status for the cleanup activities completed for the removed 6,000-gallon underground storage tank at the subject site. A copy of the NFA letter and the above-noted reports can be found in Appendix C, WDOE Documents.

In February 1994, RZA AGRA presented the findings of a Phase I Environmental Site Assessment for the subject property to Me Two Company. In their report, RZA AGRA recommended the following:

- Based upon historic uses of the subject site it would be prudent, if the subject site buildings were to be demolished or in the event of property transfers, to complete subsurface sampling and testing for possible contamination.

- Complete an asbestos survey at the subject site.

- Arrange for the proper handling/disposal of debris, containers, miscellaneous chemicals, roofing repair materials, potential PCB-containing flourescent light ballasts, and a 55-gallon drum of a "grease-like" substance located on/within the buildings.

- Conduct a review of material safety data sheets prior to the use of the material(s) at the subject site. These materials would then be compared to those constituents found during the UST removal and excavation completed at the property.

The debris and containers noted within the basement of building 1, miscellaneous chemicals and 55-gallon drum situated in the basement of building 2, and roofing repair material observed on the roof of building 2 by RZA AGRA in 1993 were not observed on-site during EAI's recent site visit completed on August 11, 1999. RZA AGRA also noted during their 1993 site visit that staining was noted on the flooring in the vicinity of the above-noted materials. No stained flooring was noted during EAI's August 1999 site visit. For additional discussion on the potential PCB-containing flourescent light ballasts the reader is referred to the Check For PCB-Containing Materials and Conclusions/Recommendations sections of this report.

On October 31, 1996, Environmental Associates, Inc. (EAI) presented the findings of a Phase I Environmental Audit for a portion of the subject site (northerly portion of lot 10) to Mr. Mike Malone. The findings of that report revealed that the former on-site apartment building, which burned down in 1992, was heated via an "oil-fired" furnace. The actual location, configuration (above or below ground) or fate of the storage vessel logically used to store the heating oil was not provided in publically available documents. For additional discussion of this issue, the reader is referred to the Development History & Land Use and Conclusions/Recommendations sections of this report.

GENERAL DESCRIPTION

The subject property includes six (6) rectangular-shaped parcels covering a total of approximately 34,981 square feet (0.80 acres) of land. These six (6) parcels which comprise the subject site include the following:

Tax Parcel #	Brief Legal Description
600350-0060	north 40 feet of lot 2 in block 4 of the plat known as J. H. Nagles 2nd Addition
600350-0065	north 30 feet of lot 3 in block 4 of the plat known as J. H. Nagles 2nd Addition

Tax Parcel #	Brief Legal Description
600350-0070	south 30 feet of lot 3 in block 4 of the plat known as J. H. Nagles 2nd Addition
600350-0135	north 38 feet of lot 10 in block 4 of the plat known as J. H. Nagles 2nd Addition
600350-0140	south 22 feet of lot 10 and all of lot 11 in block 4 of the plat known as J. H. Nagles 2nd Addition
600350-0150	all of lot 12 less street in block 4 of the plat known as J. H. Nagles 2nd Addition

Improvements to the northern portion of lot 2 include a one-story wood-framed commercial building (building 1) with a full basement enclosing approximately 7,320 square feet of space which was reportedly erected in 1913. Improvement to lots 10 (south 22 feet), 11 and 12 include a one-story masonry and brick commercial building (building 2) with a full basement enclosing approximately 19,450 square feet of space which was reportedly erected in 1920. Additional features located on-site include asphalt-paved parking areas situated on lot 2 and the southerly portion of lot 3 and a gravel-covered parking lot located on the northerly portion of lot 10. Currently the property is occupied by the following tenants:

ADDRESS	TENANT	USAGE
Building 1 (located on the northerly portion of lot 3)		
1416A - 10th Avenue (basement)	Senami Coffee Company	espresso machine assembly company
1416B - 10th Avenue (first floor)	Second Generation Bakery	bakery
1418 - 11th Avenue (first floor)	Union Garage	theater
Building 2 (located on the southerly portion of lot 10, all of lot 11, and all of lot 12)		
1401 - 11th Avenue (first floor)	Madison Park Greetings	greeting card company
1414 -10th Avenue (basement)	DDI Corporation	a diecutting, foiling, embossing, stock die, perforating, crash imprinting, numbering, jig and laser die, packaging, and door hanger company
1414 - 10th Avenue (basement)	Hamilton Custom Press	commercial printing facility
1414- 10th Avenue (basement)	Lighting Accessories, Inc.	light company

The subject property is located in a mixed retail and residential area of the Capital Hill District located approximately three-fourths of a mile east of downtown Seattle, Washington. The approximate location of the site is shown on the Vicinity Map, Plate 1, appended herewith. Photographs reflecting the character of the subject property are provided with this report as Plates 2 through 4.

A brief description of land use on nearby parcels is provided below. Plate 5, Site Plan, depicts the setting of the subject property and land use for adjacent sites.

North: Immediately north of the subject site is an asphalt-paved parking lot. Further north are multi-use buildings occupied by (but not limited to) La Puerta Restaurant, Arensberg Sons Shoe Service, Winston Apartments, SJW Studios, City Motors Import Car Specialists, and Pistil Books & News. Beyond these multi-use buildings is East Pike Street.

South: Located to the south is East Union Street and a building occupied by CHHIP (Capital Hill Housing Improvement Program) and 7000 Studio. Across East Union Street are four (4) commercial buildings occupied by Kessler Foreign Car Repair, Sherri's Complete Detail, apartments, Auto Battery & Electric Company, General Parts Company, and Chicken Soup Brigade.

East: The subject site's eastern boundary is defined by 11th Avenue. Across this north-south arterial is a building occupied by Union Art Co-Op and an asphalt-paved parking area. Located to the northeast is Garlick Manufacturing Automobile Upholstery, Cornish College of the Arts, Premier Auto Body, Aria, Petti Rosa, and Salon Espresso. Immediately southeast is an apartment building, The Color Store, and The Buzz Stop espresso stand.

West: 10th Avenue defines the subject site's western property line. Across 10th Avenue is The Warm Company, Present Downworks, and ARO Restaurant. Located to the southwest is a small garage.

According to the City of Seattle Zoning Department, the subject property is zoned C2-65, a commercial designation with a 65 foot height limit.

GEOLOGIC SETTING

Physiographically, the site is situated on a gently rolling elevated plain (the Seattle Drift Plain) which was formed during the last period of continental glaciation that ended approximately 13,500 years ago.

Published geologic maps for the site vicinity (Liesch, et al., 1963) suggest that much of the material underlying the subject site is glacial till, a dense heterogenous mixture of silt, sand, and gravel. Typically, the till exhibits relatively low vertical hydraulic conductivity which frequently results in formation of a "perched" water table along its upper contact. The "perched" water table (if present) is frequently seasonal and derives recharge primarily from infiltration of precipitation through more permeable overlying soils.

Topographically, the site is situated on a relatively level area of land approximately 295 feet above sea level. Based upon inference from topography and local drainage patterns, it appears that shallow-seated groundwater (if present) in the vicinity of the subject property may flow in a southwesterly direction.

Groundwater was encountered at the subject site at approximately 7½ feet below ground surface during drilling activities in March 1993.

With respect to surface water resources, Elliott Bay of Puget Sound is located approximately one mile northwest of the subject site.

DEVELOPMENT HISTORY AND LAND USE

Sources reviewed for information on site and area development and land use included the resources of the Seattle Public Library, King County Assessor's Office, Washington State Archives, and aerial photographs of the subject property and surrounding area from several time periods.

Aerial photographs of the area were reviewed for the years 1936, 1941, 1946, 1956, 1960, 1969, 1974, 1977, 1980, 1985, 1990, 1992, 1995, and 1997. The following paragraphs provide an interpretive summary of our observations in each photo. The time intervals between the various historic aerial photographs selected for this particular project are, in our opinion, entirely adequate for the intended purpose which was to permit a general assessment of overall development and land use in the vicinity of the subject property.

1936 The northerly portion of lot 3 appears to be developed with the current 1913-vintage commercial building. The 1920-vintage building located on lots 10 (southerly portion), 11 and 12 is also visible on the subject site. The northerly portion of lot 10 and the southerly portion of lot 3 appear to be developed with apartment buildings. Lot 2 of the subject site appears to contain a small shop. Immediately south of the subject site is a commercial building and East Union Street. Across East Union Street are three (3) additional commercial buildings and a retail gasoline station (former Texaco located at 1023/1035 East Union Street). This historical gasoline station is situated in an inferred hydrologically cross-gradient position in relation to the subject site. Located to the southeast of the subject site across the intersection of East Union Street and 11th Avenue is the current apartment building and another retail gasoline station (former Chevron located at 1118 East Madison Street). This additional historical gasoline station is also situated in an inferred hydrologically cross-gradient position in relation to the subject site. The subject site's eastern property line is defined by 11th Avenue. Across 11th Avenue is a commercial building, a single-family residence, two (2) apartment buildings, and another commercial building. Adjacent to the subject site on the north are single-family dwellings and a small store/automotive repair garage. Further north are a few residences and the existing multi-use buildings. The subject site's western property line is defined by 10th Avenue. Across this north-south arterial are the current commercial buildings occupied by The Warm Company, Crescent Downworks, and ARO Restaurant. Located to the southwest of the subject site across the intersection of East Union Street and 10th Avenue is a small garage.

1941 and 1946 No changes were noted on the subject site or in the immediate vicinity.

1956 A few of the residences located to the north of the subject site appear to have been demolished. The single-family dwelling and one of the apartment buildings situated on the adjacent property to the east also appear to have been demolished and replaced with a parking lot. The subject site and remaining adjacent properties appear similar to the 1946 photograph.

1960 The remaining residences located to the north of the subject site appear to have been demolished and replaced with parking lots. The retail gasoline station (former Texaco) located to the south of the subject site across East Union Street appears to have been demolished and replaced with the current building occupied by Chicken Soup Brigade. No additional changes were noted on the subject site or in the immediate vicinity.

1969 The small shop located on lot 2 and the apartment building located on the southerly portion of lot 3 of the subject site appear to have been demolished and replaced with a parking lot. The store/automotive repair garage located on the adjacent property to the north also appears to have been demolished and replaced with a parking lot. All remaining areas of the subject site and adjacent properties appear unchanged.

1974 Six (6) semi-trucks are visible on lot 2 of the subject site. The remaining apartment building located on the adjacent property to the east appears to have been demolished and replaced with a parking lot. The Chevron gasoline station

located to the southeast of the subject site also appears to have been demolished and replaced with the current building occupied by The Color Store. No additional changes were noted on the subject site or in the immediate vicinity.

1977, 1980, 1985, and 1990 No changes were noted on the subject site or in the immediate vicinity.

1992 The apartment building located on the northerly portion of lot 10 is no longer visible (building was destroyed by a fire). All remaining areas of the subject site and immediate vicinity appear unchanged.

1995 and 1997 The subject site and immediate vicinity appear similar to the 1992 photograph.

PROPERTY CONVEYANCE/OWNERSHIP DATA

From the file resources of the King County Assessor's Office and resources of the Seattle Public Library and Washington State Archives, the following limited history of ownership has been established:

INSTRUMENT	OWNER	DATE OF PURCHASE
Tax Parcel #600350-0060 (northerly 40 feet of lot 2)		
Archive Records	George W. Hoffman	February 23, 1917
Archive Records	Elizabeth Eyler and Helen Davis	April 3, 1943
Archive Records	Harry Pinch	August 25, 1950
Archive Records	Ruth Ashbrook	February 10, 1954

INSTRUMENT	OWNER	DATE OF PURCHASE
Deed	LeConie Stiles, Jr. & Jean L. Stiles	July 8, 1985
Deed	Conrad W. & Judith M. Jacobsen	November 2, 1993
Tax Parcel #600350-0065 (northerly 30 feet of lot 3)		
Archive Records	N. E. Lieberg	June 3, 1913
Archive Records	Alice Lundberg	July 23, 1962
Real Estate Contract	Carolyn A. & Ernest A. Shook	May 21, 1971
Real Estate Contract	LeConie Stiles, Jr. & Jean L. Stiles	March 9, 1981
Quit Claim Deeds	Connie Stiles-Falk	July 11, 1986, February 21, 1987 and September 28, 1988
Deed	Conrad W. & Judith M. Jacobsen	November 2, 1993
Tax Parcel #600350-0070 (southerly 30 feet of lot 3)		
Archive Records	E. Rosenberg	Prior to 1930
Archive Records	C. Peterson	October 2, 1930
Archive Records	Sadie R. Ichlussel	March 3, 1941
Archive Records	Gas. Pnoiette	November 14, 1950
Archive Records	Joseph Pnoiette	June 4, 1957
Archive Records	Alice Lundberg	July 23, 1962
Archive Records	Helen D. Stiles	April 12, 1967
Archive Records	I. J. Halfon, et al.	December 10, 1968
Deed	LeConie Stiles, Jr. & Jean L. Stiles	July 8, 1985
Deed	Conrad W. & Judith M. Jacobsen	November 2, 1993
Tax Parcel #600350-0135 (northerly 38 feet of lot 10)		
Archive Records	C. R. Johnson	August 8, 1935
Archive Records	Reuben Ranson	August 21, 1950
Archive Records	Anton & Florence Montes	October 1956
Archive Records	Bead-Dang Corporation	January 16, 1959
Archive Records	Edgar Merez, et ux.	April 6, 1959
Archive Records	Western Apartments, Inc.	February 26, 1963

INSTRUMENT	OWNER	DATE OF PURCHASE
Archive Records	Don Rice, et ux.	April 19, 1963
Archive Records	Robert E. Campbell, et ux.	June 15, 1966
Archive Records	Leon G. Paguet, et ux.	January 16, 1969
Foreclosure	James Burns and Howard McQuaid	November 27, 1973
Contract	Robert & Patricia Gerend	April 1, 1974
Contract	Dave & Irene Dewar	June 27, 1977
Contract	Duane & Louise Welsch	November 15, 1977
Contract	Robert & Carol Randolph	September 17, 1979
Contract	Bothell Way Associates	November 13, 1980
Purchaser's Assignment of Contract and Deed	John R. Potter	January 1, 1983
Seller's Assignment of Contract and Deed	Hazel M. Lamb	January 30, 1984
Seller's Assignment of Contract and Deed	Pacific Coast Investment Company	July 30, 1984
Purchaser's Assignment of Contract and Deed	Kun Lin Chen	December 3, 1984
Quit Claim Deed	Kang Chang Chang	November 24, 1986
Quit Claim Deed	Kun Lin Chen	August 13, 1987
Deed	Conrad W. & Judith M. Jacobsen	February 18, 1997
Tax Parcel #600350-0140 (southerly 22 feet of lot 10 and all of lot 11)		
Archive Records	Northern Life Insurance Company	March 23, 1920
Archive Records	LeConie Stiles, Jr. & Jean L. Stiles	May 7, 1945
Deed	Conrad W. & Judith M. Jacobsen	November 2, 1993
Quit Claim Deed	Conrad W. & Judith M. Jacobsen	February 18, 1997
Tax Parcel #600350-0150 (lot 12)		
Archive Records	George F. Uber, et al.	May 15, 1916
Archive Records	Gilham Thompson	October 10, 1941
Archive Records	Gilham & Anders Thompson	Prior to 1949
Archive Records	Gilham Thompson	May 12, 1949

INSTRUMENT	OWNER	DATE OF PURCHASE
Archive Records	Ruth Ashbrook Bakeries Corporation	January 29, 1957
Deed	Conrad W. & Judith M. Jacobsen	November 2, 1993

Tax Lot 0060 (northerly portion of lot 2):

According to resources available at the Seattle Public Library, Washington State Archive and the King County Assessor's Office, along with review of aerial photographs, the northern portion of lot 2 was developed in 1905 with a small warehouse (1408 and 1410 - 10th Avenue). Archive records indicate that this warehouse was historically occupied by a "trim shop" prior to 1948 and by Shaw & Mercill, Inc. (machine work company) between 1948 and 1960. This historic warehouse was demolished in approximately 1961 and then utilized as an asphalt-paved parking lot.

Tax Lot 0065 (northerly portion of lot 3):

According to resources available at the Seattle Public Library, Washington State Archive and the King County Assessor's Office, along with review of aerial photographs, the northern portion of lot 3 was developed in 1913 with the current commercial building (1416 - 10th Avenue). Archive records and historic reverse directories suggest that the current 1913-vintage building was occupied by Lieberg Auto Springs Works (blacksmithing, forging and welding company) from 1913 until approximately 1965. Between 1970 and 1980, 1416 - 10th Street is noted as being occupied by Bondo Bob's Body Shop, Seattle Air Conditioning Repair & Sales, and Specialty Automotive Warehouse. Ruth Ashbrook Baking Company was listed as occupying the site between approximately 1982 and 1993. In 1994, Hamilton Custom Press occupied the building for approximately one year. In 1995 the building was occupied by Union Garage Theater and Senami Coffee Company (current occupants).

Tax Lot 0070 (southerly portion of lot 3):

According to resources available at the Seattle Public Library, Washington State Archive and the King County Assessor's Office, along with review of aerial photographs, the southern portion of lot 3 was developed in 1904 with a multi-family residence (1414 - 10th Avenue). This residence remained on-site until it was demolished in 1969. The southerly portion of lot 3 was then utilized as an asphalt-paved parking lot.

Tax Lot 0135 (northerly portion of lot 10):

According to resources available at the Seattle Public Library, Washington State Archive and the King County Assessor's Office, along with review of aerial photographs, the northern portion of lot 10 was developed in 1907 with an apartment building (1415 - 11th Avenue). This apartment building remained on-site until it was destroyed by a fire in 1992. The northern portion of lot 10 was then utilized as a gravel-covered parking area.

Archive records suggest that the heating source for the former apartment building was reportedly supplied by a hot water "oil burner". The actual position (above or below ground) of the storage vessel used to store heating oil was not available in archive records. At the time of this writing, no additional information was available (including the City of Seattle Department of Construction & Land Use and WDOE) regarding the type of storage vessel (above or below ground), fate, location, or size of a tank which logically must have supplied the "oil" heating system, or condition of site soil and/or groundwater on the northern portion of lot10.

Tax Lots 0140 (lot 11 and southerly portion of lot 10) and 0150 (lot 12):

According to resources available at the Seattle Public Library, Washington State Archive and the King County Assessor's Office, along with review of aerial photographs, tax lots 0140 and 0150 were developed in 1920 with the current warehouse building. Businesses which have operated at the subject site since 1930 included the following:

LISTED BUSINESS/USAGE	LISTED ADDRESS	OCCUPATION OF SITE (approximate)
Joe Engler Automotive Repair	1401 - 11th Avenue	1930-1937
H & H Motors Inc./used car sales	1401 - 11th Avenue	1938-1939
Grandma Baking Company	1407 - 11th Avenue	1940-1950
Thompson Brothers Auto Rebuild	1020 East Union Street	1943-1953
Ruth Ashbrook Bakeries	1407 - 11th Avenue	1951-1985
Jack Fuller's Auto Rebuild	1020 East Union Street	1954-1956
Salvation Army	1401 - 11th Avenue	1993
Madison Park Greetings	1401 - 11th Avenue	1994-present
Activate	1414 - 10th Avenue	1998
Intrcd Custom Screen	1414 - 10th Avenue	1995-1998

LISTED BUSINESS/USAGE	LISTED ADDRESS	OCCUPATION OF SITE (approximate)
DDI Corporation	1414 - 10th Avenue	1995-present
Hamilton Custom Press	1414 - 10th Avenue	1995-present
Lighting Accessories	1414 - 10th Avenue	1995-present
Teller Printing	1414 - 10th Avenue	1995-1998

Borrowing from the jargon of ASTM, no "reasonably ascertainable" or "likely to be useful" information prior to 1904 was available. The absence of such information has no material effect upon the conclusions of this report.

SITE RECONNAISSANCE

An environmental engineer/EPA-certified Asbestos Building Inspector from our firm visited the property on August 11, 1999 to review on-site conditions and land use practices in the surrounding area. Mr. Gordon Stevenson with Real Property Associates provided access to the buildings and grounds. The representative areas reviewed during our site visit included the interior and exterior areas of the subject site.

As mentioned earlier, the subject property includes a 1913-vintage one-story wood-framed building with a full basement (building 1) and a 1920-vintage one-story masonry and brick building with a full basement (building 2). The roofs of both buildings are flat and built-up in design. Asphalt-paved parking areas are located on the south side of building 1 and a gravel-covered parking area is situated to the north of building 2. Currently the buildings are occupied by the following tenants:

ADDRESS	TENANT	USAGE
Building 1 (located on the northerly portion of lot 3)		
1416A - 10th Avenue (basement)	Senami Coffee Company	espresso machine assembly company
1416B - 10th Avenue (first floor)	Second Generation Bakery	bakery
1418 - 11th Avenue (first floor)	Union Garage	theater

Building 2 (located on the southerly portion of lot 10, all of lot 11, and all of lot 12)		
1401 - 11th Avenue (first floor)	Madison Park Greetings	greeting card company
1414 -10th Avenue (basement)	DDI Corporation	a diecutting, foiling, embossing, stock die, perforating, crash imprinting, numbering, jig and laser die, packaging, and door hanger company
1414 - 10th Avenue (basement)	Hamilton Custom Press	commercial printing facility
1414- 10th Avenue (basement)	Lighting Accessories, Inc.	light company

Typical building materials and/or conditions observed during our site reconnaissance included:

Building #1:

Please note that the space occupied by Union Garage Theater was not reviewed during our recent site visit (theater was closed and Mr. Stevenson did not have keys to access the space).

- Floors are wood on the first floor covered with 12-inch square vinyl tile. Floors within the basement area are bare concrete.
- Interior walls throughout the building are painted sheetrock, natural wood, or concrete.
- Ceilings are painted wood, unfinished sheetrock, or suspended cellulose panels.
- Incandescent and fluorescent light fixtures were noted throughout the building.
- Heating is provided by natural gas suspended units.
- Two (2) 1-gallon containers of lacquer thinner, two (2) 1-gallon containers of paint thinner, one (1) 1-gallon container of denatured alcohol, six (6) 1-gallon containers of latex paint, one (1) 5-gallon container of contact adhesive, small cans of spray paint, and two (2) 5-gallon containers of adhesive solvent were noted within the basement area of building 1. All materials were neatly stored on the concrete floor and no signs of spillage and/or staining were noted in the vicinity of these materials.

Building #2:

- Floors are bare wood or wood on the first floor covered with 12-inch square vinyl tile, carpet, or sheet vinyl. Floors within the basement area are bare concrete or concrete covered with carpet.

- Interior walls throughout the building are painted sheetrock, brick, concrete, or plaster.

- Ceilings are painted sheetrock, natural wood, plaster, or suspended cellulose panels.

- Incandescent and fluorescent light fixtures were noted throughout the building.

- Heating is provided by natural gas suspended units and by electric/natural gas forced air systems.

- One solvent parts cleaner, one (1) 55-gallon drum of solvent, several containers of waste rags, one (1) 55-gallon drum of waste ink, several 5-gallon containers of gear oil, and several small containers (less than 1-gallon each) of new ink were noted with the basement area occupied by Hamilton Custom Press. According to the owner of the printing company, Mr. Bill Hamilton, the waste solvent from the parts cleaner and waste ink are picked up for lawful disposal by Safety Kleen. All waste rags are picked up for cleaning/reuse by Overall Laundry. Mr. Hamilton stated that the 55-gallon drum of solvent (blanket wash) is kept on-site for the periodic cleaning of the printing machines. The solvent is reportedly rag-applied to the machines and then the used rags are sent to Overall Laundry, as noted above. All gear oil kept on-site is utilized in the printing machines. All of the above-noted materials were neatly stored on the concrete floor or wood shelves. No staining or signs of spillage were noted in the vicinity of these materials.

- Also noted within Hamilton Custom Press was a ProStar SL-251 film developer which utilizes fixer and developer. Two (2) approximately 25-gallon containers of developer and fixer were noted in the vicinity of the film developer. According to Mr. Hamilton, the film developer is hooked-up to a silver recovery system which is periodically maintained by Hallmark Refining Corporation. Mr. Hamilton also stated that his facility is not required to sample or test water discharged from the silver recovery system for pH or total recoverable silver. Water processed through the silver recovery system reportedly discharges to the sanitary sewer system.

- Several 1-gallon containers of latex paint, one (1) 5-gallon container of kerosene, one (1) 5-gallon container of gear oil, and two (2) 5-gallon containers of waste rags were noted within the basement area occupied by DDI Corporation. According to the owner of DDI Corporation, Mr. Art Guempel, all waste rags generated on-site are picked up for cleaning/reuse by Overall Laundry. All of the above-noted materials were neatly stored on the concrete floor or wood shelves. No staining or signs of spillage were noted in the vicinity of these materials.

No above ground fuel storage tanks or evidence to suggest the presence of underground fuel storage tanks (i.e., vent lines, filler caps, etc.) were noted on the property. Similarly, no water wells or groundwater monitoring wells were noted on the property. At the time of our visit, no stains, odors, or unusual vegetation conditions that might otherwise indicate the potential presence of hazardous materials were observed on the subject property.

CHECK FOR PCB-CONTAINING MATERIALS

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used in electrical equipment such as transformers, capacitors, switches, fluorescent lights (ballasts) and voltage regulators owing to their excellent cooling properties. In 1976, the EPA initiated regulation of PCBs through issues pursuant to the Toxic Substances Control Act (TSCA). These regulations generally control the use, manufacturing, storage, documentation, and disposal of PCBs. EPA eventually banned PCB use in 1978, and adoption of amendments to TSCA under Public Law 94-469 in 1979 prohibited any further manufacturing of PCBs in the United States.

Light Fixtures

Based upon the age of buildings 1 and 2 (1913-vintage and 1920-vintage), it is conceivable that some ballasts not definitely marked with respect to PCB's (hence possibly PCB-containing) may exist within these buildings. In the event that non-labeled ballasts are later discovered, we have attached an EPA information pamphlet as Appendix A for information regarding the handling and disposal of possible PCB-containing ballasts.

Main Service Electrical Transformers

Thirteen (13) pole-mounted electrical transformers were noted along 10th Avenue, 11th Avenue and East Union Street. Through a telephone interview with Ms. Elyse Kane with Seattle City Light, we learned that each of the main service transformers along the property contain less than 50 parts-per-million (ppm) PCB and hence are considered non-PCB transformers under current EPA definitions.

CHECK FOR ASBESTOS-CONTAINING MATERIALS

During reconnaissance of the property, we observed building materials to assess the potential for the presence of asbestos-containing materials (ACM). During our site review, three (3) types of materials suspected to possibly contain asbestos were observed within the subject buildings. These materials included a ceiling/wall plaster, 12-inch square vinyl tile, and sheet vinyl flooring. At the time of this writing we were not authorized by the client to sample or test the suspect materials to confirm or deny this presumption. The suspect materials are provided in the table below:

MATERIAL	LOCATION	CONDITION[1]	APPROXIMATE SQUARE FOOTAGE
Building 1			
tan, black and creme colored mosaic print sheet vinyl	restrooms on first floor	good	220
creme, tan and blue colored 12-inch square vinyl tile	entrance hallway and west half of suite #1416B on first floor	good	unknown
Building 2			
ceiling plaster	first floor warehouse area	good	unknown
wall and ceiling plaster	former boiler room in basement	good	unknown
Note: 1 - Material condition was evaluated borrowing criteria adopted under the Asbestos Hazard Emergency Response Act (AHERA), 40 CFR, part 763.			

Our effort regarding identification of asbestos-containing materials within the subject buildings was a preliminary review and not an asbestos survey. Since no destructive sampling was authorized for this audit, materials not readily accessible such as possible asbestos-containing roofing materials and/or materials obscured behind, beneath, or within walls or existing flooring materials were not reviewed.

REVIEW FOR LEAD-BASED PAINT

Lead was formerly a common additive to many paints to improve their durability and coverage. Lead-based paint presents a special hazard to small children, who can ingest it by chewing on painted woodwork or eating flakes of paint. A number of studies showing the toxic effects of lead

on humans, and on small children in particular, prompted the Consumer Product Safety Commission to mandate in 1977 that the amount of lead in most paints, including those for residential use, should not exceed 0.06 %.

A review of interior painted surfaces on the subject property was conducted to assess the potential for lead-content in surface layers of paint. Representative painted surfaces (listed in the table below) were analyzed using "Lead-Check" sodium rhodizonate color reagent paint tests. These tests provide a qualitative indication as to whether lead is present in paint samples with reproducible results to a lower detection limit of 0.5 percent, a level corresponding to a threshold of concern established by HUD.

PAINTED SURFACE	LOCATION	RESULT
Building 1		
wall	storage room/office in suite #1416B	negative
window sill	storage room/office in suite #1416B	negative
window frame	storage room/office in suite #1416B	negative
wood ceiling beam	basement	negative
Building 2		
door frame	mezzanine office in first floor warehouse	negative
concrete walls	former boiler room in basement	negative
pipe	former boiler room in basement	negative

As noted in the table above, none of the surfaces tested using the "Lead Check" screening method showed a reddish hue response characteristic of the sodium rhodizonate method as an indication of the likely presence of lead in the painted surfaces. On that basis, we conclude that lead was not present in the surfaces tested.

RADON EVALUATION

Occurrence Radon is a naturally occurring, highly mobile, chemically inert radioactive gas created through radioactive decay of uranium and thorium. The potential for occurrence of radon varies widely and is dependent upon (1) the concentration of radioactive materials in the underlying bedrock; (2) the relative permeability of soils with respect to gases; and (3) the amount of fracturing or faulting in surficial materials (EPA, 1987).

Health Risks

The concern regarding radon and its potential effects upon humans arises from the results of studies (EPA, 1987) which suggest that approximately fifteen percent of all lung cancer mortalities in the United States may be attributable to exposure to radon.

The EPA has established a concentration of radon of four (4) picocuries per liter (pCi/l) as a maximum permissible concentration "action level". Concentrations above this value would signal a potential health threat. According to some studies, an average concentration in homes across the United States is on the order of 1.4 pCi/l.

Risk of Potential Exposure in the Seattle Area

The Bonneville Power Administration (BPA) recently published the results of measurements for radon made in residences throughout the region they serve which includes Washington, Oregon and Idaho. For the Seattle area in the immediate vicinity of the subject property 134 tests have been performed. The results of their work (BPA, 1993) suggest that radon levels over 4 pCi/l were detected in none of the monitored residences in the vicinity of the subject site. Additionally, the average listed radon reading in the subject site township was 0.51 pCi/l, well below the EPA threshold of concern.

On the basis of the findings presented in the cited BPA survey, we conclude that the potential for exposure to naturally occurring radon at the subject site is very low.

WATER SUPPLY, WASTE WATER AND SOLID WASTE MANAGEMENT

Information supplied by the Public Works Department of the City of Seattle revealed that water and sewer services for the subject site are provided by the City of Seattle.

One (1) solid waste dumpster and one (1) recycling bin located on asphalt were noted along the south side of building 1. The dumpster and bin, which are maintained by Emerald City Disposal and Emerald City Recycling, respectively, were relatively clean and free of overflowing debris at the time of our site reconnaissance.

REVIEW OF WASHINGTON DOE LISTING OF UNDERGROUND STORAGE TANKS

Review of the current Washington Department of Ecology listing of underground storage tanks (USTs) suggests that thirty-five (35) registered UST facilities are located within a one-half mile radius of the subject property. Acknowledging the need for common sense practicality in dealing with a large number of sites, information regarding the UST sites within a one-quarter mile radius and their status is provided below:

* "Hydro. Pos." (hydrologic position) in the table refers to the position of the USTs in relation to the subject property and the probable direction of groundwater flow. Cross (X), Down (D), and Up (U) indicate gradient direction. In general, concern arises when USTs are located up-gradient from the subject property.

** Information regarding age of tanks, status, capacities, and/or content was not included for these sites in the WDOE UST list.

According to the most recent WDOE Leaking Underground Storage Tank (LUST) listing, thirty (30) tank facilities located within an approximately one-half mile radius of the subject property have reported accidental releases or leakage to the WDOE in the past. For the sake of brevity, we have provided the following listing of LUST sites located within a one-quarter mile radius:

2) Carin Capital Property at 815 East Pike Street reported a release of contamination into the soil on October 25, 1993. Cleanup of the site has begun. This facility is located approximately 500 feet west of the subject property in an inferred cross-gradient hydrologic position.

4) Chevron Station 93068 at 1531 Broadway Avenue East has reportedly completed the cleanup of soils contaminated in a June 25, 1991 release. This site is situated in an inferred cross-gradient hydrologic position approximately one-eighth of a mile northwest of the subject site.

8) Foley Sign Company located at 1205 East Pine Street reported a limited release of petroleum product to the soil. One used oil tank was removed. WDOE listed the status as "reported cleaned up" as of March 25, 1991. This site is in an inferred cross-gradient hydrologic position approximately one-eighth of a mile northeast of the subject property.

10) Phil Smart, Inc. located at 600 East Pike Street reported two releases, one occurred on January 20, 1990 and the other on September 22, 1994. Cleanup of both incidents has been completed according to the WDOE. This facility is located approximately one-quarter of a mile northwest of the subject property in an inferred cross-gradient hydrologic position.

13) Seattle University campus located on the southeast corner of the intersection of Broadway Avenue and East Madison Street removed a number of underground tanks from various locations. Cleanups are in progress for contaminated soil and groundwater. This site is located in an inferred cross-gradient hydrologic position approximately 500 feet south of the subject property.

15) Seattle Central Community College located at 1525 Broadway Avenue reported soil contamination on September 9, 1993. The site has since been cleaned up. This site is located approximately one-eighth of a mile northwest of the subject property in a hydrologically cross-gradient position.

15) Seattle Central Community College located at 801 East Pine Street reported a release of contaminants to the soil on August 2, 1994. Cleanup of the site is in progress. This site is approximately one-eighth of a mile northwest of the subject property in a hydrologically cross-gradient position.

21) Texaco Station # 63-232-0267 located at 1500 Broadway Avenue reported completion of a cleanup after a September 8, 1991 release. This site is situated approximately 350 feet northwest of the subject property in a cross-gradient hydrologic position.

22) Tomlinson, Inc. at 1100 East Union Street has reportedly completed cleanup of affected soils associated with the removal of one 500 gallon UST in April 1991. In September 1991 the former tank basin was overexcavated and approximately 30 cubic yards of contaminated soil was eventually disposed of off-site. Confirmation soil samples were collected from the excavation and found to contain total petroleum hydrocarbons and lead below cleanup limits. One water sample was also collected from the excavation and found to contain levels of total petroleum hydrocarbons, benzene, toluene, ethylbenzene, and xylenes below cleanup guidelines. This site is located approximately 70 feet east of the subject site in an inferred up-gradient hydrologic position.

24) Unocal Station # 5919 at 1100 Broadway Avenue is listed in a "monitoring" stage regarding a March 31, 1989 release. This site is located approximately one-eighth of a mile southwest of the subject site in an inferred cross-gradient hydrologic position.

25) Wallace/Oncorp Property located at 1222 East Madison Street has reportedly completed the cleanup of soil contamination which resulted from a July 20, 1989 release. This facility is approximately one-eighth of a mile east of the subject property in an inferred cross-gradient hydrologic position.

27) Family Housing Partnership located at 1630 - 14th Avenue is a site with soil contamination by petroleum products. Available WDOE documents suggest that the cleanup at this facility has been started. This site is located approximately one-quarter of a mile northeast of the subject site in an hydrologically cross-gradient position.

28) REI (former) located at 1525 - 11th Avenue is a site with soil contamination by petroleum products. Available WDOE documents suggest that the cleanup is awaiting further remedial action. This facility is located approximately 450 feet north of the subject site in an inferred hydrologically cross-gradient position.

Considering the separation distances, hydrologic positions and/or cleanup status (i.e., reported cleaned up) of the above-listed tank sites in relation to the subject property as positive risk-mitigating factors, it is our opinion that the potential for environmental impairment of the subject property from these sources is low. The approximate locations of the WDOE-documented underground storage tanks within a one-quarter mile radius of the subject property are indicated on the Vicinity Map attached to this report as Plate 1, and are indicated on the map by the Map ID numbers given above.

EPA & STATE RECORDS OF POTENTIALLY HAZARDOUS SITES

Superfund and NPL Review of the current EPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and National Priority List (NPL) listings revealed no CERCLIS and no NPL sites within approximately one mile of the subject property that have been designated as potentially hazardous or eligible for participation in the Superfund cleanup program.

CORRACTS Review of the current EPA Corrective Action Report (CORRACTS) listing revealed that no CORRACTS sites are located within approximately one mile of the subject property that have been designated as having a potential release at the property under RCRA.

MTCA The Washington Department of Ecology hazardous waste cleanup and investigation program was launched in 1989 as a part of the Model Toxics Control Act (MTCA), Chapter 173-340 WAC, in order to evaluate potential and actual hazards at sites within the state. Of the more than 788 sites currently on the program list, eleven (11) are located within a one mile radius of the subject property. These include:

MAP ID #	COMPANY & ADDRESS	AFFECTED MEDIA	HYDRO. POS.*	DISTANCE & DIRECTION
29	ABC Metal Finishing 528 Pontius Ave N	S, SW	X	⅞ mile northwest
30	A1 Brake 1520 - 10th Ave	A, GW, S, SW	X	400 feet north
31	BMW of Seattle 714 E Pike St	S, GW	X	⅛ mile north-northwest
32	Jefferson Street Bus Barn 1398 E Jefferson St	S	X	½ mile south-southeast
33	Mastercraft Metal Finishing 1175 Harrison St	S, SW	X	1 mile northwest
34	Melrose Apartments Property 1520 Melrose Ave	S, GW	X	⅜ mile north-northwest
35	Metal Laundry, Inc. 614 - 12th Ave	S, GW	X	⅜ mile south-southeast
36	Olympian Apartment Building 1605 E Madison St	GW, S, SW	X	⅜ mile east-northeast
37	Seattle Technical Finishing 1005 S King St	GW, S, SW	X	1 mile south
38	TD Auto Body & Repair 1209 E Fir St	SED, S, SW	X	¾ mile south
39	Tritell LLC Parking Lot 1821-1832 Minor Ave	GW, S	X	⅝ mile northwest

Affected Media Codes:

A	Air
GW	Groundwater
S	Soil
SED	Sediment
SW	Surface water

* **Note:** "Hydro. Pos." (hydrologic position) in the table refers to the position of the MTCA sites in relation to the subject property and the probable direction of groundwater flow. Cross (X), Down (D), Up (U), indicate gradient direction. In general, concern arises when sites are located up-gradient from the subject property.

Acknowledging the substantial separation distances and hydrologic positions of the listed MTCA sites in relation to the subject property as positive risk-mitigating factors, it is our opinion that the potential for environmental impairment of the subject property from these sources is very low. The approximate location of the WDOE-documented MTCA sites within a one mile radius of the subject property are indicated on the Vicinity Map attached to this report as Plate 1, and are depicted on the map by the corresponding numbers given above.

RCRA/FINDS/ TSDs

Review of EPA's Treatment, Storage and Disposal (TSD) facilities listing for sites that treat, store, or dispose of potentially hazardous materials revealed that no TSD sites are located within a one mile radius of the subject property.

Review of the EPA's Facility Index System (FINDS) listing, revealed four (4) sites located adjacent to the subject property which are regularly monitored by EPA/WDOE for the use or generation of small amounts of hazardous substances as a normal part of their business activities. No on-site hazardous generators were noted in the FINDS listing. The sites located adjacent to the subject site are listed below.

MAP ID #	COMPANY & ADDRESS	REGULATORY AGENCY	GENERATOR CODE
22	International Clinical Laboratory 1100 East Union Street	RCRIS	NG
40	Auto Battery & Electric Company 1009 East Union Street	RCRIS	2
41	Davis & Hoffman Auto Rebuild 1406 - 10th Avenue	RCRIS	3
42	Premier Auto Body 1422 11th Avenue	RCRIS	3

Regulatory Agency: RCRIS RCRA Listing

Generator Code:
- 2 Small Quantity Generator, between 100 and 1,000 kilograms per month of hazardous materials.
- 3 Very Small Quantity Generator, less than 100 kilograms per month of hazardous waste.
- NG Business is a non-regulated generator of hazardous materials.

Businesses named in the FINDS listing are users or generators of potentially hazardous or toxic materials as a normal aspect of their business practices. Listed businesses are required to closely monitor and report their use or generation of such materials to the EPA.

Based upon this information, upon the monitoring and reporting requirements imposed by the EPA, and upon the presumption that the above-mentioned user/generators exercise prudence in management of these materials to minimize liability and EPA penalties, it is our opinion that the potential for environmental impairment of the subject property from these sources is low.

The locations of the EPA-documented RCRA sites located adjacent to the subject property are indicated on the Vicinity Map attached to this report as Plate 1, and are depicted on the map by the corresponding number given above.

ERNS Review of the EPA's Emergency Response Notification Systems (ERNS) list for the State of Washington revealed that the subject site has not reported a spill. This list has been compiled with periodic updates since October 1987.

LANDFILLS

A review of WDOE and Seattle/King County Department of Public Health documents regarding current and abandoned landfills revealed that there are no documented landfills located within a mile radius of the subject property.

CONCLUSIONS/RECOMMENDATIONS

As discussed in the executive summary of the cover letter to this report, and within the context of the limitations, relying solely upon the available information reviewed or otherwise developed in the course of our study, the following conditions of potential environmental significance have been identified:

- Potential PCB-containing flourescent light ballasts.

- Presence of "suspect" asbestos-containing building materials in the form of sheet vinyl flooring, 12-inch square vinyl tile and wall/ceiling plaster.

- Historic use of heating oil associated with the former apartment building located on the northern portion of lot 10 of the subject site.

Excluding the above noted conditions, it would appear that the subject property is free from contamination by potentially dangerous, hazardous, or toxic substances, and that such substances as defined under the Resource Conservation and Recovery Act (RCRA-42 USC-6901, et seq.), the Federal Water Pollution Control Act (33 USC 1257, et seq.), the Clean Air Compensation and Liability Act (42 USC 2001, et seq.), the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA: 42 USC 9601, et seq.), and the Dangerous Waste Regulations of the State of Washington, Chapter 173-303 WAC, have not been disposed of on the property.

PCBS

Based upon the information developed during the course of our site review, it appears that some of the transformer ballasts in the fluorescent lights in the subject buildings may contain polychlorinated biphenyls (PCBs).

In our opinion, there is not immediate cause for concern regarding the potential for PCB-containing light ballasts. The only likely potential for exposure to PCBs would come in the event that one of the sealed ballasts were ruptured through abusive handling or as a result of a defect in a ballast.

It may be prudent to implement a management policy providing the inspection of ballasts by maintenance personnel during routine bulb changing activities. Ballasts may be periodically checked or replaced depending upon long-term management desires. Please refer to the attached EPA pamphlet, Appendix A, regarding appropriate handling and disposal practices for such ballasts.

ASBESTOS

Borrowing evaluation criteria adopted under the Asbestos Health Emergency Response Act (AHERA, 40 CFR Part 763), the wall/ceiling plaster, sheet vinyl flooring and 12-inch square vinyl tile are in "good" condition. In the current use and condition, these materials pose no threat to public health or to the environment. No action would be required under current state or federal regulations.

To reduce exposure to potential future liability, and in an effort to comply with regulations regarding the presence of asbestos in commercial and apartment buildings under Chapter 296-62-07753 WAC, it may be prudent to consider implementation of a management policy (Operations and Maintenance Program/O&M) whereby all maintenance, repair, or service personnel who may be engaged to work

on the property are formally advised (i.e., signed acknowledgment) as to the "suspected" presence of asbestos-containing materials (ACM) prior to commencement of any work associated with the ACM.

Should the owner intend to renovate, demolish, remodel, or repair any or all portions of the structure containing asbestos, please note that applicable sections of WAC 296-65 require that all projects relating to construction, demolition, repair, or maintenance where release or likely release of asbestos fibers into the air could occur must be performed by "certified asbestos workers". Additional information may be obtained through the offices of Environmental Associates, Inc., or directly from the Washington State Department of Labor and Industries, P.O. Box 207, Olympia, Washington 98504. If future representative sampling and laboratory testing of these suspect materials were to confirm that they do not contain asbestos, these recommendations may logically be disregarded.

FORMER USE OF HEATING OIL

As noted earlier in the report, archive records suggest that the former apartment building located on the northern portion of lot 10 of the subject property was heated via a hot water "oil burner" furnace. No additional information regarding the configuration of the storage vessel (above ground or below ground) logically used to store the heating oil utilized by the furnace was provided in our review of archive documents. In addition, no evidence of vent lines or fill ports that would otherwise suggest the presence of underground storage tanks was observed during our site reconnaissance.

Our research of WDOE, Department of Construction and Land Use, and/or other readily available/reasonably ascertainable resources revealed no definitive information regarding the exact configuration of a possible tank and/or condition of subsurface soil and/or groundwater in the vicinity of the possible UST. This lack of data is not surprising or unusual given the age of the residence, and the non-uniformity of application of tank registry and environmental regulations over the years in Washington.

Subtitle I of the Resource Conservation and Recovery Act (RCRA), and the preamble to 40 CFR, parts 280/281 (EPA underground tank regulations) specifically exclude "tanks storing heating oil for consumptive use on the premises where stored" from regulation. In contrast, Chapter 340, Division 108, section 070 et seq provides definition of liability along with specific cleanup criteria for petroleum hydrocarbons (oil, gasoline, etc.) in soils irrespective of the cited federal exclusion for heating oil tanks.

Based upon our experience on a number of similar sites, small heating oil tanks are generally not the source of large-scale contamination problems, however the presence of relatively small volumes of soil containing residual concentrations of petroleum hydrocarbons exceeding state guidelines is not uncommon.

Assessment of subsurface soil and/or groundwater conditions cannot typically be accomplished through visual examination of surficial conditions afforded by the scope of our Level I audit effort, nor was such a determination envisioned as a task included in the scope of our proposal.

In developing recommendations for future action regarding the site of a possible heating oil tank, the following management alternatives are offered for discussion:

(1) The owner and/or lender could, without benefit of further study, jointly agree to presume that the dollar risk posed by soil conditions at the location of the potential heating oil tank is low, and move forward with orderly completion of the pending financial transaction. The benefit of such an expedient solution lies in the ability to proceed without delay or additional immediate costs. Detractions from acceptance of this solution obviously could include future claims for extra costs of other liabilities in the event that contamination requiring some form of cleanup is encountered in other site work.

(2) A geophysical survey possibly using ground-penetrating radar could be performed in an effort to determine the location, size, depth and orientation of any underground storage tanks.

(3) Using the information obtained in (2) above, limited subsurface sampling supported by appropriate laboratory analysis from one or two localities proximal to the underground tank (if one actually exists) could be employed to factually assess whether or not environmental impacts have occurred.

Decision making authority regarding selection of one of the above alternatives or other approaches clearly lie with the property owner and/or lender, depending upon their individual risk tolerances.

FORMER ON-SITE UST/USAGES

As discussed earlier, soil and groundwater contamination was encountered on-site during the removal and overexcavation of a 6,000-gallon capacity diesel underground storage tank (UST) in 1990 and 1993. Impacted soil was excavated to the maximum allowable extent (contaminated soil was left-in-place along/under the building located on the adjacent property to the south) and groundwater was again sampled and found to contain levels of contamination compatible with

WDOE cleanup limits. The WDOE then issued a "no further action" status letter for the site on October 22, 1993.

Also discussed in appropriate sections of this report, readily available/reasonably ascertainable records in the public domain suggest that the subject site was historically utilized by a machine shop and automotive repair facilities.

Throughout the United States, properties associated with automotive repairs have attracted the attention of regulatory agencies, lending institutions, land owners and developers, etc., as a result of the potential for accidental release and/or improper disposal of oil, solvents, motor fuels, etc. Making no attempt here to fully develop an abstract or elaborate framework of risk analysis for the benefit of those very few who may have a penchant for such endeavors, it seems sufficient for purposes of this preliminary Phase 1 effort to simply state that experience has shown these types of businesses do present some inherently higher degree of risk for adverse environmental impacts than many other types of land use. Often, this principle is validated only at the time when a property is redeveloped and problems are encountered in excavations or other types of construction work. At such times, as the problems become obvious the attendant costs to remedy them become higher than normal owing to the pressures of a construction schedule and the costs of various work crews being held up at that time.

In attempting to take a balanced approach summarizing this issue, it may be reasonable to conclude that based upon observable conditions and uses evident at the property at the time of our recent site reconnaissance, subsurface conditions (whatever they may be) pose no particular threat to public health or safe beneficial use of the facility in the current use and condition. For the lender considering a fixed term loan having adequate value to loan with a proven borrower anticipating no significant changes to the property, this pronouncement may be sufficient. As echoed above, this obviously does not preclude the possibility that if the property were redeveloped at some time in the future to the extent that subsurface soils and/or groundwater were exposed, impacts relating to the removed UST and past site usages (machine shop and automotive repair) might be discovered.

If some degree of confidence is desired with respect to subsurface soil and/or groundwater conditions, limited subsurface sampling and testing could be conducted to make a site specific determination. Decision-making authority in this regard clearly lies with the owner and/or lender, depending upon their individual risk tolerances.

LIMITATIONS

This report has been prepared for the exclusive use of Mr. & Mrs. Conrad Jacobsen along with The Commerce Bank of Washington, Seattle Mortgage and their several representatives for specific application to this site. Our work for this project was conducted in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area, and in accordance with the terms and conditions set forth in our proposal dated August 4, 1999. The condition of subsurface soil and/or groundwater cannot typically be determined by visual examination of surficial conditions such as those afforded by a Phase I audit such as performed here. Acknowledging that limitation, no warranty in that regard is made. No other warranty, expressed or implied, is made. If new information is developed in future site work which may include excavations, borings, studies, etc., Environmental Associates, Inc., must be retained to reevaluate the conclusions of this report and to provide amendments as required.

The level of effort regarding identification of potential ACM should be considered a reconnaissance, should not be confused with an asbestos survey, and should not be used as a sole informational resource for removal, construction, or abatement bidding purposes.

DATABASE

The following table lists the various governmental database resources reviewed for this project, the ASTM search radius, the search radius for this project, and the date that the agency produced the listing. The 1984/1996 date for the county/state landfill lists should not be construed by the report user or reviewers as out-of-date. It is simply the last date of issuance of the lists selected by the county/state government, ASTM not withstanding.

APPENDIX A

EPA PCB Guidance Document

Air & Toxics Division

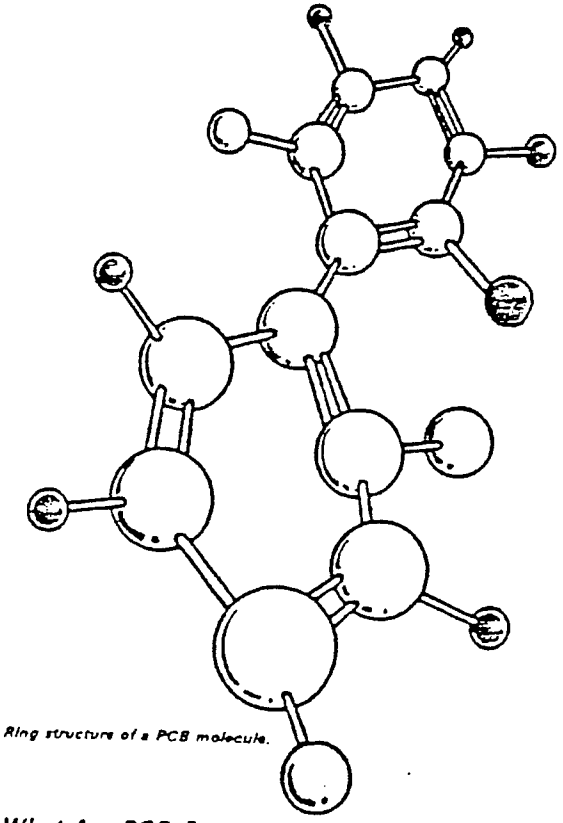
EPA

PCBs in Fluorescent Light Fixtures

A Fact Sheet

Introduction

The purpose of this brochure is to provide some basic information on polychlorinated biphenyls (PCBs) and guidelines for handling PCBs in fluorescent light fixtures. Although the precautionary actions described in this fact sheet may seem extreme, or suggest to some that cleanup of a small PCB spill is personally hazardous, this is not generally so. For example, if you should get a small amount of PCB on your skin during cleanup, it is highly unlikely that you would be harmed. However, given the nature of PCBs and the fact that much is still unknown about the effects of minor exposures, no absolute guarantees or reassurances can be given. For that reason, EPA has chosen to describe a conservative approach which minimizes personal hazard. It is EPA's hope that this information will inform you rather than alarm you.



Ring structure of a PCB molecule.

What Are PCBs?

PCBs (polychlorinated biphenyls) belong to a broad family of organic chemicals known as chlorinated hydrocarbons. PCBs are produced by the combination of one or more chlorine atoms and a biphenyl molecule. Virtually all PCBs in existence today have been synthetically manufactured.

PCBs range in consistancy from heavy oily liquids to waxy solids. Prior to 1979, PCBs were widely used in electrical equipment such as transformers, capacitors, switches, and voltage regulators for their "cooling" properties because they do not readily burn or conduct electricity, and only boil at high temperature. Also, PCBs do not readily react with other chemicals. They were also used in mining equipment, heat transfer and hydraulic systems, carbonless copy paper, pigments, and microscopy mounting media.

Why Are PCBs Harmful to Human Health and the Environment?

When released into the environment, PCBs do not easily break apart and form new chemical arrangements (i.e., they are *not* readily biodegradable). Instead, they persist for many years, bioaccumulate, and bioconcentrate in organisms. Laboratory data show that PCBs cause cancer in animals. Although there are no actual data showing that PCBs cause cancer in humans, EPA's policy is to consider any animal carcinogen a possible human carcinogen. Animal studies show adverse reproductive and developmental effects from repeated exposure to PCBs. In addition, it has been shown that PCBs are toxic to fish at very low levels of exposure. The survival rate and the reproductive success of fish can be adversely affected by the presence of PCBs. EPA believes there may be similar cause for concern when humans are exposed to large doses of PCBs. Exposure to PCBs can cause chloracne (a painful, disfiguring skin illness), nausea, dizziness, eye irritation, and bronchitis. Ingestion of PCBs can cause liver damage and digestive problems.

How Does EPA Regulate PCBs?

EPA regulates PCBs through rules issued pursuant to the Toxic Substances Control Act of 1976. These regulations generally control the use, marking, storage, records, and disposal of PCBs. There are millions of pieces of equipment in operation in the U.S. which were manufactured prior to these regulations and which contain PCBs.

Small Capacitors in Fluorescent Light Ballasts

Light ballasts are the primary electric components of fluorescent light fixtures and are generally located within the fixture under a metal cover plate. The ballast units are generally composed of a transformer to reduce the incoming voltage, a small capacitor (which may contain PCBs), and possibly a thermal cut-off switch and/or safety fuse. These components are surrounded by a tar-like substance that is designed to muffle the noise that is inherent in the operation of the ballast. This substance covers the small capacitor. When a ballast unit fails, excessive heat can be generated which will melt or burn the tar material, creating a characteristic foul odor.

In considering causes of ballast failure, some privately conducted tests have indicated that operation of power-saving lamps with a standard ballast or standard lamps with a power-saving ballast tends to significantly increase the ballast operating temperature and decrease its normal life-span. It appears that ballasts will fail less frequently if standard lamps are used only with standard ballasts and power-

is is the ballast portion of a typical fluorescent light fixture.

aving lamps with power-saving ballasts. Fluorescent mps should be changed in pairs; new lamps should ot be used with old lamps.

Does Your Fluorescent Light Ballast Contain PCBs?

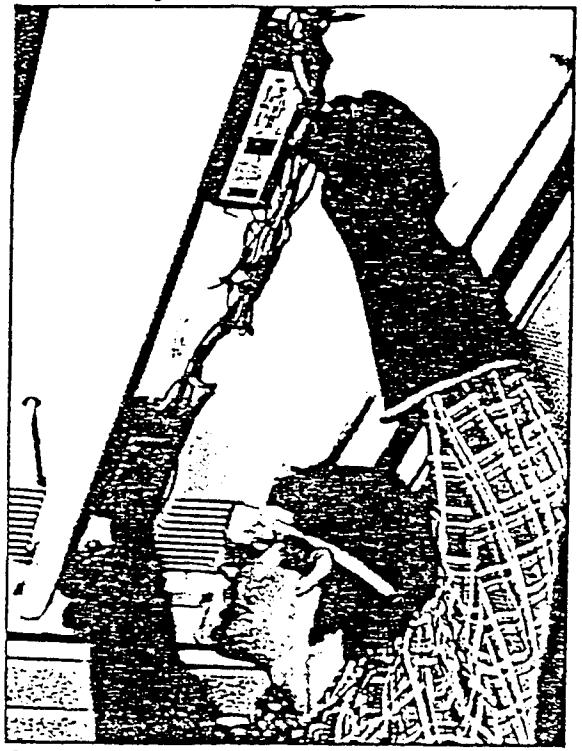
efore EPA banned the manufacture of PCBs in 1978, CBs were used in the manufacture of fluorescent light allasts. The use of PCBs in ballasts manufactured prior to 978 is not regulated by EPA. All light ballasts anufactured since 1978 which do not contain PCBs hould be marked by the manufacturer with the statement *No PCBs.*" For those manufactured prior to that me, or for those ballasts which contain no atement regarding PCB content, you should sume that they do contain PCBs.

the ballast does contain PCBs, they are located inside e small capacitor. There would be approximately 1 to ¼ ounces of PCB fluid in the capacitor itself. If the allast fails, the capacitor *may* break open, allowing e PCB oil to drip out of the fixture. The capacitor es not always leak when the ballast fails, but when it es happen, measures should be taken to limit or avoid rsonal exposure.

What Should I Do if My Light Ballast Leaks?

PA has these recommendations for anyone with a fluorescent light ballast leaking PCBs:

1. Vacate the room or area immediately and open any windows to ventilate the room to the outside. If the incident occurred in a room which cannot be vented, the person replacing the failed ballast and cleaning up can reduce exposure by wearing a chemical cartridge respirator equipped with an organic vapor cartridge.



Once you have removed the fluorescent tubes and the control cover, you will be able to easily locate the ballast(s). Note the gloves and goggles worn to prevent possible personal contact with PCBs.

2. Turn off the light fixture at the switch and disconnect electricity at the fuse or breaker box. Let the ballast unit cool for 20-30 minutes before proceeding.

   If the room is fully ventilated, the amount of PCB-contaminated particulate matter in the air should decrease significantly enough to make negligible any risk from breathing.

3. Wear rubber gloves that will not absorb PCBs (e.g., neoprene, butyl, or nitrile). Further, if you will be working directly under the fixture, consider using additional protective gear such as goggles (or a face shield) and a rubber apron to help guard against possible exposure from further leaking or cleanup activities. Exercise caution to avoid personal contamination (e.g., from touching your face with a contaminated glove).

   During the cleanup or removal period, smoking should be prohibited in the area because smoking increases the inhalation rate of contaminated air. In addition, you may be using a flammable solvent in the cleanup.

4. Remove the fluorescent lamps.

5. Recheck that the power is off at the fuse or breaker box. Remove the metal cover over the wiring and ballast unit; loosen the ballast unit by taking out the metal screws which hold it to the end of the fixture; cut the electrical wires going to the ballast and remove the ballast.
   Note: Wire connectors can be used when installing a new ballast.

6. Proceed to clean up leaks using the following guidelines.

   PCBs that leak onto *nonabsorbent* surfaces such as table tops and uncarpeted floors should first be cleaned up by wiping with a rag or paper towel or by scraping with a putty knife if hardened. Avoid smearing the PCB around. This would only contaminate a larger area. Surfaces should then be thoroughly cleaned twice using an appropriate solvent or detergent. Only certain solvents are effective in cleaning up spilled PCBs. These include *mineral spirits, deodorized kerosene, turpentine,* and *rubbing alcohol.* Certain detergents containing trisodium phosphate (such as *"Soilex"* or *"Spic 'n Span"*) may also be used. However, they should be used only at *full strength* and applied with a damp rag rather than diluted in a bucket. That solution would become contaminated and cannot legally be disposed of in the sewer system. Some of the other effective detergent products (which are commercially available) include: *"Triton X-100"* (Rohm-Haas), *"Sterox"* (Monsanto), and *"Power Cleaner 155"* (Penetone Corp.). EPA does not endorse these particular products. Other effective products may also be available.

   For leaks onto *absorbent* materials such as drapes and carpets, there is no reliable way to clean and decontaminate the material. In the case of rugs and fabrics, the material should be cut away in a six-inch radius around the contamination point(s). In areas where foot traffic has spread contamination, the entire carpet should be

disposed of. Proper disposal procedures for all such materials are described in the following section. Associated surfaces, such as flooring under contaminated carpeting, should be thoroughly cleaned with a solvent or detergent as previously described.

7. Contaminated materials (*ballasts, rags, contaminated clothing, gloves, drapes, carpets, etc.*) should be packed into crumpled newspapers or other sorbent materials (*sawdust, kitty litter, vermiculite, soil, etc.*) and placed in a double thickness plastic bag. This bag should be taken to one of the transporters listed in the following section of this fact sheet. There, the contaminated meterials will be packed in a drum approved for PCBs by the Department of Transportation and finally disposed of at an EPA approved site.

   (One might consider discarding the entire light fixture instead of decontaminating the unit. This would eliminate the chance of skin coming into direct contact with the PCBs while cleaning inside the light fixture.)

8. When you are completely through with the cleanup process, and contaminated materials and protective clothing have been packed for disposal, you should wash your hands thoroughly with detergent.

9. Continue to ventilate the room for 24 hours before reuse.

How to Get Rid of Your PCBs

Arrangements may be made with one of the following Seattle area transporters for shipment of ballasts, PCB-soiled items, or fluorescent fixtures containing PCBs to an EPA-approved chemical waste processing site. You may wish to call more than one transporter to compare prices. If you live outside of the Seattle metropolitan area, please check the telephone yellow pages under waste disposal to locate an authorized transporter. If you have difficulty finding a transporter, please call EPA's regional office in Seattle at (206) 442-1270.

1. Chemical Processors, Inc.
   (206) 767-0350
2. Northwest Tank Service
   (206) 622-1090
3. Crosby and Overton
   (206) 872-8030 (24-hour number)
4. Westinghouse
   (206) 292-4111

For homeowners within the Seattle metropolitan area, small numbers (less than 5) of non-leaking fluorescent light ballasts can be dropped off at one of four collection points maintained by the Seattle-King County Health Department. Appointments must be made beforehand. *Leaking units will not be accepted.* The numbers to call for these centers are:

Eastside (Bellevue area)	885-1278
Southeast (Renton area)	228-2620
North (Northgate area)	363-4765
Central (downtown area)	587-2722

The Seattle-King County Health Department will make arrangements to have the ballasts collected at these centers shipped to an EPA-approved chemical waste landfill for PCBs.

For further information, please contact EPA Region 10 at (206) 442-1270.

Mr. James Cazort
O'SULLIVAN CONSTRUCTION, INC.
3214 16th Avenue S.W.
Seattle, WA 98134

Subject: Contamination Testing of Soil

Dear Mr. Cazort:

On October 30, 1990, the Chemistry Department of Pacific Testing Laboratories received two soil samples from your P.O. No. 22830 for Job No. 2190-056 sampled October 24, 1990. The samples were analyzed on October 31, 1990, for total petroleum hydrocarbons, EPA Method 418.1, using a Perkin Elmer 1600 Series FTIR (S/N 135991). Results are presented in ppm per dry weight. Benzene, toluene, ethyl-benzene, and xylenes (BTEX) content were determined by EPA Method 3810 (Headspace Method), using a Hewlett-Packard 5890A gas chromatograph (2429 A03040) results are presented in ppm total weight. Results of this analysis, in parts per million (ppm), are presented in Table 1.

Table 1. Analytical Results for Soil Samples (ppm)

Sample I.D.	% of Water	Total Petroleum Hydrocarbons	Benzene	Toluene	Ethyl Benzene	Total Xylenes
1-1	10.5	1798.2	0.13	3.4	3.3	17.7
2-1	13.8	<50.0	<0.05	<2.5	<1.0	<1.5

The EPA regulated maximum set for total petroleum hydrocarbons in soil is 0.020 weight percent (200 ppm). Based on this criteria, sample no. 1-1 was found to be in excess the limit for total petroleum hydrocarbons.

This test has been made and report prepared based upon the specific sample provided to us by the client for testing. We assume no responsibility for variations in quality of samples made by persons or under conditions over which we have no control.

This report is provided for the information of the client only. The reproduction of this report by any method and its transmittal by any means to a third party without the written permission of Pacific Testing Laboratories is prohibited.

If you have any questions, please contact us at (206) 282-0666.

RE: Approval for Disposal of Contaminated Soils

Dear Mr. Cazort:

Your request for disposal of contaminated soils associated with Ruth Ashbrook Bakery is approved based on the following conditions.

1. Solid Waste Disposal Checklist Submitted.

   Yes. (November 8, 1990)

2. Material Cleared by Health Department.

   Yes. (November 8, 1990, telephone approval by Steve Burke)

3. King County Solid Waste Division Facility at which Material may be Disposed.

   Cedar Hills Regional Landfill.

4. Route Approved for Hauling Material for Disposal.

   The haul route shown on the enclosed map is approved.

5. Schedule for Disposal.

   November 12 and 13, 1990

6. Total Volume to be Disposed.

   Not to exceed 100 cubic yards.

RECEIVED 11-14-90

7. Conditions.

a. Health Department Clearance pertinent to the material being disposed and a copy of this letter must be presented to the landfill cashier upon arrival at the Cedar Hills Landfill.

b. No more than five (5) vehicular trips will occur each day. Loads will be distributed according to prior arrangement with Mel Andriesen, King County Operations Supervisor.

c. Mel Andriesen will be notified (296-4490) prior to start of delivery and every day during delivery. Notification should include an estimate of the amount of material to be disposed of each day so that an adequately sized disposal area can be prepared each day.

d. King County reserves the right to refuse delivery on the basis of weather or operational constraints.

If you have any questions, please call me at 296-4418.

Sincerely,

Julie Pecoraro

SUBJECT: WASTE MATERIAL CLEARED FOR DISPOSAL AT CEDAR HILLS LANDFILL

This is to advise you that we find that the waste material listed from the following company is a solid waste, and if disposed of in King County, must be disposed at Cedar Hills.

Generator:	Ruth Ashbrook Bakery 1416 - 10th Avenue Seattle, Wa 98122	Contact:	Bud Stiles 325-4900
Transporter:	O'Sullivan Construction 3214 - 16th Avenue S.W. Seattle, Wa 98134	Contact:	James Cazort 682-2440

Delivery must be scheduled with Mel Andriesen at 296-4490.
Minimum 24 hours notice required

Material: Soil excavated with the removal of an underground diesel storage tank at 1416-10th Avenue, Seattle, Wa

Amount: 100 cubic yards.

Approximate total weight 150 tons.

Frequency: This one time only.

Expiration Date: January 12, 1990

Consulted with: Mel Andriesen (November 7, 1990)

The above substances were found not to meet the State DOE definitions for either extremely hazardous waste or dangerous waste or Federal EPA criteria for hazardous waste or toxic substances. A summary of the available chemical analysis is attached, if applicable.

Please note that it is only the described materials that are acceptable for disposal. Any other type of questionable waste from this company will require separate review and analysis.

If you have any questions or need additional information, please call me at 296-4633 (FAX 296-0188).

Seattle, WA 98122

Dear Mr. Stiles:

Thank you for the opportunity to remove your underground storage tank located at 1416 - 10th Ave. Seattle, WA. As you are aware, some soil contamination was discovered during our work. In all cases where polluted soil is found, we recommend the professional services of a soils engineer be retained.

O'Sullivan Construction would like to assist you in the removal and disposal of contaminated soil. Any forthcoming work we perform should be done so on a time and material basis as our contract dated 6-22-90 for $5,883.00 is ~~complete~~ Asphalt still to be done L.P.S. The following rates would govern:

Equipment Trucking	$75/hr
Excavator w/operator	$95/hr or $575/day
Backhoe w/operator	$55/hr or $375/day
Visqueen	$40/roll
Barricades	.51ea/day
Dirt hauling	$60.29/hr - solo or $72.02/hr-T & T
Dump fee - per King County invoice, currently	$78.45/TN

Subject: Contamination Testing of Soil

Dear Mr. Cazort:

On November 28, 1990, the Chemistry Department of Pacific Testing Laboratories received two soil samples from your P.O. No. 23442 for Job No. 2190-056 sampled November 27, 1990. The samples were analyzed on November 29, 1990, for total petroleum hydrocarbons, EPA Method 418.1, using a Perkin Elmer 1600 Series FTIR (S/N 135991). Results are presented in ppm per dry weight. Results of this analysis, in parts per million (ppm), are presented in Table 1.

Table 1. Analytical Results for Soil Samples (ppm)

Sample I.D.	% of Water	Total Petroleum Hydrocarbons
1-1	14.8	413.5
2-1	12.9	60.5

The EPA regulated maximum set for total petroleum hydrocarbons in soil is 0.020 weight percent (200 ppm). Based on this criteria, sample 1-1 was found to be in escess of the limit for total petroleum hydrocarbons.

This test has been made and report prepared based upon the specific sample provided to us by the client for testing. We assume no responsibility for variations in quality of samples made by persons or under conditions over which we have no control.

This report is provided for the information of the client only. The reproduction of this report by any method and its transmittal by any means to a third party without the written permission of Pacific Testing Laboratories is prohibited.

If you have any questions, please contact us at (206) 282-0666.

Re: Remediation of Subject Property: 1416 - 10th East, Seattle, Washington
Commonly Known as Ruth Ashbrook Bakery Property

Dear Mr. Hickey:

Please find enclosed the information, documentation and reports describing the final cleanup to the Department of Ecology's standards; which confirms that this site is officially cleaned.

The contamination was excavated and treated on-site. By using bio-remediation and farming, the contamination was removed and cleaned in a timely manner. After reports were received from Friedman and Bruya, Inc. stating that the soil was free of contamination, the soil was replaced in the excavated hole. This remediation action is classified as an independent cleanup action as defined in the Model Toxics Control Act (70.105D, RCW Chapter 173-340 WAC).

Both soil and water samples were taken before the fact, as well as reports taken as of October 8, 1993, which indicated the cleanup was successful. The amount of room on the site; as well as the low contamination levels, aided in a speedy remediation of the soil and water.

The enclosed material is fairly self-explanatory, and again with our discussions previous to this report, I do not anticipate any problems and would appreciate your signing off on this project as quickly as possible.

Thank you in advance for your prompt attention in your review of the enclosed material. Also, I appreciated your cooperation through-out the cleanup of this project. Please do not hesitate to give me a call if any questions should arise.

Sincerely,

Nurseryman Products, Inc.

Randy B. Perkins

V. Chemical Analysis

EXECUTIVE SUMMARY

RUTH ASHBROOK BAKERY PROPERTY

In October of 1990, a 6,000 gallon diesel underground storage tank was removed from the subject site. At that time, 100 cubic yards of contaminated soil was removed and disposed of by O'Sullivan Construction. The excavation was backfilled prior to confirmation of over-excavation. Soil samples were analyzed for petroleum hydrocarbon concentrations, based upon the contents of the former UST. Analytical results indicated excessive Total Petroleum Hydrocarbon (TPH) concentrations, as well as excessive Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) concentrations. TPH concentrations were found to be in excess of the Department of Ecology (DOE) limits.

In March of 1993, soil samples were obtained from three borings, strategically placed around the former UST location, by Pacific Testing Laboratories. They mobilized a Simco 4000 drill rig to the subject site to perform the sampling. Boring A was placed near the west perimeter of the excavation, defined by the presence of asphalt patch. Boring B was placed near the east perimeter and boring C was placed near the northeast perimeter of the excavation. Each boring was to ten (10) feet below grade, with the exception of boring A, which stopped at seven and one half fee below grade, due to glacial tills. Ground water was encountered in borings B and C, at approximately seven and one half feet below grade.

Soil samples were obtained with the use of a split spoon sampler, which was driven into the matrix by a 140 pound hammer, free falling 30 inches. Prior to obtaining each sample, the split spoon sampler was decontaminated to prevent cross contamination. Soil samples were obtained at 2.5, 5, 7.5, and 10 feet below grade, except boring A, which was terminated at 7.5 fee below grade. Each soil sample was placed into the appropriate, previously labeled glass sampling jar.

The analytical results of the soil testing showed that at B-2.5/B-5 the total Petroleum Hydrocarbons was 311 ppm and at C-2.5/C-5 355 ppm, indicating TPH concentrations in excess of DOE limits.

Based upon results of previous analysis, each composite sample was analyzed utilizing Washington Total Petroleum Hydrocarbon Identification (WTPH-HCID) method. Because analysis of all 6 composites soil samples produced results indicating petroleum hydrocarbons in the diesel range, further analysis utilizing WTPH-D was performed per DOE protocol.

In August of 1993, excavation began to treat the contamination on-site. By using bio-remediation and farming, the contamination was removed and cleaned in a timely manner. After reports were received from Friedman & Bruya, Inc. stating that the soil was free of contamination, the soil was replaced in the excavated hole. This remediation action is classified as an independent cleanup action as defined in the Model Toxics Control Act (70.105D, RCW Chapter 173-340 WAC).

At the time of excavation, the groundwater was determined to be contaminated by diesel fuel and small levels of Tetrachloroethylene were indicated. The soil was removed and treated by bio-remediation. The water was treated by using carbon filter tank.

Contamination was found underneath the building to the south of the subject site (the Davis Hoffman Building); however, it was mutually agreed upon by DOE, the Owners, and the Contractor that it was non-accessable and financially unreasonable to remove the contaminated soil. A concrete wall was placed between the subject property and the adjacent building with a plastic lining placed along the bottom to ensure no future contamination would enter the treated area. A water collection system was installed to continually treat and monitor the groundwater flowing from the adjacent building until levels fall below DOE's requirements for contamination.

SITE DESCRIPTION

RUTH ASHBROOK BAKERY PROPERTY

The subject site is located north of East Union Street between 10th Avenue and 11th Avenue in Seattle, King County Washington (Township 25 North, Range 4 East, Section 32), (see attached map). The address is 1416 - 10th Avenue East, Seattle, Washington. The mailing address is 1301 Spring Street, Unit 28-1, Seattle, Washington 98104.

The irregularly shaped subject property supports two older structures: the first, an approximate 33,500 square foot, two-story, concrete and brick constructed warehouse/commercial building which occupies the eastern portion of the property; the second, a wood-frame constructed, approximately 7,300 square foot, two-story, warehouse/light commercial/industrial building which occupies the northwest portion of the property.

The larger warehouse structure, reportedly built in 1920, was formerly the Ruth Ashbrook Bakery warehouse and, prior to that, was the site of an automobile sales and repair business. The majority of the lower floor and portions of the upper floor are being used by the Salvation Army to store donated furniture, canned goods, and other miscellaneous items. A boiler room located on the east central portion of the basement, and an elevator and other equipment items are along the northern portion of the lower floor. The upper floor, including mezzanine areas, is vacant except for some assorted office furniture, appliances, and additional stockpiles of donated goods on the eastern portion of the building. A portion of the eastern wall of the bakery is shared by an automobile repair facility. The remainder of the eastern side of the warehouse is the site of a loading dock.

The smaller building at 1416 - 10th Avenue is also a two-story structure. It was reportedly built in 1913. According to historical records, past uses have included use by the Ruth Ashbrook Bakery; and an industrial automotive business which performed automotive repair, parts manufacturing, blacksmithing, and forging activities. The lower floor has evidence of fire damage throughout which reportedly occurred in 1992. There are also debris piles in the eastern portions of the lower level. Parts of the upper floor are being used for storage (western portion) while other areas appear to be in a state of repair (eastern portion). According to the owner, Mr. Stiles, the upper floor was remodeled in about 1977 and electric baseboards are now used to heat this portion of the facility.

There is a slight downward slope from north to south along 10th and 11th Avenues and from east to west along East Union Street, there being an approximate 4 to 5 foot difference in elevation difference at street grade from north to south as well as east to west perimeters of the subject property.

The western portion of the subject property is bounded to the north by a paved parking area beyond which is a mixture of commercial properties and apartments. The eastern portion of the subject property is bounded on the north by a vacant parcel of land which was used to process the contaminated soil.

The subject property is bounded to the east by 11th Avenue beyond which is a vacant , multi-story brick building which appears to be undergoing maintenance; to the south across East Union Street by commercial properties including a paint business, an auto parts ales store, an automobile battery repair business, and an auto repair facility. Another auto repair facility is located northeast of the intersection of 10th Avenue ad East Union Street. This facility is adjacent to the subject property immediately south of the excavation and west of the warehouse. Beyond 10th Avenue, to the west of the subject property, are other commercial facilities including additional auto repair business.

A 6,000 gallon Underground Storage Tank (UST) containing diesel was removed from the subject site in October of 1990. In March of 1993, three borings were placed around the location of the former UST. Boring A was placed near the west perimeter of the excavation, defined by the presence of asphalt patch. Boring B was placed near the east perimeter and boring C was placed near the northeast perimeter of the excavation. Each boring was to ten (10) feet below grade, with the exception of boring A, which stopped at seven and one half fee below grade, due to glacial tills. Ground water was encountered in borings B and C, at approximately seven and one half feet below grade.

The southwestern portion of the property was excavated as part of an ongoing leaking underground storage tank remediation project being performed independently by the current owner. The excavated area is estimated to be 120 feet in length from east to west. It varies in width from approximately 18 feet to 40 feet at the eastern and western portions of the excavation, respectively. The excavation is near the southwestern portion of the property immediately adjacent to an auto repair facility. Soils from the excavation were being stockpiled and treated in the area immediately between the excavation and wood-frame building on 10th Avenue. The soil was being landfarmed on an adjacent property immediately north of the warehouse facility. Groundwater appears to be flowing southeast across the property.

According to the USGS "Preliminary Geologic Map of Seattle and Vicinity, Washington" (1962), the geologic units underlying the site and surrounding area are identified as Vashon Till. Vashon Till is described as a "compact, concrete-like mixture of silt, sand, gravel and clay." The thickness of Vashon Till is usually less than 50 feet, but can be up to 150 feet. The upper two to five feet of this layer generally consists of a loose, silty sand and gravel.

HISTORY

RUTH ASHBROOK BAKERY PROPERTY

The land use history of the subject site was reviewed utilizing archived tax assessment records, business directories, historical aerial photographs, Department of Construction and Land Use permits, and other information sources.

Tax records for the subject property were obtained from the King County Department of Assessments and the Washington State Archives office. The subject property consists of five regularly shaped parcels. The warehouse facility corresponds to two different parcels: one at 1401 - 11th Avenue, the other at 1405 - 11th Avenue. The square footage of building space reported for 1401 - 11th Avenue is 14,080 and the square footage for the portion of the facility at 1405 - 11th Avenue is 19,450 giving a total area of 33,530 square feet. Both parcels report construction in 1920. Suspended heating equipment is the reported heat source for the southern portion of the warehouse, and other documentation indicate a steam heat source for the portion of the facility corresponding to the northern part of the facility. A hydraulic elevator with a concrete shaft was reportedly installed in the warehouse in about 1950. Archived photographs indicate that a portion of the building at 1401 - 11th Avenue was an automobile sales and service business, and the 1405-13 - 10th Avenue address corresponded to a garage facility. Photographs dated in 1959 of 1401 and 1405-13 indicate use by the Ruth Ashbrook Bakery.

The building at 1416 - 10th Avenue was reportedly built in 1913 and has 7,320 square feet of area. Suspended heating equipment and stove heat sources are reported for this address. An archived photograph indicates that 1416 - 10th Avenue was a blacksmithing and forging business and a building at 1418 - 10th Avenue, which appears to adjoin the northern wall of 1416 - 10th Avenue, was an automotive repair business.

The parcels corresponding to 1408, 1410, and 1414 - 10th Avenue in Washington State archives are listed at 1400 - 10th Avenue on King County assessment records. The reported land use of this portion of the subject property is for parking, and data for the combined land area of these parcels is a total of 8,960 square feet. The parcel address on which coil landfarming activities are taking place appears to correspond to 1414 - 10th Avenue. This address was reportedly the site of a three-story, multi-family dwelling built in 1904 with a fireplace and pipeless furnace heat sources.

The excavation site appears to correspond to 1408 and 1410 - 10th Avenue. A record for 1408 - 10th Avenue shows the property to be paved and the site of a 6,000 underground tank. A document for 1410 - 10th Avenue shows this address to be the site of a machine shop business constructed in 1905 with stove heating.

Water and monitoring well records on file with the Washington State Department of Ecology (Ecology) were reviewed. No drinking water wells on file were located within an approximate one mile radius of the subject site, but records for other types of wells were reviewed.

Soils reported in one well log approximately one-half mile south of the subject property reported brown clay from the surface to a depth of 10 feet, brown sandy clay from 10 to 22 feet, and sandy course gravel from 22 to 50 feet. The surface elevation of this well is 278 feet above seal level and the static level for groundwater was approximately 51 feet below the surface. A second water well report for a site approximately one-quarter mile southwest of the subject property reported brown sand (fill) from the surface to a depth of 16 feet; brown sand, gravel, sandy gravel, and silt from 16 to 48.5 feet; gray to brown saturated sand, silt, course sand and gravel from 48.5 to 74 feet; and gray-brown saturated sand, and silt from 74 to 76 feet. Although surface elevation was not reported, groundwater was encountered at a depth of 22 feet. A monitoring well drilled approximately one-quarter mile southeast of the subject property reported fill and surface covering from the surface to a depth of 4 feet; moist, greenish blue silty sand from 4 to 15 feet; and wet greenish blue silty sand with some gravel from 15 to 20 feet. Groundwater was reported at 12 feet below the ground surface.

An RZA AGRA representative also conducted a reconnaissance of the area immediately surrounding the subject site on 26 August and 1 September 1993. The purpose of this reconnaissance was to observe land use in the site vicinity and to note the potential for nearby businesses to generate, use, or store hazardous substances that may affect the subject site.

The area surrounding the subject property is primarily commercial, although there are some residential properties. Automotive repair facilities are adjacent to the subject site to the southwest as well as across the streets to the east, south, and west. An automotive battery/electrical shop and a commercial paint store were noted across East Union Street south of the subject property. The building northeast of the intersection of 11th Avenue and East Union Street is vacant and undergoing maintenance or renovation. This building has signs on it indicating it was the location of a commercial laboratory. There are no readily apparent indications that these properties had adversely affected the subject property.

Four telephone poles with a total of seven transformers are in the sidewalks around the subject property. These electrical equipment items may contain polychlorinated biphenyls (PCB's). PCB was a common constituent in power transformer coolant oil prior to 1979 which were banned by the Environmental Protection Agency (EPA) in 1978 due to the adverse health effects they can cause. However, no sheen or evidence of leaking was observed on the transformers. A tar-like substance is emanating from the base of the telephone pole near the southwestern corner of the warehouse building. It has covered an estimated two square foot area and extends to the curb of East Union Street, However, this substance is not related to the transformers and will not pose a significant environmental threat to the subject property.

In an effort to document past uses of the site and surrounding area, available historical business directories were reviewed. The directories were reviewed to help establish a history of occupancy for the host site and to locate businesses in the immediate area which may have used or stored hazardous material. Polk's Seattle City Directory from the years 1939, 1948/49, 1957, 1964, 1971/72, 1978, 1977, 1985, and 1989/90 were reviewed.

Addressed in the business directories corresponding to the warehouse facility include 1401, 1403, and 1407 - 11th Avenue. A used car dealer is listed at 1401 - 11th Avenue in 1939, but there is no listing for this address in the directories reviewed after that time. In 1957 a listing for 1403 - 11th Avenue shows a vacancy, and the Ruth Ashbrook Bakery is listed at 1407 - 11th Avenue. The bakery appears in each of the following directories reviewed until 1985 at which time it is listed as vacant and it is not listed in the 1989/90 directory.

An auto springs manufacturer is listed at 1416 - 10th Avenue in the directories reviewed from 1939 to 1971/72 at which time it is listed as being vacant. In the 1978 directory, an automotive repair business is listed at this address, and in the 1985 and 1989/90 directories it is listed as a Ruth Ashbrook Bakery facility. Addresses listed in the reviewed directories corresponding to the approximate locations of the excavation and soil stockpile and treatment areas include 1408 and 1414 - 10th Avenue. A listing for 1408 - 10th Avenue first appears in 1948/49 where it is listed as an auto repair facility, and it is listed as a machining business in 1957. No listing for this address appear in the directories reviewed after that time. The 1414 address is listed as a residential or apartment building from 1939 through 1964. It is listed as being vacant in 1971/72 and is not listed in the more recent directories reviewed.

The directories indicate the immediate neighborhood surrounding the site has been used for residential but mostly commercial uses. Apartments and residences were north of the site and to the south across Union Street. Within an approximate two block radius of the site, listed businesses which present potential environmental concerns included service stations, machine shops, plating businesses, a radiator repair shop, automobile businesses (i.e., repair shops, paint shops), dry cleaners, automobile dealerships, a medical laboratory, and photography businesses. An example of such a property is immediately south of the excavation site at 1408 - 10th Avenue. This is listed as the Davis-Hoffman auto repair business in each directory reviewed. A second example is a former auto repair business listed at 1418 - 10th Avenue in 1939. In 1948/49, a printing company was listed at this address and it is listed as being vacant in 1957. There is no listing for 1418 - 10th Avenue in the directories reviewed until 1989/90 where it appears as a Ruth Ashbrook Bakery facility.

Aerial photographs from the years 1946, 1956, 1960, 1969, 1974, 1980, and 1985 were reviewed. The photographs ranged in scale from approximately 1:1000 feet to 1:2000 feet. In the review of the aerial photographs, observations are interpretative and limited to the area within approximately 2,500 feet of the subject site. The height from which the photographs were taken did not provide a clear image of specific site characteristics. However, the absence and presence of structures on the site as well as developmental trends in the area were noted. All of the photographs reveal the site to be occupied by the bakery warehouse and the storage facility at 1416 - 10th Avenue. All photos also show a building immediately north and immediately west of the warehouse structure. The surrounding area is urban. The replacement of buildings and redevelopment of properties is apparent in the surrounding area. The 1946 and 1956 photographs show a building across the street from the southeast portion of the subject property which resembles a service station. A commercial structure has replaced the service station facility in the more recent photos reviewed. The 1946, 1956, and 1960 photographs show two structures on the subject property between the buildings now present at 1406 and 1416 - 10th Avenue. Neither of the structures appear in the more recent photographs. The 1969, 1974, 1980, and 1985 photographs show this area to be used for parking for trucks.

Permits on file the with Seattle Department of Construction and Land Use (DCLU) were reviewed for information on the subject property. Permit numbers 383291 (not dated) and 418895 (dated in 1953) were obtained to construct a paint spray booth for the auto repair garage corresponding to the warehouse not located at 1401 - 11th Avenue. Permit number 487188 (dated 1960) was obtained to demolish the building at 1408 - 10th Avenue, and permit number 487309 (dated 1960) was obtained to install a 6,000 gallon gasoline tank at the same address.

According to information provided by the Owners and RZA, a 6,000 gallon diesel underground storage tank (UST) and approximately 100 cubic yards of soil were removed from the southwestern portion of the subject property in October and November 1990. Laboratory reports dated 1 November and 3 December showed soil samples corresponding to locations at the bottom of the UST excavation to be contaminated by petroleum hydrocarbons.

Sanborne Fire Insurance Maps for the site and surrounding area updated as of 1950 and 1961 were reviewed. The 1950 map shows an auto body shop and painting warehouse at 1401 and 1403 - 11th Avenue. Automotive business is also shown at 1407 and 1411 - 11th Avenue. An auto springs manufacturing and electric motor business is shown at 1416 - 10th Avenue with apartments and a machine shop at 1414 and 1408 - 10th Avenue, respectively. A printing business and residential properties are adjacent to the north of the subject property, and auto repair, auto painting, and a plating business are immediately to the south and southwest. A "gas & oils" facility is shown directly across East Union Street from the existing warehouse location. The map updated in 1961 shows the same structures except for the following noted changes: the warehouse is no longer shown to be an automotive business, but shows where wrapping and dish cleaning operation occur. The "gas & oils" facility has been moved one parcel further south to a location northwest of the intersection of East Madison Street and 11th Avenue.

Readily available regulatory agency reports generated from data bases were interviewed with respect to the proposed communications facilities sites and surrounding properties. The reports, obtained from Federal, State, and Local government agencies, were reviewed in an effort to document any reported environmental problems or concerns which have occurred at the site or in the surrounding area. Sites or facilities appearing on the reviewed reports, within a certain distance or radius of the subject site, are discussed below. The search radii RZA AGRA utilizes for its standard Phase I reports meet or exceed those specified in the American Society for Testing and Materials (ASTM) Standard E 1527-93. The following agency databases were reviewed (RZA AGRA's standard search radius for each report is listed in parentheses):

- U.S. Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) report (one mile)

- Washington State Department of Ecology's (Ecology) Affected Media & Contaminants (AMC) report (one mile).
- EPA Resource Conservation and Recovery Act (RCRA) report (adjacent properties)
- Ecology's Underground Storage Tank (UST) registration list (adjacent properties)
- Ecology's Leaking UST (LUST) list (one-half mile)
- Landfills (one-half mile)

The CERCLIS database is used by EPA to track activity conducted under the Superfund Program. Three types of sites are listed on this inventory including sites which may be hazardous and require a preliminary investigation; sites for which no further remedial action is planned (NFA); and sites which represent a long-term threat and are classified on the National Priorities List (NPL). The reviewed CERCLIS list (dated 28 January 1993) lists three sites within an approximate one-mile radius of the subject site. All three sites are designated NFA. An NFA designation indicates the site has been evaluated and, based upon the findings, no further investigation or remedial actions are planned under the Federal Superfund program. Listing of a site on the CERCLIS report does not necessarily mean it is contaminated, and the absence of a site on the inventory or the NFA designation does not necessarily mean it is contaminant free. The three sites are as follows:

METAL LAUNDRY, INC. at 614 - 12th is located an estimated three-eighths mile south of the subject site. This site also appears on the State AMC report and is discussed further in the report.

ABC METAL FINISHINGS, INC. at 528 PONTIUS N. and MASTERCRAFT METAL FINISHING at 1175 HARRISON ST. are both located approximately one mile northwest of the subject site. Both sites are topographically downgradient of the subject site 200 to 250 feet. Based on the separation distances and their downgradient location relative to the subject site, it is unlikely contaminants at these facilities could adversely affect the subject site.

Ecology's AMC report lists suspected or confirmed hazardous substance sites in the State of Washington. The reviewed AMC report (dated 8 January 1993) lists eight facilities within an approximate one mile radius of the subject site. The eight facilities include ABC METAL FINISHING, INC. and MASTERCRAFT METAL FINISHING, INC. which were discussed in the CERCLIS section. The remaining five facilities are discussed below:

The nearest facility is A1 BRAKE at 1520 - 10th Avenue located approximately one block north of the subject site. According to the report, this site has confirmed petroleum contamination of its soil due to improper handling. The site has a potential for surface water, groundwater and air contamination. A file concerning this facility was reviewed at Ecology's NRO. According to information in that file, Ecology received a call from a neighbor of the A1 Brake facility in August 1991 complaining about facility personnel dumping "some kind of oil sludge" out the back door and onto the soil.

Ecology investigated the site in February and March of 1992 and visually confirmed petroleum contamination of the soil. The file does not indicate further characterization or remediation of the facility has occurred. Based on the review Ecology file, it does not appear contaminant concerns at this facility have adversely affected the subject site.

OLYMPIAN APARTMENT BUILDING at 1605 EAST MADISON STREET is location approximately three-eighths of a mile northeast of the subject site on a hilltop. JEFFERSON STREET BUS BARN at 1398 EAST JEFFERSON STREET is located an estimated one-half mile south of the subject site. METAL LAUNDRY INCORPORATED at 614 - 12th is located an estimated three-eighths mile south of the subject site. MELROSE APARTMENTS PROPERTY at 1520 MELROSE AVENUE is located an estimated three-eighths of a mile west-northwest of the subject site. Considering the topography, near-surface groundwater flows at these sites are inferred to be in directions that are non-tributary to the subject site. Based on the separation distances and the inferred, near-surface groundwater directional flows, it is unlikely contaminants at these facilities have adversely affected the subject site.

The RCRA report is a list of regulated generators, handlers, transporters and disposers of hazardous materials. Listing on the RCRA report does not indicate a facility has been adversely affected by a hazardous material, but merely the facility is required to monitor and document hazardous waste activities to EPA or Ecology. The reviewed RCRA report (dated 11 January 1993) lists over 150 RCRA facilities located within approximately one mile of the subject site.

Four facilities are located adjacent to or on opposite sides of the street from the subject property. DAVIS & HOFFMAN AUTO REBUILD at 1406 - 10th AVENUE is the only facility listed as a large quantity generator and it is immediately adjacent to the subject property south of the excavation and west of the warehouse facility. AUTO BATTERY AND ELECT CO. at 1009 EAST UNION STREET immediately across the street to the south of the subject property and is listed as a small quantity generator. The remaining two facilities are listed as conditionally exempt generators: INTERNATIONAL CLINICAL LABORATORIES at 1100 EAST UNION STREET immediately across 11th Avenue to the west of the subject site, and PREMIER AUTO BODY at 1422 - 11th AVENUE across 11th Avenue and northwest of the subject site. A non-intrusive visual observation of these facilities did not reveal indications of improper hazardous wastes disposal. If these facilities handle and dispose of hazardous wastes in a proper fashion, following appropriate regulations, it is unlikely the hazardous wastes would pose an environmental threat to the subject site.

Leakage from underground storage tanks (UST's) is a potential source of environmental contamination. Ecology's report of registered UST's (dated 2 February 1993) lists all registered UST's in the State of Washington. Therefore, this list is limited to registered UST's and does not necessarily include all existing UST's. A review of this report indicated over 100 facilities with UST's within an approximate one mile radius of the site. The nearest listed UST facility is TOMLINSON, INC. at 1100 EAST UNION located to the east on the opposite side of 10th Avenue in relation to the subject property. This site is also listed on the Leaking UST list.

Ecology's leaking UST (LUST) list is limited to reported leaking UST's and may not include all leaking UST's. According to Ecology's NRO list dated 30 July 1993, there are over 60 facilities with LUST's within an approximate one mile radius of the subject site. Of these, one LUST site is on the subject property and 13 others are within an approximate one-quarter mile radius. The list indicated that limited cleanup was performed and a diesel tank was removed from the RUTH ASHBROOK BAKERY site at 1416 - 10th AVENUE and the impact to soil only is indicated.

A file for this site was reviewed at Ecology's NRO and copies of material in this file were also provided by RZA. Information from a 4 March 1993 study of the LUST site was also provided by Mr. Stiles. Ecology's file contained a letter from Northwest EnviroField Services dated 7 November 1990 stating that a 6,000 diesel tank from the site address had been received from O'Sullivan Construction. Laboratory reports in the file dated 1 November and 3 December 1990 showed levels of total petroleum hydrocarbon (TPH) contamination from the approximate area of the existing excavation which exceeded allowable levels. A 13 March 1991 initial investigation document by Ecology reported that the contractor hired to remove the UST and some contaminated soils backfilled the excavation before the laboratory results were received. At that point, the property owner reportedly decided to wait before initiating further cleanup efforts.

The 4 March 1993 letter provided by Mr. Stiles was prepared by Pacific Testing Laboratories. Samples were taken from various depths of three borings in locations near the former LUST site. Based on laboratory analysis of soil and groundwater, further remediation of soil and additional investigation into groundwater contaminations was recommended.

On the 13 remaining sites, the list indicates that only soil was impacted at nine sites, so it is unlikely that associated contamination from these locations have adversely impacted the subject site. The list also indicates that the groundwater and soils has been impacted at four of the fourteen LUST sites. The four groundwater impacted facilities are as follows:

> The nearest facility is UNOCAL STATION #5919 at 1100 BROADWAY located approximately 150 yards south-southwest of the site. A file concerning this facility was reviewed at Ecology's NRO. According to a report in the file dated 28 September 1992, prepared by a consultant, four UST's were removed from the facility in 1989. Sampling and analysis of the soil and groundwater revealed contaminant impacts to both media. Contaminants include gasoline, BTEX, and solvents. Seven groundwater monitoring wells have been installed at the facility. The report gives the apparent shallow groundwater flow direction to be to the northeast, which is toward the site. Depth to groundwater, as measured by the consultant in February and May of 1992, ranged from approximately 15 feet to 20 feet. Contaminants have not been detected in samples obtained and analyzed from the monitoring well nearest the subject site. The report indicates the facility is currently in a monitoring phase. It appears, based on the information in the Ecology file, contaminants at this facility have not impacted the subject site.

SEATTLE UNIVERSITY ATHLETIC FL at BROADWAY AND EAST MADISON is located approximately one-quarter mile south of the subject site. A file concerning this LUST site was reviewed at Ecology's NRO. According to the file, the address given on the listing is the general location of Seattle University. The actual location of the LUST's however are at the southeast corner of 13th Avenue and East Cherry Street, approximately three-eighths to one-half mile southeast of the site. The file indicates groundwater has been impacted but the flow is toward the southwest, away from the subject property. Based on the groundwater flow and the separation distance, it is unlikely contaminants at this facility could adversely affect the site.

Two facilities are listed as SHEPARD AMBULANCE at 932 - 12th AVENUE and 1140 - 12th AVENUE. These facilities are located approximately three blocks southeast and two blocks east of the subject site, respectively. Considering the topography, near-surface groundwater flow at these facilities is assumed to be towards the south-southwest, which is away from the subject site. Based on this, it is unlikely the subject site would be adversely affected by contaminants at these facilities.

A file on the TOMLINSON, INC. site at 1100 EAST UNION was also reviewed at Ecology's NRO because of its proximity to the subject property (approximately 100 feet east). A 500 gallon gas tank and at least 50 cubic yards of soil were reportedly removed from the site in 1991. Petroleum hydrocarbon and lead contamination were identified, and during the performance of remediation efforts (aeration), groundwater later seeped into the excavated area. Following cleanup, water and soil samples were analyzed for contaminants and all concentrations were reported to be below allowable levels. Based on the reported contaminant levels and documented cleanup efforts, it is unlikely that this LUST site has adversely affected the subject property.

A review of abandoned landfill studies in the City of Seattle and King County revealed no landfills within one-half mile of the site.

A limited asbestos report was completed by ATC/Diagnostic Environmental, Inc. (ATC) on the warehouse facility on the subject property. The report, dated 13 August 1993, was limited to "...sampling of suspect flue insulation in the basement boiler room and flooring materials in the southern portion of the first floor bakery". Asbestos was widely used in building materials until the EPA banned its use in the mid-1970's. Asbestos-containing building material (ACBM), which is defined as any material that contains more than one percent asbestos by volume, is more hazardous if it is in a friable condition. Friable ACBM's are those which crumble or can be reduced to powder using hand pressure. Friable ACBM's are considered more hazardous because of their potential to release asbestos fibers into the amblent air.

According to the ATC report, three samples were collected and analyzed for asbestos. Floor tile in the southeast portion of the first floor contained 3 percent asbestos and requires special handling if it is disturbed or becomes friable. The remaining two samples were taken from the flue insulation in the boiler room, and the cementitious floor material in the upper floor. No asbestos was reported to be detected in the laboratory analysis. All asbestos was removed from the subject site in October of 1993.

REMEDIATION

RUTH ASHBROOK BAKERY PROPERTY

In August of 1993, excavation began on the Ruth Ashbrook Bakery Property as referenced in the enclosed reports and continued through October. Cleanup was done by bio-remediation by using nutrients and bacteria. All contaminants above 200 ppm were removed and treated on-site. A Dresser 100G and a Case 888 were utilized to perform the required cleanup. The material was laid out to a depth of 8-10 inches over the area indicated. We then proceeded to aerate and till the material until we reached the desired level of non-contamination, which was further confirmed by the lab analysis. No institutional controls were required during the clean-up process.

During each of these mixing processes, we added chemical nutrients to aid and accelerate the bacteria growth needed for the remediation of the soil. The contaminated soils were originally found to be at11,000 ppm's at the highest level and were reduced down to less than 10 ppm's.

During August of 1993, we discovered a large amount of blacktop in the hole that was left by O'Sullivan Construction along with the contaminated soil. We began excavating the blacktop from the site which contained heavy levels of diesel fuel. We were unable to screen the blacktop due to the excessive amount. Plastic was discovered along with the contaminated blacktop above the water table, which was removed. We also encountered several concrete foundations and a broken storm drain pipe with heavy contamination of diesel fuel. The drain pipe was attached to the catch basin that was being used on-site. All of these materials were removed and treated.

On October 8, 1993, the final soil sample was taken from the remediation site and sent to Friedman and Bruya, Inc. for analysis. These lab reports are included with the report for your reference, indicating a successful and thorough remediation program completed, which meets the Department of Ecology's standards. We obtained soil samples for each sample location, giving us a thorough sampling of the area indicated on the enclosed location photographs. In doing so, the samples and tests gave us a well rounded sampling for the final conclusions.

Groundwater was discovered at 6 feet deep. Upon review of the water samples drawn from the referenced holes, it was apparent that there was some contamination. Once the material was removed, the treatment of the water was fairly straightforward. We pumped the water from the excavation holes through a carbon filter tank and recirculated it back into the excavation site over a continuous process.

Contamination was found underneath the building to the south of the subject site (the Davis Hoffman Building); however, it was mutually agreed upon by DOE, the Owners, and the Contractor that it was non-accessable and financially unreasonable to remove the contaminated soil. A concrete wall was placed between the subject property and the adjacent building with a plastic lining placed along the bottom to ensure no future contamination would enter the treated area. A water collection system was installed to continually treat and monitor the groundwater flowing from the adjacent building until levels fall below DOE's requirements for contamination.

CHEMICAL ANALYSIS

RUTH ASHBROOK BAKERY PROPERTY

August 19, 1993

After excavation for hole closure, soil samples were taken from the Northwest bank, the the Southwest end, and the Northwest end. The results indicated no contamination except for the Northwest end, which was above DOE's recommendation of cleanup. The soil was removed and resampled as noted on September 13, 1993.

September 13, 1993

There are eleven samples taken from the bottom and sides of the excavation hole. The Northeast wall, the middle wall, and Northwest end wall on 10th Street, the East bottom Hole, 50 feet from East end bottom, 80 feet from East end bottom, the West end bottom, the Southeast wall, and the Northwest end wall side wall all indicated no signs of contamination. The soil contamination level for the South middle wall was at 400 ppm's and the Southwest wall was at 7,600 ppm's. We were unable to remove or treat the contaminated soil due to it being under the Davis Hoffman Building, as noted previously.

September 17, 1993

Water samples were taken at the location of the catch basin at 4 feet deep. Levels of Tetrachloroethylene were found to be at 780 ppb's, which is above DOE's recommendation of cleanup. The soil was excavated to a depth of 12 feet and treated. The water was pumped out of the excavation site and treated using a carbon filter tank.

September 20, 1993

The first sample 1A was taken from the South bank, 11 feet under the Davis Hoffman Building, 2 feet from the elevator shaft, which indicated contamination levels of 1,400 ppm's.

The second sample 1B was taken from the South bank, 13 feet under the Davis Hoffman Building, 15 feet from the elevator shaft, which indicated contamination levels of 3,800 ppm's.

The third sample 1C was taken from the South bank, 30 feet East of the elevator shaft, 13 feet underneath the building. The results showed a level of 330 ppm's, which indicated very little oil. The estimated amount of diesel fuel underneath the Davis Hoffman Building is approximately 75 yards.

September 22, 1993

Water samples were taken outside the building at the Northeast corner of the building near 11th Street, 15 feet deep. No levels of Tetrachloroethylene were found. Soil samples were taken from inside the building 2 feet deep at the floor drain. No levels of Tetrachloroethylene were found.

September 24, 1993

Sample 01 indicated the treated contaminated soil levels were at 400 ppm's.

September 27, 1993

Sample 02 indicated the treated contaminated soil levels were at 140 ppm's. These results are after three days of treatment.

September 29, 1993

Sample 03 indicated no contamination with a level of less than 10 ppm's, well below the DOE's recommendation of cleanup.

October 1, 1993

After removing contaminated soil at the catch basin, samples were taken of water entering the excavation hole from the loading dock at 8 feet deep (under catch basin). No levels of Tetrachloroethylene were found. A soil sample was also taken at 8 feet deep under the catch basin and no levels of Tetrachloroethylene were found, indicating treatment was successful.

October 4, 1993

Water sample taken from under the catch basin at the East end of the excavation site. Water sample indicated levels of 4.2 Tetrachloroethylene, which is below DOE's recommendation of cleanup.

October 8, 1993

Soil samples 04, 05, and 06 were taken from the treated soil and all indicated no contamination, showing levels of less than 10 ppm's.

October 11, 1993

Samples were taken of water entering the excavation hole from the Davis Hoffman Building. Water samples indicated no contamination of Tetrachloroethylene or Trichloroethylene.

The above analysis indicates that all contamination was removed and treated successfully and we believe this satisfies DOE's requirements for cleanup. Hopefully, all of the above information is satisfactory and will assist you in issuing a "no further action letter" at your earliest convenience. Thank you again for all of your assistance and cooperation throughout the process of treating the contamination on this project. If you have any additional questions, please do not hesitate to contact me at (206) 488-1170 (work), or (206) 885-3316 (home).

RESULTS FROM THE ANALYSIS OF THE SOIL SAMPLE FOR FINGERPRINT CHARACTERIZATION BY CAPILLARY GAS CHROMATOGRAPHY USING A FLAME IONIZATION DETECTOR (FID) AND ELECTRON CAPTURE DETECTOR (ECD)

Sample #	GC Characterization
1A Water Gas Hole	The GC trace using the flame ionization detector (FID) showed the presence of low, medium and high boiling compounds. The patterns displayed by these peaks are indicative of chlorinated solvents, Diesel #2, and possibly a hydraulic oil. The low boiling compounds appeared on the ECD trace and may be trichloroethylene and tetrachloroethylene, although this elution time was not confirmed. The medium boiling compounds appeared as a broad hump of peaks eluting from n-C_{12} to n-C_{24} showing a maximum near n-C_{16}. An irregular pattern of n-alkanes and a pronounced pattern of isoalkanes were seen in the GC/FID trace. The mid range material is present at approximately 0.9 ppm. The baseline maximum at 20 minutes suggest a second product is present which may be a lubricating oil or a hydraulic oil. The large peak seen near 25 minutes in the GC/FID trace is pentacosane, added as a quality assurance check for this GC analysis. The high boiling compounds after 25 minutes may be laboratory contamination from the GC vial's cap.

Dear Mr. Perkins:

Enclosed are the results from the testing of material submitted on October 4, 1993 from Project 10th & Union.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

Amy Gray

Request for Review

Independent Remedial Action Report

Please submit the following documents to the appropriate Ecology Office *(see back of form)*

- *Request for Review (ECY 020-74)*
- *Independent Remedial Action Report Summary (ECY 020-73)*
- *A check or money order for $1,000, payable to:* Department of Ecology
- *An Interim or Final Independent Remedial Action Report*

Ecology's Independent Remedial Action Program provides for the review of Independent Remedial Action reports on a first-come, first-served basis. The Filing Fee paid with this submittal covers an initial review and is not refundable. The initial review will be completed within 90 days.

- If the enclosed remedial action report is accepted for detailed review, you will be notified if additional fees are required before detailed review begins (see fee schedule below).
- If the enclosed remedial action report is incomplete, you forfeit the $1,000 Filing Fee. The report will be returned with suggestions about what additional information is needed. An additional $1,000 fee will be required if you choose to resubmit.

Note: A copy of this form will be mailed to you. If you wish to inquire about the status of this request for review, please refer to the TCP I.D. number located on the bottom right corner of this form.

- **TOTAL COST OF REMEDIAL ACTION** *(include both contracted work and work performed by owner/operator):*

Person/Entity Performing Work		Cost
Nurseryman Products, Inc.	Randy B. Perkins	$ 140,000
		$
		$
	Total Cost of Remedial Action	$

Applicant Name:	Mrs. LeConie Stiles, Jr.	**Phone**	(206) 328-3950
Applicant Address:	1301 Spring Street, Unit 28-1 Seattle, WA 98104

Independent Remedial Action Report Summary

This report summary is an important part of the Independent Remedial Action Report. Please complete the summary and submit it with your Independent Remedial Action Report. If this document does not accompany your cleanup report, or if it is not fully completed, your report cannot enter the review process necessary for Ecology to provide you with a "no further action" determination, or to remove your site from the hazardous sites lists.

	Vitrification	Solidification/ Stabilization	Specify	Solvent Extraction	Soil Washing	Physical Separation[3]
Soil						
Ground Water	-NA-	-NA-		-NA-	-NA-	
Surface Water	-NA-	-NA-		-NA-	-NA-	
Wastes						

[2]For example, reuse of free petroleum product recovered in a pump and treat system.
[3]For example, oil/water separators.

TABLE 5-D

	Land Disposal/Containment		Institutional Controls	Others
	Containment or On-site Landfill	Off-site Landfill	Specify	Specify treatment method
Soil				
Ground Water		-NA-		
Surface Water	-NA-	-NA-		
Wastes				

LUST SITE INFORMATION

Was **free product** encountered: on ground water? Yes ☐ No ☒ in excavation? Yes ☐ No ☒

Tank Description			Tank Status (Y or N)		
Tank ID	Product	Size	In Place?	Removed?	Closed in Place?

ENVIRONMENTAL INDICATORS

Answer the following questions as they are applicable to your site:

How many cubic yards of soil have been treated? _____

Where soil treatment was conducted, was it done **on-site**, **off-site**, or **both**? *(circle one)*

Provide the name and address of the facility where soil was treated off-site.
Name
Address N/A
State/Zip

Provide the name and address of the facility where soil was disposed.
Name
Address N/A
State/Zip

How many cubic yards of soil have been disposed of off-site? NONE
(Calculate these quantities of soil while the soil is in place, prior to any excavation and/or treatment.)

If ground water pump and treatment was conducted, how many gallons of ground water have been treated to date? 6,000 gals.

How many years is the ground water extraction system expected to continue in operation? ONE yrs.

The IRAP review of this cleanup report resulted in a 'no further action' letter. However, about 75 cubic yards of contaminated soil remains in place under the Davis-Hoffman building.

WRITE ANY ADDITIONAL INFORMATION ON BACK OF FORM:

INITIAL INVESTIGATION

SITE NAME: Ruth Ashbrook Bakery
ADDRESS: 1416 10th Ave, Seattle
INSP. DATE: 3/13/91
INSP. NAME: John Stormon

An initial investigation was conducted at Ruth Ashbrook Bakery on 3/13/91 by John Stormon. I met with Lee Stiles, the manager who told me that O'Sullivan Construction did the tank removal and excavation of contaminated material. O'Sullivan decided that the excavation was clean before the lab results came back and backfilled the hole. When the lab results did come back the soil was found to have a TPH of 1798 ppm. Mr. Stiles said that they decided at that point to wait before beginning any further cleanup.

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY
Northwest Regional Office, 3190 - 160th Ave S.E. • Bellevue, Washington 98008-5452 • (206) 649-7000

October 22, 1993

Mrs. Le Conie Stiles, Jr.
1301 Spring Street, Unit 28-I
Seattle, WA 98104

Dear Mrs. Stiles:

Thank you for submitting the results of your independent remedial action for the Department of Ecology's (Ecology's) review. Ecology appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA).

Ecology's Toxics Cleanup Program has reviewed the following information regarding the Ruth Ashbrook Bakery located at 1416 10th Avenue East, Seattle, Washington:

1. Independent remedial action report submitted October 13, 1993
2. Site file located in the regional office's Central Files

Based upon the above listed information Ecology has determined that, at this time, the site does not pose a threat to human health or the environment as a result of the release addressed in the independent remedial action report. Ecology recognizes the fact that a limited amount of petroleum contaminated soil remains under a building to the south of the cleanup site, but as it is capped and contained, it is not anticipated to pose a problem.

Therefore, Ecology has determined that no further action is necessary at this site under the MTCA, Chapter 70.105D Revised Code of Washington (RCW). Please note that because your remedial actions were not conducted under a consent decree with Ecology, this letter is not a settlement by the state under Ch. 70.105D.040(4) RCW.

This determination is made only with respect to the release identified in the remedial action report dated October 10, 1993. This no further action determination applies only to the area of the property at 1416 10th Avenue East affected by the release identified in the report. It does not apply to any other release or potential release at the property, any other areas on the

property, nor any other properties owned or operated by Mrs. Le Conie Stiles, Jr. or the Stiles Investment Company.

Ecology does not assume any liability for any release, threatened release or other conditions at the site, or for any actions taken or omitted by any person or his/her agents or employees with regard to the release, threatened release, or other conditions at the site.

Ecology will update its database to reflect this "No Further Action" determination. The status of the cleanup of your site will appear as "Conducted" in future Leaking Underground Storage Tank Lists.

Please contact me at (206)649-7202 if you have any questions.

Sincerely,

Joseph M. Hickey
Tanks Unit Supervisor
Toxics Cleanup Program

APPENDIX I

RESUMES

Hillary R. Williams
Project Manager

Professional Summary

Ms. Williams has over seven years of experience in the environmental field and has been involved in many aspects of environmental consulting services. Ms. Williams is responsible for Phase I Environmental Site Assessments, soil and groundwater investigations, hazardous material surveys, quarterly stormwater sampling, environmental compliance inspections and audits, various industrial hygiene related activities, technical reporting, cost proposals, budget management and client management. Ms. Williams has performed work in Washington, Idaho, Oregon, Alaska, New York, Pennsylvania, and Canada.

Relevant Experience

Phase I Environmental Site Assessments, Financial & Real Estate Clients, Pacific Northwest - Conducted numerous environmental site assessments for industrial facilities, automobile dealerships, light manufacturing facilities, residential apartment complexes, retail shopping centers, hotels, commercial office buildings and undeveloped properties. Projects included property historical or current uses as former landfills, gas stations, automobile repair facilities, auto body shop, dry cleaning and/or industrial/manufacturing facilities with current and long term hazardous material use. Performed historical research including review of aerial photographs, city directories, historical tax records and building department records. Reviewed and interpreted information and data from historical reports, prior subsurface investigations, and regulatory data for each respective project. Prepared proposals and bids and managed client relationships. Prepared reports as per client specific scopes and as per ASTM Standard Practice E 1527-05.

Phase I Environmental Site Assessment, Financial Client, Port of Tacoma, Washington - Performed an environmental site assessment of an asphalt-plant located at the Port of Tacoma. The asphalt-plant property was identified in numerous federal and state agency databases with historical release of xylenes to soil and groundwater. The asphalt-plant property was also within the boundaries of a National Priorities List (NPL) Site with known area wide groundwater and surface water contamination. Historical property uses included asbestos use in manufacturing, foundry activities and asphalt mixing. The asphalt-plant consisted of 42 aboveground storage tanks of asphalt materials and wood staining materials totaling over 255,000-gallons, an oil water separator, petroleum storage and use, and large quantity storage of hazardous materials.

Portfolio Phase I Environmental Site Assessments, Oilfield Production Chemical Company, Canada – Coordinated and completed a portfolio of 11 environmental site assessments throughout Alberta for oilfield chemical storage facilities and offices. The assessments required coordination of travel and site visits within a two week period, local historical research, property reconnaissance, interviews, review of Material Safety Data Sheets, regulatory data review and report preparation. Part of a two member team which completed the site reconnaissance and reporting within a four week period.

Environmental Audits & Inspections, Real Estate Management Company, Greater Seattle Area – Performed environmental audits and inspections per client scope of work. Conducted on-site inspections of operations areas, review of waste handling, storage and disposal practices, identified existing and required permits and examined facility records related to environmental management and regulatory requirements. Prepare reports identifying potential environmental liabilities. Manage client relationship, project bids and project scheduling.

Spill Prevention Control and Countermeasures (SPCC) Plan Updates, Real Estate Client, Washington State – Performed updates of existing SPCC Plans at facilities with bulk fuel and oil storage storing between 1,320 and 10,000-gallons of oil. On-site inspections verifying site conditions and operations.

Soil & Groundwater Investigations, Real Estate Clients, Greater Seattle Area – Performed subsurface investigations throughout the Greater Seattle Area, including geoprobe boring sampling, test pit explorations, groundwater sampling and groundwater monitoring well installation as part of property characterizations at various sites. Performed oversight of drilling contractors, logging soil core boring descriptions, soil sampling and groundwater sampling.

Underground Storage Tank (UST) Removal, Marine Services Client, Seattle, Washington – Washington State Site Assessor on project for removal of five USTs. Removal included the over-excavation of petroleum and lead contaminated soils from two excavations. Tasks included sub-contractor oversight and direction, logging soil samples and soil descriptions and reporting.

UST Compliance Inspections, National Shipping Client, Washington and Oregon – Inspected nine facilities for federal, state and local air agency compliance as related to gasoline and diesel USTs. Inspections included visual inspection of accessible tank components and review of required records including compliance testing, training, signage and permits. Issued preliminary findings during the site inspection and prepared individual reports with recommendations to achieve compliance.

Quarterly Stormwater Sampling, National Shipping Client, Greater Seattle Area – Perform quarterly stormwater sampling as per facility Stormwater Pollution Prevention Plan and Industrial Stormwater Permit specifications. Project includes inspection of catch basin area, stormwater sample collection, reporting, management of client relationship and project scheduling.

Asbestos Management, Port of Seattle, SeaTac, Washington – Performed abatement oversight for projects throughout the Port of Seattle SeaTac Airport. Responsible for air sample collection, construction oversight and documentation.

Hazardous Material Surveys, Real Estate & Financial Clients, Pacific Northwest – Perform asbestos and lead-based paint surveys throughout the Pacific Northwest. Project scopes included limited interior renovation projects to full demolition projects. Perform surveys and prepare technical reports.

Industrial Hygiene / Bechtel National, Inc., Department of Energy Hanford, Washington – Waste Treatment Plant Construction Site – Performed industrial hygiene monitoring and sampling for metals fumes, organic vapors and dust. Collected sound monitoring events on construction workers using personal dosimeters. Responsible for completing sample forms and data interpretation for air and sound monitoring events.

Professional Qualifications/Certifications

- EPA AHERA-Certified Building Inspector
- EPA AHERA-Certified Project Designer
- OSHA 40 Hour Health and Safety Training for Hazardous Waste Operations (HAZWOPER)
- Niton™ XRF Spectrum Analyzer Operation Training
- Washington State Site Assessor
- First Aid, CPR & AED Certified, May 2011

Education

Rochester Institute of Technology, Rochester, New York
B.S. Environmental Management, 2002

Jessica M. Czerny, CHMM
Project Manager

Professional Summary

Ms. Czerny has over eight years of experience providing environmental consulting services for a variety of clients throughout Oregon, California, Washington, Idaho, Nevada, Texas, Arizona, and Georgia. She acts as technical lead, senior editor and project manager for due diligence and subsurface projects and staff.

Performs Phase I Environmental Site Assessments (ESAs), Property Condition Assessments (PCAs), Spill Prevention, Control & Countermeasure Plans, subsurface and groundwater investigations, conducts on-site walkthroughs, interviews, evaluations, file reviews and report writing. Environmental sampling experience includes soil, groundwater, asbestos surveys according to AHERA standards, lead-based paint surveys, lead in drinking water and radon for industrial, commercial and multi-family residential properties.

Branch Safety Officer duties include review of all Health & Safety Plans, conduct monthly safety staff meetings, train new employees, perform safety audits and maintain office safety procedures.

Project management duties include preparation of cost estimates, project performance reports and monthly client status reports for billing procedures, compilation of scopes of work, negotiation of terms and selection of subcontractors for appropriate project tasks.

Relevant Experience

Phase I Environmental Site Assessments / Various Clients / Oregon, California, Washington, Idaho, Nevada, Texas, and Arizona. Project Manager for Phase I Environmental Site Assessments for commercial, industrial and multi-family residential properties. Including environmental testing for asbestos-containing materials, lead-based paint, lead in drinking water and radon.

Property Condition Assessments / Various Clients / Northern California, Oregon and Washington. Project Manager for Property Condition Assessments for commercial and multi-family residential properties.

SPCC Plans / Verizon Northwest, Inc. / Oregon and Washington. Project Manager responsible for creating SPCC plans for Verizon-owned commercial properties with oil storage.

ESA / Northern California / Milpitas Mills Limited Partnership – Co-project manager for a site that required the performance of ESA, and the design of Phase II Assessment, Lead-Based Paint

and Asbestos-Containing Material evaluations, and Indoor Air Quality assessments, as well as meetings with state regulatory agencies on a 110-acre retail shopping mall that has known chlorinated solvent contamination in the groundwater and petroleum hydrocarbon contamination in the soil.

ESA / Washington / Mountain Star Resort Development LLC – Performed an environmental site assessment for a wastewater treatment facility.

ESA / Washington / Equity Offices – Performed an environmental site assessment for a 76-story commercial office and retail building located in the financial district of Seattle, Washington.

ESA / Washington and Arizona / Fairfield Realty – Performed environmental site assessments for two large apartment complexes and managed environmental testing, which involved asbestos and lead-based paint evaluations, lead in drinking water sampling and radon.

PCA, PML and ESA / Washington / Inland Northwest Management Corporation – Performed all three tasks for a strip mall, which contained four buildings and was constructed in 1995. The property also operated an on-site gasoline service station.

PCA / Washington / Red Capital Mortgage Inc. – Performed a PCA according to HUD standards for an assisted living facility.

Professional Qualifications

Institute of Hazardous Materials Management, Certified Hazardous Materials Manager (CHMM), identification number 13626, January 2006

Professional Activities

Willamette-Columbia Chapter of ACHMM, Member since January 2006.

Oregon Association of Environmental Professionals, Member since June 2005

Education

Oregon State University, Corvallis, Oregon
Bachelor of Science in Environmental Science - minor in Environmental Health & Safety, 2002

ECOLOGY

NAME OF PERSON & TITLE: Sally Perkins

DATE: Various

COMPANY/AGENCY: Ecology - NW Regional Office

TIME: Various

LOCATION (CITY/STATE): Bellevue, WA

CONTACT: sper461@ecy.wa.gov 425-649-7190

ATC PROJECT NAME AND NUMBER: 76.75424.0001

NOTES:

ATC submitted a written request to Ecology for records pertaining to the property. Ecology acts as the regulatory agency for cleanup of hazardous materials released to the environment, including soil and groundwater assessments performed during UST removal activities. Ecology also acts as the UST implementing agency of Washington State. ATC received a general response from Ms. Sally Perkins of Central Records for the Northwest Regional Ecology office indicating that Ecology received ATC's records request. ATC reviewed available files at Ecology's Northwest Regional Office on January 30, 2012. Ecology's files contained duplicate information as documentation previously provided by the client. See Section 5.1.2 and 5.3.9 for a discussion related to these records.

EDR NEPACheck® DESCRIPTION

The National Environmental Policy Act of 1969 (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible.

The EDR NEPACheck provides information which may be used, in conjunction with additional research, to determine whether a proposed site or action will have significant environmental effect.

The report provides maps and data for the following items (where available). Search results are provided in the Map Findings Summary on page 2 of this report.

Section	Regulation
Natural Areas Map	
• Federal Lands Data:	
- Officially designated wilderness areas	47 CFR 1.1307(1)
- Officially designated wildlife preserves, sanctuaries and refuges	47 CFR 1.1307(2)
- Wild and scenic rivers	40 CFR 6.302(e)
- Fish and Wildlife	40 CFR 6.302
• Threatened or Endangered Species, Fish and Wildlife, Critical Habitat Data (where available)	47 CFR 1.1307(3); 40 CFR 6.302
Historic Sites Map	
• National Register of Historic Places	47 CFR 1.1307(4); 40 CFR 6.302
• State Historic Places (where available)	
• Indian Reservations	
Flood Plain Map	
• National Flood Plain Data (where available)	47 CFR 1.1307(6); 40 CFR 6.302
Wetlands Map	
• National Wetlands Inventory Data (where available)	47 CFR 1.1307(7); 40 CFR 6.302
FCC & FAA Map	
• FCC antenna/tower sites, FAA Markings and Obstructions, Airports, Topographic gradient	47 CFR 1.1307(8)
Key Contacts and Government Records Searched

WETLANDS CLASSIFICATION SYSTEM

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a sub-department of the U.S. Department of the Interior. In 1974, the U.S. Fish and Wildlife Service developed a criteria for wetland classification with four long range objectives:

- to describe ecological units that have certain homogeneous natural attributes,
- to arrange these units in a system that will aid decisions about resource management,
- to furnish units for inventory and mapping, and
- to provide uniformity in concepts and terminology throughout the U.S.

High altitude infrared photographs, soil maps, topographic maps and site visits are the methods used to gather data for the productions of these maps. In the infrared photos, wetlands appear as different colors and these wetlands are then classified by type. Using a hierarchical classification, the maps identify wetland and deepwater habitats according to:

- system
- subsystem
- class
- subclass
- modifiers

(as defined by Cowardin, et al. U.S. Fish and Wildlife Service FWS/OBS 79/31. 1979.)

The classification system consists of five systems:

1. marine
2. estuarine
3. riverine
4. lacustrine
5. palustrine

The marine system consists of deep water tidal habitats and adjacent tidal wetlands. The riverine system consists of all wetlands contained within a channel. The lacustrine systems includes all nontidal wetlands related to swamps, bogs & marshes. The estuarine system consists of deepwater tidal habitats and where ocean water is diluted by fresh water. The palustrine system includes nontidal wetlands dominated by trees and shrubs and where salinity is below .5% in tidal areas. All of these systems are divided in subsystems and then further divided into class.

National Wetland Inventory Maps are produced by transferring gathered data on a standard 7.5 minute U.S.G.S. topographic map. Approximately 52 square miles are covered on a National Wetland Inventory map at a scale of 1:24,000. Electronic data is compiled by digitizing these National Wetland Inventory Maps.

MODIFIERS

In order to more adequately describe wetland and deepwater habitats one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

WATER REGIME

Non-Tidal

A Temporarily Flooded
B Saturated
C Seasonally Flooded
D Seasonally Flooded/ Well Drained
E Seasonally Flooded/ Saturated
F Semipermanently Flooded
G Intermittently Exposed

Tidal

H Permanently Flooded
J Intermittently Flooded

KEY CONTACTS & GOVERNMENT RECORDS SEARCHED

Various Federal laws and executive orders address specific environmental concerns. NEPA requires the responsible offices to integrate to the greatest practical extent the applicable procedures required by these laws and executive orders. EDR provides key contacts at agencies charged with implementing these laws and executive orders to supplement the information contained in this report.

LANDMARKS, HISTORICAL, AND ARCHEOLOGICAL SITES

Historic Places

Government Records Searched in This Report

National Register of Historic Places:

The National Register of Historic Places is the official federal list of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, engineering, and culture. These contribute to an understanding of the historical and cultural foundations of the nation.
The National Register includes:

- All prehistoric and historic units of the National Park System;
- National Historic Landmarks, which are properties recognized by the Secretary of the Interior as possessing national significance; and
- Properties significant in American, state, or local prehistory and history that have been nominated by State Historic Preservation Officers, federal agencies, and others, and have been approved for listing by the National Park Service.

Declaration of Access Easement

THIS Declaration of Access Easement (this "Easement") is made as of the _____ day of July, 1997, by Conrad W. Jacobsen and Judith M. Jacobsen, husband and wife (the "Declarants"):

Recitals

Declarants own that certain parcel of land in Seattle, King County, Washington, commonly known as 1407 11th Avenue and 1416 10th Avenue, and legally described on the attached Exhibit A (the "Access Property"). Declarants also own that certain adjacent parcel of land in Seattle, King County, Washington, commonly known as 1415 11th Avenue, and legally described on the attached Exhibit B (the "Benefitted Property"). Declarants plan to operate a parking lot on the Benefitted Property and wish to establish a permanent access easement over a portion of the Access Property for the benefit of the Benefitted Property.

NOW, THEREFORE, Declarants hereby declare as follows:

1. **Establishment of Access Easement.** Declarants hereby declare, establish, grant and convey, for the benefit of the Benefitted Property, a permanent, non-exclusive access easement on, over, and across that portion of the Access Property legally described on the attached Exhibit C (the "Easement Area") to provide pedestrian and vehicular access to and egress from the Benefitted Property. The drawing attached as Exhibit D shows the approximate location of the Easement Area.

2. **Right of Entry.** The owner of the Benefitted Property shall maintain the driveway on the Easement Area in good condition and shall have the right to temporarily enter onto the Access Property, from time to time, as reasonably required to maintain and repair said driveway. All such maintenance and repair work shall be at the sole cost and expense of the owner of the Benefitted Property, and such owner shall restore any damage to the Access Property and indemnify and defend the owners of the Access Property from any damages, losses or claims arising as a result of such entry onto the Access Property for such maintenance and repair work.

3. **Binding on Successors and Assigns.** The benefits and burdens of this Easement, including the access easement established herein, shall be binding upon and inure to the benefit of the parties and their respective heirs, successors and assigns, and shall be covenants running with the land.

4. **Enforcement.** In addition to other available rights and remedies, this Easement shall be specifically enforceable. If a suit is brought to enforce this Easement, the substantially prevailing party shall be awarded its reasonable attorneys' fees.

5. **General Provisions.** This Easement may be amended only by written instrument signed by the owners of the subject property. This Easement shall be recorded in the real property records of King County.

Executed as of the date first above-written.

COVENANT

(1)

OFF SITE ACCESSORY PARKING

THIS COVENANT, made this date by the first party and the second party to the City of Seattle to satisfy the requirements of Section 23.54.025 of the Land Use Code of the City of Seattle (Seattle Municipal Code, Title 23) relating to off-site accessory parking and to secure necessary building and use permits in such connection:

WITNESSETH:

WHEREAS, the first party is the owner of the property depicted and legally described in Exhibit "A" (which shows the layout of the parking area and identifies the spaces designated as accessory parking) herein called the "Accessory Parking Site" and located at: 1401 11th Avenue, Seattle, WA 98122

WHEREAS, the first party had agreed that TEN (10) legally established parking spaces on the Accessory Parking Site may be used to provide required off-street parking spaces for a building or use on property owned or occupied by the second party, which is legally described in Exhibit "B" attached hereto, herein called the "Principal Building Site", under a lease for a period of FIVE (5) years, terminating on June 30th, 2003 and located at 1406 10th Avenue, Seattle, WA. 98122.

and

WHEREAS, Section 23.54.025 of the Land Use Code (SMC Title 23) of the City of Seattle provides as follows:

> When parking is provided on a lot other than the lot of the use to which it is accessory, the following conditions shall apply:
>
> A. The owner of the parking spaces shall be responsible for notifying the Director should the use of the lot for convent parking cease. In this event, the principal use must be discontinued, other parking meeting the requirements of the Code must be provided within thirty (30) days, or a variance must be applied for within fourteen (14) days and subsequently granted.
>
> B. A covenant between the owner or operator of the principal use, the owner of the parking spaces and the City of Seattle stating the responsibilities of the parties shall be executed. This covenant and accompanying legal descriptions of the principal use lot and the lot upon which the spaces are to be located shall be recorded with the King County Department of Records and Elections, and a copy with the recording number and parking layouts shall be submitted as part of any permit application for development requiring parking.

And

NOW THEREFORE, the first party and second party agree with each other and the City of Seattle as follows:

1. The first party hereby covenants and agrees that the legally established parking spaces of the Accessory Parking Site leased to the second party shall be diverted or converted to no use other than off-street parking accessory to the Principal Building Site, during the term of the lease thereof, as long as the principal building or use to which the parking is accessory shall continue to exist.

2. The second party hereby covenants and agrees that upon termination of the lease of the Accessory Parking Site, other off-street parking spaces will be provided to replace the required spaces of the

9805051559

Accessory Parking Site, or the use on the Principal Building Site which requires such spaces will be terminated. (2)

3. The first party and the second party agree to notify the Director of the Department of Construction and Land Use immediately if the lease of the Accessory Parking Site is to be terminated for any reason, or if the Accessory Parking Site is to be diverted or converted to any use other than off-street parking accessory to the Principal Building Site.

4. The second party agrees that if the Accessory Parking Site is to be diverted or converted to any use other than off-street parking, he/she will immediately notify the Director or the Department of Construction and Land Use of his/her intention to provide other parking, seek a variance, or terminate the use; and that he/she will obtain all necessary permits to establish required parking in a timely manner if he/she intends to continue the use.

Declaration of Access Easements

THIS Declaration of Access Easements (this "Easement") is made as of the 25th day of August, 1998, by Conrad W. Jacobsen and Judith M. Jacobsen, husband and wife (the "Declarants").

Recitals

Declarants own that certain parcel of land in Seattle, King County, Washington, commonly known as 1407 11th Avenue and 1416 10th Avenue, and legally described on the attached Exhibit A (the "Access Property"). Declarants also own that certain adjacent parcel of land and the building thereon commonly known as 1406 10th Avenue, Seattle, King County, Washington,, and legally described on the attached Exhibit B (the "Benefited Property"). Declarants operate a parking lot on a portion of the Access Property over which they wish to establish permanent pedestrian access easements for the benefit of the Benefited Property.

NOW, THEREFORE, Declarants hereby declare as follows:

1. **Establishment of Access Easement.** Declarants hereby declare, establish, grant and convey, for the benefit of the Benefited Property, (i) a permanent, non-exclusive pedestrian access easement on, over, and across that portion of the Access Property legally described on the attached Exhibit C (the "Easement Area") to provide pedestrian access to and egress from the Benefited Property, and (ii) a permanent, non-exclusive access easement on, over, and across the south five (5) feet of the Easement Area, except the west fifty-five (55) feet thereof, for maintaining an elevator, elevator shaft, and fire escape serving the Benefited Property. The drawing attached as Exhibit D shows the approximate location of the Easement Area.

2. **Maintenance and Repair; Indemnity.** In exercising its easement rights hereunder, the owner of the Benefited Property shall not unreasonably interfere with the use of the Easement Area as a parking lot or with the use of the driveway crossing the Easement Area. The owner of the Benefited Property shall not be obligated to maintain or repair the Easement Area, except for repair of damage thereto caused by said owner or its agents, tenants or employees and except for maintenance (such as snow or ice removal) that may be reasonably required for the safe pedestrian use of the Easement Area by said owner or its agents, tenants or employees. The owner of the Benefited Property shall restore any damage to the Access Property and release, indemnify and defend the owners of the Access Property from any damages, losses or claims arising as a result of any negligent or improper use of the Easement Area by the owner of the Benefited Property or its tenants, agents or employees. The owner of the Benefited Property assumes all risks of entry onto the Easement Area in the exercise of the easement rights hereunder.

9809012159

3. **Pedestrian Corridor.** The owner of the Easement Area may, but shall not be required, to paint or otherwise designate a pedestrian walkway corridor, which shall be barrier-free and no less than five (5) feet in width, across the Easement Area from Tenth Avenue to the exit on the east end of the north side of the building on the Benefited Property, to be used by pedestrians accessing the Benefited Property. In such event, the owner of the Benefited Property shall use its best efforts to observe such pedestrian corridor designation.

4. **Binding on Successors and Assigns.** The benefits and burdens of this Easement, including the access easements established herein, shall be binding upon and inure to the benefit of the parties and their respective heirs, successors and assigns, and shall be covenants running with the land.

5. **Enforcement.** In addition to other available rights and remedies, this Easement shall be specifically enforceable. If a suit is brought to enforce this Easement, the substantially prevailing party shall be awarded its reasonable attorneys' fees.

6. **General Provisions.** This Easement may be amended only by written instrument signed by the owners of the subject property. This Easement shall be recorded in the real property records of King County.

Executed as of the date first above-written.

Declaration of Access Easement

THIS Declaration of Access Easement (this "Easement") is made as of the 24th day of September, 1998, by Conrad W. Jacobsen and Judith M. Jacobsen, husband and wife (the "Declarants").

Recitals

Declarants own that certain parcel of land in Seattle, King County, Washington, commonly known as 1407 11th Avenue and 1416 10th Avenue, and legally described on the attached Exhibit A (the "Access Property"). Declarants also own that certain adjacent parcel of land and the building thereon commonly known as 1406 10th Avenue, Seattle, King County, Washington,, and legally described on the attached Exhibit B (the "Benefited Property"). Declarants operate a parking lot on a portion of the Access Property over which they wish to establish a permanent access easement for the benefit of the Benefited Property.

NOW, THEREFORE, Declarants hereby declare as follows:

1. **Establishment of Access Easement.** As of the date hereof and also effective as of the date that Declarants convey title to either the Access Property or the Benefited Property, Declarants hereby declare, establish, grant and convey, for the benefit of the Benefited Property, a permanent, non-exclusive access easement on, over, and across that portion of the Access Property legally described on the attached Exhibit C (the "Easement Area") to provide access to and egress from the Benefited Property. The drawing attached as Exhibit D shows the approximate location of the Easement Area. To the extent necessary or appropriate, the easement granted herein shall be deemed to be a "springing" estate, automatically effective upon conveyance by Declarants of title to either the Access Property or the Benefited Property. Without limiting the generality of the foregoing, the easement granted herein is for the purpose of exiting the Benefited Property as required in Chapter 10 of the Seattle Building Code and for fire fighting access as required in Chapter 9 of the Seattle Building Code.

2. **Maintenance and Repair; Indemnity.** In exercising its easement rights hereunder, the owner of the Benefited Property shall not unreasonably interfere with the use of the Easement Area as a parking lot or with the use of any driveway crossing the Easement Area. The owner of the Benefited Property shall not be obligated to maintain or repair the Easement Area, except for repair of damage thereto caused by said owner or its agents, tenants or employees and except for maintenance (such as snow or ice removal) that may be reasonably required for the safe use of the Easement Area by said owner or its agents, tenants or employees. The owner of the Benefited Property shall restore any damage to the Access Property and release, indemnify and defend the owners of the Access Property from any damages, losses or claims arising as a result of any negligent or improper use of the Easement

9809251172

Area by the owner of the Benefited Property or its tenants, agents or employees. The owner of the Benefited Property assumes all risks of entry onto the Easement Area in the exercise of the easement rights hereunder. The owner of the Access Property may, but shall not be required, to paint or otherwise designate the location of the Easement Area on the ground.

3. **Relocation of Portion of Easement Area.** While maintaining the portion of the Easement Area that consists of a 16-foot wide strip adjacent to and running the entire length of the north boundary of the Benefited Property, the owner of the Access Property may, at its election and at its sole cost, relocate the portion of the Easement Area that lies more than sixteen (16) feet north of the north boundary of the Benefited Property to another portion of the Access Property as such owner may designate by thirty (30) days notice in writing to the owner of the Benefited Property, provided such relocated portion of the Easement Area is at least sixteen (16) feet in width and connects Tenth Avenue to the exit area near the northeast corner of the building on the Benefited property. Promptly after the owner of the Access Property designates such relocation of the Easement Area, the owners of the Access Property and Benefited Property shall execute and record an amendment of this Easement containing a legal description and drawing of the relocated Easement Area.

4. **Binding on Successors and Assigns.** The benefits and burdens of this Easement, including the access easement established herein, shall be binding upon and inure to the benefit of the parties and their respective heirs, successors and assigns, and shall be covenants running with the land.

5. **Enforcement.** In addition to other available rights and remedies, this Easement shall be specifically enforceable. If a suit is brought to enforce this Easement, the substantially prevailing party shall be awarded its reasonable attorneys' fees.

6. **General Provisions.** This Easement may be amended only by written instrument signed by the owners of the subject property. This Easement shall be recorded in the real property records of King County.

Executed as of the date first above-written.

Termination of Prior Access Easements and Declaration of Access Easements

THIS Termination of Prior Access Easements and Declaration of Access Easements (this "Declaration") is made as of the 15th day of October, 1998, by Conrad W. Jacobsen and Judith M. Jacobsen, husband and wife (the "Declarants").

Recitals

A. Declarants own that certain parcel of land in Seattle, King County, Washington, commonly known as 1407 11th Avenue and 1416 10th Avenue, and legally described on the attached Exhibit A (the "Access Property"). Declarants also own that certain adjacent parcel of land and the building thereon commonly known as 1406 10th Avenue, Seattle, King County, Washington,, and legally described on the attached Exhibit B (the "Benefited Property"). Declarants operate a parking lot on a portion of the Access Property over which they wish to establish permanent access easements for the benefit of the Benefited Property.

B. Declarants have previously executed and recorded a Declaration of Access Easements, dated as of August 25, 1998 (recorded under King County Rec. No. 9809012159) and a Declaration of Access Easement, dated as of September 24, 1998 (recorded under King County Rec. No. 9809251172) establishing access easements over a portion of the Access Property for the benefit of the Benefited Property (collectively, the "Prior Access Easements"). Declarants wish to terminate the Prior Access Easements.

NOW, THEREFORE, Declarants hereby declare as follows:

1. **Termination of Prior Access Easements.** Declarants hereby terminate the Prior Access Easements, and declare them to be canceled and void for all purposes.

2. **Establishment of Access Easements.** As of the date hereof and also effective as of the date that Declarants convey title to either the Access Property (or any portion thereof affected by any Easement Area) or the Benefited Property, Declarants hereby declare, establish, grant and convey, for the benefit of the Benefited Property, the following access easements ("Easements") (i) a permanent, non-exclusive pedestrian access easement on, over, and across that portion of the Access Property legally described on the attached Exhibit C (the "Pedestrian Access Easement Area") to provide pedestrian access to and egress from the door at the northeast corner of the building on the Benefited Property, (ii) a permanent, non-exclusive vehicular access easement on, over, and across that portion of the Access Property legally described on the attached Exhibit D (the "Vehicular Fire Fighting Access Easement Area") to provide vehicular access for fire fighting and rescue vehicles to and egress from the Pedestrian Fire Fighting Access Easement Area (described below) and to facilitate fire fighting and rescue activities that may be required with respect to a fire in the building on the Benefited Property, and (iii) a permanent, non-exclusive pedestrian access easement on, over, and across

9810290251

that portion of the Access Property legally described on the attached Exhibit E (the "Pedestrian Fire Fighting Access Easement Area") to provide pedestrian access for fire fighting and rescue purposes to and egress from the basement openings in the building on the Benefited Property and to facilitate fire fighting and rescue activities that may be required with respect to a fire in the building on the Benefited Property. The drawing attached as Exhibit F shows the approximate location of the Pedestrian Access Easement Area, the Vehicular Fire Fighting Access Easement Area, and the Pedestrian Fire Fighting Access Easement Area (collectively, the "Easement Areas").

To the extent necessary or appropriate, the easements granted herein shall be deemed to be a "springing" easement estates, automatically effective upon conveyance by Declarants of title to either all or any portion of the Access Property or the Benefited Property. Without limiting the generality of the foregoing, the easements granted herein are for the purpose of exiting the Benefited Property as required in Chapter 10 of the Seattle Building Code, or its functional equivalent, and for fire fighting access as required in Chapter 9 of the Seattle Building Code, or its functional equivalent.

3. Maintenance and Repair; Indemnity. In exercising any pedestrian easement rights hereunder, the owner of the Benefited Property shall not unreasonably interfere with the driveway or parking lot uses of the Access Property; provided, however, it is understood that the owner of the Access Property will not establish any parking stalls within the Easement Areas or that would block the Easement Areas. The owner of the Benefited Property shall not be obligated to maintain or repair the Easement Areas, except for repair of damage thereto caused by said owner or its agents, tenants, employees or others entitled to use the Easement Areas pursuant to this Declaration and except for maintenance (such as snow or ice removal) that may be reasonably required for the safe use of the Easement Areas by said owner or its agents, tenants, employees or others entitled to use the Easement Areas pursuant to this Declaration. The owner of the Benefited Property shall restore any damage to the Access Property and release, indemnify and defend the owners of the Access Property from any damages, losses or claims arising as a result of any negligent or improper use of the Easement Areas by the owner of the Benefited Property or its tenants, agents, employees or others entitled to use the Easement Areas pursuant to this Declaration. The owner of the Benefited Property assumes all risks of entry onto the Easement Areas in the exercise of the easement rights hereunder. The owner of the Benefited Property may paint or otherwise designate the locations of some or all of the Easement Areas on the ground. If required by applicable law, the owner of the Benefited Property shall paint or otherwise designate the location of the Pedestrian Access Easement Area on the ground.

4. Relocation of Portion of Easement Areas. The owner of the Access Property may, at its election and at its sole cost, relocate all or any portion of the Easement Areas to another portion of the Access Property as such owner may designate by thirty (30) days notice in writing to the owner of the Benefited Property, provided any relocation of the Vehicular Fire Fighting Access Easement Area shall continue to provide a clear corridor for fire fighting and rescue vehicles at least sixteen (16) feet in width that connects Tenth Avenue to the

9810290251

building on the Benefited property or to a Pedestrian Fire Fighting Access Easement Area that connects to said building, and so long as the width of the pedestrian easements is not reduced and connection points of the pedestrian easements to the building on the Benefited Property are not changed. Promptly after the owner of the Access Property designates such relocation of the Easement Areas, the owners of the Access Property and Benefited Property shall execute and record an amendment of this Declaration containing a legal description and drawing of the relocated Easement Areas.

5. **Binding on Successors and Assigns.** The benefits and burdens of this Declaration, including the access easements established herein, shall be binding upon and inure to the benefit of the parties and their respective heirs, successors and assigns, and shall be covenants running with the land.

6. **Enforcement.** In addition to other available rights and remedies, this Declaration shall be specifically enforceable. If a suit is brought to enforce this Declaration, the substantially prevailing party shall be awarded its reasonable attorneys' fees.

7. **General Provisions.** This Declaration may be amended only by written instrument signed by the owners of the subject property. Notwithstanding the foregoing, until such time as the building on the Benefited Property is torn down or removed, this Declaration shall not be amended, except as provided in Paragraph 4 above, and this Declaration shall not be terminated, so long as Chapters 9 and 10 of the Seattle Building Code, or their functional equivalents, are in effect. This Declaration shall be recorded in the real property records of King County.

Executed as of the date first above-written.

APPENDIX M

TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-05. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions.

.

de minimis conditions – are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions.*

historical recognized environmental condition(s) (HREC) - environmental condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. The final decision rests with the *environmental professional* and will be influenced by the current impact of the *historical recognized environmental condition* on the *property*. If a past release of any *hazardous substances* or *petroleum products* has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered a *historical recognized environmental condition*.

material threat – a physically observable or *obvious* threat which is reasonably likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a *hazardous substance* and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

threat to human health or the environment – a substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. An example might include a release of a *hazardous substance* in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment.

generally would not be the subject of an enforcement action – the likelihood that an environmental condition would not be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be less likely than not, then the condition is considered to be generally not the likely the subject of an enforcement action.
